GENERAL INFORMATION

Saint Joseph's University, a private, comprehensive institution with a strong liberal arts core curriculum, founded by members of the Society of Jesus in 1851 and chartered by the Commonwealth of Pennsylvania in the following year, has been conducted ever since by the Jesuits as a Catholic educational institution in the Ignatian tradition.

The provisions of this catalog describe programs and policies of the College of Arts and Sciences, the Erivan K. Haub School of Business, the School of Education and Human Development, and the School of Health Professions within Saint Joseph's University as of time of publication. The University reserves the right to change any provision or requirement at any time.

Reservation of Rights

The Saint Joseph's University Academic Catalog serves as the source for information related to academic programs and requirements. The Catalog and its contents shall not be construed or regarded as a contract, express or implied, between the University and any other party or parties, including any prospective or enrolled student(s).

Saint Joseph's University reserves the right, in its sole discretion, to change its policies, procedures, and standards and this catalog at any time. This includes, but is not limited to, changes to course offerings, scheduling, course content, course modality, course location, fees, and graduation requirements.

Certain events beyond the University's reasonable control may arise. Such events include, but are not limited to, severe weather; natural disaster; acts of war or terrorism; and pandemic or other public health emergencies. Saint Joseph's University does not assume any, and hereby disclaims all, liability for delay or failure to provide, or suspension or modification of, educational services or access to its facilities if one or more such events occur.

If an event beyond the University's reasonable control occurs and in furtherance of its efforts to maintain the wellbeing of its community, Saint Joseph's University may modify or suspend its operations, in whole or in part. This includes, but is not limited to, changing the course modality or location of educational services offered (e.g., switching from physically present instruction on campus to fully online). Students remain responsible for all tuition, fees, or other charges regardless of the modality used to provide the educational services. The University is not obligated to issue refunds, discounts or credits for tuition, fees, or other charges in the event of any failure, modification or suspension of operations, but may elect to do so in its sole discretion and without further obligation.

Location

Hawk Hill Campus:

Situated on the western boundary of Philadelphia, Saint Joseph's one hundred and fourteen acre campus combines accessibility to the city with the proximity to the Main Line. In this urban-suburban environment, students share in the educational, cultural, and entertainment resources of a great metropolitan area. Students, faculty and staff alike enjoy the Philadelphia Orchestra, the Pennsylvania Ballet, the Philadelphia Museum of Art, the Barnes Foundation, the Pennsylvania Academy of Fine Arts, the Franklin Institute, the University Museum, the Free Library, theatre, world class dining and major league baseball, football, basketball, and hockey.

The city itself is at once a museum of American history and culture and a laboratory for contemporary economics, sociology, politics and religion.

University City Campus:

Saint Joseph's University City campus sits in the heart of West Philly, Philadelphia's innovation district—home to health science start-ups, established biotech firms and influential higher education institutions. The campus is home to our graduate and professional programs in Pharmacy and Pharmaceutical Sciences, and our Health Professions programs, in Occupational Therapy, Physical Therapy and Physician Assistant Studies. It is also the historic location of the Philadelphia College of Pharmacy, and houses some of our core research facilities in the Natural Sciences and Pharmaceutical Sciences.

History

History

On the morning of September 15, 1851, some thirty young men gathered in the courtyard outside Saint Joseph's Church, located in Willing's Alley off Walnut and Fourth Streets and one block from Independence Hall. After attending High Mass and reciting the Veni Creator in the church, these young men were assigned to their classes in a building adjacent to the church. That September morning marked the beginning of a rich and exciting history for Saint Joseph's University.

As far back as 1741, a Jesuit College in Philadelphia had been proposed and planned by Rev. Joseph Greaton, S.J., the first resident pastor of Saint Joseph's Church. The suppression of the Jesuits (1773-1814) and lack of human and financial resources delayed for over a hundred years the realization of Fr. Greaton's plans for a college. Credit for founding the college is given to Rev. Felix Barbelin, S.J., who served as its first president. He, along with four other Jesuits, formed the first faculty of Saint Joseph's College. Before the end of the first academic year, the enrollment rose from fewer than forty to ninety-seven students. In the following year (1852), when the college received its charter of incorporation from the Commonwealth of Pennsylvania, the enrollment grew to 126 students.

In January, 1856, Saint Joseph's College moved to a more spacious site on the fashionable Filbert Street. Due to financial difficulties and the serious illness of the college's second president, the college returned to its Willing's Alley location in 1860. Shortly thereafter, the civil strife between the North and South became the first of many wars that would greatly diminish the college's enrollment. Through the Civil War and post-bellum years, Saint Joseph's College struggled to remain in existence.

With the purchase in 1866 of a city block between Seventeenth and Eighteenth Streets fronting on Stiles Street as a new site for the college, its future began to look brighter. Rev. Burchard Villiger, S.J., one of the original members of the college faculty, became its president in 1866. It was during his tenure that new college buildings, made possible largely through a generous bequest from the estate of Francis Anthony Drexel, were constructed on the Stiles Street location.

A sporadic but continuing growth, both in student enrollment and academic excellence, is recorded for the new life of Saint Joseph's College from September 2, 1889, when the college moved from Willing's Alley to Stiles street, until 1927, when a still larger campus was judged necessary.

In November 1922, an ambitious building fund campaign to raise \$1,000,000 was organized by Rev. Matthew Fortier, S.J. His work in this

difficult undertaking was successful and the pledges did exceed that goal, but the actual contributions did not. Subsequently, Saint Joseph's College was able to purchase twenty-three acres in a beautiful residential area at the western edge of the city. Construction of a handsome building in modern Collegiate Gothic architectural style was begun in November 1925. Its dedication took place on November 14, 1927. From that time to the present, the location of Saint Joseph's has been 54th and City Avenue.

During the Second World War, the college's enrollment was again greatly reduced. Following the war, aided by the "G.I. Bill of Rights," enrollment grew rapidly. In 1943, an Evening College was founded. It was also after the war that Saint Joseph's acquired several spacious homes adjacent to the campus, which were converted to its first residences for students.

Through the decade of the sixties, Saint Joseph's experienced unprecedented physical growth. Five more properties were added to the campus including the nine-acre estate of Margaret Gest, a Jesuit faculty residence, the Post classroom building, a science center, the Drexel Library building, a six-story student dormitory and expansion of the Student Center. All enhanced the modern facilities of the campus.

In the fall of 1970, the undergraduate day college opened its doors to women, bringing to an end its tradition as an all-male institution. Saint Joseph's was recognized as a university by the Secretary of Education of the Commonwealth of Pennsylvania on July 24, 1978. The corporate charter was formally changed to reflect university status on December 27, 1978. Shortly thereafter the University added a College of Business and Administration to complement the College of Arts and Sciences, and it also expanded graduate programs. At the same time, Saint Joseph's built a new Student/Sports Recreation Complex. The need for a larger library prompted the expansion of the University's Drexel Library into a Library/Learning Resources Center. The campus was enlarged to 49 acres with the purchase of Saint Mary's and Bronstein halls.

The last decade has marked an era of significant change in student enrollment; development of new undergraduate and graduate programs in all three colleges; integration of state-of-the-art technology of every kind, in the classroom and throughout the campus; upgrading of science laboratories; hiring of new faculty; and new campus construction.

Among the most important building projects undertaken are the following:

- the Chapel of St. Joseph;
- the McShain Student Residence and its footbridge traversing City Avenue and linking the city and suburban campuses;
- Mandeville Hall, home of the Erivan K. Haub School of Business;
- three large new student residence halls and a parking garage;
- and a new boathouse on Philadelphia's famed Kelly Drive.

In the summer of 2005, the University agreed to purchase the Merion campus of neighboring Episcopal Academy. The acquisition added 38 acres containing 52 classrooms, eight laboratories, 113 offices, and 14.5 acres of playing fields. Subsequent to the announcement of the agreement, alumnus James J. Maguire '58 donated \$10 million to help fund the purchase, and this section of the university is known as the Maguire Campus. Maguire's gift was later matched by a donation of the same amount by Brian Duperreault '69; the two donations are the largest alumni gifts in Saint Joseph's history.

In 2012, the University purchased the adjacent Cardinal's Residence on 54th and Cardinal Avenue from the Archdiocese of Philadelphia. The building now serves as the Welcome Center for

Admissions.

In June of 2022, the university completed a comprehensive merger with the University of the Sciences, adding the School of Health Professions, including the Philadelphia College of Pharmacy. In January of 2024, the university will complete its acquisition of the Pennsylvania College of Health Sciences, in Lancaster, PA, adding a School of Nursing & Allied Health, as well as a third campus location to its Hawk Hill and University City locations.

Mission Statement

As Philadelphia's Jesuit Catholic University, Saint Joseph's University provides a rigorous, student-centered education rooted in the liberal arts. We prepare students for personal excellence, professional success, and engaged citizenship. Striving to be an inclusive and diverse community that educates and cares for the whole person, we encourage and model lifelong commitment to thinking critically, making ethical decisions, pursuing social justice, and finding God in all things.

Colleges and Accreditation

The University is organized as follows:

The College of Arts and Sciences which offers the traditional undergraduate programs leading to the degrees of Bachelor of Arts and Bachelor of Science, a flexibly-structured Adult Learner program leading to a Bachelor of Liberal Studies, graduate programs leading to the degrees of Master of Arts and Master of Science, and Doctor of Philosophy programs

The Erivan K. Haub School of Business, which offers traditional undergraduate programs leading to the degree of Bachelor of Science in Business Administration, a flexibly-structured Adult Learner program leading to a bachelor degree or associate degree, and graduate programs leading to the degrees Master of Business Administration and Master of Science.

The School of Education and Human Development, which offers traditional undergraduate programs leading to the degree of Bachelor of Science, a flexibly-structured Adult Learner program leading to a Bachelor of Liberal Studies, and graduate programs leading to the degrees of Master of Science and Doctor of Education.

The School of Health Professions, which offers traditional undergraduate programs leading to the degree of Bachelor of Science, graduate programs leading to the Masters degrees and Doctoral degrees which include Doctor of Philosophy, Doctor of Pharmacy, Doctor of Occupational Therapy, and Doctor of Physical Therapy.

Accreditations, Approvals, and Memberships

Saint Joseph's University is approved by the Commonwealth of Pennsylvania Department of Education. It is accredited by the Middle States Commission on Higher Education:

Middle States Commission on Higher Education

1007 North Orange Street
4th Floor, MB #166
Wilmington, DE 19801

267-284-5000

The Middle States Commission on Higher Education is an institutional accrediting agency recognized by the U.S. Secretary of Education and the Council for Higher Education Accreditation. The Haub School of Business and its Accounting program are accredited by the AACSB—The Association to Advance Collegiate Schools of Business. The Chemistry Department is on the approved list of the American Chemical Society. The Teacher Education program was granted *Program Approved Status* by the Pennsylvania Department of Education and is recognized by the New Jersey Department of Education for issuance of certificates.

The University is also a member of the American Council on Education, the Association of Jesuit Colleges and Universities, the National Catholic Educational Association, the National Association of Independent Colleges and Universities, the Pennsylvania Association of Colleges and Universities, the American Library Association, the Association of Liberal Arts Colleges of Pennsylvania for the Advancement of Teaching, the American Association of Colleges for Teacher Education, and the Middle Atlantic Association of Colleges of Business Administration. The Haub School of Business is also a member of Beta Gamma Sigma, the honor society of business programs accredited by AACSB International.

Professional Licensure Disclosures

Federal regulations [34 CFR § 668.43(a)(5)(v)] require colleges and universities that offer programs designed to lead to professional licensure to disclose if those programs meet the educational requirements for licensure in the state where a student is located.

It is important to note that:

1. Each state has the legal authority to independently determine its requirements and processes for professional licensure;
2. The educational requirements necessary to pursue professional licensure in a given state are subject to change; and,
3. States often have other eligibility requirements, in addition to education, that must be satisfied in order to seek professional licensure.

The Saint Joseph's University programs designed to lead to professional licensure include:

- Occupational Therapy (MOT and DrOT)
- Pharmacy (PharmD)
- Physical Therapy (DPT)
- Physician Assistant (MSPAS)
- Medical Laboratory Science (BS)

Naming Conventions Course Numbering System

In 2009 the university governance system approved a mandate that alters the course catalog numbering system. The new coding structure calls for the following general outline for course numbering:

- 100s: Courses that are designed primarily for but not limited to first-year students or that otherwise are the first undergraduate courses in a sequence in a field of study.
- 200s: Courses designed primarily for but not limited to sophomores.
- 300s: Courses designed primarily for but not limited to juniors.

- 400s: Courses designed primarily for but not limited to seniors.
- 500s: Lower-level graduate courses.
- 600s & 700s: Upper-level graduate courses.
- 800s: Courses open only to doctoral students.

Undergraduate Course Numbers

At the undergraduate level, the following types of course offerings are available across many disciplines and the numbers across from them classify each group appropriately:

First Year Seminar (New GEP)	150 (satisfies GEP FYS requirement; special topics will be presented in most academic departments offering this course)
Cooperative Education	488, 489 & 490
Internship	490, 491
Special Topics	170, 270, 370 or 470 (can be repeated for credit, topic will vary when offered)
Independent Research	493, 494
Lab Courses	Add an "L" to the end of the number of the course to which the lab corresponds wherever possible (e.g. CHM 101 & CHM 101L)
Capstone (only as required by some)	495
Transfer Courses without SJU equivalent	196 to 199, 296 to 299, 396 to 399, 496 to 499 (used for transfer articulation where course transferring in is not part of the SJU catalog of offerings)

Course numbers for remaining courses are left to the department's discretion. Some additional notes about certain undergraduate course types and offerings:

Independent Study: Special topic independent study courses can be offered using the Special Topics numbers outlined above. An independent study for an existing course can use the existing number. There is no need for special independent study numbers.

Graduate (Masters Coursework)

Due to the large numbers of graduate catalog entries in certain areas of the university, it has been determined that graduate course numbers will follow this convention which is a modification of that approved by academic governance:

1. 500s: Lower-level graduate courses.
2. 600s & 700s: Upper-level graduate courses.
3. 800s: Courses open only to doctoral students.

Curriculum at the graduate level is typically divided along the lines of foundation, core, and major or specialization coursework. Some programs have a thesis/research course, some do not. Some programs have a capstone course, some do not. These items are defined as follows:

Foundation: that part of a graduate program that may be waived given a student's prior undergraduate or graduate education. Waivers are granted at the time of admission to a given program. Transfer credit is not awarded for Foundation courses. Foundation courses cover fundamental concepts to the specific discipline. Foundation courses are not counted in the minimum credits needed to graduate.

Core: that part of a graduate program required of all students pursuing the degree. Core courses provide additional depth beyond foundation work for fundamental concepts in the specific discipline.

Major/Specialization: that part of a graduate program that allows the development of expertise in a specific area of interest.

Thesis/Research: a course designed to **allow** the student to pursue independent research with a faculty member in a specific area of interest within the discipline. Often, it serves as a prelude to doctoral study.

Capstone: a course that serves as the culmination of the academic program, pulling together concepts from across the entire discipline.

At the graduate level, the following numbers are proposed to classify each group and selected other course types appropriately:

Foundation	500 to 549
Core	550 to 599
Major/Specialization	600 to 785
Special Topics	770
Internship	791 & 792
Thesis/Research	793 & 794
Capstone	795
Lab Courses	Add an "L" to the end of the number of the course to which the lab corresponds wherever possible (e.g. BIO 500L)
Transfer Courses without SJU equivalent	796 to 799 (graduate programs have transfer credit limitations; numbers are not used for regular SJU offerings)

Some additional notes about certain course types and offerings:

Independent Study: Special topic independent study courses can be offered using the Special Topics numbers outlined above. An independent study for an existing course can use the existing number. There is no need for special independent study numbers.

Graduation Requirement: Pennsylvania Department of Education regulations stipulate that a master's degree must be comprised of a minimum of 30 credits. Certain SJU programs have a minimum of more than 30. Commonly accepted academic protocol indicates that Foundation courses are not part of the announced minimum number of credits required to graduate. Foundation courses, if required, add to the student's number of credits required to graduate.

Section Naming Conventions

In order to readily identify different types of offerings, the following conventions be used when naming certain sections.

Section Type	Naming Convention	Example
Undergraduate Day Program	starts with D	D01, D02, etc.

First Year Seminar	starts with FY	FY1, FY2, etc.
Professional and Liberal Studies	starts with P	P01, P02, etc.
Graduate and Doctoral Programs	starts with G	G01, G02, etc.
On-Line	starts with OL	OL1, OL2, etc.
Hybrid	starts with HY	HY1, HY2, etc.
Independent Study	starts with IS	IS1, IS2, etc.
Internship	starts with IN	IN1, IN2, etc.
Honors	starts with HN	HN1, HN2, etc.
Service Learning	starts with SL	SL1, SL2, etc.
Co-op	starts with CO	CO1, CO2, etc.

N.B. – Additional abbreviations will be made as the schedule develops and will be posted comprehensively on the Registrar's Office webpage.

UNIVERSITY POLICIES AND PROCEDURES

Academic Policies

Students are expected to be familiar with the policies and regulations summarized in the Academic Catalog and with any supplementary or modified policies and regulations which may be promulgated during the academic year. More detailed information is available from faculty advisors, department chairs, or the offices of the Deans.

Non-Discrimination Policy

In compliance with applicable law and its own policy, Saint Joseph's University is committed to recruiting and retaining a diverse student and employee population and does not discriminate in its admission of students, hiring of employees, or in the provision of its employment benefits to its employees and its educational programs, activities, benefits and services to its students. This includes but is not limited to scholarship and loan programs, on the basis of race, color, religion, national origin, age, sex/gender, marital status, ancestry, sexual orientation, medical condition, physical or mental disability, veteran status or any other basis prohibited by applicable law.

Questions or concerns regarding the University's equal opportunity policies and programs should be directed to the University's Affirmative Action/Equal Opportunity Officer, (610) 660-3336.

Notification with Regard to the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act of 1998, and the Campus Sex Crimes Prevention Act.

As provided by the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act of 1998, Saint Joseph's University through its Department of Public Safety, annually provides notice and makes available copies of the Annual Security Report to the campus community, prospective students, employees, and the public. Each Security Report includes statistics for the past three years concerning crimes and incidents (whether they occurred on campus, in off-campus buildings and property owned or controlled by the University, or on public property adjacent to campus) reported to campus security authorities. Each Security Report also provides campus policies and practices concerning security – how to report sexual assaults and other crimes, crime prevention efforts, policies/laws governing alcohol and drugs, victims' assistance programs, student discipline, university resources, and other matters. The Security Report, which also includes information about the Department of Public Safety and Security, is publicly available electronically or by hard copy in the following ways:

- Electronically: <https://www.sju.edu/int/resources/security/annualreport.html>
- Telephone request to the Department at 610-660-1111
- Department of Public Safety and Security office

In addition, as provided by the Campus Sex Crimes Prevention Act, the Philadelphia and Lower Merion Sheriffs' Offices maintain a Megan's Law database of sex crime offenders: <http://www.pameganslaw.state.pa.us/>

Definition of a Course

For the purpose of fulfilling curricular requirements, a course is any semester unit to which a value of one credit or more is assigned. A

laboratory associated with a course, field experiences, etc. are not considered a separate course, even when it carries a separate course number and grade. Audit (non-credit) courses do not fulfill any requirements.

Syllabus

The instructor should provide a copy of the syllabus in advance or during the first class meeting of the course that includes the following:

- A detailed description of the course
- Course objectives, learning outcomes pertaining to assessment, and grading policies
- Required texts and other materials
- Sequence of topics or themes
- Assignments
- Frequency and nature of exams, quizzes, essays, projects, or other modes of evaluation
- Attendance policy
- University policy on academic honesty
- Policy for accommodations for students with disabilities
- Other policies of the discipline, unit, or institution pertinent to the class

Classification of Students

Matriculated Students

Students who have met all admission entrance requirements and are accepted with full standing into a degree program are classified as matriculated students.

Visiting Students

Undergraduate students who attend other colleges or universities and are in good academic standing may enroll in courses at Saint Joseph's University to transfer back to their respective home institution. A visiting student application and letter from the student's home institution indicating good academic standing are required. Visiting students who wish to take courses with prerequisites must submit official transcripts that include the necessary prerequisite. Under this classification, a visiting student may enroll in up to 12 credits.

Students in good standing in a graduate program at another accredited educational institution may take graduate courses on a visiting student basis if they provide a letter from the head of the graduate program of their degree-granting school stating that they are in good standing and that the institution will accept the course for credit. Visiting students must complete a graduate school application and pay the appropriate application fee.

Isolated Credit/Non Matriculated Students

Non-degree applicants may enroll in up to 12 PLS/HDC credits prior to formally matriculating into a degree program. Under this classification, students are admitted to Saint Joseph's University, but not to a specific degree granting program. No financial aid is available. A formal application and academic transcripts are required prior to being admitted as an isolated credit student.

Graduate Non-Degree Credit Admission (Isolated Credit and Visiting Students)

Graduate non-degree applicants may enroll in graduate-level coursework for professional development, certification, and personal enrichment.

Under this classification, students are admitted to Saint Joseph's University, but not to a specific degree-granting, graduate program. Non-degree or isolated credit applicants must complete the online graduate application process.

Non-degree students are not eligible to take graduate courses in all programs. Non-degree students should seek the permission of the Graduate Program Director in the department offering the course(s) before applying. A maximum of six credit hours (two courses) of coursework taken as a non-degree student may apply toward the credit requirement of the degree program.

Requests for degree credit for courses completed as a non-degree student are considered for admission to a graduate degree program. All non-degree coursework accepted for degree credit must be approved by the program director of the student's department.

Credit earned while enrolled in a graduate certificate program may be transferred into a degree program with the approval of the unit offering the degree program.

Adding and Dropping Courses

During the add/drop period, students may make changes to their schedule through the Nest. A student who drops a course from their schedule during the add/drop period will not have the course listed on their official record. After the add/drop period has ended, a student who does not wish to continue in a course must submit a request to withdraw from the course no later than the withdrawal deadline. Add/drop and withdrawal deadlines are listed on the Saint Joseph's University academic calendar. In no case will dropping or withdrawing from a course be permitted in contravention of penalties imposed through the University's Academic Honesty Policy. For more information on withdrawing from courses after the drop/add deadline, please see the Withdrawal from Courses policy for your level.

Cancellation of Courses

The University reserves the right to cancel a course for which there is insufficient enrollment. When such a cancellation becomes necessary, students will be notified in advance and given the choice of receiving a full refund or enrolling in another available course without penalty.

Attendance Policy

The course syllabus includes a clear statement on the attendance policy, specifying the maximum number of absences permitted in the course. If the course syllabus does not include an attendance policy, students may assume a policy of unlimited non-attendance. Absence from class does not release students from in-class work, quizzes, exams, presentations, group work, etc. Instructors with an unlimited non-attendance policy may not use unannounced examinations as a means of enforcing attendance. Students are responsible for the timely performance of all class assignments, including examinations. If students are required to be absent from class to participate in a University-sponsored activity, the director of the activity will provide written notice to the instructor in advance.

Pass/No Penalty Course Grade Option Policy

In order to encourage students to challenge their interests and limitations in areas outside their chosen field of study, the University has a Pass/No Penalty grade option. A standard passing grade submitted by an

instructor will be converted to a grade of **P** on the student's transcript, and a failing grade will be converted to a grade of **NP** on the student's transcript. Neither of these final grades are calculated into the student's grade point average (GPA), and credits will be awarded only if a passing grade is attained. A comprehensive description of grades is outlined in the Grades section (p. 18) of the catalog.

Students may select the P/NP grading option for a course if the following conditions are met:

- The course selected is a free elective, not counting toward the student's general education requirements, or prescribed major or minor program requirements.
- Students are permitted to take 2 (two) such courses under this grading option during their undergraduate career at Saint Joseph's University, and no more than 1 (one) such course in a given semester.
- The student must be an undergraduate student, and the course must be on the undergraduate level.
- The student must be in sophomore, junior or senior class standing at Saint Joseph's University.

The deadline to declare a course to be graded using the P/NP Grade Option via the electronic form is the withdrawal deadline defined on the academic calendar.

Change of Grade

Requests by teachers for changes in grade must be submitted to the Registrar in writing within thirty days after the last examination date of the semester. Regular semesters are considered to be the fall and spring semesters. Requests by teachers for changes in grade after this time must be submitted in writing to the appropriate Dean, with well-defined reasons for the change of grade. Only in exceptional circumstances will such changes be permitted.

Interim Repeat and Grade Replacement Policy

Advisor approval:

- A student may only repeat a course for which they received a grade of **B- or below**.
- Advisor approval is required prior to submitting a request for grade replacement.
- Evidence of this approval (for instance, an advisor's email) must be submitted with your request form.
- Note: The email you upload must include a clear statement from your advisor that the grade replacement for your repeated class is approved. For example, "I support your request for Grade Replacement for XXX course." When a student repeats a course, both the new and old grade will appear on the student's transcript.

Repeating courses + Grade replacement:

- Students who repeat a course may then apply for grade replacement using the appropriate form. Applications for grade replacement are due no later than the withdrawal deadline for the term in which the course is being repeated. Approval is granted by the relevant Dean's office based on the student's major program of study.
- If grade replacement is approved, both the new and old grade will appear on a student's transcript, but only the new grade will be factored into the student's GPA and count for course credit.

- A student may not repeat the same course more than once for the purposes of grade replacement. A student may not replace a grade for more than four distinct courses total. A student may not repeat a first year seminar course. In no case will grade replacement be allowed in contravention of penalties imposed through the University's Academic Honesty Policy.

Additional Information:

- The second course typically must have the same course name and number as the course being replaced; dean's approval is required for a course to be replaced with a different course that fulfills the same GEP or program requirement (or, for a student who is changing major, a comparable requirement of the new major).
- Repeating a course by transfer of a comparable course from another institution requires dean's approval and is only allowed if there is no other way for the student to stay on track towards degree completion.
Transfer credit is not calculated into a student's cumulative GPA (See Transfer Credit policy (p. 15)).
- Programs and departments may impose additional restrictions on repeat courses and grade replacement due to accreditation and/or state licensure, state certification, or state registration requirements.

Grade Reports

Grades are available to all students at the end of each semester via the web. Quarterly grades for freshmen are distributed through academic advisors; upperclass students will be able to access their quarterly grades through the web. Quarterly grades are not recorded and are issued solely to advise students of their academic progress. "NG" (no grade) is not a permanent grade and is assigned in the infrequent instances when an instructor is late in returning grades or has not recorded a grade for a given student.

Transcripts

Students may obtain their official transcripts provided their financial obligations to Saint Joseph's University have been fulfilled. Official transcripts bear the signature of the Registrar and the seal of the University. Official transcripts are sent upon request of the student directly to other institutions or organizations. A fee is charged for official transcript orders, and they can be ordered online:

National Student Clearinghouse (<http://www.getmytranscript.com/>) (getmytranscript.com)

Courses Taken Elsewhere Policy

Matriculated students may be permitted to take courses for degree credit in other two or four-year colleges and institutions with written approval from their Dean. No more than 18 credits of the 120 credits required may be taken at another school and credited toward the degree unless an approved degree program provides otherwise. Additionally, students may not take courses that exceed the residence requirement of 60 credits, with the final 30 credits completed at Saint Joseph's University. Students engaged in study abroad or in an approved exchange program may be granted degree credit for a maximum of 30 credits with pre-approval from their Dean. Students on academic suspension from the University under the Academic Honesty Policy and students on temporary separation from the University may not receive credit for courses taken elsewhere during their time of academic suspension or temporary separation.

Credit Hour Definition

Saint Joseph's University follows the guideline set by the Pennsylvania Department of Education for determining the amount and level of credit awarded for courses, regardless of format or mode of delivery. These guidelines are in compliance with policies set forth by both the federal government and the Middle States Commission on Higher Education.

Saint Joseph's University follows a semester system with the fall and spring semesters consisting of approximately 15 weeks, which includes one week for exams. Summer terms are variable in length and adhere to this policy.

Implementation of Credit Hour Policy

Regardless of the format in which it is delivered, all courses taught at Saint Joseph's University require equivalent student-instructor and student-student interaction. The online modality achieves equivalent interaction and learning through asynchronous discussions and group work, and a number of online courses also incorporate some face-to-face meetings. In addition, the expectation exists for online courses to include the same content and learning outcomes as traditionally taught courses. To ensure equivalency, faculty develop the online structure and content following the policy of the Middle States Commission on Higher Education, Standard 11: Educational Offerings, "*The institution's educational offerings display academic content, rigor, and coherence appropriate to its higher education mission. The institution identifies student learning goals and objectives, including knowledge and skills, for its educational offerings.*" (Characteristics of Excellence [2006], p 10.)"

Nationally Accepted Standards for Credit Hours and Semester Length

Every Saint Joseph's course requires the equivalent of 50 minutes of instruction per week and a minimum of two hours of out-of-class student work, per credit hour, based on the Integrated Postsecondary Education Data System (IPEDS™) definition for credit hour, which states that a credit hour is a unit of measure representing the equivalent of an hour (50 minutes) of instruction per week over the entire term. The University also follows the semester system as defined by IPEDS: a calendar system that consists of two sessions called semesters during the academic year with about 15 weeks for each semester of instruction. There may be an additional summer session.

Practices to Determine Amount and Level of Credit

The faculty is responsible for the curriculum. Credit values for courses are determined at the department level based on faculty expertise and course objectives. Upon departmental approval the course is entered into the online curriculum action system and undergoes additional evaluation as it moves through the course approval system. All curriculum and review/approval committees and bodies of Saint Joseph's University are charged with following the policy on credit hours in their review and approval of all courses and for certifying that the expected student learning for the course meets the credit hour standard. Initial review is done within the colleges, and final review and approval is the function of the University Council. Approved courses are sent to the Registrar's Office for inclusion in the University Catalog. The Registrar's Office reviews the class schedules prior to the start of each semester to ensure that all classes are scheduled for the minimum number of minutes. Any discrepancies are brought to the attention of the appropriate department for correction.

Credit Hour Standard by Instructional Method

Lecture and Seminar : courses with multiple students that meet to engage in various forms of group instruction under the direct supervision

of a University faculty member. A typical 3 hour course will meet 2100 minutes over 14 weeks.

Laboratory and Studio: courses with a focus on experimental learning under the direct supervision of a University faculty member wherein the student performs substantive work in a laboratory or studio setting. The minimum contact time per credit is twice that of a lecture (2:1 ratio)

Independent Study: courses of study in which a University faculty member regularly interacts and directs student outcomes with periodic contact. Minimum credit hours are determined based on lecture contact minutes with the face-to-face meetings and student work being equivalent to the values found in the lecture contact table.

Internship/Practica/Field Experience: courses of study in which a University faculty member regularly interacts and directs student outcomes with periodic contact. The learning experience may also contain a site supervisor and directed activity/learning outside of a lecture setting. Contact time requirements follow those of the laboratory/studio guideline.

Accelerated Courses: courses offered outside of a standard 15 week semester in which the credit hours offered are the same as standard semester courses. The content and substantive learning outcomes are the same as those in the standard semester. These courses must meet the definition of standard lecture contact time within the time frame the accelerated version is offered.

Online Courses: courses offered entirely online without regard to face-to-face meetings. These courses have the same learning outcomes and substantive components of a standard lecture course with alternate delivery method. Contact time is satisfied by several means which can include, but is not limited to, the following: a.) regular instruction or interaction with a University faculty member once a week for each week the course runs. b.) Academic engagement through interactive tutorials, group discussions moderated by faculty, virtual study/project groups, engaging with class peers and computer tutorials graded and reviewed by faculty.

Hybrid Courses: courses offered in blended format with 1 or more face-to-face class sessions and at least one or more online sessions, both containing direct interaction with a University faculty member. University faculty members demonstrate through the syllabi that the content and activities equate to a standard assignment of lecture credit.

FERPA Confidentiality of Student Records

The University's policy with respect to the confidentiality of and access to student records is in conformity with the relevant state and federal regulations.

The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99) grants eligible students the right to inspect and review certain education records, and safeguards students against improper or unauthorized disclosure of such education records or personally identifiable information contained therein.

Complaints with respect to this policy or its administration may be registered with:

Family Policy Compliance Office

United States Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5901

What is FERPA?

FERPA is the Family Educational Rights and Privacy Act (<https://www2.ed.gov/policy/gen/guid/fpco/ferpa/>).

The Family Educational Rights and Privacy Act of 1974 helps protect the privacy of student education records. The Act provides eligible students the right to inspect and review educational records, the right to seek to amend those records, and to limit disclosure of information from the records. The intent of the legislation is to protect the rights of students and to ensure the privacy and accuracy of education records. The Act applies to all institutions that are the recipients of federal aid administered by the Secretary of Education.

Who is Protected under FERPA?

FERPA protects the education records of students who are currently enrolled or formerly enrolled regardless of their age or status with regard to parental dependency. The educational records of students who have applied to, but have not attended an institution, are not subject to FERPA guidelines, nor are deceased students.

Parents of a deceased student termed as "dependent" for income tax purposes may have access to the student's education records. A copy of the parent's most recent Federal Income Tax return (where the parents declared the student as a dependent) must be submitted to the Office of the Registrar to document "dependency".

In Reference to FERPA, who is Considered a Parent?

The term "parent" refers to either parent, including custodial and non-custodial.

What are and are not Education Records?

With certain exceptions (noted below), an education record is any record (1) which contains information that is personally identifiable to a student, and (2) is maintained by the University. With the exception of information about other students, financial records of parents and confidential letters of reference to which the student has waived access, a student has the right of access to his/her education records.

Education records include any records in whatever medium (handwritten, print, email, etc.) that are in the possession of any school official. This includes transcripts or other records obtained from a school in which a student was previously enrolled.

What information is not considered part of an education record?

- Sole possession records or private notes held by school officials that are not accessible to released to other personnel.
- Law enforcement or campus security records that are solely for law enforcement purposes and maintained solely by the law enforcement unit.
- Records relating to individuals who are employed by the institution (unless contingent upon attendance).
- Records relating to treatment provided by a physician, psychiatrist, psychologist, or other recognized professional or paraprofessional and disclosed to individuals providing treatment.

- Records of an institution that contain only information about an individual obtained after that person is no longer a student at that institution, i.e. alumni records.

What Rights does FERPA Afford Students with Respect to their Education Records?

The right to inspect and review your education record within a reasonable time after the University receives a request for access. If you want to review your record, contact the University office that maintains the record to make appropriate arrangements.

The right to request an amendment of your education record if you believe it is inaccurate or misleading. If you feel there is an error in your record, you should submit a statement to the University Registrar who is responsible for the record, clearly identifying the part of the record you want changed and why you believe it is inaccurate or misleading. The Office of the Registrar will notify you of their decision and advise you regarding appropriate steps if you wish to appeal.

The right to consent disclosure of personally identifiable information contained in your education records, except to the extent that FERPA authorizes disclosure without consent. Once exception which permits disclosure without consent is disclosure to school officials with "legitimate educational interests". A school official has a legitimate educational interest if the official has a "need to know" information from your education record in order to fulfill his/her official responsibilities. Examples of people who may have access depending on their official duties (and only within the context of those duties):

- University faculty and staff
- Agents of the institution
- Students employed by the institution or who serve on official institutional committees
- Representatives of agencies under contract with the University

The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA. This can be done by contacting:

Family Policy Compliance Office

U.S. Department of Education

400 Maryland Ave, SW

Washington, DC 20202-5901

When is the Student's Consent not Required to Disclose Information?

When the disclosure is (one or more of the following):

- To school officials (defined in policy) who have a legitimate educational interest
- To federal, state, and local authorities involving an audit or evaluation of compliance with educational programs
- In connection with financial aid, including veteran's benefits
- To organizations conducting studies for or on behalf of educational institutions
- To accrediting organizations

- To comply with judicial order or subpoena if specified that the disclosure is not to be made due to the interest of justice
- In a health or safety emergency
- Releasing directory information
- Releasing the results of a disciplinary hearing to an alleged victim of a crime of violence

What is Considered Directory Information at Saint Joseph's University?

Certain information, known as directory information, may be disclosed by anyone without the prior written consent of the student. While FERPA defines a list of what can be considered directory information, it is at the discretion of the institution to define what is considered directory information. At SJU, directory information is defined as:

- Student name
- Major/Minor/Certificate field of study
- Degree(s) sought or earned
- Dates of attendance
- Current enrollment status (full/part time)
- Class standing
- Academic awards received (Dean's List, Latin Honors)
- Photographs
- Activities/clubs
- Height and weight of athletic team members
- Most recent educational institution attended

Please note, if an item is not on this list, it may not be disclosed without prior written consent of the student. Addresses, phone numbers, and email addresses of students are *not* directory information at SJU.

Transfer Credit Policies Undergraduate Day Transfer Credit Policies

To qualify for a degree, students transferring from on the following categories must fulfill the General Education Program and departmental requirements, either by transfer credit or by courses completed in the day colleges. Approved transfer credit may come from:

- Another college or university,
- The Professional and Liberal Studies program of Saint Joseph's University,
- Or college level credits achieved in the areas of Dual Enrollment/Diocesan Scholars/AP/IB exams.

Freshman/Transfer Students

In order for credit to be awarded, Saint Joseph's University requires the course(s) meet the following criteria

- Taken through an accredited college or university
- Earned 3.00 credit hours or higher and the grade of "C" or better

The acceptance or denial of transfer credit is not determined exclusively on the basis of the accreditation of the sending institution or the mode of delivery, but, rather, will consider course equivalencies, including expected learning outcomes, with those of the receiving institution's curricula

and standards. Final determination of transferable college-level credit is awarded by the Deans' offices.

Students must submit all materials by the end of the academic year of initial enrollment in order for the course to be applied to the Saint Joseph's University Degree. All incoming freshmen students must complete a Transfer Credit Request Form requiring the above criteria be verified by the college or university Registrar's Office. All students must also submit an official college transcript and course description or syllabus for evaluation.

Block Transfer

Students who transfer to Saint Joseph's University with a completed AA or AS degree from an accredited Community College will not be required to complete the Saint Joseph's University GEP Curriculum. Rather, the AA, AS degree holder will receive credit for having completed their general education requirements with the addition of a maximum of twelve hours of Saint Joseph's University mission and identity related coursework as described below. Additionally, if a student has completed a course that would, in a course by course transfer evaluation, count for one of the courses identified below, that course will be considered completed.

- PHL 154 Moral Philosophy (3 credit hours)
- THE 154 Faith, Justice, and the Catholic Tradition (3 credit hours)
- Any certified Faith and Reason course, any discipline (3 credit hours)
- Any upper-division (300 level and above) ethics intensive course, (3 or more credit hours). This requirement will be waived for PLS and HDC students until such time as all three overlays are required by the curriculum for this population.

This proposal does not equate the AA or AS degree with the Saint Joseph's University GEP Curriculum. Rather, it suggests an alternative way in which AA or AS degree holders may continue their education at Saint Joseph's University in their chosen discipline while still receiving exposure to some of the fundamentals of the Jesuit Liberal Arts tradition and a Saint Joseph's University education.

Residence Requirement

The standard residence requirement for a degree at Saint Joseph's University is 60 credits. The final 30 credits must be completed at Saint Joseph's University, except where an approved degree program or an approved plan of acceleration provides otherwise.

Summer Courses

Degree credit is granted for courses taken in summer sessions and the intersession. Summer session courses that are a part of the GEP or major course requirements must be taken at Saint Joseph's University. However, if the course is not being offered that summer and is necessary for a student to maintain standard academic progress or the proper sequence of courses in their major field of study, an exception may be granted. For information on the maximum number of credits allowed to be taken elsewhere, please see the Courses Taken Elsewhere (p. 13).

The approved uses of summer session courses for matriculated students are as follows:

- To make up academic deficiencies, i.e., courses failed or not completed during a required semester
- To make up course deficits, i.e., additional courses needed as result of change of major, or, in some instances, transfer

- To enrich the student's educational program
- To reduce the student's course load in an ensuing semester

Permission to register for summer courses does not constitute permission to accelerate a degree program. For all students registered in CAS, HSB, and SHSE, the maximum number of credits allowed for any one summer part of term will typically be six. For exceptional reasons, the Dean may grant permission for a third course/an additional 3-4 credits. Registration and payment for summer courses are governed by the regulations and procedures of the summer sessions.

Adult Undergraduate (PLS) Transfer Credit Policies

Advanced Standing for Transfer Students

A candidate for admission to a degree or certificate program with credits from another college must request official transcripts be sent to Saint Joseph's University from each college or university previously attended.

International students must provide official transcripts from each high school and university previously attended, translated into English, and a course-by-course evaluation from an approved international credential evaluation service. For more information please see the section on International Students in the catalog.

Only grades of C (not C-) or higher from accredited colleges or universities will be considered for transfer. Students may transfer a maximum equivalent of 75 credits towards the undergraduate adult learner bachelor's degree at the time of admission. Some courses may require a review by specific academic departments for evaluation of transfer credit.

There are two exceptions to the 75 credit limit on transfer credits for undergraduate adult learner bachelor degree programs. The following students may transfer the equivalent of 90 credits toward the undergraduate adult learner bachelor's degree:

- Students who are transferring from the Saint Joseph's University Undergraduate Day program, or
- Students who have earned a 120-credit bachelor's degree from a previous college or university and are pursuing a second degree at Saint Joseph's University

Students may transfer a maximum equivalent of 30 credits for the associate's degree. Student may transfer a maximum equivalent of six credits for the certificate programs.

Adult Undergraduate Admissions maintains articulation agreements with local and regional community colleges designed to facilitate the transfer process.

Credits for Prior Learning

A student in good academic standing may be eligible to earn college credit for prior learning through College Level Examination Program (CLEP) or Experiential Learning Assessment Program (ELAP). A student cannot earn CLEP or ELAP credit for a course in which they are currently enrolled or for a course when they have completed a more advanced course in the same subject.

To be considered for CLEP or ELAP, a student must:

- Be in good academic standing, and
- Have more than 30 credits remaining in their degree program

A student may not use a CLEP exam or ELAP portfolio review for credit if they have already transferred the maximum number of credits allowed.

College Level Examination Program (CLEP)

PLS/HDC students have the opportunity to earn college credit by achieving a passing score on exams in specific subject areas through CLEP. Administered by the College Board, CLEP offers 33 exams in five subject areas, covering material generally taught in the first or second year of college. Students must obtain approval from their respective advising office before taking a CLEP exam in order to ensure the applicability of CLEP credits to their degree program. After a CLEP request is approved, the exam must be taken and a CLEP transcript submitted before the end of the next consecutive semester. A listing of exams and minimum required scores is available on the PLS and HDC advising office websites.

Experiential Learning Assessment Program (ELAP)

ELAP provides students the opportunity to validate college level knowledge acquired through study, work, and other life experiences. PLS and HDC programs offer a portfolio assessment process by which prior learning can be documented and assessed for credit. ELAP applicants may apply for portfolio assessment credit for experiences that are similar to a specific course.

Approval of all ELAP requests is at the discretion of each academic department. This process, including portfolio preparation and academic department/faculty review, may take up to two to three months to complete. If the student is awarded credit, the credit will be recorded on the student's permanent record as a transfer course with a grade of "TR." ELAP applications may be submitted after a student has been fully accepted and enrolled in the PLS/HDC program.

Credits awarded by Assessment through American Council on Education (ACE)

A student may be granted transfer credit for courses evaluated and approved for college credit by the American Council on Education (ACE), if the course meets the content equivalent of a three-credit course offered at Saint Joseph's University. ACE recommendations for 1-credit or 2-credit courses may not be transferred to fulfill a three-credit course requirement. Credit is not awarded for vocational/technical level recommendations. Listings of ACE approved courses and credit recommendations can be referenced in two publications: A Guide to the Evaluation of Educational Experiences in the Armed Forces and The National Guide to Educational Credit for Training Programs. Credits awarded are subject to the same policies as those of any other transfer credits. To initiate an evaluation of ACE credits, a student must request an official ACE transcript.

Military Credits

Transfer credit may be granted for college-level coursework earned while in military service if the credit is recommended by the American Council on Education (ACE) and if the course meets the content equivalence of a three-credit course offered at Saint Joseph's University. ACE recommendations for 1-credit or 2-credit courses may not be transferred to fulfill a three-credit course requirement. Credit is not awarded for Basic Training or for vocational/technical level recommendations. To initiate an evaluation of military credits, a student must request an official

military transcript from their respective service branch. Students may access additional information regarding military transcripts and ACE evaluations at <http://www.acenet.edu/militaryprograms/transferguide/> (<http://www.acenet.edu/militaryprograms/transferguide/>)

Residence Requirement

The residency requirement for an associate degree is fulfilled by the satisfactory completion of at least 36 credits in the HDC program immediately preceding the date of graduation. Students enrolled in an associate degree program must complete at least three upper division credits in their major and at least half of their Business core courses at Saint Joseph's University.

The residency requirement for a bachelor's degree is fulfilled by the satisfactory completion of at least 45 credits in the PLS/HDC program immediately preceding the date of graduation. Students who are pursuing a second bachelor's degree and those who are transferring to PLS or HDC from the Saint Joseph's University Undergraduate Day School are required to complete a minimum of 30 credits in the PLS/HDC program immediately preceding the date of graduation. Students must satisfy the General Education Program and the approved requirements for the major field. For a bachelor's degree, at least 12 upper division credits (level as defined by each academic department) in the major must be completed through the PLS/HDC program unless specifically waived by the Department Chairperson or Program Director. Business majors must complete at least half of their Business core/concentration courses at Saint Joseph's University.

The residency requirement may not be satisfied by credits earned through CLEP, ELAP, or courses completed elsewhere.

Once matriculated into the PLS/HDC Program, students are required to complete all remaining courses at Saint Joseph's University. Exceptions for up to six credits may be considered in extenuating academic circumstances by written request to the appropriate Associate Dean.

Graduate Transfer Credit Policies

Request for the evaluation of graduate transfer credit must be made at the time of application or admission. With the approval of the Program Director, students may transfer up to six credit hours of graduate-level work into graduate programs that are 30 credits or more in length.

Course credit may be transferred only from graduate programs at regionally accredited institutions and only courses with a grade of B or higher may be transferred. Courses with grades of B- or lower will not be evaluated for transfer.

Applicants must submit an official transcript, course description, and syllabus. Courses taken more than five years prior may not be accepted for transfer credit unless approved by the academic department. Continuing education credits will not be considered for transfer credit.

Once a student is enrolled in a graduate program at Saint Joseph's University, courses may not be taken at another institution for the purpose of transfer credit.

Haub School of Business Graduate Transfer Credit Policy

Students may transfer up to six graduate credit hours (2 courses) towards the graduate degree from an AACSB accredited college or university, provided a grade of B or better was earned in the course

and content equivalency is approved. Approval by the Department Chairperson of the department is required.

Grades

Incomplete Grades

The grade of Incomplete, noted as "I" on the official transcript, is reported by an instructor to the Program Director or Department Chair and to the Registrar's Office only under the following circumstances (all must apply):

1. The student has requested an Incomplete
2. Course requirements have not been completed for reasons beyond the student's control (e.g., illness or family emergency)
3. The student has completed the majority of the work for the class, and the student can accomplish the remaining requirements within 30 days of the end of the final exam period.

Please note that if the work for the course is not completed by the agreed time, the "I" grade will convert to an "F" grade. A student may not be given an "I" grade if an incomplete grade from a previous semester is still outstanding.

Audit

Audited courses appear on the student's official transcript and on the official record with the grade "X". Students must petition the appropriate Dean to be permitted to take a class on an audit basis. The appropriate Dean may allow a student to change from credit to audit status no later than the withdrawal deadline for the semester, but not to avoid penalties imposed through the University's Academic Honesty Policy. The reverse change, from audit to credit status, is not permitted.

Grade Appeal

A student who wishes to appeal the final grade in a course should first contact the instructor of the course in an attempt to remedy the situation. If after talking with the instructor the student still thinks they have been inappropriately evaluated in the course, the student may make a written request for review to the Department Chairperson or Program Director, depending on the program of study. The written request must describe, in detail, the situation and reason for appealing the course grade. The Department Chairperson or Program Director will consult with the instructor and if a grade change is warranted, make a recommendation to the Associate Dean for approval.

Grade Point Average (GPA)

The grade point average is the ratio of the total grade points (sum of products of course credits and grade points for each course) earned at Saint Joseph's University to the total credits attempted at Saint Joseph's University (including grades of F and FA, but excluding grades of P, NP, I, IP, W, WA, X, AF, and NG.) Only courses taken at Saint Joseph's University after matriculation are included in this calculation, even if transfer credit has been awarded.

Undergraduate Level Grades

The following system of grades, with their grade point equivalent in parenthesis, is used in all courses offered by the University:

Letter	GPA	Description
A	4.0	Excellent performance in all or most aspects of the course
A-	3.7	Excellent performance in many aspects of the course

B+	3.3	Very good performance in all or most aspects of the course
B	3.0	Good performance in all or most aspects of the course
B-	2.7	Good performance in many aspects of the course
C+	2.3	Acceptable performance; more than adequate performance in in some aspects of the course
C	2.0	Acceptable performance in all or most aspects of the course
C-	1.7	While acceptable overall, course performance is inadequate in one or more areas
D+	1.3	While acceptable, course performance is inadequate in several areas
D	1.0	Meets minimal performance standards required for passing
F	0.0	Failure; overall performance has not meet the basic standards of the course
FA		Failure; due to excessive absence
P		Pass. No grade points. Credit. The grade P carries credit but is not included in the calculation of the grade point average.
NP		No Penalty. No grade points. No credit. The non-passing grade NP carries no credit and does not affect the calculation of the grade point average.
I		Incomplete. A temporary grade which may be assigned when a student has permission of the instructor to complete requirements within a short time after the end of the course. This grade is not used when a student's work is qualitatively deficient. The I grade must be resolved within 30 days of the last day of the final exam period. "I" grades will not appear on a final record. At the end of the stated period unresolved incomplete grades become failure grades. Extensions may be granted only by the Dean of the appropriate college.
IP		In Progress. A temporary grade assigned to all students of a given course that extends meeting requirements beyond the grading period for a traditional semester. A final grade will be assigned by the appropriate faculty member at the conclusion of the given course or within 180 days from the initial issuance of the IP grade. At that point, the University Registrar is instructed to change all outstanding IP grades to F grades. Extensions may be granted only by the Dean of the appropriate college.
W		Withdrawal.

WA	Administrative Withdrawal. Equivalent to W; given by the Dean of the college to which the student belongs in consultation with the University Registrar or with the Vice-President/Associate Provost of Student Life in selected involuntary cases, or both, following consideration of exceptional situations where a standard withdrawal from all courses is or was not possible. Students who must withdraw from the university after the end of the last day to withdraw should consult with their academic advisors for appropriate procedures, justification, and documentation to request an administrative withdrawal. Further, Administrative withdrawals are approved only in circumstances with sufficient documentation of impacted academic performance because of medical illness, death or critical illness of an immediate family member, or military service, or when it is deemed that the University can no longer provide education services to a given student (involuntary withdrawal). Administrative withdrawal petitions based upon extraordinary circumstances are only considered for all courses in a semester (not selected courses) and are only considered for courses in the calendar year immediately preceding the date of the petition. Petitions for withdrawal from a second successive semester based on the same circumstances will not be approved.	B	3.0	Good; sound performance in all aspects of a course; completely fulfilling and satisfying the requirements of the course
		B-	2.7	Good performance in many aspects of the course
		C+	2.3	Acceptable performance; more than adequate performance in in some aspects of the course
		C	2.0	Acceptable performance in all or most aspects of the course
		F	0.0	Failure; overall performance has not meet the basic standards of the course
		FA		Failure; due to excessive absence
		P		Pass. No grade points. Credit. The grade P carries credit but is not included in the calculation of the grade point average.
		NP		No Penalty. No grade points. No credit. The non-passing grade NP carries no credit and does not affect the calculation of the grade point average.
		I		Incomplete. A temporary grade which may be assigned when a student has permission of the instructor to complete requirements within a short time after the end of the course. This grade is not used when a student's work is qualitatively deficient. The I grade must be resolved within 30 days of the last day of the final exam period. "I" grades will not appear on a final record. At the end of the stated period unresolved incomplete grades become failure grades. Extensions may be granted only by the Dean of the appropriate college.
		IP		A temporary grade assigned to all students of a given course that extends meeting requirements beyond the grading period for a traditional semester. Other grades on the scale will be assigned by the appropriate faculty member at the conclusion of the given course or within 180 days from the initial issuance of the IP grade. At that point, the University Registrar is instructed to change all outstanding IP grades to F. Extensions may only be granted by the Dean of the college through which the course is offered.
		W		Withdrawal.
X	Audit. No grade points. No credit. Does not affect the calculation of the grade point average.			
AF	Academic Forgiveness. No grade points. No credit. Does not affect the calculation of the grade point average.			
NG	No Grade. A grade that is only used by the University Registrar to indicate that no grade has been submitted by the instructor. This grade will automatically convert to an F grade if it is not resolved within four weeks from of the last day of the final examination period for the semester in question.			
NA	Never Attended. Equivalent of F; given by the instructor when the student never attended or did not attend after the add/drop period. This grade may be changed by an administrative withdrawal only within one calendar year from when it is issued.			
VF	Equivalent of F; given by the instructor when the student stopped attending after the add/drop period. This grade may be changed by an administrative withdrawal only within one calendar year from when it is issued.			

Graduate/Doctoral Level Grades

The following system of grades, with their grade point equivalent in parenthesis, is used in all courses offered by the University:

Letter	GPA	Description
A	4.0	Distinguished; exceptional performance in all aspects of the course
A-	3.7	Exceptional performance, but somewhat less than that rated as A
B+	3.3	Very good; meritorious work; exceptional performance in several aspects of the course; notably above average expected of students

WA	Administrative Withdrawal. Equivalent to W; given by the Dean of the college to which the student belongs in consultation with the University Registrar or with the Vice-President/Associate Provost of Student Life in selected involuntary cases, or both, following consideration of exceptional situations where a standard withdrawal from all courses is or was not possible. Students who must withdraw from the university after the end of the last day to withdraw should consult with their academic advisors for appropriate procedures, justification, and documentation to request an administrative withdrawal. Further, Administrative withdrawals are approved only in circumstances with sufficient documentation of impacted academic performance because of medical illness, death or critical illness of an immediate family member, or military service, or when it is deemed that the University can no longer provide education services to a given student (involuntary withdrawal). Administrative withdrawal petitions based upon extraordinary circumstances are only considered for all courses in a semester (not selected courses) and are only considered for courses in the calendar year immediately preceding the date of the petition. Petitions for withdrawal from a second successive semester based on the same circumstances will not be approved.
X	Audit. No grade points. No credit. Does not affect the calculation of the grade point average.
AF	Academic Forgiveness. No grade points. No credit. Does not affect the calculation of the grade point average.
NG	No Grade. A grade that is only used by the University Registrar to indicate that no grade has been submitted by the instructor. This grade will automatically convert to an F grade if it is not resolved within four weeks from of the last day of the final examination period for the semester in question.
NA	Never Attended. Equivalent of F; given by the instructor when the student never attended or did not attend after the add/drop period. This grade may be changed by an administrative withdrawal only within one calendar year from when it is issued.
VF	Equivalent of F; given by the instructor when the student stopped attending after the add/drop period. This grade may be changed by an administrative withdrawal only within one calendar year from when it is issued.

Graduation & Commencement Graduation Application

Students who will complete all of the requirements for a degree in a given semester must submit a graduation application in the Nest by the deadline specified on the academic calendar. Failure to submit the graduation application by the specified deadline will result in delayed degree conferral, and will be reviewed in the term for which they apply. The Deadlines are as follows: Spring: April 1, Summer: August 1, Fall: December 1.

Awarding of Degrees and Diplomas

Degrees are conferred three times per year. On the date of the commencement ceremony for Spring, August 31 for Summer, and January 15 for Fall. Students are awarded the degree of their primary

major. Double majors are recorded on the transcript; however, students are awarded one degree and receive one diploma listing that degree. Diplomas are ordered two weeks after the conferral date and take 4-6 weeks to process and ship.

Commencement Ceremony

The commencement ceremony is held annually in the spring. Diplomas are not distributed at Commencement. Students receiving degrees in September or January are invited to participate formally in the commencement ceremony of the following May.

Eligibility for Walking in the Commencement Ceremony

Students with no more than eight credits/two courses remaining at the end of the spring semester and who will finish the remaining courses in the summer, and who are in good academic standing, are eligible to walk in the commencement ceremony.

- Good academic standing for undergraduate students is a cumulative GPA of at least a 2.0
- Good academic standing for graduate students and doctoral students (in a PhD or Ed.D.) students is a cumulative GPA of at least a 3.0

Doctoral students (PhD or EdD) are required to have successfully defended their dissertation and will finish all remaining requirements (post defense and/or progression milestones) in the summer to be able to walk in the commencement ceremony.

Early Graduation/Acceleration

While the traditional undergraduate degree program requires the attendance of eight semesters, students may seek the Dean's approval for an accelerated program.

Extraordinary academic achievement on the pre-college level, through Advanced Placement and similar programs, may, at the discretion of the appropriate Dean, significantly reduce the traditional semester requirement. Students should request the Dean's evaluation of their pre-college work before the end of their freshman year.

Students may, for sound academic reason, request permission to accelerate their degree programs. Such acceleration is limited to 30 credits or one academic year. After consultation with their faculty advisors and department chairs, interested students petition their Dean, ordinarily in the spring semester of the sophomore year but not later than the fall semester of the junior year, to approve a plan of acceleration. If the plan of acceleration includes summer session courses, not more than nine credits may be scheduled for any one summer. The traditional limitation of 18 degree credits in other institutions applies to accelerated programs. Transfer students with 18 credits or more in other institutions are not eligible for program acceleration.

Delayed Graduation

Students may request their Dean's permission to extend their degree program beyond the traditional eight semesters. Extensions beyond ten semesters are granted only for extraordinary reason.

Degree Time Limitation

After the establishing of degree candidacy, a maximum of five years will be allowed for the completion of the degree requirements. Under extenuating circumstances, a student may request an extension of this time frame. Graduate and Doctoral programs may have other limits on

time to completion. Please see those specific time limits in the Graduate and Doctoral Policies sections.

Graduation Process for Ed.D. Programs

After a successful defense of the final dissertation and before there is a grade change on the student's transcript, all graduation requirements must be met. This includes completion of the following: Registrar Requirements, Signature Pages, Approved and Completed Manuscript, IRB Protocol, the Library Dissertation Requirements for Graduation (i.e., Bindery and ProQuest processes), Bound Dissertation Copies, and Final Approval to Graduate.

Undergraduate Day Policies

Academic Policies Degree Requirements

The University offers three undergraduate day degrees: the Bachelor of Arts, the Bachelor of Science and the Bachelor of Science in Business Administration. The degree awarded is determined by the student's major field. The standard requirements for the degree include the following:

- Completion of a minimum of 120 credits
- Completion of additional credits specified by the major
- Completion of the General Education Program
- Completion of approved requirements for the major field
- Cumulative grade point average of 2.0

Residence Requirement

The residence requirement for an undergraduate degree at Saint Joseph's University is 60 credits. The final 30 credits must be completed at Saint Joseph's University, with the exception of an approved degree program or an approved plan of acceleration.

Final Examinations

Students are required to take a final examination in each subject during the scheduled examination period at the end of each semester. With the approval of the department chair, an instructor may exempt from the final examination all students who have earned the grade of "A" in the course. Individual teachers who wish to substitute an alternative mode of evaluation for the final examination must submit a specific request in advance through their department chairperson for the approval of the appropriate Dean. The syllabus must include information on the alternative mode selected.

Grade Appeal

A student who wishes to appeal the final grade in a course should first contact the instructor of the course in an attempt to remedy the situation. If after talking with the instructor the student still thinks they have been inappropriately evaluated in the course, the student may make a written request for review to the Program Director or Department Chair, depending on the program of study. The written request must describe, in detail, the situation and reason for appealing the course grade. The program director or department chair will consult with the instructor and if a grade change is warranted, make a recommendation to the Associate Dean for approval.

Withdrawal from Course/Courses

A student who wishes to withdraw from a course after the add/drop period must obtain approval from their academic advisor no later than the withdrawal deadline for the semester as stated on the academic calendar. All withdrawn courses will be noted with a grade of "W" on the official transcript, and are not included in the grade point average calculation. A request to withdraw past this deadline requires an extraordinary reason and the approval of the respective Associate Dean overseeing the student's primary major. A withdrawal will not be permitted after the last day of classes for the semester or in contravention of the penalties imposed through the University's Academic Honesty Policy.

Class Standing

A student's class standing is separate from the definition of "Satisfactory Academic Progress". Advancement through the freshman, sophomore, junior, and senior levels is predicated on the number of credits completed and hours earned toward completion of the degree program. traditionally, eight semesters are required to finish a baccalaureate degree program. Therefore, class standing at Saint Joseph's University is based on the following scale for students in the day division:

Class Standing	Credit Hours Earned
First Year	fewer than 24
Sophomore	24 to 53
Junior	54 to 83
Senior	84 or more

Sixth Course Overload

The standard course load is five courses of 3-4 credits, up to a maximum of 17 credits, unless a student's major program of study has an approved higher credit limit. Students with superior records (traditionally 3.3 GPA and above) may petition the Dean of the appropriate college for permission to register for a sixth course. No student may register for more than six courses in a single semester. Additional tuition may be charged for a course overload.

Professional and Liberal Studies Courses

Undergraduate Day students wishing to register for Professional and Liberal Studies (PLS) courses must obtain permission from the chair of the department in which the course is offered. Juniors and seniors may take a maximum of two PLS courses per year. Sophomores are generally discouraged from taking PLS courses, although exceptions can be made at the discretion of the appropriate department chair. Freshmen may not take PLS courses.

Undergraduate Day students who are not Business majors who wish to enroll in evening HSB classes need special permission from department chairs or the Associate Dean of HSB, depending on the department. Students should discuss this with their academic advisor, prior to registering for the course, and how the course(s) fits into their overall academic plan.

Independent Study/Directed Readings and Research/Tutorials

Students who have completed four required semesters with an overall grade point average (GPA) of 3.0 or higher, or cumulative grade point average (GPA) of 3.4 or higher for courses in the major field of study, may register each semester for one upper division course in the major field

(or a closely related field) to be taken in the Independent Study/Directed Readings or Research/Tutorial format. Students are required to develop a comprehensive plan of study in consultation with the faculty member directing the course of study and receive prior approval of the department chair and the Dean's offices before the registration for the course. Such courses are offered to enrich the student's major program and not as a special arrangement to facilitate a student's fulfillment of course or credit requirements.

Minors

Students may have a minor listed on their academic record in areas where the department has an approved minor, or in an interdisciplinary program. For a minor, at least 18 credits in the specified area must be successfully completed. Students choosing a minor must seek the approval of the chair in the department of the minor no later than the last day of the add/drop period of their seventh semester. Students should also be aware that their choice of a minor may be restricted based on their major or primary area of study.

Second Major

Qualified students may request permission to pursue a second major for sound academic reason. Such a request requires the approval of the chair of the secondary major department and of the appropriate Dean. Certification of completion of requirements for the second major will be the responsibility of the chair of the secondary major department. The official transcript will record the completion of the second major. The degree granted will be the degree appropriate in the primary major. Two separate degrees will not be granted to students who complete a second major.

Second Degree

Students who have earned one bachelor's degree may request permission to return to study for a different bachelor's degree. This is the awarding of two distinct credentials. Applications for a second degree require the approval of the major department and the appropriate Dean. Candidates for a second degree must meet all standard degree requirements. Credits applied toward a first degree may be applied toward a second degree, as if the candidate were a transfer student, but at least 30 additional credits must be successfully completed for a second degree. Students who have completed a bachelor's degree are advised that a second degree is rarely, if ever, required for certification or pre-professional qualification. Specific course requirements for certification or pre-professional qualifications can usually be met by enrolling in the required courses as a non-matriculated student. Many institutions offer graduate credit for courses which may be applied toward certification requirements.

Special Program

A set of requirements leading to a specific objective secondary to the degree, either vocational or liberal, with the required courses simultaneously satisfying degree requirements, constitutes a Special Program. A minimum of 24 credits and two disciplines are necessary for a Special Program. Completion of a Special Program is noted on the student's academic record.

Leave of Absence (LOA)

A Leave of Absence (LOA) is for students who are taking time off from their formal education, with the intent to return to Saint Joseph's University. Students may not take classes at another institution and

transfer those credits back to Saint Joseph's University while they are on a leave of absence.

When approved, a leave of absence is granted for one semester and may be renewed once for a consecutive semester or a total of two leave of absences during a student's time at Saint Joseph's University. To show continuity in the academic record, a comment of "Leave of Absence" will be placed on the official transcript for the term the student is on a leave of absence.

Students on a leave of absence are reported to lenders and loan service agencies as "not enrolled" and the student needs to contact lenders for information on possible repayment requirements.

Withdrawal from the University

Undergraduate Day students should consult with their academic advisor before beginning the withdrawal process from Saint Joseph's University. The first step of the withdrawal process is to contact success@sju.edu or call 610-660-2956. Students will submit the withdrawal form and have an exit interview with a staff member from the Office of Student Success to complete the withdrawal process.

Summer and Interession Courses

Degree credit is granted for courses taken in summer sessions and the interession. Summer session courses that are part of the GEP or major course requirements must be taken at Saint Joseph's University. However, if the course is not being offered that summer and is necessary for a student to maintain standard academic progress or the proper sequence of courses in their major field of study, an exception may be granted. (Please see the Courses Taken Elsewhere policy) (p. 13)

The approved uses of summer session courses for matriculated students are as follows:

- To make up academic deficiencies, i.e., courses failed or not completed during a required semester
- To make up credit deficits, i.e., additional credits needed as result of change of major or transfer
- To enrich the student's educational program
- To reduce the student's course load in a subsequent semester

Permission to register for summer courses does not constitute permission to accelerate a degree program. For all undergraduate students the maximum number of credits allowed for any one summer part of term will typically be six. For exceptional reasons, the Dean may grant permission for an additional three credits. Registration and payment for summer credits are governed by the regulations and procedures of the summer sessions.

Academic Honors
Graduation Honors

Honors at graduation will be awarded for grade point averages in all subjects as follows:

summa cum laude	3.85
magna cum laude	3.70
cum laude	3.50

Averages for honors will be computed on the basis of work completed at Saint Joseph's University. Students must complete a minimum

of 60 credits at Saint Joseph's University to be eligible for honors at graduation.

Dean's List

Students who achieve a grade point average of 3.5 for a semester in which they are registered as a full-time student and complete a minimum of 12 at Saint Joseph's University will be included on the Dean's List.

Academic Honor Societies

Phi Beta Kappa Society

Phi Beta Kappa was established in 1776 as a philosophical society. Eventually, it evolved into the paramount honor society for the liberal arts in America. Its major goal is to support, foster, and recognize the excellence of liberal arts scholarship in the institutions of higher education in America. There are presently 262 chapters in the United States; the Saint Joseph's University chapter was established in 2001 and comprises faculty and staff members who are members of the Society. These members carry on the business of the chapter and elect the student members each year.

Student members are elected in the second semester of the junior or senior year primarily on the basis of broad cultural interests, scholarly achievement, and commitment to the intrinsic value of learning. Eligible students must complete a minimum of 90 credit hours of liberal studies among the 120 or more credit hours required for the bachelor's degree. In addition, they must have completed at least three full semesters of work (45 credits) in residence at Saint Joseph's University and be fully registered, as a full time student, for the fourth semester. They must also have obtained the minimum grade point average at Saint Joseph's University specified by the chapter. While the minimum grade point average requirements may vary slightly from year to year, usually it is 3.75 for juniors and 3.5 for seniors.

Liberal studies shall be considered to be courses designed principally for knowledge, understanding or appreciation of the natural and social world in which we live. Grades earned in applied or professional work may not be counted toward the liberal arts hours or the grade point average for eligibility. Applied and professional work shall be understood to include all training intended to develop skills or vocational techniques; this work often leads to licensure or certification. Such courses generally are taken by students who are preparing for a specific professional career. Examples of courses not recognized by the national office of Phi Beta Kappa under the heading of "liberal studies" would be those in business administration, accounting, education, journalism, library science, military science, applied physical education, speech, applied art, applied music, social work, applied communication, and computer science.

Weight will be given to the breadth of the program of each candidate as shown by the number and variety of courses taken outside of the major. Weight will also be given to the balance and proportion of the liberal arts in the student's degree program as a whole. Students who have violated the academic honesty policy of Saint Joseph's University will not be eligible for membership.

Students who complete their college studies at the end of the summer of fall terms, shall be considered for membership during the following spring.

Election to membership in Phi Beta Kappa is wholly within the discretion of the local chapter, subject only to the limitations imposed by the Constitution and By-Laws of the Chapter. No right to election shall adhere to any student solely by reason of fulfillment of the minimum grade point

average for election to "membership in course," and no reason need be given for non-election.

Beta Gamma Sigma

In the spring of 1907, a group of commerce students at the University of Wisconsin received permission from the faculty to organize a commerce honor society, which they called Beta Gamma Sigma. The purpose of the Society was to encourage and reward scholarship and accomplishment in the field of business studies among commerce students at the University. At about the same time, students at the University of Illinois and the University of California felt the need for such an organization on their campuses and respectively organized Delta Kappa Chi (1910) and The Economics Club (1906). In 1913, having become aware of their coexistence and common purpose, representatives of the three societies met at Madison, Wisconsin, to consummate a merger which made Beta Gamma Sigma into a national organization.

Action was initiated in 1919 to establish Beta Gamma Sigma as the only scholastic honor society recognized by the American Assembly of Collegiate Schools of Business (AACSB). This organization, which was renamed AACSB International - The Association to Advance Collegiate Schools of Business, includes in its membership collegiate schools of business that meet high standards of eligibility required of accredited member institutions with respect to curricula, teaching staff, teaching loads, library and laboratory facilities. Beta Gamma Sigma amended its constitution in 1921 to restrict the installation of new chapters to collegiate schools of business which are accredited members of AACSB International.

The Mission of the International Honor Society Beta Gamma Sigma is to encourage and honor academic achievement in the study of business, to foster personal and professional excellence, to advance the values of the Society, and to serve its lifelong members.

Other Honors Societies

Distinguished achievement is also recognized by admission to Alpha Sigma Nu, national Jesuit honor society, and the following more specialized national honor societies:

- Upsilon Pi Epsilon (Computer Science),
- Omicron Delta Epsilon (Economics),
- Alpha Upsilon Alpha (Education),
- Kappa Delta Pi (Education),
- Delta Phi Alpha (German),
- Phi Alpha Theta (History),
- Pi Mu Epsilon (Mathematics),
- Phi Sigma Iota (Modern Languages/Classics),
- Sigma Xi (Student Research),
- Phi Sigma Tau (Philosophy),
- Sigma Pi Sigma (Physics),
- Pi Sigma Alpha (Political Science),
- Alpha Epsilon Delta (Premedical),
- Psi Chi (Psychology),
- Alpha Kappa Delta (Sociology),
- Sigma Delta Pi (Spanish), and
- Theta Alpha Kappa (Theology).

Academic Probation and Dismissal

Minimum Standards for Retention

A cumulative grade point average of 2.0 is the minimum required for a bachelor’s degree from Saint Joseph’s University. Students with a grade point average below 2.0 (cumulative or semester) at the end of any semester will be cautioned that their level of performance may be insufficient to satisfy the requirements for graduation.

At the end of the fall or spring semester, students who have a cumulative grade point average below the minimum level indicated in the table below will be automatically recommended for academic dismissal. The advisor is notified as well, and the student is informed of their options and is required to meet with their advisor.

Students may appeal academic dismissal in writing or in person (after both semesters) in front of the Board of Student Academic Review (BOSAR) by a date to be set by the Associate Deans in consultation with the Registrar, which can then recommend one of the following:

- Student is placed on academic probation
- Student is suspended from Saint Joseph’s University
- Student is dismissed from Saint Joseph’s University

At the end of the second semester and following, students who have a cumulative grade point average below the minimum level indicated in the table below will be reviewed by the Board on Student Academic Review (BOSAR), which could lead to a recommendation for academic probation, suspension, or dismissal. The advisor is notified as well, and the student is required to meet with their advisor.

If students are on probation for any four semesters they will be summoned by the Board of Student Academic Review (BOSAR)

Semester completed	Minimum GPA
At the end of the 1st semester	1.8
At the end of the 2nd semester	1.8
At the end of the 3rd semester	1.8
At the end of the 4th semester	1.8
At the end of the 5th semester	1.9
At the end of the 6th semester	1.9
At the end of the 7th semester	2.0

Transfer students are required to maintain the minimum GPA for the semester level to which they are assigned. Courses at other institutions for which they received academic credit at SJU upon transferring and which contribute to their SJU cumulative grade point average are included in these calculations.

Academic Probation

Students who fail to maintain the required grade point average or an acceptable level of progress toward the degree are placed on probation by their Dean, acting on the recommendation of the Board on Student Academic Review (BOSAR). A student on probation is required to report to the Dean, who may prescribe appropriate remedial measures, and is not permitted to register for more than five courses a semester. If circumstances warrant, the Dean may require a student on probation to limit their course load to four with no reduction in tuition.

The standard period of probation will extend one semester, during which time the student must show sufficient improvement to raise their

GPA above the minimum level. In extraordinary cases, one additional semester of probation may be allowed by the Board on Student Academic Review (BOSAR) if the improvement during the first probationary semester indicates that the student will probably reach the necessary level by the end of the second probationary semester. A student may be permitted as many as three semesters of probations, provided that no more than two are consecutive.

A student on academic probation is ineligible to participate in major extracurricular activities, including intercollegiate athletics, or to serve as officer or director of any student activity.

Academic Suspension

A student who is showing slow improvement in their level of performance or rate of progress during this period of probation may be subject to academic suspension by the appropriate Dean on the recommendation of the Board on Student Academic Review (BOSAR). While a student is traditionally granted at least one academic probation before suspension, the Board on Student Academic Review (BOSAR) may recommend academic suspension without any probation when the student’s cumulative grade point average is so low that the Board on Student Academic Review (BOSAR) determines an academic probation would not be in the student’s best interest. A student who has been placed on suspension by the appropriate Dean may return to Saint Joseph’s University only after being away for one semester but not more than four semesters.

Academic Dismissal

A student who fails to make sufficient improvement in their level of performance or rate of progress during the period of probation, or after coming back from suspension, may be subject to academic dismissal by the appropriate Dean.

While a student is traditionally granted at least one academic probation or suspension before dismissal, the Board on Student Academic Review (BOSAR) may recommend academic dismissal without any probation or suspension where the student’s cumulative grade point average is so low that the Board on Student Academic Review (BOSAR) determines an academic probation and/or suspension would not be in the student’s best interest. A student who has been academically dismissed may not be a student at Saint Joseph’s University in the future without formally re-applying to the University.

Board of Student Academic Review

The Board of Student Academic Review (BOSAR) shall consist of:

- Three (3) Associate Deans, one from each college and school: College of Arts and Sciences, Haub School of Business, and School of Health Studies and Education. One of the Associate Deans should serve as Chair and another Associate Dean should serve as co-Chair.
- Five (5) faculty members representing each of the five divisions of Saint Joseph’s University
- One (1) student member

In extraordinary circumstances, BOSAR has the authority to recommend to the appropriate Dean that the student receive academic forgiveness, expunging all the student’s grades from the most recent semester from their academic transcript. This policy cannot be used to expunge some or all of the grades from any previous semester, other than the most recent

one, or to expunge only some but not all of the grades from the most recent semester.

Academic Forgiveness

Undergraduate and graduate students who return following an absence of at least one calendar year may request academic forgiveness. If academic forgiveness is granted, each grade of C- or below for undergraduate students, and B- or below for graduate students will be eligible to be replaced with a grade of "AF". Courses with a grade of AF will no longer count for credit or be included in the GPA calculation. Additionally, the student's transcript will have a comment added denoting that academic forgiveness was granted in the applicable semesters. To apply for academic forgiveness, the student must submit a letter to the appropriate Dean explaining how they will achieve successful degree completion. This explanation may involve addressing the reasons for their poor original performance and lessons learned during their time away. Application for Academic Forgiveness must be completed at least 4 weeks before registration for courses. Please see application form (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>) for additional details. (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>)

Guidelines

- Students may only receive academic forgiveness once.
- Courses that a student withdrew from are not eligible for academic forgiveness.
- Once a student has been approved for academic forgiveness, the action is irreversible and final.
- Failing grades that result from violations of the Academic Honesty Policy cannot be changed under the terms of this policy.
- Federal guidelines allow Title IV Federal Financial Aid to be applied for only one retake of a course with a passing grade. Questions related to financial aid eligibility following academic forgiveness can be directed to finaid@sju.edu.
- A student's Satisfactory Academic Progress is not impacted by academic forgiveness as it relates to federal, state, and institutional financial aid requirements. Please review the SAP policies relative to financial aid at sju.edu/sap/ (<http://sju.edu/sap/>).

Admission Policy for Academically Dismissed SJU Day Students into PSL/HDC Programs

A Saint Joseph's University day student who has not met the academic standards of the University, as determined by the Board of Academic Review (BOSAR) and Dean of that school, and has been academically dismissed from the day program will not be considered for admission to the PLS/HDC Program for a period of at least one semester or full summer term following dismissal from the day program.

The PLS/HDC Program reserves the right to deny admission to any applicant who has a documented history of violating University rules and regulations or who has previously been expelled or suspended from the University.

Satisfactory Academic Progress Satisfactory Academic Progress (SAP)

The standard academic program in the undergraduate day colleges at Saint Joseph's University requires students to progress toward their degree in eight standard (fall and spring) semesters in which 15 credits are taken each semester. Following such a program a student will have completed 120 credits by the end of the eighth semester. Transfer students must complete a minimum of 60 credits at Saint Joseph's University.

Satisfactory academic progress at Saint Joseph's University requires students to earn a minimum of 24 credits in at least eight courses in each academic year, beginning in September and ending in August.

It is the policy of Saint Joseph's University to allow for a ninth and sometimes a tenth semester if significant reasons or a change in major justify such an extension. Permission for a ninth or tenth semester will ordinarily be obtained from the associate academic Dean of the appropriate college. The Deans of the Colleges reserve the right to consider special cases differing from the above statement.

Students who receive federal, state, or University aid need to maintain satisfactory academic progress in order to keep their eligibility. Evaluation of a student's academic progress to determine financial assistance eligibility will be made at the end of the spring semester. Students not meeting criteria for satisfactory progress will be informed in early summer that their current academic record disqualifies them for financial assistance.

Students should not assume that Saint Joseph's University will recommend and/or award financial assistance for more than eight semesters. Students intending to complete their degree program in more than eight semesters should first consult with the appropriate academic Dean and the Student Financial Services Office.

In addition to the quantitative parameter of 24 earned credits within each academic year as a requirement for retaining financial assistance, Saint Joseph's University also adheres to the qualitative parameter defined as follows:

Utilizing the academic probation structure as described in this catalog, the recommendation of the Board on Student Academic Review (BOSAR) and approval of the appropriate Dean to impose an academic dismissal on a student automatically includes the termination of financial assistance by Saint Joseph's University. Under no circumstances will a student be eligible for financial assistance beyond the second consecutive academic probation.

Academic dismissal is mandatory if the student has not achieved the required cumulative grade point average at the end of the second academic probation. The Board on Student Academic Review (BOSAR) may recommend the continuation of a second academic probation only for a student who has completed six semesters of study or for a student who has changed their major during the second probation. Academic dismissal may also occur after the first probation if sufficient improvement in studies has not been shown. In rare instances academic dismissal may be given without any previous probation if the student's academic standing is so poor that academic probation would not be in the student's best interest.

The qualitative parameter for financial assistance is linked to the academic dismissal procedures of the Saint Joseph's University.

Since these judgments involve issues of academic qualifications and performance as well as federal and state regulations concerning financial assistance, decisions about the loss of financial assistance will be made jointly by the Student Financial Services Director and the appropriate academic Dean, acting on the recommendation of the Board on Student Academic Review (BOSAR).

Undergraduate Adult Policies

Academic Policies

Degree and Certificate Requirements

Students must complete the required number of credits listed in the various curricula (see Curricula section) to be eligible for a degree or certificate. Students must complete a minimum of 120 credits for a Bachelor's Degree and minimum 60 credits for an Associate Degree. Students may not graduate with more than one certificate or degree in the same field. Three credits represent a total of 42 instructional hours over the course of a semester.

Students will consult with their faculty advisors to select the courses that best serve their educational needs, and meet the requirements for their degree. A repeated course, even when the student receives a passing grade on both occasions for the course, will be counted once for graduation requirements. The student is responsible for planning a program of courses that satisfies all degree requirements.

Second Degree Candidates

Students who have earned a bachelor's degree in a program that required a minimum of 120 credits from a previous college or university may pursue a second undergraduate degree through the PLS or HDC Adult Learner Program. These students are required to complete a minimum of 30 credits at Saint Joseph's University, including any general education requirements not yet satisfied and a minimum of 12 upper division credits in their major, unless specifically waived by the appropriate Department Chairperson or Program Director.

Second Major

Students may request permission to pursue a second major offered through PLS or HDC for sound academic reasons. Such a request requires the approval of the PLS or HDC Advising Office and Department Chairperson or Program Director for the major. The student must meet all the prerequisites and other requirements for both majors. The final transcript, not the diploma, will record the completion of the second major. The degree granted will be the degree appropriate to the primary major. Two separate degrees will not be awarded to students who complete a second major.

A Student whose primary major is Business Administration is not permitted to declare a secondary major in another business discipline. Likewise, a student whose primary major is in a business discipline other than Business Administration is not permitted to declare a secondary major in Business Administration.

Minors

Bachelor's degree students may pursue a minor or multiple minors. Approval from the Department Chairperson or Program Director for the minor is required. At least one-half of the courses required for the minor(s) must be completed at Saint Joseph's University. More

information about minor options and requirements can be found under the Undergraduate Day Programs section of the catalog.

A Student whose major is Business Administration is not permitted to declare a minor in another business discipline. Likewise, a student whose major is in a business discipline other than Business Administration is not permitted to declare a minor in Business Administration.

Course Overload

Students are permitted to take a maximum of 16 credits per semester. Approval for a course overload is considered only in cases when a student's previous academic performance at Saint Joseph's University shows evidence of probable success with the additional course registration.

Withdrawal from a Course/Courses

A student who wishes to withdraw from a course must submit a request to withdraw from the course no later than the withdrawal deadline. Withdrawal deadlines are listed on the Saint Joseph's University academic calendar. Students are encouraged to discuss withdrawing from a course with their instructor prior to submitting the withdrawal form through their Advising Office. Withdrawal from any course without completing the required form will result in an grade of "F" and will be calculated into a student's grade point average. Students are permitted to withdraw from an individual course or from all courses. All withdrawn courses will be noted with a grade of "W" on the official transcript, and are not included in the grade point average calculation. Grading and refund regulations apply only to the courses a student has officially withdrawn from.

Withdrawal from a course after the last day of the published withdrawal deadline requires documentation of an extraordinary and unusual reason. Students must submit an Extraordinary Withdrawal form and documentation to support the withdrawal request through their Advising Office for final approval by the appropriate Associate Dean. Medical documentation must be submitted directly to the Office of Student Disability Services. The avoidance of undesirable grades is not a sufficient reason for an extraordinary withdrawal. Extraordinary withdrawals are not permitted after the last day of classes for the semester.

The University reserves the right to request the withdrawal of any student. Withdrawals are not permitted for the purpose of avoiding penalties imposed through the Saint Joseph's University Academic Honesty Policy.

Class Standing

Advancement through the first-year, sophomore, junior, and senior levels is predicated on the number of hours earned toward completion of the degree program. Class standing at Saint Joseph's University is based on the following scale for candidates in the PLS and HDC undergraduate programs.

Class Standing	Credit Hours Earned
First-Year	fewer than 24
Sophomore	24 to 53
Junior	54 to 83
Senior	84 or more

Student Deactivation

After two years of non-attendance, PLS and HDC students are deactivated and are required to apply for readmission if and when they decide to return to their studies at Saint Joseph's University. Students are subject to all curricular requirements at the time of readmission.

Leave of Absence (LOA)

PLS and HDC students may request a leave of absence for up to two years. After two years, a student will be deactivated and will be required to re-apply to be considered for readmission to a PLS or HDC program. Students are required to submit a completed PLS/HDC Leave of Absence form to their Advising Office.

Withdrawal from the University

A student may withdraw from Saint Joseph's University provided any indebtedness to Saint Joseph's University is settled, and they are not liable for dismissal because of an academic violation or disciplinary action. Students are required to submit a completed Withdrawal from University form to their Advising Office.

Academic Honors Graduation Honors

Honors at graduation will be awarded for grade point averages in all subjects as follows:

summa cum laude	3.85
magna cum laude	3.70
cum laude	3.50

Averages for honors will be computed on the basis of work completed at Saint Joseph's University in the PLS/HDC program only. Students must complete a minimum of 60 credits in the PLS/HDC Program to be eligible for honors at graduation.

Dean's List

The Dean's List is published at the completion of each semester. PLS and HDC students working toward a bachelor's degree are eligible for this honor.

A student must complete at least 30 credits through the Saint Joseph's University PLS/HDC program before becoming eligible. A cumulative grade point average of 3.50 is required to achieve and to remain on the Dean's List. A minimum of six credits must be completed during the semester to be eligible for Dean's List. A failing semester grade in the current semester disqualifies a student from achieving Dean's List.

Academic Honor Societies

Beta Gamma Sigma Business Honor Society

Beta Gamma Sigma is the international honor society serving business programs accredited by AACSB International - The Association to Advance Collegiate Schools of Business. Membership in Beta Gamma Sigma is the highest recognition a business student anywhere in the world can receive in a business program accredited by AACSB International.

HDC Students are eligible for invitation to membership in the Beta Gamma Sigma International Business Honor Society. In order to receive an invitation to Beta Gamma Sigma, students must be a bachelor's or

associate's degree-seeking student and fulfill either of the following criteria:

Tier 1: Be in the top 10% of eligible HDC students who have earned at least 105 overall credits (including transfer credits) as well as at least 30 credits in the HDC Program

Tier 2: Be in the top 7% of eligible HDC students who have earned more than 75 overall credits and fewer than 105 overall credits (including transfer credits) as well as at least 30 credits in the HDC Program

Invitations are based on cumulative Saint Joseph's University GPAs on the HDC Program level only, and are calculated as of the end of the Intercession semester immediately preceding the invitation. Invitations are generally sent late in the spring semester. Certificate students are not eligible for membership.

Alpha Sigma Lambda Honor Society – Alpha Zeta Chapter

Alpha Sigma Lambda is the oldest and largest national honor society for non-traditional students who achieve outstanding scholastic standards and demonstrate leadership while managing the responsibilities of work and family.

The membership comprises undergraduate adult students and alumni. To be considered for induction into Alpha Sigma Lambda at Saint Joseph's University, a student must:

- Be a matriculated student in a baccalaureate degree program offered through PLS or HDC
- Complete a minimum of 30 credits through the Saint Joseph's University Adult Undergraduate Program
- Have earned 12 or more credits in the liberal arts/sciences (this may include transfer credits)
- Have a minimum GPA of 3.20
- Be in the top 15% of the students in a bachelors program with a minimum of 30 credits earned through PLS/HDC and 12 or more credits in the liberal arts/sciences

Academic Probation and Dismissal Minimum Standards for Retention

PLS and HDC students are permitted to take courses at a rate that is appropriate and convenient for them, normally without incurring any penalties for delay in completing degree program requirements. Students pursuing Teacher Certification, however, are required to complete their certification within the time stipulated in departmental regulations.

Grades for PLS and HDC students are reviewed at the end of the fall, spring, and summer semesters. Students with a Saint Joseph's University cumulative grade point average below 2.0 will be reviewed by the Undergraduate Adult Learner Academic Review Board, which could lead to a recommendation for academic probation, suspension, or dismissal. Saint Joseph's University grade point average is calculated by dividing quality points by GPA hours for courses completed at Saint Joseph's University. Failures are calculated into the GPA, but withdrawals are not.

PLS and HDC students who, after attempting their first 12 credits at Saint Joseph's University, and have a cumulative grade point average below 1.0 will be recommended for academic dismissal. They will be informed of

the relevant policies, including the right to appeal their dismissal to the Undergraduate Adult Learner Academic Review Board. Please see the section on Academic Dismissal for additional information.

Academic Probation

PLS and HDC students who are not achieving satisfactory academic progress according to the standards listed above (i.e., cumulative GPA < 2.0) will be placed on academic probation. Students who have a GPA above a 2.0 but below a 2.25 will be given an academic warning.

When on academic probation, a degree seeking student may be given 1-2 semesters, maximum of 15 additional credits, to raise their GPA to the required 2.0 standard. In extraordinary cases, one additional semester of probation may be granted if the improvement during the first probationary period indicates that the student will probably reach the necessary level by the end of an additional probationary semester. If the student does not raise their GPA to the required level within this timeframe, they will be subject to dismissal.

Post-Baccalaureate Certificate students who are placed on academic probation will have up to six additional credits or one semester to raise their GPA to 2.0. If the student does not raise their GPA to the required level, they will be subject to dismissal.

PLS and HDC students placed on probation are required to meet with their advisor, and in some instances, the Associate Dean at the beginning of each semester to review their academic schedule and discuss a plan for success. Students on academic probation may have a variety of conditions placed on them. These conditions include, but are not limited to the following:

- Registration may be limited to a maximum of two courses per semester, unless full time enrollment is required for financial aid or other reasons.
- Required consultation with an advisor prior to registering for courses for the following semester.
- Enrollment in the INT101 Learning Strategies course.
- Attainment of a minimum term GPA required to return to good academic standing.
- Any other appropriate remedial measures that will help ensure the student's academic success.

Students may lose their financial aid if they do not attain the required GPA after being placed on probation. In rare instances, the loss of financial aid may be stipulated without any previous probation if the student's academic standing is so poor that academic probation would not be in the student's best interest. Since these judgments involve issues of academic qualifications and performance, as well as federal and state regulations concerning financial aid, decisions about the loss of financial aid will be made jointly by the Director of Student Financial Services and the appropriate Associate Dean acting on the recommendations of the Undergraduate Adult Learner Academic Review Board. Please see Satisfactory Academic Progress and Financial Aid for additional information. Students on probation making inquiries must address them to the Director of Advising for PLS or HDC. For further information regarding financial aid, please contact the Office of Financial Aid.

Academic Suspension

A student who is showing slow improvement in their level of performance or rate of progress during the period of probation may be subject to academic suspension by the appropriate Dean on the recommendation of the Undergraduate Adult Learner Academic Review Board. While a student is usually granted at least one academic probation before suspension, the Undergraduate Adult Academic Review Board may recommend academic suspension without any probation when the student's cumulative grade point average is so low that it is determined academic probation would not be in the student's best interest. A student placed on suspension by the appropriate Dean may return to Saint Joseph's University only after being away for at least one semester but not more than two academic years. If a student wishes to return after two years, the student will be required to reapply for admission.

Academic Dismissal

A student who fails to make sufficient improvement in their level of performance or rate of progress during the period of probation, or after returning from suspension, may be subject to academic dismissal by the appropriate Dean. While a student is usually granted at least one academic probation or suspension before dismissal, the Undergraduate Adult Learner Academic Review Board may recommend academic dismissal without any probation or suspension when the student's cumulative grade point average is so low that it is determined academic probation and/or suspension would not be in the student's best interest.

When dismissal is recommended, the student will be informed of the relevant policies, including the right to appeal their dismissal to the Undergraduate Adult Learner Academic Review Board. Students who appeal the recommendation for academic dismissal must do so in writing within ten business days of the date of their dismissal letter from the Dean. The Undergraduate Adult Learner Academic Review Board will consider extenuating circumstances that may have entered into a student's situation and will decide whether and under what circumstances the student may be readmitted. If readmitted, the Undergraduate Adult Learner Academic Review Board may recommend the student be placed on academic probation for the next semester or serve a suspension period before returning to their studies.

A student may also be dismissed or suspended from the University under the provisions of the Academic Honesty Policy. Please see Academic Honesty Policy section.

Readmission Following Withdrawal or Dismissal

Students seeking readmission who have voluntarily withdrawn from the university are required to reapply to the university after a two-year absence, following all of the requirements for readmission into their desired program. Students who have been dismissed from either the PLS or HDC programs due to failure to meet academic standards or because of an academic integrity violation will not be reconsidered for readmission into an undergraduate program at Saint Joseph's University.

Academic Forgiveness

Undergraduate and graduate students who return following an absence of at least one calendar year may request academic forgiveness. If academic forgiveness is granted, each grade of C- or below for undergraduate students, and B- or below for graduate students will be eligible to be replaced with a grade of "AF". Courses with a grade of AF will no longer count for credit or be included in the GPA calculation.

Additionally, the student's transcript will have a comment added denoting that academic forgiveness was granted in the applicable semesters. To apply for academic forgiveness, the student must submit a letter to the appropriate Dean explaining how they will achieve successful degree completion. This explanation may involve addressing the reasons for their poor original performance and lessons learned during their time away. Application for Academic Forgiveness must be completed at least 4 weeks before registration for courses. Please see application form (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>) for additional details. (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>)

Guidelines

- Students may only receive academic forgiveness once.
- Courses that a student withdrew from are not eligible for academic forgiveness.
- Once a student has been approved for academic forgiveness, the action is irreversible and final.
- Failing grades that result from violations of the Academic Honesty Policy cannot be changed under the terms of this policy.
- Federal guidelines allow Title IV Federal Financial Aid to be applied for only one retake of a course with a passing grade. Questions related to financial aid eligibility following academic forgiveness can be directed to finaid@sju.edu.
- A student's Satisfactory Academic Progress is not impacted by academic forgiveness as it relates to federal, state, and institutional financial aid requirements. Please review the SAP policies relative to financial aid at sju.edu/sap (<http://sju.edu/sap/>).

Satisfactory Academic Progress

Satisfactory Academic Progress (SAP)

PLS/HDC students who are receiving federal, state, or University aid are required to maintain satisfactory academic progress (SAP) and also meet the Minimum Requirements for Retention in order to keep their financial aid eligibility.

Satisfactory academic progress (SAP) is reviewed after the spring semester each academic year. Both cumulative GPA and the ratio of credits earned to credits attempted are used to determine academic progress. Students who do not meet the criteria for satisfactory academic progress will be informed at the end of each spring semester that their current academic record disqualifies them for financial assistance. These students will be given the opportunity to file an academic plan with the Dean's Office to be considered for financial aid for the coming academic year.

Students must maintain the following minimum cumulative GPA for satisfactory academic progress (SAP). These standards are in accordance with the PLS/HDC Academic Probation Policy.

- 1.8 cumulative GPA up to 60 credits earned
- 1.9 cumulative GPA for 61-90 credits earned
- 2.0 cumulative GPA above 90 credits earned

In addition to maintaining the required GPA, PLS/HDC students must earn a passing grade in a minimum of 67% of overall credits attempted in order to be considered as making satisfactory academic progress. For example, if a student registers for 12 credits/four courses, the student must earn a passing grade in at least three of these courses to meet this requirement.

Withdrawals are considered when calculating the ratio of credits earned to credits attempted. Although withdrawals do not impact grade point average (GPA), they do negatively impact the measure of satisfactory academic progress.

Students not achieving satisfactory academic progress (SAP) based on the above criteria must submit an academic plan explaining the circumstances that led to the failure to meet the standards and the changes that will allow the student to be successful. The student should identify and provide documentation of any extenuating circumstances (e.g., loss of job, a major financial life event, personal illness, illness or death of family member, or other special circumstances) that may have hindered their ability to achieve satisfactory academic progress (SAP). The appropriate Associate Dean will review plan to determine if the student will be allowed to continue to receive federal financial assistance. For a student's academic plan to be considered, it must be submitted by the first day of classes of the traditional full-term semester for which the student is requesting federal aid.

Graduate Policies

Academic Policies

Academic Standing

Good Academic Standing is defined as students enrolled in master's or non-degree programs who maintain a 3.00 or above cumulative GPA, as calculated at the end of the fall, spring, and summer terms.

Course Load

Full-time graduate students are those who enroll for six or more credits each semester. Half-time graduate students are those who enroll for at least three credits, and fewer than six credits each semester. A student who is employed full-time is encouraged to take six credits (two courses) each semester, and must receive permission from the student's Graduate Program Director before registering for nine or more credits (three or more courses) each semester.

Course Overload

Requests to enroll in 15 credit hours (five courses) in a fall or spring semester from a full-time graduate student with a cumulative grade point average (GPA) below 3.50 will not typically be approved. All graduate course overloads must be approved by the Graduate Program Director and Associate Dean. No overload requests will be considered for the summer term. Certain graduate programs restrict students from registering for more than nine credit hours (three courses) in the summer terms. Students enrolled in a first semester of graduate study are not granted permission to take course overloads.

Course Repeat

A graduate student may voluntarily repeat one course while enrolled in a program, and it can only be a course in which a grade of C or below was received. The course may be repeated only once. Students who are placed on academic probation may be required to repeat one or more courses as part of their plan for reinstatement to good academic standing—see policy on Levels of Academic Progress, Probation, and Dismissal. Courses that students are required to repeat as part of their academic probation or reinstatement do not count as "voluntarily" repeated courses. When a course is repeated, both the original and repeated grade appear on the academic record; both grades will be used

in calculating the grade point average. Course credit may be applied toward degree requirements only once, even if a course is repeated.

Time to Completion

Each student is expected to make academic progress toward the degree or certificate to remain in good standing. After the establishing of degree candidacy, a maximum of five years will be allowed for the completion of the degree requirements. Under extenuating circumstances, a student may request an extension of this time frame.

Students who exceed the time limit to complete their program will be dismissed from the program.

Haub School of Business

Students enrolled in the MBA or MS programs have six years to complete their MS degree from Saint Joseph's University. This six-year limit begins with the student's first core course. Extensions beyond this limit may be made only with the approval of the Program Director, and only for unusual and serious circumstances.

Students who exceed the time limit to complete the MS Program will be dismissed from the program. Such students must reapply for admission into the program as new students and start the program with no credit from previous courses taken.

Grievance Procedure

Students who have a concern regarding an academic matter may seek assistance. The procedure for resolving academic program concerns (see note of grade appeal process below) begins with the course instructor. A student who has a concern about a final course grade should first consult the grade appeal process in the following section. If the student is not satisfied with the response or resolution achieved at this first level, or if speaking with the faculty member presents a conflict of interest for the student, the student should proceed to speak with their Graduate Program Director. If the student is not satisfied with the response or resolution achieved through the Graduate Program Director, the student should proceed to speak with the Department Chairperson. If the student is still not satisfied with the response or resolution achieved through the Department Chairperson, or if speaking with the Department Chairperson presents a conflict of interest for the student, the next step is to request a review of the concern in writing to the Associate Dean. All requests to present a concern to an Associate Dean must be first summarized in writing in the form of a petition by the student and submitted. A decision on a grievance by the College Dean represents a final level of review. During all stages of the process, the Graduate Program Director or representative designated by the Dean's Office will serve as the point of contact for the student filing the complaint.

Appealing a Course Grade

The instructor for a course has the responsibility for setting the requirements for a course and making an evaluation of students' work. Once a grade has been given, the instructor is not free to change the grade unless the instructor indicates to the Registrar that an error was made in the original grade transmitted. If a student believes that an error has been made, they must take the initiative in bringing about the necessary correction before the conclusion of the semester or immediately following the semester in which the course was taken. The typical procedure for requesting a correction would be through direct discussion between the student and the instructor. If redress cannot be attained through such discussions, the student may next

appeal to the Graduate Program Director. If resolution cannot be attained through appeal, the student may next appeal in writing to the Department Chairperson. All requests to present a concern to an Associate Dean must be first summarized in writing in the form of a petition by the student and submitted.

Leave of Absence (LOA)

Under special circumstances (illness, family hardship, work or military service, etc.), a student may request a leave of absence from their graduate program. An approved leave of absence does not automatically cancel a student's registration for courses. If the student has active registrations for the term(s) included in the approved leave of absence, a student must drop or withdraw their registration(s). Failure to do so will result in billing and assigned grades for the term(s). Students are not permitted to enroll at another institution while under a leave of absence status. The maximum time permitted for a leave of absence is two years. After a two-year period, the student will be deactivated and will be required to re-apply to be considered for reinstatement to a program. Students are required to submit a completed Graduate Leave of Absence form.

MSPAS students should consult the PA Student Handbook for all options for Leave of Absence or Temporary Separation.

Withdrawal from a Course/Courses

It is strongly suggested that students seek counsel from their Graduate Program Director or Advisor before submitting a course withdrawal. All withdrawn courses will be noted with a grade of "W" on the official transcript, and are not included in the grade point average calculation. Withdrawing from a course can have financial and academic implications that should be taken into consideration when making this decision. Changes in financial aid rules and veterans education benefits have further complicated the course withdrawal process; only trained representatives have the knowledge to help students make the best decision(s)—financially and academically.

Withdrawal from a Course/Courses for MSPAS Program

Students must advance sequentially within their cohort; therefore, individual course withdrawal is not allowed without automatically decelerating. Please see the Program Deceleration Policy (p. 33) for details regarding deceleration. All other course withdrawals effectively end matriculation in the program. For additional details, please see PA Student Handbook.

Withdrawal from the University

A student may elect to file a total withdrawal from a graduate program of study at Saint Joseph's University. The student must not have any outstanding tuition debt, and must not meet the conditions for dismissal due to an academic violation or disciplinary action. Students are required to submit a completed Withdraw from University form.

Administrative Withdrawal

Graduate students may be administratively withdrawn from Saint Joseph's University, after due notice, for an academic or disciplinary action or failure to satisfy overdue financial obligations or to comply with administrative requirements of Saint Joseph's University.

Readmission After Withdrawal or Dismissal

When seeking readmission, students who have voluntarily withdrawn from Saint Joseph's University or are no longer active due to prolonged absence from the University are required to reapply. Students should contact gradaute@sju.edu for more information.

Students who have been dismissed from a Graduate Arts and Sciences program due to failure to meet academic progress or because of an academic integrity violation may not reapply to their previous program or any other graduate program offered by the College of Arts and Sciences.

Statistics Proficiency

All students in the MSBIA Program must demonstrate proficiency in statistics prior to the start of DSS 610 through an online learning module (ALEKS). Students with strong statistical background may test out. Students must complete 100% of the module before the start of DSS 610. Further details can be obtained from the MSBIA Program Director or the HSB Graduate Program Office.

Academic Probation and Dismissal

Students in graduate certificate and master's programs are placed on academic probation when their cumulative GPA falls below 3.00.

At the end of each semester, the appropriate Graduate Office will notify the students who are either placed on academic probation or are academically dismissed via email. Probation notices will direct students to meet with their designated graduate advisor at the beginning of the probation period to create an academic performance improvement plan.

Graduate students placed on academic probation are given a maximum of two probationary semesters to raise their cumulative GPA to the minimum standard of 3.00.

Haub School of Business

The grading system in effect at Saint Joseph's University will apply to courses in master's programs. As per University guidelines for graduate study, a student enrolled in a master's program who receives a single grade of C or below for three (3) credit hours will receive a warning letter. Students who receive a grade of C or below for six (6) credit hours will be placed on academic probation and will be so notified in writing. Students who receive a grade of C or below for nine (9) credit hours will be dismissed from the program.

Graduate students must fulfill all credit hour requirements for the master's degree. Each candidate for graduation must have at least a 3.0 cumulative GPA, no more than two grades of C, and no F grades outstanding in order to be certified for graduation. The student, with support from the Program Director and Student Records Offices, is responsible for monitoring their own academic progress throughout the course of the program.

Continued Academic Probation - Second Probation

When placed on academic probation, graduate students are given one probationary semester to raise their cumulative GPA. Graduate students are required to achieve required achieve an overall GPA of 3.00 to be taken off probation, regardless of progress made during the probationary

semester. Failure to do so will result in the student being placed on continued or second academic probation.

If the overall GPA remains below 3.00 after a second probationary semester, the student may be academically dismissed.

Students on academic probation may be asked to repeat the course(s) that caused the cumulative GPA to drop below 3.00. The course(s) should be taken within the next two semesters of enrollment after the academic probation status is applied. The Graduate Program Director will make this determination as part of the student's performance improvement plan.

Academic Dismissal

The University reserves the right to refuse the privilege of further attendance to graduate students who fail to meet minimum academic requirements with or without a probationary period.

The University also reserves the right to change the requirements for retention and graduation for graduate or doctoral students, and every candidate for a degree or certificate program shall be held in compliance with changes, as far as the remaining portion of their course of study is affected.

Certain graduate programs may have more stringent retention and dismissal standards. Students enrolled in these programs should consult with their program advisors for retention and graduation requirements.

College of Arts and Sciences

Master of Science in Psychology: Students enrolled in this program who receive two final course grades of C+ or below will be dismissed from the program.

Other Master's Degree Programs (M.A. & M.S.):

30-36 credits: Students enrolled in master's programs requiring between 30-36 credits who receive one final course grade of C+ or below for three graduate courses (9 credits) will be dismissed from the program.

42-48 credits: Students enrolled in master's programs requiring 42-48 total credits who receive four final course grades of C+ or below (or 12 credits) will be dismissed from the program.

School of Education and Human Development

Certificate Programs and Graduate Teacher and Administrative Certifications: Students enrolled in a certification bearing program requiring 16 or fewer credits who receive one final course grade of C+ or below will be dismissed from the program. Students enrolled in a certificate or certification program requiring 18-30 credits who receive two final course grades of C+ or below will be dismissed from the program.

School of Health Professions

See MSPAS Program Policies (p. 33).

Graduate Appeal of Academic Dismissal

A formal written appeal may be submitted to the Graduate Program Director by a student based on one or more of the following grounds:

- Violation of official policy or procedural error by academic or administrative personnel.
- Special mitigating circumstances beyond the student's control affecting the student's academic progress.

The following circumstances could prevent a student from satisfactorily completing a course:

- A severe illness or other debilitating condition.
- A student who is the primary care provider for a sick, injured, or needy person in family or friend circle.
- The death of a family member, friend, or someone in their relationship circle.
- The active duty service as a member of the National Guard or the armed forces of the United States.
- The change of the student's work schedule beyond the control of the student.
- Other good cause as determined by the Dean of the College or their designee.

Poor performance in coursework, poor work/study habits, missed deadlines, or change of major or concentration are not appropriate grounds for appeal. A student submitting an appeal based on mitigating circumstances is also required to provide specific evidence in support of the issue or event that impaired the student's academic performance.

The student must also provide objective documentation about the events and/or situations with respect to the subsequent impact on their learning.

Document Examples:

- Newspaper notice, copy of death certificate or obituary.
- Physician's letter explaining a medical condition and its effects or medical records.
- Photos, witness statements, copy of police report, etc.
- Court documents, bail documents, letter from a lawyer, police, reports, etc.
- Clinic notes, prescription receipts, and physician's notes are not considered sufficient documentation.

Students are not required to appear in-person for a formal appeal hearing.

Graduate Dismissal Appeals Process

First Level Review

Submitted academic dismissal appeal forms will be reviewed by the Graduate Program Director and Department Chair. The reviewers will make a decision to either recommend or reject the appeal. Recommended appeals will be forwarded to the second level of review. Appeals with a rejection status will be considered final, and the dismissal action will stand. The Graduate Program Director will notify the student in writing of the decision.

Second Level Review

If recommended for a second level of review by the academic department, an active appeal will be reviewed by the divisional Associate Dean. The Associate Dean will make a decision to recommend or reject the appeal for further consideration for the third level of review.

Third Level Review

The College of Arts and Sciences Graduate Appeals Reviews Committee headed by the Dean of the College constitutes the final level of review of an academic dismissal appeal. If an appeal is approved, the student may be considered for reinstatement to a graduate program with probationary standing.

If an appeal is denied, the dismissal action will stand. Students who have been dismissed from a Graduate Arts and Sciences graduate program

due to failure to meet academic standards or because of an academic integrity violation may not reapply to any graduate program within the College of Arts and Sciences.

Student Point of Contact During the Appeals Process

During all phases of the appeal review process, the student's Graduate Program Director will serve as the point of contact for the student. Students will be notified by letter about the outcome of their appeal.

Reinstatement

Students who are approved for reinstatement will be placed on academic probation and must return to good academic standing within one semester.

Students approved to resume their current program of study may be required to repeat the course(s) with earned grades that caused their cumulative GPA to drop below 3.00.

Additional conditions may be placed on students who have been approved for reinstatement including, but not limited to, referrals to learning resources support or tutoring, enrollment in the appropriate course(s), etc.

Reinstated students who fail to meet the specified criteria of the academic performance improvement plan, and/or do not achieve a cumulative GPA of 3.00 or higher, or who achieve a term GPA of below 3.00 during the probation term will be academically dismissed without possibility of a second appeal or reinstatement.

Academic Forgiveness

Undergraduate and graduate students who return following an absence of at least one calendar year may request academic forgiveness. If academic forgiveness is granted, each grade of C- or below for undergraduate students, and B- or below for graduate students will be eligible to be replaced with a grade of "AF". Courses with a grade of AF will no longer count for credit or be included in the GPA calculation. Additionally, the student's transcript will have a comment added denoting that academic forgiveness was granted in the applicable semesters. To apply for academic forgiveness, the student must submit a letter to the appropriate Dean explaining how they will achieve successful degree completion. This explanation may involve addressing the reasons for their poor original performance and lessons learned during their time away. Application for Academic Forgiveness must be completed at least 4 weeks before registration for courses. Please see application form (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>) for additional details. (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>)

Guidelines

- Students may only receive academic forgiveness once.
- Courses that a student withdrew from are not eligible for academic forgiveness.
- Once a student has been approved for academic forgiveness, the action is irreversible and final.
- Failing grades that result from violations of the Academic Honesty Policy cannot be changed under the terms of this policy.
- Federal guidelines allow Title IV Federal Financial Aid to be applied for only one retake of a course with a passing grade. Questions related to financial aid eligibility following academic forgiveness can

be directed to finaid@sju.edu (<https://academiccatalog.sju.edu/programs/finaid@sju.edu>).

- A student's Satisfactory Academic Progress is not impacted by academic forgiveness as it relates to federal, state, and institutional financial aid requirements. Please review the SAP policies relative to financial aid at sju.edu/sap (<http://sju.edu/sap/>).

Satisfactory Academic Progress

Satisfactory Academic Progress (SAP)

In addition to the academic levels of progress outlined in the Policy, graduate financial aid recipients are also required to meet the standards outlined in the Satisfactory Academic Progress (SAP) policy.

Satisfactory academic progress for financial aid recipients enrolled in degree programs is assessed annually at the conclusion of the spring semester. For eligible programs of one academic year or less, satisfactory academic progress (SAP) is evaluated at the conclusion of the fall and spring semesters. Failure to maintain satisfactory academic progress will result in cancellation of financial aid awards and the subsequent repayment of the funds already received.

MSPAS Program Policies

Academic Standing

Students are placed into one of the following two categories based upon their academic performance:

1. In Good Standing:

- Has completed satisfactorily the requirements of all courses of all previous semesters
- Is passing all courses in which they are enrolled
- Is not on probation for either academic or professional reasons

2. Not in Good Standing:

- Has not fulfilled the requirements of one or more courses of a previous semester
- Is not passing one or more courses in which they are enrolled
- Is on academic or professional probation

Academic Probation

Any student whose cumulative grade point average (GPA) falls below a 3.00 or receives one course grade below a 70% (C) will be notified that they will be placed on programmatic academic probation and referred to the Student Progress Committee.

Note: Once a student is placed on programmatic academic probation, that student will maintain this probationary status until graduation. A student can only be on programmatic academic probation one time during the course of the program, a second failed course for any reason, or more than 2 semesters (consecutive or nonconsecutive) with a cumulative GPA below 3.0 is grounds for dismissal from the program. This includes failure of a clinical rotation for any of the above stated reasons.

Therefore, a student is only afforded the opportunity to remediate one course throughout the entire duration of the program.

The student may be asked to appear before the Student Progress Committee within fifteen (15) business days of the notification. The

Student Progress Committee, with assistance from the Course Director and the student's faculty advisor, will review the student's case and create a contract with the student, setting forth the terms of probation. This contract will need to be signed by the student and kept on file within the PA program. The student will need to maintain compliance with the contract to allow the student to demonstrate competency in all required areas, if applicable.

All didactic phase courses must be satisfactorily completed before the student is allowed to progress into the clinical phase.

- Students who fail to meet the terms of the contract of probation within the designated time frame will be dismissed from the program
- Students who do not achieve a grade of "C" or better in any repeat of a PHA course will be dismissed from the program
- A student cannot go on programmatic academic probation twice for a GPA less than 3.0 and a failed course, or two failed courses. In the event that a student meets both criteria of a GPA < 3.0 and a failed course, or two failed courses that student will be recommended for dismissal from the program.

Students may only be placed on programmatic academic probation once during the entirety of the program. If it is required that a student be placed on programmatic academic probation for a second time in either the didactic or clinical phase of the PA program, the student will be dismissed from the program.

Depending on the state, the status of being placed on academic probation may be required to be documented on the student's records when applying for licensure.

For additional details, please refer to the PA Student Handbook.

Academic Dismissal

Failure to meet conditions for removal from programmatic academic or professional/behavioral probations or being placed on either probation status more than once while enrolled in the program, will result in dismissal from the PA program. Please see the previous sections for a more in-depth discussion. Dismissal is effective upon the receipt of the letter of notification from the Program Director. If a student is dismissed, their registration for courses will be voided and tuition for such courses shall be refunded, as per University policy.

For additional details, please refer to the PA Student Handbook.

Academic Grade Appeals

Students and course directors occasionally disagree on final course grades. Sometimes this is the result of a mathematical error on the part of the course director; an issue that can readily be resolved by the student taking the relevant exam to the course director or otherwise pointing out the error. The course director then acts to change the erroneous grade. Sometimes the student and the course director disagree on a substantive issue, such as the evaluation of an exam answer or the course letter grade. The student should first think through the grade and ensure that they can identify the nature of the disagreement clearly. The student should then make an appointment with the course director and discuss the issue. In this way almost all disagreements can be resolved.

For additional details on the Grade Appeals Process, please refer to the PA Student Handbook.

Requirements for Progression within the Didactic Phase

A PA program student must complete the following requirements by the end of each semester in which they occur in order to complete the PA program:

1. PHA courses must be passed with a minimum grade of 70% (C)
2. Satisfactory completion of all written and/or practical Summative exams with a minimum grade of 70% (C)
3. Remediation of any grade below a 70% (C) on a written, practical, or combination examination will be required. The contents will be determined by the Course Director(s)
4. A minimum cumulative GPA of 3.0 is required for progression within the program. See section regarding programmatic academic probation in Student Handbook
5. Demonstration of required skills necessary for clinical practice as determined by the program
6. Compliance with all policies of the Saint Joseph's University and the PA program
7. Compliance with the Professional/Behavioral Performance Standards in this section, and Standards of Conduct for the PA student located in the General Information section of Student Handbook
8. Satisfactory completion of BLS/ACLS

Deadlines for completion of all Didactic Phase requirements must be completed by the end of each semester in which they occur. Failure to meet these deadlines may result in delayed graduation, dismissal from the program, or need to take leave of absence (if applicable – see corresponding section of the PA Student Handbook).

All didactic phase courses must be satisfactorily completed before the student is allowed to progress into the clinical phase.

Requirements for Progression within the Clinical Phase

In addition to the requirements for promotion within the didactic phase, a PA program student must complete the following requirements by the end of each semester in which they occur in order to complete the PA program:

1. Satisfactory remediation for a grade below 65% (scaled score, or below "Satisfactory Medical Knowledge" on any PAEA end of rotation examination
2. Satisfactory remediation for a grade below 70% (C) on any other examination
3. Preceptor evaluations must be passed (graded) with a minimum grade of 80% (B)
4. Each PHA course/rotation must be passed with a minimum grade of 70% (C)
5. Demonstration of proficiency of all required skills necessary for clinical practice as determined by the PA program
6. Compliance with policies of the Saint Joseph's University and the PA program
7. Compliance with the Behavioral Standards and Professional Performance Standards contained in the Student Handbook

Deadlines for completion of all Clinical Phase requirements must be completed by the end of each semester in which they occur. Failure

to meet these deadlines may result in delayed graduation, dismissal from the program, or need to take leave of absence (if applicable – see corresponding section of the PA Student Handbook).

Requirements for Graduation

The PA program and the University will review all student records prior to graduation. Any outstanding financial balance must be reconciled with the University prior to graduation.

Students must fulfill all PA department and University requirements before being awarded a diploma and to be eligible for the PANCE examination. Specific requirements include:

1. Satisfactory completion of all Saint Joseph's University PA courses
2. Satisfactory completion of all courses in the curriculum with a grade of 70% (C) or better
3. Students must have a minimum cumulative GPA of 3.00
4. Satisfactory completion of a comprehensive summative end of curriculum written examination, with a score of "Satisfactory Medical Knowledge" or better
5. Satisfactory completion of a comprehensive Objective Structured Clinical Evaluation (OSCE)
6. Completion of the PA Clinical Knowledge Rating and Assessment Tool (PACKRAT) examination, twice
7. Compliance with behavioral and professional performance standards
8. Successful completion of comprehensive clinical skills evaluation
9. Successful completion of Capstone Project
10. All registrar and student health holds must be lifted

Deadlines for completion of all requirements for graduation must be completed by the end of each semester in which they occur. Failure to meet these deadlines may result in delayed graduation, dismissal from the program, or need to take leave of absence (if applicable – see corresponding section of the PA Student Handbook).

Deceleration Policy

For additional detail, please see the PA Student Handbook.

Deceleration is the loss of a PA student from their entering cohort, who remains matriculated in the PA program. The Saint Joseph's University PA Program curriculum is designed to be delivered and completed on a full-time basis and allows for deceleration ONLY during a temporary separation from the university (leave of absence).

Deceleration may occur for the following reason:

- Deceleration secondary to a university-approved temporary separation (leave of absence) request. Depending on the terms of the request, a student may be able to take a leave of absence and join the following cohort at the beginning of the semester that the student exited during the year prior. If this occurs, it is required that the student audit all coursework that precedes this point within the next academic calendar year.
 - Of note, an audit of a semester may require additional tuition and fees.
- During the semester audit, the student is required to participate in all course work, exams, practicals, skills, OSCEs, assignments, and other assessments and follow all required due dates/times. Failure to comply with may result in a professionalism review and recommendation for professional probation.

- It is important to note, no new grades will be submitted to the registrar based on the outcome of any assignments/assessments during an audited semester. During a semester audit, the student is not permitted to retake any PHA level course for a new grade.
- At the time of official re-entry, the student must successfully complete a comprehensive examination which demonstrates competency in all preceding coursework to be eligible to restart. If required, the student will be provided one attempt to remediate an initial failure of the comprehensive examination to demonstrate competency.

Under no other circumstances will a student be allowed to decelerate.

Doctoral Policies

Academic Policies

Academic Standing

Good Academic Standing is defined as students enrolled in a doctoral program who maintain a 3.0 or above cumulative GPA, as calculated at the end of the fall, spring, and summer terms.

Course Registration

Doctoral students register for courses following the doctoral program curriculum. If students do not complete their progression milestones, including defending the dissertation, they will need to register for 899 doctoral research every fall and spring semester until they defend their dissertation or reach the maximum of eight years in the academic program (Ed.D. students have a maximum of ten years). Doctoral students are required to register for a minimum of one credit during their terminal semester. The terminal semester is defined as the semester in which the student completes all degree requirements, not the semester in which the student is to graduate. If the requirements are to be completed in the summer term, students should register for 1 credit.

Time to Completion

Each student is expected to make academic progress toward the degree or certificate to remain in good standing. Students who exceed the time limit to complete their program will be dismissed from the program.

College of Arts & Sciences

Students enrolled in PhD programs in the Departments of Biology or Chemistry have eight years to complete their doctoral program. The time limit begins when the student enrolls in the doctoral program and begins their first course.

School of Education & Human Development

Students have a total of five years from the start of coursework to defend the dissertation proposal and ten years from the start of coursework to defend the dissertation and complete all degree requirements or be dismissed from the program.

School of Health Professions

Students enrolled in PhD programs in the Departments of Pharmaceutical Sciences have eight years to complete their doctoral program. The time limit begins when the student enrolls in the doctoral program and begins their first course.

Students enrolled in the Doctor of Pharmacy (PharmD) program have a maximum of six years to complete their program, once in the professional curriculum (P1-P4).

Grievance Procedure

Students who have a concern regarding an academic matter may seek assistance. The procedure for resolving academic program concerns (see note of grade appeal process below) begins with the course instructor. A student who has a concern about a final course grade should first consult the grade appeal process in the following section. If the student is not satisfied with the response or resolution achieved at this first level, or if speaking with the faculty member presents a conflict of interest for the student, the student should proceed to speak with their Program Director. If the student is not satisfied with the response or resolution achieved through the Program Director, the student should proceed to speak with the Department Chairperson. If the student is still not satisfied with the response or resolution achieved through the Department Chairperson, or if speaking with the Department Chairperson presents a conflict of interest for the student, the next step is to request a review of the concern in writing to the Associate Dean. All requests to present a concern to an Associate Dean must be first summarized in writing in the form of a petition by the student and submitted. A decision on a grievance by the College Dean represents a final level of review. During all stages of the process, the Graduate Program Director or representative designated by the Dean's Office will serve as the point of contact for the student filing the complaint.

Appealing a Course Grade

The instructor for a course has the responsibility for setting the requirements for a course and making an evaluation of students' work. Once a grade has been given, the instructor is not free to change the grade unless the instructor indicates to the Registrar that an error was made in the original grade transmitted. If a student believes that an error has been made, they must take the initiative in bringing about the necessary correction before the conclusion of the semester or immediately following the semester in which the course was taken. The typical procedure for requesting a correction would be through direct discussion between the student and the instructor. If redress cannot be attained through such discussions, the student may next appeal to the Program Director. If resolution cannot be attained through appeal, the student may next appeal in writing to the Department Chairperson. All requests to present a concern to an Associate Dean must be first summarized in writing in the form of a petition by the student and submitted.

Leave of Absence (LOA)

Under special circumstances (illness, family hardship, work or military service, etc.), a doctoral student may request a leave of absence from their doctoral program. An approved leave of absence does not automatically cancel a student's registration for courses. If the student has active registrations for the term(s) included in the approved leave of absence, a student must drop or withdraw their registration(s). The maximum time permitted for a leave of absence is two years (Ed.D. students have a maximum of 3 semesters). After the maximum period, the student will be deactivated and will be required to re-apply to be considered for reinstatement to a program. Doctoral students should discuss the impact of a LOA on their institutional support if such funding is received. Students are required to submit a completed Graduate Leave of Absence form.

Withdrawal from a Course/Courses

It is strongly suggested that students seek counsel from their Program Director or Advisor before submitting a course withdrawal. All withdrawn courses will be noted with a grade of "W" on the official transcript, and are not included in the grade point average calculation. Withdrawing from a course can have financial and academic implications that should be taken into consideration when making this decision. Changes in financial aid rules and veterans education benefits have further complicated the course withdrawal process; only trained representatives have the knowledge to help students make the best decision(s)—financially and academically.

Withdrawal from the University

A student may elect to file a total withdrawal from a graduate program of study at Saint Joseph's University. The student must not have any outstanding tuition debt, and must not meet the conditions for dismissal due to an academic violation or disciplinary action. Students are required to submit a completed Withdraw from University form.

Administrative Withdrawal

Students may be administratively withdrawn from Saint Joseph's University, after due notice, for an academic or disciplinary action or failure to satisfy overdue financial obligations or to comply with administrative requirements of Saint Joseph's University.

Academic Probation and Dismissal

Students in doctoral programs are placed on academic probation when their cumulative GPA falls below 3.00.

At the end of each semester, the appropriate Graduate Office will notify the students who are either placed on academic probation or are academically dismissed via email. Probation notices will direct students to meet with their designated graduate advisor at the beginning of the probation period to create an academic performance improvement plan.

Graduate students placed on academic probation are given a maximum of two probationary semesters to raise their cumulative GPA to the minimum standard of 3.00.

The University reserves the right to refuse the privilege of further attendance to graduate students who fail to meet minimum academic requirements with or without a probationary period.

The University also reserves the right to change the requirements for retention and graduation for doctoral students, and every candidate for a degree or certificate program shall be held in compliance with changes, as far as the remaining portion of their course of study is affected.

Certain programs may have more stringent retention and dismissal standards. Students enrolled in these programs should consult with their program advisors for retention and graduation requirements.

College of Arts and Sciences

PhD students who fail to maintain a cumulative grade point average of 3.00 or higher or receives a non-pass grade ("NP") in research from the Research Advisory Committee will be placed on academic probation. A doctoral student placed on academic probation because of a non-passing grade in research for two consecutive semesters or for any three semesters throughout the degree program will be dismissed from the

graduate program. Students who fail to complete their program within 8 years may also be dismissed from the program.

School of Education and Human Development

Ed.D. students will be dismissed from the program for any of the following reasons: (a) students who do not meet a minimum of a 3.0 GPA after two semesters of academic probation, (b) students who receive the grade of C+ or lower in four or more classes, (c) students who do not defend their dissertation proposal within five years from the start of coursework, and/or (d) students who do not defend their dissertations within 10 years from the start of coursework. Students with a GPA of less than a 3.0 will not be permitted to sit for the comprehensive exam during their third year.

School of Health Professions:

PhD programs in School of Health Professions

PhD students who fail to maintain a cumulative grade point average of 3.00 or higher or receives a non-pass grade ("NP") in research from the Research Advisory Committee will be placed on academic probation. A doctoral student placed on academic probation because of a non-passing grade in research for two consecutive semesters or for any three semesters throughout the degree program will be dismissed from the graduate program. Students who fail to complete their program within 8 years may also be dismissed from the program.

Doctor of Physical Therapy

Doctor of Physical Therapy students must achieve a minimum grade of "B-" in all graded courses or a "Pass" in Pass/Fail courses in the professional phase of the curriculum in order to progress to any other course for which the completed course is a prerequisite. Grades below a B- are considered "Unsuccessful." Students who earn grades less than B- in two or more courses at any time in the professional curriculum will be dropped from the program and cannot reapply.

Students who do not pass a clinical experience may participate in the next clinical experience timeframe but will repeat the course in which they were unsuccessful.

Any student who does not achieve the minimum grade requirement in a didactic course in the professional phase of the program will not be permitted to progress in the professional curriculum. The student may be offered the opportunity to take the same course the following academic year. This situation will delay the student's progression for one year. The student should refer to the readmission policy in the Student Handbook and adhere to guidelines for submission of appropriate paperwork. Readmission is not guaranteed.

Doctor of Pharmacy

The expectations for student performance in the Doctor of Pharmacy program are more stringent than what is seen in undergraduate curricula. The following Academic Standards are in place to ensure successful completion of the Doctor of Pharmacy Program:

- The "C rule" for Doctor of Pharmacy students dictates that successful (satisfactory) completion of required non-elective PCP courses (with prefix PRX) is achieved by a minimum grade of "C". Pharm D students who achieve less than a "C" in a given course are given a second and final chance to demonstrate competency by retaking the course at its next offering.
- Since most professional courses are offered only once during an academic year, if a student requires a second attempt to be successful, most likely progression will be delayed and the student's graduation date will change. Students who are unsuccessful (i.e.,

achieve less than a C) the second time will be withdrawn (dropped) from the program. Students who are successful the second time will proceed with subsequent coursework.

- In the professional years of the PharmD program (i.e., P1-P4), students who achieve less than a semester GPA of 2.30 will receive a program probation. Students who exceed two program probations or do not complete program requirements within the maximum allowable residency time will be withdrawn from the program.
- All required PRX courses (except ESAR) must be successfully completed, including learning support reassessment expectations, before the start of the next semester in order to progress to the next semester.
- All ESAR courses, including learning support reassessment expectations, must be successfully completed before the start of the next academic year in order to progress to the next academic year.
- All StEPP requirements for each academic year must be completed by the end of the spring semester in order to progress to the next academic year.

Appeal of Academic Dismissal

A formal written appeal may be submitted to the Program Director by a student based on one or more of the following grounds:

- Violation of official policy or procedural error by academic or administrative personnel.
- Special mitigating circumstances beyond the student's control affecting the student's academic progress.

The following circumstances could prevent a student from satisfactorily completing a course:

- A severe illness or other debilitating condition.
- A student who is the primary care provider for a sick, injured, or needy person in family or friend circle.
- The death of a family member, friend, or someone in their relationship circle.
- The active duty service as a member of the National Guard or the armed forces of the United States.
- The change of the student's work schedule beyond the control of the student.
- Other good cause as determined by the Dean of the College or their designee.

Poor performance in coursework, poor work/study habits, missed deadlines, or change of major or concentration are not appropriate grounds for appeal. A student submitting an appeal based on mitigating circumstances is also required to provide specific evidence in support of the issue or event that impaired the student's academic performance.

The student must also provide objective documentation about the events and/or situations with respect to the subsequent impact on their learning.

Document Examples:

- Newspaper notice, copy of death certificate or obituary.
- Physician's letter explaining a medical condition and its effects or medical records.
- Photos, witness statements, copy of police report, etc.
- Court documents, bail documents, letter from a lawyer, police, reports, etc.

- Clinic notes, prescription receipts, and physician's notes are not considered sufficient documentation.

Students are not required to appear in-person for a formal appeal hearing.

Dismissal Appeals Process

First Level Review

Submitted academic dismissal appeal forms will be reviewed by the Graduate Program Director and Department Chair. The reviewers will make a decision to either recommend or reject the appeal. Recommended appeals will be forwarded to the second level of review. Appeals with a rejection status will be considered final, and the dismissal action will stand. The Program Director will notify the student in writing of the decision.

Second Level Review

If recommended for a second level of review by the academic department, an active appeal will be reviewed by the divisional Associate Dean. The Associate Dean will make a decision to recommend or reject the appeal for further consideration for the third level of review.

Third Level Review

The College of Arts and Sciences Appeals Reviews Committee headed by the Dean of the College constitutes the final level of review of an academic dismissal appeal. If an appeal is approved, the student may be considered for reinstatement to a graduate program with probationary standing.

If an appeal is denied, the dismissal action will stand. Students who have been dismissed from a program due to failure to meet academic standards or because of an academic integrity violation may not reapply to any program within the College of Arts and Sciences.

Student Point of Contact During the Appeals Process

During all phases of the appeal review process, the student's Program Director will serve as the point of contact for the student. Students will be notified by letter about the outcome of their appeal.

Reinstatement

Students who are approved for reinstatement will be placed on academic probation and must return to good academic standing within one semester.

Students approved to resume their current program of study may be required to repeat the course(s) with earned grades that caused their cumulative GPA to drop below 3.00.

Additional conditions may be placed on students who have been approved for reinstatement including, but not limited to, referrals to learning resources support or tutoring, enrollment in the appropriate course(s), etc.

Reinstated students who fail to meet the specified criteria of the academic performance improvement plan, and/or do not achieve a cumulative GPA of 3.00 or higher, or who achieve a term GPA of below 3.00 during the probation term will be academically dismissed without possibility of a second appeal or reinstatement.

Academic Forgiveness

Students who return following an absence of at least one calendar year may request academic forgiveness. If academic forgiveness is granted, each grade of C- or below for undergraduate students, and B- or below

for graduate & doctoral students will be eligible to be replaced with a grade of “AF”. Courses with a grade of AF will no longer count for credit or be included in the GPA calculation. Additionally, the student’s transcript will have a comment added denoting that academic forgiveness was granted in the applicable semesters. To apply for academic forgiveness, the student must submit a letter to the appropriate Dean explaining how they will achieve successful degree completion. This explanation may involve addressing the reasons for their poor original performance and lessons learned during their time away. Application for Academic Forgiveness must be completed at least 4 weeks before registration for courses. Please see application form for (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>) additional details. (<https://sju.teamdynamix.com/TDClient/1942/Portal/Requests/ServiceDet/?ID=51080>)

Guidelines

- Students may only receive academic forgiveness once.
- Courses that a student withdrew from are not eligible for academic forgiveness.
- Once a student has been approved for academic forgiveness, the action is irreversible and final.
- Failing grades that result from violations of the Academic Honesty Policy cannot be changed under the terms of this policy.
- Federal guidelines allow Title IV Federal Financial Aid to be applied for only one retake of a course with a passing grade. Questions related to financial aid eligibility following academic forgiveness can be directed to finaid@sju.edu (<https://academiccatalog.sju.edu/programs/finaid@sju.edu>).
- A student’s Satisfactory Academic Progress is not impacted by academic forgiveness as it relates to federal, state, and institutional financial aid requirements. Please review the SAP policies relative to financial aid at sju.edu/sap (<http://sju.edu/sap/>).

Satisfactory Academic Progress

Satisfactory Academic Progress (SAP)

In addition to the academic levels of progress outlined in the Policy, doctoral financial aid recipients are also required to meet the standards outlined in the Satisfactory Academic Progress (SAP) policy.

Satisfactory academic progress for financial aid recipients enrolled in degree programs is assessed annually at the conclusion of the spring semester. For eligible programs of one academic year or less, satisfactory academic progress (SAP) is evaluated at the conclusion of the fall and spring semesters. Failure to maintain satisfactory academic progress will result in cancellation of financial aid awards and the subsequent repayment of the funds already received.

CURRICULA

General Education Program (GEP)

The traditional undergraduate programs include a minimum of 120 credits with additional credits required by some majors. The required credits are distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. The General Education component of the curriculum at SJU enables students to examine the principal issues and achievements of the major fields of human learning, provides an opportunity to master skills required for more advanced study, and gives them students freedom to pursue further studies in areas in which they find an interest, to experiment with previously unexplored areas, or to enter a chosen field of study.

Overlay Requirements

Students in the Class of 2025 and in following classes must complete one certified course in each of the following overlay areas:

1. Diversity
2. Diversity, Globalization or Non-western Area Studies
3. Ethics Intensive, and
4. Writing Intensive

Overlay requirements are part of the 120-credit requirement.

Electives

Except for students majoring in Education, all students will have no fewer than 18 free elective credits.

Major Concentration

The Major Concentration component offers the opportunity for that deepened knowledge of a special area which is an essential characteristic of a full education and also provides a basis for an effective career or for study in graduate or professional school.

Student Learning Outcomes

The curriculum is designed such that all graduating undergraduate students can meet the following goals:

- 1. Communication:** Students will communicate effectively through written and oral modes of expression across academic, professional, and social contexts using appropriate technology.
- 2. Critical Thinking and Inquiry:** Students will think critically and construct reasoned arguments to support their positions using skills appropriate to the context, such as deductive reasoning, scientific inquiry, quantitative reasoning, aesthetic judgment, or critical examination of form, style, content and meaning.
- 3. Ethics, Social Justice, and Ignatian Values:** Students will assess and respond to ethical and social justice issues informed by Ignatian values and other theoretical frameworks.
- 4. Diversity:** Students will engage respectfully, in a local and global context, with diverse human beliefs, abilities, experiences, identities, or cultures.

5. Discipline or Program Specific Competencies: Students will acquire the essential knowledge and skills to succeed and make well-reasoned judgments personally, professionally, and in their chosen area(s) of study.

6. Jesuit Intellectual Tradition: Students will examine forces that have shaped the world they have inherited through instruction in the Ignatian educational tradition which includes the study of the humanities, philosophy, theology, history, mathematics, and the natural and social sciences.

Additional information about the specific requirements for the GEP curricula are in this section.

For the Adult Undergraduate GEP please see here (p. 41).

Signature Core GEP Signature Courses

Code	Title	Hours
The Jesuit Tradition Common Core		
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition (or THE 153 Encountering the New Testament, or THE 155 Catholic Social Tradition)	3
The Cultural Legacy Common Core		
ENG 102	Texts & Contexts	3
HIS 154	Forging the Modern World	3
The Signature Variable Core		
One Faith and Reason Course		
One First-Year Seminar Course		
INT 151	Inequality in American Society	1

One Faith and Reason Course

This requirement can be satisfied by any course certified as a "Faith and Reason" course, provided that the course is not at the same time being used to satisfy a GEP Variable or Integrative Learning requirement.

Faith and Reason courses provide students with appropriate intellectual and epistemological frameworks for exploring both the tension and cohesion of faith and reason in the contemporary world. *Moral Foundation* (PHL 154) and one Signature Core Theology course are prerequisites (THE 154 or THE 153 or THE 155).

One First-Year Seminar Course (This course must be taken in the first year, either fall or spring semester).

The First-Year Seminar is designed to introduce students to the adventures of learning in a college context. The challenge and excitement of intellectual exploration of a topic of shared interest is its prime purpose. Its only prerequisites are a genuine interest in the topic and a willingness to contribute to the success of the course through diligent individual effort and enthusiasm. First-Year Seminars, which are limited in enrollment size, focus in depth on a question or topic of disciplinary or interdisciplinary interest. By means of its specific focus, the seminar will explore the thinking, research, and writing practices in a particular field(s). Discussion based on careful reading of texts, writing assignments, both reflection and research types, and in-class student presentations will be supplemented, as appropriate, with activities including guest lecturers, museum trip, attendance at local cultural events and or field excursions.

The first year seminar is specially designed for and open to freshmen, thus all freshmen should take a first year seminar during either their first

or second semesters at SJU. However students who fail to successfully complete a First Year during one of their first two semesters at SJU will be required to take an additional Philosophy or Theology/Religion Studies course as a replacement for the FYS. This replacement course cannot count for any other major or GEP requirement.

Note: For non-transfer students, these six signature courses must be completed at SJU. Transfer students may use transfer credits to meet Signature Core requirements if course equivalency is approved by the CAS Dean's Office. Transfer students are exempt from the First-Year Seminar requirement.

Variable Variable Courses

Please note students may earn AP credit and/or use transfer credits to meet these requirements. Students must take approved courses in the following areas:

- One Art, Music/Theatre/Film, or Literature Course
- One Mathematics-Beauty Course
- One 4-credit Lab-Based Natural Science Course
 - (Note: An alternative of two 3-credit Lecture-Based Natural Science courses may be available)
- Non-native Language Requirement (1-2 courses at the appropriate level, depending on language placement)
- One Social/Behavioral Science Course
- One Philosophical Anthropology Course (Pre-requisite PHL 154)
- One Religious Difference Course
- Writing Requirement (ENG 101 or AP credit)

Integrative Learning Integrative Learning

This component includes three courses determined by a student's primary major department or program. These courses must be College of Arts and Sciences courses outside of the major department. The Integrative Learning component aims to foster integration of the major with general education. The Integrative Learning component requirement is in addition to GEP Signature and Variable requirements.

Overlay GEP Overlay Courses

Students in the Class of 2022, Class of 2023, and Class of 2024 take one Ethics Intensive course, one Writing Intensive course, and one course from any of the following three areas of Diversity, Globalization or Non-Western Studies. Students in the Class of 2025 and following classes take one Diversity course, one Ethics Intensive course, one Writing Intensive course, and one course from any of the following three areas of Diversity, Globalization or Non-Western Studies. Courses may be certified in multiple overlay areas.

Diversity

Diversity courses analyze the construction and maintenance of social categories such as race, class, religion, sexual orientation, gender, age, ability as well as the material, political, economic, social and ethical consequences of these identities. Each diversity course employs theoretical frameworks that provide sustained analytical inquiry. Each course emphasizes the ways in which social categories overlap and

interact to produce multiple identities and attend to the complex consequences of these intersections. Diversity courses are not purely empirical, though they contain empirical components; rather, they are critical-seeking to account for and understand the significance of such social categories and, where appropriate, to investigate methods of challenging social institutions that promote injustice.

Globalization

Courses in this area will address the theoretical foundations (economic, political, historical, cultural, environmental and ethical) of the international framework that is increasingly linking countries, cultures and peoples around the world. These courses will examine the ways in which global processes and interactions among nation states, societies, international organizations and individuals shape human experience, both in the past and present. These courses will focus on the forms of interaction and interdependency among the world's peoples and the social structures that bring us closer to one another.

Non-Western Areas Studies

In identifying courses in this category, the "West" is used primarily in its cultural sense. This broad usage extends beyond the narrow geographical boundaries of "western Europe". These courses therefore focus primarily on cultures different from those emphasized in courses on "Western Civilization". Non-Western Area course do have a geographical component because they concentrate on the language, culture, history, society, economics and politics of one or more region outside of North America and Europe. These courses emphasize understanding a region and its cultures on their own terms and from the perspectives of their own peoples rather than in the context of the West or as part of global comparative systems. This may also include appropriate language courses above the intermediate level. The Diversity, Globalization, or Non-Western Studies overlay requirement may be satisfied by any approved course outside of the Signature Common Core and Faith and Reason. If so certified, any GEP Variable course, any Integrative Learning course, any First Year Seminar, any Concentration or Major course, or any Free Elective can satisfy this requirement, with the following exception: A course taken for Religious Difference GEP Variable credit may not at the same time count for Diversity, Globalization, or Non-Western Studies overlay credit.

One Ethics Intensive Course

Ethics-intensive courses evaluate ethical issues in a particular discipline or field. Such critical evaluation requires applying to the disciplinary material some of the theoretical frameworks and conceptual tools that students have acquired in their signature/core courses. Ethics-intensive courses will thus push beyond professional ethics (where "the good" is determined only by the rules of the discipline or field) and will rigorously investigate the subject matter of a course in light of more fundamental moral values and ethical principles (e.g., justice, human dignity, vocation, beneficence, utility, double effect, proportionality). Through this study, students will come to a deeper understanding of a moral life and will be enabled to better act with self-agency in their lives beyond. This requirement can be satisfied by any approved course outside of the Signature Core. If so certified, any GEP Variable course, any Integrative Learning course, any Concentration or Major course, or any Free Elective can satisfy this requirement. (pre-requisite PHL 154)

One Writing Intensive Course

Writing is a means of communication and a skill that develops with structured practice. It is grounded in the foundations of proper punctuation, grammar and thesis statement and development. This

requirement can be satisfied by any approved course outside of the Signature Common Core and First Year Seminar. If so certified, any GEP Variable course, any Integrative Learning course, any Faith and Reason course, any Concentration or Major course, or any Free Elective can satisfy this requirement. (pre-requisite: ENG 101).

Adult Learner General Education Program

The **General Education Program** (GEP) at Saint Joseph’s University involves a distinctive liberal arts education in the Jesuit, Catholic tradition. General education is essential to the University’s mission, providing all students with the broad knowledge, essential skills, appreciation of diversity, and ethically informed perspective needed by those who would aspire to be “men and women for others.” The GEP ensures mastery of skills required for further study, exposes students to the principal achievements and problems of the major fields of human learning, and introduces them to new disciplines that they may or may not wish to pursue. The **Major Concentration** component gives depth in a particular field and is thus a preparation for an effective career or for graduate study in that field. **Free** or **general electives** allow students to pursue interests, explore new fields, or to continue concentration in their major.

The Adult Learner General Education Program (GEP) applies to students who are completing a bachelor’s degree offered through the SJU Adult Learner Program. These degrees include the Bachelor of Liberal Studies (BLS) and Bachelor of Business Administration degrees (BBA).

The Adult Learner GEP is comprised of Signature Core, Variable Core, Integrative Learning courses and a Diversity Overlay.

Signature Core

Code	Title	Hours
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition (or THE 153 Encountering the New Testament, or THE 155 Catholic Social Tradition)	3
ENG 102	Texts & Contexts	3
HIS 154	Forging the Modern World	3
Any course certified as Faith & Reason		3
Any course in written and oral communication		

Variable Core

- One approved course in Art, Literature, or Music, Theater, Film.
- One course in the Natural Sciences (lab-based or lecture based) in biology, chemistry, environmental science, or physics.
- Two courses in Mathematics. BLS degree majors require MAT 101 or higher; BBA degree majors require MAT 103 (or MAT 120 precalculus) and MAT 123 (or an alternate calculus course).
- One course in a Non-Native Language (e.g., SPA 111-SPA 112) or one approved alternative course in Literature in Translation or Classics. Students who are bilingual may request an exemption for the language requirement from the Department of Modern & Classical Languages.

- One course in the Social-Behavioral Sciences including Political Science, Economics, Sociology, and Psychology. Please note that some majors require a specific course.
- One course that is certified as a Philosophical Anthropology course.
- One course from Religious Studies or Theology that is certified as a Religious Difference course.
- ENG 101 Craft of Language.

Integrative Learning Courses

(2 courses required)

- Courses approved for ILC requirements will vary by major. Some majors have specific courses that must be taken.

Overlay

- Adult Learner Program students are required to complete one course that is certified as a diversity overlay.

Free Electives

Except for Early Childhood/Elementary Pre K-4 Education majors, all students must complete a minimum of 18 free elective credits. Elective credits may be used to pursue a minor or secondary major.

SPECIAL PROGRAMS AND RESOURCES

Student Resources

Academic Advising

Undergraduate Advising (Traditional Day Students)

At SJU, academic advising responsibilities for traditional undergraduate students are shared between faculty advisors and the Undergraduate Advising Support staff. In this shared model, advisors and the advising staff have distinct roles in the advising process but work collaboratively to help students succeed academically, develop educational plans that are consistent with their life goals, and benefit fully from their college experience. Faculty advisors focus primarily on mentoring and academic/career planning related to the student's major. They also serve as mentors to guide the intellectual development of students. The Advising Support provides generalized support for students including help with the transition to college, course registration, course selection for the general education program requirements, interpreting/understanding University policies and navigating university procedures.

Incoming first-year and transfer students who have declared a major are assigned an advisor in their major. Incoming students who are undeclared are usually assigned an advisor in their division (e.g., Social Science, Humanities, Natural Science) or College (e.g., Haub School of Business, School of Health Professions, School of Education and Human Development). Once they have declared a major, these students will be assigned to a faculty advisor in that major.

All students are encouraged to develop a relationship with their advisor and to meet with them throughout the school year. First-year students are required to meet with their advisors twice each semester—to view and discuss mid-semester grades and to receive approval of course selections for registration for the following semester. Sophomores, juniors, and seniors are required to meet with their advisors once each semester for guidance related to registration for the following semester. They also should meet with their advisors at other times to discuss their academic progress and future plans for graduate school or careers.

In the second semester of junior year, students are expected to meet with their faculty advisor to review course requirements completed and course requirements not yet fulfilled for their bachelor's degree. This review is necessary to ensure that the proper set of courses will be taken in the senior year and that graduation can occur at the expected time. Although faculty advisors and Undergraduate Advising Support provide information and counsel, it is ultimately the student's responsibility to ensure that they have completed all of the requirements for their degree.

SJU Undergraduate Advising Support maintains three offices on the University's two campuses. The Hawk Hill campus offices are the William F. Leahy Advising Office in Mandeville Hall 150 and the Barbelin Advising Office in Barbelin Hall 117. The University City Campus Office is located in Whitecar Hall. Advising Support is an especially important resource for students during their transition to Saint Joseph's University and for help understanding the registration process. First-year students, in particular, are expected to participate in advising workshops offered by Advising Support in the fall semester each year. In addition to covering important topics like academic planning for the GEP and registration procedures, the workshops also provide an introduction to special programs, academic support services (the Learning Resource Center, the

Writing Center, etc.), other resources (the Career Development Center), and other academic opportunities available at Saint Joseph's University. Students may direct questions to Undergraduate Advising Support at sjuadvising@sju.edu.

Advising for Undergraduate Adult Learner Students

For most undergraduate adult learner students, advising is provided by professional advisors in the Undergraduate Advising Support Offices.

Exceptions to this include those majoring in English & Professional Writing and Early Childhood/Elementary Education who are assigned a faculty advisor within their academic department.

The role of an advisor:

- Assist with orienting the student during their transition to Saint Joseph's University;
- Review how transfer credits will apply to degree requirements and assist with developing an academic plan for completing requirements for graduation;
- Inform students of scholarship opportunities and various campus resources that promote student success;
- Support students in long-range educational and career planning; and,
- Direct students to opportunities and resources that will enrich their education, including honor societies, internships, etc.

Advising appointments are available for all undergraduate adult learners, in-person or via email, zoom session or phone. The student is responsible for planning a program of courses that satisfies all degree requirements. Students are encouraged to review DegreeWorks and their curriculum worksheets carefully before selecting courses to make sure they have the prerequisites or proper background for each course.

All students are encouraged to talk with an advisor to review course selections prior to registration each semester. Students who are on academic probation and/or have a GPA below 2.25 are required to obtain advisor approval for course selections prior to registration.

Graduate Arts & Sciences and School of Education and Human Development Academic Advising

The Graduate Program Director of each academic program is responsible for the academic administration of the unit graduate program(s) and academic advising and mentoring of students.

Graduate HSB Academic Advising

Students enrolled in graduate-level programs such as MBA, M.S. or a Graduate Business Certificate may contact our advising team at sjumba@sju.edu. Please visit our website for more information: <https://www.sju.edu/offices/advising/centers/graduate-business-advising> (<https://www.sju.edu/offices/advising/centers/graduate-business-advising/>).

Professional Practice Center

The Professional Practice Center in the Haub School of Business provides a centralized administrative location to consolidate and streamline the co-op and internship process which supports the efforts of HSB academic departments and students. The center assists in the placement of students in co-op positions and internships each year at businesses and organization through-out the Northeast. By participating in the center's programs, students explore the connections between

theory and practice and between their academic program and their career choice. They acquire a better understanding of their own skills and interests.

Through the Professional Practice Center programs, undergraduate students integrate classroom study with professional experience in a related career field. In addition to acquiring new knowledge and skills, students may earn college credit. Students are able to clarify career choices by experiencing the challenges of working in a chosen discipline. The Professional Practice Center serves as a resource for employers in the region and is an excellent training ground for students. For additional information, please call (610) 660-1934.

Center for International Programs

The Center for International Programs (CIP) is strongly committed to internationalization and globalization – on the Saint Joseph's University campus and elsewhere. The office provides information and services to incoming international students and students who wish to study abroad on a short-term or long-term academic program. The CIP also assists with the implementation of new international education initiatives and the support of the University's International Travel Policy.

The CIP is located at 183 Bala Place (across from Lannon Hall) and the office hours are Monday through Friday, 9am to 5pm. Please visit the website for more information: <http://internationalprograms.sju.edu/>.

Student Disability Services

In accordance with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act (ADA) of 1990, the Office of Student Disability Services coordinates support services and recommends reasonable academic adjustments based on appropriate documentation and the needs of the student. The Office is responsible for promoting access to facilities and programs, ensuring equal educational opportunities, acting as an information and referral source, and serving as a liaison between faculty and student.

The office of Student Disability Services is located in:

Bellarmino G10
610-660-1339
TTY 610-660-1620
sds@sju.edu

Visit the website: [sju.edu/sds/](http://www.sju.edu/sds/) (<http://www.sju.edu/sds/>)

Student Life

Committed to our Catholic Jesuit tradition and guided by our Ignatian values, we empower our students to create a supportive and transformative educational experience. We provide challenging opportunities for the holistic development of students so that they may become servant leaders who discern goals, focus on social justice, appreciate diversity and lead lives of faith and purpose. <http://www.sju.edu/studentlife/> (<http://www.sju.edu/studentlife/>)

The Office of Student Success

By supporting students as they face obstacles associated with college life, the Office of Student Success & First Year Experience assists students in making connections with campus resources and provides coaching on strategies for having a positive transition to college and an enjoyable experience at SJU.

Every SJU student is fully capable of earning a degree from Saint Joseph's University. At times, students experience difficulties: academic, emotional, social, health-related, family emergencies, and disciplinary actions. There are many resources on campus available to support our students, and the Office of Student Success is here to help.

The Office of Student Success is located in:

G10 Bellarmine Hall
610-660-2956
success@sju.edu
or visit the website [sju.edu/studentsuccess](http://www.sju.edu/studentsuccess/) (<http://www.sju.edu/studentsuccess/>)

Office of International Students and Scholars

ISS is responsible for meeting the needs of international students from the time they apply until they graduate. ISS serves as the primary advising office for non-academic issues for international students. Areas of assistance for international students include:

- Initial issuance of the I-20 form to apply for a student (F-1) visa
- Issuing the DS-2019 form to apply for an exchange visitor (J-1) visa
- Organizing orientation for international students and other cross-cultural activities
- Signing immigration documents for travel in and out of the United States
- Assisting with change of status applications to F-1 status
- Processing the immigration paperwork for off campus work permission requests
- Helping with social security and driver's license applications
- Assisting international students in acclimating to SJU and Philadelphia

The Office of International Students and Scholars is located in the Campion Student Center, room 217, and is open Monday through Friday, 9am to 5pm. Please visit the website for more information: [sju.edu/iss](http://www.sju.edu/iss/) (<http://www.sju.edu/iss/>).

Veterans Services

The SJU Office of Veterans Services is dedicated to serving the unique needs of our veterans, spouses and dependents. We are a nationally recognized "veteran friendly" university, as well as a full participant in the Post-9/11 GI Bill® and Yellow Ribbon programs. Our mission is to create a welcoming environment for veterans and their families, and to ensure veterans gain access to all eligible federal, state and local programs and services. We are located in Mandeville Hall, Suite 206. Additional information is available on our website at www.sju.edu/veterans/. (<http://www.sju.edu/veterans/>)

GI Bill® is a registered trademark of the U.S. Department of Veterans Affairs (VA). More information about education benefits offered by VA is available at the official U.S. government Web site at www.benefits.va.gov/gibill.

Writing Center

The Department of English, Writing & Journalism also supports The Writing Center, where students, faculty, staff, and alumni receive free assistance with their writing. The main office is located in Merion Hall 162. A satellite office is located in Post Learning Commons 128. The Center is staffed by trained undergraduate and graduate peer tutors

who assist writers at any level of expertise, in any stage of the writing process, from brainstorming and prewriting, to topic selection and focus, to drafting, revising, and editing. In addition to any type of writing, including creative writing, group projects, slideshare presentations, lab reports and blogs, the Writing Center offers guidance on resumes, cover letters, application letters for scholarships or graduate school, as well as personal statements. The Center also offers online tutoring to students who are studying abroad, to those enrolled in the Co-op program, to those in the Professional & Liberal Studies (PLS) program, to those in online courses, and to graduate students.

Undergraduate students who are interested in becoming peer tutors apply to take ENG 345 Tutor Practicum, Writing Center Theory and Practice. The Tutor Practicum course is open to students in any major. Applications for the course are available on the Writing Center's website (www.sju.edu/writingcenter) (<http://www.sju.edu/writingcenter/>).

Study Abroad/Tours

SJU Faculty-Led Study Tours

Each year, in conjunction with SJU faculty, the Center for International Programs offers a series of campus-based classes that have a travel component as one of their requirements. While class takes place on campus during the fall or spring semester, the actual travel portion occurs during the January intercession, spring break, or in the summer months. Each year, course offerings and destinations vary. (Recent study tour destinations included: Germany, Spain, Italy, Morocco, Cuba, Nicaragua, Belize and Panama. Students earn three credits for participating in these courses. Please note that the running of these programs is contingent on meeting sufficient enrollment requirements. Additional information about SJU study tours can be found on the CIP website: <http://internationalprograms.sju.edu/>.

SJU Summer Study Abroad

A SJU Summer Program is a month-long academic course offered by SJU faculty during the summer. The course is held in one of four locations:

- China,
- Greece,
- Rome or
- Chile (description of each to follow).

Academic learning takes place on-site, with required pre-departure meetings and assignments to help prepare students for the immersion experience. Summer Programs are designed to give students a longer immersion experience to other countries and cultures than Study Tours. Any student who is not on academic or disciplinary probation and is in good financial standing with SJU may apply for a SJU summer study abroad program, provided that s/he has received academic advisor approval and has met course pre-requisites. There is no GPA requirement; however, students must be in good academic standing. CIP also recommends that students meet with their academic advisor to make sure that they have met course pre-requisites (if applicable) and to talk about GEP or academic program requirements. Please note that the running of these programs is contingent on meeting sufficient enrollment requirements. For application information, please visit the CIP website: <http://internationalprograms.sju.edu/>. (<http://internationalprograms.sju.edu/>)

SJU Summer Program in Greece: The SJU Summer Program in Greece takes place on the Greek island of Syros. Excursions are also typically offered in Athens, Santorini, and Crete. Students may enroll in one or two

courses offered by SJU faculty and earn 3-6 credits. Students live in a neoclassical villa on Syros, in a hotel in Athens, and in a monastery in Santorini. Courses offered change from year to year. Previous courses have included Theology, Politics, History, and Psychology. (Summer only, four weeks, typically late May to late June.)

SJU Summer Program in Rome: The SJU Summer Program in Rome program takes place in the heart of Rome with several cultural visits planned in addition to two weekend excursions that typically include Florence/Pompeii and Sorrento/Capri. Students may enroll in one or two of the courses offered and there may be up to four courses offered each summer in a variety of disciplines. In the past, courses have included Italian, Classics, Psychology, Business, and Economics. Students, faculty, and coordinators reside at fully furnished apartments through The American University of Rome (AUR) and classroom space is provided on campus along with access to the AUR computer lab and library. (Summer only, four weeks, typically in the month of July.)

SJU Summer Program in China: The SJU Summer Program in China is tentatively scheduled to take place at the Beijing Center. Site visits to Luoyang, Xi'an and Hangzhou as well as a weekend trip to Shanghai are planned as part of the itinerary. Students may enroll in one or two classes. Previous courses have included History, Business, Theology, and Decision Sciences. (Summer only, four weeks, typically late May to late June)

Non-SJU Summer or Winter Study Abroad

Saint Joseph's University students who wish to earn academic credit through participation in an external (i.e., not facilitated by SJU) winter (J-term) study abroad program must apply through the CIP's online application system by the appropriate deadlines (March 15th for summer study abroad and October 15th for winter study abroad). As part of the application process, students will be required to obtain course approvals and seek the support of their Academic Associate Dean. Before beginning an application, however, we strongly advise students to carefully research program options. Students can browse through the brochures available in the CIP office, meet with the Study Abroad Advisor, or they can research programs independently. It's important to also note the following policies related to non-SJU winter study abroad:

- Students of all levels (freshmen through seniors) are eligible to apply for approval to participate on a non-SJU winter/summer program.
- Students must have a minimum cumulative GPA of 2.5 in order to be eligible for this type of study abroad. However, students may find that many programs have a higher GPA requirement that they will also need to meet.
- The student is responsible for submitting appropriate application materials and payments directly to the program that he/she decides to apply into, and SJU financial aid will not transfer.
- Credits earned through the non-SJU summer/winter abroad program will be considered transfer credits and the grades earned will not be posted on the SJU transcript.
- Credit will only be granted if the student has earned a grade of C or above.

Semester or Year Abroad

Saint Joseph's University has carefully selected 29 semester abroad program options in countries all around the world, including some programs with a Jesuit connection, programs with an experiential

learning component such as an internship or service-learning, and options where SJU students can take classes alongside local students. Students should review all program options on the CIP website and schedule an advising meeting with a CIP staff member before beginning an application. Students are also encouraged to consider a full year of study abroad.

Petitioning for a Non-approved Program: Saint Joseph's University students who wish to attend a university or study abroad program that is not currently affiliated with or approved by SJU and therefore not recognized for academic credit must petition the Center for International Programs through the on-line application system. Please note that this is only an option for students who have specific academic needs that cannot be met on any of the current Saint Joseph's approved programs; petitions for programs that are largely duplicate to, or are in enrollment competition with, existing Saint Joseph's programs, reciprocal university exchanges, or recognized affiliated programs in the same city or country are not normally approved.

As part of the application process, students will be asked to request a recommendation from their Academic Advisor. Therefore, before preparing a petition, the student should consult with their Advisor to discuss their specific interest in study abroad and how the experience will fit into their academic program. This is also a good time to discuss possible course selection and planning. It is also suggested that the student discuss a "backup plan" with their Academic Advisor (and the Study Abroad Advisor) in the event the petition is not approved. A committee reviews completed petitions and makes a recommendation to the CIP to either approve or reject the petition on a first come, first serve basis. Petitions are judged on the merit of the student's academic objectives in relation to specific study abroad opportunities for which they are seeking approval, and petition students are expected to have superior grades and sound academic preparation.

If the student's petition is approved, Saint Joseph's University will administer their study abroad program in the same way as an approved program.

Eligibility: SJU students are eligible for a semester abroad during the second semester of their sophomore year, all or part of their junior year or their senior year (with permission of the Associate Dean). Students must be in good academic and financial standing with Saint Joseph's University at the time of application and maintain that good standing throughout the process. There is a minimum cumulative GPA of 2.5., though many of our affiliated programs have a higher GPA requirement, some up to a 3.0.

Although CIP can advise students on making an appropriate program selection and assist them through the application process, our approval does not guarantee admission into a particular study abroad program or foreign institution. Students are responsible for understanding and meeting the regulations, requirements and deadlines specific to the program of their choice.

Applying: Students must apply through the on-line application system and receive approval from the Center for International Programs (CIP) in order to study abroad. Application deadlines are typically March 1st for the fall semester and October 1st for the spring semester; however, the CIP may adjust these deadlines (in advance and with notice) if necessary. In the event of a larger than anticipated applicant pool, the Center for International Programs may not be able to approve all study abroad applications. Complete applications from eligible students will be approved on a first come, first serve basis. For this reason, early

applications are strongly advised. Students who apply by the deadline but are not approved due to space will be placed on a waitlist. In the case of withdraws, priority will then be given to Saint Joseph's University students, students with no prior study abroad experience and students with exceptional, academic circumstances that may prevent them from studying abroad in a future semester. Some examples include (but are not limited to) class standing and major.

All other students not approved for the semester of their choice will be given priority for the following semester. Deferred applications will be approved pending an academic and disciplinary check during the following semester.

Senior Approval: Students who wish to study abroad during the fall or spring semester of their senior year must discuss their plans with their Academic Advisor, and obtain approval from the Associate Dean of their college via the Request to Study Abroad as a Senior (<https://forms.sju.edu/advsupport/view.php?id=46048>) form.

Length of Stay: Students can apply for an academic semester (fall or spring) or a full year abroad. Only in special circumstances (and with prior approval from the CIP, the Vice President/Associate Provost and the student's Academic Associate Dean) will a student be permitted to spend a third semester abroad. Students interested in studying abroad for more than one year should make an appointment with the Study Abroad Advisor prior to any planning and before beginning an application.

Fees and Financial Aid: Saint Joseph's University students who wish to study abroad for a semester and receive credit toward their Saint Joseph's degree will remain registered at SJU and pay SJU full-time, day tuition plus a \$100 Continuing Registration Fee. Students will also be asked to submit a \$300 confirmation deposit, which will be credited towards the student's total SJU tuition/Continuing Registration Fee expenses. Saint Joseph's University will then pay the overseas program for the tuition portion of the program. Students will be responsible for all non-tuition fees associated with the program they will be attending. Please visit the Center for International Programs website to review estimated costs for each of our approved, semester abroad programs.

All forms of financial aid can be applied to Saint Joseph's approved semester abroad programs. This includes Saint Joseph's grants, loans, scholarships, and state and federal awards, such as Pell Grants and Guaranteed Student Loans. A financial aid package for a student participating on a Saint Joseph's approved program will be based on the specific costs of the program in which the student will be studying. The following expenses will be included when calculating a student's financial need: tuition and fees, room and board, books, airfare for round-trip ticket and miscellaneous expenses such as local transportation, police registration fees, immunizations and any health insurance required by the host country. Students may not use any of their financial aid towards a petition program that is not approved by the committee.

Family Tuition Benefits, FACHEX and Tuition Exchange: Students who are receiving SJU family tuition benefits will be able to use these tuition scholarships toward their study abroad experiences. Family Tuition Benefit is available only for courses taken as part of a bachelors or master's degree program. Travel and expenses (other than tuition) for overseas programs, study abroad or other credit work at locations away from the main campus are not covered by the Family Tuition Benefits program.

Students who are the children of employees at other colleges/universities who are receiving scholarships through FACHEX and the Tuition Exchange Program may use these awards toward any approved study

abroad program through Saint Joseph’s University. For more information about FACHEX and the Tuition Exchange Program, please contact the Financial Assistance Office at 610-660-2000.

Credit Toward Graduation: Credit will be given towards graduation for all appropriate courses taken on SJU programs or approved programs abroad. Students must, however, get all courses approved following the instructions provided by the CIP. All courses (including credit-bearing internships) must be taken on A-F basis; pass/fail is not an option. Grades are reported on the Saint Joseph’s University transcript and count toward the student’s overall GPA.

Program Requirements: Students are required to maintain full time enrollment, attend class regularly and comply with all program regulations and individual course requirements in any program they choose. Students who leave the program before it is officially over will not receive credit for their work.

University Refund Policy: Students who choose to withdraw from the study abroad program must immediately notify the Center for International Programs through the on-line application portal. Only that portion of the student’s tuition and fees, which have not been committed on their behalf to the University and/or any third party at the time of cancellation, will be refunded to the student. If the student withdraws from the program before paying tuition and fees, the University will bill the student for commitments made on their behalf to the University and/or any third party. The student will be financially responsible for any such costs incurred, per the terms of the Semester Abroad Academic and Disciplinary Waiver in the on-line application.

Cooperative Education

Cooperative Education (Co-op)

Cooperative Education (Co-op) unites the classroom and the workplace, allowing students to engage in real-world applications of their academic pursuits. Co-op is available to business students majoring in Accounting; Business Intelligence; Finance; Financial Planning; a series of Management majors (Business Administration; Family Business and Entrepreneurship; International Business; Managing Human Capital; Leadership, Ethics and Organizational Sustainability); Marketing; Risk Management and Insurance; Pharmaceutical and Healthcare Marketing; and Sports Marketing. The Food Marketing Department administers a separate Co-op Program for its students.

Through two full-time, paid experiences (creating one year of work experience within the four-year degree), Co-op has proven to be an instrumental way for students to discover and live their professional passions. The Co-op work terms take place:

- 1. from September to December of the sophomore year and
- 2. from January to August of the junior year.

The hourly pay rate for the first Co-op ranges between \$10 and \$15 an hour, the hourly pay rate for the second Co-op work term ranges between \$15 and \$20 an hour. This translates to approximately \$25,000 in earnings across the two work terms.

The first work term is a more general experience, introducing students to the fundamental demands of work and providing them with workplace tasks that meet their introductory-level skills and knowledge. The second work term is comparatively more in-depth, allowing students to participate in higher-level responsibilities. Students may work for the

same employer for both work experiences or opt to work for different employers.

Co-op students enroll in two summer semesters (the summers following the freshman and sophomore years). The summer semesters, which run from mid-May to mid-July, replace the semesters that students work. Co-op students commonly report enjoying the summer semesters, particularly the cohesiveness and collaboration that exists among the students in the Program and the academic success that often results.

A Co-op student’s schedule proceeds like this:

Class	Fall	Spring	Sumer
Freshman	Study	Study	Study
Sophomore	Work	Study	Study
Junior	Study	Work	Work
Senior	Study	Study/Graduate	

A student who wants to participate in Co-op must:

- Be a full-time day student in the Haub School of Business.
- Have completed the first semester of the sophomore year before starting the first Co-op work term.
- Have completed the junior year before starting the second Co-op work term.
- Maintain a minimum overall grade point average of 2.5 throughout his/her college career and be in good disciplinary standing to enter and remain in the Co-op Program.

Additional Important Details

Students can join Co-op by completing a short application that is available at the Co-op Office or at classroom/campus information sessions.

Students should register for Co-op during the first semester of the freshman year (usually by or near November 1). Students may enroll later; however, the advantage to enrolling early is wiser course selection: the Co-op Program guides students into specific courses for the spring semester to prevent scheduling conflicts with the courses that need to be taken during the summer semester. Additionally, Co-op students enjoy a host of special programming (resume writing and interviewing workshops; social gatherings; networking nights; site visits to companies, etc.). Only students who have enrolled in Co-op will know about and be eligible to participate in these events.

Because of changing job market conditions and variations in students’ skills and abilities as they relate to employers’ needs, the Co-op Program cannot guarantee jobs. However, the Director works diligently with students to help them engage in the most successful job search possible with the companies that post Co-op positions with the Co-op Program.

While on work assignments, Co-op students are classified as full-time. Full tuition must be paid for the two summer semesters (which replace the fall semester of the sophomore year and the spring semester of the junior year). A monthly payment plan option is available to divide the summer semester tuition across several months. There are no tuition charges for the two work terms.

Students who are contemplating Co-op must meet with a Hawk Central counselor to investigate how, if at all, Co-op will affect their financial aid package.

On-campus housing is available to Co-op students during the summer semesters and during the work experiences for students who are eligible for it.

For additional information, please call the Co-op office at 610-660-1103 or visit the Co-op office in Mandeville 150.

4+1 Programs

4 + 1 Programs

For program options and admission information click here (<https://www.sju.edu/academics/undergraduate/four-plus-one/>)

SJU undergraduate students are eligible to apply for select masters degrees as part of our 4+1 Program.

In this competitive work environment, having a master's degree can lead to higher-level positions, more responsibility and greater earning potential.

The 4+1 Program allows students to complete both a bachelor's and a master's degree in five years. Students share 6 credit hours between their undergraduate and graduate degrees.

Here's how the 4+1 program works:

- Apply to the graduate program in your Junior or Senior Year – Here is the link to Apply (<https://admission.sju.edu/apply/?pk=GR>)
- The Graduate & Extended Studies Office will request your official transcript and your application fee will be waived.
- Work with your advisor to begin enrolling in graduate courses during your junior or senior year
- Earn your undergraduate degree and your master's degree in just 4+1 years
- Graduate classes may be done on campus or online (varies by program)
- Enjoy the 10% Alumni tuition discount upon receiving your Bachelor's Degree
- Merit Scholarships are available
- 4+1 offerings vary by program. Contact the Graduate Program Director (<https://sites.sju.edu/gradplsadvising/grad-advising/>) of your interested program during the first semester of your Junior year to determine eligibility.

4 + 1 Program at the Haub School of Business

For Admission Procedures click here (<https://www.sju.edu/admission/graduate-business/>)

SJU undergraduate students are eligible to apply for the MBA and Specialized Masters Programs as part of our 4+1 Program.

In this competitive business environment, having a master's degree can lead to higher-level positions, more responsibility and greater earning potential.

The 4+1 Program allows students to complete both a bachelor's and a master's degree in five years. Students share six specific credit hours between their undergraduate and graduate degrees.

Here's how the 4+1 program works:

- Apply in your Junior or Senior Year – Here is the link to Apply (<https://admission.sju.edu/apply/?pk=GR>)
- The Graduate Business Office will request your official transcript and your application fee will be waived.
- Business undergraduate course can be used to waive foundation courses.
- Earn your undergraduate degree and your MBA in just 4+1 years
- Take up to six credits in your senior year that can count toward your MBA
- Increase your value in a competitive marketplace and earn a higher starting salary
- Classes can be done completely online or on campus (All evening classes)
- Enjoy the 10% Alumni tuition discount upon receiving your Bachelor's Degree
- GMAT waived based on academic excellence and letters of recommendation from faculty
- Merit Scholarships are available
-

Other Special Programs

Fellowships

The Fellowships Office offers guidance and advice to fellowship and scholarship applicants already enrolled in the College of Arts and Sciences, the Erivan K. Haub School of Business, Professional and Liberal Studies and the Haub Degree Completion Program. In the majority of cases, these fellowships and scholarships are given by off-campus granting institutions or foundations, such as the Fulbright Program, the Barry M. Goldwater Excellence in Education Foundation, the Harry S. Truman Scholarship Foundation, or the Rhodes Scholarship Fund. The Fellowships Office works closely with fellowship/scholarship applicants in every step of the application process, from discerning which fellowships/scholarships best suit their needs to discussing and implementing the steps that need to be taken along the way.

Preparing for Health Professions School

Students preparing to enter a doctoral level program in the health professions such as medicine or dentistry typically major in one of the natural sciences. It is also possible to major in humanities and social science areas and still fulfill the minimum requirements for all health professional schools, however students need to show proficiency in the natural sciences to be a strong candidate for admission. The minimum course requirements for most medical, dental, optometry, veterinary, and podiatry schools include one year each of biology, general chemistry, organic chemistry, and general physics, all with labs. Additionally, a semester of coursework in biochemistry, statistics, and calculus is strongly recommended or required by most health professional programs. Although schools establish these minimum science requirements for admission, it is strongly recommended that students take additional advanced level science courses to enhance their background and to show that they can manage advanced science work. Courses that explore the sociological, psychological, philosophical, and ethical

aspects of healthcare delivery—the human dimension—are also strongly encouraged.

The Health Professions Advisory Committee reviews the credentials of students applying to health professional schools and provides the composite letter of evaluation from the University; further information can be found here (https://www.sju.edu/offices/advising/resources/health-professions/#_ga=226475655915340186191666036313-30951731666036313). Additionally, Brianna Metzger (bmetzger@sju.edu), Associate Director of Pre Health Advising, is available to counsel students on course selection, preparation for the standardized admission exams, and procedures to follow when applying to health professional schools.

Service-Learning Program

Integral to the mission of Saint Joseph's University, Service-Learning challenges students to combine traditional academic coursework with community-based experiences. The student engaged in Service-Learning works in two classrooms, one here at the University and the other in the city of Philadelphia. Classroom lectures, texts, assignments, and critical reflection on social justice issues are enhanced by a community-based learning commitment through weekly volunteering or a mutually designed project with community partner schools and agencies that relate to course material.

Service-Learning courses are offered in all schools and colleges at the university. A unique First Year Service-Learning Program engages first-year students through a two-course sequence embedded in General Education courses for an entire academic year. Upper-class students can enroll in semester-long course offerings in their major, minor, or general education requirements. A team of staff and student leaders assist the faculty in the recruitment, placement, and orientation of students enrolled in Service-Learning courses. To learn more about the Service-Learning Program and a current list of open courses, please visit www.sju.edu/servicelearning (<http://www.sju.edu/servicelearning/>) or contact the Faith-Justice Institute.

The Washington Center Internship Program

Through The Washington Center for Internships and Academic Programs (TWC), Saint Joseph's University offers a unique experiential learning program for students interested in semester-long and summer internships in Washington D.C. TWC is a nonprofit, nonpartisan educational organization that provides integrated academic and work experience aimed at preparing students for careers in private, public, and related professions.

As participants in the program, students spend a semester or a summer in our nation's capital where they gain valuable career experience working as an intern, taking a class specific to their major and professional field of interest, and engaging in a Leadership and Service Forum, all while retaining full-time SJU status. The program is open to all majors and disciplines, runs year-round, provides guaranteed housing in a state-of-the-art facility, and includes training in leadership and professional skill-building.

TWC offers a variety of internships through hundreds of private, public, and non-profit organizations, and students are able to choose from seven different professional tracks that cater to their interest and career aspirations:

- Advocacy, Service & Arts
- Business & Global Trade
- International Affairs
- Law & Criminal Justice
- Media & Communications
- Politics & Public Policy
- Science, Technology & Society

Recent SJU student internship placements include:

- The State Department,
- TeachAmerica,
- Pan American Health Organization Foundation,
- Center for Security Policy,
- Department of the Interior,
- Federal Trade Commission,
- Peace Corp,
- Metropolitan Police Department,
- Amnesty International,
- and many private law firms, think tanks, lobbying firms, and congressional offices.

To learn more about The Washington Center Internship Program at SJU, contact Dr. Becki Scola, the campus liaison/coordinator, at bscola@sju.edu, or visit <http://www.sju.edu/centers/washington-center> (<http://www.sju.edu/centers/washington-center/>).

Undergraduate Internship

Undergraduate Internships can be paid or unpaid work experiences in corporate settings that relate to students' major fields of study. Students may receive academic credit for an internship experience. If a student wants to secure academic credit for an internship, the student should, prior to seeking the internship, meet with his/her academic advisor to determine whether he/she meets the department's requirements to secure an internship (minimum GPA, enrollment status, and internship pre-requisites). Once eligibility has been confirmed, a student can seek internship opportunities through the Career Development Center, through faculty corporate contacts, or through individual internship postings on corporate websites (students who are not seeking academic credit can and should utilize these same resources). Once the internship has been secured, a student needs to provide a job description and a hire letter to his/her faculty mentor (usually an advisor or a faculty member the student has had for at least one class) for the internship. The student and the faculty mentor will complete all necessary internship paperwork to be forwarded to the Director of Cooperative Education. Under the direction of an Associate Dean of the Haub School of Business, the Director of Cooperative Education will approve the internship, if all factors related to the internship meet the University's and the sponsoring academic department's requirements.

Laptop Program

All full time undergraduate day students in the Haub School of Business are required to have a Windows Laptop documented on the Business School link at www.sju.edu/laptop (<http://www.sju.edu/laptop/>) .

Saint Joseph's University collaborates with partnered vendors to offer our students specially priced laptops, which meet all the SJU computing requirements. These models are available for purchase at www.sju.edu/

laptop (<http://www.sju.edu/laptop/>) . Students *are not* required to purchase a computer through the SJU Laptop Program.

Microsoft Office for Windows is also required. SJU students can download this software for free by visiting the laptop website. Students receive technical support provided by the Technology Service Center located in the Science Center, Room 129.

COLLEGE OF ARTS AND SCIENCES

Arts and Sciences Leadership

Interim Dean: Nathan Baird, Ph.D.

Associate Dean for Students and Experiential Learning: James Caccamo, Ph.D.

Associate Dean for Curriculum, Assessment, and DEI: Becki Scola, Ph.D.

Faculty Listing: College of Arts and Sciences (<https://directory.sju.edu/college-arts-and-sciences/faculty/>)

Mission

As the intellectual heart of Jesuit education at Saint Joseph's University, the College of Arts and Sciences invites students into a community of life-long learners who lead by example, living purposefully for the greater glory of God in service to and with others. To this end, we expand minds, advance knowledge, nurture humane values, and inspire imaginations.

Africana Studies Minor

Students interested in pursuing the Minor in Africana Studies should consult the Advising Support Center of the College of Arts and Sciences.

The Africana Studies program currently includes courses offered by the departments of Economics, English, French, History, Foreign Languages and Literatures, Music, Theatre and Film, Philosophy, Political Science and Religious Studies. Courses taken to satisfy requirements of this program may also serve to satisfy GEP or major requirements, including Integrative Learning courses where appropriate.

Requirements

Participants choose a minimum of six courses from those listed below (both course numbers and course titles must match the ones listed below) with no more than three from any one department. Substitutions may be approved upon written application to the director. Students who successfully complete the program requirements earn a Minor in Africana Studies.

American Studies Minor

The minor in American Studies provides a framework within which students can focus their elective and related courses on the study of American history, literature, art, politics, ideas, and institutions. Students majoring in economics, English, history, fine arts, political science, sociology, and theology are especially encouraged to consider a minor in American Studies. By examining the United States from a variety of intellectual perspectives, American Studies minors will develop both a more nuanced understanding of the development and dynamics of American culture and a more sophisticated, interdisciplinary approach to academic study.

Faculty Director

- Brian Yates

Advisory Board

Katherine Sibley, Jeffrey Hyson, Martha Easton, Emily Hage, Chris Kelly and Owen Gilman.

Learning Goals and Outcomes

Goal 1: Students minoring in American Studies will gain a stronger knowledge in the disciplines that make up this minor and thus articulate key aspects of United States history, politics, economics, culture (including art, religions, and literatures) and society.

Objective 1.1: Students will be trained to identify, define, or analyze key aspects of U.S. history, politics, economics, culture (including art, religions, and literatures) and society, using a variety of tools, methods, and perspectives, in order to gain knowledge and articulate their understanding in the disciplines that make up this minor.

Goal 2: Students will produce clear and persuasive analyses of relevant research questions generated by the interdisciplinary approaches offered in the minor of American studies.

Objective 2.1: Students will be able to practice a range of methodological perspectives and practices used to investigate and interpret topics in American Studies, and to present their findings effectively.

Requirements

Code **Title** **Hours**

Participants must choose a minimum of six courses from those listed below, with at least one from each group (and at least one in each group must be above 100 level):

Animal Studies Minor

Animal Studies is an interdisciplinary field that aims not only to investigate animals themselves, but also the relationship between human and non-human animals. Animal Studies brings together scholarship from the social and natural sciences, as well as the humanities. The Animal Studies minor exposes students to courses focusing on human and animal relations and interactions, animal biology/physiology, animal

behavior and cognition, and the role played by non-human animals in the larger world around them. The selection of courses is designed to yield a greater knowledge of and appreciation for animals and our relationship with them.

Faculty

Director

- Skolnick (Psychology)

Animal Studies Advisory Board

- Fetherston (Health Sciences)
- Goldthwaite (English)
- Nelson (Biology)
- Tudor (Biology)

Learning Goals and Outcomes

Goal 1. Students will develop greater understanding of the nature of animals and the role played by animals in the larger world.

Objective 1.1: Students will demonstrate knowledge of the role of animals in the broader natural world or in human society.

Objective 1.2: Students will demonstrate knowledge of human-animal interactions and relationships.

Objective 1.3: Students will demonstrate knowledge of the major concepts, historical trends and theoretical perspectives in the discipline of Animal Studies.

Objective 1.4: Students will demonstrate knowledge of animal biology.

Objective 1.5: Students will demonstrate knowledge of animal behavior and cognition.

Goal 2. Students will develop a greater understanding of the ethical issues that surround human-animal interactions.

Objective 2.1: Students will demonstrate knowledge of the theoretical perspectives concerning the moral status of animals.

Objective 2.2: Students will demonstrate knowledge of the ethical issues surrounding the use of animals.

Requirements

All students seeking to minor in Animal Studies will take the following courses:

1. PSY 208 Human-Animal Relations (PSY 100 or PSY 101 is prerequisite)
2. An understanding of how human and non-human animals relate and interact requires understanding form and function of the organisms, so all students seeking to minor in Animal Studies will complete **one of the following courses:** (Non-Biology Majors can choose between BIO 101 and BIO 165, Biology Majors must take BIO 201)

Code	Title	Hours
BIO 101	Bio I: Cells	4
BIO 165	Exploring the Living World	4
BIO 201	Bio III: Organismic Biology	4

3. A background in animal behavior and its underpinnings is helpful when considering the interactions and relationships between human and non-human animals. All students seeking to minor in Animal Studies must take **one of the following courses:** (These courses all have prerequisites)

Code	Title	Hours
BIO 401	Animal Behavior	4
PSY 201	Biological Bases of Behavior	3
PSY 225	Comparative Animal Behavior	3

4. Students will take three additional elective courses to complete the Animal Studies minor (Note: many of these have pre-requisites and/or co-requisites); **at least one of these courses must be from a department other than Psychology or Biology.** Students may choose from among the following, which are included in order to provide additional knowledge of human and non-human animal relations and interactions, animal biology/physiology, animal behavior and cognition, and the role of non-human animals in the larger world around them:

Code	Title	Hours
Independent Study ¹		
Independent Research ¹		
Internship ¹		
BIO 260	Anat&Physiol Nurs/Al Hlth I	4
BIO 406	Comparative Anatomy	4
BIO 409	Ecology	4
BIO 412	Neurobiology	4
BIO 417	Systemic Physiology	4
BIO 419	Invertebrate Zoology	4
BIO 423	Evolution	4
CLA 201	Love,Sex,Conqst:Classic Myth	3
ENG 150	First Year Seminar ²	3
ENG 270	Special Topics in English ⁴	3
ENG 426	Nature & Environmental Writing	3
ENG 452	Writing and Reading Animals	3
ENG 461	Food Writing	3
ENV 105	The Environment	3
ENV 106	Exploring the Earth	4
HIS 386	American Environmental History	3
HSC 360	Animal Therapy	3
PHL 312	Animal Ethics	3
PSY 201	Biological Bases of Behavior ³	3
PSY 221	Animal Learning and Memory	3

¹

With permission of the Animal Studies Director, students can count one semester of an appropriate independent study, research, or internship toward the minor (in category 4).

²

This course is a freshman seminar and to count it must be approved by the Director.

³

PSY 201 may be used as an elective or to satisfy requirement 3 above, but it may not be used in both categories.

4

Only the ENG 270 Special Topics in English course titled, "Intro to Animal Studies" counts as an elective in the minor.

At least half (three) of the courses counting toward the minor must come from outside the student's major department.

Art/Art History

Department Overview

The Art & Art History department offers courses in art history, graphic design, painting, drawing, photography, sculpture, pottery, ceramics, and mosaics. The department occupies three buildings that include lecture classrooms, painting and drawing, sculpture, and ceramics studios, a kiln house with electric, gas, and raku kilns, a darkroom for traditional photography, a shooting studio for all photography classes, and a digital lab outfitted with high-end computers, printers and state-of-the-art software for graphic design and digital photography.

With Saint Joseph's University's partnership with the Barnes Foundation, students will be able to see artworks and even show their own in the galleries in the new Frances M. Maguire Art Museum at the Barnes Arboretum. Students also pursue internships that help secure jobs after graduation.

Because of Saint Joseph's proximity to Philadelphia, New York, and other major cultural centers, students are able to experience first-hand major works of art at many renowned galleries and museums. Students pursue internships at regional museums and cultural organizations, travel overseas, and have access to the University's extensive permanent collection. As part of the Gallery Exhibition Research Assistant (GERA) program, students can gain valuable experience in researching and hanging exhibitions in the department's two galleries for professional and student work.

The department's award-winning faculty of artists or scholars are also dedicated teachers who challenge students to express themselves and respond to their immediate and global context.

Art and Art History students develop careers in a wide range of art-related areas, including publishing, advertising, gallery and museum curating, graphic design, pottery, interior design, fashion design, education, and architecture, in addition to the many jobs available to students with a strong liberal arts degree, such as law and also medicine.

Faculty

Well respected in the art industry, the faculty members in Saint Joseph's University's Art & Art History Department bring a wide range of applicable experience from previously held high-level positions working for museums, galleries, graphic design firms, major corporations and more. They are deeply dedicated to helping students reach their career objectives in art and art history.

Department of Art and Art History Faculty & Staff (<https://www.sju.edu/departments/art/faculty-staff/>)

Art/Art History in the GEP

GEP overlays

The Art/Lit GEP requirement for all majors may be satisfied by three-credit ARH or ART courses (Art History or studio courses).

Many ART and ARH courses fulfill the GEP overlay requirements:

Code	Title	Hours
ARH 103	Art of Africa/African Diaspora	3
ARH 104	Intro to Global Architecture	3
ARH 105	East Asian Art & Architecture	3
ARH 106	Latin American Art & Architect	3
ARH 107	Women, Gender, and Art	3
ARH 150	First Year Seminar	3
ARH 202	Medvl Art Ctcombs to Cthdrals	3
ARH 203	Renaissance Art & Architecture	3
ARH 204	Baroque Art and Architecture	3
ARH 207	American Art and Architecture	3
ARH 208	Modern Art & Architecture	3
ARH 209	Contemporary Art & Architect	3
ARH 210	Museum Studies	3
ART 146	Sculpture and the Environment	3
ART 149	Japanese Pottery & Tea Culture	3
ART 177	Photography & Climate Crisis	3
ART 179	Photography: Truth & Privilege	3

Independent Study Program

Independent study courses may be taken for upper division credit in a student's major department. Advanced or specialized work in Art and Art History may be pursued under the guidance of a faculty mentor within the independent study program. Students requesting an independent study should contact the faculty member to be involved in the project at least two weeks prior to the registration period. Students must submit a written project proposal which outlines topics and goals.

College Honors Requirements

To receive College Honors credit, Art majors participate in the Senior Project courses, required of all majors, and complete additional assigned reading, research and discussion that are not required of those students not taking the courses for honors credit. For students in the University Honors program, these two upgraded courses may be counted toward the eight course Honors requirement. To be eligible to participate in College Honors, a student must have a 3.5 GPA. Students interested in completing the College Honors project during their senior year should contact the department chair early in the spring semester of their junior year. Art History majors will complete upgraded versions of ARH 480 (Art History Research Seminar) and another course, usually ARH 481 (Museum Internship). These courses lead art history students through supervised projects, including a written research project that is formally presented to members of the Department of Art and Art History. Along with the research and writing expected of all students in these courses, Honors students will incorporate an additional component, such as an annotated bibliography, into their final written product. More details concerning College Honors may be found in the "Honors Program" section of the catalog.

Programs Undergraduate Majors

- Art (p. 68)
- Art History (p. 65)
- Art Education (p. 64)

Undergraduate Minors

- Art (p. 70)
- Art History (p. 67)
- Art Therapy (p.)
- Commercial Photography (p. 71)
- Graphic Design (p. 73)
- Museum Studies (p. 73)

Courses

ARH 101 Intro to Global Art History I (3 credits)

A survey of the visual arts and architecture from a global perspective. Students are introduced to a wide range of artistic practices, styles, and media from many major periods throughout history, and will examine the way visual culture both reflects and influences the ideas and values of the societies that produce it. The course covers material such as prehistoric cave painting; funerary art from ancient Egypt; temple architecture and sculpture dedicated to the gods and goddesses of ancient Greece and Rome; the development of Buddhist art and architecture in Asia; and the religious and secular art and architecture of medieval Europe.

Attributes: GEP Art/Literature, Undergraduate

ARH 102 Intro to Global Art History II (3 credits)

A survey of the visual arts and architecture from a global perspective. This is a continuation of "Introduction to a Global Art History I," but the two courses may be taken independently of one another. Students are introduced to a wide range of artistic practices, styles, and media, including painting, drawing, prints, photography, sculpture, installation art, performance art, film, video, and architecture, in Europe, the Americas, Asia, and Africa. The class examines many major periods and movements in the history of art, including material such as Renaissance painting in Italy and northern Europe; ukiyo-e woodblock prints in Japan; power figures in Africa; Impressionism in nineteenth-century France and America; Cubism and Abstract Expressionism in the early twentieth century; and contemporary art worldwide.

Attributes: GEP Art/Literature, Undergraduate

ARH 103 Art of Africa/African Diaspora (3 credits)

This course will focus on the rich history of the art and architecture of Africa and the African diaspora. It will take advantage of the strong collection of African art at Saint Joseph's University, as well as other collections in the Philadelphia area.

Attributes: GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

ARH 104 Intro to Global Architecture (3 credits)

This course introduces students to the history of architecture - its major figures, works, movements, and historical eras. It encourages students to analyze major buildings within a broader context and challenges them to reflect on the cultural and political implications of the built environment. Students will gain familiarity with the most significant architectural styles, structural approaches, building materials, and technological innovations that have shaped architecture throughout human history.

Prerequisites: ENG 101

Attributes: American Studies Course, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ARH 105 East Asian Art & Architecture (3 credits)

This course introduces students to the visual culture of East Asia from prehistory to the present, viewed through the lens of history, literature, and religion. Topics of particular focus will include ancestor worship in ancient China; the intersection of Buddhism with art and architecture; calligraphy as an art form; the illustration of The Tale of Genji and Heian court culture; class, gender, and ukiyo-e (woodblock prints); popular art such as manga and anime, and trends in contemporary Asian art of the late twentieth and early twenty-first centuries. We will also discuss the idea of cultural interaction and appropriation between China, Korea, Japan, and the West, as well as issues surrounding the collection and display of East Asian art in America. Students are given the opportunity to see relevant works of art in collections in the Philadelphia region.

Attributes: Asian Studies Course, GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

ARH 106 Latin American Art & Architect (3 credits)

This course examines the visual arts of ancient, colonial, and modern Latin America. It encompasses the study of painting, sculpture, decorative arts and architecture from Mesoamerica, Central America, South America and the Caribbean. We also address issues critical to discussions of the arts of Latin America, such as preconceptions about the political and religious roles in art, appropriation and adaptation of western cultures, the incorporation and relationship with European/American art theory and methods, and the reevaluation of Latin American art today. Students are given the exciting opportunity to examine works of art from Saint Joseph's University's important collection of colonial Spanish American art as well as collections at nearby museums.

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

ARH 107 Women, Gender, and Art (3 credits)

This course offers a survey of art history with an emphasis on gender. It will consider how gender informs the production, reception, and cultural understanding of art and imagery. Students will consider how gender is relevant to the creation and study of arts and culture. We will study artists who have used art to effect social change. Exploring feminist approaches to art historical study, we will analyze perceptions of gender through visual culture and personal experience. We will examine the ways that certain ideals of masculinity and femininity are represented in art and its history to gain insight into gender performance and sexual identity both in past periods and in contemporary society.

Attributes: Diversity Course, Gender Studies Course, GEP Art/Literature, Undergraduate

ARH 108 Traditions of Art (3 credits)

The course is offered by the Barnes Foundation and is designed to strengthen the participant's understanding of the objective method or empirical art analysis as developed by Dr. Albert C. Barnes, put into practice by Violette de Mazia and grounded in the aesthetic philosophy of John Dewey. Participants will deepen and enrich their understanding of art as it has developed through the centuries. Through direct study and observation, participants will be challenged both individually and collectively to participate in a continuing dialogue regarding the place of the aesthetic in everyday life and the role art can play within such a context. Participants are encouraged to think critically in this examination thereby affecting a richer and more meaningful experience for all. This will NOT count as fulfilling the Art/Lit GEP requirement, though it WILL count toward the Art History major or minor.

Attributes: Undergraduate

ARH 109 Elements of Art (3 credits)

This course is offered by the Barnes Foundation and is designed to help participants discover the art in painting through an objective method of understanding and appreciating visual expression, and to expose participants to an inclusive view of the relationship between art and daily life. In Elements of Art participants will hone their power of perception, develop a vocabulary by which to describe visual experiences, and begin to improve their ability to communicate to others what they see. Informed Perception is based on the analytical theory of Dr. Albert C. Barnes which was codified and explicated in the many writings and lectures of Violette de Mazia. Barnes' and de Mazia's methodology is grounded in the pragmatic philosophy of John Dewey who remains one of the most respected names in American thought and philosophy and as such Dewey's ideas will act as a springboard for many class discussions. In addition to the assigned readings participants are encouraged to read excerpts from Dewey's seminal work *Art as Experience* available on the class portal. This will NOT count as fulfilling the Art/Lit GEP requirement, though it WILL count toward the Art History major or minor.

Attributes: Undergraduate

ARH 110 Art and Medicine (3 credits)

This course focuses on artists who explore and employ medicine in their work. Possible images for analysis include works by Leonardo da Vinci, Thomas Eakins, and Hannah Wilke, as well as visual depictions of world health crises in the media. Students will look at how a broad range of artists has envisioned medicine, disease, and deviance, and their related dialogue with constructions of race, class, gender, and sexuality. The course will encourage students to think critically about the many intersections between art and medicine throughout history. It also will touch upon how medical professionals are increasingly receiving art history training and why. The chronological parameters of the course will vary according to who is teaching it.

Attributes: GEP Art/Literature, Undergraduate

ARH 115 Italy Through Art (3 credits)

Italy Through Art, The Making of Modern Rome: Conducted in Rome, this course introduces students to the visual language of art, while providing an enriching cultural experience. The eternal city is an expansive, open-air museum where ancient and modern meet. Students will learn about Rome's artistic heritage while living amidst ancient ruins, baroque basilicas and contemporary monuments. As we view art objects first-hand, we will explore the making and meaning of Italian art, by addressing methodological issues including form and function, style, materials and technique. We begin with a consideration of ancient Rome, through direct experience with monuments that have survived centuries. Next, we explore the early developments of Christianity by visiting Roman basilicas and churches. Our excursion to Tuscany focuses on Renaissance humanism and Medici patronage. Upon return to Rome we examine Baroque masterpieces adorning Roman piazzas and churches. We conclude with art and architecture of the period after 1870, when Rome became the capital of Italy. The course is complemented by guest lectures and site visits to Roman museums, churches and palaces, as well as excursions to Assisi, Florence, Pompeii and Sorrento. Taught in English. No pre-requisites. Counts toward the major and minor in art history, the Italian Studies major, the major and minor in Classical Studies, and the minor in Medieval, Renaissance, Reformation Studies.

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ARH 150 First Year Seminar (3 credits)

Students will focus on a topic having to do with the history of art and architecture. The class will include field trips on campus and in Philadelphia. Besides learning about artists and their works, students will hone their reading, writing, speaking and research skills, as they become acquainted with the university.

Attributes: First-Year Seminar, Undergraduate

ARH 170 Special Topics in Art History (3 credits)

Concentrated focus on a selected topic in Art History at an introductory level.

Attributes: Undergraduate

ARH 178 Art History & Photography: Italy (3 credits)

This Art study tour will have a combined emphasis on the history of Italian Renaissance art and the practice of photography. Through travel to the Italian cities of Venice, Florence, and Rome students will have the opportunity to explore the great works of art and architecture that defined the Renaissance in Italy - St. Mark's Square, the Uffizi, the Sistine Chapel and more. They will also spend time developing photographic skills as they explore these cities with an eye toward creating their own photo essay. Travel will be over Spring Break. No prior experience in either art history or photography is required.

Attributes: Undergraduate

ARH 180 Encountering Mystery (3 credits)

This course investigates the relationship between art, religious belief structures, and mystical experience. With a number of texts from Comparative Religion and Art Theory as backdrop, the lectures, discussions, and papers will involve presentations of art and architecture which circumscribe religious belief structures as well as expressions of spiritual conviction. Discussions of the essential elements of the I-am-spiritual-but-not-religious mindset will expose contrasting experiences of the *mysterium tremendum et fascinans*, the "numinous" wholly Other. Reflection on experience will lead to a stronger ability to express one's own attitudes about the scientific mindset and the creative expression of spiritual ideas and ideals.

Prerequisites: PHL 154 and (THE 154 or THE 153 or THE 155 or THE 221)

Attributes: Faith-Reason Course, GEP Art/Literature, Undergraduate

ARH 202 Medvl Art Ctombs to Cthdrals (3 credits)

This course examines the art and architecture of the Middle Ages across a broad chronological and geographic scope, from the late Roman empire through the late Gothic period (c. 250-1500), including western Europe, Byzantium, and the Islamic world. We will study the painting, sculpture, architecture, stained glass, metalwork, and manuscripts produced by the diverse cultures during this period in terms of materials and methods of production, style, and iconography. We will also pay special attention to the historical context for the creation and reception of medieval art, including issues of patronage, politics, gender, cross-cultural interactions, and the multivalent purposes of images and buildings during the Middle Ages.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate, Writing Intensive Course- GEP

ARH 203 Renaissance Art & Architecture (3 credits)

This course analyzes key works of art and architecture and art historical trends from the period of the 13th to 16th century. The focus of our exploration is on the art of Europe, with a particular emphasis on Italy, Spain, and the Netherlands. We discuss the careers and works of artists such as Michelangelo, Leonardo da Vinci, and Albrecht Dürer. We also explore the social and historical context of the art they produced, including issues of patronage, gender, and audience.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate, Writing Intensive Course- GEP

ARH 204 Baroque Art and Architecture (3 credits)

This course analyzes key monuments and art historical trends from the late 16th century to the mid-18th century. The focus of our exploration is on the art of Europe, with a particular emphasis on Italy, Spain, and the Netherlands. We discuss the careers and works of artists such as Caravaggio, Gianlorenzo Bernini, Artemisia Gentileschi, and Jan Vermeer, and also explore the social and historical context of the art they produced.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate, Writing Intensive Course- GEP

ARH 205 Revolution to Realism 1780-1880 (3 credits)

From the power of Neoclassicism to the decadence of the fin-de-siècle, painters, sculptors, and architects challenged tradition and transformed art during the dynamic and often turbulent years between 1780 and 1880. The death of the revolutionary hero, the search for spiritual meaning, the "rape" of the countryside by industrialism, the anxious masculinity of romanticism, and the emergence of such conceptions as "Orientalism" and nationalism are some of the themes that are addressed through the art of this period. Students study the careers of such artists as David, Delacroix, Ingres, Gericault, Constable, Turner, and Goya, and the radical landscape painting of the mid-century that foreshadowed Impressionism. Themes explored include gender and sexuality, patronage, and political censorship, and we focus on the social and political contexts in which works were produced, exhibited, and understood.

Attributes: GEP Art/Literature, Undergraduate

ARH 206 Impressionism (3 credits)

This course examines paintings produced between the mid nineteenth and early twentieth centuries. We consider artists from many countries who worked and exhibited in Paris at this time, including Monet, Renoir, Degas, and Cassatt. This course also includes discussion of artists who immediately followed the Impressionists, such as Manet, Seurat, Cézanne, Van Gogh and Gauguin. We consider the reception of these artists' works by their contemporaries and since, and examine these works within their wider artistic, cultural, political, and social contexts.

Attributes: GEP Art/Literature, Undergraduate

ARH 207 American Art and Architecture (3 credits)

This course offers a survey of the history of American art and architecture. Organized around important episodes in American history, including the Civil War, the Harlem Renaissance, and the Civil Rights Movement, this course considers such topics as the role of gender and racial identity in the content, authorship, and reception of artworks. The class examines major movements in the history of American art, with an emphasis on works that historically have been overlooked because of the race, gender, religion, nationality, and/or ethnicity of the artist or architect. In an effort to show the currency and relevance of these issues, and to scrutinize how art institutions treat (or ignore) issues of diversity, the course requires students to visit area museums and galleries.

Attributes: American Studies Course, Diversity Course, GEP Art/Literature, Undergraduate

ARH 208 Modern Art & Architecture (3 credits)

This course offers a survey of the history of European and American art and architecture, with a focus on the first half of the 20th century. Students are introduced to a wide range of artistic practices, styles, and media, including painting, drawing, prints, photography, sculpture, film and architecture. The class examines major movements within the history of art, including such artists as Pablo Picasso, Marcel Duchamp, Frida Kahlo, and Salvador Dalí. It takes advantage of the many rich collections of art and architecture in the Philadelphia area by visiting these institutions and analyzing works firsthand.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ARH 209 Contemporary Art & Architect (3 credits)

The period from the mid-twentieth century to the present is one of exceptional political, social, cultural, and technological upheaval. This course offers a survey of European and American painting, drawing, prints, photography, sculpture, installation art, performance art, film, video, and architecture within the context of these changes. Topics covered include debates regarding abstraction and figuration, as well as feminism, primitivism, modernism, postmodernism, and the impact of such factors as technology, religion, and war on the creation and reception of art.

Prerequisites: ENG 101

Attributes: American Studies Course, Undergraduate, Writing Intensive Course- GEP

ARH 210 Museum Studies (3 credits)

This course is an introduction to museum history, theory, and practice. Through case studies and key texts, it explores the evolving structure and mission of the museum and its impact on our understanding of art, society, and culture. Additionally, students will gain insight into the various jobs and responsibilities at museums. A key component of this course is immersive, on-site learning experiences that take advantage of the distinguished art institutions available in the Philadelphia region. Although centered on art museums, this course considers a broad range of museum practices and related fields.

Attributes: American Studies Course, Diversity Course, GEP Art/Literature, Undergraduate

ARH 211 Art & Magazines (3 credits)

Artists have been involved with magazines since they first appeared - designing covers, illustrating stories, designing pages, and even making their own. With an emphasis on the 19th through the 21st century, this course explores artists' involvement in periodicals, including artists' journals, contributions to mass circulation magazines, and underground "zines." It explores how serials have helped artists disseminate their ideas, shaped their artistic beliefs, and informed what kind of images they made. It also considers why artists have accepted commissions from commercial periodicals like *Fortune* and *The New Yorker*. The course examines a wide range of artists, including not only photographers and "fine" artists, but also graphic designers and those hired as illustrators. It will delve into the material nature of magazines, from paper to digital, and analyze how magazines interrogate entrenched divisions between "high" and "low." As part of the class, students will have the option to experiment with making their own magazines.

Attributes: GEP Art/Literature, Undergraduate

ARH 212 History of Photography (3 credits)

Photography is a widely used but relatively little understood medium. This course offers a survey of photography in the United States and Europe from its invention to the present. We examine the ways in which photography has been employed by amateurs, artists, anthropologists, politicians, and scientists for a wide range of purposes. We also examine how the medium has affected portraiture, painting, documentation, journalism, and advertising. The class considers photography in the context of continuing debates regarding the nature of reality and truth, photography's status as art or document, subjectivity versus objectivity, and issues of originality, authenticity, and power.

Attributes: GEP Art/Literature, Undergraduate

ARH 301 Mystery&Monument:Anc Greece (3 credits)

This course examines the material culture remains of various cities prominent in the history of Greece. Knossos, the main city of the island of Crete, Troy, and Mycenae are among the sites studied for their importance in the Bronze Age (3000-1100 BCE). After a detailed study of Greek architecture and the evolution of key building types such as the temple, the stoa, and the theater, students explore the material remains of Olympia, Delphi, and Athens. The myths associated with these cities are also included.

Attributes: GEP Art/Literature, Undergraduate

ARH 302 Mystery&Monument:Anc Rome (3 credits)

An introduction to the art and archaeology of Roman Italy, which will explore through digital images the major surviving monuments of Rome and its environs, of the Etruscans, and of other famous sites in Italy.

Attributes: GEP Art/Literature, Undergraduate

ARH 480 Art History Research Seminar (3 credits)

This course is designed to prepare junior and senior art history majors and minors for graduate study and professional employment after graduation. It is optional for minors and required for majors (who may take it in either their junior or senior year). It offers students the opportunity to apply what they have learned in their art history and related courses to a project focused on a topic of their choosing. This topic will be the basis of an extensive research paper and a public presentation. Working closely with fellow classmates, the professor, and additional mentors, students will share and develop their ideas while honing their research, analytical, and writing skills. Outside readings will provide students with various methodologies to consider while pursuing their work. Students also will be exposed to various art history-related professions and offered guidance regarding the practical aspects of pursuing graduate school and professional employment.

Attributes: GEP Art/Literature, Undergraduate

ARH 481 Museum Internship (3 credits)

This course is optional, but recommended for Art History majors. It is open to Art History minors upon consultation with the Chair. Students work 10 hours per week (total 130 hours), write a resume and sample cover letter, keep a journal, read a book relevant to their internship, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division Art History course.

Attributes: GEP Art/Literature, Undergraduate

ART 121 Introduction to Studio Art (3 credits)

This course is designed to introduce the essential elements of painting, drawing and sculpture. Working from the landscape, still life and the figure, students research two-dimensional form and space through a variety of mediums that includes: charcoal, pencil and paint. The investigation of three-dimensional issues is done with clay.

Attributes: GEP Art/Literature, Undergraduate

ART 130 Art Therapy (3 credits)

Art therapy uses different forms of creative expression to help people explore and transform feelings, thoughts, and ideas. It can help to process and cope with emotional issues, as well as facilitate self-awareness, understanding, healing, and well-being. Art therapy can be especially useful for people who find it difficult to talk about their thoughts and emotions. In this course, students will examine theories and models of art therapy. Through discussion of readings, sharing of experiences, group work, and art therapy activities, students will increase their understanding of the history, theory, practice, and applications of art therapy in various settings.

Attributes: ARTS Major ILC Courses, GEP Art/Literature, Undergraduate

ART 132 Illustration I (3 credits)

This is an introductory course to the Illustration field. Students will develop fundamental illustration skills and become familiar with major areas within the industry, such as advertising, book, editorial and entertainment design. Students will explore a variety of media and techniques while acquiring approaches to communication-based problem solving skills using research methods to create and communicate their ideas. Both concept and execution are emphasized. Objective visual perception, clarity in drawing and technical facility is stressed. This course is an introduction to conceptual strategies available to the visual artist, the critical link between text and image, and the creative approaches for giving visual form to abstract concepts and ideas.

Attributes: GEP Art/Literature, Undergraduate

ART 133 Drawing I (3 credits)

Students work from their actual visual experience. Working from the landscape, still life and the figure, students research form and space through tone, size relationships, mark-making and composing the picture plane. Ultimately we try to integrate these elements producing a unified whole as well as finding an equivalent to the artists' experience. Media range from small pencil drawings to larger more ambitious charcoal drawings.

Attributes: GEP Art/Literature, Undergraduate

ART 135 Painting I (3 credits)

This course concentrates on becoming familiar and proficient with the basics of image-making through painting, developing good studio practice, introducing terminology, developing language and examining the work of established professional painters, so that constructive discussions and self-analysis may take place. The subject is studio-based, and the course focuses on working from life (meaning that students work from their actual visual experience) or on learning from the attempt to express an interior reality. Working from various motifs as appropriate, including the landscape, still life and the figure, students research form and space using paint.

Attributes: GEP Art/Literature, Undergraduate

ART 136 Landscape Painting (3 credits)

This course is designed to introduce the student to the essential elements of painting. We research these elements through the unique challenges that arise from notating the landscape, which include: overlapping forms, color temperature, the vastness of an outdoor space, scale relationships and atmospheric perspective. Ultimately we try to integrate these elements producing a unified whole as well as finding an equivalent to the artists' experience.

Attributes: GEP Art/Literature, Undergraduate

ART 137 Printmaking (3 credits)

In this course students will be introduced to a variety of printmaking techniques including: monotype, calligraph and linocut. Printmaking takes a unique place in the 21st century. Artists use printmaking as an interdisciplinary medium within the idea of creating multiples in the art world. Students will be introduced to a brief history of printmaking and how contemporary artists use print techniques towards expression and communication. Students will also learn how prints are used outside of the art world, including: publication, commercial prints, etc.

Attributes: GEP Art/Literature, Undergraduate

ART 138 Landscape Drawing (3 credits)

This course is designed to introduce the student to the essential elements of drawing from the landscape. We research form and space while working from the landscape. Some of the issues include: overlapping forms, the vastness of an outdoor space, scale relationships and atmospheric perspective. Ultimately we try to integrate these elements producing a unified whole as well as finding an equivalent to the artists' experience.

Attributes: GEP Art/Literature, Undergraduate

ART 139 Contemp Botanical Illustration (3 credits)

This course offers a solid foundation in a variety of skills and techniques for scientific illustration. Students learn botanical drawing and watercolor, as well as botanical science. The course is for beginner, intermediate, and advanced students. It will take place at the Barnes Arboretum at Saint Joseph's University and students will have access to the gardens, greenhouse, and herbarium. A limited number of seats are open to SJU undergraduate students.

Attributes: Undergraduate

ART 140 Anatomy and Life Drawing (3 credits)

This course explores anatomy through drawing. It will provide an in-depth anatomical approach to depicting human anatomy. Students will learn anatomical proportioning while drawing from the figure, and will have the opportunity (but not the obligation) to draw from cadavers. No prerequisites or prior studio art experience required. All students welcome; the course may be of particular interest to art, biology, and health sciences students.

Attributes: GEP Art/Literature, Undergraduate

ART 141 3-D Studio Art (3 credits)

In this hands-on studio course students experiment with the fundamentals of three-dimensional design. Mechanical connections, structural stability, and expressive potential are explored in-depth as well. Spatial and visual elements are discussed in the context of our physical relationship to our environment and to contemporary and art historical influences. Each of the three main projects are designed to encourage students to think creatively, problem solve, improvise, and to discover how the creative process can unfold in exciting and unexpected ways. Image presentations, a museum trip, and group discussions and critiques complement the hands-on studio projects.

Attributes: GEP Art/Literature, Undergraduate

ART 142 Pottery I (3 credits)

This course is an introduction to the creation, function and history of ceramic vessel forms created by hand. Through regular studio practice, students will learn to use the potter's wheel and clay handbuilding techniques to create a variety of functional pottery forms such as cups, bowls, vases and pitchers. Techniques in ceramic surfacing, glazing, kiln firing methods and concept development will be explored. Historic and contemporary pottery forms and styles will be introduced weekly through presentations, lectures, and a gallery visit. Classes also include technical demonstrations, practice time, and critiques. All are welcome.

Attributes: GEP Art/Literature, Undergraduate

ART 143 Mosaics I (3 credits)

This hands-on studio art course focuses on the relationship between image and object through an exploration of ceramic tile and mosaics. Found adorning the most sacred of spaces and often performing the most mundane of functions, ceramic tile is a form of artistic inquiry that explores the intersection of art and utility. Topics include visual perception and language; basic painting and drawing methods; non-objective, abstract and representational imagery; and the construction, firing, and glazing of ceramic tile and mosaics. Classes also include technical demonstrations, practice time, and critiques. All are welcome.

Attributes: GEP Art/Literature, Undergraduate

ART 144 Ceramics I (3 credits)

This course is an introduction to the creation of ceramic objects by hand and the many ways that using clay as an art form has impacted the history of humankind. Through assigned projects and regular studio practice, students will learn how to build objects with clay using ceramic handbuilding techniques, basic wheel-throwing techniques, ceramic surfacing and kiln firing methods, and concept development. Classes consist of technical demonstrations, lectures on historic and contemporary ceramic objects and artists, practice time, and critiques. Students will begin to understand the essential components of a well designed and finely crafted ceramic sculpture or vessel through assigned projects, group discussions and a gallery visit. All are welcome.

Attributes: GEP Art/Literature, Undergraduate

ART 145 Figurative Sculpture (3 credits)

This introductory course explores ideas and techniques for sculpting the figure from life. Traditional figurative sculpting is taught through study of anatomical proportion, muscular structure, and clay modeling. The history of contemporary figurative sculpture will be explored through lectures, power point presentation, videos, and student research. This class culminates in a project based on contemporary figurative processes.

Attributes: GEP Art/Literature, Undergraduate

ART 146 Sculpture and the Environment (3 credits)

This hands-on studio art course is an introduction to three-dimensional design principles and contemporary sculptural issues focusing on art work related to the topics of environmental activism and the field of environmental ethics. In this class, students will see and discuss work examples that include environmental art, socially engaged public art, and land art among others. The design phases incorporated will include sketching, model making, and joinery techniques in wood. Image presentations, group discussions, and class critiques will complement the studio projects. The ethical frameworks of natural law, utilitarianism, and deontology will be discussed and utilized to further examine public policy around the management of natural resources. Art work examples created and presented in this course will be discussed in the context of 20th and 21st century art historical traditions—students explore pressing environmental issues and artistic impulses that lead contemporary artists to draw attention to environmental themes in their work.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

ART 147 Intro to Sculpture/Mixed Media (3 credits)

This hands-on studio course is an introduction to three-dimensional design principles and contemporary sculptural issues explored through an in-depth mixed-media and interdisciplinary creative process. Mixed-media refers to the combination of various materials, while interdisciplinary refers to working between two-dimensional and three-dimensional processes. In this class, students will work with mold making, wood working, collage, and laser cutting, among other material processes. Image presentations, a museum trip, group discussions and class critiques complement the hands-on studio projects.

Attributes: GEP Art/Literature, Undergraduate

ART 148 Social Justice Through Sculpt (3 credits)

In this studio art course students explore the concepts of social sculpture and social engagement along with fundamental design principles by considering how an art making practice can be used to create opportunities for social change. In this class, students use processes and technologies related to laser cutting, laser etching, use of Adobe Illustrator, and archiving personal narratives (recorded at Service Learning sites that will include local homeless shelters or local public schools), while drawing attention to themes and value systems related to systemic inequality and structural racism. Image presentations, group discussions, and class critiques complement the hands-on and digital fabrication based studio projects.

Attributes: Undergraduate

ART 149 Japanese Pottery & Tea Culture (3 credits)

This studio art course introduces students to the Japanese philosophy and techniques used in pottery making from the perspective of Japanese tea culture, and its evolution from the ancient rituals of the tea ceremony and Zen Buddhist philosophy. Students will use traditional Japanese forming techniques, glazes, and kiln firing practices to create pottery forms derived from the Japanese tea ceremony and Zen aesthetics. At the culmination of this course, students will create a body of work and be able to describe and discuss in depth the cultural context and distinctive features that gave rise to the uniquely Japanese tea ceremony pottery forms and practices. Classes consist of technical demonstrations, lectures, discussions on assigned readings, practice time, critiques, and a group participation at a Japanese tea ceremony at Shofuso. All are welcome.

Attributes: GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

ART 160 Phoneography (3 credits)

The smartphone and other mobile technology have spurred a remarkable shift in the field of photography: more pictures are being taken with phones than all other devices combined. This drastic increase in amateur, semi pro and professional photography with mobile devices, has resulted in an influx of photo-editing software and new techniques. Learn various techniques of shooting, editing with camera phones.

Attributes: GEP Art/Literature, Undergraduate

ART 170 Special Topics (3 credits)

Concentrated focus on a selected topic in Art at an introductory level. GEP certifications vary by section.

Attributes: GEP Art/Literature, Undergraduate

ART 171 Camera-less Photography (3 credits)

A hands-on photography course which explores using darkroom chemicals and light to produce unique photographic images. Students will explore in depth the camera-less processes of photograms, lumen prints and chemigrams. A chemigram is an experimental piece of art where an image is made by painting with chemicals on light-sensitive paper.

Attributes: GEP Art/Literature, Undergraduate

ART 172 Darkroom Photography I (3 credits)

This course investigates film-based black and white photography as an expressive and creative medium. Topics include the skills of using a 35mm camera effectively, film processing, basic darkroom printing techniques, and an understanding of the aesthetics of photography. Adjustable 35mm cameras will be provided to any students who need them.

Attributes: GEP Art/Literature, Undergraduate

ART 173 Digital Photography I (3 credits)

This course introduces students to the fundamental terminology, concepts, methodologies, and techniques of digital photography. It focuses on the principles of composition, lighting, and visual storytelling. The course will focus on black and white and color photographic techniques. An overview of the history of this modern medium and impact on contemporary culture will be introduced through lectures, field trips and guest lectures.

Attributes: GEP Art/Literature, Undergraduate

ART 174 Historical Photo Processes (3 credits)

This course is an introduction to experimental photographic image techniques related to using the sun as a method to produce engaging and graphic imagery. Students will be introduced to solar printing techniques such as: Cyanotype, Van Dyke Brown and Cliché Verre techniques using computer-generated and hand drawn negatives. Students will explore their own artistic approaches to a photographic printmaking processes, on a variety of surfaces, that does not require extensive technical expertise.

Attributes: GEP Art/Literature, Undergraduate

ART 175 Image Manipulation: Photoshop (3 credits)

This course introduces students to digital tools that manipulate and enhance photographic images. Students learn the skills to correct, retouch, render and enhance varied input in order to create high-quality digital output utilizing the industry standard for digital image manipulation.

Attributes: GEP Art/Literature, Undergraduate

ART 176 Independent Study (3 credits)

Independent research leading to the successful completion of a project with guidance from a faculty member.

Attributes: GEP Art/Literature, Undergraduate

ART 177 Photography & Climate Crisis (3 credits)

This hands-on studio photography course is an introduction to the principals of two dimensional design using 19th century photographic processes and hybrid 21st century photographic technology with content focused on issues of environmentalism and ethics. The aim of this course is not only to interrogate ethical theory, but to practice artmaking using sustainable materials acquired through urban foraging and upcycling. Students will study the foundations of the environmental movement in the 20th century and current legislation on environmentalism and environmental policy through close readings on the ethical traditions of: natural law, utilitarianism, deontology, deep ecology and ecofeminism. Students will be exposed to art work created by contemporary photographers who use the same methods practiced in class (chlorophyll printing, anthotype and cyanotype processes) and will analyze these examples in relation to environmentalism, humanitarianism, and ethics. Students will work to create their own archive of found imagery and produce digital negatives using photoshop and the piezography printing process to make chlorophyll, anthotype and cyanotype prints. Class time will be spent engaging in Image presentations, group discussions, class critiques and studio projects. Written responses papers, and a final research paper will fill out the course.

Attributes: Ethics Intensive, Undergraduate

ART 178 Intro to Video (3 credits)

This is a course about video art techniques, which introduces students to the basic theory and practice of art based video, incorporating basic narrative, non narrative, and experimental video techniques. Skills that will be developed include introductory level DSLR camera operations such as adjusting exposure and focus, and basic camera movements. Students will learn to edit with Adobe Premiere Pro. The class will also cover basic methods of recording sound. All technical skills are directed towards the inclusion of video as a form of creative expression within the context of an artistic medium.

Attributes: GEP Art/Literature, Undergraduate

ART 179 Photography: Truth & Privilege (3 credits)

In this studio course, students will learn the fundamental techniques of digital photography through the study of contemporary artists from marginalized communities. Contemporary methods of portrait photography will be explored through three assignments covering candid portraits, self-portraiture, studio portraits, staged portraits, still-life and memory. The course will include readings and research around the impact of images on race and history, the ethics of seeing, racial bias and photography, photography and privilege and students will learn about how artists who are from oppressed communities make photographs as a way to address issues of race, class, gender and sexuality. Photography techniques taught will include using a DSLR in manual, lighting techniques in and out of the studio and digitally developing and printing photographs. Image presentations, group discussions and class critiques will complement the studio projects.

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

ART 190 Fundamentals of Graphic Design (3 credits)

This course introduces students to the main tenants, principles and vocabulary of Graphic Design. Students develop the ability to lay out and organize design elements for a variety of visual effects and communication applications. This course is taught through Illustrator and Indesign.

Attributes: GEP Art/Literature, Undergraduate

ART 193 2D Animation (3 credits)

During this course, students will examine and practice the medium of animation, and gain a greater understanding for what makes this unique artform tick. This will take their general understanding of Shape and Color, and amplify it by adding the concept of Time and Motion to their existing design principles. We will discuss noteworthy works of animation, both new and old, and learn how these pieces of media can leave such a lasting impact simply by adding motion to garner emotion. Students will complete work on a variety of assignments which all correlate to a different level of development in animation, including Character Design and Storyboarding. Through regular group critiques and constructive feedback, students will learn how to more decisively utilize aspects of time and motion, as well as light, shape and color, in their animation and artistic career.

Attributes: GEP Art/Literature, Undergraduate

ART 196 Art Elective (3 credits)**ART 221 Art Education in the Schools (3 credits)**

In this course there are seminar discussions in methods of teaching, levels of mark making, learning styles, art historical references for the learning lessons being taught this week in the school in an eight-week intensive experience of teaching a group of fifteen to thirty primary school students. While this is being done, the student keep a weekly diary from which they construct a ten-page term paper on the meaning of the experience. This is a service learning course. This course may count as a GEP course if taken in conjunction with an introductory studio course (studio, drawing, painting, 3D, ceramics, traditional or digital photography).

Attributes: GEP Art/Literature, Undergraduate

ART 233 Drawing II (3 credits)

Our purpose is to explore both formally and conceptually the elements of drawing in order to realize an authentic vision. Through directed exercises students discover new possibilities in the essential experience of drawing. These exercises cover the formal issues including surface and spatial geometry, the relationship between tone or scale to spatial depth, the mark as a means to personal expression and the integration of pictorial elements into a unified whole. In order to create new possibilities, students experiment with developing images and explore how and why images become interesting.

Prerequisites: ART 133 (may be taken concurrently)

Attributes: GEP Art/Literature, Undergraduate

ART 235 Painting II (3 credits)

Through lectures, critical discussions coursework and examination of the work of established professional painters, students will study content and material issues pertinent to producing compelling artworks. Finding one's own voice as well as an authentic application of the media are primary objectives. Formal concerns such as dynamic composition and rigorous construction of form and space will be stressed.

Prerequisites: ART 135

Attributes: GEP Art/Literature, Undergraduate

ART 239 Concepts and Artmaking (3 credits)

Artists have always made work based on concepts; ideas upon which the image or process is based. For example, the Impressionists in the second half of the 19th century made work based on concepts relevant to the time, choosing to paint common, every day subjects in plain air. Those concepts affected the processes, materials, and subjects of their work. In this course we explore how contemporary artists develop the concepts underpinning their work as well as develop our own conceptual thought concerning art-making. The focus each week is on making our own work. In this regard we will be paying particular attention to the ideas that are motivating us to make the image in the first place, clarifying them by considering some of the factors that influence our ideas and consequently refining the process by which we pursue the development and actualization of those ideas. We will augment our own ideas by researching the concepts of a number of contemporary artists. There are restrictions concerning the materials or medium, except those restrictions that we choose to place on ourselves as a result of the deepening understanding of our concepts and processes. The process of developing your own ideas in art is invaluable if you want to make art in the future; and if not, may simply alter your understanding of the next step you are going to take in your life, helping you to clarify your wants and desires.

Prerequisites: ART 121 or ART 133 or ART 135 or ART 141 or ART 142 or ART 143 or ART 144 or ART 172 or ART 173

Attributes: GEP Art/Literature, Undergraduate

ART 241 Sculpture II (3 credits)

Building on skills acquired in ART 141, this course explores the use of repetition to achieve scale, the relationship between interior and exterior spaces, and the critical analysis associated with these techniques. Projects are executed in a variety of materials that are chosen for their aesthetic and conceptual properties.

Prerequisites: ART 141 or ART 147

Attributes: GEP Art/Literature, Undergraduate

ART 242 Pottery II (3 credits)

In this intermediate pottery course, students expand their previous technical skills and concept development by creating an intermediate level body of work on such topics as complex functional vessels, the design and creation of unified pottery sets, and the exploration of "vessel" as an abstract concept. Demonstrations will include intermediate wheel throwing and clay handbuilding techniques, proper loading and unloading of kilns, further glaze research as it relates to specific vessel types, and other topics as needed. Emphasis is given to the ergonomics of specific vessel forms, enhanced craftsmanship, and focus on detail. Topics also include the role of handmade vessels from an historical and contemporary viewpoint.

Prerequisites: ART 142 or ART 144 or ART 149

Attributes: GEP Art/Literature, Undergraduate

ART 243 Ceramic Surface Design (3 credits)

This course explores a broad range of ceramic surfacing and decorating techniques, from traditional to alternative. Group discussions and projects will examine the relationships among surface, content, form, and function. Experiments will be conducted using specific glazes, glaze techniques, overglaze and underglaze decals, slip design techniques, resist methods, and more. Glaze "flaws" will be explored as opportunities for unique surfaces. Students are encouraged to explore both historical and experimental uses of materials and to develop a personal approach to glaze and surface. Projects include functional and sculptural work, both two-dimensional and three-dimensional, and emphasize the dialogue between surface and form.

Prerequisites: ART 142 or ART 143 or ART 144 or ART 149

Attributes: GEP Art/Literature, Undergraduate

ART 244 Ceramics II (3 credits)

This course explores the techniques and concepts involved in creating complex hand-built and wheel-thrown vessels and sculptures. Assignments are concept-driven and encourage creative inquiry and independent thought. The emphasis is not only the refinement of skill but the importance of content. Topics include sculptural approaches to clay, the wheel as an idea generating tool, alternative surfacing methods, and other research-driven investigations. Classes consist of technical demonstrations, lectures, practice time, and critiques.

Prerequisites: ART 142 or ART 144

Attributes: GEP Art/Literature, Undergraduate

ART 245 Atmospheric Firing: Wood/Salt (3 credits)

This course explores the effects of wood, salt, and raku firing on pottery and sculpture. Firings include high-fire, midrange, and low-fire. To create a type of visual poetry, the projects in this course focus on the distinct attributes of each firing: fuel source, timing, weather, loading method, and flame path. Topics include the impact of heat movement, atmosphere, and temperature on aesthetics and functionality. Some off-campus events are required, including firing a Japanese style noborigama kiln.

Prerequisites: ART 142 or ART 143 or ART 144

Attributes: GEP Art/Literature, Undergraduate

ART 246 Ceramic Sculpture (3 credits)

Students explore the development of ceramic sculpture from its earliest beginnings to contemporary work being done today. A variety of techniques to both construct and glaze ceramics are studied. Students will be expected to produce a body of sculptural work that balances the conceptual, material, aesthetic and process-oriented elements within it.

Prerequisites: ART 142 or ART 144

Attributes: GEP Art/Literature, Undergraduate

ART 247 Sculpture Mixed Media II (3 credits)

Building upon the knowledge and skills formed in Intro to Sculpture and Mixed Media students will further their conceptual and craftsmanship skills in generating sculptural forms in this advanced level course.

Prerequisites: ART 141 or ART 147

Attributes: GEP Art/Literature, Undergraduate

ART 248 Figurative Sculpture II (3 credits)

This class consists of research, discussion, and practice on contemporary figurative and body art issues. Projects throughout the semester explore different sculptural working methods, processes, and techniques including armature, traditional materials, molding/casting, and form building. Outcome of student work is focused on understanding of human gesture and individual expression.

Prerequisites: ART 145

Attributes: Undergraduate

ART 270 Spec. Topics & Ind. Study (SO) (3 credits)

Concentrated focus on a selected topic in Art History. Topic and content vary from semester to semester. Course may be taken twice for credit as the topic changes.

Prerequisites: ART 172 or ART 173

Attributes: GEP Art/Literature, Undergraduate

ART 272 Darkroom Photography II (3 credits)

This course provides a continuation or review of film-based camera and darkroom techniques while introducing more advanced and experimental development. Topics include archival printing, advanced exposure controls, experimental camera work, and darkroom print manipulation. Slide presentations of master photographers will illustrate the flexibility of the medium and enable students to develop visual analysis, as well as their own creative expression. Adjustable 35mm film cameras will be provided to any student who needs one.

Prerequisites: ART 172

Attributes: GEP Art/Literature, Undergraduate

ART 273 Commercial Photography (3 credits)

In this advanced level photography studio course, students examine photographic illustration for various commercial applications, including: food, portraiture, still life and product. Professional studio lighting techniques are analyzed and applied. Advanced applications of digital capture will be explored within a studio context.

Prerequisites: ART 172 or ART 173

Attributes: GEP Art/Literature, Undergraduate

ART 275 Experimental Digital Photo (3 credits)

In this advanced, photography course, students will investigate the physical nature of photography. Students will explore alternative digital printing techniques on a variety of materials including but not limited to: fabric, wood, metal, glass and plastic. Moving beyond the traditional flat picture plane and exploring photography as part of sculpture and installation, is an important part of this course. Additionally, students will be introduced to a multitude of ways of producing photographic subject matter and how these images contribute to and rely on contemporary photographic culture.

Prerequisites: ART 172 or ART 173

Attributes: GEP Art/Literature, Undergraduate

ART 290 Typography: Design Letterform (3 credits)

This course provides an introduction to the study of the letterform as a cornerstone of graphic design. It focuses on how typography can be used as a communicative device as well as a graphic, compositional and expressive element. Areas explored include letterform anatomy, letterform analysis, measuring systems, typographic identification, and practical issues of setting and using type effectively.

Prerequisites: ART 190

Attributes: GEP Art/Literature, Undergraduate

ART 331 Works on Paper (3 credits)

In this course, students address more sophisticated problems in black and white composition, using graphite, charcoal, and ink. They then are introduced to color media appropriate for paper, pastel and aquarelle, investigate the interaction of drawing and photography, and experiment with collage techniques. The course presupposes that drawing is a significant medium in itself and that works on paper are not mere way-stations to other "heavier" media, such as painting or sculpture.

Attributes: GEP Art/Literature, Undergraduate

ART 333 Drawing III (3 credits)

Drawing III is an intensive and rigorous study of drawing where students produce an enormous amount of work. The issues we investigate include: organizing your visual experience into a clear pictorial idea, recognizing and articulating the structure of a work, the relationships in tone and the uses of scale as an element. This course is directed to be a more personal exploration of drawing and images. Students will be encouraged to produce a series of related images.

Prerequisites: ART 233

Attributes: GEP Art/Literature, Undergraduate

ART 335 Painting III (3 credits)

This course concentrates on realizing convincing form, rigorous construction of the entire picture plane and the pursuit of finding an authentic vision. There is a focus on the scale of the paintings and tone relationships. We research what personal narrative is and how it could impact the image. The students produce paintings in a range of sizes including some very large works.

Prerequisites: ART 235

Attributes: GEP Art/Literature, Undergraduate

ART 341 Sculpture III (3 credits)

Advanced skills in three-dimensional concepts and techniques.

Prerequisites: ART 141 or ART 241

Attributes: GEP Art/Literature, Undergraduate

ART 344 Ceramics III (3 credits)

More complex work in ceramic sculpture, pottery-making or mosaics are studied in this class. It is expected that the students in this class will explore and develop their personal approach to both ceramic art and glazing/firing techniques. One other class in ceramics is required before enrolling in this class. The requirements are designed to develop a strong sense of the history in ceramics and the students' own skills in ceramic art.

Attributes: GEP Art/Literature, Undergraduate

ART 370 Spec. Topics & Ind. Study (JR) (3 credits)

Concentrated focus on a selected topic in Studio Art. Topic and content vary from semester to semester. Course may be taken twice for credit as the topic changes.

Attributes: GEP Art/Literature, Undergraduate

ART 372 DirectedProjects - Photography (3 credits)

This course provides students with an opportunity to build a comprehensive portfolio of photographic work. Students will begin with directed shooting assignments that lead to work which investigates the student's own personal vision. Lectures and presentations review the work of selected photographers, both historic and contemporary, for group discussion and analysis. With input from the instructor and the class, students develop their own photographic project in traditional, experimental, or digital, media, reflecting historical and/or contemporary genres of image making.

Prerequisites: ART 172 or ART 173 or ART 272 or ART 273 or ART 275

Attributes: GEP Art/Literature, Undergraduate

ART 373 Photo Essay/Docu Photo (3 credits)

This course is an introduction to the tradition of documentary photography. Topics will emphasize why people photograph, the stories photographs can tell us, and how photographs can manipulate or evoke emotions. Presentations will include the work of master documentary photographers, both fine art and journalistic, enabling students to discuss and analyze social documentation as well as autobiographical documentation. Assignments will encourage students to look at their own world in a new way and allow them to choose their own subjects for a photographic essay.

Prerequisites: ART 273

Attributes: GEP Art/Literature, Undergraduate

ART 374 Adv. Comm. Studio Photography (3 credits)

In this advanced level photography studio course, students will build upon skills learned in previous studio courses and continue to examine photographic illustration for various commercial applications, including: food, portraiture, fashion, still life and product. Advanced professional studio lighting techniques, such as strobe(flash) photography will be applied. This course investigates the versatility and creative potential of commercial photography and its role in Advertising and Marketing. All aspects of a commercial photographic business will be discussed. May be taken as an independent study with the instructor's permission during years when it is not regularly scheduled.

Prerequisites: ART 273 (may be taken concurrently)

Attributes: GEP Art/Literature, Undergraduate

ART 390 Commercial Design (3 credits)

A study of the essential elements of commercial design including the conceptual and graphic design issues involved in the production of print, guerilla and web advertising; an overview of principles of design, layout, copy writing and designing cross platform promotional campaigns by using computer graphic software. Course topics will include anticipating how to visually engage target audiences, creative concept formulation, logo and advertisement design and layout, typography, working with art, as well as production methodology.

Prerequisites: ART 290

Attributes: GEP Art/Literature, Undergraduate

ART 392 Design for Mobile Web &Tablet (3 credits)

This course examines screen based graphic design applications for web, mobile and tablet. Topics include understanding how users approach various screen based formats, designing for small screens, developing page layouts and navigation systems. Projects incorporate creating graphics for mobile platforms, designing for the web, best practices for writing code, and setting up interfaces for various devices including desktop presentation, mobile and tablet.

Prerequisites: COM 372 or ART 390

Attributes: GEP Art/Literature, Undergraduate

ART 444 Ceramics IV (3 credits)

More complex work in ceramic sculpture, pottery-making or mosaics is studied in this class. It is expected that the students in this class will explore and develop their personal approach to both ceramic art and glazing/firing techniques. One other class in ceramics is required before enrolling in this class. The requirements are designed to develop a strong sense of the history in ceramics and the students' own skills in ceramic art.

Attributes: GEP Art/Literature, Undergraduate

ART 470 Spec Topics & Indep Study (SR) (3 credits)

Concentrated focus on a selected topic in art history or studio art. Topic and content vary from semester to semester. Course may be taken twice for credit as the topic changes.

Attributes: GEP Art/Literature, Undergraduate

ART 490 Design Studio: Work w/ Clients (3 credits)

In this upper level Graphic Design course, students will work in teams to develop a design project for an external client. A research and systems-based approach will be utilized to develop context, concept, presentations and graphics. Students will develop strong creative solutions in the context of real world constraints. This course will emphasize teamwork and client interaction.

Prerequisites: ART 390

Attributes: GEP Art/Literature, Undergraduate

ART 491 Internship in the Arts I (3 credits)

Junior and Senior art majors may broaden their perspective by completing an approved internship in the arts. Work in industry, art studios, theatres, galleries and museums offers potential opportunities for internships. Students are expected to spend six to eight hours per week on site, and to maintain a weekly journal of their experiences and to secure a report by their immediate supervisor at mid semester and upon completion of the work. Prior approval by the chair is required.

Attributes: GEP Art/Literature, Undergraduate

ART 492 Internship in the Arts II (3 credits)

Junior and Senior art majors may broaden their perspective by completing an approved internship in the arts. Work in industry, art studios, theatres, galleries and museums offers potential opportunities for internships. Students are expected to spend six to eight hours per week on site, and to maintain a weekly journal of their experiences and to secure a report by their immediate supervisor at mid semester and upon completion of the work. Prior approval by the chair is required.

Attributes: GEP Art/Literature, Undergraduate

ART 493 Ind. Research in the Arts I (3 credits)

Students pursuing advanced independent projects, especially those in connection with departmental or university honors, may register for these courses under the direct mentorship of department faculty. Prior approval of both faculty mentor and chair required.

Attributes: GEP Art/Literature, Undergraduate

ART 494 Ind. Research in the Arts II (3 credits)

Students pursuing advanced independent projects, especially those in connection with departmental or university honors, may register for these courses under the direct mentorship of department faculty. Prior approval of both faculty mentor and chair required.

Attributes: GEP Art/Literature, Undergraduate

ART 495 Senior Project I (Capstone) (3 credits)

In the first segment of this advanced level two-semester course students focus on developing a cohesive body of work in a medium and subject matter of their choosing. This course culminates with a senior thesis exhibition. (Art Education majors may, but are not required to complete the Senior Project courses. Instead those students may take two additional Art courses. Art minors are also able to take this two-semester class.)

Attributes: GEP Art/Literature, Undergraduate

ART 496 Senior Project II (Capstone) (3 credits)

In the second half of this advanced level two-semester course, students focus on professional business skills related to Art. Students are introduced to artists and industry experts via field trips to New York and Philadelphia. Developing a variety of written professional materials is integral to the course. This course culminates with a senior thesis exhibition. (Art Education majors may, but are not required to complete the Senior Project courses. Instead those students may take two additional Art courses. Art minors are also able to take this two-semester class.)

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course-GEP

ART 497 Professional Practices Seminar (3 credits)

The class is a seminar with practical applications. It is part laboratory for hands-on projects and part discussion group. Projects include: creation of a professional website, creation of a professional resume and creation of writing samples, application for a grant and public speaking. Class trips to galleries and museums will form the basis for discussions about contemporary art and for critical writing assignments. Topics under discussion include: the transition from student to professional, job searches, gallery contracts, grant applications, graduate school options and trends in contemporary art. Class attendance and participation are mandatory. By the end of the semester, students will have a website for their work, a resume, an artist statement and writing samples. They will know how to apply for a grant and they will be aware of the possibilities for employment and exhibition in the arts. The class is aimed at Art majors, but those outside the major will also find it useful.

Attributes: GEP Art/Literature, Undergraduate

Art Education Major

The Art Education PK12 undergraduate program is available to candidates majoring in art and who wish to teach art in PK12 settings. The art education PK12 certification program culminates in a Pennsylvania Department of Education Level I certification for teaching art. Students double majoring in art and art education PK12, once certified, can teach in public, private and charter schools, museums, and community settings. The program offers candidates a strong foundation in theory and practice, curricula in public schools, and teaching for equity and inclusion. The program includes field experiences in PK12 classrooms that start with the first semester of enrollment. As part of the program, candidates must meet clearance requirements and have them on file prior to starting the program and renew the clearances each year. In their field experience, pre and student teaching, candidates have the opportunity to be mentored by experienced PK12 art teachers in local schools while being supervised by university professors.

Learning Goals and Outcomes

Goal 1: The student will demonstrate an understanding of PK12 learner development.

Objective 1.1: The student will understand and accurately interpret key concepts, principles, theories, and research about PK12 learner development in social context.

Objective 1.2: The student will identify the diverse developmental needs and abilities of PK12 learners and use this information effectively when selecting instructional strategies and making curricular decisions with respect to learning in a PK12 art classroom.

Goal 2: The student will understand and use the central concepts, standards, research, and structures of content to plan and implement curriculum that develops PK12 school learners' competence in the area of learning art.

Objective 2.1: The student will describe and explain the philosophical and historical foundations of art education and apply this knowledge in analyzing school culture and climate, classroom management, and instructional design.

Goal 3: The student will understand and use developmentally appropriate instructional strategies.

Objective 3.1: The student will describe and analyze a range of specific teaching strategies and apply them appropriately in instructional planning, modifying their use based on the unique learning needs of PK12 students and the particular demands of learning art.

Objective 3.2: The student will demonstrate a practiced habit of self-analysis and collaboration with students and colleagues to assess the impact of instruction on student motivation and learning and will adjust teaching accordingly.

Goal 4: The student will demonstrate understanding and appropriate use of multiple methods of assessment.

Objective 4.1: The student will define and describe types of valid and reliable educational assessments (including screening, diagnostic, formative, summative, and authentic) and identify strengths, weaknesses, and appropriate uses associated with each.

Objective 4.2: The student will analyze and interpret assessment data to understand patterns and gaps in learning, to guide planning and instruction, and to provide meaningful feedback to learners and their guardians.

Goal 5: The student will demonstrate an understanding of educating for social justice.

Objective 5.1: The student can demonstrate the ability to interact positively and respectfully with those of different racial, ethnic, language and socioeconomic backgrounds and sexual orientations.

Objective 5.2: The student will identify and describe practices and policies that reinforce inequalities and undermine high school student learning, as well as steps that can be taken to challenge such practices in order to create a more just society.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In

addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

Art History Major

In a world full with images, Art History offers a critical means of understanding visual culture in an increasingly globalized world. The Art History program at Saint Joseph's covers major artistic developments in traditional and new media throughout history. Art History is an interdisciplinary field that encourages students to explore the many intersections between art and politics, religion, science, history and philosophy, among many other areas. Through close analysis of art and architecture Art History students develop strong critical evaluation skills and a wide-ranging cultural literacy.

Saint Joseph's University's proximity to Philadelphia and New York allows Art History students to see in person buildings as well as artworks at the many art museums and galleries in these cities. Art History students also study abroad, gaining exposure to some of the most renowned works of art and architecture around the globe. In their junior or senior year, Art History majors (optional for minors) take a research seminar focusing on a topic of their choice. Junior and senior Art History majors and minors also have the opportunity to complete an internship related to their career plans after graduation. Students studying Art History go on to a wide range of careers, including museums, galleries, publishing, education, and fashion. As a strong liberal art undergraduate degree, Art History prepares students for many other career paths, as well.

With Saint Joseph's partnership with the Barnes Foundation, students take advantage of the galleries in Saint Joseph's University's new Frances M. Maguire Art Museum.

Learning Goals and Outcomes

Goal 1: To develop an understanding of the visual characteristics and historical contexts of works of art

Outcome 1.1: Art history students will be able to identify the visual characteristics of works of art

Outcome 1.2.: Art history students will be able to identify the historical circumstances in which works of art were created (for example, function; patronage; motivation; movement, etc.)

Goal 2: To develop the necessary resources to research and write about art history

Outcome 2.1: Art history students will be able to identify and use appropriate tools to conduct research in art history

Outcome 2.2: Art history students will be able to write clearly and effectively about works of art

Art Major

The Art program at Saint Joseph's University provides students with valuable problem-solving and technical hands-on skills and encourage students to think creatively, take risks, and be innovative. Studio classes are small, and students receive one-on-one attention.

The program boasts three dedicated buildings that include a digital lab with high-end computers, printers and state-of-the-art software for graphic design and digital photography, painting, drawing, ceramics, and sculpture studios, a darkroom, shooting studio, a kiln house complete with electric, gas, and raku kilns, and lecture classrooms.

Art students have many opportunities to exhibit their work on campus and to pursue internships that help secure jobs after graduation. Saint Joseph's University's proximity to Philadelphia allows studio classes to visit Philadelphia-area museums and galleries for field trips and on-location assignments.

Art students develop careers in a wide range of art-related areas, including advertising, gallery and museum curating, graphic design, pottery, interior design, fashion design, education, and architecture, among others.

Learning Goals and Outcomes

Goal 1: To develop a visual awareness through analysis and creative work.

Outcome 1.1: Distinguish the components of a work of art.

Outcome 1.2: Discuss the context of a work of art.

Goal 2: To manifest their visual awareness in their own work.

Outcome 2.1: Produce a body of creative visual works.

Outcome 2.2: Write critical analysis of visual works of art.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

Art Minor

The Art program at Saint Joseph’s University provides students with valuable problem-solving and technical hands-on skills and encourage students to think creatively, to take risks, and to be innovative. Studio classes are small, and students receive a great deal of one-on-one attention.

The program boasts three dedicated buildings that include a digital lab with high-end computers, printers and state-of-the-art software for graphic design and digital photography, painting, drawing, ceramics, and sculpture studios, a darkroom, shooting studio, a kiln house complete with electric, gas, and raku kilns, and classrooms.

Art students have many opportunities to exhibit their work on campus and to pursue internships that help secure jobs after graduation. Saint Joseph’s University’s proximity to Philadelphia allows studio classes to visit Philadelphia-area museums and galleries for field trips and on-location assignments.

Art students develop careers in a wide range of art-related areas, including advertising, gallery and museum curating, graphic design, pottery, interior design, fashion design, education, and architecture, among others.

Learning Goals and Outcomes

Goal 1: To develop a visual awareness through analysis and creative work.

Outcome 1.1: Distinguish the components of a work of art, and

Outcome 1.2: Discuss the context of a work of art.

Goal 2: To manifest their visual awareness in their own work.

Outcome 2.1: Produce a body of creative visual works, and/or

Outcome 2.2: Write critical analysis of visual works of art.

Requirements

The minimum requirement for the minor is the completion of six courses in Art (18 credits). Students are encouraged to take the two-semester capstone class during their senior year, which counts as two of the six required courses. Students taking the capstone class will participate in the senior art exhibition.

Art Therapy Minor

Art therapy is a growing field that uses various forms of creative expression to help people explore and transform feelings, thoughts, and ideas through visual means of expression. It can help in processing and coping with emotional issues, as well as facilitate self-awareness, understanding, healing, and well-being. Art therapy can be especially useful for people who find it difficult to talk about their thoughts and emotions.

The Art Therapy minor is designed to provide students with some of the foundational courses required for admission to graduate programs in art therapy. It is intended as a first step for undergraduate students towards deciding if they wish to pursue paths toward professional, academic, and/or research careers in art therapy and related professions. Once this decision is made, students should consult with their academic advisors

for appropriate guidance and familiarize themselves with graduate school admissions requirements as they map out their undergraduate careers.

Learning Goals and Outcomes

Goal 1. Know and demonstrate understanding of the concepts, theoretical perspectives, and empirical findings of abnormal psychology, clinical mental health counseling, developmental psychology, and sensation and perception.

Goal 2. Know and demonstrate understanding of the concepts, theoretical perspectives, and empirical findings of artistic and creative development, the history and practice of art therapy, and the fundamentals of the therapeutic relationship.

Goal 3. Students will develop proficiency in the use of various art media, including, but not limited to, drawing, painting, ceramics, and sculpture.

Requirements

Commercial Photography Minor

The Commercial Photography minor aims to increase students' competitiveness for employment, to establish new partnerships and enhance current ones with local marketing and media firms for internships, and to foster both interdisciplinary and cross-disciplinary programming at Saint Joseph's. This minor would complement our Graphic Design minor and provide students with more actionable job-related skills, opening additional opportunities in Advertising, Marketing, Design and Publication.

Learning Goals and Outcomes

- Goal 1:** Solve communication problems and carry projects from creation to completion, using skills such as research and analysis and idea generation using relevant industry standard graphics software.
- Goal 2:** Create and develop visual concepts in response to industry standard client briefs.
- Goal 3:** Apply principles of visual communication as they relate to reaching audiences, the role of commercial photography in society, and the ability to work cooperatively.
- Goal 4:** Create a professional portfolio that demonstrates problem-solving expertise (including advanced lighting techniques, creative concepts, and innovative solutions necessary for an entry-level position at a digital marketing, publishing or advertising firm)

Graphic Design Major

The Graphic Design major is a collaboration between the departments of Art and Art History, Communication & Media Studies and Marketing. The Art and Art History Department delivers most of the courses and manages the major, with Communication & Media Studies and Marketing supporting the major with several key courses.

Learning Goals and Outcomes

- Goal 1:** Solve communication problems and carry projects from creation to completion; including the skills of research, analysis and idea generation, using relevant industry standard graphics software

- Goal 2:** Create and develop visual concepts in response to communication problems, including an understanding of the principles of visual organization, information hierarchy, typography, principles of color, and composition
- Goal 3:** Apply principles of visual communication as they relate to reaching audiences, the role of design in society as a tool to raise awareness and mobilize audiences, in addition to working collaboratively
- Goal 4:** Create a professional portfolio that demonstrates problem-solving expertise (including advanced typography, creative concepts, and innovative solutions necessary for an entrylevel design position at leading graphic design firm)

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

Graphic Design Minor

Visual communication is vital in the world today. The Graphic Design minor is a cross-disciplinary minor including the Art, Communications and Media Studies, and Marketing departments. Graphic design students develop skills in visual organization, information hierarchy, branding, and typography. They develop an understanding of principles of color and composition and analysis and idea generation using industry standard graphics software. Students also learn about problem solving and the role of design in society. The graphic design program at Saint Joseph's also assists students secure internships that help secure employment after graduation.

Learning Goals and Outcomes

Goal 1: To develop a visual awareness through analysis and creative work

Outcome 1.1: Students will be able to distinguish the design components.

Outcome 1.2: Students will be able to discuss the context of their design work.

Goal 2: To manifest their visual awareness in their own work

Outcome 2.1: Students will be able to produce a design portfolio.

Outcome 2.2: Discuss how their design work fits into a contemporary and historical context.

Requirements

Students must take the 4 foundation courses plus any 2 elective courses.

Code	Title	Hours

Museum Studies Minor

Museums are essential cultural institutions that play an important role in society by preserving and interpreting the past for future generations. Using various means to study, present, and promote their collections, museums educate, entertain, and inspire their audiences. The Museum Studies minor at Saint Joseph's University is an interdisciplinary program that reflects the wide variety of possible professions in the museum world of today. Students are trained in the history, theory, and ethics of museums. In addition, students can customize their curriculum with electives that take into account their particular interests and career goals, which could include curatorial work, exhibition design, museum education, registration and collections management, marketing and social media, fundraising and development, non-profit management, and digital technology with a variety of applications. Students will also gain hands-on experience with an internship in one of the wide variety museums in the Philadelphia area. They will also be able to take

advantage of opportunities at the Frances M. Maguire Art Museum, set within the Barnes Arboretum at Saint Joseph's University.

Learning Goals and Outcomes

Goal 1: Know and demonstrate an understanding of the history and theory of museums of various types, including, but not limited to, art museums, history museums, science museums, and historic houses and monuments.

Goal 2: Know and demonstrate an understanding of the different types of museum work, with a particular emphasis on their own academic interests and career goals, through a careful selection of elective courses.

Goal 3: Know and demonstrate a hands-on understanding on museums through an internship appropriate to their academic interests and career goals.

Asian Studies

Department Overview

Asian Studies is an interdisciplinary major and minor that encourages, facilitates, and recognizes the study of Asia, broadly defined as the region from the Persian Gulf to the Philippines, including the present states of China, Japan, Korea, Mongolia, Taiwan, Vietnam, Cambodia, Laos, Thailand, Indonesia, Malaysia, Singapore, Burma, Bangladesh, India, Pakistan, Afghanistan, Iran, and the Central Asian Republics of the former Soviet Union.

Asian Studies students prepare themselves for graduate study or professional work by studying the language, history, culture, and politics of the region. Currently, departments including Fine and Performing Arts, History, Political Science, Theology and Religious Studies, Non-Native Languages, and Economics offer Asian Studies courses. Students are encouraged to study abroad in the region as part of their university

program. The program offers a limited number of scholarships in support of such study.

Students are required to register and consult with the Director of the Asian Studies program, and may earn a major or minor in Asian Studies.

Faculty

The program emphasizes understanding of Asian cultures through an emphasis on the study of core cultural values. Currently, participating departments include Economics, English, Fine and Performing Arts, Foreign Languages, History, Political Science, and Theology.

Asian Studies Program Faculty (https://www.sju.edu/degree-programs/asian-studies/#faculty&_ga=2976256239668220891676297075-10866635421674493415)

Asian Studies Major

Learning Goals and Outcomes

Goal 1: Students will achieve Intermediate Low Oral Proficiency in an Asian language (by ACTFL standards).

Outcome 1.1: Students will be able to communicate effectively in an Asian language

Goal 2: Students will explore Asia's importance in the world through interdisciplinary investigation of the histories, political systems, economies, cultures, and societies of Asia.

Outcome 2.1: Students will be able to apply a variety of tools, methods, and perspectives to investigate and interpret important aspects of the history, politics, geography, economics and culture of contemporary Asian societies.

Goal 3: Students will conduct research about Asia, evaluate data generated by multiple methodologies, and present their findings effectively.

Outcome 3.1: Students will be able to produce cogent, well-organized, and thoroughly researched written and oral presentations on important aspects of East or South Asian language, history, politics, culture and society that display familiarity with the scholarly conventions of the respective disciplines.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. *Diversity, Globalization or Non-western Area Studies,*
2. *Ethics Intensive*
3. *Writing Intensive, and*
4. *Diversity*

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Asian Studies majors are required to take three integrated learning courses. Two of these courses must be Area Studies courses dealing with areas outside Asia. A third course must focus on methodology.

Major Requirements

The Asian Studies major requires the following:

- Intermediate language competency in an Asian language
- HIS 208 Historical Introduction to Asia
- Eight electives courses
- A Senior Seminar in Asian Studies

Foundational Heritage

Code	Title	Hours
HIS 208	Historical Intro to Asian Civs	3

This course provides a broad overview of Asia, and will emphasize the fundamental background on which students will build in their later courses, including the basic linguistic, geographic, cultural, religious, and historical trends that have shaped East and South Asia.

Electives and Concentration

Students must complete a minimum of seven elective courses, reflective of their geographical area of concentration and exclusive of language courses at or below the intermediate level.

Geographic concentration: students must complete a geographical focus, with four elective classes in one of two geographical concentrations:

- East Asia or
- South Asia.

This requirement may also be satisfied by at least one semester of study abroad in the area of concentration.

To insure interdisciplinary breadth, elective courses must be selected from at least four different departments. In addition, electives must be

distributed to ensure breadth of study, with at least one course taken from each of three categories:

- Art (e.g., Asian Cinemas), Literature (e.g. Literature of South Asia) and Language (e.g., Japanese Film and Culture)
- Philosophy and Theology and Religious Studies (e.g., Mahayana Buddhism)
- Social Sciences (e.g., Asian Economies; Japanese Politics) and Business

To insure geographical breadth at least two elective courses must be taken outside the student's concentration (whether East Asia or South Asia).

Area Studies Courses

These classes, which parallel the interdisciplinary nature of the major, afford students the opportunity to explore other major Area Studies fields (Africana Studies, Latin American Studies) taught at SJU. This component complements the major by exposing students to comparative perspectives on history, culture, politics and economics, broadening their understanding of the world and of the place of Asia within it. Note that some of these courses have pre-requisites. These two courses should be selected from any two of the following areas:

Code	Title	Hours
Africana Studies (includes but is not limited to)		
ENG 482	Literature & Culture	3
HIS 210	History of Modern Africa	3
HIS 343	African Ethnicities	3
REL 271	African & Caribbean Religions	3
Latin American Studies (includes but is not limited to)		
HIS 203	Historical Intro to Latin Am	3
HIS 303	History of Modern Mexico	3
HIS 304	Social Protest in Latin Am His	3
THE 356	Liberation & Pol Theologies	3

Methodology Course

Asian Studies majors must also take a methodology course. Students will select from a menu of courses designed to introduce them to fundamentals of social science theory. The intent of this course will be to equip students with analytic tools that they may make use of in their Asian Studies courses. Note that some of these courses have pre-requisites. This course may be selected from the following:

Code	Title	Hours
Select one of the following:		
ECN 101	Introductory Economics Micro	
ECN 102	Introductory Economics Macro	
ECN 321	International Trade	
ECN 322	International Macroeconomics	
ENG 415	Postcolonial Studies	
ENV 105	The Environment	
ENV 102	Environ Theory & Ethics Sem	
MAT 118	Introduction to Statistics	
POL 113	Intro to Comparative Politics	
POL 115	Intro to Global Politics	
POL 117	Intro to Political Thought	
POL 305	Politics, Ideology, & Film	

POL 368	Women, Gender & World Politics
POL 352	Global Political Economy
POL 367	Ethics in Internation Affairs
SOC 211	Classical Sociological Theory

Senior Seminar in Asian Studies

The senior experience is designed to enable students to synthesize what they have learned during their time at SJU, and will typically take the form of a research seminar and/or thesis. The expectation is that these papers would be nominated to be presented at the Greater Philadelphia Asian Studies consortium conference each spring.

Language Requirement

All majors are required to attain intermediate language competency in their area of concentration. The language requirement may be satisfied in one of three ways.

1. Two sequential intermediate classes (200-level) in the same Asian language (each course consisting of a minimum of three semester credit hours) at SJU or another US institution.
2. Language examination confirming intermediate-level competency
3. One semester language intensive study-abroad experience.

This requirement is seen as a minimum. The program encourages majors to attain fluency in an Asian language. Ideally, students will augment language study at SJU with an immersion experience of a semester or more. Part of the program's endowment will be dedicated to funding student needs for study abroad.

For languages not offered at SJU (Hindi, Urdu, Korean, etc.), the program will help interested students find appropriate instruction at other institutions or abroad, unless and until SJU is able to offer these languages on campus.

Study Abroad

The Asian Studies program considers experience in Asia to be an essential means of understanding. All Asian Studies majors are expected to spend at least one term (fall, spring, or summer) in a study-abroad program in Asia. There are currently approved programs in China, Japan, and India. This requirement can frequently be met through programs with existing ties to SJU, including The Beijing Center (operated by a consortium of Jesuit universities) and Sofia University in Tokyo, as well as summer programs.

Asian Studies Minor

Learning Goals and Outcomes

Goal 1: Students will achieve Intermediate Low Oral Proficiency in an Asian language (by ACTFL standards).

Outcome 1.1: Students will be able to communicate effectively in an Asian language

Goal 2: Students will explore Asia's importance in the world through interdisciplinary investigation of the histories, political systems, economies, cultures, and societies of Asia.

Outcome 2.1: Students will be able to apply a variety of tools, methods, and perspectives to investigate and interpret important aspects of the history, politics, geography, economics and culture of contemporary Asian societies.

Goal 3: Students will conduct research about Asia, evaluate data generated by multiple methodologies, and present their findings effectively.

Outcome 3.1: Students will be able to produce cogent, well-organized, and thoroughly researched written and oral presentations on important aspects of East or South Asian language, history, politics, culture and society that display familiarity with the scholarly conventions of the respective disciplines.

Requirements

Students completing the Minor in Asian Studies fulfill a six-course requirement. To ensure the interdisciplinary nature of the program, courses must be taken from at least three departments, and no more than three courses from any one department may count for credit toward the minor. Although language competency is not required for the minor, language study is encouraged.

List of Approved Courses

Biology

Department Mission

The Biology program has as its aim the education of broadly trained biologists who are well grounded in chemistry, physics, and mathematics, and have command of the written and spoken word. Emphasis is placed on understanding basic principles and concepts in biology, and the application of those principles through analysis of data and synthesis of information learned in the classroom and the research laboratory. The Biology program has always been known as a training ground for individuals pursuing professional careers in the life sciences. Many graduates from the Biology program have gone on to professional schools, pursued graduate studies, or entered the work force directly in academic, government, and industrial labs. This requires that our students be prepared to face the challenges of a competitive world. To help them meet these challenges the Department of Biology has established a strong advising program. Faculty commitment to academic advising and accessibility of faculty advisors to students exemplifies the institutional mission of cura personalis.

Faculty

The biology department's faculty and staff members are scientists, scholars, educators, mentors and advisers who are eager to engage in research and support students throughout their journey in the ever-evolving field of life sciences.

Department of Biology Faculty & Staff (<https://www.sju.edu/departments/biology/faculty-staff/>)

Biology in the GEP

The GEP requires that all students take EITHER one semester of a lab-based natural science course (6 contact hours) OR two semesters of lecture-only natural science courses. Students who wish to satisfy the natural science GEP by completing courses in Biology may do so by taking the first semester of the Biology majors, lab-based course sequence, BIO 101, or one of the lab-based, one-semester courses for non-science majors, like BIO 165. Alternatively, students may fulfill one or both semesters of the natural science GEP by completing one or two of the special one-semester lecture-only Biology courses designed for non-science majors listed below.

Code	Title	Hours
Non-science majors Biology GEP lecture-only courses		
BIO 160	Heredity and Evolution	3
BIO 161	Human Organism	3
BIO 162	Plants and Civilization	3

Non-science majors Biology GEP lab-based courses

BIO 165	Exploring the Living World	4
---------	----------------------------	---

Programs

Undergraduate Majors

- Biology (p. 95)
- Biological Studies (p. 91)
- Biology Secondary Education (p. 91)
- Biomedical Sciences (p. 100)
- Medical Laboratory Science (p. 103)

Undergraduate Minors

- Biology (p. 99)

Graduate

- Biology (MS) (p. 94)
- Biology (MA) (p. 93)
- Genomics (p. 102)

Graduate Certificates

- Brewing Science (p. 102)
- Genomics (p. 102)

Courses

BIO 101 Bio I: Cells (4 credits)

The study of the structure and function of representative prokaryotic and eukaryotic cells. Chemical makeup, organelle interactions, energy producing and biosynthetic reactions will be stressed. Three lecture periods, one three-hour laboratory period (BIO 101L or BIO 150L). First of three courses in the core program.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

BIO 101L Bio I: Cells Lab (0 credits)

Students who register for BIO 101 must also register for a BIO 101 laboratory. For example, if you register for BIO 101 you must, at the same time, register for a section of BIO 101L.

Attributes: GEP Natural Science, Undergraduate

BIO 102 Bio II: Genetics (4 credits)

The study of heredity and the mechanism of transmission of genetic information in biological systems. The course material is approached from the population, organismic, and biochemical perspectives. Three lecture periods, one three-hour laboratory period (BIO 102L or BIO 151L).

Prerequisites: BIO 101

Attributes: Science Course w/Lab (Sci Maj), Undergraduate

BIO 102L Bio II: Genetics Lab (0 credits)

Students who register for BIO 102 must also register for a BIO 102 laboratory. For example, if you register for BIO 102 you must, at the same time, register for a section of BIO 102L.

Attributes: Undergraduate

BIO 109 General Biology I (3 credits)

Basic principles of biology with emphasis on the scientific method, cellular structure and function, cellular respiration, cellular division, protein synthesis, metabolism, and genetics. Three lecture periods, one recitation period, one three-hour laboratory period (BIO 109L). This course will not be offered after the '23 - '24 academic year.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 109L General Biology I Lab (1 credit)

This is a laboratory-based course to be taken with General Biology I. This laboratory allows students to participate in the scientific method through various experiments. Students will perform hypothesis-based experiments on a variety of topics, which may include macromolecule composition, microscopy, osmolarity, enzyme activity, fermentation, and biotechnology. Students who register for BIO 109 must also register for a BIO 109 laboratory. For example, if you register for BIO 109 you must, at the same time, register for a section of BIO 109L. This course will not be offered after the '23 - '24 academic year.

Attributes: Undergraduate

BIO 119 General Biology II (3 credits)

A continuation of basic principles of biology with emphasis on evolution, morphology, and diversity of organisms within the three domains in life, ecology, animal behavior, and environmental biology. Three lecture periods, one recitation period, one three-hour laboratory period (BIO 119L). This course will not be offered after the '23 - '24 academic year.

Prerequisites: BIO 109 or BS 109

Attributes: Undergraduate

BIO 119L General Biology II Laboratory (1 credit)

This is a laboratory-based course to be taken with General Biology II. Students will engage in experiments that focus on Mendelian and population genetics and microbiology. Additionally, students will observe live and preserved specimens to investigate plant and animal diversity. Students who register for BIO 119 must also register for a BIO 119 laboratory. For example, if you register for BIO 119 you must, at the same time, register for a section of BIO 119L. This course will not be offered after the '23 - '24 academic year.

BIO 132 Introductory Biology I (3 credits)

An introduction to basic biological principles with an emphasis on cellular and molecular biology. Major topics include molecular makeup of a cell, cell structure, cellular respiration, cell to cell communication, cell division, gene expression, and gene regulation. Three lecture periods, one recitation period, one three-hour laboratory period (BIO 132L). This course will not be offered after the '23 - '24 academic year.

Attributes: Undergraduate

BIO 132L Introductory Biology I Lab (1 credit)

This is a laboratory-based course to be taken with Introductory Biology I. This laboratory allows students to participate in the scientific method through various experiments. Students will perform hypothesis-based experiments on a variety of topics, which may include macromolecule composition, microscopy, osmolarity, enzyme activity, fermentation, and biotechnology. Students who register for BIO 132 must also register for a BIO 132 laboratory. For example, if you register for BIO 132 you must, at the same time, register for a section of BIO 132L. This course will not be offered after the '23 - '24 academic year.

BIO 133 Introductory Biology II (3 credits)

This course is a continuation of BS 132; it is a study of basic biological systems emphasizing evolution, biodiversity, and physiological and morphological differences between organisms. Three lecture periods, one recitation period, one three-hour laboratory period (BIO 133L). This course will not be offered after the '23 - '24 academic year.

Prerequisites: BIO 132

Attributes: Undergraduate

BIO 133L Introductory Biology II Lab (1 credit)

This is a laboratory-based course to be taken along with Introductory Biology II. Students will engage in experiments that focus on Mendelian and population genetics and microbiology. Additionally, students will observe live and preserved specimens to investigate plant and animal diversity. Students who register for BIO 133 must also register for a BIO 133 laboratory. For example, if you register for BIO 133 you must, at the same time, register for a section of BIO 133L. This course will not be offered after the '23 - '24 academic year.

BIO 150L Bio I: Cells Lab Phage (0 credits)

A research-based laboratory for freshman accompanying BIO 101 involving isolation, purification, and preliminary genomic characterization of bacteriophages, viruses that infect bacteria. Open to first year students majoring in Biology, Biomedical Science, Biochemistry, Chemical Biology, Environmental Science, or Medical Laboratory Science. Admission by application. Successful completion of BIO101 and 150L fulfills the first year seminar GEP requirement. Students are expected to continue with BIO 151L in the spring. Two 120-minute lab periods.

Attributes: First-Year Seminar, GEP Natural Science, Undergraduate

BIO 151L Phage Lab (0 credits)

A research-based laboratory for freshman accompanying BIO 102. Students work "in silico" (using computers) to annotate bacteriophage genomes isolated the previous year by students in BIO 150L. Complete annotated genomes will be submitted to GenBank. Open to first year students majoring in Biology, Biomedical Science, Biochemistry, Chemical Biology, Environmental Science, or Medical Laboratory Science. Admission by application. Successful completion of BIO102 and 151L fulfills the first year seminar GEP requirement. Students are expected to continue with BIO 150L in the spring. Two 75- minute lab periods.

Prerequisites: BIO 150L

Attributes: First-Year Seminar, Undergraduate

BIO 160 Heredity and Evolution (3 credits)

A study of human genetics at three levels: human heredity and the inheritance of disease, genes and DNA, and human evolution. Includes discussion of how a cell uses its genetic information and how scientists study genes using genetic engineering techniques. Open to all students except those who have credit for BIO 102 or BIO 462 or BS 462.

Attributes: GEP Natural Science, Undergraduate

BIO 161 Human Organism (3 credits)

A study of the basic principles of human anatomy, physiology, and genetics. The organization and function of the human body will be described with an appreciation of underlying genetic and evolutionary concepts. Open to all students except those who have credit for BIO 201 or BIO 202 or BIO 260 or BIO 310 or BS 201 or BS 310.

Attributes: GEP Natural Science, Undergraduate

BIO 162 Plants and Civilization (3 credits)

This course will examine plants in the context of their importance to people. Plants used for food, fiber, medicine, and recreation will be included. Open to all students. Biology majors need permission of the Biology Chair to take this course.

Restrictions: Students cannot enroll who have a major in Biochemistry, Biology, Biomedical Sciences, Chemistry, Chemical Biology, Environmental Science, Medical Laboratory Science or Physics.

Attributes: GEP Natural Science, Undergraduate

BIO 165 Exploring the Living World (4 credits)

Students in this course will learn about the scientific world view and experience the methods of science in the context of the life sciences.

This course is designed for students not planning to major in science.

The course includes a survey of plant and animal life, an overview of bioenergetics, and selected topics in genetics and evolutionary biology. Three lecture periods, one three-hour laboratory period (BIO 165).

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

BIO 165L Exp. Living World Lab (0 credits)

Students who register for BIO 165 must also register for a BIO 165 laboratory. For example, if you register for BIO 165 you must, at the same time, register for a section of BIO 165L.

Attributes: GEP Natural Science, Undergraduate

BIO 201 Bio III: Organismic Biology (4 credits)

A survey of all living things followed by more detailed study of plants and animals. Topics include development, nutrition, locomotion, transport, and homeostatic controls. Three lecture periods, one three-hour laboratory period (BIO 201L). This course is NOT required for legacy University of the Sciences students.

Prerequisites: BIO 102

Attributes: Science Course w/Lab (Sci Maj), Undergraduate

BIO 201L Bio III: Organismic Biol Lab (0 credits)

Students who register for BIO 201 must also register for a BIO 201 laboratory. For example, if you register for BIO 201 you must, at the same time, register for a section of BIO 201L.

Attributes: Undergraduate

BIO 202 Human Structure and Function I (3 credits)

Organization of the human body and histology. Students will examine the histology, gross anatomy and function of the integumentary, skeletal, muscular and nervous systems. Three hours of lecture and one hour of recitation. Students may count either BIO 202 plus BIO 203, or BIO 260 plus BIO 261, or BIO 310 plus 311, or BIO 417 toward graduation, but not more than one such combination.

Prerequisites: BIO 119 or BIO 102 or BS 119 or BIO 133 or BS 133

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 202L Human Structure&Function I Lab (1 credit)

Organization of the human body and histology, microscopic examination of tissues and organs, followed by a study of the gross anatomy of the muscular and skeletal systems. One, three-hour lab period. Students who register for BIO 202L must also register for a BIO 202 OR a BIO 310 lecture section. For example, if you register for BIO 202L you must, at the same time, register for a section of BIO 202 OR BIO 310.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 203 Human Structure & Function II (3 credits)

Continuation of BS 205 - Human Structure and Function I. Organization of the human body and histology. Students will examine the histology, gross anatomy, and function of organs of the circulatory, digestive, respiratory, and excretory systems. Three hours of lecture and one hour of recitation. Students may count either BIO 202 plus BIO 203, or BIO 260 plus BIO 261, or BIO 310 plus BIO 311, or BIO 417 toward graduation, but not more than one such combination.

Prerequisites: BIO 202

Attributes: Undergraduate

BIO 203L Hum Structure& Function II Lab (1 credit)

Continuation of BIO 202L - Human Structure and Function I Laboratory. A study of the organization and histology of the human circulatory, digestive, respiratory, and excretory systems. One, three-hour lab period. Students who register for BIO 203L must also register for a BIO 203 OR a BIO 311 lecture section. For example, if you register for BIO 203L you must, at the same time, register for a section of BIO 203 or BIO 311.

Attributes: Undergraduate

BIO 204 Biological Sciences Colloquium (1 credit)

Preparation for careers in biology, microbiology, environmental science, and the health professions; introduction to faculty research. Required for all second-year University of the Sciences legacy students in biological sciences.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Undergraduate

BIO 205 Introduction to Neuroscience (3 credits)

Introduction to neuron structure and function, synaptic transmission, organization of the nervous system, brain-behavior relationships, and current neuroscience methods.

Prerequisites: BIO 102 or BIO 119 or BIO 133 or BS 119 or BS 133

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 206 Animal Diversity (3 credits)

An introduction to the natural history, diversity, and functional anatomy of animals, stressing the theme of evolution.

Prerequisites: BS 119 or BIO 119 or BS 133 or BIO 133

Attributes: Undergraduate

BIO 218 Hematology (3 credits)

Study of the blood and blood-forming tissues with emphasis on the cellular morphology and hematopoietic mechanisms of the red blood cells, white blood cells, and platelets. Also covers a wide variety of clinical disorders, particularly those involving abnormally formed cellular elements and coagulation.

Prerequisites: BS 119 or BIO 102 or BIO 119 or BS 133 or BIO 133

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 218L Hematology Lab (1 credit)

Students who register for BIO 218 must also register for a BIO 218 lab section. For example, if you register for BIO 218 you must, at the same time, register for a section of BIO 218L.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 219 Basic Nutrition (3 credits)

A basic course in understanding nutrition and its implications in the maintenance of good health.

Prerequisites: BS 119 or BIO 102 or BIO 119 or BS 133 or BIO 133

Attributes: Undergraduate

BIO 220 Plant Diversity and Morphology (3 credits)

A study of the diversity that exists within the plant kingdom. Topics include evolutionary trends, functional anatomy, and ecological influences. Students may count only one of the following courses towards their graduation requirements: BS 220, or BIO 220, or BIO 414.

Prerequisites: BIO 201 or BIO 119 or BIO 133 or BS 119 or BS 133

Attributes: Undergraduate

BIO 230 Basic Concepts & Proc MLS (4 credits)

Fundamentals in medical laboratory sciences.

Prerequisites: BS 119 or BIO 102 or BIO 119 or BS 133 or BIO 133

Restrictions: Enrollment is limited to students with a major in Medical Laboratory Science.

Attributes: Undergraduate

BIO 230L Basic Concepts Med Lab Sci Lab (0 credits)**BIO 243 Microbial Science (3 credits)**

This course will give students a solid foundation in the science of microbiology. Students will learn about the various types of microbiological life (bacteria, archaea, viruses and single cell eukaryotes) with a special emphasis on common themes. These include: classification, structure, growth, the flow of genetic information and relevance to human activity.

Prerequisites: (BS 119 or BIO 119 or BIO 201 or BS 133 or BIO 133) and (CH 102 or CHM 125 or CH 112)

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 243L Microbial Science Lab (1 credit)

This course introduces students to the growth, classification and manipulation of microorganisms in a laboratory setting. The laboratory introduces students to aseptic/sterile technique, normal microflora, microbiological media, microbial colony isolation, classic and modern microbiological techniques. One, three-hour lab period. Students who register for BIO 243 must also register for a BIO 243L lab section. For example, if you register for BIO 243 you must, at the same time, register for a section of BIO 243L.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 260 Anat&Physiol Nurs/Al Hlth I (4 credits)

This course is designed for students needing preparation in human anatomy and physiology as required for nursing and some allied health programs. Students may count either BIO 260 plus BIO 261, or BIO 202 plus BIO 203, or BIO 310 plus BIO 311, or BIO 417 toward graduation, but not more than one such combination. Three 50-minute lecture periods and one three-hour lab period.

Prerequisites: BIO 102 (may be taken concurrently) or BIO 119 or BIO 133 or BS 119 or BS 133

Attributes: Undergraduate

BIO 260L Anat&Physiol Lab I (0 credits)

Students who register for BIO 260 must also register for a BIO 260 lab section. For example, if you register for BIO 260 you must, at the same time, register for a section of BIO 260L.

Attributes: Undergraduate

BIO 261 Anat&Physiol Nurs/Al Hlth II (4 credits)

Continuation of BIO 260. This course is designed for students needing preparation in human anatomy and physiology as required for nursing and some allied health programs. Students may count either BIO 260 plus BIO 261, or BIO 202 plus BIO 203, or BIO 310 plus BIO 311, or BIO 417 toward graduation, but not more than one such combination. Three 50-minute lecture periods and one three-hour lab period.

Prerequisites: BIO 260

Attributes: Undergraduate

BIO 261L Anat&Physiol Lab II (0 credits)

Students who register for BIO 261 must also register for a BIO 261L lab section. For example, if you register for BIO 261 you must, at the same time, register for a section of BIO 261L).

Attributes: Undergraduate

BIO 270 Microbio Nurse/Allied Health (4 credits)

This course is designed for students needing preparation in microbiology as required for nursing and some allied health programs. Not open to students who have taken BIO 243 or BIO 348 or BIO 416 or BIO 422 or BIO 425 or BIO 453 or BS 244 or BS 342 or BS 343 or BS 347 or BS 348 or BS 350 or BS 375 or BS 453. Three 50-minute lecture periods and one three-hour lab period.

Prerequisites: BIO 102 or BIO 119 or BS 119 or BIO 133 or BS 133

Attributes: Undergraduate

BIO 270L Microbio Nurse/Allied Hlth Lab (0 credits)

Students who register for BIO 270 must also register for a BIO 270L lab section. For example, if you register for BIO 270 you must, at the same time, register for a section of BIO 270L.

Attributes: Undergraduate

BIO 276 Intro to Environmental Science (3 credits)

This is an introductory course in environmental science. It is intended for any student who wants to gain a background in the major environmental issues of our present time. It will cover the issues of world population expansion, sustainability, and basic ecological principles in the context of energy issues, water and mineral resource issues, biodiversity, agricultural issues, and suburban sprawl. Pollution of the air we breathe and the water we drink will also be discussed. We will also examine the issues of solid waste disposal and the economics of environmental issues.

Prerequisites: BIO 102 or BIO 119 or BS 119 or BIO 133 or BS 133

Attributes: Undergraduate

BIO 276L Intro to Enviromntl Sci Lab (1 credit)

Students who register for BIO 276 must also register for a BIO 276L lab section. For example, if you register for BIO 276 you must, at the same time, register for a section of BIO 276L.

Attributes: Undergraduate

BIO 280 Comparative Animal Physiology (3 credits)

Study of organ and system functions in major invertebrate and vertebrate phyla. Students may count only one of the following courses towards their graduation requirements: BS 280, or BIO 280, or BIO 417.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 290 Career Development Seminar (0 credits)

This seminar course is designed to enhance students' professional development, knowledge about careers, and practical career skills. By the end of the seminar, students will be able to identify career paths of interest and have the necessary tools to pursue them. This course is taken in the fall of the sophomore year for Biology and Biomedical Sciences majors.

Attributes: Undergraduate

BIO 305 Animal Behavior (4 credits)

An introduction to the proximate causes and ultimate consequences of behavioral strategies used by individuals within a population. Specific questions concerning the behavior of individuals and populations of individuals are explored in a mechanistic and evolutionary context.

Students may count only one of the following courses towards their graduation requirements: BIO 305, or BS 305, or BIO 401.

Prerequisites: BIO 102 or BIO 119 or BIO 133 or BS 119 or BS 133

Attributes: Undergraduate

BIO 305L Animal Behavior Lab (0 credits)

Students who register for BIO 305 must also register for a BIO 305L lab section.

Attributes: Undergraduate

BIO 306 Human Molecular & Cellular Bio (3 credits)

An exploration of how human cells function with an emphasis on molecular techniques used to diagnose disease. Course will provide an introduction to foundational topics in molecular and cellular biology such as, DNA replication, transcription, translation, organelles, and cell division with application to human diseases, when such components and processes fail or are mutated. Students may count only one of the following courses towards their graduation requirements: BIO 306, or BS 306, or BIO 402.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 310 Anatomy and Physiology I (3 credits)

A systemic approach to the structure and function of the human. Organ systems studied include the integumentary, skeletal, muscular, and nervous systems. Three hours of lecture and one hour of recitation. Students may also take the BIO 202L Human Structure & Function I Lab (1 credit) concurrently with this lecture. Students may count either BIO 202 plus BIO 203, or BIO 260 plus BIO 261, or BIO 310 plus BIO 311, or BIO 417 toward graduation, but not more than one such combination.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CH 102 or CHM 125 or CH 112)

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 311 Anatomy and Physiology II (3 credits)

Continuation of BS 310; systemic approach to the structure and function of the human. Organ systems studied include endocrine, circulatory, respiratory, digestive, and excretory systems. Three hours of lecture and one hour of recitation. Students may also take the BIO 203L Human Structure & Function II Lab (1 credit) concurrently with this lecture. BIO 202 plus BIO 203, or BIO 260 plus BIO 261, or BIO 310 plus BIO 311, or BIO 417 toward graduation, but not more than one such combination.

Prerequisites: BIO 310 or BS 310

Attributes: Undergraduate

BIO 320 Science Communication&Outreach (1 credit)

Optional Service Learning course can be taken in conjunction with any Biology course. Guided experience in preparing and presenting hands-on science lessons to K-12 children. Time commitment is 3 hrs per week.

Attributes: Undergraduate

BIO 336 Plant Therapeutics (3 credits)

This course considers plants as sources of alternative therapeutics and the science behind herbal medicines.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CH 102 or CHM 125 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 343 Microbial Genetics (4 credits)

Microbial genetics explores the mechanisms and regulation of information storage, duplication, transmission, and translation in living microorganisms. Major themes include DNA replication, mutation, and repair; gene expression; protein production and trafficking. Practical applications and fundamental discoveries will be emphasized.

Prerequisites: (BIO 243 or BS 243) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Undergraduate

BIO 348 Clinical Microbiology (4 credits)

A survey of the various bacteria that cause human infections. The type of infection caused, portal of entry, molecular basis of the infection process, treatment, and laboratory identification are discussed for each group of organisms. Three hours of lecture and three hours of lab. Students may count only one of the following courses towards their graduation requirements: BIO 348, BIO 270, BIO 416, BIO 422, BIO 425, BIO 453, BS 244, BS 342, BS 343, BS 347, BS 348, BS 350, BS 375, or BS 453.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Restrictions: Enrollment is limited to students with a major in Microbiology or Medical Laboratory Science.

Attributes: Undergraduate

BIO 348L Clinical Microbiology Lab (0 credits)

Students who register for BIO 348 must also register for a BIO 348L lab section. For example, if you register for BIO 348 you must, at the same time, register for a section of BIO 348L.

Restrictions: Enrollment is limited to students with a major in Microbiology or Medical Laboratory Science.

Attributes: Undergraduate

BIO 350 Clinical Immunology (3 credits)

Basic principles and types of immunity. Consideration of transplantation, AIDS, hypersensitivity, and tumor immunology of the human. Laboratory methods of serodiagnosis of disease and blood and tissue typing are emphasized. Students may count BIO 350 or BIO 415 towards their graduation requirements, but not both.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 358 Principals &App of Immunology (3 credits)

Study of the principles and mechanisms of immunology and their applications to infection, hypersensitivity, autoimmunity, transplantation, cancer and AIDS. Students may count BIO 358 or BIO 415 towards their graduation requirements, but not both.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 360 God and Evolution (3 credits)

This course considers a major topic in academic discourse and society at large, the relationship between religion/theology and biological evolution.

This course explores the thesis that the two can be compatible- including from an informed scientific point of view. Students in this course learn evolutionary biology, theological account of creation, and how they can be compatible. This course does not fulfill requirements for a Biology, Biomedical Science, or Medical Laboratory Science major or minor.

Prerequisites: (THE 153 or THE 154 or THE 155 or THE 221) and PHL 154

Attributes: Faith-Reason Course, Undergraduate

BIO 372 Aquatic Biology (4 credits)

A lecture and field course concerning the biological, physical, and chemical aspects of freshwater ecosystems. Includes collection, preservation, and recognition of aquatic organisms other than vertebrates and the study of those aspects of their biology that are important adaptations to aquatic life.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CH 102 or CHM 125 or CHM 126 or CH 112)

Attributes: Undergraduate

BIO 372L Aquatic Biology Lab (0 credits)**BIO 377 Ecology (4 credits)**

Consideration of the interaction of living organisms with the environment. Aquatic, terrestrial, and marine systems are examined. Students may count only one of the following towards their graduation requirements: BIO 372, BIO 409, or BS 377.

Prerequisites: (BIO 201 or BIO 243 or BS 243) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 377L Field Ecology Lab (0 credits)

Students who register for BIO 377 must also register for a BIO 377L lab section. For example, if you register for BIO 377 you must, at the same time, register for a section of BIO 377L.

Attributes: Undergraduate

BIO 390 Biology Seminar (0 credits)

Attendance at three seminars is required each semester during sophomore, junior, and senior years. Approved seminars are posted in the Department.

Restrictions: Enrollment is limited to students with a major in Biology or Biomedical Sciences.

Attributes: Undergraduate

BIO 400 Developmental Genetics (3 credits)

Students will learn about the principles governing plant and animal development and the underlying cellular and genetic mechanisms.

This includes: gametogenesis and fertilization, sex determination, embryogenesis and early development, ectoderm development (nervous systems, skin and appendages), mesoderm development (muscle, bone, blood and cardiovascular), endoderm development (organogenesis, tube formation and reproduction) and an introduction to common developmental disorders. Students will read primary literature and learn about the techniques employed in developmental genetics research using model systems.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 401 Animal Behavior (4 credits)

The study of animals and their behaviors, with a strong emphasis on evolutionary relationships and ecology. Live animals will be studied in the classroom, laboratory, and field. Two 50-minute lecture periods, one four-hour laboratory period. Students may only count one of the following courses towards their graduation requirements: BS 305 or BIO 305, or BIO 401.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 401L Animal Behavior Lab (0 credits)

Students who register for BIO 401 must also register for a BIO 401L lab section.

Attributes: Undergraduate

BIO 402 Advanced Cell Biology (4 credits)

An in-depth analysis of eukaryotic cell structure and function, including membrane structure and transport, cellular organelles, the cytoskeleton, and cell communication. Emphasis will be on experimental approaches to understanding concepts in cell biology. Two 50-minute lecture periods, one four-hour laboratory period. Students may count only one of the following courses towards their graduation requirements: BIO 306, or BS 306, or BIO 402.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 402L Advanced Cell Biology Lab (0 credits)

Students who register for BIO 402 must also register for a BIO 402L lab section.

Attributes: Undergraduate

BIO 404 Biochemistry (3 credits)

An introduction to the chemistry of living systems. The study of important molecules, metabolic pathways, and control systems will be emphasized. Students may count only one of the following courses towards their graduation requirements: BIO 404, or CHM 335, or CHM 341, or CHM 346, or CH 340, or CH 341, or CH 346.

Prerequisites: (BIO 201 or BIO 119 or BIO 133 or BS 119 or BS 133) and (CHM 215 (may be taken concurrently) or CH 202 or CH 212) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 405 Biomechanics (4 credits)

The role of physics in biological systems and the organismal and super-organismal level. Lectures will cover a range of biomechanics disciplines, presenting underlying physical principles and their biological ramifications. Laboratories will provide experience with the experimental techniques available to measure forces relevant to biological systems. Two 75-minute lecture periods, one three-hour laboratory period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112) and (PHY 101 or PHY 105 or PY 212 or PY 202)

Attributes: Undergraduate

BIO 405L Biomechanics Lab (0 credits)

Students who register for BIO 405 must also register for a BIO 405L lab section.

Attributes: Undergraduate

BIO 406 Comparative Anatomy (4 credits)

An integrated comparative study of vertebrate structure and development. A synthesis of the embryological development, the gross anatomy, and the histology of selected forms. Two 75-minute lecture periods, one three-hour laboratory period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 406L Comparative Anatomy Lab (0 credits)

Students who register for BIO 406 must also register for a BIO 406L lab section.

Attributes: Undergraduate

BIO 409 Ecology (4 credits)

A study of the complex interrelationship between organisms and their environment. The course will include discussions on fundamental themes in ecology such as food webs and population growth, as well as topics of current interest such as oil spills and the destruction of the rain forest. Two 50-minute lecture periods, one four-hour laboratory period. Students may count only one of the following courses towards their graduation requirements: BIO 377, or BS 377, or BIO 409.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 409L Ecology Lab (0 credits)

Students who register for BIO 409 must also register for a BIO 409L lab section.

Attributes: Undergraduate

BIO 411 Molecular Genetics (4 credits)

Study of the molecular biology of the genetic material, its structure, expression, regulation, and its dynamic nature. Two 50-minute lecture periods, one four-hour laboratory period. Students may count only one of the following courses towards their graduation requirements: BIO 343, or BS 343, or BIO 411.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126) and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

BIO 411L Molecular Genetics Lab (0 credits)

Students who register for BIO 411 must also register for a BIO 411L lab section.

Attributes: Undergraduate

BIO 412 Neurobiology (4 credits)

Introduction to the structure and function of the vertebrate nervous system. Major topics will include neuronal function, sensory and motor systems, behavior, and higher mental processes. Laboratory work will include hands-on experience of several neurobiological techniques to measure molecular and biochemical changes in a mouse brain. Two 50-minute lecture periods, and two 2-hour laboratory periods. Students may count only one of the following courses towards their graduation requirements: BIO 412 or BIO 460 or BS 460.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 412L Neurobiology Lab (0 credits)

Students who register for BIO 412 must also register for a BIO 412L lab section.

Attributes: Undergraduate

BIO 413 Plant Physiological Ecology (4 credits)

This course will focus on the physiological mechanisms plants use to respond to their environment. Major topic areas include the basic environmental physiology of carbon, water, and mineral nutrient exchange, and the adaptive mechanisms plants use to survive the variety of global environments. Labs will cover common physiological research methods ranging from cellular to whole organism level measurements and will involve both laboratory and field work. Two 75-minute lecture periods, two 90-min laboratory periods.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 413L Plant Physiological Eco Lab (0 credits)

Students who register for BIO 413 must also register for a BIO 413L lab section.

Attributes: Undergraduate

BIO 414 Plant Systematics (4 credits)

Students will learn to recognize vascular plant families and understand how taxonomists study evolutionary relationships among plant groups. Economic, medical, and ecological importance of various seed plants will be emphasized. Two 75-minute lecture periods, two 90-minute laboratory periods.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 414L Plant Systematics Lab (0 credits)

Students who register for BIO 414 must also register for a BIO 414L lab section.

Attributes: Undergraduate

BIO 415 Immunology (4 credits)

An introductory course providing students with an overview of how the immune system works, including molecules, cells and organs of the immune system and their functions and interactions. Discussion of the experimental techniques used to understand the cell-cell interactions that occur in immunity as well as the differentiation and activation of the immune response will be included. Two 50-minute lecture periods, one four-hour laboratory period. Students may count BIO 350 or BIO 415 towards their graduation requirements, but not both.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 415L Immunology Lab (0 credits)

Students who register for BIO 415 must also register for a BIO 415L lab section.

Attributes: Undergraduate

BIO 416 Microbiology (4 credits)

The structural, cultural, and physiological characteristics of microorganisms and their role in the economy of nature. The principles of immunity, serology, and virology are also considered. Three 50-minute lecture periods, one three-hour laboratory period. Students may count only one of the following courses towards their graduation requirements: BIO 416 or BIO 453 or BS 453.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 416L Microbiology Lab (0 credits)

Students who register for BIO 416 must also register for a BIO 416L lab section.

Attributes: Undergraduate

BIO 417 Systemic Physiology (4 credits)

A study of the fundamental mechanisms of vertebrate physiology. The basis for the function of the various organ systems and the biological controls that result in the integration of these systems will be discussed. Two 50-minute lecture periods, one four-hour laboratory period. Students may count only one of the following courses towards their graduation requirements: BS 412, or BIO 440, or BIO 417.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 417L Systemic Physiology Lab (0 credits)

Students who register for BIO 417 must also register for a BIO 417L lab section.

Attributes: Undergraduate

BIO 419 Invertebrate Zoology (4 credits)

A study of the morphology, physiology, behavior, and phylogenetic relationships of the major groups of invertebrates. Participants will compare and contrast the physical and biological challenges facing the invertebrates that live on land, in water, and inside other organisms. The laboratory will include observations and experiments on live and preserved animals. Two 50-minute lecture periods, and two 2-hour lab periods.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 419L Invertebrate Zoology Lab (0 credits)

Students who register for BIO 419 must also register for a BIO 419L lab section.

Attributes: Undergraduate

BIO 420 Bioinformatics (4 credits)

Introduction to the use of computers in biology. Students learn about important scientific questions and the contemporary tools used to answer them. Topics include genome sequence assembly and annotation, database mining, genome organization, phylogenetics and genetics of human disease.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 420L Bioinformatics Lab (0 credits)

Students who register for BIO 420 must also register for a BIO 420L lab section.

Attributes: Undergraduate

BIO 421 Molecular&Cellular Biophysics (4 credits)

The course is designed to show students how the integration of physics, chemistry and molecular biology are used to explain and predict molecular and cellular processes such as protein-protein interactions, protein folding, diffusion, and signaling. The course will also provide students with a basic understanding and hands-on experience of several biophysical and biochemical laboratory techniques. Two 50-minute lecture periods, one four-hour lab period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126) and (PHY 101 or PY 202 or PY 212 or PHY 105)

Attributes: Undergraduate

BIO 421L Mol & Cell Biophysics Lab (0 credits)

Students who register for BIO 421 must also register for a BIO 421L lab section.

Attributes: Undergraduate

BIO 422 Applied&Environ Microbio (4 credits)

The course will introduce us to the complex relationships between microbes and their environment, including other organisms. In the frame of these relationships, we will explore how microbial activities are key to geochemical cycles and to human-engineered processes that are essential part of our lives. Two 50-minute lecture periods, one four-hour lab period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 422L Applied & Environ Micro Lab (0 credits)

Students who register for BIO 422 must also register for a BIO 422L lab section.

Attributes: Undergraduate

BIO 423 Evolution (4 credits)

This course covers the major concepts of evolutionary biology, including natural selection, adaptation, genetic drift, and phylogenetic trees. The course trains students to know how to generate and test evolutionary hypotheses using data and inference. The lab portion of the course encourages hands-on learning through computer simulation and problem-solving. Two 50-minute lecture periods, one four-hour lab period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 423L Evolution Lab (0 credits)

Students who register for BIO 423 must also register for a BIO 423L lab section.

Attributes: Undergraduate

BIO 424 Biotechnology (4 credits)

A course in which students will learn how basic cell and molecular biology are used to develop products for biomedical, agricultural and industrial applications. The course will also cover fundamental and emerging techniques in the biotechnology field. The lab section will focus on the steps involved in the production and purification of recombinant proteins expressed in bacterial cells. Two 50-minute lecture periods, one four-hour laboratory period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CH 102 or CH 112 or CHM 126)

Attributes: Undergraduate

BIO 424L Biotechnology Lab (0 credits)

Students who register for BIO 424 must also register for a BIO 424L lab section.

Attributes: Undergraduate

BIO 425 Bacterial Pathogenesis (4 credits)

A study of the physiological, genetic, and biochemical basis underlying some of the commonly encountered bacterial diseases. The course also addresses the roles of antimicrobial compounds and the host immune system in counteracting disease. Finally, in the lab module for the course, students perform discovery-oriented research as they identify novel genes in enteropathogenic *Escherichia coli* (EPEC) that affect bacterial virulence in a *C. elegans* (roundworm) model of disease. Two 75-minute lecture periods, one three-hour laboratory period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 425L Bacterial Pathogenesis Lab (0 credits)

Students who register for BIO 425 must also register for a BIO 425L lab section.

Attributes: Undergraduate

BIO 426 Fermentation Science (4 credits)

This course will provide students with an overview of various fermentation processes and their use in producing fermented foods and beverages. Fermentation will be considered from biochemical, microbiological, food science, historical and cultural points of view. This course will run either with an associated lab or, periodically, as a study tour. Two 75-minute lecture periods and one three-hour lab, or, if running as a study tour, one three-hour meeting per week plus one week abroad. When this course is run as a lecture-only course, it is worth 3 credits, whereas when it is run as a study-tour course, it is worth 4 credits and is considered a lab-based course

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 426L Fermentation Science Lab (0 credits)

Students who register for BIO 426 4 credits must also register for a BIO 426L lab section.

Attributes: Undergraduate

BIO 428 Histopathology (4 credits)

A study of the microscopic structure and function of normal and diseased cells, tissues and organs, focusing on vertebrates, with a special emphasis on humans. Using prepared slides and computer images, students will learn to identify and differentiate healthy and pathological samples and relate this to abnormal or disrupted organ function. Two 50-minute lecture periods, two, two-hour lab periods.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 428L Histopathology Lab (0 credits)

Students who register for BIO 428 must also register for a BIO 428L lab section.

Attributes: Undergraduate

BIO 429 Environmental Science (4 credits)

An overview of the relationship between humans, their activities, and the environment around them. Though focused on the biological impacts from pollution, overpopulation, climate change, and resource exploitation, this course will also address the chemical and physical mechanisms that drive those changes and possible solutions to the challenges they present. Three, 50-minute lecture periods, one three-hour laboratory period.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 429L Environmental Science Lab (0 credits)

Students who register for BIO 429 must also register for a BIO 429L lab section.

Attributes: Undergraduate

BIO 430 Neurological Disorders (4 credits)

Students will learn about the molecular and cellular mechanisms underlying various human nervous system disorders, such as autism, addiction, trauma, and neurodegenerative disorders. There will be a focus on the reading of primary literature and writing. Laboratory work will include a semester-long investigative research project. Two 50-minute lecture periods, and two 2-hour laboratory periods. Students may count BIO 430 or BIO 460 or towards their graduation requirements, but not both.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112) and ENG 101

Attributes: Undergraduate

BIO 430L Neurological Disorders Lab (0 credits)

Students who register for BIO 430 must also register for a BIO 430L lab section.

Attributes: Undergraduate

BIO 432 Genes and Brains (3 credits)

Advances in the fields of neuroscience and genetics have begun to unravel complex ways in which our genes control proper functioning and dysfunctioning of our brains. In this course-based undergraduate research experience (CURE), students investigate emerging ideas in neurogenetics through rigorous and collaborative laboratory-based research. Students apply the scientific method to test hypotheses, collect and interpret data, and examine broader relevance of their experiments through analysis of primary literature.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BS 133 or BIO 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 433 Parasitology (3 credits)

Survey of the geographic distribution, incidence, symptoms, diagnosis, treatment, prevention, control, and immunology of important parasitic diseases in humans. Emphasis is placed on relationship of culture and social customs to the life cycles of the parasites. Class discussions and presentations will focus on ethical implications of diagnoses, as well as related Western interventions in developing countries. Note: This course does NOT serve as a 400-level biology course for legacy University of the Sciences students. It is a 300-level course for those students.

Attributes: Undergraduate

BIO 433L Parasitology Lab (1 credit)

Students who register for BIO 433 must also register for a BIO 433L lab section.

BIO 434 Biology of Aging (3 credits)

Study of the aging process, including the role of evolution and genetics, systems review, probable causes, and major consequences of aging.

Note: This course does NOT serve as a 400-level biology course for legacy University of the Sciences students. It is a 300-level course for those students.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112) and (CHM 335 (may be taken concurrently) or CHM 341 (may be taken concurrently) or CHM 346 (may be taken concurrently) or BIO 404 (may be taken concurrently) or CH 340 or CH 341 or CH 346)

Attributes: Undergraduate

BIO 435 Neuropsychology (3 credits)

This course is designed to introduce upper-level students interested in careers in medicine, clinical psychology, and related health science disciplines to the structure-function relationships of the human brain.

The course emphasizes adult brain anatomy and function. The behavioral effects of brain damage (e.g., agnosia, neglect, aphasia, apraxia, amnesia) will be related to neuropsychological theories of brain function and examined in depth through readings, case material, and presentations.

Prerequisites: (PSY 100 or PSY 101 or PS 101 or PS 111) and (BIO 102 or BS 119 or BS 133 or PSY 201)

Attributes: Undergraduate

BIO 436 Virology (3 credits)

The study of bacterial, plant, and animal viruses is presented with an emphasis on animal virology. Viral taxonomy, mechanisms of viral reproduction and replication, and the pathology of selected viral families are presented.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112) and (CHM 335 (may be taken concurrently) or CHM 341 (may be taken concurrently) or CHM 346 (may be taken concurrently) or BIO 404 (may be taken concurrently) or CH 340 or CH 341 or CH 346)

Attributes: Undergraduate

BIO 440 Human Physiology (4 credits)

Examination of critical concepts in human physiology from an integrative perspective common to current biomedical disciplines. Levels of organization within and between classical systems include skeletomuscular, nervous, endocrine, cardiovascular, respiratory, renal, and digestive systems. Recommended for pre-professional students. Students may count only one of the following courses towards their graduation requirements: BS 412, or BIO 440, or BIO 417.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112) and (PHY 101 or PHY 102 or PY 202 or PY 212)

Attributes: Undergraduate

BIO 453 Microbial Physiology (4 credits)

Survey of bacterial morphology, factors affecting growth characteristics of bacterial populations, biosynthetic processes, and biochemical and genetic factors that control these processes. Mechanisms of antibiotic activity, development of resistance, and methods of antibiotic testing are also covered.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112) and (CHM 335 (may be taken concurrently) or CHM 341 (may be taken concurrently) or CHM 346 (may be taken concurrently) or BIO 404 (may be taken concurrently) or CH 340 or CH 341 or CH 346)

Attributes: Undergraduate

BIO 455 Molecular Basis Neuro Disorder (3 credits)

Students will explore the molecular underpinnings of different neurological disorders and diseases, such as neurodegenerative disorders (Alzheimer's, Parkinson's Disease, etc.), addiction, and epilepsy. Through primary literature, discussion, and inquiry-based learning, students will also learn about the research methodology and model systems used to make advances in the investigation of these diseases and disorders.

Prerequisites: (BIO 205 or NSC 205 or PSY 205) or (BS 260 or NS 260 or PS 260)

Attributes: Undergraduate

BIO 460 Neurobiology (3 credits)

In-depth study of the molecular and cellular components of neurons and neural networks. Neuronal functions including synaptic transmission, neurotransmitter release, signaling pathways, and gene expression will be covered. Primary literature will be used to analyze the cellular mechanisms and components regulating neural systems including sensation, integration, sleep, learning, and memory.

Prerequisites: (BS 260 or NS 260 or PS 260) or (BIO 205 or NSC 205 or PSY 205)

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 461 Cell Biology (4 credits)

Analysis of the cell at all levels of organization, which includes consideration of techniques used in the study of cells.

Prerequisites: BS 119 or BIO 119 or BS 133 or BIO 133 and CH 102 or CHM 125 or CH 112

Attributes: Undergraduate

BIO 461L Cell Biology Lab (0 credits)**BIO 462 Genetics (3 credits)**

Course covers fundamental concepts, principles, and applications of microbial, classical, and molecular genetics. This course is only open to legacy University of the Sciences students.

Prerequisites: (BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 335 (may be taken concurrently) or CHM 341 (may be taken concurrently) or CHM 346 (may be taken concurrently) or BIO 404 (may be taken concurrently) or CH 340 or CH 341 or CH 346)

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Undergraduate

BIO 462L Genetics Lab (1 credit)

Students who register for BIO 462 must also register for a BIO 462L lab section.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 470 Special Topics (3 credits)

Advanced study on a topic or problem to be arranged with any of the Departmental faculty members.

Prerequisites: BIO 201 and CHM 125

Attributes: Undergraduate

BIO 473 Biological Sciences Seminar I (1 credit)

Reports and seminars on topics of current biological interest presented by students or outside speakers. Depending on the instructor, topic may be one of students' or instructor's choice. Required of all senior biological sciences majors; open to all qualified students. This course is only open to legacy University of the Sciences students.

Prerequisites: (BIO 119 or BS 119) or (BIO 133 or BS 133)

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Undergraduate

BIO 474 Emrg Bio Threat & Gbl Sustain (3 credits)

Biological threats such as emerging human/animal diseases, food insecurity, and population growth are examined in connection with causes and effects on global changes in climate, land use, decline in biodiversity, etc. Topics are covered through journal readings, reports, presentations, and student blogs.

Prerequisites: (BIO 201 or BIO 119 or BS 119 or BIO 133 or BS 133) and (CHM 125 or CHM 126 or CH 102 or CH 112)

Attributes: Undergraduate

BIO 475 Biological Sciences Seminar II (1 credit)

Continuation of BIO 473 - Biological Sciences Seminar I. Students will integrate knowledge and ideas within biology and across other fields.

Prerequisites: (BIO 473 or BS 493)

Attributes: Undergraduate

BIO 476 Molecular Biology (3 credits)

Study of molecular biology concepts and techniques. Topics include biochemical basis of macromolecular structure, maintenance of the genome, gene expression, gene regulation, and current molecular biology techniques.

Prerequisites: BIO 492 or BS 462 or BS 466

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

BIO 476L Molecular Biology Lab (2 credits)

Students who register for BIO 476 must also register for a BIO 476L lab section.

BIO 477 Seminar in Neuroscience (1 credit)

Current research and techniques in the field of neuroscience through primary literature review, discussion, and analysis. Topics will be chosen based on current discoveries and advancements in the field.

Prerequisites: (BIO 205 or NSC 205 or PSY 205) or (BS 260 or NS 260 or PS 260)

Attributes: Undergraduate

BIO 491 Biology Internship (1-3 credits)

Internships enable the student to gain first-hand experience working in some field of biology. Interns should work a minimum of 10 hours weekly for 12 weeks to earn credit for a single course. Permission to take an internship for course credit must be obtained prior to beginning the internship. Permission of the Chair of Biology required.

Prerequisites: BIO 201 and (CHM 125 or CHM 126)

Attributes: Undergraduate

BIO 492 Biology Internship II (1-3 credits)

Internships enable the student to gain first-hand experience working in some field of biology. Interns should work a minimum of 10 hours weekly for 12 weeks to earn credit for a single course. Permission to take an internship for course credit must be obtained prior to beginning the internship. Permission of the Chair of Biology required.

Prerequisites: BIO 201 and (CHM 125 or CHM 126)

Attributes: Undergraduate

BIO 493 Undergraduate Research in Bio (3,6 credits)

Laboratory or field work on a specific biological problem in cooperation with a faculty member of the department. Normally requires three hours of work per week for each unit of credit. This course may be taken for credit multiple semesters but only one semester counts as a biology elective. In subsequent semesters this course will count as a general elective. Students need to complete the application form for independent study and have the approval of the department chair and Associate Dean.

Prerequisites: BIO 201 and (CHM 125 or CHM 126)

Attributes: Undergraduate

BIO 494 Undergraduate Research in Bio (1-6 credits)

Laboratory or field work on a specific biological problem in cooperation with a faculty member of the department. Normally requires three hours of work per week for each unit of credit. This course may be taken for credit multiple semesters but only one semester counts as a biology elective. In subsequent semesters this course will count as a general elective. Students need to complete the application form for independent study and have the approval of the department chair and Associate Dean.

Prerequisites: BIO 201 and (CHM 125 or CHM 126)

Attributes: Undergraduate

BIO 550 Research Techniques (3 credits)

An introduction to techniques commonly used in life science research laboratories. Weekly meetings by different faculty members on their area of specialty. One lecture period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 550L Research Techniques Lab (1 credit)

This course is designed to expose students to the research activity within the department. Students will be rotated through 2-3 faculty research laboratories, working in each lab for a four-week period. Students will select the labs to work in based on their interest. This experience is designed to allow students the opportunity to learn the practical side of laboratory techniques and to help students select a research area for study.

Restrictions: Enrollment is limited to Graduate level students.

BIO 552 Graduate Seminar (1 credit)

Presentations and discussions of primary literature articles. Topic varies by semester. One period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 600 Developmental Genetics (3 credits)

Students will learn about the principles governing plant and animal development and the underlying cellular and genetic mechanisms. This includes: gametogenesis and fertilization, sex determination, embryogenesis and early development, ectoderm development (nervous systems, skin and appendages), mesoderm development (muscle, bone, blood and cardiovascular), endoderm development (organogenesis, tube formation and reproduction) and an introduction to common developmental disorders. Students will read primary literature and learn about the techniques employed in developmental genetics research using model systems.

Restrictions: Enrollment is limited to Graduate level students.

BIO 601 Animal Behavior (4 credits)

Study of animals and their behaviors with strong emphasis on evolutionary relationships and ecology. Two lecture periods, one four hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 601L Animal Behavior Lab (0 credits)**BIO 602 Advanced Cell Biology (4 credits)**

In depth analysis of eukaryotic cell structure and function. Emphasis is on experimental approaches to understanding concepts in cell biology. Two lecture periods, one four-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 602L Advanced Cell Biology Lab (0 credits)**BIO 604 Biochemistry (3 credits)**

An introduction to the study of the chemistry of living systems. The study of important macromolecules, metabolic pathways, and control systems will be emphasized. Two lecture periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 605 Biomechanics (4 credits)

Students are introduced to the ways in which the behavior, morphology and material composition of plants and animals are affected by and take advantage of physical forces. This course will include lectures given by the members of the Biology and Physics Department, as well as an integrated laboratory section where students will observe and measure the effect of physical forces on organisms in both aquatic and terrestrial systems. Two 75-minute lecture periods, one three-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 605L Biomechanics Lab (0 credits)**BIO 606 Comparative Anatomy (4 credits)**

An integrated comparative study of vertebrate structure and development. A synthesis of the embryological development, the gross anatomy, and the histology of selected forms. Two lecture periods, one four-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 606L Comparative Anatomy Lab (0 credits)**BIO 609 Ecology (4 credits)**

Study of complex interrelationship between organisms and their environment. Two lecture periods, one four-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 609L Ecology Lab (0 credits)**BIO 611 Molecular Genetics (4 credits)**

Study of the molecular biology of the genetic material, its structure, expression, regulation, and its dynamic nature. Two lecture periods, one four-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 611L Molecular Genetics Lab (0 credits)**BIO 612 Neurobiology (4 credits)**

Introduction to the structure and function of the vertebrate nervous system. Major topics will include neuronal function, sensory and motor systems, behavior, and higher mental processes. Laboratory work will include hands-on experience of several neurobiological techniques to measure molecular and biochemical changes in a mouse brain. Two 50-minute lecture periods, and two 2-hour laboratory periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 612L Neurobiology Lab (0 credits)**BIO 613 Plant Physiological Ecology (4 credits)**

This course will focus on the physiological mechanisms plants use to respond to their environment. Major topic areas include the basic environmental physiology of carbon, water, and mineral nutrient exchange, and the adaptive mechanisms plants use to survive the variety of global environments. Labs will cover common physiological research methods ranging from cellular to whole organism level measurements and will involve both laboratory and field work. Two 75-minute lecture periods, two 90 minute lab periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 613L Plant Physiological Eco Lab (0 credits)**BIO 614 Plant Systematics (4 credits)**

Students will learn to recognize vascular plant families and understand how taxonomists study evolutionary relationships among plant groups. Economic, medical, and ecological importance of various seed plants will be emphasized. Two 75-minute lecture periods, two 90-minute laboratory periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 614L Plant Systematics Lab (0 credits)**BIO 615 Immunology (4 credits)**

An introductory course providing students with an overview of how the immune system works, including molecules, cells and organs of the immune system and their functions and interactions. Discussion of the experimental techniques used to understand the cell-cell interactions that occur in immunity as well as the differentiation and activation of the immune response will be included. Two 50-minute lecture periods, one four-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 615L Immunology Lab (0 credits)**BIO 616 Microbiology (4 credits)**

The structural, cultural, and physiological characteristics of microorganisms and their role in the economy of nature. Three 50-minute lecture periods, one three-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 616L Microbiology Lab (0 credits)**BIO 617 Systemic Physiology (4 credits)**

A study of the fundamental mechanisms of vertebrate physiology. The basis for the function of the various organ systems and the biological controls that result in the integration of these systems will be discussed. Two lecture periods, one four-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 617L Systemic Physiology Lab (0 credits)**BIO 619 Invertebrate Zoology (4 credits)**

A study of the morphology, physiology, behavior, and phylogenetic relationships of the major groups of invertebrates. Participants will compare and contrast the physical and biological challenges facing the invertebrates that live on land, in water, and inside other organisms. The laboratory will include observations and experiments on live and preserved animals. Two 50-minute lecture periods; two two-hour lab periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 619L Invertebrate Zoology Lab (0 credits)**BIO 620 Bioinformatics (4 credits)**

Introduction to the use of computers in biology. Students learn about important scientific questions and the contemporary tools used to answer them. Topics include genome sequence assembly and annotation, database mining, genome organization, phylogenetics and genetics of human disease. Two 50-minute lecture periods, one four-hour lab period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 620L Bioinformatics Lab (0 credits)**BIO 621 Molecular&Cellular Biophysics (4 credits)**

The course is designed to show students how the integration of physics, chemistry and molecular biology are used to explain and predict molecular and cellular processes such as protein-protein interactions, protein folding, diffusion, and signaling. The course will also provide students with a basic understanding and hands-on experience of several biophysical and biochemical laboratory techniques. Two 50-minute lecture periods, one four-hour lab period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 621L Mol & Cel Biophysics Lab (0 credits)**BIO 622 Applied & Environ Microbiology (4 credits)**

The course will introduce us to the complex relationships between microbes and their environment, including other organisms. In the frame of these relationships, we will explore how microbial activities are key to geochemical cycles and to human-engineered processes that are essential part of our lives. Two 50-minute lecture periods, one four-hour lab period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 622L Applied & Environ Micro Lab (0 credits)**BIO 623 Evolution (4 credits)**

This course covers the major concepts of evolutionary biology, including natural selection, adaptation, genetic drift, and phylogenetic trees. The course trains students to know how to generate and test evolutionary hypotheses using data and inference. The lab portion of the course encourages hands-on learning through computer simulation and problem-solving. Two 50-minute lecture periods, one four-hour lab period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 623L Evolution Lab (0 credits)**BIO 624 Biotechnology (4 credits)**

A course in which students will learn how basic cell and molecular biology are used to develop products for biomedical, agricultural and industrial applications. The course will also cover fundamental and emerging techniques in the biotechnology field. The lab section will focus on the steps involved in the production and purification of recombinant proteins expressed in bacterial cells. Two 50-minute lecture periods, one four-hour lab period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 624L Biotechnology Lab (0 credits)**BIO 625 Bacterial Pathogenesis (4 credits)**

A study of the physiological, genetic, and biochemical basis underlying some of the commonly encountered bacterial diseases. The course also addresses the roles of antimicrobial compounds and the host immune system in counteracting disease. In the lab module for the course, students perform discovery-oriented research as they identify novel genes in enteropathogenic *Escherichia coli* (EPEC) that affect bacterial virulence in a *C. elegans* (roundworm) model of disease. Two 75-minute lecture periods, one three-hour laboratory period.

Restrictions: Enrollment is limited to Graduate level students.

BIO 625L Bacterial Pathogenesis Lab (0 credits)**BIO 626 Fermentation Science (4 credits)**

This course will provide students with an overview of various fermentation processes and their use in producing fermented foods and beverages. Fermentation will be considered from biochemical, microbiological, food science, historical and cultural points of view. This course will run either with an associated lab or, periodically, as a study tour. Two 75-minute lecture periods and one three-hour lab, or, if running as a study tour, one three-hour meeting per week plus one week abroad.

Restrictions: Enrollment is limited to Graduate level students.

BIO 626L Fermentation Science Lab (0 credits)**BIO 628 Histopathology (4 credits)**

A study of the microscopic structure and function of normal and diseased cells, tissues and organs, focusing on vertebrates, with a special emphasis on humans. Using prepared slides and computer images, students will learn to identify and differentiate healthy and pathological samples and relate this to abnormal or disrupted organ function. Two 50-minute lecture periods, two, two-hour lab periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 628L Histopathology Lab (0 credits)

A study of the microscopic structure and function of normal and diseased cells, tissues and organs, focusing on vertebrates, with a special emphasis on humans. Using prepared slides and computer images, students will learn to identify and differentiate healthy and pathological samples and relate this to abnormal or disrupted organ function. Two 50-minute lecture periods, two, two-hour lab periods.

Restrictions: Enrollment is limited to Graduate level students.

BIO 629 Environmental Science (4 credits)

An overview of the relationship between humans, their activities, and the environment around them. Though focused on the biological impacts from pollution, overpopulation, climate change, and resource exploitation, this course will also address the chemical and physical mechanisms that drive those changes and possible solutions to the challenges they present. Three, 50-minute lecture periods, one three-hour laboratory period.

BIO 629L Environmental Science Lab (0 credits)**BIO 630 Neurological Disorders (4 credits)**

Students will learn about the molecular and cellular mechanisms underlying various human nervous system disorders, such as autism, addiction, trauma, and neurodegenerative disorders. There will be a focus on the reading of primary literature and writing. Laboratory work will include a semester-long investigative research project. Two 50-minute lecture periods, and two 2-hour laboratory periods.

BIO 630L Neurological Disorders Lab (0 credits)**BIO 710 Fundamentals of Brewing Science (3 credits)**

Comprehensive course in the brewing process and its underlying scientific principles. Students will learn methods of brewing beer from grain to glass as instructed by industry experts. There will be a focus on raw ingredient quality, assessment, application, and processing in the brewery.

BIO 711 Brewery Engineering (3 credits)

Designed to inform students of key engineering principles with application to best brewery practices. A combination of theory and application will enable the student to better understand the function, theory, and design of brewery process, equipment, and layout.

Prerequisites: BIO 710 or BS 770

BIO 712 Microbiology of Beer (2 credits)

Through laboratory exercises, students will learn general concepts in cell and molecular biology as it pertains to yeast, bacteria, and fermentation including microscopy, culturing techniques, identification, and yeast management. Through the Yeast Hunters program, students will learn essential techniques while isolating wild yeast strains.

Restrictions: Enrollment is limited to students with a major in Brewing Science.

BIO 713 Quality Control Lab (2 credits)

In this laboratory, students will practice and demonstrate the theory behind common analytical techniques as described by the American Society of Brewing Chemists. Many of these techniques can be incorporated into the brewery, while alternative / more advanced methods will inform the student of possible analytical lab expansion or outsourcing.

BIO 714 Project in Brewing Science (3 credits)

This course is an opportunity to study a topic or establish a skill set as determined by the student with program director oversight. It is meant to prepare students for the industry internship. This will likely be a team-based project that asks a research-based question, utilizing the pilot brewing system.

Restrictions: Enrollment is limited to students with a major in Brewing Science.

BIO 715 Brewing Science Internship (3 credits)**BIO 720 Science Communication & Outreach (1 credit)****BIO 767 Cell Biology Methods Lab (2 credits)**

Laboratory practice in methodologies found in a cell biology or biochemistry laboratory environment. Typical projects may include extraction and analysis of proteins, enzyme purification and characterization, flow cytometry, densitometric analysis of gels, ELISA analysis, and fluorescence microscopy of cellular components.

BIO 770 Advanced Topics in Biology (4 credits)

Topics, course format, and instructors may vary each semester.

Restrictions: Enrollment is limited to Graduate level students.

BIO 770L Adv Topics in Biology Lab (0 credits)**BIO 772 Current Topics in Zymology (3 credits)**

This course focuses on current research and techniques in fermentation science through primary literature review, discussion, and analysis. Additional material will cover current issues such as supply chain management, regulatory compliance, and safety.

Prerequisites: BIO 710

BIO 785 Introduction to Research (1-2 credits)

This course is designed for students who are beginning the research phase of their thesis project or who are deciding between the thesis and non-thesis options. The course consists of at least two rotations in the laboratories of department faculty.

BIO 786 Research Ethics (1 credit)

This course will provide an examination of ethical behavior and practice in research in the scientific research. The course will follow a case study format in which students will be expected to present and participate in group discussions.

BIO 790 Independent Study (3 credits)**BIO 791 Graduate Internship (1-4 credits)****BIO 792 Project in Cell Bio & Biotech (1-3 credits)**

Graduate students may perform a graduate-level project under the direction of a mentor. The project must include a comprehensive literature search, an analysis of data, and a written paper.

BIO 793 Research (1-6 credits)

Research project undertaken in the laboratory of a member of the graduate faculty. Meeting times arranged.

Restrictions: Enrollment is limited to Graduate level students.

BIO 794 Thesis Research (1-6 credits)

Research credit during preparation of thesis. Times to be arranged.

Restrictions: Enrollment is limited to Graduate level students.

BIO 799 Master's Research (1-9 credits)

Candidates for the master of science in cell biology and biotechnology (thesis option) are required to complete a research project under the direction of an advisor chosen from within the department.

BIO 801 Scientific Discourse (2 credits)

Graduate students will learn and improve upon their skills in presentation and debate of primary scientific data. The course will take the format of student presentations about their own ongoing research to their peers. Students will be expected to actively participate in the presentation of others through discussion and critical evaluation of the work presented. General presentation skills and strategies will be covered and feedback will be provided to students on an individual basis. All levels of graduate students are welcome and those without a significantly advanced research project may, at the discretion of the instructor, present current literature related to their research topic.

BIO 861 Cell and Molecular Biology (3 credits)

This course is designed to give the student a working knowledge of modern cell biology, mostly through critical analysis of the current literature. This course will be presented in a lecture/seminar format.

BIO 887 Graduate Colloquium (1 credit)

This course is focused on those skills required by the graduate scientist and consideration of career options.

BIO 897 Scientific Proposals (3 credits)

The course is focused on writing and peer assessment of grant proposals. Thesis students will use their approved research prospectus to compose the Specific Aims page and Research Plan sections of a federally-supported funding opportunity. Non-thesis graduate students will develop a grant application focused on a research project of interest.

BIO 899 Doctoral Research (1-9 credits)

Candidates for the doctor of philosophy degree are required to fulfill their research requirements under the direction of a graduate faculty member of the department.

Biological Studies Major

The B.A. in Biological Studies is a program for students who enter Saint Joseph's University through one of the block-transfer agreements, and who have completed two-years in a biology major, or closely related program. This degree has fewer requirements than the B.S. in Biology, which will allow block-transfer students to normally graduate in two years.

The B.A. in Biological Studies can be an excellent program for block-transfer students who want to enter allied health professions programs such as Physician Assistant, Doctor of Physical Therapy, Doctor of Occupational Therapy, Doctor of Pharmacy, and others. It is also an excellent program for students wanting to enter various industries in the life sciences, or who wish to pursue a research-based graduate degree.

It is important note that, due to the reduced range of course requirements, the B.A. in Biological Studies does not include the pre-requisite courses for medical, dental, or veterinary school. Students interested in entering these programs after graduating from Saint Joseph's University should enroll in the B.S. in Biology program instead.

Learning Goals and Outcomes

Learning Goals and Outcomes

Goal 1: Students will appreciate and understand cell structure and function, the organization of biological systems, and the evolution of biological diversity.

Outcome 1.1: Students will understand and be able to describe the mechanisms of evolutionary change and the diversity of life.

Outcome 1.2: Students will understand and be able to describe biochemical processes of living organisms and the role of macromolecules in these processes.

Outcome 1.3: Students will understand and be able to describe how organisms interact with their abiotic and biotic environment.

Outcome 1.4: Students will understand and be able to describe molecular, classical, and population genetics.

Goal 2: Students will develop skills in experimental design and the presentation of scientific information.

Outcome 2.1: Students will be able to design an experiment, operate basic laboratory equipment, reduce and present data that includes the interpretation of statistical tests.

Outcome 2.2: Students will be able to develop cogent written and oral presentations of scientific content.

Goal 3: Students will be exposed to career and professional development opportunities.

Requirements

The B.A. in Biological Studies is a major that is only open for students entering SJU with an Associate's Degree in Biology or a closely-related discipline, through a block-transfer agreement. This program of study has fewer requirements compared to the B.S. in Biology or Biomedical Sciences, and can be completed by most block-transfer students in four semesters.

The B.A. in Biological Studies provides an excellent route in various career options, including graduate programs in the allied health professions, direct-entry jobs in industry, and some other graduate programs. Please note that it is not ideal for students looking to enter medical, dental, veterinary, or other similar professional school programs, nor is it designed for students looking to enter a Ph.D. program in the life sciences after graduation. The traditional B.S. in Biology degree is a better option for those pursuits.

The block-transfer agreements mean that students will not have to complete most of the General Education Program (GEP) requirements.

The required courses are listed below. Similarly, some of the natural science and mathematics courses will have been completed as part of the Associate's degree, so not all of the courses listed for the major will need to be completed at SJU. This will be determined at the time of admission.

Code	Title	Hours
Required GEP Courses		
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition (THE 153, 154 or 155 all fulfill this requirement))	3
	A Faith and Reason course (THE 153, 154, or 155, and PHL 154 are prerequisites)	3
	An ethics-intensive certified course (PHL 154 is a prerequisite)	3
	Free electives, if needed, to reach at least 120 total credits (60 or more credits MUST be taken at SJU)	

Code	Title	Hours
Mathematics		
MAT 120	The Mathematics of Modeling	3
or MAT 155	Fundamentals of Calculus	
Natural Science		
BIO 101 & 101L	Bio I: Cells and Bio I: Cells Lab	4
or BIO 150L	Bio I: Cells Lab Phage	

Code	Title	Hours
Biology		
BIO 102 & 102L	Bio II: Genetics and Bio II: Genetics Lab	4
or BIO 151L	Phage Lab	
BIO 201 & 201L	Bio III: Organismic Biology and Bio III: Organismic Biol Lab	4
BIO 290	Career Development Seminar	0
BIO 390	Biology Seminar (Three semesters required after taking BIO 290)	0

Three upper-level biology courses, from from Group A, one from Group B, and one from Group C, below: ¹

Group A: Cell Structure and Function		
BIO 402	Advanced Cell Biology	4
BIO 411	Molecular Genetics	4
BIO 416	Microbiology	4
BIO 421	Molecular&Cellular Biophysics	4
BIO 424	Biotechnology	4
BIO 428	Histopathology	4
BIO 430	Neurological Disorders	4

Group B: Systemic Organization

BIO 405	Biomechanics	4
BIO 412	Neurobiology	4
BIO 413	Plant Physiological Ecology	4
BIO 415	Immunology	4
BIO 417	Systemic Physiology	4
BIO 425	Bacterial Pathogenesis	4

Group C: Evolution and Diversity of Life

BIO 372	Aquatic Biology	4
BIO 401	Animal Behavior	4
BIO 406	Comparative Anatomy	4
BIO 409	Ecology	4
BIO 419	Invertebrate Zoology	4
BIO 420	Bioinformatics	4
BIO 422	Applied&Environ Microbio	4
BIO 423	Evolution	4
BIO 426	Fermentation Science	4
BIO 429	Environmental Science	4

At least 6 additional credits of upper-level Biology courses. These credits can be from any of the courses in group A - C above, as well as in groups D and E, below.

Group D courses ²		
BIO 218	Hematology	3
BIO 230	Basic Concepts & Proc MLS	4
BIO 261	Anat&Physiol Nurs/Al Hlth II	4
BIO 348	Clinical Microbiology	4
BIO 433	Parasitology	3

Group E courses: Non-lab courses		
BIO 205	Introduction to Neuroscience	3
BIO 219	Basic Nutrition	3
BIO 220	Plant Diversity and Morphology	3
BIO 280	Comparative Animal Physiology	3
BIO 336	Plant Therapeutics	3
BIO 400	Developmental Genetics	3
BIO 404	Biochemistry ³	3
BIO 434	Biology of Aging	3
BIO 436	Virology	3
BIO 455	Molecular Basis Neuro Disorder	3
BIO 474	Emrg Bio Threat & Glbl Sustain	3

Mathematics		
MAT 128	Applied Statistics	3

Chemistry/Physics Elective

Students may choose to take either both semesters of Organic Chemistry (CHM 210 & CHM 210L, CHM 215 & CHM 215L) or both semesters of General Physics (PHY 101 & PHY 101L, PHY 102 & PHY 102L). Transfer credit may be applicable and may fulfill this major requirement.

1
BIO 101 (<https://academiccatalog.sju.edu/search/?P=BIO%20101>), BIO 102 (<https://academiccatalog.sju.edu/search/?P=BIO%20102>), BIO 201 (<https://academiccatalog.sju.edu/search/?P=BIO%20201>) and CHM 120 (<https://academiccatalog.sju.edu/search/?P=CHM%20120>), CHM 125 (<https://academiccatalog.sju.edu/search/?P=CHM%20125>) are prerequisite for all 400 level BIO courses.

2
One semester of BIO 493 or BIO 494 (Independent Research) and/or BIO 492 (Biology Internship) may count as one Group D biology elective. For students doing a year-long honors thesis, both BIO 493 and 494 may be counted as Group D biology electives. For non-honors research, the second semester of research will count as a free elective.

3
CHM 215/CHM 215L is a prerequisite or co-requisite for BIO 404

Biology M.A.

Dr. Bela Peethambaran (<https://directory.sju.edu/bela-peethambaran/>), Co-Director

Dr. Edwin Li (<https://directory.sju.edu/edwin-li/>), Co-Director

Dr. Kenneth Myers (<https://directory.sju.edu/kenneth-myers/>), Co-Director

Mission Statement

The Master of Arts in Biology program at Saint Joseph's University is designed to provide training in technical and professional skills for students who wish to join the workforce as proficient scientists, or for students who desire to pursue a doctoral or professional degree.

Description of Program

The M.A. program is primarily course-based and more easily accommodates part-time as well as full-time students. Students seeking the M.A. degree may take up to six credits of research. Students can choose to specialize in one of the following concentrations: (1) **Cell and Molecular Biology**, and (2) **Ecology, Evolution and Behavior**. Non-matriculated students may also, with permission, enroll for isolated credit.

Learning Goals and Outcomes

Goal 1: Students will develop proficiency in subject content, train in cutting-edge technologies, and appropriate professional skills that will aid in their overall development as a scientist.

Outcome 1.1: Students will be informed about prospective careers for life scientists in government, industry, and academia as well as learn about the professional and ethical expectations for scientists.

Outcome 1.2: Students will be familiar with the appropriate set of research, laboratory and/or field skills used by specialists in their subfields of choice.

Goal 2: Students will develop skills in experimental design and the presentation of scientific information.

Outcome 2.1: Students will be able to design an experiment, operate basic laboratory equipment, reduce and present data that includes the interpretation of statistical tests.

Outcome 2.2: Students will be able to develop cogent written and oral presentations of scientific content.

Outcome 2.3: Students will be able to locate, read, interpret, evaluate, and discuss primary literature in biology.

Requirements

Degree Requirements

The M.A. degree requires completion of 30 credit hours of graduate level courses.

Code	Title	Hours
Core Courses:		
BIO 786	Research Ethics	1
BIO 801	Scientific Discourse (at least 2 semesters)	2
BIO 887	Graduate Colloquium	1
MAT 704	Statistics for Research	3
Electives:		
Six (6) Biology electives (600 level or higher)		

Concentrations

Students in the M.A. Biology program may elect to declare one of the following concentrations: (1) **Cell and Molecular Biology**, and (2) **Ecology, Evolution and Behavior**. The concentration is optional. Students are not guaranteed a particular sequence of courses to ensure the completion of a concentration. The concentration must be declared by the end of the Add-Drop period in the last semester of enrollment.

Concentration in Cell and Molecular Biology

For the concentration in **Cell and Molecular Biology**, students must complete **three** of the following elective courses:

Code	Title	Hours
BIO 602 & 602L	Advanced Cell Biology and Advanced Cell Biology Lab *	
BIO 861	Cell and Molecular Biology *	
BIO 604	Biochemistry	
BIO 611 & 611L	Molecular Genetics and Molecular Genetics Lab	
BIO 612 & 612L	Neurobiology and Neurobiology Lab	
BIO 615 & 615L	Immunology and Immunology Lab	
BIO 616 & 616L	Microbiology and Microbiology Lab	
BIO 617 & 617L	Systemic Physiology and Systemic Physiology Lab	
BIO 620 & 620L	Bioinformatics and Bioinformatics Lab	
BIO 621 & 621L	Molecular&Cellular Biophysics and Mol & Cel Biophysics Lab	
BIO 624 & 624L	Biotechnology and Biotechnology Lab	
BIO 625 & 625L	Bacterial Pathogenesis and Bacterial Pathogenesis Lab	
BIO 628 & 628L	Histopathology and Histopathology Lab	

BIO 630 & 630L	Neurological Disorders and Neurological Disorders Lab
BIO 710	Fundamentals of Brewing Scienc

*Students can take BIO 602/602L or BIO 861, but not both.

Concentration in Ecology, Evolution, and Behavior

For the concentration in **Ecology, Evolution, and Behavior**, students must complete **three** of the following elective courses:

Code	Title	Hours
BIO 601 & 601L	Animal Behavior and Animal Behavior Lab	
BIO 609 & 609L	Ecology and Ecology Lab	
BIO 613 & 613L	Plant Physiological Ecology and Plant Physiological Eco Lab	
BIO 619 & 619L	Invertebrate Zoology and Invertebrate Zoology Lab	
BIO 620 & 620L	Bioinformatics and Bioinformatics Lab	
BIO 622 & 622L	Applied & Environ Microbiology and Applied & Environ Micro Lab	
BIO 623 & 623L	Evolution and Evolution Lab	
BIO 629 & 629L	Environmental Science and Environmental Science Lab	

Biology M.S.

Dr. Bela Peethambaran (<https://directory.sju.edu/bela-peethambaran/>),
Co-Director

Dr. Edwin Li (<https://directory.sju.edu/edwin-li/>), Co-Director

Dr. Kenneth Myers (<https://directory.sju.edu/kenneth-myers/>), Co-Director

Mission Statement

The Master of Science in Biology program at Saint Joseph's University is designed to provide training in technical and professional skills for students who wish to join the workforce as proficient scientists, or for students who desire to pursue a doctoral or professional degree.

Description of Program

The M.S. program requires completion of traditional courses and an extensive research project that culminates with a written thesis. The degree is typically completed within two years. Students can choose to specialize in one of the following concentrations: (1) **Cell and Molecular Biology**, and (2) **Ecology, Evolution and Behavior**. Non-matriculated students may also, with permission, enroll for isolated credit.

Learning Goals and Outcomes

Goal 1: Students will develop proficiency in subject content, train in cutting-edge technologies, and appropriate professional skills that will aid in their overall development as a scientist.

Outcome 1.1: Students will be informed about prospective careers for life scientists in government, industry, and academia as well as learn about the professional and ethical expectations for scientists.

Outcome 1.2: Students will be familiar with the appropriate set of research, laboratory and/or field skills used by specialists in their subfields of choice.

Goal 2: Students will develop skills in experimental design and the presentation of scientific information.

Outcome 2.1: Students will be able to design an experiment, operate basic laboratory equipment, reduce and present data that includes the interpretation of statistical tests.

Outcome 2.2: Students will be able to develop cogent written and oral presentations of scientific content.

Outcome 2.3: Students will be able to locate, read, interpret, evaluate, and discuss primary literature in biology.

Requirements
Degree Requirements

The M.S. degree requires completion of 30 credits of graduate level courses.

Code	Title	Hours
Core Courses:		
BIO 785	Introduction to Research	1-2
BIO 786	Research Ethics	1
BIO 801	Scientific Discourse (at least 4 semesters)	2
BIO 887	Graduate Colloquium	1
MAT 704	Statistics for Research	3
BIO 799	Master's Research	1-9
Electives:		

Two (2) Biology electives (600 level or higher) are required.

Thesis Requirements

The M.S. degree requires completion of a research project in the biological sciences under the supervision of a research mentor. The findings are published in thesis form. A Thesis Committee will be formed to follow the progress of the candidate, evaluate the final thesis, and administer a final oral examination (thesis defense) based on the thesis research. The thesis must be acceptable in both scholarship and literary quality. To be recommended for the Master of Science degree in Biology, the candidate must receive approval of the majority of the committee members.

Concentrations

Students in the M.S. Biology program may elect to declare one of the following concentrations: (1) **Cell and Molecular Biology**, and (2) **Ecology, Evolution and Behavior**. The concentration is optional. Students are not guaranteed a particular sequence of courses to ensure the completion of a concentration. The concentration must be declared by the end of the Add-Drop period in the last semester of enrollment.

Concentration in Cell and Molecular Biology

For the concentration in **Cell and Molecular Biology**, students must complete **two** of the following elective courses:

Code	Title	Hours
BIO 602 & 602L	Advanced Cell Biology and Advanced Cell Biology Lab *	4

BIO 861	Cell and Molecular Biology *	3
BIO 604	Biochemistry	3
BIO 611 & 611L	Molecular Genetics and Molecular Genetics Lab	4
BIO 612 & 612L	Neurobiology and Neurobiology Lab	4
BIO 615 & 615L	Immunology and Immunology Lab	4
BIO 616 & 616L	Microbiology and Microbiology Lab	4
BIO 617 & 617L	Systemic Physiology and Systemic Physiology Lab	4
BIO 620 & 620L	Bioinformatics and Bioinformatics Lab	4
BIO 621 & 621L	Molecular&Cellular Biophysics and Mol & Cel Biophysics Lab	4
BIO 624 & 624L	Biotechnology and Biotechnology Lab	4
BIO 625 & 625L	Bacterial Pathogenesis and Bacterial Pathogenesis Lab	4
BIO 628 & 628L	Histopathology and Histopathology Lab	4
BIO 630 & 630L	Neurological Disorders and Neurological Disorders Lab	4
BIO 710	Fundamentals of Brewing Scienc	3

*Students can take BIO 602/602L or BIO 861, but not both.

Concentration in Ecology, Evolution, and Behavior

For the concentration in **Ecology, Evolution, and Behavior**, students must complete **two** of the following elective courses:

Code	Title	Hours
BIO 601 & 601L	Animal Behavior and Animal Behavior Lab	4
BIO 609 & 609L	Ecology and Ecology Lab	4
BIO 613 & 613L	Plant Physiological Ecology and Plant Physiological Eco Lab	4
BIO 619 & 619L	Invertebrate Zoology and Invertebrate Zoology Lab	4
BIO 620 & 620L	Bioinformatics and Bioinformatics Lab	4
BIO 622 & 622L	Applied & Environ Microbiology and Applied & Environ Micro Lab	4
BIO 623 & 623L	Evolution and Evolution Lab	4
BIO 629 & 629L	Environmental Science and Environmental Science Lab	4

Biology Major

Overview

Program Overview

The undergraduate Biology curriculum begins with a core of courses that presents the fundamentals of the life sciences, both in concept and methodology. After completing the core, students take a distribution

of upper division courses with at least one course in each of the three major areas of biology. This distribution strategy insures that all students have broad exposure to an extensive range of topics including cell and molecular biology, microbiology, genetics, plant biology, evolution, physiology, ecology, environmental biology, and animal behavior. The curriculum provides appropriate training for students seeking admission to professional and graduate schools and those who wish to enter the job market directly following graduation.

The faculty of the Department of Biology view teaching as the primary mission of both the Department and the University. In addition, Biology faculty are involved in high caliber scientific research. The interplay between teaching and research, and the involvement of students in faculty research strengthens the Biology curriculum. One of the most important qualities of the Department is the opportunity for undergraduates to participate in faculty research. This mentor-student relationship involves the design and execution of experiments, and is a very enriching learning experience. Students can work with faculty as volunteers, for academic credit, or for pay during the summer months. The research done by students often leads to publications and presentations at national and regional conferences. Whatever the career plans, students are encouraged to seriously consider participating in undergraduate research. Up to two semesters of research may be counted as biology electives.

The Department of Biology also has a small but strong graduate program that leads to either a MS or a MA degree in biology. The MA degree is primarily designed for post-graduates who are working or wishing to improve their credentials for professional school. The MS degree requires the development and presentation of a thesis based on original research. This degree is more appropriate for full-time students wishing to engage in research as part of a career or as a prelude to graduate training at the doctoral level. Students in the MS program may be eligible for a teaching assistantship that provides a tuition scholarship and stipend. The presence of diverse and engaged graduate students enhances both faculty research and the academic experience for undergraduate students.

Advisory Option - Biology Pre-Professional

Biology majors may satisfy entrance requirements for medical, dental, osteopathic medical, and other schools of the health professions. Students are advised to take elective courses in liberal arts and behavioral sciences.

Learning Goals and Outcomes

Goal 1: Students will appreciate and understand cell structure and function, the organization of biological systems, and the evolution of biological diversity.

Outcome 1.1: Students will understand and be able to describe the mechanisms of evolutionary change and the diversity of life.

Outcome 1.2: Students will understand and be able to describe biochemical processes of living organisms and the role of macromolecules in these processes.

Outcome 1.3: Students will understand and be able to describe how organisms interact with their abiotic and biotic environment.

Outcome 1.4: Students will understand and be able to describe molecular, classical, and population genetics.

Goal 2: Students will develop skills in experimental design and the presentation of scientific information.

Outcome 2.1: Students will be able to design an experiment, operate basic laboratory equipment, reduce and present data that includes the interpretation of statistical tests.

Outcome 2.2: Students will be able to develop cogent written and oral presentations of scientific content.

Goal 3: Students will be exposed to career and professional development opportunities.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

¹
Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

Code	Title	Hours
First Year Seminar Requirement		
BIO 150L	Bio I: Cells Lab Phage	0
Students can apply to take BIO 150L in place of the BIO 101L. The Phage Safari lab fulfills the First Year Seminar requirement in the signature core.		

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics		
MAT 155	Fundamentals of Calculus	3 or 4
or MAT 161	Calculus I	
Natural Science		
BIO 101 & 101L	Bio I: Cells and Bio I: Cells Lab	4
or BIO 150L	Bio I: Cells Lab Phage	

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Chemistry		
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II ¹	4
CHM 215 & 215L	Organic Chemistry II and Organic Chemistry Lab II ²	4
Physics		
PHY 102 & 102L	General Physics II and General Physics Laboratory II ³	4

- ¹
CHM 120 and CHM 120L are pre-requisites for CHM 125
- ²
CHM 210 and CHM 210L are pre-requisites for CHM 215
- ³
PHY 101 and PHY 101L are pre-requisites for PHY 102

Note: Students with the appropriate Mathematics background and interests can substitute University Physics for General Physics.

GEP Electives

At least 18 credits. Biology majors may use CHM 120/120L, CHM 210/210L, and PHY 101/101L as free electives if they wish. This will allow them to take fewer courses. Alternatively, Biology majors can choose to take 5 courses each semester, and so have more free electives to use for a second major, minors, etc.

Major Requirements

At least 33 credits.

Code	Title	Hours
Biology		
BIO 102 & 102L	Bio II: Genetics and Bio II: Genetics Lab (second semester, freshman year)	4
or BIO 151L	Phage Lab	
BIO 201 & 201L	Bio III: Organismic Biology and Bio III: Organismic Biol Lab (first semester, sophomore year)	4
MAT 128	Applied Statistics	3
BIO 290	Career Development Seminar (required for first-semester sophomores)	0
BIO 390	Biology Seminar (required each semester for second-semester sophomores, juniors and seniors)	0

Select one from each of the following three groups: ¹

Group A: Cell Structure and Function		
BIO 402	Advanced Cell Biology	4
BIO 411	Molecular Genetics	4
BIO 416	Microbiology	4
BIO 421	Molecular&Cellular Biophysics	4

BIO 424	Biotechnology	4
BIO 428	Histopathology	4
BIO 430	Neurological Disorders	4
Group B: Systemic Organization		
BIO 405	Biomechanics	4
BIO 412	Neurobiology	4
BIO 413	Plant Physiological Ecology	4
BIO 415	Immunology	4
BIO 417	Systemic Physiology	4
BIO 425	Bacterial Pathogenesis	4

Group C: Evolution and Diversity of Life

BIO 372	Aquatic Biology	4
BIO 401	Animal Behavior	4
BIO 406	Comparative Anatomy	4
BIO 409	Ecology	4
BIO 419	Invertebrate Zoology	4
BIO 420	Bioinformatics	4
BIO 422	Applied&Environ Microbio	4
BIO 423	Evolution	4
BIO 426	Fermentation Science	4
BIO 429	Environmental Science	4

At least 13 additional credits of upper-level Biology courses. These credits can be from any of the courses in group A - C above, as well as in groups D and E, below. A maximum of 6 of these credits can be from group E courses.

Group D courses²

BIO 218	Hematology	3
BIO 230	Basic Concepts & Proc MLS	4
BIO 261	Anat&Physiol Nurs/Al Hlth II	4
BIO 348	Clinical Microbiology	4
BIO 433	Parasitology	3

Group E courses: Non-lab courses, maximum of 6 credits

BIO 205	Introduction to Neuroscience	3
BIO 219	Basic Nutrition	3
BIO 220	Plant Diversity and Morphology	3
BIO 280	Comparative Animal Physiology	3
BIO 336	Plant Therapeutics	3
BIO 400	Developmental Genetics	3
BIO 404	Biochemistry ³	3
BIO 434	Biology of Aging	3
BIO 436	Virology	3
BIO 455	Molecular Basis Neuro Disorder	3
BIO 474	Emrg Bio Threat & GIBI Sustain	3

1

BIO 101 (<https://academiccatalog.sju.edu/search/?P=BIO%20101>), BIO 102 (<https://academiccatalog.sju.edu/search/?P=BIO%20102>), BIO 201 (<https://academiccatalog.sju.edu/search/?P=BIO%20201>) and CHM 120 (<https://academiccatalog.sju.edu/search/?P=CHM%20120>), CHM 125 (<https://academiccatalog.sju.edu/search/?P=CHM%20125>) are prerequisite for all 400 level BIO courses.

2

One semester of BIO 493 or BIO 494 (Independent Research) and/or BIO 492 (Biology Internship) may count as one Group D biology elective. For students doing a year-long honors thesis, both BIO 493 and 494 may be counted as Group D biology electives. For non-honors research, the second semester of research will count as a free elective.

3

CHM 215/CHM 215L is a prerequisite or co-requisite for BIO 404

Concentrations

Biology Major Concentrations

Students majoring in Biology may elect to declare a single concentration within the major if they choose; however, please note that:

- Students are not required to declare a concentration.
- Students are not guaranteed a particular sequence of courses to ensure that they can complete a concentration.
- Pursuit of a concentration must be declared by the end of the drop-add period in the last semester of enrollment, but students wishing to declare a concentration are advised to plan ahead.
- Courses used to meet the concentration requirements may also be used to satisfy the A-B-C group requirements.
- Students may count one semester of appropriate independent research (BIO 493 or 494) or an internship (BIO 491 or 492) toward any concentration; decisions about whether research or internships can count will be made by the chair or designated faculty member.

Microbiology Concentration

Code	Title	Hours
Required:		
BIO 416	Microbiology	4
Three additional courses from the following:		
BIO 411	Molecular Genetics	4
BIO 422	Applied&Environ Microbio	4
BIO 424	Biotechnology	4
BIO 425	Bacterial Pathogenesis	4
BIO 426	Fermentation Science	4

Neurobiology Concentration

Code	Title	Hours
Required:		
BIO 412	Neurobiology	4
Three additional courses from the following:		
BIO 401	Animal Behavior	4
BIO 402	Advanced Cell Biology	4
BIO 411	Molecular Genetics	4
BIO 417	Systemic Physiology	4
BIO 430	Neurological Disorders	4

Ecology, Evolution & Behavior Concentration

Code	Title	Hours
Four courses from the following:		
BIO 401	Animal Behavior	4
BIO 406	Comparative Anatomy	4

BIO 409	Ecology	4
BIO 413	Plant Physiological Ecology	4
BIO 414	Plant Systematics	4
BIO 419	Invertebrate Zoology	4
BIO 422	Applied&Environ Microbio	4
BIO 423	Evolution	4
BIO 429	Environmental Science	4

Cell & Molecular Biology Concentration

Code	Title	Hours
Required (one of the following):		
BIO 402	Advanced Cell Biology	4
BIO 411	Molecular Genetics	4
Three additional courses from the following:		
BIO 402	Advanced Cell Biology	4
BIO 404	Biochemistry	3
BIO 411	Molecular Genetics	4
BIO 415	Immunology	4
BIO 416	Microbiology	4
BIO 420	Bioinformatics	4
BIO 424	Biotechnology	4
BIO 428	Histopathology	4

Biology/Secondary Education
Biology/Secondary Education

The Bachelor of Arts degree in Biology is for students who wish to pursue a dual major with Secondary Education. The B.A. degree is only available for students who pursue the dual major. Students who do not complete both majors will have to fulfill the requirements for the B.S. in Biology major instead.

Requirements for the B.A. in Biology In order to become certified to teach at the secondary education level (grades 7- 12), students must complete a total of five Education and three Special Education courses, as well as student teaching. Students interested in the five-year program should speak to their academic advisors and to Chair of the Department of Biology as early in their academic careers as possible.

General Education Signature Courses

See this page about Signature courses (p.).

Code	Title	Hours
First Year Seminar		
EDU 150	Schools in Society w/ Field	3

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

BIO 101 (<https://academiccatalog.sju.edu/search/?P=BIO%20101>), BIO 102 (<https://academiccatalog.sju.edu/search/?P=BIO%20102>), BIO 201 (<https://academiccatalog.sju.edu/search/?P=BIO%20201>) and CHM 120 (<https://academiccatalog.sju.edu/search/?P=CHM%20120>), CHM 125 (<https://academiccatalog.sju.edu/search/?P=CHM%20125>) are prerequisite for all 400 level BIO courses.

5 year Program

Biology Five-year BS/MS or BS/MA

Students who are completing undergraduate degrees leading to the BS in Biology have the option to complete a combined BS/MS or BS/MA degree in five years (including the summer term after the fifth year). Students electing this option must apply to the graduate program in their senior year and be provisionally accepted before they complete the BS. (Students applying for the BS/MS program must have been accepted by a faculty mentor for the thesis portion of their work at the time of application.) They will be required to complete all the requirements for the normal MS or MA degree, with the following additions/exceptions:

- Students in the five year programs will have the option of taking up to nine credits of graduate courses that can count toward BOTH their undergraduate AND graduate degrees while they are still enrolled as

undergraduates. The graduate courses will only count toward the graduate degree if they are not needed for the BS in Biology.

- Students in the five year programs will be expected to take at least three credits during the summer between their senior year and the fifth year. These credits may be for research or coursework.
- Students considering the five year programs should speak with their advisors and the graduate director as early as possible.

Biology Minor

Overview

The minor in Biology curriculum begins with a core of three courses that presents the fundamentals of the life sciences, both in concept and methodology. After completing the core, students take three upper division courses with at least one course from two of the three major areas of biology (Groups A, B, and C). This distribution strategy insures that all students have broad exposure to an extensive range of topics including cell and molecular biology, microbiology, genetics, plant biology, evolution, physiology, ecology, environmental biology, and animal behavior.

Learning Goals and Outcomes

* Not all Learning Goals and Outcomes may be met by the minor since students have a choice of their upper-level courses.

Goal 1: Students will gain a fundamental understanding of cell structure and function, the organization of biological systems, and the evolution of biological diversity.

Outcome 1.1 Students will understand basic mechanisms of evolutionary change and the diversity of life.

Outcome 1.2 Students will understand basic concepts of molecular, classical, and population genetics, and basic biochemical processes in living organisms.

Outcome 1.3 Students will understand basic concepts of how organisms interact with their abiotic and biotic environment.

Goal 2. Students will develop basic skills in experimental design and the presentation of scientific information.

Outcome 2.1 Students will gain basic skills in data reduction, analysis, presentation, and the operation of basic laboratory equipment.

Outcome 2.2 Students will be able to develop cogent written and oral presentations of scientific content.

Requirements

The minor in biology requires completion of the following:

Code	Title	Hours
Required Courses:		
BIO 102 & 102L or BIO 151L	Bio II: Genetics and Bio II: Genetics Lab (second semester, freshman year) Phage Lab	4
BIO 201 & 201L	Bio III: Organismic Biology and Bio III: Organismic Biol Lab (first semester, sophomore year)	4

BIO 290	Career Development Seminar (required for first-semester sophomores)	0
BIO 390	Biology Seminar (required each semester for second-semester sophomores, juniors and seniors)	0
CHM 120 & 120L	General Chemistry I and General Chemistry Lab I	4
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II	4
Take at least two courses from two different groups (A - C) below: ¹		8
Group A: Cell Structure and Function		
BIO 402	Advanced Cell Biology	
BIO 411	Molecular Genetics	
BIO 416	Microbiology	
BIO 421	Molecular&Cellular Biophysics

Total Hours	27

1

BIO 101 (<https://academiccatalog.sju.edu/search/?P=BIO%20101>), BIO 102 (<https://academiccatalog.sju.edu/search/?P=BIO%20102>), BIO 201 (<https://academiccatalog.sju.edu/search/?P=BIO%20201>) and CHM 120 (<https://academiccatalog.sju.edu/search/?P=CHM%20120>), CHM 125 (<https://academiccatalog.sju.edu/search/?P=CHM%20125>) are prerequisite for all 300 and 400 level BIO courses.

2

One semester of BIO 493 or BIO 494 (Independent Research) and/or BIO 492 (Biology Internship) may count as one Group D biology elective.

3

CHM 215/CHM 215L is a prerequisite or co-requisite for BIO 404

Biomedical Sciences Major Overview

Biomedical science puts foundational scientific knowledge into practice, spurring innovation in interventions, technology and biomedical engineering. This major is specifically designed for students planning to pursue careers in the allied health professions, translational medical research, and related areas. It is not well suited for students interested in entering medical, dental, veterinary and similar professional schools.

Students interested in this programs, or doctoral programs in biology, should consider the B.S. in Biology instead.

Learning Goals and Outcomes

1. Students will be prepared for careers and graduate programs in allied professions and related fields.

1.1 Students will understand and be able to describe human anatomy, physiology, and specialized organ and tissue processes.

1.2 Students will understand and be able to describe cellular, genetic, biochemical, and organismal-level processes of living organisms, including humans and human diseases.

1.3 Students will understand and be able to describe important areas in other scientific areas that relate to human health, including chemistry, physics, statistical analysis, and others.

2. Students will develop skills in experimental design and the presentation of scientific information.

2.1 Students will be able to design an experiment, operate basic laboratory equipment, reduce and present data that includes the interpretation of statistical tests.

2.2 Students will be able to develop cogent written and oral presentations of scientific content.

3. Students will be exposed to career and professional development opportunities.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

Code	Title	Hours
First Year Seminar		
BIO 150L	Bio I: Cells Lab Phage	0
Incoming first-year students can apply to be part of the BIO 150L Phage Safari lab in place of the BIO 101L. Phage fulfills both the lab requirement and the FYS requirement.		

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics		
MAT 155	Fundamentals of Calculus (or a higher-level calculus course)	3
or MAT 161	Calculus I	
Natural Science		
BIO 101 & 101L	Bio I: Cells and Bio I: Cells Lab	4
or BIO 150L	Bio I: Cells Lab Phage	

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Chemistry		
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II ¹	4
CHM 215 & 215L	Organic Chemistry II and Organic Chemistry Lab II ²	4
Physics		
PHY 101 & 101L	General Physics I and General Physics Laboratory I ³	4

1

CHM 120 and CHM 120L are prerequisites for CHM 125 and CHM 125L.

2

CHM 210 and 210LCHM 210L are prerequisites for CHM 215 and CHM 215L

3

The Biomedical Sciences major only requires the first semester of general physics. Please note that some professional and graduate programs require BOTH semesters. The second semester can be taken, but it will serve as a free elective.

General Education Overlays

See this page about Overlays (p. 41).

GEP Electives

At least 18 credits. Biomedical Sciences majors may use CHM 120/CHM 120L, CHM 210/CHM 210L, and PHY 101/PHY 101L as free electives if they wish. This will allow them to take fewer courses. Alternatively, Biomedical Sciences majors can choose to take 5 courses each semester, and so have more free electives to use for a second major, minors, etc.

Major Concentration

Code	Title	Hours
BIO 102	Bio II: Genetics	4
BIO 201 & 201L or BIO 151L	Bio III: Organismic Biology and Bio III: Organismic Biol Lab Phage Lab	4
BIO 260 & 260L	Anat&Physiol Nurs/Al Hlth I and Anat&Physiol Lab I	4
BIO 261 & 261L	Anat&Physiol Nurs/Al Hlth II and Anat&Physiol Lab II	4
BIO 290	Career Development Seminar	0
BIO 390	Biology Seminar	0
MAT 128	Applied Statistics	3
Four courses total, with at least one course from each of the following three groups:		
Group A: Clinical and Translational Biology		
BIO 218	Hematology	3
BIO 219	Basic Nutrition	3
BIO 230	Basic Concepts & Proc MLS	4
BIO 424	Biotechnology	4
BIO 428	Histopathology	4
BIO 425	Bacterial Pathogenesis	4
BIO 433	Parasitology	3
Group B: Biological Foundations of Medicine		
BIO 336	Plant Therapeutics	3
BIO 402	Advanced Cell Biology	4
BIO 404	Biochemistry	3
BIO 411	Molecular Genetics	4
BIO 412	Neurobiology	4
BIO 415	Immunology	4
BIO 416	Microbiology	4
BIO 430	Neurological Disorders	4

BIO 434	Biology of Aging	3
BIO 436	Virology	3
Group C: Connect and Impacts of Biology		
BIO 220	Plant Diversity and Morphology	3
BIO 372	Aquatic Biology	4
BIO 401	Animal Behavior	4
BIO 409	Ecology	4
BIO 413	Plant Physiological Ecology	4

Genomics Graduate Certificate

Saint Joseph's University's graduate online certificate in genomics gives you an advanced understanding of genomics and genetics and the role they place in pharmacy, medicine, nursing, social work, ethics, legal and computer science fields. Throughout this four-course program, you'll explore topics in DNA sequencing technologies, genetics research and personalized medicine. Each eight-week course will build upon the other, giving you a solid foundation in concepts of genomics for use in your current role, or to prepare for further education. Credits earned during this program count towards Saint Joseph's online master's degree in genomics (<https://www.sju.edu/degree-programs/genomics-ms/>).

Requirements

GNM 715	Chromosomes & Human Disease	3
Total Hours		12

Genomics M.S.

Genomics is the future of the healthcare industry. There's no better time to pursue an education in this rapidly growing field than now.

The online master's in genomics program at Saint Joseph's University will teach you the advanced genetics and genome-based research and leadership skills needed to leverage your knowledge for improved disease research and patient care. In this 12-course program, you'll gain a critical understanding of genomics and genetics and their applications in

healthcare and the health sciences. You'll also examine the role genomics plays in the study of public health and human disease.

Requirements

Courses

GNM 701 Introduction to Genomics (3 credits)

This course explores the history of genetics and genomics. Family history is discussed as a vital part of a genetic riskassessment and tool for the evaluation of inheritance patterns and penetrance of the disease. The course concludes with a review of the epigenetic influences on health and epidemiologic approaches to evaluate health and disease and applications in genomics.

Restrictions: Enrollment is limited to Graduate level students.

GNM 702 Genetic Concepts Testing (3 credits)

The course will serve as the basis for the health care professional to integrate genetics and genomics into personalized healthcare. The course provides a review of sources of information available to you and clinicians in genomic health care for clinical management and therapeutic applications.

Restrictions: Enrollment is limited to Graduate level students.

GNM 703 Issues in Genomics & Pharma (3 credits)

This course exposes students to the ethical, legal, and social issues surrounding genetic testing and available direct-to-consumer genetic testing. This course will explore approaches for engaging individuals as partners in their healthcare, as well as the expanding applications of pharmacogenomics.

Restrictions: Enrollment is limited to Graduate level students.

GNM 704 Cancer Genomics & Applications (3 credits)

This course focuses on the role of genetics and genomics in cancer diagnosis, prognosis, and treatment. Future directions of genetics and genomics with comprehensive genome/exome/transcriptome sequencing in oncology, polygenic risk scores, cell-free DNA, and genome-wide and phenome-wide association studies are addressed. Genomic technologies and computational approaches that are driving advances to manage health and treat disease will be reviewed.

Restrictions: Enrollment is limited to Graduate level students.

GNM 710 Principles of Genetics (3 credits)

This course provides you with an introduction to genetics, with a focus on transmission and molecular genetics. The course makes use of bioinformatics to explore gene function and covers pertinent applications of bioinformatics and genetics to modern biological problems. Topics include chromosome structure and replication, variations and extensions of transmission genetics, genetic linkage and mapping, regulation of gene expression, epigenetics, genetic mutations, genetics of cancer, and the principles of genetic engineering.

Restrictions: Enrollment is limited to Graduate level students.

GNM 715 Chromosomes & Human Disease (3 credits)

This course introduces you to the role of chromosomes in human disease and seeks to familiarize you with the field of cytogenetics, the study of chromosomes, and the relationship between chromosomal abnormalities and human disease. Topics covered include cytogenetic methodology, aneuploidy, chromosome rearrangements, chromosomes and sex determination, and chromosomes and cancer.

Restrictions: Enrollment is limited to Graduate level students.

GNM 720 Molec Basis Inherited Disease (3 credits)

This course seeks to familiarize you with the molecular basis of diseases of human genetics and its applications to modern research. You will undertake a comprehensive examination of the principles of human inheritance in the context of both normal human variation and human disease. The course explores mechanisms of gene regulation and introduces you to current methods in genome analysis.

Restrictions: Enrollment is limited to Graduate level students.

GNM 725 Clinical App Genetics & Genomics (3 credits)

The course focuses on the genetic basis of disease and cytogenetic analysis for applications to clinical care. Diagnostic molecular approaches and the clinical translation of genetic and genomic health information in a personalized healthcare environment are explored.

Restrictions: Enrollment is limited to Graduate level students.

GNM 730 Evolutionary Analysis (3 credits)

This course introduces you to evolutionary science and population genetics, with a focus on the importance of four factors: selection, migration, mutation, and genetic drift. You will evaluate human evolution and its impact on health.

Restrictions: Enrollment is limited to Graduate level students.

GNM 735 Human Population Genetics (3 credits)

The sequencing of the human genome has led to the emergence of population genomics. This course covers the basics of population genomic analysis, from SNP data to the key analyses that may be required to successfully analyze a population genetic data set. Population genetics topics will also include computational methods and machine learning techniques.

Restrictions: Enrollment is limited to Graduate level students.

GNM 740 Public Health Genetics (3 credits)

Public health ensures the basic conditions required for individual and population health are present. The role of genetics is evolving, as is the understanding of genetic disease. This course provides students with advances in genetic knowledge and technology that could be used to prevent disease and improve public health.

Restrictions: Enrollment is limited to Graduate level students.

GNM 745 Genomic Statistics & Research (3 credits)

This course provides you with an introduction to the statistical approaches used in solving problems in genetic epidemiology. Methodological expositions and practical guidelines for software selection are included. Topics include molecular genetics and Mendelian description principles, genetic markers and map distances, model-based and model-free population and family-based and genome-wide association studies, and association analyses using haplotypes.

Restrictions: Enrollment is limited to Graduate level students.

Medical Laboratory Science Major

Saint Joseph's University's medical laboratory science program is one of the few hospital-based programs in the region directed by a certified medical laboratory scientist. And unlike many health sciences programs, our medical laboratory science major requires only four years of study. With a versatile curriculum taught by the Department of Biology's expert faculty (<https://www.sju.edu/departments/biology/faculty/>) at our University City campus and a year-long internship in a medical or clinical lab, you'll learn the biological, physiological and pathological basis of disease, gaining an unparalleled understanding of the medical science field.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

¹

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

MLS 201	Med Lab Science Seminar	1
CHM 120	General Chemistry I	3
CHM 210	Organic Chemistry I	3
MLS Clinicals		32-38

Students must have completed at least 97 credits towards the MLS degree before they can enter the Clinical Rotations	
Total Hours	70-77

- 1
- Students may also take any of the biochemistry courses (300 level or higher) offered through the Biochemistry & Chemistry Department. Students who plan to seek certification in NY should also take a biochemistry lab.
- 2
- Students must take at least one course from the three Medical Laboratory Science electives listed below. Students may take more than one, but at least one is required.

Chemical Biology Program Overview

The major in Chemical Biology addresses the growing interest that many biologists have in the molecular aspects of biology and the increasing emphasis that many chemists place on the significance of chemical interactions and reactions in biological systems. The mission of the major in Chemical Biology is to provide students with an inter-disciplinary and thorough training in both biology and chemistry so that they can understand and investigate the chemical processes that take place at the molecular level in living systems. Chemical Biology majors take a wide variety of chemistry and biology courses with the flexibility to focus on particular areas of their own interest. All students majoring in Chemical Biology engage in faculty-directed independent research projects as part of the major requirement. This gives students the opportunity to apply the principles that they have learned in the classroom and laboratory to the solution of real world scientific problems. In doing research, students gain hands-on experience in the use of state-of-the-art instrumentation, data analysis and interpretation. Students have presented their research at local and national conferences and in journal publications.

A major in Chemical Biology provides a strong academic background for students interested in pursuing graduate, professional and industrial careers at the interface between chemistry and biology. Students in the major benefit from the presence of pharmaceutical, chemical and biochemical industries, and many strong graduate and professional programs in the Philadelphia region. Chemical Biology majors have gone on to careers in cellular and molecular biology, biochemistry, genetics, pharmacy and pharmacology, medicine, biotechnology, forensic science and neuroscience.

Chemical Biology Major

Learning Goals and Outcomes

Goal 1: Students will understand the role of chemical properties in biological systems and processes.

Outcome 1.1: Students will understand and be able to describe biochemical processes of living organisms and the role of macromolecules in these processes.

Outcome 1.2: Students will understand and be able to describe how organisms interact with their abiotic and biotic environment.

Goal 2: Students will gain an appreciation of the integration of chemistry and biology to solve scientific problems.

Outcome 2.1: Students will understand and be able to apply fundamental chemical principles of bonding, molecular structure and interactions, stoichiometry, kinetics, and thermodynamics to explain biological systems, processes, and structure.

Goal 3: Students will acquire research experience through faculty-supervised independent projects in chemistry or biology.

Outcome 3.1: Students will search the literature for published work relevant to a problem of interest.

Outcome 3.2: Students will be able to design an experiment, operate basic laboratory equipment, reduce and present data that includes the interpretation of statistical tests.

Goal 4: Students will effectively communicate scientific information.

Outcome 4.1: Students will be able to develop cogent written and oral presentations of scientific content.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive

CHM 393 or CHM 394	Junior Research I Junior Research II	
CHM 493 or CHM 494	Senior Research I Senior Research II	

Total Hours 51-54

A Chemical Biology major must register for Chemical Biology Seminar each semester as a junior and a senior (4 total).

*The research requirement can also be satisfied with CMB 490 "Introduction to Research" and an in-depth Chemistry course or a Biology elective course listed above.

Chemistry and Biochemistry Department Overview

The department trains students in the areas of chemistry and biochemistry both at the undergraduate and graduate level, offering both BS and MS (both Thesis and Non-Thesis) degrees. Both the Chemistry BS and Biochemistry BS are approved by the American Chemical Society (ACS). ACS certification of the degree can be obtained by inclusion of selected chemistry courses together with additional electives. The department is also accredited by the American Society of Biochemistry and Molecular Biologists (ASBMB). Students receive either certification or certification with high merit from ASBMB based on their performance in an ASBMB certification exam administered in their senior year. Chemistry is a fundamental science that is critical to the understanding of many other scientific and health professional fields. An understanding of the molecular nature of substances, and how they react, enables one to understand how they can best be used to improve our lives. Over the years, chemists have contributed enormously to the health and well-being of their fellow human beings through drug discovery and synthesis for human diseases. The efficiency and productivity of U.S. and worldwide agriculture is due in no small part to the chemical fertilizers and insecticides that chemists have synthesized. Chemists also play an important role in evaluating and treating environmental problems ("green chemistry") and help to address national security concerns, such as the detection of chemical weapons and explosives. Chemists are employed in industries as diverse as petroleum refining, food processing, cosmetics, rubber, plastics, fabrics, and energy production. In government labs, they monitor the environment and the purity of our foods and drugs, and in forensic chemistry laboratories, they identify and assist in prosecuting criminals. Many teach the wonders of science in settings from junior high school to university. Some chemistry majors use their degrees as the basis for professional training in medicine, dentistry, veterinary medicine, law, or business. Biochemistry is the study of chemical processes within living systems. In other words, it is the study of living systems at the most fundamental level through the analysis of the chemistry of molecules that make up these systems. As the most basic of biomedical sciences, it provides the foundation on which genetics, molecular biology, physiology, cell biology, immunology, and other modern branches of biology and medicine are based. Biochemists are trained at the interface between chemistry and biology and obtain experience in techniques associated with molecular biology and biotechnology that can be applied effectively in medicine to ameliorate and cure disease. Undergraduate study in biochemistry at the University provides a solid background for advanced training in any of the areas indicated, along with an excellent preparation for medicine or any of the other health professions. Students in the biochemistry program also learn the experimental techniques that prepare them for technical positions in biomedical research in one of the growing number of industries involved in biotechnology. From cancer research to gene splicing to photosynthetic capture of solar energy, biochemistry leads the way with new ideas.

Departmental Mission

The core mission of the department is to train students in areas of chemistry and biochemistry to advance student education and future career goals, and prepare them to be lifelong learners. This mission is accomplished through a focus on excellence in teaching with one-on-one faculty mentoring through advising and undergraduate research. Our

modern research-grade instrumentation makes it possible for students to explore contemporary problems in all of these areas. Chemistry and Biochemistry majors are encouraged to engage in faculty-directed independent research projects and to present the results of their studies in the chemical and biochemical literature and at scientific meetings. The curriculum for both majors prepares the graduates to continue their educations in graduate and professional schools including areas of health or law or to work in the chemical and pharmaceutical industries and in government laboratories. Our alumni are aware that through chemistry they can continue to make contributions to society that are of service to others.

Advisory Option—Chemistry Premedical

Students planning to enter medical or dental school should take BIO 101-BIO 102.

Advisory Option—Chemistry and Business

Students who intend to pursue studies toward the M.B.A. or who plan careers in the marketing or management areas of the chemical industry should minor in business.

Faculty

Well respected in the chemistry industry, the faculty members in Saint Joseph's University's Chemistry Department bring a wide range of applicable experience from previously held high-level positions and hands-on experience working in labs. The faculty goes above and beyond to help students achieve success.

Department of Chemistry and Biochemistry Faculty & Staff (<https://www.sju.edu/departments/chemistry/faculty-staff/>)

Chemistry in the GEP

The GEP requires that all students take EITHER one semester of a lab-based natural science course (6 contact hours) OR two semesters of lecture-only natural science courses. Students who wish to satisfy the natural science GEP by completing courses in Chemistry or Biochemistry may do so by taking the first semester of the Chemistry majors, lab-based course sequence, CHM 120 and CHM 120L, or one of the lab-based, one-semester chemistry courses for non-science majors. Alternatively, students may fulfill one or both semesters of the natural science GEP by completing one or two of the special one-semester lecture-only Chemistry or Biochemistry courses designed for non-science majors listed below. Food Marketing (only) majors fulfill the GEP natural science requirement by taking CHM 112/112L.

Non-science majors Chemistry GEP lecture-only courses:

Code	Title	Hours
CHM 100	Chemistry for the Consumer	3

Non-science majors Chemistry GEP lab-based courses:

Code	Title	Hours
CHM 115	Chemistry in Daily Life	4
CHM 115L	Chemistry in Daily Life	0
CHM 112	Food Chemistry (open to Food Marketing majors only)	4
CHM 112L	Food Chemistry: Lab (open to Food Marketing majors only)	0

Programs

Undergraduate Majors

- Biochemistry (p. 115)
- Chemistry (p. 117)

Undergraduate Minors

- Chemistry (p. 118)
- Biochemistry (p. 116)
- Pharmaceutical Chemistry (p. 119)

Graduate

- Biochemistry (p. 114)
- Chemistry (p. 116)

Courses

CHM 100 Chemistry for the Consumer (3 credits)

This course is designed to help students understand the chemistry that affects them throughout their lives. Topics include: nuclear chemistry, home products, food and drugs, acid rain, energy, climate control, and sustainability. May be taken for science or elective credit without previous chemistry courses. Successful completion of this course will fulfill a lecture-only natural science course requirement for the GEP natural science area.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Food Marketing or Physics.

Attributes: GEP Natural Science, Undergraduate

CHM 112 Food Chemistry (4 credits)

The study of chemistry as it specifically relates to food. Underlying basic chemical principles will allow the study of particular molecules found in food (carbohydrates, proteins, lipids) and the changes these molecules undergo as they are cooked and absorbed. Topics will also include preservation, food safety, and food additives. This laboratory course will introduce students to the use of laboratory techniques to study food, including the measurement of food properties including pH, flavor, color, and texture. Students will learn how chemical and physical changes can alter food quality. The content material of CHM 112 overlaps with the content of IHS 253 Nutrition: Health and Disease. Students may take either CHM 112 or IHS 253 not both. Successful completion of CHM 112/112L fulfills the GEP science requirement for Food Marketing majors only. It will serve as a free-elective for all other majors.

Restrictions: Enrollment is limited to students with a major in Food Marketing Co-Op or Food Marketing.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

CHM 112L Food Chemistry: Lab (0 credits)

Students who register for this Chemistry lab must also register for the corresponding lecture. For example, if you register for CHM 112L you must, at the same time, register for CHM 112.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Food Marketing Co-Op or Food Marketing.

Attributes: GEP Natural Science, Undergraduate

CHM 115 Chemistry in Daily Life (4 credits)

This course explains the basic theories and need-to-know facts of scientific events one encounters in daily life from a chemistry perspective. In addition to explaining the fundamental concepts of chemistry, the course will cover topics such as acids and bases, oxidation and reduction, household chemicals, nuclear energy, nuclear medicine, biochemistry, and drugs. This laboratory course will cover a wide range of experiments that require mastering a variety of laboratory skills, which utilize many different types of equipment. The proper use of beakers, flasks, pipets, burets, simple calorimeters, balances, and thermometers, to name a few, is critical to a student's success in the course. Accurate observations and recording of data is stressed and evaluated. Students will submit data and results forms at the conclusion of each experiment. Both qualitative (observations and descriptions) and quantitative (calculations and graphs) methods will be stressed.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

CHM 115L Chemistry in Daily Life (0 credits)

Students who register for this Chemistry lab must also register for the corresponding lecture. For example, if you register for CHM 115L you must, at the same time, register for CHM 115.

Attributes: Undergraduate

CHM 118 Chemical Sciences Orientation (1 credit)

Introduction to all aspects of the chemical sciences, including biochemistry. Students are presented with an overview of the department, the University, the curricula, active research areas, career opportunities, and scientific ethics, as well as information on how they can maximize their educational experience.

Attributes: Undergraduate

CHM 120 General Chemistry I (3 credits)

Topics included are chemical formulas, stoichiometry, balancing reactions, ideal gases, thermodynamics, atomic structure, chemical bonding and molecular structure, kinetics, equilibrium, the chemistry of acids and bases, entropy, free energy, and electrochemistry.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

CHM 120L General Chemistry Lab I (1 credit)

A lecture-laboratory course to accompany CHM 120-125 with emphasis upon concepts in chemistry, quantitative and qualitative analysis, and introduction to instrumental methods. One four-hour period. Successful completion of CHM 120 and CHM 120L fulfills the GEP natural science requirement.

Attributes: GEP Natural Science, Undergraduate

CHM 121 General Chemistry Honors I (3 credits)

The material covered in this honors course is the same as CHM 120-125 but more extensive in depth. Additional topics may be added as time permits. The course assumes that the student has had chemistry in high school. The format of the course may differ from the standard lecture model. Fulfills the GEP natural science requirement.

Attributes: GEP Natural Science, Honors Course, Science Course w/Lab (Sci Maj), Undergraduate

CHM 125 General Chemistry II (3 credits)

Topics included are chemical formulas, stoichiometry, balancing reactions, ideal gases, thermodynamics, atomic structure, chemical bonding and molecular structure, kinetics, equilibrium, the chemistry of acids and bases, entropy, free energy, and electrochemistry.

Prerequisites: CHM 120 or CHM 121 or CH 101 or CH 111

Attributes: Science Course w/Lab (Sci Maj), Undergraduate

CHM 125L General Chemistry Lab II (1 credit)

A lecture-laboratory course to accompany CHM 120-125 with emphasis upon concepts in chemistry, quantitative and qualitative analysis, and introduction to instrumental methods. One four-hour period.

Prerequisites: CHM 120L or CH 103 or CH 113

Attributes: Undergraduate

CHM 126 General Chemistry Honors II (3 credits)

The material covered in this honors course is the same as CHM 120-125 but more extensive in depth. Additional topics may be added as time permits. The course assumes that the student has had chemistry in high school. The format of the course may differ from the standard lecture model.

Prerequisites: CHM 120 or CHM 121

Attributes: Honors Course, Science Course w/Lab (Sci Maj), Undergraduate

CHM 150 First Year Seminar (3 credits)

The First-Year Seminar (FYS) is designed to introduce students to the adventures of learning in a college context. The challenge and excitement of intellectual exploration of a topic of shared interest is its prime purpose. First-Year Seminars focus in depth on a question or topic of disciplinary or interdisciplinary interest. By means of its specific focus, the seminar will explore the thinking, research, and writing practices in a particular field. Discussions based on careful reading of texts, writing assignments, both reflection and research types, and in-class student presentations will be supplemented, as appropriate, with activities including guest lecturers, museum trips, attendance at local cultural events and/or field excursions. Topics vary according to individual instructors. First year seminar.

Attributes: First-Year Seminar, Undergraduate

CHM 170 Special Topics in Chemistry (3 credits)

Advanced study on a topic that is arranged with a Chemistry faculty member.

Attributes: Undergraduate

CHM 204 Literature of Chemistry (1 credit)

The study of the nature and uses of the primary, secondary, and tertiary literature of chemistry and biochemistry and of modern information-retrieval techniques.

Attributes: Undergraduate

CHM 210 Organic Chemistry I (3 credits)

Modern organic chemistry in which the treatment of aliphatic and aromatic compounds is integrated as much as possible. Reactions of the functional groups are explained in terms of electronic mechanisms.

Prerequisites: CHM 125 or CHM 126 or CH 102 or CH 112

Attributes: Undergraduate

CHM 210L Organic Chemistry Lab I (1 credit)

This semester concentrates on experiments designed to introduce students to the various techniques used in the organic laboratory.

Prerequisites: CHM 125L or CH 114 or CH 104

Attributes: Undergraduate

CHM 215 Organic Chemistry II (3 credits)

Modern organic chemistry in which the treatment of aliphatic and aromatic compounds is integrated as much as possible. Reactions of the functional groups are explained in terms of electronic mechanisms.

Prerequisites: CHM 210 or CH 201 or CH 211

Attributes: Undergraduate

CHM 215L Organic Chemistry Lab II (1 credit)

A continuation of CHM 210L utilizing micro scale laboratory techniques in organic chemistry for the preparation, purification and analysis of organic compounds.

Prerequisites: CHM 210L or CH 203 or CH 213

Attributes: Undergraduate

CHM 230 Basic Inorganic Chemistry (3 credits)

Introduction to basic inorganic chemistry, including elementary bonding theories, the chemistry of elements other than carbon, coordination chemistry, acid-base chemistry, organometallic chemistry, and solid-state chemistry.

Prerequisites: (CH 102 or CH 112 or CHM 125) and (CH 104 or CH 114 or CHM 125L)

Attributes: Undergraduate

CHM 270 Special Topics in Chemistry (3 credits)

Advanced study on a topic that is arranged with a Chemistry faculty member.

Attributes: Undergraduate

CHM 293 Sophomore Research Studies I (3,6 credits)

Integrated literature and laboratory investigation of an assigned problem under the supervision of a departmental faculty member. Each credit of CHM 293-294 requires four hours each week in the research laboratory. Students need to complete the application form for independent study and have the approval of the Chemistry Department Chair and Associate Dean in order to register.

Attributes: Undergraduate

CHM 294 Sophomore Research Studies II (3,6 credits)

Integrated literature and laboratory investigation of an assigned problem under the supervision of a departmental faculty member. Each credit of CHM 293-294 requires four hours each week in the research laboratory. Students need to complete the application form for independent study and have the approval of the Chemistry Department Chair and Associate Dean in order to register.

Attributes: Undergraduate

CHM 300 Discussions in Chemistry (1 credit)

Discussion of ethical issues and research opportunities in the chemical sciences as well as career planning.

Attributes: Undergraduate

CHM 310 Physical Chemistry I (3 credits)

Covers thermodynamic principles and applications to gases, liquids, and ideal and non-ideal solutions; thermodynamics of chemical reactions and equilibria, electrochemistry and reaction kinetics.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 310L Physical Chemistry Lab I (2 credits)

Experiments are performed to reinforce the concepts learned in CHM 310

Attributes: Undergraduate

CHM 315 Physical Chemistry II (3 credits)

Quantum Chemistry. The fundamental postulates of quantum mechanics are introduced in the form of historical narrative to illustrate the logical progression to quantization in natural theory. Eigenvalue problems, operator mathematics, uncertainties and orthonormality are discussed as essential portions of quantum mechanical calculations. The Schrodinger equations for the harmonic oscillator and rigid rotor are solved and related specifically to molecular spectroscopy techniques. The course ends with the description of the hydrogen atom in terms of quantum mechanics, with emphasis on the origin of the familiar atomic orbitals.

Prerequisites: CHM 310

Attributes: Undergraduate

CHM 315L Physical Chemistry Lab II (2 credits)**CHM 318 Essentials of Physical Chem (4 credits)**

Fundamental concepts of physical chemistry: aspects of thermodynamics including the first and second laws, chemical and phase equilibria, solutions, surface chemistry, reaction kinetics, introduction to quantum chemistry including QM postulates/Schrodinger equation/particle in a box, rigid rotor and harmonic oscillator/hydrogen atom/many electron atom, chemical bond, molecular structure, introduction to statistical mechanics including Boltzmann distribution/partition functions.

Prerequisites: PY 212 or PHY 212

Attributes: Undergraduate

CHM 320 Physical Chem for Chem Bio (3 credits)

Study of atomic and molecular structure; chemical thermodynamics; states of matter; kinetics and mechanisms of reactions; phase and chemical equilibria; emphasis on applications in biological systems.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 321 Physical Chemistry I (4 credits)**CHM 322 Physical Chemistry II (4 credits)**

Continuation of Physical Chemistry I, including quantum chemistry, reaction kinetics, spectroscopy, photochemistry, statistical mechanics, and theories of reaction rates.

Prerequisites: CH 321 or CHM 310

Attributes: Undergraduate

CHM 330 Instrumental Analysis (3 credits)

This course covers the theory, methodology, and instrumentation for the study of atomic and molecular species and/or processes.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 330L Instrumental Analysis Lab (2 credits)

CHM 330 is a co-requisite to CHM 330L.

Prerequisites: CHM 215L

Attributes: Undergraduate

CHM 335 Survey of Biochemistry (3 credits)

This survey of biochemistry uses a descriptive approach to biological molecules, including both structure and function. Cellular components, biochemical reactions, metabolism, and the workings of the genetic code will all be discussed. Overall, a general understanding of biochemistry and its relationship to the world around us will be provided.

Prerequisites: (BS 119 or BIO 119) or (BS 133 or BIO 133) and (CH 202 or CHM 215)

Attributes: Undergraduate

CHM 340 Biochemistry (3 credits)

A basic introduction to the chemistry of living systems emphasizing their major metabolic activities. Structure and function of proteins, lipids, and carbohydrates. Basic principles of intermediary metabolism and photosynthesis.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 340L Biochemistry Lab (2 credits)

Laboratory applications of the topics covered in CHM 340. CHM 340 is a co-requisite to CHM 340L.

Prerequisites: CHM 215L and CHM 340 (may be taken concurrently)

Attributes: Undergraduate

CHM 341 Molecular Structure Biochemist (3 credits)

This introduction to biochemistry covers protein structure and function, enzyme kinetics and mechanisms, membrane structure and function, and principles of biological regulation.

Prerequisites: CH 212 or CH 202 or CHM 215

Attributes: Undergraduate

CHM 342 Nucleic Acid Biochemistry (3 credits)

Focused on molecular genetics. Topics include structure, replication, transcription, translation, repair, recombination, and processing of nucleic acids; control of gene expression; and modern recombinant methods of DNA splicing, cloning, and sequencing.

Prerequisites: CH 341 and BS 462 and BS 462L

Attributes: Undergraduate

CHM 343 Intermediary Metabolic Biochem (3 credits)

Catabolic and anabolic pathways with emphasis on chemical logic, mechanisms, and regulatory control. Also includes carbohydrate, lipid, amino acid, and nucleotide metabolism, and oxidative and photosynthetic phosphorylation.

Prerequisites: CH 341

Attributes: Undergraduate

CHM 346 Biochemistry (4 credits)

An introduction to biochemistry that includes structure of proteins, nucleic acids, and membranes; enzyme kinetics and mechanisms; membrane transport; central metabolic pathways and their regulation; and basic methods of biochemistry.

Prerequisites: CH 202 or CHM 215

Attributes: Undergraduate

CHM 350 Inorganic Chemistry (3 credits)

This course includes the study of atomic structure, bonding, molecular orbital theory, symmetry and group theory, the chemistry of the main group elements, and the structure and reactivity of transition metal complexes.

Prerequisites: CHM 215 or CH 212 or CH 331

Attributes: Undergraduate

CHM 350L Inorganic Chemistry Lab (2 credits)

This course focuses on synthetic inorganic chemistry and emphasizes the use of modern analytical techniques for the characterization of inorganic and organometallic compounds. CHM 350 is a co-requisite for CHM 350L.

Prerequisites: CHM 215L

Attributes: Undergraduate

CHM 356 Molecular Biology and Genetics (3 credits)

Introduction to molecular biology and genetics. The biochemistry of the synthesis of DNA, RNA, and proteins and their regulation will be studied. We will also investigate the importance of genetic information to biochemistry and medicine.

Prerequisites: CH 346

Attributes: Undergraduate

CHM 360 Nanochemistry (3 credits)

This course covers the synthesis, characterization and physical properties of materials chemistry systems on the length scale of individual molecules. Emphasis is placed on the distinction between macro- and nanoscale properties of matter. Course topics to include (but not limited to): quantum confinement in semiconductor nanocrystals; localized surface plasmon resonance (LSPR), superhydrophobicity in self-assembled monolayers; electronic and mechanical properties of 2D materials

Prerequisites: CHM 215 and (MAT 161 or MAT 155) and (PHY 102 (may be taken concurrently) or PHY 106 (may be taken concurrently))

Attributes: Undergraduate

CHM 361 Analytical Chemistry (3 credits)

Introductory analytical chemistry with emphasis on relevant chemical principles, combining both classical and modern instrumental techniques.

Prerequisites: (CH 102 or CH 112 or CHM 125) and (CH 104 or CH 114 or CHM 125L)

Attributes: Undergraduate

CHM 361L Analytical Chemistry Laborator (1 credit)

CHM 370 Special Topics in Chemistry (3 credits)
Advanced study on a topic that is arranged with a Chemistry faculty member.

Attributes: Undergraduate

CHM 390 Chemistry Seminar (0 credits)

Lectures by outside and local speakers and discussions of special topics in chemistry. Enrollment is required each semester for junior and senior chemistry majors.

Attributes: Undergraduate

CHM 393 Junior Research I (3,6 credits)

Integrated literature and laboratory investigation of an assigned problem under the supervision of a departmental faculty member. Each credit of CHM 393-394 requires four hours each week in the research laboratory. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the Chemistry Department chair and Associate Dean in order to register.

Attributes: Undergraduate

CHM 394 Junior Research II (3,6 credits)

Integrated literature and laboratory investigation of an assigned problem under the supervision of a departmental faculty member. Each credit of CHM 393-394 requires four hours each week in the research laboratory. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the Chemistry Department chair and Associate Dean in order to register.

Prerequisites: CHM 393 or CHM 293

Attributes: Undergraduate

CHM 400 Chemistry of the Earth (3 credits)

This course examines the chemical processes that control the distribution, speciation, and transfer of essential elements and energy in natural systems. Topics include: the concept of the Earth as a biogeochemical system; the use of quantitative methods to model the chemical fluxes of elements on a global scale; dominant chemical reactions in natural environments, evolution of metabolic pathways; the biogeochemical cycling of water, carbon, nitrogen, phosphorus, sulfur, and select heavy metals under natural and anthropogenically-influenced conditions. CHM 340 can be taken concurrently with CHM 400.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 401 Seminar in Chemistry I (1 credit)

Chemical and biochemical topics of current interest presented orally by students and invited guest speakers. Writing, speech, delivery, and use of visual aids are critiqued. All biochemistry, chemistry, and pharmaceutical chemistry majors, and other interested persons are invited to attend.

Attributes: Undergraduate

CHM 402 Seminar in Chemistry II (1 credit)

Lectures by outside and local speakers and discussions of special topics in Chemistry

Prerequisites: CH 401

Attributes: Undergraduate

CHM 410 Biophysical Chemistry (3 credits)

This course utilizes the concepts of physical chemistry to understand the properties of biological systems.

Prerequisites: CHM 310 or CHM 320

Attributes: Undergraduate

CHM 410L Biophysical Chemistry Lab (1 credit)**CHM 411 Medicinal Chemistry (3 credits)**

A study of the biochemical mechanisms of drug action in order to develop a rational approach to the analysis of drugs and their metabolites and to design new drugs.

Prerequisites: CH 341 or CHM 341

Attributes: Undergraduate

CHM 414 Structure-Activity Relationships (3 credits)

Selected classes of medicinal agents are examined, stressing general structures, synthesis, and, in particular, the relationships between structure and pharmacological activity.

Prerequisites: CH 212 or CHM 215

Attributes: Undergraduate

CHM 416L Chemical Synthesis Laboratory (3 credits)

Techniques of organic and inorganic synthesis, including reaction control, vacuum and fractional distillation, uniform reagent addition, controlled stirring, operation in inert atmosphere, safe handling of toxic or unstable reagents, and chromatographic purification.

Prerequisites: (CH 212 and CH 214 and CH 368) or CHM 330L

Attributes: Undergraduate

CHM 420 Atmospheric Environmental Chem (3 credits)

This course examines the behavior of chemical species in the atmosphere. Topics include: stratospheric chemistry and the role of ozone, tropospheric chemistry and photochemical smog formation, precipitation, aerosol chemistry, indoor and urban air quality and regulatory efforts, energy, the chemistry of global climate and potential mitigation strategies, biogeochemical cycling of elements, and green chemistry.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 430 Mechanisms in Organic Chem (3 credits)

Application of the electron pushing formalism for manipulating Lewis structure representations of organic structures. Emphasis is placed on mechanistic rationalization of complex organic transformations. Classes of mechanisms include elimination, substitution, rearrangement, oxidation-reduction, enolate alkylation, and others.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 435 Tech Applications of Chemistry (3 credits)

Course will focus on current and future technologies that utilize fundamental and advanced theories of chemistry. Topics will include, but are not limited to, microwave ovens, liquid crystal displays (LCD), light emitting diode displays (LED), plasma screens, charge coupled devices (CCD), field effect transistors (FET), positron emission tomography (PET), magnetic resonance imaging (MRI), battery systems, data storage devices, and solar panels.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 440 Organometallic Chemistry (3 credits)

This course will focus on the structure and reactivity of organometallic transition metal complexes. Topics include catalysis, reaction mechanisms, applications to organic chemistry, and characterization by spectroscopic methods.

Prerequisites: CHM 350

Attributes: Undergraduate

CHM 444L Biochemistry Laboratory I (1 credit)

Techniques of isolation, purification, and assay of representative biomolecules, particularly proteins.

Prerequisites: (CH 341 or CHM 341)

Attributes: Undergraduate

CHM 445 Thermodynamics & Stat Mechanic (3 credits)**CHM 445L Biochemistry Laboratory II (1 credit)****CHM 448 Computer-Aided Drug Design (3 credits)**

Introduction to the theory and practice of molecular modeling, especially as applied to the problem of identifying and designing bioactive and therapeutic agents, using specialized software and advanced computer hardware such as workstations and supercomputer clusters.

Prerequisites: CH 341

Attributes: Undergraduate

CHM 450 Polymer Chemistry (3 credits)**CHM 460 Aqueous Environmental Chem (3 credits)**

This course examines the behavior of chemical species in natural and engineered water systems and their interactions with the terrestrial environment. Topics include: the chemical composition of surface and subsurface water; geochemical controls on water composition; equilibrium and kinetic processes in aquatic systems; fate and reactions of inorganic and organic constituents in water; acid-base chemistry, complexation chemistry, and redox chemistry in water; the applications of isotopic and other tracers in the study of aquatic systems; water pollution and treatment.

Prerequisites: CHM 215

Attributes: Undergraduate

CHM 464 Pharmaceutical Analytical Chem (3 credits)

The application of analytical chemical techniques to pharmaceutical materials and dosage forms. The development and evaluation of methods appropriate for pharmaceutical materials.

Prerequisites: CH 376 or CHM 330

Attributes: Undergraduate

CHM 464L Pharm Analytical Chemistry Lab (1 credit)

The application of analytical chemical techniques to pharmaceutical materials and dosage forms. The development and evaluation of methods appropriate for pharmaceutical materials.

Prerequisites: CH 368 or CHM 330L

Attributes: Undergraduate

CHM 470 Special Topics (3 credits)

Advanced study on a topic that is arranged with a chemistry faculty member. Permission of the Department of Chemistry chair is required.

Attributes: Undergraduate

CHM 480 Inorganic Biochemistry (3 credits)

The chemical and biological properties of various metal ions in biological systems will be examined at the molecular level. Permission of the Department of Chemistry chair is required.

Prerequisites: CHM 215 and CHM 340

Attributes: Undergraduate

CHM 490 Spectroscopy (3 credits)

This course provides an exposure to aspects of spectroscopic theory, methods, and instrumentation that are not covered in Instrumental Analysis.

Prerequisites: CHM 330

Attributes: Undergraduate

CHM 491 Chemistry Internship I (3 credits)**CHM 492 Chemistry Internship II (3 credits)****CHM 493 Senior Research I (3,6 credits)**

Integrated literature and laboratory investigation of an assigned problem under the supervision of a departmental faculty member. Includes a seminar, a poster presentation, and written reports. Each credit of CHM 493 and CHM 494 requires four hours each week in the research laboratory. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the Chemistry Department chair and Associate Dean in order to register.

Attributes: Undergraduate

CHM 494 Senior Research II (3,6 credits)

Integrated literature and laboratory investigation of an assigned problem under the supervision of a departmental faculty member. Includes a seminar, a poster presentation, and written reports. Each credit of CHM 493 and CHM 494 requires four hours each week in the research laboratory. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the Chemistry Department chair and Associate Dean in order to register.

Prerequisites: CHM 493

Attributes: Undergraduate

CHM 495 Undergraduate Research (1-3 credits)

Qualified students may elect to carry out research in analytical, inorganic, organic, or physical chemistry or biochemistry under the direction of a member of the department.

CHM 522 Physical Chemistry II (4 credits)

Continuation of Physical Chemistry I, including quantum chemistry, reaction kinetics, spectroscopy, photochemistry, statistical mechanics, and theories of reaction rates.

CHM 530 Instrumental Analysis (3 credits)

This course covers the theory, methodology, and instrumentation for the study of atomic and molecular species and/or processes.

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

CHM 560 Nanochemistry (3 credits)

This course covers the synthesis, characterization and physical properties of materials chemistry systems on the length scale of individual molecules. Emphasis is placed on the distinction between macro- and nanoscale properties of matter. Course topics to include (but not limited to): quantum confinement in semiconductor nanocrystals; localized surface plasmon resonance (LSPR), superhydrophobicity in self-assembled monolayers; electronic and mechanical properties of 2D materials

Restrictions: Students with the University Sciences Legacy attribute may **not** enroll.

Attributes: Doctoral

CHM 570 Special Topics (4 credits)**CHM 620 Atmospheric Environmental Chem (3 credits)**

This course examines the behavior of chemical species in the atmosphere. Topics include: stratospheric chemistry and the role of ozone, tropospheric chemistry and photochemical smog formation, precipitation, aerosol chemistry, indoor and urban air quality and regulatory efforts, energy, the chemistry of global climate and potential mitigation strategies, biogeochemical cycling of elements, and green chemistry.

Restrictions: Students with the University Sciences Legacy attribute may **not** enroll.

Attributes: Doctoral

CHM 640 Organometallics (3 credits)

This course will focus on the structure and reactivity of organometallic transition metal complexes. Topics include catalysis, reaction mechanisms, applications to organic chemistry, and characterization by spectroscopic methods.

Restrictions: Students with the University Sciences Legacy attribute may **not** enroll.

Attributes: Doctoral

CHM 660 Aqueous Environmental Chem (3 credits)

This course examines the behavior of chemical species in natural and engineered water systems and their interactions with the terrestrial environment. Topics include: the chemical composition of surface and subsurface water; geochemical controls on water composition; equilibrium and kinetic processes in aquatic systems; fate and reactions of inorganic and organic constituents in water; acid-base chemistry, complexation chemistry, and redox chemistry in water; the applications of isotopic and other tracers in the study of aquatic systems; water pollution and treatment.

Restrictions: Students with the University Sciences Legacy attribute may **not** enroll.

Attributes: Doctoral

CHM 680 Inorganic Biochemistry (3 credits)

The chemical and biological properties of various metal ions in biological systems will be examined at the molecular level. Permission of the Department of Chemistry chair is required.

Restrictions: Students with the University Sciences Legacy attribute may **not** enroll.

Attributes: Doctoral

CHM 700 Intro to Graduate Studies (1-3 credits)

Individualized coursework designed to strengthen a student's background prior to taking advanced graduate courses.

Restrictions: Enrollment is limited to Graduate level students.

CHM 711 Medicinal Chemistry (3 credits)

A study of the biochemical mechanisms of drug action in order to develop a rational approach to the analysis of drugs and their metabolites and to design new drugs.

CHM 714 Structure-Activity Relation (3 credits)

Selected classes of medicinal agents are examined, stressing general structures, synthesis, and, in particular, the relationships between structure and pharmacological activity.

Restrictions: Enrollment is limited to Graduate level students.

CHM 716 Chemical Synthesis Laboratory (3 credits)

Techniques of organic and inorganic synthesis, including reaction control, vacuum and fractional distillation, uniform reagent addition, controlled stirring, operation in inert atmosphere, safe handling of toxic or unstable reagents, and chromatographic purification.

CHM 718 Heterocyclic Chemistry (3 credits)

A study of the major types of aromatic and nonaromatic heterocyclic compounds with a special interest in those having biochemical activity: their synthesis, physical properties, reactivity, and influence on living systems, etc.

CHM 720 Applications of Computational (3 credits)

Introduction to the theory and applications of computational chemistry methods, including quantum mechanics, density functional theory, and classical molecular dynamics simulation methods. Project-based exercises on applying the above methods to chemical/biochemical processes while utilizing state-of-the-art computational software packages.

CHM 721 Chemical Kinetics (3 credits)

The Study of theoretical aspects of reaction kinetics and the experimental methods used to measure the rates of reactions.

CHM 728 Advanced Biochemistry (3 credits)

Selected topics in protein structure and function, especially enzymology.

Restrictions: Enrollment is limited to Graduate level students.

CHM 733 Computational Chemistry (3 credits)

This course will give hands on training in current computational chemistry methods. Particularly on how to manipulate large data sets through computational algorithms and programs. The course will explore and have hands on training with practical computational methods currently used in modern computational research.

Restrictions: Enrollment is limited to Graduate level students.

CHM 748 Computer Aided Drug Design (3 credits)

Introduction to the theory and practice of molecular modeling, especially as applied to the problem of identifying and designing bioactive and therapeutic agents, using specialized software and advanced computer hardware such as workstations and supercomputer clusters.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Doctoral

CHM 764 Pharmaceutical Analytical Chem (3 credits)

In-depth treatment of the principles and practice of analytical chemistry and instrumental methods as applied to drug analysis, pharmaceutical product quality, concentration of drug and metabolites in biological fluids, drug formulation, etc., with an emphasis on HPLC methods.

Restrictions: Enrollment is limited to Graduate level students.

CHM 786 Research Ethics (1 credit)

This course will provide an examination of ethical behavior and practice in scientific research. The course will follow a case study format in which students will be expected to present and participate in group discussions.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Doctoral

CHM 802 Research Seminar (2 credits)

Students present a formal seminar based on their research endeavors.

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

Attributes: Doctoral

CHM 813 Chem of Surfaces & Interfaces (3 credits)

This hybrid lecture/lab course will cover the thermodynamics, phenomenology, and chemistry of surfaces and interfaces. Lectures will be capped by three weeks of a lab practicum covering the methods of surface analysis and characterization.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Doctoral

CHM 815 Intro to Polymer Chemistry (3 credits)

This course will cover basic concepts and the most important topics in modern polymer science including synthesis, physical properties, and current applications.

Attributes: Doctoral

CHM 828 Biophysical & Biochemical Meth (3 credits)

This course will provide a survey of important biophysical and biochemical methods with special emphasis on applications to drug discovery and design. Topics include single-molecule techniques, calorimetry, binding and high throughput screening, kinetic modeling, spectroscopy, computer simulation and others. Results from the current literature that rely on these techniques will be reviewed.

CHM 878 Introduction to Research (1 credit)

A laboratory rotation through two seven-week chemical, biochemical, or pharmacognosy research projects for graduate students matriculated in a graduate program in the Department of Chemistry & Biochemistry.

Restrictions: Enrollment is limited to Doctoral level students.

Attributes: Doctoral

CHM 887 Graduate Colloquium (1 credit)

This course will highlight and help students develop the skills needed to be successful graduate school. We will discuss many components of the graduate school, such as (but not limited to) reading and critiquing papers, writing papers and grants, getting along with lab mates, and being an effective instructor. We will go over some strategies for life balance which will include having fun and learning during this process. This course will help you prepare you for the next step(s) in your career.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Doctoral

CHM 892 Non-trivial Problems in Chem (3 credits)

This course will discuss the practical aspects of solving everyday problems encountered in research in the physical and natural sciences. Students will apply knowledge from different fields of chemistry and various other scientific disciplines to solve chemical problems. Students will also learn the application of mathematical modeling and numerical fitting to quantitatively determine solutions to these problems.

Restrictions: Enrollment is limited to Doctoral or Graduate level students. Enrollment limited to students with the University Sciences Legacy attribute.

Attributes: Doctoral

CHM 897 Scientific Proposals (3 credits)

This course is designed to guide students in the development of an F31 - Kirschstein NRSA grant application. The course is heavily weighted in writing and peer assessment of grant proposals. By the end of the course, students will be expected to have completed the Specific Aims page and Research Plan sections of the F31 application. For thesis students, the application must be focused on the student's approved research prospectus and build upon current research in the student's thesis laboratory. Student's without an approved research prospectus, part-time extramural thesis students and non-thesis graduate students will develop a grant application focused on a research project of interest.

Attributes: Doctoral

CHM 899 Graduate Research (1-9 credits)

Candidates for the Doctor of Philosophy degree, specializing in chemistry, biochemistry, or pharmacognosy, are required to fulfill their research requirement under the direction of a faculty member in the department graduate program.

Restrictions: Enrollment is limited to Doctoral level students.

Attributes: Doctoral

Biochemistry M.S.

The Department of Chemistry & Biochemistry (<https://www.sju.edu/departments/chemistry/>) offers graduate programs leading to the Master of Science (M.S. thesis or non-thesis) in Biochemistry (<https://www.sju.edu/degree-programs/biochemistry-ms/>) (specialties: bioanalytical chemistry and peptide, protein, lipid and nucleic acid chemistry). These programs are designed to prepare students for careers in academic, industrial, and governmental settings. Individualized programs of study, which take advantage of modern instrumentation (<https://www.sju.edu/departments/chemistry/research/>), provide a solid foundation for independent research. Expert instructors (<https://www.sju.edu/departments/chemistry/graduate-faculty/>) bring biology and chemistry disciplines together and research opportunities link those lessons to the real world. You'll take classes on our University City campus and have the option to pursue research-based (thesis) or classroom-based (non-thesis) degrees.

Students entering the graduate program in biochemistry may have any undergraduate degree that satisfies all the prerequisites for these programs. However, in some instances the graduate program director will need to assign appropriate remedial courses to ensure that students are properly prepared for the graduate courses in their particular program. In order to help the program director evaluate an entering student's background, each student takes a series of entrance examinations in specific areas of chemistry.

Learning Goals and Outcomes

Goal 1: Achieve an in-depth understanding of important concepts pertaining to all the major areas of chemistry appropriate to the research problem being addressed and be able to apply the knowledge gained.

Goal 2: Be exposed to the laboratory procedures and chemical instrumentation necessary for the solution of the research problem being addressed and be able to use them effectively for that purpose.

Goal 3: Become aware of critical safety issues and environmental regulations.

Goal 4: Be able to use computers effectively for both scientific and nonscientific tasks.

Goal 5: Be able to explore the scientific literature using a variety of resources and communicate that information effectively.

Goal 6: Attain a level of problem-solving and critical-thinking skills appropriate to the graduate degree being sought and be able to learn independently.

Requirements

Thesis:

Code	Title	Hours
CHM 887	Graduate Colloquium	1
CHM 786	Research Ethics	1
CHM 802	Research Seminar <small>Students must participate in CHM-802 every term after their first semester until they defend their thesis work. Only 2 credits of this repeatable 1 credit course can be counted towards their degree credit requirements.</small>	2
MAT 704	Statistics for Research	3
CHM 897	Scientific Proposals	3
CHM 728	Advanced Biochemistry	3
BIO 861	Cell and Molecular Biology	3
Electives: CHM or BIO courses in the 600-800 levels <small>Elective courses must be approved by Advisor, Advisory Committee, or Program Director.</small>		3
CHM 878	Introduction to Research	1
CHM 899	Graduate Research (Minimum) <small>10 credits minimum, typically many more will be required to complete a Master's-level research project</small>	10
Total Hours		30

In addition to the above coursework, M.S. thesis students have a number of progression milestones which include:

1. Selection of Research Advisor
2. Selection of Research Committee
3. Preparing a committee approved Research Prospectus
4. Presentation of your research efforts at an external venue at least once
5. Preparing a committee approved Thesis on your original research
6. Successful Defense of your thesis work

Non Thesis:

Code	Title	Hours
CHM 887	Graduate Colloquium	1
CHM 786	Research Ethics	1
CHM 802	Research Seminar <small>Students must participate in CHM 802 every term after their first semester until they complete their didactic requirements. Only 2 credits of this repeatable 1 credit course can be counted towards their degree credit requirements.</small>	2
MAT 704	Statistics for Research	3
CHM 728	Advanced Biochemistry	3
BIO 861	Cell and Molecular Biology	3
Electives: CHM or BIO courses in the 600-800 levels <small>Elective courses must be approved by Program Director. Up to 3 credits of research may be applied towards this requirement.</small>		18
Total Hours		31

Biochemistry Major

The biochemistry program draws on faculty expertise from the departments of Chemistry Biochemistry and Biological Sciences, in areas including physical and analytical biochemistry, enzymology, cell biology, microbiology, immunology, and genetics. Students begin with a sound preparation in basic biology and chemistry during the first two years, supported by physics and mathematics. The third and fourth years involve, besides biochemistry itself, physical and analytical chemistry, molecular and cell biology, and genetics, as well as electives chosen by the student from an approved list of biology and chemistry courses to meet his/her particular interests. Students also have ample opportunities to pursue undergraduate research in biochemistry. Undergraduate study in biochemistry at the University provides a solid background for advanced training in genetics, molecular biology, physiology, cell biology and immunology, besides graduate study in biochemistry as well as an excellent preparation for medicine or any of the other health professions. Students in the biochemistry program also learn the experimental techniques that prepare them for technical positions in biomedical research in one of the growing number of industries involved in biotechnology. From cancer research to gene splicing to photosynthetic capture of solar energy, biochemistry leads the way with new ideas.

Learning Goals and Outcomes

1. Fundamental Knowledge and Understanding:

Students will demonstrate a good understanding of the basic concepts pertaining to all the major sub-disciplines of chemistry (analytical, biochemistry, inorganic, organic and physical).

2. Fundamental Skills:

Students will demonstrate their understanding of basic experimental techniques, knowledge of instrumentation and safety issues in the laboratory in all areas of chemistry.

3. Problem-Solving, Critical Thinking, and Application of Knowledge:

Students will develop critical thinking skills and apply their knowledge to solve problems

4. Scientific Communication Skills:

Students will be able to analyze and communicate scientific information effectively both in oral and written formats.

5. Scientific Information Literacy Skills:

Students will be able to learn independently, to explore the scientific literature using a variety of resources, and communicate that information.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive

3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

Biochemistry Minor

Learning Goals and Outcomes

Goal 1: Students will develop an understanding of the theoretical methods and models that biochemists use to understand the properties and behavior of matter.

Objective 1.1: Students will gain an understanding of the key concepts fundamental to biochemistry, including, structure, metabolism, and nucleic acid chemistry.

Objective 1.2: Students will predict the behavior of a new substance based on the known behavior of related compounds.

Objective 1.3: Students will apply appropriate theoretical models to explain experimental observations.

Objective 1.4: Students will assess experimental data critically.

Goal 2: Students will gain authentic hands-on experience with the experimental methods used by chemists.

Objective 2.1: Students will use contemporary computer software to study problems in chemistry and present results properly and accurately using figures, graphs, and tables.

Objective 2.2: Students will store, handle, and use chemicals safely and responsibly.

Objective 2.3: Students will assess experimental data critically.

Objective 2.4: Students will apply appropriate theoretical models to explain experimental observations.

Objective 2.5: Students will use accepted laboratory record-keeping methods to record their experimental data.

Chemistry M.S.

The Department of Chemistry & Biochemistry (<https://www.sju.edu/departments/chemistry/>) offers graduate programs leading to the

Master of Science (M.S. thesis or non-thesis) in Chemistry (<https://www.sju.edu/degree-programs/chemistry-ms/>) (specialties: analytical, computational, medicinal, organic, and physical chemistry). These programs are designed to prepare students for careers in academic, industrial, and governmental settings. Individualized programs of study, which take advantage of modern instrumentation (<https://www.sju.edu/departments/chemistry/research/>), provide a solid foundation for independent research.

The Master of Science in Chemistry program at Saint Joseph's University is the ideal place to study the latest innovations in chemistry alongside top program faculty (<https://www.sju.edu/departments/chemistry/graduate-faculty/>). In this program, you'll gain skills and knowledge in modern chemistry that will prepare you for growing careers in computational chemistry, drug design, pharmacognosy and more. You'll also have the opportunity to conduct original, pioneering research in our robust research labs, including in the West Center for Computational Chemistry and Drug Design (<https://www.sju.edu/research/facilities-labs/west-center/>). You'll take classes on our University City campus and have the option to pursue research-based (thesis) or classroom-based (non-thesis) degrees.

Students entering the graduate program in chemistry may have any undergraduate degree that satisfies all the prerequisites for these programs. However, in some instances the graduate program director will need to assign appropriate remedial courses to ensure that students are properly prepared for the graduate courses in their particular program. In order to help the program director evaluate an entering student's background, each student takes a series of entrance examinations in specific areas of chemistry.

Learning Goals and Outcomes

Goal 1: Achieve an in-depth understanding of important concepts pertaining to all the major areas of chemistry appropriate to the research problem being addressed and be able to apply the knowledge gained.

Goal 2: Be exposed to the laboratory procedures and chemical instrumentation necessary for the solution of the research problem being addressed and be able to use them effectively for that purpose.

Goal 3: Become aware of critical safety issues and environmental regulations.

Goal 4: Be able to use computers effectively for both scientific and nonscientific tasks.

Goal 5: Be able to explore the scientific literature using a variety of resources and communicate that information effectively.

Goal 6: Attain a level of problem-solving and critical-thinking skills appropriate to the graduate degree being sought and be able to learn independently.

Requirements

Thesis:

Code	Title	Hours
CHM 887	Graduate Colloquium	1
CHM 786	Research Ethics	1
CHM 802	Research Seminar	2

Students must participate in CHM-802 every term after their first semester until they defend their thesis work. Only 2 credits of this repeatable 1 credit course can be counted towards their degree credit requirements.

MAT 704	Statistics for Research	3
CHM 897	Scientific Proposals	3
Electives: CHM courses in the 600-800 levels <small>Elective courses must be approved by Advisor, Advisory Committee, or Program Director.</small>		9
CHM 878	Introduction to Research	1
CHM 899	Graduate Research (Minimum) <small>10 credits minimum, typically many more will be required to complete a Master's-level research project</small>	10
Total Hours		30

In addition to the above coursework, M.S. thesis students have a number of progression milestones which include:

1. Selection of Research Advisor
2. Selection of Research Committee
3. Preparing a committee approved Research Prospectus
4. Presentation of your research efforts at an external venue at least once
5. Preparing a committee approved Thesis on your original research
6. Successful Defense of your thesis work

Non-Thesis:

Code	Title	Hours
CHM 887	Graduate Colloquium	1
CHM 786	Research Ethics	1
CHM 802	Research Seminar <small>Students must participate in CHM-802 every term after their first semester until they complete their didactic work. Only 2 credits of this repeatable 1 credit course can be counted towards their degree credit requirements.</small>	2
MAT 704	Statistics for Research	3
Electives: CHM courses in the 600-800 levels <small>Elective courses must be approved by Program Director. Up to 3 credits of graduate research may be applied towards this requirement.</small>		24
Total Hours		31

Chemistry Major

A student who is majoring in chemistry at Saint Joseph's University is introduced to all of the major sub-disciplines: analytical chemistry, biochemistry, inorganic chemistry, organic chemistry, and physical chemistry. An important objective of the program is to develop in students the ability to solve problems by employing the techniques of the various sub-disciplines of chemistry. Throughout the program, emphasis is placed on chemistry as a laboratory science. Consequently, a student majoring in chemistry learns not only the basic theories of chemistry, but also how to use experimental techniques to solve chemical problems. Students hone their experimental skills through hands-on experience on modern research-grade instrumentation in our laboratory courses taught by faculty. In addition, chemistry majors are able to engage in faculty-directed independent research projects in the traditional sub-disciplines of chemistry and environmental chemistry during the academic year and/or in the summer. Students often have the opportunity to present the results of their research at local, regional, and national scientific meetings as well as co-author publications with graduate students and faculty. The curriculum for the chemistry major is designed to prepare students for continuing their educations in graduate and professional schools such as medicine, law, or business as well as employment in the chemical and pharmaceutical industries and government laboratories.

Learning Goals and Outcomes

Goal 1: Students will develop an understanding of the theoretical methods and models that chemists use to understand the properties and behavior of matter.

Outcome 1.1: Students will demonstrate a mastery of the key concepts in the five major subdisciplines of chemistry: analytical chemistry, biochemistry, inorganic chemistry, organic chemistry, and physical chemistry.

Outcome 1.2: Students will apply appropriate theoretical models to explain experimental observations.

Goal 2: Students will employ the experimental methods used by chemists.

Outcome 2.1: Students will properly employ the instruments that are used to study problems in chemistry. The students will correctly interpret the data that they obtain from these instruments.

Outcome 2.2: Students will store, handle, and use chemicals safely and responsibly.

Goal 3: Students will effectively communicate scientific information.

Outcome 3.1: Students will present results from chemical investigations and the chemical literature both orally and in writing.

Outcome 3.2: Students will search and properly cite the chemical literature for published work relevant to a problem of contemporary interest.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

¹

Overlay requirements are part of the 120 credit requirements

Select one from the following:		
CHM 400	Chemistry of the Earth	3
CHM 410	Biophysical Chemistry	3
CHM 420	Atmospheric Environmental Chem	3
CHM 430	Mechanisms in Organic Chem	3
CHM 435	Tech Applications of Chemistry	3
CHM 440	Organometallic Chemistry	3
CHM 460	Aqueous Environmental Chem	3
CHM 480	Inorganic Biochemistry	3
CHM 490	Spectroscopy	3

Enrollment in CHM 390 , is required each semester for junior and senior chemistry majors. In order to fulfill the requirements for an ACS certified degree, students must also take CHM 493 and CHM 494

Chemistry/Secondary Education Secondary Education Double Major

Requirements for the B.A. in Chemistry In order to become certified to teach at the secondary education level (grades 7-12), students must complete a total of five Education and three Special Education courses, as well as student teaching. For further details, see the Teacher Education section of the catalog. Students interested in the dual major program should speak to their academic advisors and to Chair of the Department of Chemistry as early in their academic careers as possible.

Total Hours		12

Pharmaceutical Chemistry Minor

Learning Goals and Outcomes

Goal 1: Students will develop an understanding of the theoretical methods and models that chemists use to understand the properties and behavior of matter.

Objective 1.1: Students will gain an understanding of the key concepts fundamental to Pharmaceutical Chemistry, such as instrumental analysis and medicinal chemistry.

Objective 1.2: Students will predict the behavior of a new substance based on the known behavior of related compounds.

Objective 1.3: Students will apply appropriate theoretical models to explain experimental observations.

Objective 1.4: Students will assess experimental data critically.

Goal 2: Students will gain authentic hands-on experience with the experimental methods used by chemists.

Objective 2.1: Students will use contemporary computer software to study problems in chemistry and present results properly and accurately using figures, graphs, and tables.

Objective 2.2: Students will store, handle, and use chemicals safely and responsibly.

Objective 2.3: Students will assess experimental data critically.

Objective 2.4: Students will apply appropriate theoretical models to explain experimental observations.

Objective 2.5: Students will use accepted laboratory record-keeping methods to record their experimental data.

Requirements

Code	Title	Hours
CHM 120 & 120L	General Chemistry I and General Chemistry Lab I	4
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II	4
CHM 210 & 210L	Organic Chemistry I and Organic Chemistry Lab I	4
CHM 215 & 215L	Organic Chemistry II and Organic Chemistry Lab II	4
CHM 330 & 330L	Instrumental Analysis and Instrumental Analysis Lab	5
One of the following:		3
CHM 411	Medicinal Chemistry	
CHM 414	Structure-Activity Relationships	
CHM 448	Computer-Aided Drug Design	
Total Hours		24

Classical Studies

Mission

The Classical Studies Program aims to be a model for visionary, interdisciplinary thinking, offering courses that serve the needs of multiple academic departments as well as the new General Education Program. The mission of the Classical Studies Program is to offer courses in ancient languages including Greek, Latin and Hebrew, biblical texts, and ancient history. We offer a major in Classical Studies in two concentrations. The Classical Languages and Literatures concentration will combine courses in intermediate/upper level Latin and Greek language and literature, Classical literature in translation, Hebrew language, Bible and religious studies, ancient history of the Mediterranean and Near East, and ancient material culture. As such, it will prepare students for secondary school teaching in Latin but it will also better prepare students for graduate study in Classical Studies and Classical Archaeology. A second concentration in Ancient Cultures is interdisciplinary and flexible to allow specialization in a variety of areas that complement existing programs (e.g., Classical Studies, Ancient Near East, Bible, Ancient History, Archaeology). We also offer minors in Classical Studies and Ancient Cultures. Our courses in ancient language, literature, and civilization complement courses in other disciplines so that students may combine their Classical Studies major with a second major in English, fine and performing arts, history, languages, psychology, theology, philosophy, and elementary education.

The Classical Studies Program offers courses from the elementary to advanced levels of Latin and Greek language and literature. The program serves its majors and minors by offering a full range of advanced level Latin and Greek courses covering the works of major Latin and Greek authors and literary genres. These courses feature comprehensive

exploration of Greek and Latin language and of classical society and culture and are designed to prepare majors and minors for graduate study in Classics. Our elementary and intermediate level Latin and Greek courses may be taken as prerequisite courses for advanced work in the languages, and they may also be taken to fulfill the non-native language general education program requirement. All Latin and Greek courses enable students to explore a wide variety of supplementary materials that focus upon mythology, religion, literacy and education, and political and social history.

We also offer a wide range of courses in ancient culture and civilization that focus on the literature, history, and material culture of the ancient world. We offer two Honors courses that focus on Greece and Rome: Sexuality and Gender in the Ancient World and the team-taught Society, Democracy, Republic. Knowledge of Greek and Latin are not required for any of these civilization courses, which may be taken to fulfill requirements for the major or minor, to fulfill the Art/Literature, Diversity, Writing Intensive, and Ethics Intensive areas of the GEP, or as free electives. These courses are interdisciplinary and stress connections with other disciplines such as history, literature, philosophy, theology, gender studies, and the social and natural sciences.

Requirements for Departmental Honors

To receive College Honors credit, students undertake two consecutive semesters of course-based research and study that culminates in a senior thesis. For students in the University Honors program, these two courses may be counted toward the eight course Honors requirement. To be eligible for College Honors, a student must have a 3.5 GPA. If you are interested in completing the College Honors project during your senior year, please be in touch with the department chair early in the spring semester of your junior year. Specific requirements for the College Honors thesis may be found under Honors Program.

Programs

Undergraduate Minors

- Ancient Cultures (p. 122)
- Classical Studies (p. 122)

Courses

CLA 170 Special Topics in Classics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

CLA 201 Love, Sex, Conqst: Classic Myth (3 credits)

Study and interpretation of the sources, nature, and function of Greek and Roman mythology, including its major story patterns, divine and human figures, and recurrent themes; exploration of the significance and uses of mythology and mythic symbolism; understanding and appreciation of the continuing significance of classical mythology in literature, the arts, and modern popular culture.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 202 Classical Epic: Gods & Heroes (3 credits)

We will engage in reading, discussion and analysis of the Greek epic poems of Homer (Iliad and Odyssey), Hesiod (Works and Days), and the Roman epic of Virgil (Aeneid). We will consider important questions and topics arising from a reading of Homer, such as the identity of the poet and his society, his depiction of Late Bronze Age "heroic" values, the "oral" and "formular" nature of Homeric language, Homeric theology, Mycenaean civilization and the historical/archaeological evidence for the Trojan War. We will then consider Hesiod's response to Homer's warrior society and values in his Works and Days, and Virgil's reshaping of Homeric epic conventions and promotion of Augustan policy and ideals in his Aeneid.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 203 Life & Death on Ancient Stage (3 credits)

This course features reading in English of several original tragedies of Aeschylus, Sophocles, and Euripides. Students discuss the nature and character of the gods in these plays as well as the interactions and relationships between human and divine characters. The class also evaluates the often expressed idea that the texts of Greek tragedy and comedy reflect an Athenian society in crisis. The class will explore how various forms of upheaval in politics, education, religion, and domestic life are reflected in Athenian drama, and also how the Athenian playwrights may be commenting on these issues. Another significant topic of examination is the tendency of Athenian tragedy to feature characters that rebel against or subvert traditional Athenian gender roles. We discuss in each case what these reversals reveal about the characters and what consequences arise from these reversals. In order to assist students in visualizing the dramas, the instructor will show images from ancient Greek theatres at Athens and Epidauros and scenes from the famous National Theatre of Great Britain production of Aeschylus' Oresteia, (directed by Peter Hall, with actors performing in masks) and the equally famous Kennedy Center production of Euripides' Medea.

Attributes: GEP Art/Literature, Undergraduate

CLA 204 Comedy: Ancient and Modern (3 credits)

This course features reading in English of several original comedies of Aristophanes and Plautus. The class explores the "Old Comedy" of Aristophanes with its topical satire and also evaluates the often expressed idea that the texts of Greek tragedy and comedy reflect an Athenian society in crisis. The class will consider how various forms of upheaval in politics, education, religion, and domestic life are reflected in Athenian drama, and also how Aristophanes may be commenting on these issues. We will then study the development of comedy at Rome and its debt to Greek "New Comedy," its staging and performance, and its conventional themes and stock characters.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 206 Sports and Spectacles in Clas (3 credits)

The course draws on historical sources and material culture to investigate the genesis, evolution, and social importance of athletics (track and field events, combat sports, and equestrian competitions) and public spectacles (gladiatorial combats, chariot races, and reenactments of battles) in ancient Greece and Rome, respectively. Topics explored include: the history of the ancient Olympics and other Crown Games; the importance of religion, socio-economic status, and gender in ancient sports; the relation between politics and spectacles in ancient Rome; the ethical protocols of Greek athletics; and the role of ancient sports in the history of the modern Olympic Games.

Prerequisites: PHL 154

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

CLA 270 Special Topics in Classics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

CLA 301 Mystery&Monument:Ancnt Greece (3 credits)

This course examines the material culture remains of various cities prominent in the history of Greece. Knossos, the main city of the island of Crete, Troy, and Mycenae are among the sites studied for their importance in the Bronze Age (3000-1100 BCE). After a detailed study of Greek architecture and the evolution of key building types such as the temple, the stoa, and the theater, students explore the material remains of Olympia, Delphi, and Athens. The myths associated with these cities are also included.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 302 Mystery&Monument:Ancient Rome (3 credits)

An introduction to the art and archaeology of Roman Italy, which will explore through digital images the major surviving monuments of Rome and its environs, of the Etruscans, and of other famous sites in Italy.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 303 Pompeii & Herculaneum (3 credits)

This course examines the archaeological evidence of the ancient Roman towns of Pompeii and Herculaneum, and also literary and epigraphical evidence from the Roman world, to bring to light various aspects of daily life in the Roman empire in the first century AD, including politics, religion, art, housing, entertainment, and industry.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 304 Etruscan Art and Archaeology (3 credits)

At one time the masters of the Italian archipelago, the Etruscans have suffered at the pens of historians both ancient and modern; in redressing the record, archaeology has opened as many problems as it has solved. The Etruscans' non-Indo-European language, wealth and technology set them apart from their Italic and Greek neighbors; though Romans adopted Etruscan religious doctrine and material culture, they ultimately conquered and eliminated this unique culture. This course examines the ancient written sources and the latest archaeological discoveries, from painted tombs and bronze armor to DNA, to identify the character of Etruscan civilization from 1000 BC to the days of Augustus, as well as its modern heritage. "Hands-on" visits to the world-class Etruscan collection in the University of Pennsylvania Museum will supplement illustrated lectures.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 305 Cleopatra Thrhg Anc & Mod Eyes (3 credits)

Cleopatra has fascinated the world for more than two millennia. The last pharaoh of Egypt was also the first of its Ptolemaic rulers to speak the Egyptian language. Cleopatra was a charismatic woman, who directed her efforts toward protecting and enriching her family and subjects. Her powerful personality and erotic dramas left a rich legacy for scholars, poets, and artists down to the present day. The course will examine the Hellenistic period and the beginning of the Roman domination of the eastern Mediterranean world, placing emphasis on the historical career of Cleopatra as a leader and her relationship with two of Rome's most influential politicians: Julius Caesar and Marc Antony. We will read ancient sources on Cleopatra, the Ptolemies, her Roman lovers, the Battle of Actium and its aftermath, and the consolidation of power by Octavian/Augustus. We will also analyze the evidence of ancient art and architecture, inscriptions, and archaeological contexts with particular emphasis on Egyptian culture. The course will also explore the diverse reception of Cleopatra's image in modern times, in particular Shakespeare, European painting, cinema (the 1934 and 1963 Cleopatras), and television (HBO Rome).

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 306 Ancient Medicine (3 credits)

After a brief look at medicine in Egypt and the ancient Near East, this course will examine medicine in the Greek and Roman world. We will read and analyze ancient medical texts, principally from the Hippocratic Corpus and the writings of Galen, and literary and philosophical texts contemporary with them. We will attempt to understand the cultural contexts of ancient medicine, the thought and practices of ancient physicians, and the relationship between Greco-Roman medicine and modern traditions that derive from it.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 307 Ancient Greece & Rome in Film (3 credits)

This course examines various films set in the classical world or inspired by classical themes. It focuses on the relation of these films to ancient literary sources and traces the reasons for the commercial success of the genre in the 1950's and early 1960's, and its rebirth at the dawn of the twenty-first century. The course investigates the uses and abuses of classical antiquity, such as how faithfully it is portrayed on the big screen and how modern concerns (about e.g., politics, ethnicity, morality, religion, gender, sexuality, and cinema itself) are dressed into an ancient costume. Students will read secondary literature as well as a variety of ancient sources in English translation. Students will be required to watch the films prior to class meetings, since only a few, representative scenes will be shown in class; these scenes will form part of the in-class discussion.

Prerequisites: ENG 101

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

CLA 320 Golden Age of Rome (3 credits)

An interdisciplinary approach to the most interesting and important period of Roman history: the beginning of the Principate under Emperor Augustus. This course will include a thorough study of the history, major literature and art/architecture of the period.

Attributes: Ancient Studies Course, GEP Art/Literature, Undergraduate

CLA 321 Anc World Sexuality & Gender (3 credits)

A study of the ancient Greek and Roman cultural constructions of gender through reading of legal, philosophical, medical, historical, religious, and literary works. We will examine the connections between the ancient ideology of gender and the legal, social, religious, and economic roles of women in Greek and Roman cultures. We will also compare this ancient ideology of gender with conceptions of masculinity and femininity in modern American culture.

Attributes: Ancient Studies Course, Diversity Course, Gender Studies Course, GEP Art/Literature, Undergraduate

CLA 370 Special Topics in Classics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

CLA 470 Topics in Classics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

CLA 493 Ind. Research in Classics (3 credits)

The student will study a Greek or Latin author whose works are not treated in the usual sequence of courses. Or the student may undertake a research project in the Classical field that is acceptable to the Department.

Attributes: Ancient Studies Course, Undergraduate

CLA 494 Ind. Research in Classics (3 credits)

The student will study a Greek or Latin author whose works are not treated in the usual sequence of courses. Or the student may undertake a research project in the Classical field that is acceptable to the Department.

Attributes: Ancient Studies Course, Undergraduate

Ancient Cultures Minor Requirements

With the approval of the Director of the Classical Studies Program, students may elect a minor in Ancient Cultures by taking any 6 ancient studies courses in CLA, LAT, GRK, HIS, HON, PHL, REL, or THE courses at any level.

Classical Studies Minor Requirements

With the approval of the Director of the Classical Studies Program, students may elect a minor in Classical Studies by taking a minimum of 2 LAT courses at any level, 2 CLA courses at any level, and 2 additional ancient studies courses (CLA, LAT, GRK, HIS, HON, PHL, REL, or THE) at any level.

Communication & Media Studies Faculty

Well respected in the media industry, the faculty members in Saint Joseph's University's Communications and Media Studies Department bring a wide range of applicable experience from previously held high-level positions in film, journalism, media and more. Above all, the faculty are dedicated to helping students reach their objectives in communications and media and go above and beyond to help them achieve academic and career success.

Department of Communication and Media Studies Faculty & Staff

Programs

Undergraduate Major

- Communication Studies (p. 125)

Undergraduate Minor

- Communication Studies (p. 127)

Courses

COM 100 Introduction to Communication (3 credits)

Focuses on factors and processes involved in interpersonal communication: source and receiver variables, verbal and nonverbal messages, and strategic interaction. Prepares students to argue policy topics and make short speeches.

COM 101 Communication and Public Life (3 credits)

Students explore the relationships between media and communication in public and private settings, including culture industries, social and civic institutions and professions. The course also examines how technology shapes media and communication practices and processes.

Attributes: Undergraduate

COM 150 First Year Seminar (3 credits)

First-Year seminar course in Communications.

Attributes: First-Year Seminar, Undergraduate

COM 170 Communications Special Topics (1-4 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

COM 175 My Digital Life (3 credits)

We live in digital media, not with it. The question is no longer whether digital media is good or bad for us, but how we make sense of our immersion in social media, streaming and constant connection. How does it impact who we are, who we have been and who we will become - as individuals and as a society? This course tackles myriad issues related to our digital lives, from addiction and attention to free speech and the "counterfeit self." By the end of the course, students will be able to: explain the role of media in their lives, recognize the way digital media shape their understanding of the world, and analyze moral and ethical dilemmas that arise on our digital lives.

Attributes: Ethics Intensive, Undergraduate

COM 200 Communication Theory/Practice (3 credits)

This introduction to communication and digital media studies focuses on various ways people employ language, image, and more cinematic means for communicative purposes. Through a series of hands-on projects students learn to research and analyze contemporary issues and trends in the field of communications, with an emphasis on digital media. In doing so, students examine how communication technologies are impacting the relationship between media audiences, producers, and content.

Attributes: Undergraduate

COM 201 Ethics in Communication (3 credits)

This course explores ethical issues in the field of communications. Themes include: privacy, civic media, citizen journalism, copyright, intellectual property, cyber bullying, net neutrality, social networking, global ethics, and digital divides. Students develop skills in applied ethical decision making, democratic dialogue, and civic participation through a range of projects in both online and community settings.

Attributes: Undergraduate

COM 202 Visual Design (3 credits)

This course examines the role of aesthetic, sensory-based experience in digital environments. The course focuses on contemporary ways to understand sensory perception (especially sight, sound, and touch) and its relationship to meaning making. Students will come to understand aesthetics as a mode of complex communication intricately related to social and cultural influences. Students will apply this understanding to a variety of hands-on projects involving color, typography, photography, infographics, sound design and editing, and presentation design.

Attributes: Undergraduate

COM 203 Digital Field Methods (3 credits)

In this course, we focus on the methods, theories, and tools of field-based audiovisual production. Students will practice photography, videography, and audio recording in both field- and studio-based environment, and will learn how to edit and revise content in the Adobe Creative Suite. Working throughout the semester on these production skills rooted in rhetorical principles of audience and purpose, students will create a multimedia portfolio of work.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 204 Public Speaking (3 credits)

Course covers principles and practices of effective oral presentation. Lectures and exercises are used to enable students to develop and deliver information, demonstrations, and persuasive speeches. Emphasis placed on conceptual frameworks and specific communication skills for scientific audiences.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

COM 220 Professional and Academic Comm (3 credits)

This course provides students with the necessary skills to communicate effectively in professional and academic settings. The course emphasizes the importance of clear, concise, and persuasive communication in various contexts, including written, verbal, and non-verbal forms of communication. Students will learn how to tailor their communication style to different audiences, analyze and evaluate various forms of communication, and engage in critical thinking and problem-solving.

Attributes: Undergraduate

COM 270 Communications Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

COM 274 Black Popular Culture (3 credits)

The Association of Popular Culture has held an annual conference since 1971 and yet the subject area of Black Popular culture is relatively new. It seems, however, that W.E.B DuBois' was writing about it as early as his 1897 essay "The Problem of Amusement." We will begin our study there and trace the trajectory of the development of Black Popular culture in the United States in film, media, and fiction.

Attributes: Undergraduate

COM 275 Black Adaptation (3 credits)

This course focuses on diverse texts and theories regarding adaptation and intertextuality as they impact media. Centering adaptation theory, this course will examine the surge in adaptations, with a particular focus on Black adaptations. The course explores the ways in which texts are adapted from one medium into other media and the ways in which texts intersect and communicate with one another.

Attributes: Undergraduate

COM 290 Professional Prep Seminar (1 credit)

What can you do with a degree in Communication and Media Studies? Do you know how to search for an internship or a job? And, are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance students' knowledge about internships and careers within their major and help them build practical skills through a series of steps and events throughout the semester. This one-credit course meets once a week through the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication and networking/interviewing.

Attributes: Undergraduate

COM 371 Civic Media (3 credits)

This course engages students in questions about media, technology, sociality, and society. Students examine both theoretical and experiential foundations in order to understand the relationship between mediated communication and human communities. Those who complete this course will gain hands on experience engaging audiences and developing communities through various social media platforms.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 372 Web Design & Development (3 credits)

This course explores the principles and best practices for creating web content, ranging from introductory work in HTML to design prototypes and web typography. Students will work with several types of web content (text, image, audio, video) and consider how that content is best used in the composition of usable, accessible, and attractive web sites. Students will also learn about the structure/history of the web, typical design workflows, and potential careers in web work.

Prerequisites: (COM 200 and COM 202) or ART 190

Attributes: Undergraduate

COM 382 Global Digital Media (3 credits)

Communications study tour students will study how digital media is used outside the context of the United States, and study the role it plays in other cultures. Through travel to another country students will be able to research and experience first hand differences in digital media practices. Destination varies depending on semester. As part of this course students will produce a digital media project that reflects both their in class research and study abroad experience.

Attributes: Undergraduate

COM 400 Health Communication and Educa (3 credits)

This course introduces principles and techniques of health communication to 'inform, educate and empower people about health issues.' Our focus will include communicating about health and science to the public through media channels, health advocacy, patient information and decision aids, as well emergency and crisis communication. Students will create multiple products for group critique with the goal of developing skills and competency.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

COM 402 Advanced Web Design (3 credits)

The class will be a mixture of web design theory and practical front-end techniques. Students are expected to have experience hand-coding websites using HTML and CSS, a basic understanding of using Git, and be familiar with basic principles of design such as color and typography. Topics covered will include: usability, accessibility, Git, Javascript/jQuery, designing for content management, and using Wordpress as a CMS. By the end of this course, students should have a solid understanding of the web design industry and modern web design techniques.

Prerequisites: COM 372 and COM 200 and COM 201

Attributes: Undergraduate

COM 411 Health Literacy (3 credits)

Health literacy—or the ability to obtain, process and act on health information—is an essential patient safety and public health issue. This course provides key concepts and skills for students in health related fields to identify patients with health literacy risks; to provide clear health and medical information in oral and written formats; and to assess and modify healthcare delivery systems and environments to enhance patient access and understanding.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

COM 441 Social Media & Community Engmnt (3 credits)

Not-for-profit and community-based organizations rely on strategic digital communication to create social change. Students in this course gain in-depth knowledge of communication theories and practices while conducting research projects with local organizations through the Beautiful Social Research Collaborative. Students in the course actively participate as a member of a project team to complete projects with a non-profit partner.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 442 Non-Profit Communications (3 credits)

Not-for-profit and community-based organizations rely on strategic digital communication to create positive social change. Students will gain in-depth knowledge of communication theories and practices while conducting research projects with local organizations through the Beautiful Social Research Collaborative. Those who complete this course will know how to apply a variety of social media theories and practices to help organizations achieve their communication goals. Students in the course will actively participate as a member of a project team to complete projects with partners in the Greater Philadelphia area and, from time to time, beyond. Local travel is required.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 443 Equity by Design (3 credits)

The premise of this course is that systems of oppression, inequality, and inequity are designed – and can be redesigned. Charting a path toward equity and justice means creating spaces where power, privilege, and oppression are actively and intentionally considered. Equity-based design approaches ensure a more equitable distribution of design's benefits and burdens, meaningful participation in design decisions, and recognition of community-based, Indigenous, and diasporic design practices. Practicing asset-based community building, mutuality, reciprocity, solidarity, empathy, humility, co-creation, and power sharing are all methods to cultivate equity and justice. By the end of the course, students will apply these methods to their own work and develop understandings about how to enact equity by design.

Attributes: Diversity Course, Undergraduate

COM 444 Mindful Communication (3 credits)

In this experiential course, we combine the study of communication theory with mindfulness training. Mindfulness is about paying attention on purpose to what's happening in the present moment –without judgment. We will explore a range of research topics related to mindful communication, including attention, presence, deep listening, perspective taking, relational awareness, communication goals, conversational dynamics, and emotional intelligence. We will also examine real-world examples of mindful (and mindless) communication in relationships, school, public, and social media. With these skills, we can increase our ability to communicate effectively in each unique situation we encounter and modify unproductive communication habits.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 451 Privacy/Surv in the Dig Era (3 credits)

Based on your cell phone history researchers can predict where you will be 24 hours from now. You can download and install software onto a computer to monitor and capture everything a user does. Nearly every thing you buy is recorded in a database. Corporations track every page view and click. Your email is easily read by third parties. Target knows when a customer is pregnant. Even the post office scans and digitally images every piece of mail it sends. It is impossible to not leave a digital trace, and all of these traces are being collected. In this class we will look at how our digital lives intersect with and effect our privacy. Is privacy dead in the age of constant surveillance? Should we even care? And who benefits from all this data collection? We will look to answer these question both on a technological level, what is possible, and a critical level, what does this mean for democracy and society. We will also seek to put this knowledge into practice, understanding and using what tools and techniques citizens can employ to regain privacy both in their lives as individuals and citizens.

Prerequisites: (COM 200 and COM 201)

Attributes: Justice Ethics and the Law , Undergraduate

COM 452 Podcasting (3 credits)

Students focus on producing podcasts, from understanding form and genre to techniques in working with digital sound production. Students will learn advanced audio recording and post-processing techniques and tools, integrate music, write and revise scripts, publish and promote their work digitally, learn and practice interviewing techniques, and work collaboratively to create a cohesive series. Previous experience working with audio recording and editing will be helpful, though it is not a prerequisite.

Attributes: Undergraduate

COM 453 Advanced Design (3 credits)

In this course, students will develop a graphic design portfolio and deepen their knowledge of typography, color theory, the graphic design profession, and more. As a communications course, it emphasizes rhetorical dimensions of design, including purpose and audience. During the creative process, students will move through phases of research, planning, drafting, feedback, revision, and reflection-with an emphasis on sketching as a means of paying attention and gathering inspiration. Class projects may include branding materials, illustrations, posters, and magazine layouts for both print and digital formats. The primary goal of the course is to produce portfolio-quality work in graphic design and to build on skills and concepts covered in previous courses. Students should have at least a working knowledge of Adobe software products, including Photoshop, Illustrator, and InDesign. Qualified students may seek instructor approval

Prerequisites: (COM 202 or ART 190 or MKT 325 or CSC 341)

Attributes: Undergraduate

COM 455 Music Protest & Social Justice (3 credits)

Popular musicians use their platform to release songs, videos, and statements that reveal, condemn, and inspire action in response to perceived social, political, and military injustices. These songs, videos, and statements exist within a complex system of power, cultures, values, politics, entertainment, music, and texts. In this course, we will consider that complex system by analyzing protest and social justice songs that cover important issues, including race, civil rights, sexual orientation, war, labor, and immigration, from Slavery Spirituals to the present moment. In doing so, we will see how protest music works within social movements, fights power, encourages activism, and, perhaps, inspires change.

Attributes: Undergraduate

COM 457 Black Women Content Creators (3 credits)

Linked by race, gender, and fate, but arguably little else, how do Black women content creators write themselves into the idea of America? This course examines, exclusively, Black women's media creations to answer this question. Covering a wide array of approaches, students are positioned to effectively question notions of privilege and power driven by the intersectionalities of gender and race. Some background in Black history, culture, and/or literature is recommended, but not required.

Attributes: Undergraduate

COM 460 Health Communication Advocacy (3 credits)

This course will address the topic of health as it is enacted and defined within the discipline of communication studies. This course systematically explores and elaborates key concepts, principles, and underlying theories pertinent to public health communication campaigns and advocacy practices. Specifically, this course will provide students with conceptual and applied knowledge about communication interactions and its effects on health care, health practitioners, and patients. Topics include but are not limited to patient-provider interaction, social and cultural issues of health, mass media representations of health and healthy behaviors, and communication within health organizations.

Attributes: Undergraduate

COM 465 Bear Witness: Images/Soc Change (3 credits)

For most of us the visual experience of war comes from images. We will likely never see war first-hand so photographs, movies, video games and graphic novels help shape our collective understanding and memory of armed conflict. This course will investigate images of war from the United States, Iran, Spain, Rwanda, both World Wars, the war in Vietnam and the recent wars in Iraq and Afghanistan. We will examine photographs, films and video games and discuss the dual purpose of war images - as pieces of art and as the documentation of an event.

Attributes: Undergraduate

COM 470 Communications Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in English.

Attributes: Undergraduate

COM 473 Special Topics/ Com&Digi Media (3 credits)

This special topics course will explore a specialized area at the intersection of technology and rhetoric.

Attributes: Undergraduate

COM 475 Crime, Justice, & Media (3 credits)

This course examines media narratives of crime and justice in the United States. We will analyze and discuss how these narratives impact incarceration, sentencing, policing and criminal justice policy. We will also consider how to produce new narratives, stories of redemption, through meetings and interviews with men and women who have or are serving life-without-parole sentences in Pennsylvania prisons, their families and advocacy groups lobbying for criminal justice reform. The course includes at least one group visit to a prison, accompanied by the instructor, to talk to men serving life sentences. Media production experience is helpful, but not required.

Restrictions: Enrollment limited to students with a class of Junior or Senior.

Attributes: Diversity Course, Faith Justice Course, Justice Ethics and the Law, Undergraduate

COM 480 Senior Capstone (3 credits)

This required course provides department majors an opportunity to propose, plan, create and present a project to demonstrate what they have learned during their time at the university. The course focuses on an individual, semester-long creative and/or research project. The project scope and logistics will be negotiated between the student and instructor. The project is designed to serve as a transition from undergraduate to professional work and/or graduate school. The course includes a public presentation at the end of the semester.

Attributes: Undergraduate

COM 491 Communications Internship (1-3 credits)

An on-the-job learning experience in which students spend 12-15 hours a week over a semester, with opportunities to develop further their understanding of communications, ideally in a career field close to their own interests. Normally taken in the junior or senior years, after career interests have clarified through diverse courses in the curriculum.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 492 Independent Study (6 credits)**COM 493 Indep Research Project I (3 credits)****COM 494 Indep Research Project II (3 credits)****COM 700 Health Communication and Educ (3 credits)**

This course introduces principles and techniques of health communication to 'inform, educate and empower people about health issues.' Our focus will include communicating about health and science to the public through media channels, health advocacy, patient information and decision aids, as well emergency and crisis communication. Students will create multiple products for group critique with the goal of developing skills and competency.

COM 711 Health Literacy (3 credits)

Health literacy—or the ability to obtain, process and act on health information—is an essential patient safety and public health issue. This course provides key concepts and skills for students in health related fields to identify patients with health literacy risks; to provide clear health and medical information in oral and written formats; and to assess and modify healthcare delivery systems and environments to enhance patient access and understanding.

Communication Studies Major Program Overview

The BA in Communication Studies is a major in the College of Arts and Sciences for students interested in specializing in digital media studies as an area of expertise. The major helps students develop advanced skills in communications with an emphasis on digital media studies, including multimedia writing, video editing and production, web content strategy and design, and writing for social media platforms.

Communication Studies students acquire a solid grounding in the study of digital communications while exploring current ideas and tools that are shaping the knowledge society. A hallmark of the Communication Studies curriculum is the emphasis on both theory and practice. Not only do students study what is happening at the forefront of emerging communication technologies, they also participate. Students have access to cutting-edge resources as they make and reflect upon media and in the process acquire important skills in teamwork, innovation, design, and entrepreneurship. The major prepares students for careers in digital media including web content strategy and design, social media/ community management, and multimedia journalism.

The Department of Communication Studies is committed to excellence in teaching and learning. Faculty are dedicated to the art of thinking across media, platforms, and theories in order to create an innovative and socially responsible curriculum that goes beyond the classroom. Communication Studies students gain hands-on experience by working closely with faculty on a variety of activities.

Learning Goals and Outcomes

Goal 1: Students will gain critical awareness of the social role of media.

- Outcome 1.1:** Students will understand the history and context of the role that media has played in society.
- Outcome 1.2:** Students will be able to articulate and critique the role media has historically played, and currently plays in society.

Goal 2: Students will understand the principles and practices of effective media communication.

- Outcome 2.1:** Students will be able to identify and employ a range of effective communication strategies to navigate audience, purpose, and context.

Goal 3: Students will understand and apply human centered design approaches to communicating through digital media.

- Outcome 3.1:** Students will analyze, articulate, and understand how multiple theoretical approaches of aesthetics and design inform the way audiences act, interact, and produce meaning.
- Outcome 3.2:** Students will be able to create media objects which effectively applies these design principles for a desired rhetorical goal.

Goal 4: Student will understand the relation between media and social responsibility.

- Outcome 4.1:** Students will understand and articulate the ethical questions and principles that inform the use of digital media.
- Outcome 4.2:** Students will understand and articulate how digital media has been, and can be, employed to facilitate innovation, social change, and civic engagement.

Goal 5: Students will be able to use digital media in a way which demonstrates information literacy.

- Objective 5.1:** Students will employ digital media tools and approaches to establish the veracity and credibility of information.
- Objective 5.2:** Students will demonstrate the ability to effectively manage the ubiquitous flow of digital media information.
- Objective 5.3:** Students will be able to effectively use digital media to research, gather, and assess digital information and knowledge.

Requirements

Communication Studies Major Curriculum

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

¹
Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Communication majors must also take three courses in the College of Arts & Sciences (CAS) as part of the Integrated Learning Component (ILC) of the GEP. These courses must be outside of the major department. To fulfill the ILC requirement, students should choose three courses from the following:

Code	Title	Hours
ARH 103	Art of Africa/African Diaspora	3
ARH 104	Intro to Global Architecture	3
ARH 105	East Asian Art & Architecture	3
ARH 106	Latin American Art & Architect	3
ARH 107	Women, Gender, and Art	3
ARH 208	Modern Art & Architecture	3
ARH 209	Contemporary Art & Architect	3
ARH 212	History of Photography	3
CHN 310	Selections in Chinese Lit	3
ECN 330	Economics of Labor	3
ECN 370	Economic Development	3
ECN 375	Environmental Economics	3
ECN 475	Asian Economies	3
ECN 480	Econ of Poverty & Income Dist	3
ENG 208	Special Topics in Literature	3
ENG 211	Black Popular Culture	3
ENG 215	Passing Narratives - Black Lit	3
ENG 267	Negotiations, Writing&Conflict	3
ENG 329	Black Women Writers	3
ENG 311	21st Century Irish Literature	3
ENG 364	Stunt Journalism	3
ENG 407	20th/21st Cent. British Novel	3
FRE 322	Making our Voices Heard	3
GRM 321	Getting to Know the Germ Media	3
HIS 385	Women in America	3
HIS 386	American Environmental History	3
HIS 387	Popular Culture in the US	3
ITA 365	Italian Society and the Media	3
JPN 310	Selections in Japanese Lit I	3
LIN 200	Introduction to Linguistics	3
LIN 250	Social Media Discourse	3
MTF 191	Introduction to Film	3

MTF 192	History of Narrative Film	3
MTF 291	American Film	3
MTF 292	European Cinemas	3
MTF 293	Five Films	3
MTF 294	Non-Western World Cinemas	3
PHL 262	Freedom, Citizenship, Culture	3
PHL 302	Philosophy of Race	3
PHL 334	Ethics and Criminal Justice	3
POL 117	Intro to Political Thought	3
POL 305	Politics, Ideology, & Film	3
POL 319	Public Opinion & Media	3
POL 324	Race & Ethnic Politics in U.S.	3
POL 331	Latin American Politics	3
POL 368	Women, Gender & World Politics	3
PSY 235	Psychology of Gender	3
REL 327	Religion & Race in Phila	3
RUS 310	Selections in Russian Lit I	3
SOC 205	Ethnic & Minority Relations	3
SOC 206	Theories of Crime	3
SOC 207	Juvenile Justice	3
SOC 208	Sociology of Gender	3
SOC 252	Media & Popular Culture	3
SOC 253	Race and Social Justice	3
SOC 330	Urban Sociology	3
SOC 335	Classes and Power in US	3
SOC 355	Race, Crime & CJ	3
SOC 377	Inside-Out	3
SPA 360	Spanish in the Community	3
THE 371	Christianity and Media	3
THE 372	Technology Ethics	3

Major Requirements

All Communication majors will be assigned a departmental advisor with whom they will consult during the course of their studies and who will help them select a series of course appropriate for both their interests and future careers.

All students complete the seven Core courses and select the remaining five courses from the list of Option Courses.

Code	Title	Hours
Core Courses		
COM 200	Communication Theory/Practice	3
COM 201	Ethics in Communication	3
COM 202	Visual Design	3
COM 203	Digital Field Methods	3
COM 371	Civic Media	3
COM 372	Web Design & Development	3
COM 480	Senior Capstone	3
Option Courses		
Select five of the following:		15
COM 274	Black Popular Culture	
COM 275	Black Adaptation	
COM 382	Global Digital Media	

COM 402	Advanced Web Design	
COM 441	Social Media & Community Engmnt	
COM 442	Non-Profit Communications	
COM 443	Equity by Design	
COM 444	Mindful Communication	
COM 451	Privacy/Surv in the Dig Era	
COM 452	Podcasting	
COM 453	Advanced Design	
COM 455	Music Protest & Social Justice	
COM 457	Black Women Content Creators	
COM 460	Health Communication Advocacy	
COM 465	Bear Witness:Images/Soc Change	
COM 473	Special Topics/ Com&Digi Media ¹	
COM 475	Crime, Justice, & Media	
COM 491	Communications Internship ²	
Total Hours		36

¹

COM 473 may be repeated provided the topics are different.

²

Com 491 may be taken a second time but credits will count as a general elective.

Internship

Students who have completed both 200 and 201 and have at least junior standing are eligible to take the Internship course as one of their option courses. In order to take the Communications Internship students must be a Communications major and have a GPA of 2.5 or higher.

Independent Study

Communication Studies students with junior or senior standing and an overall GPA of 3.0 may apply for credit in an independent study program. These courses usually cover a topic not typically offered as part of the standard selection of courses, but which will enhance the student's educational objectives. At the end of the semester preceding the semester in which an independent study is sought the interested students should submit a written proposal describing, with particulars, the planned study project. The minimum requirement for such a proposal is that it include a substantial critical and/or creative project, and the name of the appropriate faculty member.

Communication Studies Minor

Learning Goals and Outcomes

Goal 1: Students will gain critical awareness of the social role of media.

Outcome 1.1: Students will understand the history and context of the role that media has played in society.

Outcome 1.2: Students will be able to articulate and critique the role media has historically played, and currently plays in society.

Goal 2: Students will understand the principles and practices of effective media communication.

Outcome 2.1: Students will be able to identify and employ a range of effective communication strategies to navigate audience, purpose, and context.

Goal 3: Students will understand and apply human centered design approaches to communicating through digital media.

Outcome 3.1: Students will analyze, articulate, and understand how multiple theoretical approaches of aesthetics and design inform the way audiences act, interact, and produce meaning.

Outcome 3.2: Students will be able to create media objects which effectively applies these design principles for a desired rhetorical goal.

Goal 4: Student will understand the relation between media and social responsibility.

Outcome 4.1: Students will understand and articulate the ethical questions and principles that inform the use of digital media.

Outcome 4.2: Students will understand and articulate how digital media has been, and can be, employed to facilitate innovation, social change, and civic engagement.

Goal 5: Students will be able to use digital media in a way which demonstrates information literacy.

Outcome 5.1: Students will employ digital media tools and approaches to establish the veracity and credibility of information.

Outcome 5.2: Students will demonstrate the ability to effectively manage the ubiquitous flow of digital media information.

Outcome 5.3: Students will be able to effectively use digital media to research, gather, and assess digital information and knowledge.

Requirements

Six courses are required to complete the minor. To gain solid grounding in the field of communications, all students will satisfy three core requirements and then select three other courses from a range of options. Students must apply to enter this Minor.

Code	Title	Hours
Core Courses		
COM 200	Communication Theory/Practice	3
COM 201	Ethics in Communication	3

MKT 325	Fundamentals of Graphic Design
MKT 341	Music Marketing
MKT 353	Sports Marketing
MKT 362	Digital Media in Sports
MKT 365	eSports
MTF 282	Screenwriting
MTF 284	Digital Filmmaking
MTF 382	Advanced Screenwriting
MTF 383	Directing for Film/TV
MTF 384	Advanced Light, Camera, Design
MTF 386	Editing & Post-Production

Total Hours **18**

Computer Science

Department Overview

The Department of Computer Science is dedicated to equipping students with the tools necessary to become analytical problem solvers. Much of what a computer scientist does involves finding ways to make computers complete useful and interesting tasks. An ability to see the large-scale structure of a problem, a measure of persistence and attention to detail, will be rewarded with the satisfaction of making something work. Few inventions have had as much impact on modern life as the computer. Many fields of human endeavor have changed, and are changing, beyond all recognition as a result of the use of computers. A degree in computer science allows you to share in the excitement of a rapidly developing field.

Classes are taught by distinguished computer science faculty who bring their applicable experience working in the field and apply that knowledge directly in the classroom. Classes are small and student-

focused, allowing for one-on-one interaction between students and faculty and close mentorship.

Faculty

The Computer Science Department's faculty and staff have been widely published in research journals related to image processing, medical imaging, computer graphics, numerical methods, social information-assisted system design and more. They are dedicated to sharing their research and knowledge with students and helping them learn the various aspects of the information technology and computer science industries to help them grow and succeed in their future careers.

Department of Computer Science Faculty & Staff (<https://www.sju.edu/departments/compsci/faculty-staff/>)

Programs

Undergraduate Majors

- Bachelor of Science in Computer Science (p. 139)
- Bachelor of Science in Information Technology (p. 143)

Undergraduate Minors

- Computer Science (p. 142)
- Information Technology (p. 145)

Graduate

- Computer Science (p. 141)
- Cybersecurity (p. 143)

Graduate Certificate

- Cybersecurity (p. 143)

4+1 Program

B.S. Component:

- Must apply to the combined program before fall of the senior year.
- Successful candidates must complete two graduate courses in their senior year with a grade of B or higher.
- Students in the program will be required to take only two CSC electives instead of 4. Although the total number of courses is reduced to 38, students will be closely monitored and advised to ensure they will still complete 120 credits upon graduation (please see Appendix B).
- Applicants must maintain an overall GPA of 3.0 or higher throughout the B.S. program.

M.S. Component (Project Based)

- A total of ten (10) graduate courses (**30 credits**) are required for graduation.
- Two (2) 500-level or 600-level breadth (elective) courses are taken during the senior year (**3 credits each**).
- The choice of breadth courses will allow students to matriculate either in the General Option or any of the Concentration Options of Web and Database Technologies or Cybersecurity.

Courses

CSC 110 Building Virtual Worlds (3 credits)

A gentle introduction to programming with user-friendly software (Alice). Students will use 3D animated interactive virtual worlds to develop an understanding of basic programming constructs. Open to all students. Computer science majors may take this course to prepare for CSC 120. This course presupposes no previous programming experience.

Attributes: Undergraduate

CSC 115 Intro to Computer Science (3 credits)

A gentle introduction to computer science. Students will be introduced to basic programming constructs in a language such as Python. Open to all students. Computer science majors may take this course to prepare for CSC 120. This course presupposes no previous programming experience.

Attributes: Undergraduate

CSC 116 Comp'l Thinking & Data Sci (3 credits)

The course aims to provide students with an understanding of the role computation can play in solving problems and to help students, regardless of their major, feel justifiably confident of their ability to write small programs that allow them to accomplish useful goals. The class uses the Python programming language.

Prerequisites: CSC 115

Attributes: Undergraduate

CSC 120 Computer Science I (4 credits)

Computer programming for beginners. Very little prior knowledge regarding how computers work is assumed. Learn how to write understandable computer programs in a programming language widely used on the Internet. Go beyond the routine skills of a computer user and learn the programming fundamentals: data, variables, selection, loops, arrays, input/output, methods and parameter passing, object and classes, abstraction. Take what is learned and write programs for use on the Internet. One hour per week of the course is a required laboratory.

Attributes: Undergraduate

CSC 121 Computer Science II (4 credits)

The course covers intermediate programming techniques emphasizing advanced object oriented techniques including inheritance, polymorphism, and interfaces. Other topics include recursion, exception handling, design patterns, simple GUI programming, and dynamic containers such as linked lists, stacks, queues, and trees.

Prerequisites: CSC 120

Attributes: Undergraduate

CSC 125 CSC I: Programming Fundamentals (3 credits)

Computer programming for beginners. Very little prior knowledge regarding how computers work is assumed. Learn how to write understandable computer programs in a programming language widely used on the Internet. Go beyond the routine skills of a computer user and learn the programming fundamentals: data, variables, selection, loops, arrays, input/output, methods and parameter passing, object and classes, abstraction. Take what is learned and write programs for use on the Internet. One hour per week of the course is a required laboratory.

Attributes: Undergraduate

CSC 126 CSC II: Intermed Prog Technique (3 credits)

The course covers intermediate programming techniques emphasizing advanced object oriented techniques including inheritance, polymorphism, and interfaces. Other topics include recursion, exception handling, design patterns, simple GUI programming, and dynamic containers such as linked lists, stacks, queues, and trees.

Attributes: Undergraduate

CSC 131 Web Design for All (3 credits)

This course will attempt to give you experience in designing Internet applications. A student finishing this course should be able to design, implement, and maintain a website using HTML, CSS, JavaScript, etc.

Attributes: Undergraduate

CSC 132 Artificial Intellig for All (3 credits)

This course will cover the fundamental concepts in artificial intelligence, machine learning and robotics. Learn about deep learning systems that mimic biological or societal models to learn and perform challenging tasks.

Attributes: Undergraduate

CSC 133 Python Programming for All (3 credits)

Programming fundamentals using the Python programming language: data, variables, selection, loops, arrays, input/output, basic graphics, functions and data visualization.

Attributes: Undergraduate

CSC 134 Databases for All (3 credits)

Learn about data, organizing data into databases. Learn how to create Entity Relationship diagrams, create databases and use SQL to find what you want. Learn about Big data and unstructured data.

Attributes: Undergraduate

CSC 135 Cybersecurity for All (3 credits)

This course introduces students with no computer science background to the basic concepts and techniques associated with cybersecurity. Specifically, the course will cover information security, network security, data privacy, smartphone security, and legal and political issues.

Attributes: Undergraduate

CSC 136 eSports Game Design (3 credits)

This course will cover the tools and techniques for designing interactive games and virtual reality simulations.

Attributes: Undergraduate

CSC 150 First Year Seminar (3 credits)

This First Year Seminar course for majors and non-majors will introduce the basics of computer programming using Python (Joy of Computing) or Alice (Computational Thinking Through 3D Animation). Through programming practice the students will gain an appreciation of computer programs and algorithm development that can be applied in many fields.

Attributes: First-Year Seminar, Undergraduate

CSC 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

CSC 196 Computer Science Elective (3 credits)**CSC 201 Data Structures (4 credits)**

The course covers fundamental data structures, algorithms for manipulating and retrieving information from these data structures, and techniques for analyzing their efficiency in terms of space and time. The distinction between an Abstract Data Type and its implementation is emphasized. Topics include lists, vectors, trees (general trees, binary search trees, and balanced trees), priority queues, hashing, graphs, and various searching and sorting algorithms.

Prerequisites: CSC 121

Attributes: Undergraduate

CSC 202 Computer Architecture (3 credits)

Overview of computer system organization, hardware, and communications. Introduction to combinational and sequential logic, arithmetic, CPU, memory, microprocessors, and interfaces. CISC vs. RISC processors. Assembly language programming, microarchitecture, and microprogramming on a variety of processors.

Prerequisites: CSC 121

Attributes: Undergraduate

CSC 240 Discrete Structures (3 credits)

Topics include finite probability space, conditional probability, Bayes' theorem, permutations and combinations, statistics and sampling distributions, the Central Limit Theorem, hypothesis testing, correlation, regression analysis, data encoding, channel capacity, the Shannon coding theorem. Data analysis projects using an appropriate statistical package will be assigned.

Prerequisites: CSC 121

Restrictions: Graduate level students may **not** enroll.

Attributes: Undergraduate

CSC 261 Principles of Programming Lang (3 credits)

The general principles underlying programming languages, including such topics as syntax and its specification, data types, data control, flow control, storage management and support for design patterns. Examples drawn from a variety of programming languages, including functional, logical and procedural languages, will be presented.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

CSC 281 Design & Analysis Algorithms (3 credits)

This course presents fundamental techniques for designing efficient computer algorithms and analyzing their running times. Topics include asymptotics, solving summations and recurrences, sorting and selection, graph algorithms (depth-first and breadth-first search, minimum spanning trees, and shortest paths), algorithm design techniques (divide-and-conquer, dynamic programming, and greedy algorithms), and introduction to NP-completeness.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 290 Career Prep Seminar (1 credit)

What can you do with a degree in Mathematics, Computer Science, Information Technology, or Actuarial Science? Do you know how to search for an internship or a job? And, are you ready to apply for a position should the opportunity arise? Have you practiced your elevator pitch? This professional development seminar will enhance students' knowledge about internships and careers within their major and help them build practical skills through a series of steps and events throughout the semester. This one-credit course meets once a week through the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication, and networking/interviewing.

Attributes: Undergraduate

CSC 310 Computer Systems (3 credits)

An overview of operating systems and the software required to integrate computer hardware into a functional system. Topics include operating systems structure, interrupt driven systems, concurrency, memory management, file systems and security, and system calls.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 315 Software Engineering (3 credits)

Principles of designing large programs, including issues of specification, documentation, design strategies, coding, testing and maintenance. Students work in small groups to design and implement a major software project.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 341 Introduction to Graphics (3 credits)

Principles of designing large programs, including issues of specification, documentation, design strategies, coding, testing and maintenance. Students work in small groups to design and implement a major software project.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 342 Computer Vision (3 credits)

Computer vision is the science of analyzing images and videos in order to recognize or model 3D objects, persons, and environments. Topics include the underlying image formation principles, extracting simple features like prominent points or lines in images, projecting a scene to a picture, tracking features and areas in images and make a mosaic, making an image-based positioning system, obtaining 3D models from two or more images, and techniques to recognize simple patterns and objects. The class includes programming exercises and hands-on work with digital cameras and laser scanners.

Prerequisites: CSC 281

Attributes: Undergraduate

CSC 343 Interactive 3D Game Developmt (3 credits)

This course will cover the tools and techniques for programming interactive games and virtual reality simulations. The focus is primarily on programming aspects, including event loops and execution threads, rendering and animation in 3D, terrain/background representation, polygonal models, texturing, collision detection and physically-based modeling, game AI, and multi-user games and networking. Although this course has a significant programming focus, other topics briefly covered will include the history of computer/video game technology, game genres and design principles, and the social impact of games.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 344 Human Computer Interaction (3 credits)

User models: conceptual, semantic and syntactic considerations; cognitive and social issues for computer systems; evaluating the interface; direct manipulation; architectures for Interaction; Students will design and implement a GUI based application.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 345 Image Data Science (3 credits)

Image Data Science is the science of analyzing images including video in order to recognize or model 3D objects, persons, and environments. Topics include the underlying image formation principles, extracting simple features like prominent points or lines in images, projecting a scene to a picture, tracking features and areas in images to make a mosaic, making an image-based positioning system, obtaining 3D models from two or more images, and techniques to recognize simple patterns and objects. The class includes programming exercises and hands-on work with C#, Python, and Google's Tensorflow machine learning framework.

Prerequisites: CSC 281

Attributes: Undergraduate

CSC 346 Introduction to Data Science (3 credits)

This course will introduce students to the various aspects of data science such as data collection and integration, exploratory data analysis, predictive modeling, descriptive modeling, data product creation, evaluation, and effective communication. The focus in the treatment of these topics will be on breadth, rather than depth, and emphasis will be placed on integration and synthesis of concepts and their application to solving problems. To make the learning contextual, real datasets from a variety of disciplines will be used. Course includes programming projects in a Python and/or R.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 347 Advanced Data Science (3 credits)

The course introduces most recent tools for performing predictive analytics, data visualization, data wrangling, statistical inference, deep machine learning, and software engineering. The main focus of the course is to introduce students to most important aspects of data science by reinforcing writing efficient code, testing, and debugging while working with large software systems. The course includes several programming projects.

Prerequisites: CSC 346

Attributes: Undergraduate

CSC 348 Advanced Machine Learning (3 credits)

The course will present machine learning algorithms for supervised and unsupervised learning with an emphasis on recent advances in deep learning with neural networks, decision trees, and various stochastic models. Application areas in data science, computer vision, natural language understanding, and engineering optimization will reinforce the covered topics. The course includes several programming projects.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 351 Database Management Systems (3 credits)

The course will cover the concepts and structures necessary to design and implement a relational database system. Topics to be covered: entity-relationship and relational data models, relational algebra, SQL, normalization, file organization, indexing, hashing, and enterprise-wide web-based applications.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 352 Data Communication & Networks (3 credits)

Topics include mathematical foundations of data communications, logical and physical organization of computer networks, the ISO and TCP/IP models, communication protocols, circuit and packet switching, the Internet, LAN/WAN, client/server communications via sockets, routing protocols, data encryption/decryption and network security issues.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 353 Internet Application Development (3 credits)

This course will attempt to give you experience in designing Internet applications. A student finishing this course should be able to design, implement, and maintain a large community or e-commerce web site. They should leave the course with an understanding of a variety of Internet protocols and markup languages, a knowledge of at least one common scripting tool, an understanding of how to implement a database back-end into a large-scale site, and the ability to critically assess the usability of both their design and the design others.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 354 Web Technologies (3 credits)

Topics include organization of Meta-Markup languages, Document Type Definitions (DTD), document validity and well-formedness, style languages, namespaces, Transformations, XML parsers, and XQuery. Course includes programming projects.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 355 Cryptography & Network Security (3 credits)

Topics include classical cryptosystems, public and symmetric cryptography, key management, digital signatures, cipher techniques, authentication and federated identity management. Course also covers concepts relating to crypto-virology, malware, viruses, Trojan horses, worms and other types of infectors as they relate to network security. Course includes programming projects.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 356 Mobile App Design (3 credits)

This course is designed for students who wish to start developing mobile applications on Android platforms, and through the process understand the concepts relating to Computer Science on a mobile platform. The course will include the basics of mobile and wireless technology with Android programming and will cover the most recent version of Android. Students will learn how to develop feature-rich Android applications using various development platforms and learn the basic concepts in Computer Science such as algorithmic thinking, abstractions, logic, flow control, and data representation, storage and manipulation. The primary language used in the course will be Java.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 357 Internet of Things (3 credits)

By 2020, the number of smartphones, tablets, and PCs in use will reach about 7.3 billion units. In contrast, the IoT (Internet of Things) will have expanded at a much faster rate, resulting in a population of about 26 billion units at that time. The IoT is the network of physical objects that contains embedded technology to communicate and sense or interact with their internal states or the external environment. In this course, students will use two of the most popular IoT platforms (Arduino and Raspberry Pi) to develop their own "things."

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 358 Big Data and Web Intelligence (3 credits)

The course explores the concepts of big data, the use of Artificial Intelligence data exploration techniques, map-reduce parallel computing paradigm, distributed file systems, NoSQL databases, and stream computing engines. The course includes programming projects on a cluster of Hadoop servers.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 359 Security in Mobile App Design (3 credits)

The course introduces students on how to implement and enforce access and data protection measures for mobile applications using data encryption standards, VPN policies, and authentication. The focus of the course is on the integration between the mobile application and remote authentication services. The course includes Android programming projects using security specific SDK's

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 360 Intro to Cloud Computing (3 credits)

Cloud Computing is concerned with the use and architecture of this model of computation. This course covers the services provided by clouds, their internal structure, and their possibilities and limitations. Topics include Infrastructure as a Service, Middleware (Platform) as a Service, Software as a Service, Service-oriented architectures, Web Services and standards, cloud security, reliability, governance, and wireless clouds.

Prerequisites: CSC 201 and CSC 310

Attributes: Undergraduate

CSC 361 Formal Language & Compiler Construction (3 credits)

Introduction to formal languages and abstract machines: finite automata and regular sets, context free grammars and pushdown automata. Syntax trees and decorated trees. Application of these ideas to the construction of compilers and other language translation software. The course will include programming projects that will illustrate the major features of compiler construction.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 362 Artificial Intelligence (3 credits)

The course covers fundamental concepts such as role of logic in reasoning, deductive proofs, and blind and informed search techniques. Additional topics may include inductive learning, genetic algorithms, decision trees, planning, natural language processing, game trees and perceptron learning.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 363 Theoretical Foundations (3 credits)

Introduction to formal models of languages and computation. Topics covered include finite automata, regular languages, context-free languages, pushdown automata, Turing machines, computability, and NP-completeness.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 364 Network Forensics (3 credits)

This course is a broad introduction to the field of Digital Forensics. It covers various fundamental topics necessary for digital forensics investigation, and a variety of hardware and software tools that are commonly used during the investigation. The course begins with foundations of electronic evidence including cybercrime laws, the 4th Amendment, compliance and requirements, collection and handling, analysis, and reporting. The course also covers fundamentals of file systems with specific details pertaining to Microsoft FAT file systems. Students will learn two important forensics techniques -file recovery and file carving-among other things. In addition, basic techniques used in Network-based digital forensics will also be covered. Finally, Anti-forensics will also be discussed. Hands-on lab activities familiarize students with several relevant investigation techniques.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 365 Intro to Security (3 credits)

Topics include fundamental concepts in confidentiality, integrity, and availability, access control methods, cryptographic concepts, physical security, malware, computer viruses, privacy-invasive software, malware detection, network security, web security, security models, software vulnerability assessment.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 366 Intro to Ethical Hacking (3 credits)

This course introduces students to the basic principles and techniques used in penetration testing, also known as Ethical Hacking. The course covers the methods used in penetration testing process and the corresponding remedial techniques while emphasizing the key factors that differentiate a malicious attacker from an ethical hacker, stressing the importance of being within legal confines. Students will develop a broad understanding of current cybersecurity problems by completing projects on the topic of Ethical Hacking.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 367 Intro Soc Net Anyls & Modlng (3 credits)

The Analysis and Modeling of Social Networks is a very hot topic in Computer Science. Considering that mobile devices, as smartphones and laptops, are physically carried by human beings, the data generated by these devices actually possesses certain social features. By analyzing the social features and modeling social networks, we are able to design better applications, in terms of the functionality and efficiency. This course will include methods for analyzing and modeling the following aspects of social networks: the small-world network models, social network search algorithms, power-laws and preferential attachment, diffusion and information propagation in social networks, community detection in social networks, models of network cascades, models of evolving social networks, links and attributes prediction. In addition, the course will introduce a set of tools for visually presenting and studying different social networks and their unique features.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 370 Topics in Computer Science (3 credits)

The course introduces students to recent theoretical or practical topics of interest in computer science. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 470 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

CSC 490 Internship (3 credits)

The course goals are: to gain first-hand experience of the daily activities of professionals in computer science and related fields, to verify an interest in a particular area of computer science, to develop and hone skills required for computer science professions, to establish contacts outside the academic community who will facilitate a career in computer science. An internship journal and a report are also required.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 492 Honors Research, Non-Thesis (3 credits)

Supervised independent research mentored by a faculty member. Students must complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean, and Honors Program Director to register.

Prerequisites: CSC 315

CSC 493 Independent Study (3 credits)

A one- or two-semester, independent research project on a topic selected by the student and a faculty research advisor, and approved by the department. The student may undertake the two-semester option to graduate with departmental honors, in which case he/she must notify the department by spring of his/her junior year. Students need to complete the application form for independent study (available in the Dean's Office), meet the GPA and other requirements, and have the approval of the Computer Science Department chair and Associate Dean in order to register.

Prerequisites: CSC 281

Attributes: Undergraduate

CSC 494 Independent Study (3 credits)

A one- or two-semester, independent research project on a topic selected by the student and a faculty research advisor, and approved by the department. The student may undertake the two-semester option to graduate with departmental honors, in which case he/she must notify the department by spring of his/her junior year. Students need to complete the application form for independent study (available in the Dean's Office), meet the GPA and other requirements, and have the approval of the Computer Science Department chair and Associate Dean in order to register.

Prerequisites: CSC 281

Attributes: Undergraduate

CSC 495 Computer Science Project (3 credits)

Students will work on a substantial application based upon their prior knowledge.

Prerequisites: CSC 201

Attributes: Undergraduate

CSC 496 Honors Thesis I (3 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the Department Chair, Associate Dean and the Honors Program Director in order to register.

Prerequisites: CSC 315

Attributes: Undergraduate

CSC 497 Honors Thesis II (3 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the Department Chair, Associate Dean and the Honors Program Director in order to register.

Prerequisites: CSC 315

Attributes: Undergraduate

CSC 500 Discrete Structures (3 credits)

Mathematics needed for Computer Science. Topics covered include: functions, relations, propositional and first order predicate logic, set theory, proofs and their construction, counting and elementary probability. The course will use a declarative language as a tool to support concrete implementations of the mathematical ideas.

Restrictions: Enrollment is limited to Graduate level students.

CSC 501 Computer Science I (3 credits)

This is an intensive, one-semester, two-course sequence intended to provide students with the necessary background in programming for the graduate program. The use of the computer to solve problems. Students will learn general principles of program design, at first by using libraries of predefined program units, and later, by constructing complete programs. Emphasis is on developing techniques for program design that lead to correct, readable and maintainable programs. Intermediate programming techniques including the use of recursion. An introduction to encapsulated data structures. Lists and list sorting will be used to introduce a discussion of algorithm efficiency.

Restrictions: Enrollment is limited to Graduate level students.

CSC 502 Computer Science II (3 credits)

This is an intensive, one-semester, two-course sequence intended to provide students with the necessary background in programming for the graduate program. The use of the computer to solve problems. Students will learn general principles of program design, at first by using libraries of predefined program units, and later, by constructing complete programs. Emphasis is on developing techniques for program design that lead to correct, readable and maintainable programs. Intermediate programming techniques including the use of recursion. An introduction to encapsulated data structures. Lists and list sorting will be used to introduce a discussion of algorithm efficiency.

Prerequisites: CSC 501 (may be taken concurrently)

Restrictions: Enrollment is limited to Graduate level students.

CSC 503 Java Programming (3 credits)

This course provides students with the necessary background in programming for the graduate program. Students will learn general principles of program design at first by using libraries of predefined program units, and later by constructing complete programs. Intermediate programming techniques including the use of recursion are covered. An introduction to encapsulated data structures and algorithm efficiency.

Restrictions: Graduate level students may **not** enroll.

CSC 549 Computing Essentials (3 credits)

This course provides students, who have minimal or no prior knowledge of computational environments, with an understanding of modern computers and operating systems. Students will also learn general principles of programming design in an appropriate computational environment such as Python. Emphasis is on developing techniques for program design that lead to correct and secure programs.

Restrictions: Enrollment is limited to Graduate level students.

CSC 550 Object Oriented Design & Data Structures (3 credits)

The course combines a strong emphasis on Object-Oriented Design principles and design patterns with the study of data structures. Fundamental Abstract Data Types, their implementations and techniques for analyzing their efficiency will be covered. Students will design, build, test, debug and analyze medium-size software systems and learn to use relevant tools.

Prerequisites: CSC 502

Restrictions: Enrollment is limited to Graduate level students.

CSC 551 Design and Analysis (3 credits)

Concepts of program complexity; basic approaches to complexity reduction: data structures and techniques; worst cases and expected complexity. Topics to be covered may include sorting, set manipulation, graph algorithms, matrix multiplication, and finite Fourier transforms, polynomial arithmetic, and pattern matching.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 552 Computer Architecture (3 credits)

Overview of computer system organization, hardware components, and communications. Introduction to Boolean algebra, combinational and sequential logic, arithmetic, the CPU, memory, microprocessors, and interfaces. CISC vs. RISC processors. Practical assembly language programming will be the emphasis with an introduction to micro architecture and microprogramming on a variety of processors.

Prerequisites: CSC 501

Restrictions: Enrollment is limited to Graduate level students.

CSC 553 Computer Systems (3 credits)

An overview of the software required to integrate computer hardware into a functional system. The following topics are covered. Operating systems as resource managers and as virtual machines. System calls, in particular those required for process and file management; interrupt driven systems; concurrency; memory management; file systems and security.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 554 Theory of Computation (3 credits)

Formal languages, formal grammars, abstract machines; models of computation (e.g. Turing machines); computational complexity (NP completeness); undecideability and uncomputability.

Prerequisites: CSC 500

Restrictions: Enrollment is limited to Graduate level students.

CSC 610 Software Engineering (3 credits)

The purpose of this class is to teach the process of developing software. It combines a study of methods, tools, and techniques for creating and evolving software products, with the practical skills needed to deliver high- quality software products on schedule. The methods that are studied include requirements, specification, design, implementation, testing, and maintenance. The course includes a substantial group project.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 611 Human Computer Interaction (3 credits)

User models: conceptual, semantic and syntactic considerations; cognitive and social issues for computer systems; evaluating HCI; direct manipulation; the model view controller architecture; widgets and toolkits. Students will design a GUI based application.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 612 Program Verification (3 credits)

Symbolic logic and mechanized deduction; program specification; loop invariants; the proof methods of Floyd and Hoare; parallel computations; program semantics.

Prerequisites: CSC 551

Restrictions: Enrollment is limited to Graduate level students.

CSC 613 Software testing (3 credits)

A systematic approach to software testing, in context of the software life cycle and as a branch of software engineering, building on students' prior knowledge of software engineering. Through both the breadth and depth of its coverage, the course prepares students to make an effective contribution to software testing as professional software engineers.

Prerequisites: CSC 500

Restrictions: Enrollment is limited to Graduate level students.

CSC 618 Semantic Web (3 credits)

This course covers a range of semantic web technologies, including RDF (Resource Description Framework - a model for data interchange), OWL (Web Ontology Language) and SPARQL Query Language. Students will apply course concepts to an in-depth project (using Semantic Tools) in an area of personal or professional interest. The course will allow students to build a substantial body of work and an industry-ready Graph Knowledge Engineer/Ontology Engineer portfolio.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 619 Advanced Programming Tech (3 credits)

This course thoroughly examines many of the sophisticated features of Object Oriented Programming (using Java), including interfaces, advanced graphics, string manipulation, exception handling, some data structures, file I/O techniques, multithreading, generics, string formatters and wrappers. Students demonstrate their mastery of the material through a series of graded projects and assignments that challenge at an extremely high level.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 620 Internet App. Development (3 credits)

This course will attempt to give you experience in designing Internet applications. A student finishing this course should be able to design, implement, and maintain a large community or e-commerce web site. They should leave the course with an understanding of a variety of Internet protocols and markup languages, a knowledge of at least one common scripting tool, an understanding of how to implement a database back-end into a large-scale site, and the ability to critically assess the usability of both their design and the design others.

Prerequisites: CSC 502

Restrictions: Enrollment is limited to Graduate level students.

CSC 621 Database Systems (3 credits)

This course covers the concepts and structures necessary to design and implement a database management system. Topics to be covered: data models (entity-relationship and relational), SQL, normalization, storage structures, enterprise applications and database integrity.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 622 Advanced Database Concepts (3 credits)

Topics include stored procedures, triggers, query processing and optimization, web-based enterprise data applications, transaction management, concurrency control, distributed databases, data mining and web mining. The course includes programming projects involving SQL.

Prerequisites: CSC 621

Restrictions: Enrollment is limited to Graduate level students.

CSC 623 Data Comm and Networking (3 credits)

Topics include mathematical foundations of data communications, logical and physical organization of computer networks, the ISO and TCP/IP models, communication protocols, circuit and packet switching, the Internet, LAN/WAN, client/server communications via sockets, routing protocols, data encryption/decryption and network security issues.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 626 Web Technologies (3 credits)

Topics include organization of Meta-Markup languages, Document Type Definitions (DTDs), document validity and well-formedness, style languages, namespaces, Transformations, XML parsers, Web Services, and Web Security Specifications. Course includes programming projects.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 627 Introduction to Security (3 credits)

Topics include fundamental concepts in confidentiality, integrity, and availability, access control methods, cryptographic concepts, physical security, malware, computer viruses, privacy-invasive software, malware detection, network security, web security, security models, software vulnerability assessment.

Restrictions: Enrollment is limited to Graduate level students.

CSC 628 Advanced Security (3 credits)

Topics include classical cryptosystems, public and symmetric cryptography, key management, digital signatures, cipher techniques, authentication and federated identity management. Course also covers concepts relating to cryptovirology, malware, viruses, Trojan horses, worms and other types of infectors as they relate to network security. Course includes programming projects.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 629 Mobile App Design (3 credits)

This course is designed for students who wish to start developing mobile applications on Android platforms, and through the process understand the concepts relating to Computer Science on a mobile platform. The course will include the basics of mobile and wireless technology with Android programming and will cover the most recent version of Android. Students will learn how to develop feature-rich Android applications using various development platforms and learn the basic concepts in Computer Science such as algorithmic thinking, abstractions, logic, flow control, and data representation, storage and manipulation. The primary language used in the course will be Java.

Prerequisites: CSC 550

CSC 630 Introduction to Graphics (3 credits)

The course provides an introduction to the principles of computer graphics. The emphasis will be placed on understanding how various elements that underlie computer graphics interact in the design of graphics software systems. Topics include pipeline architecture, graphics programming, 3D geometry and transformations, modeling, viewing, clipping and projection, lighting, shading and texture mapping and visibility determination. A standard graphics API will be used to reinforce concepts and the study of basic graphics algorithms. Students need some proficiency in C language and basic concepts from Linear Algebra.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 631 Computer Vision (3 credits)

Computer vision is the science of analyzing images and videos in order to recognize or model 3D objects, persons, and environments. Topics include the underlying image formation principles, extracting simple features like prominent points or lines in images, projecting a scene to a picture, tracking features and areas in images and make a mosaic, making an image-based positioning system, obtaining 3D models from two or more images, and techniques to recognize simple patterns and objects. The class includes programming exercises and hands-on work with digital cameras and laser scanners.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 632 Interactive 3D Game Development (3 credits)

This is a technology-based course that uses the latest computer games technology to teach advanced programming, mathematics, and software development. The course is ideal for students with an interest in computer games who plan to seek employment in one of the country's more profitable industries, or students looking for a career in new technologies or software development. The interactive entertainment industry in the US and throughout the world is entering a new phase. New technology platforms are forcing existing development firms to diversify. There are many aspects of game design, development, production, finance, and the distribution process.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 633 Advanced Graphics (3 credits)

The goal of this course is to expose students to advanced techniques in modeling and rendering in computer graphics and visualization.

Topics include parametric curves and surfaces, mesh representation, multiresolution modeling, mesh simplification, ray-tracing, radiosity and volume rendering (iso-rendering and direct volume rendering), anti-aliasing and animation.

Prerequisites: CSC 630

Restrictions: Enrollment is limited to Graduate level students.

CSC 634 Computational Geometry (3 credits)

The course covers design, implementation and analysis of data structures and algorithms for solving geometric problems concerning objects like points, lines, polygons in 2-dimensional space and in higher dimensions. The course emphasizes the applications of computational geometry. Topics include overview of geometric concepts, curves and surfaces, data structures for representing solid models, convex hulls, line segment intersection, multi-dimensional data structures (kd-trees, quadrees and BSP trees), and range searching, point location, triangulations and Voronoi diagrams.

Prerequisites: CSC 551

Restrictions: Enrollment is limited to Graduate level students.

CSC 635 Image Data Science (3 credits)

Image Data Science is the science of analyzing images including video in order to recognize or model 3D objects, persons, and environments. Topics include the underlying image formation principles, extracting simple features like prominent points or lines in images, projecting a scene to a picture, tracking features and areas in images to make a mosaic, making an image-based positioning system, obtaining 3D models from two or more images, and techniques to recognize simple patterns and objects. The class includes programming exercises and hands-on work with C#, Python, and Google's Tensorflow machine learning framework.

Prerequisites: CSC 551

CSC 643 Big Data and Web Intelligence (3 credits)

The course explores the concepts of big data, the use of Artificial Intelligence data exploration techniques, the map-reduce parallel computing paradigm, distributed file systems, NoSQL databases, and stream computing engines. The course includes programming projects on a cluster of Hadoop servers.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 644 Security in Mobile App Design (3 credits)

The course introduces students on how to implement and enforce access and data protection measures for mobile applications using data encryption standards, VPN policies, and authentication. The focus of the course is on the integration between the mobile application and remote authentication services. The course includes Android programming projects using security specific SDK's

Prerequisites: CSC 551

CSC 645 Intro to Ethical Hacking (3 credits)

This course introduces students to the basic principles and techniques used in penetration testing, also known as Ethical Hacking. The course covers the methods used in penetration testing process and the corresponding remedial techniques while emphasizing the key factors that differentiate a malicious attacker from an ethical hacker, stressing the importance of being within legal confines. Students will develop a broad understanding of current cybersecurity problems by completing projects on the topic of Ethical Hacking.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 647 Internet of Things (3 credits)

By 2020, the number of smartphones, tablets, and PCs in use will reach about 7.3 billion units. In contrast, the IoT (Internet of Things) will have expanded at a much faster rate, resulting in a population of about 26 billion units at that time. The IoT is the network of physical objects that contains embedded technology to communicate and sense or interact with their internal states or the external environment. In this course, students will use two of the most popular IoT platforms (Arduino and Raspberry Pi) to develop their own "things."

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 648 Distributed Computing (3 credits)

With the growth of technological expansion of computer networking, distributed systems are becoming more and more widespread. A distributed computer system consists of multiple autonomous computing devices that do not share primary memory but cooperate by sending messages over a communication network. This course systematically studies the special problems in distributed systems, including distributed control such as election and mutual exclusion, routing, data management Byzantine agreement, and deadlock handling. The course also introduces several basic parallel/distributed algorithms and typical applications in distributed shared memory, database, file systems, web applications, cloud, and block-chain.

CSC 652 Network Forensics (3 credits)

This course is a broad introduction to the field of Digital Forensics. It covers various fundamental topics necessary for digital forensics investigation, and a variety of hardware and software tools that are commonly used during the investigation. The course begins with foundations of electronic evidence including cybercrime laws, the 4th Amendment, compliance and requirements, collection and handling, analysis, and reporting. The course also covers fundamentals of file systems with specific details pertaining to Microsoft FAT file systems. Students will learn two important forensics techniques -file recovery and file carving-among other things. In addition, basic techniques used in Network-based digital forensics will also be covered. Finally, Anti-forensics will also be discussed. Hands-on lab activities familiarize students with several relevant investigation techniques.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 653 Intro to Soc Net Anlys and Mdl (3 credits)

The Analysis and Modeling of Social Networks is a very hot topic in Computer Science. Considering that mobile devices, such as smartphones and laptops, are physically carried by human beings, the data generated by these devices actually possesses certain social features. By analyzing the social features and modeling social networks, we are able to design better applications, in terms of the functionality and efficiency. This course will include methods for analyzing and modeling the following aspects of social networks: the small-world network models, social network search algorithms, power-laws and preferential attachment, diffusion and information propagation in social networks, community detection in social networks, models of network cascades, models of evolving social networks, links and attributes prediction. In addition, the course will introduce a set of tools for visually presenting and studying different social networks and their unique features.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 655 Social Network Security Issues (3 credits)

Since the arrival of the first generation of social networks in the 2000s, online social network platforms have expanded exponentially and many social network-based applications have been designed. However, the massive amount of personal information is stored and used by these platforms and applications, which inevitably causes security and privacy concerns. This course systematically studies the unique features of social networks and their data and applications, discusses the security problems and privacy leakage issues of social networks, and further introduces the cutting-edge techniques to solve those security and privacy problems.

Restrictions: Enrollment is limited to Graduate level students.

CSC 656 Info Security Mgmt Systems (3 credits)

An information security management system (ISMS) is a documented management system that consists of a set of security controls that protect the confidentiality, availability, and integrity of company/business assets from threats and vulnerabilities. The course covers the importance of an ISMS to any given organization in light of the multiple cybersecurity threats in the world today. It also explains the components of an ISMS, the methods used to create one, and complete exercises that show the relationship between technical cybersecurity skills; and, what makes those skills of value to businesses and other organizations.

Restrictions: Enrollment is limited to Graduate level students.

CSC 657 Incident Response Management (3 credits)

This course will explain the core components of creating a successful Computer Security Incident Response Plan (CSIRP) and maintaining it in response to changes at the organization. It will also detail how a well-maintained CSIRP can mitigate and offset the losses to an organization and lessen their legal liabilities in the event of a breach. The student will learn the hardware and software resources that exist to assist organizations in preventing incidents, and that collect data to properly investigate such incidents. The student will also learn how to properly execute the procedures within a CSIRP, and see how the plan will dictate information flow to the critical parties within the organization. Lastly, the program will connect Incident Response Management to an Information Security Management System.

Restrictions: Enrollment is limited to Graduate level students.

CSC 658 Applied Digital Forensics (3 credits)

The course introduces the core terminology and concepts regarding the proper preservation of digital evidence. It will explain Locard's Exchange Principle, the importance of precise chain-of-custody and detailed documentation during the data collection efforts, the importance of proper metadata preservation and the investigative use of that metadata. The course will transition to hands-on work using actual digital forensic tools. The students will collect pre-created evidence (email and file system), document their work with the tools and in their own notes. They will perform basic analyses, they will complete chain-of-custody forms, supply the logs generated by their use of the tools, and then answer questions on the evidence, their findings, and these processes over the course of the semester.

Restrictions: Enrollment is limited to Graduate level students.

CSC 659 Intro to Cloud Computing (3 credits)

Cloud Computing is concerned with the use and architecture of this model of computation. This course covers the services provided by clouds, their internal structure, and their possibilities and limitations. Topics include Infrastructure as a Service, Middleware (Platform) as a Service, Software as a Service, Service-oriented architectures, Web Services and standards, cloud security, reliability, governance, and wireless clouds.

Prerequisites: CSC 550 and CSC 553

Restrictions: Enrollment is limited to Graduate level students.

CSC 665 Intro to Cybercrime (3 credits)

The course covers the evolution of cybercrimes, and the evolution of the laws used to prosecute those who commit them. We will examine the fact-patterns of significant cybercrimes that have occurred in modern history, including notable prosecutions in hacking, illegal enterprise, and child exploitation. We will explore the (current) categories of cybercrimes and delve into the crimes that did not exist prior to the proliferation of the personal computer. We will explain the role of digital evidence in these prosecutions and we will also look closely at the laws (both at the federal and state levels) that are used to hold cybercriminals accountable.

Restrictions: Enrollment is limited to Graduate level students.

CSC 667 Info Govern, Risk & Compliance (3 credits)

This course discusses Information Governance (IG) and the policies and procedures needed within an organization to avert risk and stay compliant. The objectives of this course are to help students look at Information Governance in theory, practice, and policy. This is one of the primary drivers behind an organization's cybersecurity program and efforts is the goal of proper Information Governance.

Restrictions: Enrollment is limited to Graduate level students.

CSC 668 Cybersecurity Core Domains (3 credits)

This course is intended to orient the student on the ten core domains in the practice of cybersecurity. These domains were defined by the International Information System Security Certification Consortium, Inc. for their CISSP certification (Certified Information Systems Security Professional). The content presented in this course will offer a successful student the dual-benefit of being prepared for further study and possible certification as a CISSP, and also will provide them broad background knowledge on the technical and business needs that drive the practice of cybersecurity.

Prerequisites: CSC 656

Restrictions: Enrollment is limited to Graduate level students.

CSC 670 Topics in CS (3 credits)

The course introduces students to recent theoretical or practical topics of interest in computer science. Content and structure of the course are determined by the course supervisor. The special topics for a given semester will be announced prior to registration. With permission of the Graduate Director the course may be taken more than once.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 671 Computer Science Education (3 credits)

Candidates will learn subject-specific standards for competencies based upon the Computer Science Teachers Association (CSTA) standards. The CSTA academic standards detail a core set of learning objectives providing the foundation for a rigorous K-12 computer science curriculum. The standards introduce the foundation concepts of computer science making them accessible for all learners. Topics will include the following: Algorithms and Programming, Computing Systems, Data and Analysis, Impacts of Computing, Networks and the Internet and Pedagogy.

CSC 680 Artificial Intelligence (3 credits)

The course covers fundamental concepts such as role of logic in reasoning, deductive proofs, and blind and informed search techniques. Additional topics may include inductive learning, genetic algorithms, decision trees, planning, natural language processing, game trees and perception learning. Course includes programming projects in a suitable language.

Restrictions: Enrollment is limited to Graduate level students.

CSC 681 Programming Paradigms (3 credits)

An exploration of the relationships between computational paradigms and the computer languages that support them. The Lambda calculus and functional programming, resolution and logic based languages, machine based models and imperative languages. The impact of the computational model on program structure and language design. A mid-sized programming project will be used to illustrate the concepts.

Restrictions: Enrollment is limited to Graduate level students.

CSC 682 Numerical Algorithms (3 credits)

Exposition and analysis of numerical methods for modern computers; review of basic concepts in linear algebra; direct and interactive methods for solving linear and nonlinear problems in numerical algebra; basic problems in approximation theory, numerical differentiation and integration; numerical solutions of different equations; forward and backward error analysis of algorithms; criteria for comparing the efficiency and suitability of numerical methods.

Prerequisites: CSC 550

Restrictions: Enrollment is limited to Graduate level students.

CSC 683 Information Theory and Coding (3 credits)

Data encoding and transmission; variable length coding; the Kraft inequality for noiseless transmission channels; channel capacity; noise channels and channel capacity; the Shannon coding theorem; algebraic coding schemes.

Prerequisites: CSC 500

Restrictions: Enrollment is limited to Graduate level students.

CSC 684 Complexity of Computation (3 credits)

P and NP problems; NP-complete classes; concrete complexity and the P class of combinatorial problems; complexity reduction on graph and string problems; complexity of algebraic computations.

Prerequisites: CSC 551

Restrictions: Enrollment is limited to Graduate level students.

CSC 685 Advanced Machine Learning (3 credits)

The course will present machine learning algorithms for supervised and unsupervised learning with an emphasis on recent advances in deep learning with neural networks, decision trees, and various stochastic models. Application areas in data science, computer vision, natural language understanding, and engineering optimization will reinforce the covered topics. The course includes several programming projects.

Prerequisites: CSC 550

CSC 686 Introduction to Data Science (3 credits)

The course covers the fundamental concepts in data science including mathematical tools needed to analyze large data sets, data visualization, inferential techniques, cloud computation, and applying analytical methods to real-world business and industry data.

Prerequisites: CSC 550

CSC 687 Advanced Data Science (3 credits)

The course introduces most recent tools for performing predictive analytics, data visualization, data wrangling, statistical inference, deep machine learning, and software engineering. The main focus of the course is to introduce students to most important aspects of data science by reinforcing writing efficient code, testing, and debugging while working with large software systems. The course includes several programming projects.

Prerequisites: CSC 550

CSC 690 Computer Science Internship (3 credits)

An approved internship in advanced computer science.

CSC 791 Research Project I (3 credits)

Supervised independent research mentored by a graduate faculty member. Students must have a GPA of 3.5 and permission of the Graduate Director to enroll in this course.

Restrictions: Enrollment is limited to Graduate level students.

CSC 792 Research Project II (3 credits)

Supervised independent research mentored by a graduate faculty member. Students must have a GPA of 3.5 and permission of the Graduate Director to enroll in this course.

Restrictions: Enrollment is limited to Graduate level students.

CSC 793 Research Project III (6 credits)

Supervised independent research mentored by a graduate faculty member. Students must have a GPA of 3.5 and permission of the Graduate Director to enroll in this course.

Restrictions: Enrollment is limited to Graduate level students.

Artificial Intelligence Graduate Certificate

The certificate program is intended to provide foundational knowledge in computer science that is valuable in both the workplace for career advancement, as well as to those looking to move into graduate programs within the discipline.

Learning Goals and Outcomes Goals

The Program will produce graduates who will:

1. Adapt and evolve in complex technological environments such as those found in the workplace.
2. Be careful, precise, mature thinkers; and who will take with them, the intellectual preparation they need to apply what they have learned, to communicate it to others, and to continue their education for the rest of their lives.

Outcomes

After completing the Computer Science curriculum, students should be able to:

1. Solve problems and implement their solutions in an appropriate computational environment.
2. Apply their knowledge of computer science to solve technical problems.
3. Identify, formulate, and solve problems encountered when constructing solutions involving computer science and related fields.

4. Analyze contemporary issues related to the evolving discipline of computer science.

Requirements

Code	Title	Hours
CSC 680	Artificial Intelligence	3
CSC 631	Computer Vision	3
CSC 643	Big Data and Web Intelligence	3
CSC 685	Advanced Machine Learning	3
CSC 621	Database Systems	3
Total Hours		15

Computer Science Major

Program Overview

The program prepares students both for a professional career in the field of computing or for graduate study, if that is the student's inclination.

Learning Goals and Outcomes

Goal 1: Graduates succeed as practicing computer scientists.

Outcome 1.1: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 1.2: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 1.3: Design systems, components, or processes to meet specified requirements.

Outcome 1.4: Work in teams to create various software systems, both large and small.

Outcome 1.5: Communicate effectively, orally and in written form, individually and/or in teams.

Goal 2: Graduates adapt and evolve in complex technological environments such as those found in the workplace.

Outcome 2.1: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 2.2: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 2.3: Design systems, components, or processes to meet specified requirements.

Outcome 2.4: Work in teams to create various software systems, both large and small.

Outcome 2.5: Analyze contemporary issues related to the evolving discipline of computer science.

Outcome 2.6: Communicate effectively, orally and in written form, individually and/or in teams.

Goal 3: To provide graduates with a firm foundation in the scientific and mathematical principles that support the computing discipline.

Outcome 3.1: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 3.2: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 3.3: Design systems, components, or processes to meet specified requirements.

Goal 4: Graduates are careful, precise, mature thinkers, and take with them, the intellectual preparation they need to apply what they have learned, communicate it to others, and continue their education for the rest of their lives.

Outcome 4.1: Enter and succeed in graduate programs in computing.

Outcome 4.2: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 4.3: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 4.4: Design systems, components, or processes to meet specified requirements.

Outcome 4.5: Articulate the social, professional, ethical and legal aspects of a computing environment.

Outcome 4.6: Analyze contemporary issues related to the evolving discipline of computer science.

Outcome 4.7: Communicate effectively, orally and in written form, individually and/or in teams.

Requirements

Requirements for the Computer Science Major

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

¹

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics¹		
MAT 155 or MAT 161	Fundamentals of Calculus Calculus I	3

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Select One Sequence:		
MAT 120 & MAT 155	The Mathematics of Modeling and Fundamentals of Calculus	6
MAT 155 & MAT 162	Fundamentals of Calculus and Calculus II	7
MAT 161 & MAT 162	Calculus I and Calculus II	8
Select one of the following:		
MAT 118 or MAT 128	Introduction to Statistics Applied Statistics	3

GEP Electives

Seven courses

Major Requirements

Code	Title	Hours
Core Courses		
CSC 120	Computer Science I	4
CSC 121	Computer Science II	4
CSC 240	Discrete Structures	3
CSC 201	Data Structures	4
CSC 202	Computer Architecture	3
CSC 261	Principles of Programming Lang	3
CSC 281	Design & Analysis Algorithms	3
CSC 310	Computer Systems	3
CSC 315	Software Engineering	3
CSC 495	Computer Science Project	3
Select five including any CSC courses numbered 340 or above		15
Total Hours		48

Double Major in Computer Science Advisor

• Dr. Forouraghi

With the approval of the Department, students who wish to double major in Computer Science and another discipline shall first satisfy the Major's requirement of the Nine Required Core Courses and then take Three additional CSC elective courses.

Computer Science M.S.

Graduate Arts and Sciences

Director: Babak Forouraghi, Ph.D.

The equivalent of the following courses currently required in the undergraduate Computer Science program:

Code	Title	Hours
CSC 120	Computer Science I	4
CSC 121	Computer Science II	4

These courses use the Java programming language.

Mathematics

The equivalent of the following courses in an undergraduate Mathematics or Computer Science program.

Code	Title	Hours
CSC 240	Discrete Structures	3

1

New students will be required to take a placement examination in these subjects. Students who are deficient in these requirements must take and earn (without graduate credit) a grade of B in the appropriate courses.

Program Options

Students may choose to graduate with an:

- M.S. degree in Computer Science: General Option
- M.S. degree in Computer Science: Concentration Option

Learning Goals and Outcomes

Goal 1: Graduates succeed as practicing computer scientists.

Outcome 1.1: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 1.2: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 1.3: Design systems, components, or processes to meet specified requirements.

Outcome 1.4: Work in teams to create various software systems, both large and small.

Outcome 1.5: Communicate effectively, orally and in written form, individually and/or in teams.

Goal 2: Graduates adapt and evolve in complex technological environments such as those found in the workplace.

Outcome 2.1: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 2.2: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 2.3: Design systems, components, or processes to meet specified requirements.

Outcome 2.4: Work in teams to create various software systems, both large and small.

Outcome 2.5: Analyze contemporary issues related to the evolving discipline of computer science.

Outcome 2.6: Communicate effectively, orally and in written form, individually and/or in teams.

Goal 3: Graduates are careful, precise, mature thinkers, and take with them the intellectual preparation they need to apply what they have learned, communicate it to others, and continue their education for the rest of their lives.

Outcome 3.1: Enter and successfully complete Ph.D. programs in computing.

Outcome 3.2: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 3.3: Apply their knowledge of computer science, mathematics, and science to solve technical problems.

Outcome 3.4: Design systems, components, or processes to meet specified requirements.

Outcome 3.5: Articulate the social, professional, ethical and legal aspects of a computing environment.

Outcome 3.6: Analyze contemporary issues related to the evolving discipline of computer science.

Outcome 3.7: Communicate effectively, orally and in written form, individually and/or in teams.

Requirements

Degree Requirements for M.S. in Computer Science: General Option

A total of ten (six core and four elective) courses is the minimum required for the M.S. in Computer Science with General Option. Of these, a maximum of two courses may be for an approved research project

Code	Title	Hours
Core Courses		
Select six of the following:		18
CSC 550	Object Oriented Design & Data Structures	
CSC 551	Design and Analysis	
CSC 552	Computer Architecture	
CSC 553	Computer Systems	
CSC 554	Theory of Computation	
CSC 610	Software Engineering	
CSC 621	Database Systems	

Elective Courses

Select any four CSC courses numbered 600 and more	12
---	----

A student who receives a grade lower than a B in a core course must retake the course.

Degree Requirements for M.S. in Computer Science: Concentration Option

A total of ten (four core and six elective) courses is the minimum for obtaining an M.S. degree in Computer Science in any of the following concentrations:

- Web and Database Technologies
- Cybersecurity
- Artificial Intelligence

Students who do not need prerequisite courses take the following two required core courses during their first and second semesters, respectively:

Code	Title	Hours
Core Courses		
CSC 550	Object Oriented Design & Data Structures	3
CSC 551	Design and Analysis	3
Elective Courses		
Select two of the following:		6
CSC 552	Computer Architecture	
CSC 553	Computer Systems	
CSC 554	Theory of Computation	
CSC 610	Software Engineering	
CSC 621	Database Systems	
CSC 627	Introduction to Security	
CSC 680	Artificial Intelligence	
CSC 681	Programming Paradigms	

A student who receives a grade lower than a **B** in any core course must retake the course.

Requirements for Concentrations

Students take four courses from the same concentration plus any other two CSC courses numbered 600 and above to receive a specialized M.S. degree from that concentration:

Web and Database Technologies Concentration

Code	Title	Hours
Select four of the following plus any two CSC courses numbered 600 and above:		
CSC 620	Internet App. Development	
CSC 621	Database Systems	
CSC 622	Advanced Database Concepts	
CSC 623	Data Comm and Networking	
CSC 643	Big Data and Web Intelligence	
CSC 647	Internet of Things	

Cybersecurity Concentration

Code	Title	Hours
Select four of the following plus any two CSC courses numbered 600 and above:		
CSC 627	Introduction to Security	
CSC 628	Advanced Security	
CSC 629	Mobile App Design	

CSC 644	Security in Mobile App Design
CSC 645	Intro to Ethical Hacking
CSC 652	Network Forensics
CSC 653	Intro to Soc Net Anlys and Mdl

Artificial Intelligence Concentration

Code	Title	Hours
Select four of the following plus any two CSC courses numbered 600 and above:		
CSC 680	Artificial Intelligence	
CSC 643	Big Data and Web Intelligence	
CSC 631	Computer Vision	
CSC 686	Introduction to Data Science	
CSC 685	Advanced Machine Learning	
CSC 687	Advanced Data Science	

Computer Science Minor

With the approval of the Department, students may minor in Computer Science. Upon acceptance, the advisor will assist in selecting courses appropriate for their area of interest.

Learning Goals and Outcomes

Goal 1: Graduates will be practicing computer scientists.

Outcome 1.1: Apply their knowledge of computer science, mathematics, and science to solve technical problems in an appropriate computational environment.

Goal 2: Graduates adapt and evolve in complex technological environments such as those found in the workplace.

Outcome 2.1: Apply their knowledge of computer science, mathematics, and science to solve technical problems in an appropriate computational environment.

Outcome 2.2: Analyze contemporary issues related to the evolving discipline of computer science.

Goal 3: Graduates have a firm foundation in the scientific and mathematical principles that supports the computing discipline.

Outcome 3.1: Apply their knowledge of computer science, mathematics, and science to solve technical problems in an appropriate computational environment.

Requirements

Code	Title	Hours
CSC 120	Computer Science I	4
CSC 121	Computer Science II	4
CSC 201	Data Structures	4
Three (3) Computer Science electives numbered 202 and above.		15
Total Hours		27

Cybersecurity M.S.

Overview

The main objective of the program is to expose students to state-of-the-art concepts and techniques in the area cybersecurity in addition to providing them with the necessary theoretical and technical computational skills.

Learning Goals and Outcomes

Goal 1: Be able to pursue their Ph.D. studies in Cybersecurity or related fields.

Outcome 1.1: Identify, formulate, and solve problems encountered when constructing solutions involving cybersecurity and related fields.

Outcome 1.2: Articulate the security and legal aspects of a computing environment.

Goal 2: Succeed as practicing cybersecurity specialists.

Outcome 2.1: Analyze contemporary issues related to the evolving discipline of cybersecurity.

Outcome 2.2: Apply modern skills, techniques, and tools in their professional practice.

Requirements

The program requires completion of ten graduate courses (30 credits):

Code	Title	Hours
Core Courses		
CSC 665	Intro to Cybercrime	3
CSC 627	Introduction to Security	3
CSC 628	Advanced Security	3
CSC 644	Security in Mobile App Design	3
CSC 645	Intro to Ethical Hacking	3
Choose 5 Elective Courses		15
CSC 652	Network Forensics	
CSC 621	Database Systems	
CSC 653	Intro to Soc Net Anlys and Mdl	
CSC 655	Social Network Security Issues	
CSC 656	Info Security Mgmt Systems	
CSC 657	Incident Response Management	
CSC 658	Applied Digital Forensics	
CSC 791	Research Project I	
Total Hours		30

A student who receives a grade lower than a **B** in any core course must retake the course.

Cybersecurity Graduate Certificate

The main objective of the certificate program is to expose students to state-of-the-art concepts and techniques in the area cybersecurity.

Learning Goals and Outcomes

Goal 1: Succeed as practicing cybersecurity specialists.

Outcome 1.1: Identify, formulate, and solve problems encountered when constructing solutions involving cybersecurity and related fields.

Outcome 1.2: Articulate the security and legal aspects of a computing environment.

Goal 2: Adapt and evolve in complex technological environments such as those found in the workplace.

Outcome 2.1: Analyze contemporary issues related to the evolving discipline of cybersecurity.

Outcome 2.2: Apply modern skills, techniques, and tools in their professional practice.

Requirements

Code	Title	Hours
Core Courses		
CSC 627	Introduction to Security	3
CSC 645	Intro to Ethical Hacking	3
CSC 665	Intro to Cybercrime	3
Elective Courses		
Select any two CSC courses from below:		6
CSC 628	Advanced Security	
CSC 644	Security in Mobile App Design	
CSC 653	Intro to Soc Net Anlys and Mdl	
CSC 656	Info Security Mgmt Systems	
Total Hours		15

Information Technology Major

Learning Goals and Outcomes

Goal 1: Graduates will succeed as practicing information technologists.

Outcome 1.1: Solve business-related problems and implement their solutions in an appropriate computational environment.

Outcome 1.2: Apply their knowledge of computer science and business to develop business-related software solutions.

Outcome 1.3: Design systems, components, or processes to meet specified business requirements.

Outcome 1.4: Work in teams to create various software systems, both large and small.

Outcome 1.5: Communicate effectively, orally and in written form, individually and/or in teams.

Goal 2: Graduates will adapt and evolve in complex technological environments such as those found in the workplace.

Outcome 2.1: Solve business-related problems and implement their solutions in an appropriate computational environment.

Outcome 2.2: Apply their knowledge of computer science and business to develop business-related software solutions.

Outcome 2.3: Design systems, components, or processes to meet specified business requirements.

Outcome 2.4: Work in teams to create various software systems, both large and small.

Outcome 2.5: Analyze contemporary issues related to the evolving discipline of IT.

Outcome 2.6: Communicate effectively, orally and in written form, individually and/or in teams.

Goal 3: Graduates will have a firm foundation in the computing and business principles that support the IT discipline.

Outcome 3.1: Solve business-related problems and implement their solutions in an appropriate computational environment.

Outcome 3.2: Apply their knowledge of computer science and business to develop business-related software solutions.

Outcome 3.3: Design systems, components, or processes to meet specified business requirements.

Goal 4: Graduates are careful, precise, mature thinkers, and take with them the intellectual preparation they need to apply what they have learned, communicate it to others, and continue their education for the rest of their lives.

Outcome 4.1: Enter and succeed in graduate programs in computing, business, or information technology.

Outcome 4.2: Solve business-related problems and implement their solutions in an appropriate computational environment.

Outcome 4.3: Apply their knowledge of computer science and business to develop business-related software solutions.

Outcome 4.4: Design systems, components, or processes to meet specified business requirements.

Outcome 4.5: Articulate the social, professional, ethical and legal aspects of an IT environment.

Outcome 4.6: Analyze contemporary issues related to the evolving discipline of IT.

Outcome 4.7: Communicate effectively, orally and in written form, individually and/or in teams.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics		
MAT 155 or MAT 161	Fundamentals of Calculus Calculus I	3
Natural Science		
One semester of any lab-based natural science course (see ILC)		

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
ECN 101	Introductory Economics Micro	3
ECN 102	Introductory Economics Macro	3
Any CAS course		

GEP Electives

Six courses

Major Requirements

Code	Title	Hours
Required Core Courses		
ACC 101	Concepts of Financial Acct	3
ACC 102	Managerial Accounting	3

Total Hours		51

1

Any ACC, CSC, DSS, ECN, or FIN courses with advisor approval.

Information Technology Minor Learning Goals and Outcomes

Goal 1: Graduates will be practicing information technologists.

Objective 1.1: Apply their knowledge of information technology and business to solve technical problems in an appropriate computational environment.

Goal 2: Graduates adapt and evolve in complex technological environments such as those found in the workplace.

Objective 2.1: Apply their knowledge of information technology and business to solve technical problems in an appropriate computational environment.

Objective 2.2: Analyze contemporary issues related to the evolving discipline of information technology.

Goal 3: Graduates have a firm foundation in the computing and business principles that support the IT discipline.

Objective 3.1: Apply their knowledge of information technology and business to solve technical problems in an appropriate computational environment.

Requirements

With the approval of the Department, students may minor in Information Technology. Upon acceptance, the advisor will assist in selecting courses appropriate for their area of interest.

Code	Title	Hours
CSC 120	Computer Science I	4
CSC 121	Computer Science II	4
CSC 201	Data Structures	4
Three (3) Computer Science electives numbered 202 and above.		9
Total Hours		21

Web and Database Technologies Graduate Certificate

Learning Goals and Outcomes

The Program will produce graduates who will:

1. Adapt and evolve in complex technological environments such as those found in the workplace.
2. Be careful, precise, mature thinkers; and who will take with them, the intellectual preparation they need to apply what they have learned, to communicate it to others, and to continue their education for the rest of their lives.

After completing the Computer Science curriculum, students should be able to:

1. Solve problems and implement their solutions in an appropriate computational environment.
2. Apply their knowledge of computer science to solve technical problems.
3. Identify, formulate, and solve problems encountered when constructing solutions involving computer science and related fields.
4. Analyze contemporary issues related to the evolving discipline of computer science.

Requirements

Code	Title	Hours
CSC 620	Internet App. Development	3
CSC 621	Database Systems	3
CSC 622	Advanced Database Concepts	3
CSC 647	Internet of Things	3
CSC 629	Mobile App Design	3
Total Hours		15

1

Students without adequate programming background are required to take CSC 503: Java Programming, which will count toward one of the required five courses.

Software Development Graduate Certificate

The certificate program is intended to provide foundational knowledge in computer science that is valuable in both the workplace for career advancement, as well as to those looking to move into graduate programs within the discipline.

Learning Goals and Outcomes

Goal 1: Adapt and evolve in complex technological environments such as those found in the workplace.

Outcome 1.1: Solve problems and implement their solutions in an appropriate computational environment.

Outcome 1.2: Apply their knowledge of computer science to solve technical problems.

Goal 2: Be careful, precise, mature thinkers; and who will take with them, the intellectual preparation they need to apply what they have learned, to communicate it to others, and to continue their education for the rest of their lives.

Outcome 2.1: Identify, formulate, and solve problems encountered when constructing solutions involving computer science and related fields.

Outcome 2.2: Analyze contemporary issues related to the evolving discipline of computer science.

Criminal Justice Faculty

The Department of Sociology and Criminal Justice prides itself on excellence in teaching and on individual faculty members bringing their research interests and expertise in criminal justice into the classroom.

Faculty & Staff: Department of Sociology and Criminal Justice (<https://www.sju.edu/departments/sociology/faculty-staff/>)

Programs Undergraduate Major

- Criminal Justice (p. 152)

Undergraduate Minor

- Criminal Justice (p. 154)

Graduate

- Criminal Justice (p. 150)

Courses

CRJ 550 Research Methods and Analysis (3 credits)

The functions of concepts, hypotheses, and theories for an empirical discipline; the operationalization of theoretical variables; the principles of research design; and the problems of inference. The association between criminological theories and research methods used to study crime is explored through the utilization of a variety of related data sources. Also covered are basic quantitative techniques, relevant statistics, data interpretation, and an overview of SPSS. Required of all students unless CRJ 575 is taken.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 560 Criminological Theory (3 credits)

A systemic and critical analysis of the major theories of criminality, including an examination of both traditional and contemporary theories. Consideration will be given to conceptualizations of crime, the relationship of criminological theories to crime on the streets, and specific aspects of criminal behavior.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 565 Ethics and Criminal Justice (3 credits)

This course will address ethical issues in the criminal justice system at both the theoretical and applied levels. Typical theoretical issues addressed might include the following: the relationship between law and morality; theories of punishment; conditions for the moral and/or legal responsibility of individuals; notions of procedural justice. Typical applied ethics issues might include the following: search and seizure rules; the insanity defense and the "guilty but mentally ill" verdict; plea bargaining; capital punishment; mandatory sentencing; civil disobedience; limits on the use of deadly force.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 570 Prof Writ for Criminal Justice (3 credits)

The course is designed to develop the cognitive and technical skills of effective writing across the field of criminal justice. Primary emphasis will be given to the "craft of writing," thus learning the techniques and skills of effective professional communication in criminal justice.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 575 Adv Resrch Methds & Analysis (3 credits)

In-depth coverage of data collection including questionnaire construction, advanced quantitative techniques and statistics, interpretation and drawing inferences, comprehensive use of SPSS, function of the SJU Institutional Review Board, and research report formulation. Students will select a topic, complete the literature review, and develop a research methodology that may later be used as the initial components of the master's thesis. Prerequisite: recent coursework and present working knowledge of basic research methods. Required of students intending to complete a master's thesis via CRJ 793. May be substituted for CRJ 550 as a core course.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 600 Drugs and Society (3 credits)

Alcohol and drug use and abuse are a part of life in contemporary America. This course examines their role from the standpoints of sociology, criminology, and public health. What social factors such as gender, race, and class shape substance use? How do major social institutions such as the legal system and healthcare deal with substance use and misuse? What public policies and programs exist to regulate or reduce substance use, and how well do they work? Examples of topics discussed include why people take drugs, the various ways we respond to drug use and distribution, and the nonmedical use of prescription drugs. The course will also explore the contemporaneous issues of the opiate crisis, how the COVID-19 pandemic impacts substance use, treatment, and law enforcement, including in the context of police reforms.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 607 Multiculturalism & Justice (3 credits)

This course critically examines the experiences of underrepresented social groups in the criminal justice system through a lens of social justice and the sociological imagination. In furtherance of these goals, we will discuss: (1) the social construction of various social groups; (2) how society shapes the experiences of underrepresented social groups within the criminal justice system as professionals, offenders, and victims in a way that produces social injustices; and (3) how the criminal justice system can operate in a socially just way for all parties.

Restrictions: Enrollment is limited to Graduate level students.

Attributes: On-Line Program Course

CRJ 611 Crime Analys Using GIS Mapping (3 credits)

This course will examine the role of geographic information systems (GIS) in crime analysis by covering the basic components of a GIS and examining the use of GIS in police departments throughout the US. Special attention will be given to the use of GIS at the Philadelphia Police Department and will include techniques used to analyze crime patterns as well as a review of the way crime maps influence tactical deployment decisions. Finally, a visit to the Philadelphia Police Department's Crime Analysis Unit and/or Compstat meeting will illustrate the relationship of GIS to current crime problems in Philadelphia.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 615 Youth Cultures and Deviance (3 credits)

This course offers economic, cultural, political, and social perspectives on American youth based on sociological theory. Special attention will be paid to youth popular culture and the unique social problems facing young adults (e.g. gangs, drugs, suicide, and teen pregnancy).

Restrictions: Enrollment is limited to Graduate level students.

CRJ 616 Juvenile Justice & Delinquency (3 credits)

This course provides a contemporary overview of theoretical and programmatic issues and concerns in juvenile delinquency and the juvenile justice system, including a review of recent research. The course also focuses on a critical review of the trends in problem solving and delivery of services to this population.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 617 Mental Health & The Law (3 credits)

The purpose of this course is to acquaint criminal justice professionals with the mental health field and to serve as a primer for understanding mental health and mental health professionals. In addition, particular areas of interplay between mental health and criminal justice will be emphasized to provide a historical and up-to-date factual background.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 618 Therapeutic Strat Crim Justice (3 credits)

An examination of the application of basic counseling principles to varied criminal justice settings, from adult correctional institutions to post-release situations. Special emphasis is given to innovative methods and programs.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 619 Fnds of Addiction:CRJ Profess (3 credits)

The course is designed to meet the needs of the criminal justice professional in dealing with the human and social consequences of addiction. The course will provide an understanding of substance abuse problems and addiction in American society. It is designed to provide a framework for exploring the effects of these problems on the many aspects of American culture including: the individual, family, criminal justice system, healthcare system, and the workplace. Course content will also include a critical analysis of current and past treatment interventions.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 620 Evid Bas Prac Subt Ab/Beh Hlth (3 credits)

Increasingly the Substance Abuse/Behavioral Healthcare field is being asked to prove that it offers a valuable treatment service for the funds it receives. This course will explore "best practices" including practice guidelines, treatments that are efficacious and evidence based treatments for substance abuse/addiction. The course will look at the level of energy needed and the complexities to transport "Evidence Based Scientific Knowledge" into a "real" clinical environment.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 621 Co-Occurring Disorders (3 credits)

The widespread prevalence of individuals suffering from concurrent psychiatric and substance use disorders has been increasingly recognized within the behavioral healthcare field, with a consequent need for well-trained professionals to be proficient in dealing with these clients, as well as able to function competently in the sophisticated, multidisciplinary programs which are evolving to treat co-occurring disorders. This course will provide the requisite foundational knowledge and skills for the student who will be faced with these challenges. The focus will be on evaluation, treatment planning and delivery, case management, aftercare, and self-help recovery groups. The characteristics and unique needs of each disorder will be addressed, accompanied by an examination of the impact of substance abuse and addiction.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 628 Victimology (3 credits)

The course focuses on the contemporary concept and status of the victim, juxtaposed with their historical evolution in terms of compensation, retribution, and vengeance. Current victim assistance programs are evaluated. The definition of the victim is broadened to include currently undervalued categories. Other issues addressed are child abuse, environmental casualties, and controversies over recovered memories.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 629 Violence and Victims (3 credits)

This course is designed to explore the serious problem of violence in our society from a sociological perspective. Violence is prevalent in homes and on the streets of the United States. This course will address a variety of types of violence, its causes, consequences, and theories for prevention. Topics which will be addressed include wife abuse, rape, child abuse, gang warfare, street violence and serial murder. An emphasis will be placed on understanding the structural causes of violence such as gender, race, and social class inequality as well as the effect of pornography, the media, and drugs/alcohol on violence. Particular attention will be given to the consequences of violence for both individual victims and society as a whole.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 632 Crime and Urban Communities (3 credits)

This course examines crime and delinquency at the level of the urban neighborhood. This course takes an in-depth look at the theories and research that has emphasized the community level factors that lead to crime and delinquency, and examines the topic of what neighborhoods can do to prevent crime. The course will also consider policies that aim at alleviating neighborhood problems and reducing crime. The course has a practical component that requires students to apply what they learn in class to specific problems of crime and disorder in local communities.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 633 Federal Criminal Justice (3 credits)

This course will examine the criminal justice at the federal level. The main areas are the role of each branch of government; how agencies are funded; the major investigation, prosecution, probation, and correction elements; and individual investigative agencies including Inspector General. The course will cover the mission of and interrelationships among individual agencies.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 634 Fed Criminal Law & Prosecution (3 credits)

This covers federal criminal law and its enforcement. Major areas include an overview of federal crimes, elements of the United States Code, origin and scope of federal criminal law, and the role of federal agents in the support of prosecutions. Specific topics include mail and wire fraud, the Hobbs Act, official bribery and corruption, organizational crime, drug enforcement, money laundering, criminal civil rights violations and remedies, interference with witnesses, federal versus state prosecution, sentencing guidelines, and asset forfeiture.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 635 White Collar Crime (3 credits)

The course provides an understanding of the accounting and financial bases of embezzlement, fraud, corruption, and misapplication of funds. Legislation and regulation in government and business are examined. Consumer protection and corporate responsibility are discussed.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 636 Federal Search and Seizure (3 credits)

This course is designed to teach the law of search and seizure as it is defined and applied in federal court. Instruction will focus on the requirements of the Fourth Amendment and the proper means by which a federal agent may obtain evidence through searches and seizures. This course will address legal and evidentiary issues associated with search warrants, exceptions to the warrant requirement, warrantless searches, frequent problems that confront federal agents, as well as emerging trends in the law of search and seizure.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 637 Forensic Financial Analysis (3 credits)

This course covers the detection of illegal financial transactions. Major topics include money laundering, fraud, embezzlement, and illicit accounting practices. Students will learn data gathering and analysis techniques for financial transactions, records, legitimate businesses, illegal organizations, and individuals. The course will include preparation for trial.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 639 Org Crime:Targets & Strat (3 credits)

This course will investigate the social, economic, and political impact organized crime has on our society. We will target specific industries where organized crime has influence/control (e.g. construction, waterfront, garment, trucking, and convention centers). The course will explore criminal, civil, and administrative strategies to control and/or remove the influence of organized crime in those industries.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 640 Terrorism: Threats and Strateg (3 credits)

This course is designed to give the student an understanding of the concepts of terrorism, both domestic and international. Lecturer will address the causes and effects of terrorism as they relate to political structures from both religious and historical perspectives; noting its impact on the world today.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 641 Homeland Security (3 credits)

This course focuses on the consolidation of responsibilities and functions across agencies, at various jurisdictional levels, that have the charge of mitigating hostilities, threats, hazards, and consequences. Further, this course incorporates the pillars of robust response systems. This course is designed to develop analytical skills that will prepare students to identify, evaluate and resolve complex policy issues and initiate practical actions. Though the range of relevant issues extends from local matters to national security, this course will concentrate on preparedness strategies for state, urban and local areas.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 642 Law Enforc Intel Analysis (3 credits)

This course pursues the deliberative and cognitive activities and methodologies that surround the production of intelligence information, in support of decision-making at the strategic, tactical, and operational levels of law enforcement. Also examined are the structure and supervision of the intelligence analysis unit at various levels of law enforcement, and the role of the analyst.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 643 L.E. Intelligence:Policy & Pro (3 credits)

This course provides insights into the contemporary functions of law enforcement strategic, tactical, and operational intelligence and its influence upon crime prevention policy. The discussion will include the intelligence process in the context of intelligence unit structure and supervision, operating procedures, and resources. The course will examine how law enforcement intelligence relates to organizational relationships, planning, and decision-making.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 644 Elec Intelligence Analysis (3 credits)

This course will use the latest computer technology to train students in the use of Analyst Notebook 7, an electronic version of link analysis, telephone toll analysis and flow charts. Analyst Notebook 7 is the program currently being used by the CIA, FBI, NSA, US ARMY, INS, CUSTOMS, SECRET SERVICE, HOMELAND SECURITY, DEA, and more than 1500 other National, State and Local Law Enforcement agencies throughout the world, to combat Terrorism, Drug Smuggling, Money Laundering and Organized Crime. It is a hands-on training course and is limited to twenty-five students.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 645 Sociology of Disasters (3 credits)

This course is designed to provide the graduate student advanced knowledge and understanding of the sociological issues and concerns related to both man-made and natural disasters. The purpose is to present the current research pertaining to community resilience and the effects on individuals who witness, become victimized, or are otherwise affected by disasters. Each student will be expected to increase their capacity in both oral and written communication through their individual and group participation. The course will also improve the student's analysis of the sociological implications related to disasters.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 646 Risk Assessment (3 credits)

This course is designed to provide the graduate student advanced knowledge and understanding in the area of risk assessment and management. The focus is on the recognition of real and perceived threats, sharing information between communities and agencies, the collaboration of resources, and the management of risk. Students will examine the concepts of risk assessment, risk analysis, and the impacts of actual and suspected threats.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 647 Prob Contemporary Corrections (3 credits)

The major problems of adult corrections, including prison and jail overcrowding, population forecasting, judicial intervention in correctional operations, prison disturbances, mental health and incarceration, pretrial and post-conviction alternatives to traditional incarceration, ethics and corrections, and the death penalty. Case study materials are employed, and current and ongoing correctional issues are discussed.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 648 Con Prob Probation & Parole (3 credits)

This course is designed to analyze the current legal, managerial, and political factors which impact upon the probation and parole system. It will examine organizational innovations, caseload management techniques, and technological advances used to confront such problems.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 649 Interrogation (3 credits)

Broadly defined as "the use of human beings to collect or confirm information through overt, covert, or clandestine methodologies," human intelligence (HUMINT) gathering is an essential component in military, national security, and law enforcement contexts. This course will begin with situating HUMINT in the broader intelligence cycle and to understand the critical role of intelligence analysis. The course will then focus on the more overt form of HUMINT collection where information, intelligence, and/or admissions are elicited from targets, subjects, or suspects. In common parlance, seeking information for tactical or strategic purposes, or to lead to arrest and prosecution, is referred to as interrogation, and the interrogation tactics, techniques, and procedures from the Army Field Manual, law enforcement manuals and elsewhere will be thoroughly reviewed for their effectiveness. The course will also cover the ethical issues related to HUMINT, including torture, and introduce the emerging practice of "investigative interviewing" as an alternate model to accusatory and coercive interrogation.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 650 Victim-offender Mediation (3 credits)

The introduction of restorative justice philosophy into the traditional criminal justice system has resulted in the adoption of a number of dialogue processes, which will be the focus of this new offering. The course will explore the humanistic mediation model and the community mediation model used by many local mediation groups. The course will also cover other processes such as community sentencing circles, restorative conferencing, reparative boards and family group conferencing. Participants will not only learn the theories behind these practices, but will have an opportunity to experience them through role-plays. Resolving conflict and dealing with the aftermath of crime through dialogue is a highly valued skill in restorative justice.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 655 Inside/Out Exp Crime & Justice (3 credits)

This class is a unique opportunity to explore issues of crime and justice from inside a correctional facility, where the classes take place throughout the semester. The Inside-Out Prison Exchange Program brings together students from universities and adult students who are incarcerated to learn about and discuss topics such as the causes of crime, victims, the rationale of the criminal justice system, and restorative justice. Through the readings and dialogue, inside and outside students will be able to integrate their theoretical knowledge with lived experiences. It is through this exchange that we hope to critically analyze and challenge the current system in the U.S. that has resulted in a higher incarceration rate than other similar countries.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 656 Criminal Justice System (3 credits)

Provides a foundation and overview of the criminal justice system and process. The major components are discussed including crime, law, criminology, law enforcement, adjudication by the courts, corrections, juvenile justice, current issues and policies. This course is designed for students with only limited prior study in American criminal justice and little or no professional Criminal Justice experience in the United States. Permission of the Program Director required.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 659 Rest Justice: Theory Practice (3 credits)

Restorative justice is a new movement in the fields of victimology and criminology. Acknowledging that crime causes injury to people and communities, it insists that justice repair those injuries and that the parties are permitted to participate in that process. This course will provide the student with a strong foundation in restorative justice through the use of text, supplemental readings, videos and guest speakers. Students will also gain an understanding of how restorative justice differs from our traditional justice process.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 660 Foundations of Cybersecurity (3 credits)

This course offers cultural, scientific, and social perspectives on the use of technology in counterterrorism, specifically the impact of the Artificial Intelligence (AI) revolution on areas of intelligence and security, as well as other technologies most effective in the fight against terrorism.

Restrictions: Enrollment is limited to students with a major in Cyber Intelligence. Enrollment limited to students in the MSCRJ program. Enrollment is limited to Graduate level students.

Attributes: On-Line Program Course

CRJ 661 21st Century Policing (3 credits)

This course examines best practices for enhancing law enforcement tools in reducing crime and building and sustaining legitimacy through public trust and procedural justice. It draws on and expands upon the six pillars in the final report of the President's Task Force on 21st Century Policing to prepare officers to navigate an evolving societal landscape using a guardian mindset instead of a warrior mindset.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 770 Spec Topic/Independent Study (3 credits)

An opportunity to conduct extensive literature review or research project under the supervision of the Graduate Director. Such work must be preceded by a proposal that must be approved by the Director of the Graduate Criminal Justice program.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 789 Criminal Justice Internship (3 credits)

An opportunity to carry out supervised field experience under the supervision of a subject matter expert and facilitated by the Graduate Director. Such work must be preceded by a proposal that must be approved by the Director of the Graduate Criminal Justice program.

Restrictions: Enrollment is limited to Graduate level students.

CRJ 793 Thesis Supervision I (3 credits)

An integrative course in which the student is expected to complete a research paper toward the completion of a Masters thesis, utilizing the research methods and subject matter competence obtained in previous courses. This is the first of two required courses for completing a Masters thesis. Thesis credits are encouraged for students who plan to pursue a Ph.D. or who want to work in a research field. Permission of the Director required.

Prerequisites: CRJ 570 and CRJ 575

Restrictions: Enrollment is limited to Graduate level students.

CRJ 794 Thesis Supervision II (3 credits)

An integrative course in which the student is expected to complete a Masters thesis, utilizing the research methods and subject matter competence obtained in previous courses. This course is the second of two thesis supervision courses required for the Masters Thesis. Students should only enroll in this if they have successfully completed CRJ 793. A thesis is encouraged for students who plan to pursue a Ph.D. or a career in research. Permission of the Director required.

Prerequisites: CRJ 793

Criminal Justice M.S.

Professor and Chair, *Keith Brown, Ph.D., Sociology*
Graduate Director: Melissa A. Logue, Ph.D., Assistant Professor, Sociology

The Master’s program in Criminal Justice is designed to meet the graduate education needs of practitioners and students pursuing careers in criminal justice in both the public and private sectors. While the 30-credit curriculum requires degree candidates to take four core courses, the student selects the remainder, dependent upon selected concentration. This arrangement allows individuals to create unique plans of graduate study that are compatible with their interests and career objectives in the field of criminal justice. The program is flexible enough to allow students to concentrate on the theoretical, methodological, and practical knowledge needed to become practitioners in criminal justice, pursue a degree beyond the Master’s, or enhance the management skills necessary to succeed as upper-level decision-makers.

Course offerings and schedules are conveniently arranged to accommodate the needs of both full-time and part-time students. Courses are offered online.

Learning Goals and Outcomes

Goal 1: MS Criminal Justice students can demonstrate comprehension of the theoretical foundations of the criminal justice system

Outcome 1.1: Students can apply theoretical concepts to social policy in criminal justice and related fields

Goal 2: MS Criminal Justice students can understand how to integrate ethical principles into the criminal justice system

Outcome 2.1: Students can explain and apply ethical principles to the workplace

Goal 3: MS Criminal Justice students will illustrate graduate-level written and oral communication

Outcome 3.1: Students can effectively communicate and apply criminal justice concepts and methodologies through written and oral communication

Goal 4: MS Criminal Justice students will employ empirical methods in conducting and analyzing criminal justice research

Outcome 4.1: Students can identify empirical-based criminal justice research and reports

Outcome 4.2: Students can evaluate and describe findings from empirical research and reports

Outcome 4.3: Students can apply research techniques to original research

Outcome 4.4: Students can effectively present empirical research findings

Goal 5: MS Criminal Justice students will analyze, critique, and propose criminal justice policies/programs

Outcome 5.1: Students can effectively describe and assess the effectiveness of criminal justice policies or programs

Outcome 5.2: Students can develop empirically-based policies or programs to address criminal justice-related issues

Requirements

A total of 30 credits for all concentrations is the minimum requirement for the degree. The graduate director serves as the students’ advisor in the program. All students must satisfactorily complete the following core courses at Saint Joseph’s University:

Code	Title	Hours
Core Courses:		
CRJ 550 or CRJ 575	Research Methods and Analysis Adv Resrch Methds & Analysis	3
CRJ 560	Criminological Theory	3
CRJ 565	Ethics and Criminal Justice	3
CRJ 570	Prof Writ for Criminal Justice	3
Total Hours		12

The remaining coursework should be chosen to facilitate the student’s individual professional growth and/or is dependent upon concentration.

General Concentration

This program provides students the opportunity to enhance their theoretical foundation of criminal justice; develop cognitive skills including application of ethics, written and oral communications, critical thinking, reasoning, understanding, and conducting research; and prepare for their professional future.

Code	Title	Hours
Electives		
Select six electives chosen from any available Criminal Justice Graduate courses.		18
Total Hours		18

Concentration in Homeland Security

This program offers students the opportunity to examine strategies, develop communication skills, execute plans, and learn about contemporary issues of terrorism which affect the public and private sectors as well as law enforcement in society today. The curriculum can assist students in building partnerships and strategies to disrupt or prevent homeland security incidents. Identifying emerging threats and critical infrastructure protection needs is vital to securing the Homeland today.

Code	Title	Hours
Required Concentration Courses		
CRJ 640	Terrorism: Threats and Strateg	3
CRJ 641	Homeland Security	3
CRJ 645	Sociology of Disasters	3
CRJ 646	Risk Assessment	3
Electives		
Select two Criminal Justice courses.		6
Total Hours		18

Concentration in Intelligence and Crime Analysis

This program provides insights into the contemporary functions of law enforcement intelligence and crime analysis. The specialized courses develop the deliberative and cognitive activities and methodologies including crime mapping that produce intelligence information in support of decision-making at the strategic, tactical, and operational levels of law enforcement. Students will be prepared for the growing number of intelligence and criminal analyst positions at the federal, state, and local levels.

Code	Title	Hours
Required Concentration Courses		
CRJ 642	Law Enforc Intel Analysis	3
CRJ 643	L.E. Intelligence:Policy & Pro	3
Specialized Area Courses		
Select two courses from the following:		6
CRJ 635	White Collar Crime	
CRJ 640	Terrorism: Threats and Strateg	
CRJ 641	Homeland Security	
CRJ 660	Foundations of Cybersecurity	
Electives		
Select two Criminal Justice courses.		6
Total Hours		18

Concentration in Forensic Behavioral Health

This is an excellent program for students and clinicians who want to learn about evidence-based and promising practices in the treatment of children, adolescents, and adults who become involved in the criminal justice system. This program focuses on the prevention, intervention, and treatment of offenders with behavioral health issues and the interface of the socio-legal and political climate that impacts these individuals. Social justice, rehabilitation, and the use of treatment modalities and interventions in correctional settings and in the community found to reduce recidivism, restore wellness and provide a holistic approach to restorative justice, will be explored in this program. Those admitted into the concentration prior to the Fall 2021 semester will continue to have their concentration called Behavior Management and Justice. Students admitted for the Fall 2021 semester will have the concentration named Forensic Behavioral Health. Currently, only the name of the concentration has changed.

Required Concentration Courses		
Select four from the following:		12
CRJ 615	Youth Cultures and Deviance	
CRJ 616	Juvenile Justice & Delinquency	
CRJ 617	Mental Health & The Law	
CRJ 618	Therapeutic Strat Crim Justice	
CRJ 619	Fnds of Addiction:CRJ Profess	
CRJ 620	Evid Bas Prac Subt Ab/Beh Hlth	
Electives		

Select two Criminal Justice courses.	6
Total Hours	18

Concentration in Diversity, Inclusion, and Belonging (DIB)

The Diversity, Inclusion, and Belonging (DIB) Concentration focuses on cultivating an inclusive workplace culture where people feel valued and know that they belong. Having inclusive workplace cultures that embrace diversity and create a sense of belonging can also contribute to the development of inclusive policies and procedures for how to engage with those who criminal justice officials and related agencies serve. Doing so can improve citizens' perceptions of officials' legitimacy and relations between them. Students will learn to apply scholarly theories and practical tools to help foster and promote inclusion and belonging on teams and in organizational systems and align personal values and career aspirations. This concentration is particularly apt for, but not limited to, those in managerial positions in law enforcement who wish to become fluent in the languages of social identity, the impact of social context and group dynamics, and psychological and neuropsychological constructs that result in implicit bias, discrimination, marginalization, and scapegoating. Students will build on their ability to be ethical leaders and to collaborate in increasingly diverse work settings.

Code	Title	Hours
Required Concentration Courses		
MGT 555	Equity in Organizations	3
MGT 610	Social Identity Theories	3
MGT 655	Org Culture Beyond Diversity	3
MGT 760	Inclusive Convers: DEI	3
Electives		
Select two Criminal Justice courses.		6
Total Hours		18

Concentration in Federal Law Enforcement

This program provides students with an in-depth look at the three components of the federal criminal justice system – law enforcement, the courts, and corrections. The specialized courses develop the critical thinking and analytical reasoning necessary for a career in federal law enforcement. Students will examine seminal cases in federal criminal law and what effect they have had on federal law enforcement. Students who complete this program will be better prepared for a variety of jobs throughout the federal criminal justice system including positions as a criminal analyst, law enforcement officer, prosecution assistant, and probation officer.

Code	Title	Hours
Required Concentration Courses

4+1 Program

Saint Joseph University’s combined Bachelors (e.g., B.S., B.A.)/M.S. program in Criminal Justice offers students the opportunity to obtain their Bachelor’s and Master’s degrees in five years, which provides a competitive edge to students entering the job market. The program allows students the opportunity to engage with critical issues regarding theory and policy in criminal justice through courses taught by professionals who are highly respected in their fields and networking opportunities with current students and alumni. This program also provides opportunities for internships and a Master’s Thesis. Students may choose from any concentration or no concentration (general track). However, they are required to start with core courses in their fourth year (senior year). They will take one course in the fall semester (3-cr) and one course in the spring semester (3-cr).

Students who apply for the 4+1 combined program will be evaluated for acceptance into the program following the completion of the first semester of the junior year. These undergraduate applicants will be asked to submit a current undergraduate transcript, two letters of recommendation from a supervisor or professor, and an essay describing their interests and goals for pursuing graduate education in criminal justice. The essay also serves as a writing sample. The minimum GPA requirement is 3.00.

Code	Title	Hours
Select one core course from the list for the Fall of Senior Year and one for the Spring of Senior Year.		6

Criminal Justice Major
Program Description

The criminal justice major is designed to provide theoretical and practical knowledge for students interested in professional careers in traditional law enforcement fields such as federal law enforcement, corrections, courts, police, and probation; in administrative and management positions in criminal justice and private security; and in law and para-legal occupations. Moreover, the major’s curriculum is intended to facilitate entry into graduate programs in criminal justice, sociology, and law, while also retaining a humanistic understanding of the study of crime. The criminal justice major at Saint Joseph’s is distinguished by its emphasis on creative participation, student-faculty interaction, and independent research projects.

Learning Goals and Outcomes
Learning Goals and Outcomes

- Goal 1:** Criminal justice majors will demonstrate comprehension of the discipline, including the causes of crime and society’s responses to it.
- Objective 1.1** Students can understand why people commit or do not commit crime and assess the organization and functioning of the criminal justice system.
- Goal 2:** Criminal justice majors will develop knowledge of social scientific research methods.
- Objective 2.1** Students can design a research study in an area of choice and explain why various methodological decisions were made.
- Objective 2.2** Students can run basic statistical analyses to answer research questions.
- Goal 3:** Criminal justice majors will understand how to communicate within their discipline.
- Objective 3.1** Students can engage in social scientific technical writing that accurately conveys data findings.
- Objective 3.2** Students can orally present research or course material clearly and concisely.
- Goal 4:** Criminal justice majors will understand the operation of the criminal justice system within the larger social structure.
- Objective 4.1** Students can describe the significance of race, class, gender, and age in how crime is constructed and responded to, and thus critically assess the justice system.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

¹
Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social/Behavioral Science		
SOC 101	Intro to Sociology	3

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
MAT 118	Introduction to Statistics	3
Social Science attribute	Select any CAS course outside of sociology with a "social science"	3
Arts and Sciences	Select any other course within the College of Arts and Sciences	3

GEP Electives

Seven elective courses.

Major Requirements

Code	Title	Hours
ACC 101	Concepts of Financial Acct	3
or GIS 101	Introduction to GIS	
or GIS 201	Intermediate GIS	
SOC 102	Social Problems	3
SOC 206	Theories of Crime	3
SOC 207	Juvenile Justice	3
SOC 225	Intro to American CJ	3
SOC 312 & SOC 313	Research Methods and Data Analysis	6
SOC 470	Special Topics	3
SOC 495	Seminar I	3
Select any experiential learning, including study abroad, internships, study tour courses, and service learning		3
Select five other approved Criminal Justice courses numbered above SOC 102. ¹		15
Total Hours		45

1

Approved courses are indicated in the Sociology course descriptions.

Requirements for College Honors in Sociology

To receive College Honors credit, Sociology majors will participate in the Senior Capstone experience required of all majors by taking SOC 495 as an honors course during the fall of the senior year. Additionally, College Honors candidates in Sociology will complete a second honors course during the spring of the senior year (SOC 497) that includes research, extending the senior capstone experience beyond what non-Honors students complete. For students in the University Honors program, these two upgraded courses may be counted toward the eight course Honors requirement. To be eligible to participate in College Honors, a student must have a 3.5 GPA. If you are interested in completing the College Honors project during your senior year, please be in touch with the department chair early in the spring of your junior year. More details concerning College Honors may be found under "Honors Program".

Typical Course Sequence

Course	Title	Hours
Freshman		
Fall

4+1 Program

Saint Joseph University’s combined B.S./M.S. program in Criminal Justice (GENERAL track) offers students an exciting and challenging curriculum of study. The program allows students to engage the most cogent criminal justice theories while providing opportunities for research with nationally renowned Sociology faculty. This unique program is designed for successful completion over five academic years.

Undergraduate criminal justice/sociology majors at Saint Joseph’s who apply for the 4+1 combined B.S./M.S. program will be evaluated for acceptance into the program following the completion of the first semester of the junior year. These undergraduate applicants will be asked to submit a complete undergraduate transcript, two letters of recommendation/reference, and an essay describing their interests and goals of graduate education in criminal justice. Minimum GPA requirement is 3.00.

Criminal Justice Minor

Learning Goals and Outcomes

Goal 1: Criminal justice majors will demonstrate comprehension of the discipline, including the causes of crime and society’s responses to it.

Outcome 1.1: Students can understand the broader societal context that creates criminogenic conditions and evaluate the criminal justice system as a key social institution.

Goal 2: Criminal justice majors will develop knowledge of social scientific research methods.

Outcome 2.1: Students can critically assess research studies and explain why various methodological decisions were made.

Goal 3: Criminal justice majors will understand the operation of the criminal justice system within the larger social structure.

Outcome 3.1: Students can describe the significance of race, class, gender, and age in how crime is constructed and responded to, and thus critically assess the justice system.

Requirements

The minor in criminal justice requires completion of the following:

Code	Title	Hours
SOC 102	Social Problems	3
SOC 206	Theories of Crime	3
SOC 207	Juvenile Justice	3
SOC 225	Intro to American CJ	3
SOC 312	Research Methods	3
or SOC 313	Data Analysis	
Select one additional 200+ course with a Criminal Justice attribute.		3
For Sociology majors; SOC 206 SOC 225; SOC 207; and any three additional SOC courses with a Criminal Justice attribute.		
Total Hours		18

Cyberintelligence Certificate

This certificate is ideal for professionals working in the varied facets of criminal justice, national security, and intelligence, as well as those working in computer science and cybersecurity who are looking to enhance their career by building knowledge of the most pressing cyber threats.

Learning Goals and Outcomes

Goal 1: Demonstrate competency in anticipating and identifying potential sources of data exploitation in areas of criminal justice, national security, and intelligence, and formulate strategies to counter them

Outcome 1: Describe the roles that artificial intelligence (AI) and machine learning (ML) play in cybersecurity and counterterrorism operations

Outcome 2: Differentiate between the types of cybersecurity entities from government, military, and private sectors that fight terrorism

Outcome 3: Understand the role of social media as a tool for open-source information in counter-terrorism

Goal 2: Understand the scope and nature of terrorism and other threats to homeland security

Outcome 1: Define and discuss the various definitions of terrorism and terrorist organizations

Outcome 2: Evaluate the beliefs underpinning terrorism

Outcome 3: Analyze the role that laws, policies, technology, and other tools of intelligence play in protecting against terrorism and other threats to homeland security

Outcome 4: Analyze the social, economic, and political impacts exacted by terrorism and other threats to homeland security

Outcome 5: Identify critical infrastructure and their vulnerabilities to determine priorities for protecting those elements against cyber and other threats

Goal 3: Develop the ability to synthesize information about cyberthreats, terrorism, and other homeland security threats to produce counterstrategies and communicate them to key stakeholders effectively

Outcome 1: Demonstrate competence in critical thinking and analytical skills to develop and present intelligence-based reports to policymakers

Requirements

Code	Title	Hours
CRJ 660	Foundations of Cybersecurity	3
CRJ 640	Terrorism: Threats and Strateg	3
CRJ 641	Homeland Security	3
CSC 665	Intro to Cybercrime	3
Total Hours		12

Data Science

Overview

Data Science is an interdisciplinary field that employs methods and theories drawn from statistics, computer science (computer programming, databases, machine learning) and mathematics (calculus, probability, linear algebra) to extract insights from data with special emphasis on big data. Machine learning is a branch of artificial intelligence that deals with the study and development of algorithms and statistical models that allow computers to automatically learn patterns from data without being explicitly programmed. The field of Data Science encompasses topics such as exploratory data analysis, statistical inference, regression analysis, machine learning, cluster analysis, data wrangling, data mining, and data visualization.

Big data can be found in almost every sector of society, from business and industry, healthcare, education, and government. This necessitates the need to train individuals who can work with and analyze massive amounts of data to help organizations make informed decisions. The Data Science program at Saint Joseph's University is an interdisciplinary program that is jointly administered by the Departments of Mathematics, Computer Science and Decision & System Sciences. The program offers a Major and a Minor in Data Science, which include electives not just in Mathematics, Computer Science and Decision & System Sciences but also in other departments such as Economics and Biology.

Faculty

Program Faculty

The required courses in the Data Science major and minor are taught by faculty from the Departments of Mathematics, Computer Science and Decision & System Sciences. Courses that count for the Data Science electives are taught not just by faculty in the three departments that administer the program but also by faculty in other departments such as Economics and Biology.

Programs

Undergraduate Major

Data Science (p. 156)

Undergraduate Minor

Data Science (p. 157)

Courses

DSC 223 Intro Math of Data Science (3 credits)

This course provides an introduction to basic mathematical topics needed to understand modern areas of applied and theoretical mathematics including the rapidly growing field of data science. It includes elementary set theory and counting techniques, discrete probability, descriptive statistics, simple linear regression, basic inferential statistics, and an introduction to linear algebra. This course will also cover some basic proof techniques in elementary set theory, combinatorics, discrete probability and linear algebra.

Prerequisites: MAT 155 and MAT 161

Attributes: Math Beauty, Undergraduate

DSC 325 Essentials of Data Science (3 credits)

This course covers the basic topics in data science. It includes descriptive and inferential statistics, introduction to simple and multiple regression, data visualization, and data cleaning or scrubbing. It also includes an introduction to machine learning topics such as decision trees, k-nearest neighbors, neural networks and clustering. The R software or the Python programming language will be used to visualize and analyze datasets.

Prerequisites: MAT 223 or DSC 223

Attributes: Math Beauty, Undergraduate

DSC 326 Advanced Data Science (3 credits)

This course covers some advanced topics in data science, including recent tools for performing predictive analytics, data visualization, data wrangling, statistical inference, deep machine learning, and software engineering. Various software packages, including TensorFlow, will be used to build predictive models. Whenever appropriate, the mathematical background of predictive models will be covered. Also, one of the main goals is to introduce students to the most important aspects of data science by reinforcing writing efficient code, testing, and debugging while working with large software systems. The course includes several programming projects in Python and/or R.

Prerequisites: DSC 325 or CSC 346

Attributes: Math Beauty, Undergraduate

DSC 425 Machine Learning/Data Science (3 credits)

This course provides an introduction to the fields of Machine Learning, Data Science and Predictive Analytics. It includes linear regression, logistic regression, nearest neighbor methods, decision trees, neural networks, clustering, principal components analysis, and resampling methods such as cross-validation and bootstrapping. If time permits, it will also include support vector machines, deep learning methods, and machine learning methods for numerical optimization such as genetic and evolutionary algorithms and swarm intelligence algorithms. The R software will be used to apply statistical and machine learning methods to real data sets. Whenever appropriate, the mathematical background of machine learning methods will be covered. Students will be required to work on a final data analysis project and present their findings in class. This course and MAT 424 (Regression and Time Series) together cover the topics in the SOA (Society of Actuaries) exam in SRM (Statistics for Risk Modeling) and provide an intro to the PA (Predictive Analytics) exam. Also, this course and MAT 424 cover several topics in the CAS (Casualty Actuarial Society) exams in MAS (Modern Actuarial Statistics) I and II. *Prerequisites:* MAT 223 or DSC 223 *Attributes:* Math Beauty, Undergraduate

Data Science Major

The Major in Data Science exposes students the theory and skills necessary to analyze and derive insights from large sets of structured and unstructured data. The program aims to provide students with deep understanding of concepts related to statistics, machine learning, neural networks, natural language processing, data mining, data visualization and the mathematics that is foundational to these concepts.

Learning Goals and Outcomes

Goal 1: Students will be prepared for a variety of professions in Data Science and/or Master's degree programs in Data Science and be able to adapt to complex technological and analytical environments in the workplace.

- Objective 1.1:** Students will be proficient programming in Python and in R.
- Objective 1.2:** Students will be able to analyze data sets using a variety of software and analytical approaches.
- Objective 1.3:** Students will be able to communicate the results of technical data analysis in a manner that is understandable to non-specialists.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

Data Science Minor Overview

The Data Science Minor prepares students with the theory and skills necessary to analyze and derive insights from large data sets. The curriculum includes techniques from mathematics (particularly statistics) and computer science. It encompasses academic topics including machine learning, cluster analysis, data mining, and data visualization.

Learning Goals and Outcomes

Goal 1: Students will be prepared for a variety of professions in Data Science and/or Master's degree programs in Data Science and be able to adapt to complex technological and analytical environments in the workplace.

Objective 1.1: Students will be proficient programming in Python.

Objective 1.2: Students will be able to analyze data sets using a variety of software and analytical approaches.

Objective 1.3: Students will be able to communicate the results of technical data analysis in a manner that is understandable to non-specialists.

Requirements

Code	Title	Hours
The Minor in Data Science will require completion of a total of six (6) courses as outlined below:		
Three (3) Core Courses:		
DSC 223	Intro Math of Data Science	3
CSC 133	Python Programming for All	3
or CSC 115	Intro to Computer Science	
DSC 325	Essentials of Data Science	3
or CSC 346	Introduction to Data Science	
Three (3) Elective Courses (select from the list below; at least one must be a DSC, CSC or MAT course):		
CSC 134	Databases for All	3
or CSC 351	Database Management Systems

Any internship course (in any department) that is pre-approved as having sufficient data science content.		3

Economics

Department Overview

Economics, at its core, is the relationship between unlimited needs and limited resources. It helps us understand trade-offs, big and small. In its introductory courses, the Department of Economics gives students an appreciation of the way economists view the world and some acquaintance with the economist's techniques for analyzing problems. It strives to produce professionals who will be informed and valuable participants in public and private decision-making.

With two degree options, the B.A. in Economics and the B.S. in Quantitative Economics, the Department endeavors to offer a sufficient range of upper division courses so that students with a variety of intellectual and after-graduation career plans might be able to select a set of courses that matches individual interests and provides an appropriate preparation for individual careers. Economics advisors will help students select the best degree option and assortment of courses for those going into graduate training, law school, and employment in business, nonprofits, international organizations, or government agencies.

Faculty

All faculty members in Saint Joseph's University's economics department have published in prestigious economic journals and previously held positions as consultants and economists with high-level corporations and government entities.

Department of Economics Faculty & Staff (<https://www.sju.edu/departments/economics/faculty-staff/>)

Programs

Undergraduate Majors

- Economics (p. 162)
- Quantitative Economics (p. 164)

Undergraduate Minor

- Economics (p. 163)

Courses

ECN 101 Introductory Economics Micro (3 credits)

By analyzing the behavior of buyers and sellers in product and factor markets, this course explains how a market economy determines how scarce resources are allocated to the production and distribution of various goods and services. Supply-and-demand models are used to explain the determination of the prices of products and of factor inputs, and the consequences of government controls and of different types of market structures on prices, wages, and economic efficiency are analyzed.

Attributes: GEP Social Science, International Relations Course, Undergraduate

ECN 102 Introductory Economics Macro (3 credits)

Theoretical models of the economy as a whole, show what determines the level of national output, employment, and prices, and how these might be stabilized by the proper fiscal and monetary policies. The course also looks at the mechanism by which our money supply changes, and considers the benefits and problems associated with international trade. Topics covered include the measurement of GDP, inflation and unemployment; Keynesian and Classical theories of output and price determination; the Federal Reserve System; the federal budget and the national debt; and the balance of payments.

Attributes: GEP Social Science, International Relations Course, Undergraduate

ECN 150 First Year Seminar (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: First-Year Seminar, Undergraduate

ECN 170 Special Topics in Economics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ECN 270 Special Topics in Economics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ECN 290 Professional Prep Seminar (1 credit)

What can you do with a degree in Economics? Do you know how to search for an internship or a job? And, are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance students' knowledge about internships and careers within their major and help them build practical skills through a series of steps and events throughout the semester. All students are required to complete this seminar prior to registering for the ECN491 Internship course or students can take this as a co-requisite with ECN491. All economics majors and minors are encouraged to take this course during sophomore or junior year to help prepare for internship applications.

Attributes: Undergraduate

ECN 301 Microeconomic Theory (3 credits)

This course presents an analysis of the behavior of households as buyers of output and suppliers of inputs, an analysis of firms as suppliers of output and buyers of inputs, and a study of their interaction in markets that determines the prices and quantities of outputs and inputs. Applications of analytical tools are demonstrated.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 302 Macroeconomic Theory (3 credits)

This course examines a complete model of the economy to show the forces that determine the rate of unemployment, the rate of inflation, the rate of economic growth, and the international financial position of an economy. This model is used to show the logic of, and the limitations of, monetary, fiscal, and other stabilization policies.

Prerequisites: ECN 102

Attributes: Undergraduate

ECN 321 International Trade (3 credits)

This course investigates a primary component in the study of international economics: the causes and effects of international trade and barriers to trade. The class begins with an overview of world trade patterns and then focuses on classical and modern trade theory, exploring the Ricardian and Heckscher-Ohlin models, as well as non-comparative advantage based models that incorporate economies of scale and monopolistic competition. The second part of the class focuses on trade policy, starting with a theoretical analysis of tariffs, and then investigating the debate over free trade as it pertains to both developing and advanced economies. The class also looks at the economic institutions involved in the management of global trade, such as the World Trade Organization.

Prerequisites: ECN 101 or ECN 102

Restrictions: Enrollment is limited to students with a major in Economics, International Business or International Relations.

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Undergraduate

ECN 322 International Macroeconomics (3 credits)

This course investigates international macroeconomic theory and its application to current events and policy issues, including the study of the principles and practices of the balance of payments, exchange rates, and international money markets for achieving both domestic and international policy objectives. Coverage includes the description and history of financial crises, currency policy, the development of international financial markets and the relevant national and international institutions. ECN 101 is recommended.

Prerequisites: ECN 102

Attributes: Globalization Course, International Relations Course, Undergraduate

ECN 330 Economics of Labor (3 credits)

This course provides students with an introduction into labor markets. We will discuss models for behavior, incorporating labor supply and labor demand. Topics within labor economics, such as investments in human capital, discrimination, job search, and labor unions will also be covered. Throughout the course we will investigate multiple questions such as: How do individuals decide how many hours to work? How is a person's salary determined? What are the benefits associated with attaining a college degree? Is there convincing evidence of labor market discrimination? Throughout this course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to the study of labor economics. Note: Can count towards the B.S. in Quantitative Economics with the completion of additional coursework and permission of the instructor.

Prerequisites: ECN 101 and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

ECN 340 Public Finance & Public Policy (3 credits)

This course examines the nature of government spending, the decision-making process, and trends. It describes and evaluates several kinds of taxation and proposals for reform. It utilizes microeconomics to investigate tax incidence and the welfare effects of taxation.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 350 Monetary Economics (3 credits)

The course analyzes the nature and functions of money to show its influence on GDP, the price level, unemployment, and the allocation of resources. Commercial banking and other financial institutions will be studied, as well as central banking.

Prerequisites: ECN 102

Attributes: Undergraduate

ECN 360 Industrial Organization (3 credits)

Applications of microeconomic theories to public policies affecting structure and performance of markets and behavior of firms. Antitrust and other aspects of government regulation will be covered.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 365 Game Theory (3 credits)

The goal of the course is to introduce students to the field of Game Theory within the Microeconomics discipline. Standard concepts to be learned and discussed are the roles of strategy, decision-making, solution concepts for games, the nature of Nash equilibria, strategic behavior, cooperation, the role of incentives, probabilities and the nature of Bayesian equilibria, auctions in theory and practice, matching theories, conflict and theories of appropriation versus production. The course will put a greater emphasis on the role of economic reasoning and the major results discovered within the field as opposed to understanding the complex mathematical proofs. In addition, students will learn to approach the study of economics from an analytic perspective as opposed to the standard quantitative approaches of undergraduate economic studies.

Prerequisites: ECN 101 and ECN 301

Attributes: Undergraduate

ECN 370 Economic Development (3 credits)

The field of Economic Development involves both aspects of macroeconomic and microeconomic theory and analysis. This course presents an overview of the variety of economic growth theories and their empirical evaluation in both developed and developing economies. These theories are compared against practical institutional explanations as to why some economies experience slow growth and underdevelopment, while others see higher growth rates. We explore the relationship between economic growth, poverty, inequality, sustainability and human development

Prerequisites: ECN 101 and ECN 102

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Undergraduate

ECN 372 Special Topics in Economics (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 375 Environmental Economics (3 credits)

Environmental Economics examines the interactions between people and the environment by addressing the challenge of meeting the increasing demand for goods and services while simultaneously conserving natural resources for future generations. This course utilizes economic theory and geographic information systems (GIS) software to examine global environmental issues including externalities, public goods, criteria for evaluating environmental policies, the role of economic analysis in environmental policy decisions, discussion of pollution control planning, environmental conservation policy in The United States, and international environmental conservation concerns.

Prerequisites: ECN 101 or GIS 101

Attributes: Globalization Course, International Relations Course, Undergraduate

ECN 382 Urban Economics (3 credits)

Urban Economics is broadly defined as the economic study of urban areas. This course will teach you how to examine issues that typically occur in urban areas, such as crime, poverty, inequality, and the distribution of public goods and government resources, from an economic perspective. Throughout this course, we will not only examine urban issues theoretically, but also use real-world data and geographic information systems software (GIS) to apply economic theory to examine these issues in real-time.

Prerequisites: ECN 101 or GIS 101

Attributes: Diversity Course, Undergraduate

ECN 385 Law and Economics (3 credits)

This course provides a basic understanding of the economic analysis in specific areas of common law in the United States. Covering a broad range of topics from the implications of property law and contract law for economically efficient behavior, to the effects of tort law and criminal law on the incentives for individuals to conduct themselves in a socially desirable manner. This course uses microeconomic tools to examine torts, contracts, and property law as well as the theory and empirical evidence on the economics of crime and punishment.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 390 The Economics of Healthcare (3 credits)

This course examines major policy issues associated with the delivery of health care in the United States from an economic perspective. Particular emphasis will be placed on the challenges and trade-offs involved in containing health care costs, maintaining quality, and ensuring access. This course will provide students with a better understanding of the major health policy issues.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 410 Econometrics (3 credits)

Basic principles of econometrics beginning with the classical linear regression model and the method of least squares. Special problems arising from the violation of classical assumptions, and statistical procedures for dealing with them, are covered. Identification and estimation problems are also studied, as well as forecasting with single-equation regression and simultaneous system of equations. Modern time-series models are evaluated, with numerous forecasting illustrations from economics and business.

Prerequisites: ECN 101 and ECN 102 and (MAT 118 or MAT 128 or DSS 210)

Attributes: Undergraduate

ECN 415 Economic Forecasting (3 credits)

This course provides an introduction to forecasting techniques used frequently in economics and business. Students will review basic statistical concepts and then explore data patterns that are commonly found in a variety of economic settings. Central approaches to analyzing time-series data are covered, such as moving averages, smoothing methods, single and multivariate regression, Box-Jenkins (ARIMA) methodology, and others.

Prerequisites: ECN 101 and ECN 102 and (MAT 118 or MAT 128 or DSS 210)

Attributes: Undergraduate

ECN 420 Sports Economics (3 credits)

This course is an extension of microeconomics and encompasses three areas of economic theory - labor economics, urban economics and industrial organization. Sports, particularly professional sports, command an inordinate amount of attention and interest. By studying the economic decisions of leagues, teams and municipalities, students will see how the tools of economic theory are applied and how they impact not only the revenues and profits of the professional sports teams but the play on the field as well as the general welfare and attitude of the community.

Prerequisites: ECN 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Economics or Sports Marketing.

Attributes: Undergraduate

ECN 450 Economics of Steel Industry (3 credits)

This course investigates various economic issues in the steel industry, including competitive conditions within the US and globally, as well as the heavy use of trade protection to prevent foreign competition and challenge foreign government subsidization. The course also focuses on the impact of environmental policy and labor unions in the steel industry, as well as the role of technology in the displacement of steel workers and an evaluation of various government policies that attempt to alleviate the economic hardship of displaced steel workers.

Prerequisites: ECN 101 and ECN 102

Attributes: Undergraduate

ECN 452 Econ of Presidential Elections (3 credits)

This course is offered every fall of a presidential election year. In 1992, James Carville, then candidate Bill Clinton's campaign manager, coined the phrase "the economy, stupid." The implication was that the economy was the number one issue for voters. A November 2019 poll confirms this—.."when asked what issue "matters the most to you right now," jobs and the economy is cited by 24% of Americans, No. 1 among all responses..." In this course, we will discuss the major economic policy issues of the 2020 presidential election, including health care, immigration, climate change, federal budget and taxation, trade and tariffs, minimum wage, and SNAP. The two major parties' policy platforms will be our primary texts. They will be supplemented by readings from the economics literature, campaign policy briefs and articles from the media. We will also study some topics in the economics of voting, including ranked choice voting and whether it is rational to vote at all.

Prerequisites: ECN 101

Attributes: American Studies Course, Undergraduate

ECN 455 Antitrust and Regulation (3 credits)

In the first part of the course, we will discuss the economic theory that should guide antitrust laws of the United States and discuss the actual current and historical antitrust laws and key antitrust cases in the context of underlying economic theory. In the second part of the course, we discuss the costs, benefits, methods, and outcomes of economic regulation from a theoretical standpoint, and then examine the actual U.S. experience in a large number of industry case studies. We will spend significant time on recent and ongoing antitrust and regulatory cases.

Prerequisites: ECN 101

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate

ECN 471 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: ECN 101 and ECN 102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

ECN 475 Asian Economies (3 credits)

This course will encompass a theoretical and empirical approach to the study of the economies of Asia. First, the nature of the various economies will be assessed by the observation of some indicators of economic and social development. Then, theories will be explored that attempt to explain the differences in the economies and their growth patterns. This theoretical section will entail the study of international and indigenous characteristics of Asian countries. The aim of the course is to convey to students the changes in the world distribution of economic power and in the international division of labor as it involves the Asian countries, and the implications of these trends.

Prerequisites: ECN 101 or ECN 102

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

ECN 476 Women & Econ Dev in South Asia (3 credits)

The course explores the relationship between the role of women and economic development in South Asia, which is mostly defined as a region including India, Pakistan, Nepal, Bangladesh, and Sri Lanka. Broadly, we will examine women's changing economic roles including analysis of labor force participation, wage inequality, gender differences in education, intra-household distribution of resources, and the economics of fertility. We will review the basic economic concepts of demand and supply and the historical perspectives on women's relative status, the source of gender differences, and women's role in economic development. We will eventually examine the labor market outcomes and consequences of working women and how these decisions influence the overall economic development of the South Asian region.

Prerequisites: ECN 101 or ECN 102

Attributes: Asian Studies Course, Gender Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

ECN 477 Chinese Economics (3 credits)

As the world becomes more integrated, countries become more interdependent. Economic events and policy changes in one country affect many other countries. The emergence of China, especially in international markets, is clearly one of the most important forces currently reshaping the world economy. Understanding China's history, culture, economics, politics and society is imperative to help students participate in the ongoing dialogue among policymakers, economists, business firms, and international agencies. This course will cover both the historical and current aspects of the Chinese economy with a focus on the historical development of its socio-economic institutions, on its varying economic policies and strategies. In addition, this course would provide the student with opportunities to explore and apply economic theories and models to understanding the diverse processes of economic development in China.

Prerequisites: ECN 101 or ECN 102

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate, Writing Intensive Course- GEP

ECN 480 Econ of Poverty & Income Dist (3 credits)

In this course, we study several facets of income distribution and inequality in the United States through the lens of economic theory. Initially, we discuss the basics of income and wealth distribution (definitions and measurements), and study the trends and patterns of income, wealth and well-being, followed by a similar discussion with respect to poverty. The second portion of the course focuses on causes and explanations of poverty and income inequality. This section relies heavily on the foundation of labor economic theory with discussion of labor force participation, unemployment and human capital. Finally, we focus on policies that may cause or alleviate poverty and income inequality - both current and proposed policy - followed with a discussion of societal goals. If time permits, we also cover labor market discrimination and wage gaps, specifically with respect to race/ethnicity. This course is an upper-division Economics elective that also meets the Faith-Justice course studies criteria.

Prerequisites: ECN 101 and ENG 101

Attributes: American Studies Course, Service Learning Course, Undergraduate, Writing Intensive Course- GEP

ECN 482 Latin American Economies (3 credits)

This course tackles a variety of topics that are relevant for understanding the multiple forces that have shaped the current and historical economic development of Latin America. The analysis is conducted from multiple perspectives, including economic theory and historical accounts, but not disregarding cultural and institutional features particular to Latin America. This course also discusses and applies economic analysis to examine the opportunities, constraints and tradeoffs that the economies of Latin America and their policymakers face today in their path towards development. Microeconomic issues such as poverty, inequality, education, and health are also discussed.

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

ECN 484 Race and the Economy (3 credits)

This course will examine the causes and consequences of racial disparities in economic outcomes. We begin with a history of slavery and its economic consequences. Then we will look at official government policies, such as red-lining, that have contributed to racial disparities. We will examine the data on racial disparities in poverty, unemployment, income, and wealth. The rest of the course will focus on an economic analysis of racial differences in various aspects of the economy, including education, health care, and housing. We will also study current government policy and proposals to mitigate the disparities.

Prerequisites: ENG 101 and ECN 101

Attributes: American Studies Course, Faith Justice Course, Undergraduate, Writing Intensive Course- GEP

ECN 485 Economics of Food (3 credits)

This course will begin with a conventional industrial organization analysis of the food industry (even though about half of all farms are small, family owned, they account for only 20% of food production in the U.S.). We will then move to a study of government industrial policies, including federal subsidies (about \$22 billion in 2019) and regulation, including USDA and FDA. Throughout the course, we will connect the economics of food to social justice, including food insecurity (about 10% of households in the U.S. experience food insecurity), climate (food production accounts for about 30 percent of total global emissions), immigration (72% of farm workers are foreign born; 68% are from Mexico), and labor (average individual annual income for farm workers is \$12,500-\$14,999; pre-vaccine, farmworkers were at highest risk to contract Covid). This is a service-learning course. Students will spend 3 hours a week doing service, which will be connected to course assignments and discussions. Students will be expected to follow the news about food and agriculture throughout the semester. Assignments include weekly response papers, current events papers, and weekly service journal entries.

Prerequisites: ECN 101

Attributes: American Studies Course, Faith Justice Course, Service Learning Course, Undergraduate

ECN 487 Research Methods (3 credits)

This course is an upper-level economics elective that provides students with an introduction into research methods. We will discuss current research in applied microeconomics and apply the methods learned to create original research. Throughout the course we will investigate multiple facets of research including literature review, data analysis, and analytic writing. Throughout the course, students will be given verbal and written feedback about their analysis and writing. Throughout this course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to writing a comprehensive research paper. In order to gain the most from these discussions, students are required to take on an active role in these discussions.

Prerequisites: ECN 101 and ECN 410 and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

ECN 490 Seminar in Economics (3 credits)

The process of developing and executing a research project according to the standards of modern economic science is the subject of this seminar. Attention is also given to the use of the computer as a research tool.

Attributes: Undergraduate

ECN 491 Economics Internship (3 credits)

This course combines work experience with academic study. Students work in internships for the duration of the semester (some 10 hours per week) with approved employers in the private and public sectors (or non-governmental and non-profit organizations) in the Philadelphia area. Their work experience is complemented with relevant required readings. In addition, students must keep a journal, write a final report and meet regularly with their adviser. A successful academic internship is a three-way partnership between the student, the employer, and the faculty adviser. Note: May count towards the B.S. in Quantitative Economics for students in a quantitative internship with instructor approval.

Prerequisites: ECN 290 (may be taken concurrently)

Attributes: Undergraduate

ECN 493 Independent Research (3 credits)

Students will study a topic in economics with a faculty mentor. Permission of the Instructor required.

Attributes: Undergraduate

ECN 494 Independent Research (3 credits)

Taken in senior year under the direction of a thesis mentor.

Attributes: Undergraduate

Economics Major

The Bachelor's of Arts in Economics provides a range of coursework in economics and related fields to prepare students for a wide range of careers in economics-related occupations.

Learning Goals and Outcomes

Goal 1: Students will understand how all issues in economics involve making choices in the context of scarcity.

Outcome 1.1: Students will be able to explain the concept of opportunity cost.

Outcome 1.2: Students will understand the concept that decision-making takes place at the margin and explain how this affects the behavior of consumers and firms.

Goal 2: Students will understand how economic agents interact.

Outcome 2.1: Students will be able to explain the supply and demand model and how it is applied to input and output markets as well as the macro economy.

Goal 3: Students will be able to identify important economic variables, understand how they are measured, and explain what they tell us.

Outcome 3.1: Students will be able to define and know the approximate value of some key macroeconomic variables in the US, including GDP growth, inflation, unemployment, and interest rates. Furthermore, students will know how these variables are measured, how they affect us and understand the difference between "nominal" and "real" values.

Goal 4: Students will understand how public policy impacts the economy.

Outcome 4.1: Students will be able to explain how fiscal and monetary policy work.

Outcome 4.2: Students will be able to explain how markets sometimes "fail" and how public policy can address these problems .

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social/Behavioral Science:		
ECN 101	Introductory Economics Micro	3
Natural Science:		
A natural science course with a laboratory, or two courses without a laboratory		
Math:		
Students can take any Math "Beauty" course to fulfill the requirement of the GEP. However, we recommend:		
MAT 131	Linear Methods	3
MAT 132	Math of Games & Politics	3
MAT 134	Math of Uncertainty:Rules/Prob	3
MAT 155	Fundamentals of Calculus	3
MAT 161	Calculus I	4

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Economics majors must take one course from each of the following three categories:

Code	Title	Hours
Any Statistics Course, including:		
MAT 118	Introduction to Statistics	3
MAT 128	Applied Statistics	3
MAT 322	Mathematical Statistics	3
DSS 210	Business Statistics	3
Any Calculus Course*, including:		
MAT 123	Differential Calculus	3
MAT 155	Fundamentals of Calculus	3
MAT 161	Calculus I	4

*Note: This course is not required for those who earned credit for AP Calculus or completed calculus for the Math Beauty requirement. These students must choose an alternate course from the list below. However, students are encouraged to take additional math courses.

Students may choose from the following for the remaining ILC course(s):

- Any additional math course (this is in addition to the Beauty requirement and the statistics requirement). For students considering graduate school in economics, we highly recommend additional courses in calculus or linear algebra.
- Any Computer Science (CSC) course
- Any Social Science Course
- Any Geographic Information Systems (GIS) course
- THE 373 Economic Ethics
- PSY 127 Behavioral Economics

Major Requirements

Code	Title	Hours
ECN 101	Introductory Economics Micro	3
ECN 102	Introductory Economics Macro	3
ECN 290	Professional Prep Seminar	1
ECN 301	Microeconomic Theory	3
ECN 302	Macroeconomic Theory	3
Any six additional ECN 300/400-level economics courses ¹		18
# For students completing ECN410 Econometrics, only five (5) economics electives are required (in total)		
Experiential Learning Requirement ²		
# Includes ECN491, Service-Learning course, Study abroad, The Washington Center, Independent Study – research, Summer Scholars, Winter Immersion Program (WIP), or Honors Thesis.		
Total Hours		31

1

MAT 311, MAT 322, MAT 423, ASC 401, DSS 420, DSS 435, DSS 470, FIN 201 and FIN 302 can be substituted for the above requirements at a maximum of two substitutions.

2

*ECN290 and Experiential Learning are required starting with students entering in Fall 2023.

Requirements for Departmental Honors

Requirements for departmental honors are found under Honors Programs and in the brochure published annually by the Director of Honors programs.

Economics Minor Learning Goals and Outcomes

Goal 1: Students will understand how all issues in economics involve making choices in the context of scarcity.

Outcome 1.1: Students will be able to explain the concept of opportunity cost.

Outcome 1.2: Students will understand the concept that decision-making takes place at the margin and explain how this affects the behavior of consumers and firms.

Goal 2: Students will understand how economic agents interact.

Outcome 2.1: Students will be able to explain the supply and demand model and how it is applied to input and output markets as well as the macro economy.

Goal 3: Students will be able to identify important economic variables, understand how they are measured, and explain what they tell us.

Outcome 3.1: Students will be able to define and know the approximate value of some key macroeconomic variables in the US, including GDP growth, inflation, unemployment, and interest rates. Furthermore, students will know how these variables are measured, how they affect us and understand the difference between “nominal” and “real” values.

Goal 4: Students will understand how public policy impacts the economy.

Outcome 4.1: Students will be able to explain how fiscal and monetary policy work .

Outcome 4.2: Students will be able to explain how markets sometimes “fail” and how public policy can address these problems .

Requirements

Code	Title	Hours
ECN 101	Introductory Economics Micro	3
ECN 102	Introductory Economics Macro	3
Any four economics courses numbered 300 level or higher *		12
Total Hours		18

*

MAT 311, MAT 322, MAT 423 ASC 401, DSS 420, DSS 435, DSS 470, FIN 201, FIN 302 can be used in place of one of the four additional 300 level or higher ECN courses. Two of the above courses can be used if one of the economics courses is ECN 491 Economics Internship.

Quantitative Economics Major

The Bachelor's of Science in Quantitative Economics provides a range of coursework in economics and related fields to prepare students for careers in a variety of quantitative occupations as well as graduate school in economics or related fields.

Learning Goals and Outcomes

Goal 1: Students will understand how all issues in economics involve making choices in the context of scarcity.

- Objective 1.1:** Students will be able to explain the concept of opportunity cost.
- Objective 1.2:** Students will understand the concept that decision-making takes place at the margin and explain how this affects the behavior of consumers and firms.

Goal 2: Students will understand how economic agents interact.

- Objective 2.1:** Students will be able to explain the supply and demand model and how it is applied to input and output markets as well as the macro economy.

Goal 3: Students will be able to identify important economic variables, understand how they are measured, and explain what they tell us.

- Objective 3.1:** Students will be able to define and know the approximate value of some key macroeconomic variables in the US, including GDP growth, inflation, unemployment, and interest rates. Furthermore, students will know how these variables are measured, how they affect us and understand the difference between "nominal" and "real" values.

Goal 4: Students will be able to demonstrate knowledge of econometric and quantitative methodology in economics.

- Objective 4.1:** Students will be able to use statistical and econometric techniques for estimation and analysis.
- Objective 4.2:** Students will be able to apply quantitative methods to economic theories and models.

Requirements

Requirements for the Quantitative Economics Major (B.S.)

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1
Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social/Behavioral Sciences:		
ECN 101	Introductory Economics Micro	3
Math Beauty: Students should select among the following:		
MAT 131	Linear Methods	3
MAT 132	Math of Games & Politics	3
MAT 134	Math of Uncertainty:Rules/Prob	3
MAT 155	Fundamentals of Calculus	3
MAT 161	Calculus I	4

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Any calculus course including*:		
MAT 123	Differential Calculus	3
or MAT 155	Fundamentals of Calculus	
or MAT 161	Calculus I	

*For students who have already completed calculus for Math Beauty or received AP calculus credit, students will complete any course in the College of Arts & Sciences

Two additional courses chosen from Math (MAT) (this is in addition to the Math Beauty requirement and the statistics requirement) or Data Science (DSC), or Computer Science (CSC) or Geographic Information Systems (GIS) or Decision System Sciences (DSS). Suggested courses include:

MAT 162	Calculus II
MAT 213	Calculus III
MAT 226	Introduction to Linear Algebra
CSC 133	Python Programming for All
CSC 134	Databases for All
CSC 201	Data Structures
DSC 223	Intro Math of Data Science
DSC 325	Essentials of Data Science
DSS 220	Business Analytics
GIS 101	Introduction to GIS
GIS 201	Intermediate GIS

Total Hours	9
-------------	---

Major Requirements

Code	Title	Hours
ECN 101	Introductory Economics Micro	3
ECN 102	Introductory Economics Macro	3
ECN 290	Professional Prep Seminar	1
ECN 301	Microeconomic Theory	3
ECN 302	Macroeconomic Theory	3
ECN 410	Econometrics	3
Any Statistics Course, including:		3
MAT 118	Introduction to Statistics	
MAT 128	Applied Statistics	
MAT 322	Mathematical Statistics	
DSS 210	Business Statistics	
Any three of the following quantitative economics electives ¹		9
ECN 322	International Macroeconomics	
ECN 330	Economics of Labor	
ECN 350	Monetary Economics	
ECN 365	Game Theory	
ECN 375	Environmental Economics	
ECN 382	Urban Economics	
ECN 415	Economic Forecasting	
ECN 487	Research Methods	
ECN 491	Economics Internship (with department chair approval)	
Any 300/400-level ECN course		3
Experiential Learning Requirement (required starting with students entering in Fall 2023) ²		
Includes ECN491, Service-Learning course, Study abroad, The Washington Center, Independent Study – research, Summer Scholars, Winter Immersion Program (WIP), or Honors Thesis.		

Total Hours 31

1

MAT 311, MAT 322, MAT 423, ASC 401, DSS 420, DSS 435, and DSS 470 can be substituted for the above economics requirements at a maximum of two substitutions.

2

ECN 290 and Experiential Learning are required starting with students entering in Fall 2023.

English, Writing & Journalism

Departmental Mission

Crucial to the centuries-old Ignatian vision that guided the establishment of Jesuit colleges and universities are two concepts: caring for the student as an individual (*cura personalis*) and imparting to the student a skill in thoughtful, imaginative, and well-organized language (*eloquentia perfecta*).

The Department of English, Writing & Journalism and its curriculum encourage the growth of our students in these traditions. Our courses guide them to appreciate imaginative literature and to master rhetorical skills traditionally associated with Jesuit education—including cultivating an individual and discerning voice in both writing and speaking.

We are committed to the University's mission by connecting faith, intellectual commitment, and social justice in our teaching. By offering service-learning and diversity courses and by developing mentoring relationships between faculty and students, we encourage a striving for the greater intellectual and social good.

The Department of English, Writing & Journalism supports the University mission by calling upon our students to embrace:

- An openness to imaginative, moral, and spiritual growth
- A confidence in their own intellectual reach and competence
- A commitment to being men and women with and for others
- A commitment to social justice
- A willingness and an ability to lead.

Faculty

The teacher-student relationship is one of the English department's greatest strengths. Classes are taught by a committed and highly accomplished faculty who are enthusiastic about research and writing and publish frequently but who are particularly devoted to teaching and student development. In fact, English faculty members are frequent recipients of awards and grants in teaching, literature, creative writing and journalism. Small classes, close advising, individualized instruction, discussion-oriented seminars and writing workshops provide a personal atmosphere for learning. Students are encouraged to consult their advisor and teachers frequently and freely.

English, Writing and Journalism Faculty & Staff (<https://www.sju.edu/departments/english-writing-journalism/faculty-staff/>)

English in the GEP

English in the GEP (See Curricula)

Variable Core-Writing

Code	Title	Hours
ENG 101	Craft of Language	3

Signature Core-Cultural Legacy

Code	Title	Hours
ENG 102	Texts & Contexts	3

Variable Core-Art/Literature

Students who wish to satisfy the Art/Literature portion of the GEP by completing a course in English may select from the list of GEP-appropriate creative writing or literature courses at the 200-, 300-, or 400-level.

Programs

Undergraduate Major

- English Major (p. 182)

Undergraduate Minors

- English (p. 185)
- Creative Writing (p. 184)
- Journalism (p. 185)

Adult Undergraduate Major

- English and Professional Writing (p. 186)

Graduate Program

- Writing Studies (p. 187)

Graduate Certificate

- Creative and Professional Writing (p. 188)

Courses

ENG 101 Craft of Language (3 credits)

A study of the use and power of words including poetic terms and of how words are best put together in an essay. This is mainly a writing course, and literary form will be used as a means to teach writing. The emphasis will be on expository prose. Required of all students except those qualifying for Advanced Placement.

Attributes: Undergraduate

ENG 102 Texts & Contexts (3 credits)

A course in the reading of key literary texts in both the British and American traditions. Students will examine a representative sampling of texts in detail, with guided instruction in writing personal, critical, and creative responses to them. Required of all students except those transfer students who have taken an equivalent course elsewhere.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Signature Course, Undergraduate

ENG 113 Literature & Composition (3 credits)

Introduction to fiction, drama, and poetry with frequent theme assignments, critical in nature and coordinated with readings in major literary genres.

Prerequisites: ENG 101 or ENG 111 or ENG 112 or WR 101 or WR 101H

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

ENG 140 Adult Learning Seminar (3 credits)

In this seminar, adult learners will study the idea of work through reading fiction and nonfiction on jobs, employment, and careers. Students will read stories about work and write narratives of work histories that will provide the context and experience for the course. In the second part of the course, students will reflect and theorize on these histories as either empowering sources of vocation, discouraging instances of alienation, or some combination of both. In the final part of the course, students will then engage with either their own present work or future work by preparing cover letters and resumes for their future job applications and writing a significant piece of communication (business proposal, conflict resolution, grant application, etc.) within their current or prospective professional career.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Adult Learning Seminar, Undergraduate

ENG 150 First Year Seminar (3 credits)

The First-Year Seminar is designed to introduce students to the adventures of learning in a college context. First-Year Seminars focus in depth on a question or topic of disciplinary or interdisciplinary interest. By means of its specific focus, the seminar will explore the thinking, research, and writing practices in a particular field. Discussions based on careful reading of texts, writing assignments, both reflection and research types, and in-class student presentations will be supplemented, as appropriate, with activities including guest lecturers, museum trips, attendance at local cultural events and/or field excursions. Topics vary according to individual instructors.

Attributes: First-Year Seminar, Undergraduate

ENG 170 Special Topics in English (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ENG 201 Major American Writers (3 credits)

Study of selected works of those writers who have most influenced the continuity and development of our national literature. Among those considered may be Irving, Poe, Emerson, Fuller, Hawthorne, Stowe, Melville, Whitman, Twain, Dickinson, Chopin, Gilman, Frost, Hemingway, Faulkner, and Morrison.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 202 Global English Literature (3 credits)

This course examines English as a global literary language through works of fiction and film. Students will read works by authors who represent diverse regions of the English-speaking world beyond the United Kingdom (excluding the U.S.) that expand the English language, rethink the present-day legacy of the British Empire, and redefine conceptions of Englishness. Specific course topics and reading lists vary with each course offering.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

ENG 203 English Grammar (3 credits)

To prepare current and future English language teachers, this course focuses on various aspects of English grammar, especially those are particularly challenging for ESL/EFL learners. It provides useful background knowledge for English language teachers and preparation that strengthens applications for teaching positions, fellowships, and scholarships. This course is beneficial to Linguistics and TESOL majors/minors who plan to teach English in any context and at any level as well as to students in ENG, COM, EDU and other academic areas where a solid grasp on the linguistic structure of English would be useful. Counts as an ENG elective.

Attributes: Undergraduate

ENG 204 Drama (3 credits)

Critical study of various forms of drama.

Prerequisites: ENG 113

Attributes: GEP Art/Literature, Undergraduate

ENG 205 Cultural Diversity (3 credits)

Specific focus of the course will depend on the instructor. Approaches to the issue of cultural diversity in literature may include the courses such as the following: American Voices; British Multiculturalism and the Booker Prize, or Multiethnic Literature.

Attributes: Diversity Course, English Diversity, GEP Art/Literature, Undergraduate

ENG 206 Public Speaking & Presentation (3 credits)

A practical course in the oral presentation of carefully crafted material. Based on principles of rhetoric, new and old, the course helps students in discovering, structuring, and expressing ideas with conviction and confidence. Some attention will be given to the appreciation of significant speech texts within these rhetorical traditions. Students will make multiple presentations and engage in peer critiques.

Attributes: English Area 1 - Writing, BUAD FBEN LEOS ILC Area Course, Undergraduate

ENG 208 Special Topics in Literature (3 credits)

Depending on the instructor, the course will focus on a particular topic of interest in literature (e.g., American West in Imagination, Psychology and Literature).

Attributes: GEP Art/Literature, Undergraduate

ENG 209 Literature and Film (3 credits)

This course deals with film treatments of significant literary texts. Specific focus of the course depends on the instructor (e.g., King Arthur In Literature and Film, American War in Literature and Film: Vietnam to Now, Horror in Literature and Film, etc.).

Attributes: GEP Art/Literature, Undergraduate

ENG 210 The Roaring Twenties (3 credits)

Exploration of diverse writers who were part of the "make it new" challenge in the tumult of cultural change during the 1920s in America, with particular attention given to contributions by Anderson, Fitzgerald, Millay, Cummings, Parker, Hemingway, Faulkner, O'Neill, and Hughes.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 211 Black Popular Culture (3 credits)

Beginning with W. E. B. Du Bois's 1897 essay "The Problem of Amusement" we trace the trajectory of the literary interpretations of Black popular culture in the U.S. paying particular attention to its evolution through detective fiction, graphic novels, new media, and science fiction. Likely authors include: Kyle Baker, Octavia Butler, Chester Himes, Nalo Hopkinson, Aaron McGruder, Mia McKenzie, and Walter Mosely.

Prerequisites: ENG 101 or ENG 111 or WR 101

Attributes: Africana Studies Course, American Studies Course, Diversity Course, English Area 5 - American Lit, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 215 Passing Narratives - Black Lit (3 credits)

In W.E.B DuBois' 1903 foundational text *The Souls of Black Folks*, he suggests emphatically that the most significant problem for the 20th century (and beyond) will be the color line. But what about those who write across the color line? What do we do with authors who write tales that straddle, obscure, erase that line? In the US, passing has almost exclusively referred to racial passing and more specifically, Black people passing as white people. Passing is understood to occur when a person deemed a member of one racial group performs as and is recognized as a member of a different one. Literarily, its meaning, presence and articulation has been far more broad. Some authors have written passing as an act of intentionality, one designed to undermine an oppressive racial classification system that habitually denies Black people basic human, social and political rights. For other authors, passing lacks any such political frame and rather exists as a place to express the complications of an ephemeral identity. This course will examine the range of such literary expressions.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Africana Studies Course, American Studies Course, Diversity Course, English Area 5 - American Lit, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 216 Re-Reading the Sixties (3 credits)

Exploration of representative texts from diverse parts of the universe-in-revision that was the 1960s-from Kubrick's *Dr. Strangelove* to Vonnegut's *Slaughterhouse-Five*; from Sylvia Plath's *Ariel* to Dennis Hopper's *Easy Rider*; from Nikki Giovanni's poetry to Bonnie and Clyde; from Tom Wolfe's *Electric Kool-Aid Acid Test* to Pynchon's *The Crying of Lot 49*. We start with "Berkeley in the Sixties," and it never ends.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 217 Music & American Literature (3 credits)

This course will study the relation of words to music in several different forms: songs, musical shows, an opera, and references to music in poems and novels. It will cover mostly popular music of the twentieth century, including ragtime, blues, jazz, and rock. The class will listen to music and learn some elementary reading of music. Broader topics will involve race, ethnicity, gender, romance, and youth culture.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 218 Lesbian & Gay Narrative (3 credits)

Lesbian and Gay Narrative is designed to introduce students to works by and about lesbian, gay, bisexual, transgender, and queer or questioning persons. Our survey will include works in a variety of genres: plays, novels, essays and poetry. These will come from a range of historical periods.

Prerequisites: (ENG 101 or WR 101 or ENG 111) or WR 101H

Attributes: Diversity Course, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 219 Fantasy Literature (3 credits)

Survey of the origins of fantasy, horror, and weird fiction in the mythopoeic imagination. Examines the history and themes of these genres in print and film along with their historical antecedents.

Attributes: English Area 4- British/Irish, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 220 Science Fiction Literature (3 credits)

Survey of science fiction literature (novels, short fiction, and film) from its historical antecedents to the present. Special emphasis is placed on the intersection between science fiction, scientific discovery, and ethics.

Attributes: English Area 4- British/Irish, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 222 SophSem:Critical App Lit Study (3 credits)

A seminar, ideally taken by English majors in the sophomore year, to explore a variety of significant texts in the British and American tradition, each to be examined from diverse critical perspectives, including (but not limited to) the following: formalist/New Critical, structuralist, New Historicist, feminist, deconstruction/poststructuralist, Marxist, psychoanalytic, race/ethnic/postcolonial studies.

Restrictions: Enrollment is limited to students with a major in English - Secondary Education or English.

Attributes: English Literary Theory, Undergraduate

ENG 226 Brit/Irish Detective Fiction (3 credits)

By focusing on the representative detective novels of 20th-and 21st-century Britain and Ireland, this course charts popular culture's complex and often contradictory influence on representations of class, gender, and disability. Starting with the 'Golden Age' of detective fiction in interwar Britain, this course will consider the rise of feminist crime fiction as well as questions of national and post-imperial identities in British and Irish detective novels.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 4- British/Irish, English Diversity, Gender Studies Course, GEP Art/Literature, Irish Studies Course, Undergraduate, Writing Intensive Course- GEP

ENG 230 Creativity (3 credits)

Nobel Prize-winning neuroscientist Eric Kandel argues that our brains are "creativity machines," ultimately and efficiently designed for problem-solving. This course will explore the landscape of creativity, or the space between complex challenges and innovative solutions. Through experiential exercises, case studies, intensive writing exercises, and course projects, students will learn how to identify and re-frame problems, how to generate and test ideas, how to challenge assumptions, and how to tell a compelling story to communicate ideas.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 241 Creative Writing: Intro Workshop (3 credits)

Exploration of at least two creative genres (fiction, nonfiction, poetry, plays). For models and inspiration, students will examine selected works by contemporary creative writers in varied styles. Writing workshop format.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 261 News Reporting (3 credits)

This course introduces students to reporting and writing for the news media. In frequent assignments throughout the semester, students will practice the basic principles of journalism with an emphasis on structure, accuracy, clarity and style - key for journalists working in any medium. They will gain experience in story pitching and development and in news gathering methods, including interviewing, fact gathering and fact checking. Additionally, students will study timely topics related to journalism ethics and the law as well as journalism's transition into the digital age. While this course is based in the classroom, students are expected to learn and adhere to professional newsroom standards.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 263 Writing for Organizations (3 credits)

Comprehensive examination of various forms of writing that are produced in managing organizations, including email, memoranda, letters, reports, brochures, guidelines, and slide share presentation materials.

Prerequisites: ENG 101 or WR 101 or ENG 111 or WR 101H

Attributes: English Area 1 - Writing, Undergraduate, Writing Intensive Course- GEP

ENG 264 Scientific Writing (3 credits)

This course introduces students to writing in the empirical and health sciences, with particular focus on clinical research and the scientific method. Students learn to write scientific reports, review essays, literature reviews, scientific articles for publication, and informal science articles. Additionally, students learn about the research and publication cycles of the scientific community as well as how to present papers and posters at conferences.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, Undergraduate

ENG 265 Writing for Public Relations (3 credits)

This course introduces students to the basic strategies and techniques of public relations writing through the creation and evaluation of a variety of materials commonly used in PR. Students will gain core knowledge of the following: AP style, branding, crisis communication, social media (Facebook, Twitter, and LinkedIn), audience targeting, blogging, media kits, media tracking, fact sheets, press releases, feature articles, and brochures. Does not fulfill GEP Art/Lit requirement.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, Undergraduate

ENG 267 Negotiations, Writing & Conflict (3 credits)

The course involves students in an eclectic writing process that includes legal research, conflict analysis and public speaking. Modeled in part upon the Harvard Negotiation Project's Getting To Yes methodology, the course also involves newly emerging practices that challenge the notion of argument and encourage exchange between disputing parties. The thesis of the course is that, when individuals embroiled in a conflict begin to hear and understand one another's stories, they have the option to change and to grow. Although courtrooms and trials will be examined, quite unlike a law course, the format for our class includes dramatic performance, passages from fiction and poetry as well as essays to reveal the common sense that can provide peace between warring interests. The focused goal of this sequence of readings, dramatic exercises and writing is for each student to evolve and to articulate communication strategies for crisis situations.

Attributes: English Area 1 - Writing, Undergraduate

ENG 268 Fact-checking and Fake News (3 credits)

With daily charges of "fake news" flying off the tongues of politicians and citizens alike, there has never been a better time to learn how to be a fact-checker. In this course, students will dabble in the art of fact-checking and arm themselves with media literacy tools to help them discern fact from fiction. In addition to the required course texts, students will read articles and analyses, listen to podcasts and watch films that will provide fodder for discussions about the fake news debate that occupies the current moment in history.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 269 Intro to Mass Communication (3 credits)

This course focuses on the fundamentals of how mass media operate in America, and globally. Students will cover three broad areas: media history, media economics, and the roles of media in society. Specifically, students will delve into the nature of electronic information processes and their impact on the emerging global culture. Students will use the assigned text as a guide to develop an understanding of the complex connections between media and culture. Students will monitor the latest media developments and ongoing coverage of the political, economic and cultural issues affecting our mass media and culture, in order to bridge the gap between media history and contemporary media culture.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 270 Special Topics in English (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ENG 275 Time (3 credits)

This course provides an introduction to the various ways that human beings have encountered the problems of time in literature and theory, considering perspectives drawn from mathematics, science, religion, art, and philosophy from multiple cultures in an effort to understand how and why time both rules our lives and escapes our grasps. Because this course is meant to facilitate a complex inquiry into both historical and present-day understandings of time, course requirements prioritize active participation, close critical analysis of texts, sustained, thesis-driven writing assignments, and short presentations.

Attributes: English Literary Theory, English Diversity, GEP Art/Literature, Undergraduate

ENG 290 Professional Prep Seminar (1 credit)

What can you do with a degree in English? Do you know how to search for an internship or a job? Are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance your knowledge about internships and careers within your major and help you build practical skills through class instruction, assignments, and alumni exposure throughout the semester. This one-credit course meets once a week through the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication and networking/interviewing.

Attributes: Undergraduate

ENG 301 Middle English Literature (3 credits)

This course will provide an overview of Middle English literature, excluding Chaucer, by beginning with the earliest Middle English texts and ending with Sir Gawain and the Green Knight. We will focus on language, translation, and close reading to start, with the goal of arriving at a broader consideration of the Middle English literary tradition and its role in the creation of English literature as we now know it.

Attributes: English Area 4- British/Irish, English Early Lit, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ENG 302 Renaissance Non-dramatic Lit (3 credits)

Was the Renaissance the age of the individual? Was poetry - the dominant literature of the day - a means to power, a force for good or instead a corrupting agent? This course will consider divergent views on the English Renaissance alongside major works by authors such as Sidney, Spenser and Milton.

Prerequisites: PHL 154

Attributes: English Area 4- British/Irish, English Early Lit, Ethics Intensive, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ENG 303 Renaissance Drama (3 credits)

A study of the drama of Tudor and Jacobean England, excluding Shakespeare. The plays of Marlowe, Jonson, Webster, and Ford and their distinctive dramatic qualities will be emphasized.

Prerequisites: PHL 154

Attributes: English Area 4- British/Irish, English Theatre/Drama, English Early Lit, Ethics Intensive, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ENG 305 Eighteenth Century English Lit (3 credits)

This course deals with the literature of the Restoration and eighteenth-century, a time of intellectual, cultural, and political revolutions. Among the writers who may be studied are Behn, Dryden, Swift, Pope, Haywood, Defoe, Richardson, Fielding, Johnson, Sterne, Burney, Inchbald, and Wollstonecraft. Depending on the instructor, the course may focus on a particular genre or it may deal with a specialized topic, such as "The Rise of Gender in the Novel," "The Idea of Authorship in the 18th Century," or "The Satiric Mode."

Attributes: English Area 4- British/Irish, English Early Lit, GEP Art/Literature, Undergraduate

ENG 306 Nineteenth Century English Lit (3 credits)

Depending on the instructor, the course may be focused in a variety of ways, all exploring different developments in literature in England in the 19th Century (Major Romantic Poets, The Nineteenth-Century English Novel, Rebels-Reactionaries: Victorian Literature).

Attributes: English Area 4- British/Irish, GEP Art/Literature, Undergraduate

ENG 307 Modernism: British & Irish Lit (3 credits)

A study of representative authors of British and Irish Modernism, including Auden, Conrad, Eliot, Forster, Joyce, Lawrence, Woolf, and Yeats. Depending on the instructor, this course may also explore works by Bowen, Ford, Lewis, Moore, O'Brien, Wilde, or other authors.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Undergraduate

ENG 309 British/Irish Immigration Lit (3 credits)

Focusing mainly on postwar Britain and Ireland and the changing immigration policies of these countries, this course investigates how economic conditions as well as historical and political events such as 9/11 and/or Brexit have influenced nationalism, gender, race and language at the end of the 20th and the start of 21st century.

Attributes: Diversity Course, English Area 4- British/Irish, English Diversity, Gender Studies Course, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 310 20th Century Irish Literature (3 credits)

Investigates crucial authors and stages in the development of Irish literature in English from the period of Gregory, Joyce, O'Casey, Synge, and Yeats, through the mid-century period of Beckett, Behan, Bowen, Kavanagh, and O'Brien, to works by late twentieth-century authors (for example, Banville, Boland, Carr, Enright, Friel, and Heaney)

Attributes: English Area 4- British/Irish, GEP Art/Literature, Undergraduate

ENG 311 21st Century Irish Literature (3 credits)

This course will introduce you to the best, the brightest and the loudest voices in today's Irish literature. We will read a wide variety of authors, among whom you will find more established names such as Martin McDonagh and his wickedly funny and startlingly original drama; Tana French, whose recent success has put Irish crime writing on the world (literary) map; and Ireland's first fiction laureate, Anne Enright. While exploring questions of nationalism, immigration, gender and identity, we will also study the most recent works of Irish literature, which have shaken and stirred the reading public over the course of the last couple of years.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: English Area 4- British/Irish, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 312 Modern Irish Drama (3 credits)

Irish theatre is haunted by the idea of nation. This course will examine issues of national and sexual politics and identity with attention to some of the most well-known playwrights in the history of Irish theatre - including but not limited to W.B. Yeats, Lady Gregory, Samuel Beckett, Brian Friel, Martin McDonagh, and Marina Carr.

Attributes: Diversity Course, English Area 4- British/Irish, English Diversity, Gender Studies Course, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 313 Cont Irish Women's Writing (3 credits)

Designed to give you an overview of contemporary Irish women's writing, this course will explore the thematic nexus of gender, class, disability, migrancy, immigration, and reproductive justice. In doing so, it will pay considerable attention to Ireland's history of institutionalizing women in Magdalen laundries, asylums and mother-and-baby homes. This course will showcase some of the most vibrant voices in contemporary Irish writing, including but not limited to Anne Enright, Marina Carr, Sally Rooney and Anna Burns.

Attributes: Diversity Course, English Area 1 - Writing, English Area 4- British/Irish, English Diversity, Gender Studies Course, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 314 Irish Environmental Writing (3 credits)

Ireland's colonial history and its current, intense focus on the commercial or market value of land and landscape, have transformed the Irish relationship with land and the environment. In Ireland (as elsewhere), environmental decisions are all too often justified by the need to satisfy economic and business decisions that are deemed to supersede environmental concerns. While considering such moral quandaries produced by the age of Anthropocene, this course will focus on their literary representations in recent Irish novels, plays and poetry.

Attributes: English Area 4- British/Irish, English Literary Theory, Ethics Intensive, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 315 Literature of South Asia (3 credits)

This course examines contemporary fiction and film from the Indian subcontinent (primarily India, but with some focus on Pakistan as well). Works studied include both Anglophone texts and texts in translation read alongside major events of twentieth- and twenty-first century South Asian history, particularly Independence and Partition. Featured authors may include Mulk Raj Anand, Saadat Hasan Manto, R.K. Narayan, Arundhati Roy, and Salman Rushdie.

Attributes: Asian Studies Course, English Area 4- British/Irish, English Diversity, GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

ENG 317 Literature of South Africa (3 credits)

This course provides a historical view of South African literature, focusing on apartheid, its segregationist precedents, and its present-day legacies. Utilizing novels, historical and legal documents, and creative nonfiction, as well as short fiction and film, the course introduces students to the writings of South Africans who represent diverse subject positions and experiences, but who are all united in the common goal of re-examining and working through South Africa's traumatic past.

Attributes: Africana Studies Course, English Area 4- British/Irish, English Diversity, GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

ENG 319 Postmodernism (3 credits)

Engagement with a wide range of writers whose work represents both radical extension and rejection of the earlier modernist movement, with exploration of texts by Fowles, Barth, Barthelme, Calvino, Heller, Vonnegut, Pynchon, Smith, Eggers.

Attributes: GEP Art/Literature, Undergraduate

ENG 320 Contexts of Faith in Modern Lit (3 credits)

This course examines representations of religious faith in a variety of literary genres (fiction, drama, poetry, film) from the 20th century to the present. Students will consider to what extent the texts studied reflect and develop traditional expressions of religion and the degree to which they engage readers in an evaluation of faith as a source of knowledge. Acceptable for Faith and Reason GEP requirement.

Prerequisites: THE 153 or THE 154 or THE 155

Attributes: English Area 5 - American Lit, Undergraduate

ENG 321 Early American Literature (3 credits)

A study of the literary genres that emerged from the colonization of North America and the establishment of the federal republic of the United States, with a focus on the role of literature in defining American national identity. Readings will include histories, journals, sermons, poems, autobiographies, and novels by authors including John Winthrop, Anne Bradstreet, Mary Rowlandson, Benjamin Franklin, Olaudah Equiano, Nathaniel Hawthorne, Harriet Beecher Stowe, as well as explorers, Indigenous people, and other early national authors.

Attributes: American Studies Course, English Area 5 - American Lit, English Early Lit, GEP Art/Literature, Undergraduate

ENG 322 Amer Romantic & Transcend Lit (3 credits)

An in-depth study of the writers associated with the Transcendentalism and the social reform movements they inspired, including abolition, women's suffrage, labor reform, and projects of associated living. Authors considered include Ralph Waldo Emerson, Margaret Fuller, Frederick Douglass, Henry David Thoreau, Nathaniel Hawthorne, Herman Melville, and Walt Whitman. A variety of critical and creative writing assignments will provide opportunities for us to reflect on how matters of race, gender, class and ethnicity continue to affect perceptions of democracy today.

Attributes: American Studies Course, English Area 5 - American Lit, English Early Lit, GEP Art/Literature, Undergraduate

ENG 323 American Literature 1865-1915 (3 credits)

A survey of American literature between the Civil War and World War I, from realism to naturalism, with consideration of such writers as Twain, Howells, James, Crane, Dickinson, Robinson, Cable, Wharton, Norris, and Dreiser.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 324 Twentieth Century American Lit (3 credits)

An exploration of a century of dramatic change in the American literary landscape—from Dreiser's *Sister Carrie* to Toni Morrison's *The Bluest Eye*; through poets as diverse as E. E. Cummings, Allen Ginsberg, and Rita Dove; with options that may include key work from William Faulkner, Richard Wright, Sylvia Plath, Don DeLillo, and Louise Erdrich.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 325 Contemporary American Lit (3 credits)

An exploration of representative American works (creative non-fiction, fiction, poetry) from the past 25 years- including books from Jhumpa Lahiri, Joy Harjo, Tobias Wolfe, Junot Diaz, Mark Doty, Kevin Powers, David Eggers and Cheryl Strayed.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 326 American West in Imagination (3 credits)

With a mix of literary and film texts, this course explores the impact of the West in shaping the American character and sense of identity. From Mark Twain's "Roughing It" in the 19th Century to "Butch Cassidy and the Sundance Kid" and "Legends of the Fall" in the 20th Century, the West has provided dramatic stimulation for remarkable works of human imagination.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 327 Southern Literature (3 credits)

An overview of Southern literature from the nineteenth century to the present, with consideration of both poetry and fiction. Selected authors may include Poe, Twain, Faulkner, Welty, Warren, Taylor, Styron, Smith, Edgerton, and McCorkle.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 328 African American Literature (3 credits)

This thematic survey explores how African American authors write about what it means (and has meant) to be a Black person in the U.S. Exploring poetry, autobiography, drama, short stories, novels, essays, and films, we grapple with the multifaceted experiences of "Blackness" in literary texts produced from the era of slavery to the present. Through our reading we develop an understanding of specific African American literary traditions.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Africana Studies Course, American Studies Course, Diversity Course, English Area 5 - American Lit, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 329 Black Women Writers (3 credits)

Linked by history, race, gender, and fate, but arguably little else, how do Black women writing in the U.S. write themselves into the idea of America? This course examines exclusively Black women's literature in order to answer this question. Covering a minimum of three traditional African American literary periods, students are positioned to question notions of privilege and power driven by the intersectionalities of gender and race.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Africana Studies Course, American Studies Course, Diversity Course, English Area 5 - American Lit, English Diversity, Gender Studies Course, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 330 Caribbean Lit in English (3 credits)

This course explores the intersectionalities of racial, ethnic, and linguistic identities within Anglophone and Francophone Caribbean literary traditions. In dialogue these literary traditions complicate a monolithic Caribbean narrative. With careful study of language, class, color, and identity we determine how authors contend with and memorialize French, British, and American imperialisms in the Caribbean. Likely authors include Michelle Cliff, Edwidge Danticat, Merle Hodge, Thomas Glave, George Lamming, and Jamaica Kincaid.

Attributes: GEP Art/Literature

ENG 331 Modern Drama (3 credits)

Major English and continental dramatists of the modern period from Ibsen to the present; a survey emphasizing not only major writers but also significant changes in dramatic form.

Attributes: English Theatre/Drama, GEP Art/Literature, Undergraduate

ENG 332 Playwriting (3 credits)

This course offers students the experience of creating original material for stage presentation, with particular focus on the one-act play structure and concern for character, scene, and plot development.

Attributes: English Area 1 - Writing, English Theatre/Drama, GEP Art/Literature, Undergraduate

ENG 333 Read, Write, Adapt Theatre Drama (3 credits)

Examination of the diverse functions of the dramatist developing background perspective for bringing dramatic texts to the stage, adapting various texts for stage presentation, writing interpretive notes for staged productions. Students will adapt literary texts for Reader's Theatre performance.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, English Theatre/Drama, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 334 Cont. Amer. Women Playwrights (3 credits)

This course is a survey of major American women playwrights from 1975 to the present. We will read plays by a diverse group of writers including Shange, Wasserstein, Henley, Vogel, Nottage, Ruhl, Baker, Gionfriddo, Izuka, Kron, and others.

Prerequisites: ENG 101 or ENG 111 or WR 101H

Attributes: American Studies Course, Diversity Course, English Area 5 - American Lit, English Theatre/Drama, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 341 Poetry Workshop (3 credits)

Exploration of poetry by reading and writing. Each student will be responsible for creating a set of poems. Writing workshop format.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 342 Fiction Workshop (3 credits)

Exploration of fiction by reading and writing. Each student will be responsible for creating a set of stories. Writing workshop format.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 343 Creative Nonfiction (3 credits)

Exploration of creative nonfiction by reading and writing, with particular focus on the form of the personal essay. Each student will be responsible for creating a set of essays. Writing workshop format.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 344 Screenwriting (3 credits)

Exploration of screenwriting in a workshop format with consideration of the whole process involved in development of screen projects, including feature-length film projects.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 345 Tutor Prac, Writ Cntr Thry Pr (3 credits)

This course introduces students to writing center history, theories, and practices. Readings include landmark and contemporary texts about writing pedagogy in general and the tutoring of writing specifically. Additionally, students study issues and strategies of relevance to ESL writers for whom English is not their first or home language. Students are introduced to the practices of peer tutoring through class discussions and through observation and tutoring in the University Writing Center. Upon successful completion of this course, they are eligible to be hired in subsequent semesters as writing tutors. Open to students from all majors who are interested in writing and/or the teaching of writing. Permission of instructor required. Does not fulfill GEP Art/Lit requirement.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 1 - Writing, English Literary Theory, English Diversity, Undergraduate, Writing Intensive Course- GEP

ENG 346 The Art of The Interview (3 credits)

In this course students will learn and practice interviewing skills. The reason the word art is included in the title of this course is that a good interview is just that: a work of art, one that involves creativity and deep thinking. It also requires curiosity and active listening and the ability to read people. Good interviewers do their homework before they ask questions, but they also know how to think quickly on their feet, crafting new questions, following new trails, depending on where the interview takes them. They know when to push their subjects and when to pull back and how to balance easier questions with the hard ones. They understand the power of both words and silences. If this sounds intimidating, remember: As with any skill, practice is key. The more interviews you do, the more comfortable you will become doing them.

Prerequisites: ENG 101 or WR 101

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 350 Advanced News Reporting (3 credits)

This course is an upper-level reporting class that allows students to further enhance their pre-reportorial research, reporting and storytelling skills. Students will learn how to dig up story ideas from beats they develop, crowd source, file FOIA requests, pull police/courts documents, and distill an academic report or scientific study into 300 words for a quick web post, among others. They will also explore and practice using advanced digital reporting tools.

Prerequisites: ENG 261

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 360 Feature Writing (3 credits)

At its most basic definition, feature writing is journalism that tells a story—generally, the kind of story that you don't soon forget, that lingers for many moments, or days, or years after you first encounter it. In this course, students study outstanding examples of feature stories and multimedia feature packages. From those examples, they learn how to combine the best reporting practices with the best storytelling practices in order to produce their own powerful features that marry in-depth reporting and research with captivating and creative storytelling skills. Students should have taken ENG 261 or have prior journalism experience before enrolling in this course. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 362 Photojournalism (3 credits)

This is an introductory course in photojournalism presented in a multimedia context. Students will be required to have access to either point-and-shoot cameras or (ideally) DSLR camera kits. The course will be taught as a hands-on workshop. Instruction will progress from basic camera operation and single image assignments to more comprehensive visual storytelling. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, GEP Art/Literature, Undergraduate

ENG 363 Sports Journalism (3 credits)

This hands-on, multimedia course covers all aspects of current sports journalism, from reporting and telling stories in print and broadcast media as well as in blogs, podcasts and social media. In addition to learning how to break news across multiple platforms, students will practice the kind of in-depth reporting and compelling storytelling that leads to profiles and full-length features. Students should have taken ENG 261 or have prior journalism experience before enrolling in this course. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 364 Stunt Journalism (3 credits)

In 1887, when journalist Nellie Bly feigned madness in order to get herself locked up in the Women's Lunatic Asylum on Blackwell's Island in New York, stunt journalism wasn't yet a brand. But the kind of immersive, investigative journalism that Bly did would soon become a way for journalists and newspapers to grab headlines, increase circulation and even affect real social change. Nowadays, serious stunt journalism is more commonly referred to as "immersion journalism" while some of the less serious attempts are questionably journalism at all. No matter what you call it, stunt journalism differs from traditional journalism in this significant way: The journalist deliberately becomes a part of the story—and often in disguise—in order to tell it. In addition to required readings, students will produce significant works of stunt journalism that, at least on a smaller scale, mirror the challenges of the stunt journalist.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 365 Multimedia Journalism (3 credits)

Multimedia journalism is a foundational course in audio-visual storytelling. The course will provide an overview of the language and theories of audio-visual communication, and introduce skills to produce news narratives for radio, television, and online news reporting. In this course students will learn the vocabulary of multimedia production and editing, use audio-visual production techniques to produce multimedia stories, and learn methods to critically evaluate audio-visual narratives.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 370 Independent Study: Jr. Level (3 credits)

The chief purpose of the junior-level independent study project is for the student to acquire knowledge in a particular area of literature (reading and research project) or to produce a substantial piece of writing, either creative or discursive (writing project). For the reading and research project, the student will develop a course of study with the project director that may utilize audiovisual as well as printed material. In addition to a reading program, the student will write a substantial paper that develops from that reading program; the paper should use primary texts and have a textual perspective—historical, critical, aesthetic, or mythic. For the writing project, the student will develop a program of reading and writing with the project director. Minimum GPA of 3.0 (or cumulative average of 3.4 or higher for courses in the major field).

Attributes: GEP Art/Literature, Undergraduate

ENG 377 Inside-Out (3 credits)

This class offers a unique opportunity to have meaningful discussions about a range of topics from inside a correctional facility. Inside-Out classes bring together students from Saint Joseph's University and adult students who are incarcerated to learn about and discuss topics such as the causes of crime, racism, literature, philosophy, and restorative justice. Through the readings and dialogue, inside and outside students will be able to integrate their theoretical knowledge with lived experiences. It is through this exchange that we hope to critically analyze and challenge the current system in the U.S. that has resulted in a higher incarceration rate than other similar countries.

Attributes: Criminal Justice Course, Faith Justice Course, Justice Ethics and the Law, Service Learning Course, Undergraduate

ENG 383 Seminar in Rhetorical Theory (3 credits)

Focused examination of some key factors in rhetoric over the ages: for example, invention strategies, the ethics of writing, methods of delivery.

Attributes: English Area 1 - Writing, Undergraduate

ENG 384 The Essay (3 credits)

A comprehensive study of the essay form through time, with special concern for identifying forces of change upon the style and function of the essay within selected cultural contexts.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 401 Chaucer & the Medieval World (3 credits)

An examination of the development of various medieval narrative forms, including the romance, and the climax of their development in the poetry of Geoffrey Chaucer. The major historical focus will be on work written in England from 1300 to 1485; there will be some continental material included.

Attributes: English Area 4- British/Irish, English Early Lit, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ENG 402 Shakespeare (3 credits)

An exploration of some aspect of Shakespeare's literary career. Topics may include "Comedy & History," "Tragedy & Romance," or "Sonnets & Poems," or may involve specific themes.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: English Area 3 - Shakespeare, English Area 4- British/Irish, English Early Lit, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate, Writing Intensive Course- GEP

ENG 403 Shakespeare and Race (3 credits)

This course considers race in the Renaissance through six of Shakespeare's plays, five of which include people of color: Cleopatra and the Egyptians at her court in Antony and Cleopatra; Aaron in Titus Andronicus; the Prince of Morocco (and, arguably, Shylock) in The Merchant of Venice; Othello in Othello; and Caliban in The Tempest. A sixth play, Henry V, helps us consider additional ways in which Shakespearean conceptions of both race and diversity may vary from our own.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 3 - Shakespeare, English Area 4- British/Irish, English Early Lit, English Diversity, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate, Writing Intensive Course- GEP

ENG 404 Eng,Irish,Anglophone Authors (3 credits)

An in-depth study of one to two significant authors of a particular period, the choice to be made by the instructor.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: English Area 4- British/Irish, GEP Art/Literature, Undergraduate

ENG 405 Early Tudor Gender Power & Lit (3 credits)

Anne Boleyn was the most consequential queen in English history. To marry her, Henry VIII created the Church of England and forced his subjects to swear oaths confirming his control over it and their own allegiance to Anne and her heirs. Those who refused - including Thomas More - faced imprisonment and death. Anne reigned barely a thousand days before her execution for adultery. This course is about Anne, Henry VIII, the politics of their world and the literature by and about their court - including the poetry kept and commented upon by Anne's female friends and relatives.

Prerequisites: (ENG 101 or WR 101 or WR 101H or ENG 111) and PHL 154

Attributes: English Area 4- British/Irish, English Early Lit, Ethics Intensive, GEP Art/Literature, Justice Ethics and the Law, Medieval, Ren & Reform Studies, Undergraduate, Writing Intensive Course- GEP

ENG 406 Race in the Middle Ages (3 credits)

The medieval period is thought of as a time before concepts of race emerged - before the horrors of the Atlantic slave trade, before European colonialism, before scientific racism. It continues to be used to justify the modern phenomena of racialized nationalism and ideologies of whiteness. This course examines some of the stories, images, ideas, and institutions of medieval England. We will ask how race aids our thinking about the way human difference is articulated and how it operated in the Middle Ages. Some readings will be in Middle English; others will be modern English translation. No previous experience with medieval literature is expected.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 4- British/Irish, English Early Lit, English Diversity, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ENG 407 20th/21st Cent. British Novel (3 credits)

Focusing on the study of major developments in British fiction from World War I to Brexit, this course will analyze issues of globalization and Britain's role in the globalized world. Focusing on issues of nation and nationality, of Britishness and history, the course will investigate the state of the nation in what has been seen as a far-reaching identity crisis and/or a massive inferiority complex. The authors may include Woolf, Forster, Lawrence, and, depending on the instructor, also Fowles, Spark, Ishiguro, Ali Smith and others.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Globalization Course, Undergraduate

ENG 409 Art Ethics Irish Troubles Lit (3 credits)

This course explores how various Irish (and English) novelists and short-story writers have depicted in fiction "the Troubles"-a protracted period of politically-motivated violence in Northern Ireland, Great Britain, and the Republic of Ireland, which began in the late 1960s and has not fully ended today. By identifying the stories' aesthetic and ethical dimensions and their social and political contexts, we shall examine both the representation of violence and the potential violence of representation. Key questions include: What is the role of the artist in representing politically motivated and other types of violence? Should artists offer solutions or only pose problems? What are the aesthetical and ethical stakes of making art out of atrocity?

Prerequisites: PHL 154

Attributes: English Area 4- British/Irish, Ethics Intensive, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 410 Irish Gothic Fiction (3 credits)

Interrogating issues of genre and historical context, this course traces the evolution of Irish gothic and ghost stories from the early nineteenth century to the present.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Irish Studies Course, Undergraduate

ENG 411 Black British Literature (3 credits)

This course focuses on narrative and criticism by Black British writers since the 1948 arrival of the Empire Windrush. We examine the way "Blackness" in Britain has been called upon to both unite and exclude while exploring the contested perception that Black experience in Britain should be examined solely in terms of race and identity. Likely authors include: Sam Selvon, Kwame Kwei-Armah, Jackie Kay, Andrea Levy, Caryl Phillips, and Zadie Smith.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Undergraduate

ENG 414 Modern and Contemporary Epic (3 credits)

This course examines the attempts of four long novels from the twentieth and twenty-first centuries to recapture the epic tradition in the form of the modern novel: the modernist epic, the postcolonial epic, the postimperial epic, and the epic of globalization. During the semester, we will discuss how modern and contemporary authors depict how individuals can imagine connections and responsibilities to one another while undergoing rapidly changing notions of community, national belonging, and global citizenship.

Prerequisites: PHL 154

Attributes: English Area 4- British/Irish, English Diversity, Ethics Intensive, GEP Art/Literature, Globalization Course, Undergraduate

ENG 415 Postcolonial Studies (3 credits)

An examination of diverse literary texts, films and theoretical essays that engage the idea of "post colonialism," the circumstances and effects of one nation having sovereign power over another. We will emphasize works with a relationship to the British Empire (e.g., Forster, Conrad, Rushdie, Collins, Dickens, Joyce, Winterson), but we will not be limited to this particular historical context.

Prerequisites: PHL 154

Attributes: Africana Studies Course, Asian Studies Course, Diversity Course, English Area 4- British/Irish, English Diversity, Ethics Intensive, GEP Art/Literature, Undergraduate

ENG 416 Rebellious Women Writers (3 credits)

This course explores how British and American women of the late seventeenth to early twentieth centuries used writing to rebel against the status quo. We will examine both the historical circumstances in which women found themselves and the literary production that resulted. We will examine a wide variety of women's texts—narrative fictions, poetry, political polemics, conduct books, letters, autobiographies, social theories, sermons, and protest leaflets—and we will discuss the effects of these different responses to women's plight. We will look closely at the influences that British and American writers exerted upon one another.

Attributes: American Studies Course, Diversity Course, English Area 4- British/Irish, English Area 5 - American Lit, English Early Lit, English Diversity, Gender Studies Course, GEP Art/Literature, Undergraduate

ENG 417 Post-Soul Black Literature (3 credits)

Many believed that the 1964 Civil Rights Act would usher in a radically different era of freedom and opportunity for all Black Americans, ultimately improving their quotidian experiences with racism. This has not proved true. In this course, we will approach the study of Black literature by understanding that, in some ways, life informs art and/or the artists who create it. We will read literature and theory written after the signing of the Civil Rights Act identifying common themes, styles, imagery and artistic strategies emerging from what literary critic Mark Anthony Neal has termed the "post-soul imagination". How are African American authors articulating the concepts of freedom and citizenship as raced and gendered subjects into the 21st century? Likely authors may include: Octavia Butler, Brittney Cooper, Michelle Elam, Percival Everett, Victor LaValle, and Kiese Laymon.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: American Studies Course, Diversity Course, English Area 5 - American Lit, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 420 American Authors (3 credits)

An in-depth study of one or two significant American authors, the choice to be made by the instructor.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 421 American Novel, 19th 20th Cent (3 credits)

A study of the evolution of the novel in America; may include novels by Cooper, Hawthorne, Melville, Twain, Chesnutt, Wharton, James, Hemingway, Pynchon, Bellow, Updike, Kesey, Tan, Silko, or others depending on the instructor.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 423 Amer.Poetry, 19th & 20th Cent. (3 credits)

An analytical study of poetic development, with emphasis on Romantic and modern theory and practice. Among those studied: Poe, Whitman, Dickinson, Stevens, and Frost.

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 424 Contemporary American Poetry (3 credits)

An exploration of the current American poetry scene, including representative works from a wide range of styles and poetic movements. You will read and discuss recent poetry collections, keep a journal responding to your reading, and write imitations of the poets we read for class. To more fully experience poetry as working poets do you will write a poetic imitation of each of the books we read, and we will regularly workshop the poems you write for class. Guided by the advice you receive in workshop, you will revise eight of your poems toward a polished, fully-realized final portfolio. You will also present to the class on a contemporary poetry collection of your choice.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, English Area 5 - American Lit, GEP Art/Literature, Undergraduate

ENG 425 American Drama (3 credits)

A critical study of selected plays. The emphasis will be on the works of O'Neill, Wilder, Williams, Miller, MacLeish, and Albee. Acceptable for Theatre/Drama track.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: American Studies Course, English Area 5 - American Lit, English Theatre/Drama, GEP Art/Literature, Undergraduate

ENG 426 Nature & Environmental Writing (3 credits)

Nature & Environmental Writing incorporates attention to both literature and student writing in an effort to help students understand the conventions of American nature and environmental writing and to use those conventions in their own writing. The course surveys the landscape of American nature and environmental writing from Thoreau to more contemporary authors, charting the changes and considering what has remained constant.

Prerequisites: (ENG 101 or WR 101 or ENG 111) or WR 101H

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 427 The Harlem Renaissance (3 credits)

Black artists in Harlem (and other densely populated urban areas) produced a significant collection of work remarkable for its breadth and complexity during the anachronistically named Harlem Renaissance (1922-1941). This course explores that creative explosion in an attempt to develop a comprehensive understanding of what compelled the movement and why the Harlem Renaissance continues to be so influential in Black literature and culture today. ENG 215, 328, or 329 recommended.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Africana Studies Course, American Studies Course, Diversity Course, English Area 5 - American Lit, English Diversity, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 428 The Beat Rebellion (3 credits)

A study of writers in the 1950s and early 1960s whose work reflected rebellion with regard to social and cultural norms.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: American Studies Course, English Area 5 - American Lit, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 429 The Civil Rights Movement (3 credits)

Consideration of how writing-speeches, poetry, fiction, and autobiography-from the U.S. Civil Rights movement shaped social change. Including a close look at the rhetorical strategies involved in a wide range of texts; authors include Martin Luther King, Jr., Malcolm X, Maya Angelou, James Baldwin, Taylor Branch, John Steinbeck, Alice Walker, and Eudora Welty. Also considers other movements that emerged from the Civil Rights movement including gay rights and disability rights.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: American Studies Course, Diversity Course, English Area 1 - Writing, English Area 5 - American Lit, English Diversity, GEP Art/Literature, Justice Ethics and the Law , Undergraduate

ENG 431 Special Topics in Theater (3 credits)

Course content to be determined by instructor.

Attributes: English Theatre/Drama, GEP Art/Literature, Undergraduate

ENG 432 Theater Performance Practicum (3 credits)

Rehearsal and performance of a campus production (produced by the Cap and Bells Dramatic Society and directed by a faculty director) with the student in the role of actor or stage manager. Comprehensive study of the rehearsal and performance processes which culminates in the writing of a final research paper of ten pages in length. In order to register for this course, the production must be the third campus production in which the student has served as cast member or stage manager. Instructor approval required.

Attributes: English Theatre/Drama, GEP Art/Literature, Undergraduate

ENG 433 Environmental Justice (3 credits)

In an era of depleted natural resources and climate change, environmental justice explores creative nonfiction, memoir, fiction, and poetry that addresses climate change and its impact on communities of color and impoverished communities in the U.S. and elsewhere. We also consider how to tell stories about climate change and global warming that influence policy makers and the public. We use the lens of race, class, and gender to consider how environmental writing works.

Attributes: Diversity Course, English Area 1 - Writing, English Diversity, GEP Art/Literature, Justice Ethics and the Law , Undergraduate

ENG 434 Climate Change Stories (3 credits)

This course will explore literary responses to climate change through an exploration of memoir, fiction, poetry, and popular environmental writing. The primary emphasis on the course will be on the relatively new genre of "climate fiction," also known as "cli-fi."

Attributes: English Area 1 - Writing, English Area 4- British/Irish, English Area 5 - American Lit, English Literary Theory, Faith Justice Course, GER Art/Literature, Undergraduate

ENG 441 Literacy as a Social Practice (3 credits)

An investigation of literacy as a social practice, using composition theory, ethnography, fiction, autobiography, and popular culture to define literacy and ask questions about it. With concern for the defining forces of race, class, and gender, the course explores different uses of literacy and considers the concept of a literacy "crisis." Students will compose narratives of their own literacy practices and pursue independent research on some aspect of literacy and its applications to schools, society, and quality of life. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, Undergraduate

ENG 443 Special Topics in Writing (3 credits)

In this course, students will engage in writing projects based on a specialized area of study (e.g., Writing and Faith, Running to Write).

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 444 Race, Class, and Gender (3 credits)

We investigate "identity" as an intersectional construct. Theories of whiteness and racial identity, gender and sexuality, and social class are presented through reading and writing in poetry, memoir, fiction, and film. Course can include readings on disability, mental health diagnoses, and trans identities. Drafts of writing will be shared with classmates in large and small workshops.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 1 - Writing, English Diversity, Faith Justice Course, Gender Studies Course, GEP Art/Literature, Justice Ethics and the Law , Undergraduate

ENG 445 Gender & Narrative (3 credits)

A writing course designed to explore alternative and experimental genres that combat sexism and do social and political work, with particular focus on narratives developed to challenge dominant cultural structures and practices.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 446 Writing the Grant Proposal (3 credits)

This course introduces students to the grant-making process from initial research to the submission of a final proposal. Students will first work together to consult for a single non-profit, while learning about the components of a strong grant proposal and the grant-making process overall. Then, each student will be paired with a local nonprofit organization, as volunteer consultants for that organization. Students will work with their nonprofit organization to identify a new or existing project that needs funding. They will then take what they learn in class about the grant-making process and apply it to meet the needs of their nonprofit "client," with the ultimate goal of producing a complete grant proposal that can be submitted to funders

Attributes: English Area 1 - Writing, Undergraduate

ENG 449 Travel Writing Abroad (3 credits)

In this study abroad course, you will use travel as a lens through which to explore the elements of creative nonfiction in general and travel writing in particular. You will read travel memoirs, keep a journal, do in-class invention exercises, and research, write and workshop travel essays. A portfolio of your revised writing will be due after the study tour is over.

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate

ENG 450 Hospital Stories (3 credits)

We read memoir, novels, poems, creative nonfiction, and films in order to explore how race, class, gender, sexuality, and disability are depicted through the writing of caregivers, medical professionals, and patients. The course focuses on how cultural differences affect access to medical care and how illness and health are narrated depending on the writer's intersectional position. Mental health diagnoses, addiction, chronic illness, and trauma may also be explored.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 1 - Writing, English Diversity, Faith Justice Course, Gender Studies Course, GEP Art/Literature, Health Care Ethics Course, Undergraduate

ENG 451 N. Ireland Conflict & Story (3 credits)

This course explores "The Troubles" in Northern Ireland through fiction, poetry, film, and memoir. We consider the relationship of peaceful protest in Northern Ireland to the U.S. Civil Rights Movement, reflect on how personal conflicts relate to historical and cultural clashes between groups of people, and consider how stories shape identities. We investigate the relationships between identity and conflict, violence and nonviolence, peace and reconciliation.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: Diversity Course, English Area 1 - Writing, English Diversity, Gender Studies Course, GEP Art/Literature, Irish Studies Course, Justice Ethics and the Law, Undergraduate, Writing Intensive Course- GEP

ENG 452 Writing and Reading Animals (3 credits)

This hybrid literature and writing course considers the representation of animals in a range of texts and explores how the depiction of animals as companions, gods, guides, objects, heroes, or monsters reflects changes in relationships between humans and nature. Students will also use the literary forms we study (fiction, nonfiction, and poetry) to reflect on their own experiences with animals (pets, animals in captivity or in the wild, and in books and films).

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 453 Medicine and Literature (3 credits)

This course surveys works of literature from multiple genres, cultures, and time periods in order to witness how literature emerges alongside developments and dilemmas in medical practice. Literature can represent medical experiences that other modes of scientific and clinical writing cannot contain. We will investigate the ways in which expressions and descriptions of pain often fall short. We will learn how various writers have used complex literary effects, narrative structures, and figurative language to compensate for the inarticulate and untranslatable experience of suffering, treatment, and recovery. We will also analyze the role of listeners and readers who must discover new techniques to treat patients and maladies (both physical and psychological) that they do not fully know.

Attributes: English Area 4- British/Irish, English Area 5 - American Lit, English Early Lit, GEP Art/Literature, Undergraduate

ENG 454 Narrative Medicine (3 credits)

Narrative Medicine is a field that seeks to fortify healthcare practice with narrative competence: the capacity to recognize, absorb, metabolize, interpret, and be moved by the stories of illness. We explore the relationship between narrativity and identity. We engage in literary study that allows healthcare providers to better comprehend patients, convey knowledge, and accompany patients through the ordeal of illness. Narrative competence includes rigorous training in close reading, attentive listening, reflective writing, and bearing witness to suffering. By placing events in temporal order (with beginnings, middles, and ends) and establishing connections using metaphor and figurative language, narrative medicine employs elements of creativity and literary study to help us to recognize patients and diseases, convey knowledge, and accompany patients through the ordeal of illness.

Attributes: English Area 1 - Writing, Undergraduate

ENG 460 Magazine Writing (3 credits)

In this course, students gain practice developing story ideas, pitching articles, writing to word-count, and abiding by AP style. The course also examines a variety of glossies plus online magazines in order for students to stay current with changing journalistic practices. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 461 Food Writing (3 credits)

This class explores the political, spiritual, and economic aspects of eating and offers students the chance to practice writing about food in different modes, from restaurant reviews to blog posts to personal essays. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 462 Travel Writing (3 credits)

This course explores the elements of crafting narratives about journeys, creatively and journalistically. Students will read widely, exploring the historical and contexts of travel writing, current best practices and practicalities, and ethical considerations. They will also complete a variety of writing assignments that will help them explore the various craft elements of travel writing, from researching to reporting to writing. While the course will mostly focus on local stories that can be written and reported (and traveled to) within the greater Philadelphia area, students will also have the opportunity to write about past travel experiences.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 463 Literary Journalism (3 credits)

This reading-intensive course provides an historical overview of a genre most often referred to as "literary journalism," once called "new journalism," and now sometimes dubbed "new journalism" or "immersion journalism." Students may read works by writers such as Nellie Bly, Stephen Crane, John Hersey, Joan Didion, Truman Capote, Tom Wolfe, Hunter S. Thompson, Ted Konover, Sonia Nazario, Adrian Nicole LeBlanc, and Susan Orlean, among others. In addition to their literary consumption and interrogation of the field, students will produce several short exercises in the style of the genre and one final project. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 464 Media, Politics & the Election (3 credits)

This course explores the normative and functional roles of media in our contemporary political system. Journalism - the Fourth Estate - fulfills critical roles in a representative democracy, analyzing political issues, providing diverse perspectives about candidates and creating forums for public discussion, all of which enable citizens to make informed decisions about electing leaders. During the course we will track and analyze media coverage of ongoing elections, and research and write election stories.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 465 Special Topics in Journalism (3 credits)

Focus on a particular issue in journalism, examination of some trend, of consideration of selected columnists/distinctive voices in journalism.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 466 Journalism & Entrepreneurship (3 credits)

This course prepares and inspires students to approach journalism from the start-up perspective. The theories and practices of entrepreneurial journalism will be studied and simulated, with a special emphasis on new venture creation, cutting-edge business strategy and state-of-the-art storytelling techniques. Students should have taken ENG 261 or have prior journalism experience before enrolling in this course. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 467 Communication and the Law (3 credits)

At a time when the news media's role in society, its accepted practices and its storytelling tools and platforms are all undergoing radical transformations, adhering to ethical standards is more important than ever for veteran and aspiring journalists. This course examines and challenges those ethics, their significance in the public sphere and the principles and theories serving as their foundation. Students should have taken ENG 261 or have prior journalism experience before enrolling in this course. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Justice Ethics and the Law, Undergraduate

ENG 468 Media/Culture in South Africa (3 credits)

This summer program in South Africa offers students an opportunity to study through lived experiences - the culture, economics, and politics of pre- and post-apartheid South Africa. Students will accomplish this set of objectives by working as foreign correspondents, researching and writing multimedia narratives for The Hawk, Saint Joseph University's independent student-run newspaper. For the month in South Africa, students will report stories, go on field trips to historic sites, and interact with South Africans from all walks of life, in order to engage in thoughtful and meaningful discussions about issues of social justice.

Attributes: English Area 1 - Writing, English Journalism Track, Globalization Course, Undergraduate

ENG 469 The Art of Editing (3 credits)

This course will introduce students to three basic levels of editing: substantive editing, copyediting, and proofreading. The course may include guest editor presentations as well as intensive review of grammar and writing skills and an introduction to copyediting marks. Finally, students will try on the multi-faceted roles of an editor—and experience the challenges of balancing aesthetic and pragmatic concerns—through several major writing and editing projects, including one multi-media project. Does not fulfill GEP Art/Lit requirement.

Attributes: English Area 1 - Writing, English Journalism Track, Undergraduate

ENG 470 Independent Study: Senior Level (3 credits)

The senior-level independent study is for students to engage in faculty mentored research and writing. Students will develop a course of study with the faculty mentor that results in a substantial piece of scholarship, creative writing, or journalism. Minimum GPA of 3.0 (or cumulative average of 3.4 or higher for courses in the major field).

Attributes: GEP Art/Literature, Undergraduate

ENG 473 Special Topics (3 credits)

Course content to be determined by instructor.

ENG 481 Literary Forms & Styles (3 credits)

Specific focus of the course will depend on the instructor. Approaches to the study of genres may include Books That Cook, Science Fiction, The Short Story in America, The Satiric Mode, The Lyric, The Sonnet, and Autobiography.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: GEP Art/Literature, Undergraduate

ENG 482 Literature & Culture (3 credits)

This course focuses on how literature engages readers in thinking through complex cultural problems. Specific focus of the course will depend on the instructor.

Attributes: GEP Art/Literature, Undergraduate

ENG 483 Seminar in Narrative Form (3 credits)

Drawing on both fictional and theoretical texts, the course explores how narrative attempts to give meaning and coherence to experience and how readers process narrative. Literary texts include linear and non-linear narratives and range from early modern to postmodern texts. Theoretical perspectives include structuralist, poststructuralist, and feminist.

Prerequisites: ENG 101 or ENG 111 or WR 101 or WR 101H

Attributes: English Area 1 - Writing, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

ENG 484 Spec Topics in Critical Theory (3 credits)

This course provides an intense focus on a particular area of contemporary literary theory. Depending on the instructor, the course may cover major theoretical movements (e.g., feminist theory, deconstruction, new historicism) or concentrate on certain major figures (e.g., Bakhtin, Derrida, Cixous, Foucault). Does not fulfill GEP Art/Lit requirement.

Prerequisites: ENG 101 or WR 101 or WR 101H

Attributes: Undergraduate

ENG 492 English Internship (3-6 credits)

This course is designed to help guide students who wish to earn credit for professional work experience in writing, editing, social media management, or journalism, to name a few. Possible venues include, but are not limited to, newspapers and magazines, academic journals, publishing companies, television stations, radio stations, public relations firms and communications departments, online media outlets, advertising agencies, governmental and university departments, nonprofit organizations, and private and public schools. Students must complete a minimum of 112 hours at the internship site during the semester. Course requirements include a statement of goals, a journal or field notes, a profile of an English alum for the English Department blog, attendance at a career-related panel or activity, a letter of assessment from an internship supervisor, a final Reflection Essay, and an updated resume or link to a web-based resume. A minimum GPA of 3.0 (or cumulative average of 3.4 or higher for courses in the major field), or permission of instructor is required. Minimum GPA of 3.0 (or cumulative average of 3.4 or higher for courses in the major field), or permission of chair.

Attributes: English Area 1 - Writing, Undergraduate

ENG 493 Indep Research Project (Fall) (3,6 credits)

Includes College Honors theses. Requirements for college honors are listed above and under 'Honors Program'.

Attributes: GEP Art/Literature, Undergraduate

ENG 494 Indep Research Project (SPR) (3,6 credits)

Includes College Honors theses. Requirements for college honors are listed above and under 'Honors Program'.

Attributes: GEP Art/Literature, Undergraduate

ENG 550 The Practice of Writing (3 credits)

An overview of the work of a practicing writer, with explorations of particular genres of interest to individual students in the course. Assignments may include a writer's history (autobiographical account of interest in writing) and a writer's apprenticeship (in-depth examination of a writer admired by the student).

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 560 Rhetoric Then & Now (3 credits)

Consideration of the history of rhetoric, from the Sophists to the present day, with particular concern both for the ethical considerations involved in persuasive uses of language and for the stylistic choices in developing written work.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 600 Poetry Today (3 credits)

Exploration of the current poetry scene, particularly in America, reading collections from a wide variety of poetic schools and from the theoretical positions that inform the poems. Movements covered may include feminist and identity poetics, the New York School, poetry of witness, neo-confessional, Language Poetry, and the New Formalism. Use of imitation to experiment with difference poetic stances and styles.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 612 Biography (3 credits)

This course will focus on reading and critiquing a number of important biographies, in order to see how various professional biographers have approached their task. Concomitantly, each student will be asked to choose a contemporary subject worthy of a biography (not a relative), who lives within a 50-mile radius of Philadelphia. Students will search out publications that often include biographical essays/profiles, gather detailed information about their subjects from various sources they determine to be important, and do the necessary interviews, with the aim of writing a biographical essay/profile.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 614 The Short Story (3 credits)

This course focuses on reading and writing short stories with a particular focus on single-author contemporary and classic short story collections and their significance. Authors that maybe considered include Atwood, Diaz, Fitzgerald, Hurston, Lahiri, Munro, Millhauser, Poe, and Twain.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 615 Road to Revolution in 1960s (3 credits)

A study of the American cultural scene during the 1960s including how racial discrimination, gender discrimination, sexual repression and anti-war activism appeared in writing and culture. Writers may include: Jack Kerouac, Nikki Giovanni, Eldridge Cleaver, Kurt Vonnegut, Joseph Heller, Betty Freidan, and some Beat poets. Films were also consequential both in propelling and in reflecting revolutionary changes in American life through the 1960s. Several key films that may be considered include *In the Heat of the Night*, *Bonnie and Clyde*, *The Graduate*, *Easy Rider*.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 616 Writing and Inciting (3 credits)

This course will explore how Irish novelists and short-story writers have represented "the Troubles"-a protracted period of politically motivated violence in Northern Ireland, Great Britain, and the Republic of Ireland, which began in the late 1960s and has not fully ended today. Key questions include the following: What is the role of the artist in representing politically motivated and other types of violence? Should artists offer solutions or only pose problems? What are the moral and aesthetical stakes involved in making art out of atrocity? How might studying the fiction of the Northern Irish "Troubles" provide students in the M.A. in Writing Studies with thematic, technical and ethical insights for their own artistic investigations of the many forms of violence within their own societies?

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 617 Writing and the Other Arts (3 credits)

Study of relationship between the work of writers and that produced by other kinds of creative people (in music, in architecture, in painting and drawing, in film) in order to get a full sense of any particular cultural moment (the Renaissance, the Age of Enlightenment, the Roaring 20's, the Rebellious 60's).

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 619 Reading & Writing Y.A. Novels (3 credits)

In this course we immerse ourselves in a range of contemporary literary texts written for, read by, assigned to, or kept from young adults (ages 12-18). Our goals will be to become both more familiar with the wide variety of texts geared toward adolescents and more attuned to our own experiences as readers and writers of young adult literature. At the same time, we will be attempting to think through the multiple ways in which adults (particularly parents and teachers) and adolescent readers interact with these texts and with each other.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 620 Special Topics in Lit/Culture (3 credits)

This course will consider a particular aspect of literature and culture relevant to contemporary writers. Content will vary according to the instructor. Course can be repeated when content varies.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 621 Horror in Literature & Film (3 credits)

When the novel came into being in the middle of the eighteenth century, its most popular genre was the Gothic-the novel of horror. In fact, the modern era-the era of science, reason, and democracy-has been obsessed with terror, fear, and the unknown since its very inception. What is it about horror fiction that so appeals to modern culture? Beginning with one of the earliest Gothic horror novels, the course will trace out a literary, philosophical, and filmic history. Each unit of the course will explore how a different psychological/cultural concept of terror plays out in an aesthetic context.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 630 Composition Theory (3 credits)

Exploration of theories of composition, with particular emphasis on contributions to the field in the past half century.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 635 The Writing Teacher Writing (3 credits)

Consideration of the writing that teachers can do in order to develop their approach to the teaching of writing.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 636 Writing & Empowerment (3 credits)

In this course students will explore how writing can be used as a tool, a method, and a means of empowerment. They will consider how the ability to tell one's story can be empowering and what the risks of telling that story are. They will also consider what an author might choose to leave out of the telling of a particular tale. Finally, students will research stories of empowerment and write their own stories of empowerment. Each student will complete two projects in different genres including fiction, nonfiction, pedagogy, poetry, and academic prose.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 640 Experiments in Narrative (3 credits)

Through examination of fictional and nonfiction narratives and narrative theories, this course considers such issues as the shift from oral to print to hypertext narratives, linear and nonlinear structure, writing "taboo" subjects, and the impact of social-cultural-historical circumstances upon narrative form and function. Content varies with instructor.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 641 Rhetorical Theory: Special Topics (3 credits)

Study of select issues in the domain of rhetoric, to be determined by the instructor.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 642 Style (3 credits)

This course considers the history of style from a rhetorical perspective and then moves to the work of 20th and 21st century writers to explore the use of style in contemporary writing, including your own. A discussion-based seminar with a workshop component, this course requires a high level of participation.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 643 Special Topics in Essay (3 credits)

An exploration of a particular topic related to the essay. Topics may include women essayists, personal essays, writing and memory, or other topics.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 646 Multimedia Writing Workshop (3 credits)

A writer's work can be incredibly varied and provide a multitude of challenges and opportunities for creativity. Multimedia writers may create a script for a storyboard developed by a graphic artist. They may also create the text for Twitter, Facebook, and Instagram posts. They might write copy for a news broadcast, or their own blog. The goal of this intensive writing workshop is to build a writing portfolio and introduce the many facets of multimedia writing while encouraging each student to find their own method, approach, and voice within the structures of each multimedia platform. Students will be guided in exploring, discovering, and strengthening their voices and writing styles with the goal of enhancing and expanding their analytical and creative communication skills, and preparing them for real world jobs.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 665 Memoir (3 credits)

Consideration of the writing that comes directly from life experience and development of an autobiographical narrative that reflects past achievements in this genre. Can satisfy Area I.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 668 Creative Nonfiction Workshop (3 credits)

Workshop course in creative nonfiction; several pieces of nonfiction will be prepared for submission. Can be repeated with the permission of the graduate director.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 669 Poetry Writing Workshop (3 credits)

In-depth look into the concerns of a publishing poet. Students will hone their own work, putting together a final portfolio of polished writing, and will explore publication options including chapbooks and literary magazines. Toward this end, the class will include workshoping and one-on-one conferences with the instructor, as well as reading and responding to contemporary poetry, with attention to the practical concerns of the poet. Can be repeated with the permission of the graduate director.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 670 Fiction Writing Workshop (3 credits)

Workshop method of critique, with students expected to put together a portfolio of polished short stories. Published short stories will be read as models, and there will be discussion of strategies of getting fiction published. Content varies with the instructor. Fiction-writing workshop I can be taken either before or after Fiction writing workshop II. Can be repeated with the permission of the graduate director.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 671 Fiction Writing Workshop II (3 credits)

Workshop method of critique, with students expected to put together a portfolio of polished short stories or a short section of a novel or novella. Published short stories and novels will be read as models, and there will be discussion of strategies of getting fiction published in a variety of locations. Content varies with the instructor. Fiction-writing workshop II can be taken either before or after Fiction writing workshop I. Can be repeated with the permission of the graduate director.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 673 Screenwriting Workshop (3 credits)

Exploration of screenwriting in a workshop format with consideration of the whole process involved in development of screen projects.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 675 Special Topics Writing Wkshop (3 credits)

Exploration of a particular topic not covered in other writing workshops. Examples include "Playwriting," "Writing and Memory," "Writing through Race, Class, and Gender," "Food Writing," and "Nature Writing." Content varies according to instructor. Course may be repeated with permission of the graduate director.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 676 Writing for Publication (3 credits)

Successful freelance publishing begins with an awareness of what editors and their readers want. It demands knowledge of the manuscript market and familiarity with the requirements of specific publications: subject, length, organization, style. Unpublished writers can perfect their skills by analysis and imitation of authors who already write for the publications in which learners wish to appear. The course requires that assignments be composed-from the beginning-for specific publications and that completed work will be submitted for publication. Content can be fiction, nonfiction, or journalism and varies with the instructor. Can be repeated with the permission of the graduate director.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 677 Case Study:Public Relations (3 credits)

Comparative analysis of several public relations campaigns, with consideration of the rhetorical principles involved in the effort to sway public opinion.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 678 Case Study: MagazinePublishing (3 credits)

Exploration of magazine publishing, and the study of several magazines-their histories and editorial styles- with consideration for changing demographics and the practical considerations of achieving success in the magazine market. Consideration of the state of magazine publishing in both print and the web, and the development of articles from pitch to publication.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 679 Special Topics in Journalism (3 credits)

Exploration of a particular topic in journalism. May include sports journalism, literary journalism, or other topics as determined by the instructor.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 680 Writing for Nonprofits (3 credits)

This course will teach you the basics of how to write for a nonprofit organization, and how to tailor your message and style to various audiences. Focusing primarily on grant writing, you will learn the basics of how to ask for money from organizations in writing and how to navigate the grant-making process from the initial research to the submission of the final proposal. You will also practice writing other important pieces for any nonprofit, like appeal letters, blog posts, social media outreach, performance reports, and more. Through hands-on practice with real Philadelphia-area nonprofits, you'll learn how to write for the different audiences a nonprofit organization needs to reach.

While this course is geared towards the writing skills suited to nonprofit organizations, many of these skills are also transferrable to writing at other kinds of professional organizations.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 681 Writers at Work (3 credits)

This course is designed to set your professional life as a writer in motion. Over the course of 15 weeks, you'll meet a series of working writers from around Philadelphia who will visit our class. During these visits, you'll have the opportunity to network with professional writers and learn about possible career paths, from public relations to publishing. Each writer's visit will tie into a different writing assignment so that you can begin building a portfolio of professional work (likely assignments will include: a press release, a review, a book proposal, an edited manuscript, plus a professional resume and bio.) At the end, you'll develop an online portfolio that you can use as a calling card.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 682 New Media (3 credits)

Exploration of new communications media as the hypertext world expands and technology continues to make possible increased broadcast media opportunities.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 683 Editing Practicum (3 credits)

Assignment to a specific, actual editing project, with expectation that the student will engage in several editorial functions in preparing manuscripts for publication.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 684 Health Writing (3 credits)

Are pharmaceutical makers influencing scientific research? What emerging infectious disease is likely to be the next big scare? What are the pros and cons of universal healthcare? Is chocolate really good for the heart? This course will teach students how to report and write on some of the pressing health issues of the day and encourage them to become more discerning consumers of medical news. Students will learn how to analyze research studies, conduct interviews of doctors, scientists and patients, and translate findings into lively and informative stories for the lay reader. The course will explore the connection between the environment and disease and examine trends in medicine as technology advances and funding shrinks. Students will get the latest information from guest speakers who are leaders in the fields of medical research, public relations and the media. This course will help prepare students for a career in health-related writing or sharpen their communication skills for whatever field they are pursuing.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 770 Directed Readings (3 credits)

An independent study course, overseen by an instructor with the approval of the director. This course is utilized to fulfill a degree requirement under special circumstances with an emphasis on assigned readings.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in English. Enrollment is limited to Graduate level students.

ENG 771 Directed Research (3 credits)

An independent study course, overseen by an instructor with the approval of the director. This course is utilized to fulfill a degree requirement under special circumstances with an emphasis on researching a particular topic.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in English. Enrollment is limited to Graduate level students.

ENG 772 Directed Writing (3 credits)

An independent study course, overseen by an instructor with the approval of the director. This course is utilized to fulfill a degree requirement under special circumstances with an emphasis on writing assignments.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in English. Enrollment is limited to Graduate level students.

ENG 773 Directed Fieldwork (3 credits)

An independent study course, overseen by an instructor with the approval of the director. This course is utilized to fulfill a degree requirement under special circumstances with an emphasis on community writing/teaching.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 791 Graduate Internship (3 credits)

Students have workplace internship assignments in areas of career interest that involve writing (research, editing, writing). A component of the course will be research in the internship field, in addition to writing of various kinds about the actual internship activity, some of it done with an eye to publication. Each placement involves approximately 200 hours of work over the course of the internship, a letter from a supervisor upon completion of the internship, and a journal documenting the work of the internship.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 793 Thesis Project I (3,6 credits)

The thesis project can involve either an analytical study in some area covered by the program or a collection of original creative material. Each project will have a faculty director, selected by the student in consultation with the Writing Studies Program Director. For a project to be completed in one registration period, register for ENG 793 and ENG 794, 3 credits each, for a total of 6 credits. For a project to be completed in two separate registration periods, register first for ENG 793 for 3 credits, then later, for ENG 794 for the remaining 3 credits. It is recommended that each project also be read by a second reader, who will be chosen by the student and thesis director, and approved by the graduate director. At the completion of the thesis project, students will make a formal presentation of it in one of three ways: (1) A public reading of a selected portion of the project (2) A formal defense whereby the thesis will be explained and questions about it entertained (3) A public reading coupled with a formal defense. The method of public presentation would be agreed upon by the student and the thesis director. The English Department will host opportunities for public readings two times a year (in December and May) close to expected completion of degree requirements and the thesis project. Once complete, thesis projects will receive a P (pass). In progress thesis projects will be graded as Incomplete. *Nota Bene:* The Writing Studies diploma will not be conferred until the candidate has successfully completed the above steps, as well as submitted the thesis project in the correct format for binding. Details about the procedure for binding the thesis can be found on the Writing Studies website.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

ENG 794 Thesis Project II (3 credits)

The thesis project can involve either an analytical study in some area covered by the program or a collection of original creative material. Each project will have a faculty director, selected by the student in consultation with the Writing Studies Program Director. For a project to be completed in one registration period, register for ENG 793 and ENG 794, 3 credits each, for a total of 6 credits. For a project to be completed in two separate registration periods, register first for ENG 793 for 3 credits, then later, for ENG 794 for the remaining 3 credits. It is recommended that each project also be read by a second reader, who will be chosen by the student and thesis director, and approved by the graduate director. At the completion of the thesis project, students will make a formal presentation of it in one of three ways: (1) A public reading of a selected portion of the project (2) A formal defense whereby the thesis will be explained and questions about it entertained (3) A public reading coupled with a formal defense. The method of public presentation would be agreed upon by the student and the thesis director. The English Department will host opportunities for public readings two times a year (in December and May) close to expected completion of degree requirements and the thesis project. Once complete, thesis projects will receive a P (pass). In progress thesis projects will be graded as Incomplete. *Nota Bene:* The Writing Studies diploma will not be conferred until the candidate has successfully completed the above steps, as well as submitted the thesis project in the correct format for binding. Details about the procedure for binding the thesis can be found on the Writing Studies website.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Writing Studies. Enrollment is limited to Graduate level students.

English Major

Program Overview

Through its challenging and rewarding program of study, the Department of English, Writing & Journalism introduces students to the formative traditions of British, Irish, American, and Anglophone literature; supports students as they develop as creative and professional writers; and provides students with a wide array of news writing, reporting, editing and multimedia skills.

In the course of our program, students will integrate close reading and extensive writing. They will also present fundamentals of research in order to foster intellectual maturity and to prepare for more advanced study in literature and writing.

English majors can explore their particular interests through a variety of courses in literature, writing, theatre/drama, and journalism.

The English major thus equips our students to enter many careers, including teaching, publishing, editing, writing, and business. Current graduates include college professors, teachers, journalists, novelists, poets, lawyers, pharmacists, physicians, and public-relations specialists.

Learning Goals and Outcomes

Goal 1: Acquire knowledge of significant texts in the British, Irish, American, and Anglophone literary traditions.

Outcome 1.1: Students will demonstrate a familiarity with British, Irish, American, and Anglophone key texts and an understanding of the historical continuities among literary conventions and imaginative traditions.

Goal 2: Develop rhetorical skills.

Outcome 2.1: Students will recognize and use various rhetorical modes, including (but not limited to) narrative, exposition, analysis, and argument.

Goal 3: Develop creative abilities.

Outcome 3.1: Students will exercise their imaginations in crafting their own creative works and performances, particularly through creative writing workshops and theatre courses.

Goal 4: Acquire knowledge of significant schools of literary theory.

Outcome 4.1: Students will demonstrate an understanding of the historical development of literary theory and draw upon these models for their own literary analyses.

Outcome 4.2: Students will formulate their own theories about what literature is and does.

Goal 5: Acquire knowledge of research fundamentals.

Outcome 5.1: Students will locate, assess, and incorporate primary and secondary sources into their writing to support their claims.

Goal 6: Develop revision strategies and editing skills.

Outcome 6.1: Students will demonstrate an understanding of revision.

Outcome 6.2: Students will practice editing skills through examining their own writing and the writing of their peers.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

In consultation with, and with the approval of their faculty advisor, English Majors must complete three additional courses within the College of Arts & Sciences but outside the English major, with no more than two classes taken from the same department.

GEP Electives

Thirteen to sixteen courses, depending on how many courses are required in the variable core.

Major Requirements

Code	Title	Hours
Courses		Credits
Two Literature Courses		6
Two Writing Courses		6
One Literary/Writing Pedagogy Course		3
Two ENG Diversity Courses ¹		6
Three ENG Electives		9
One Experiential Learning Overlay ²		

¹ These courses must be taken in addition to the GEP Diversity and DGNW requirements; they cannot double count for the GEP Diversity or Diversity/Globalization/non-Western studies overlays.

² Majors must also take an Experiential Learning Overlay (i.e., service learning, study abroad, or internship course), either as one of the ten required ENG courses or as a course from a different subject area.

Independent Studies and Internships

English majors who have completed four regular semesters with an overall grade point average of 3.0 (or a cumulative average of 3.4 or higher for courses in English) may apply for credit in an independent study program, generally involving a topic that is not typically offered in the English curriculum and that will enrich the student's study in the major. At the end of the sophomore or early in the junior year, interested students should submit a written proposal describing, with particulars, the planned study project. The minimum requirement for such a proposal is that it include a substantial critical or creative writing project. If the proposal is accepted, the student will be assigned a faculty mentor who will oversee the writing project, offer advice on readings, help with the selection of courses, and establish a timetable for the completion of the writing project. The project may extend over one or two semesters. Serious and satisfactory work for one semester will earn three credits. A student who successfully completes the two-semester project will receive six credits.

The English Internship course ENG 492 is designed to help guide students who wish to earn credit for professional work experience in areas such as writing, editing, social media management, or journalism. Possible venues include, but are not limited to, newspapers and magazines, academic journals, publishing companies, television stations, radio stations, public relations firms and communications departments, online media outlets, advertising agencies, governmental and university departments, nonprofit organizations, and private and public schools. Students must complete a minimum of 112 hours at the internship site during the semester. Course requirements include a statement of goals, a journal or field notes, a profile of an English alum for the English Department blog, attendance at a career-related panel or activity, a letter of assessment from an internship supervisor, a final Reflection Essay, and an updated resume or link to a web-based resume. A minimum GPA of 3.0 (or cumulative average of 3.4 or higher for courses in the major field), or permission of instructor is required.

The independent study and internship courses are:

Code	Title	Hours
ENG 370	Independent Study:Jr. Level	3
ENG 470	Independent Study:Senior Level	3
ENG 492	English Internship	3
ENG 493 & ENG 494	Indep Research Project (Fall) and Indep Research Project (SPR)	6-9

4+1 Program

4+1 Program in Writing Studies

The Writing Studies M.A. program at Saint Joseph's University offers undergraduate students the option to take 3 courses (or 9 credits) toward a Master's Degree in Writing Studies. Students may explore this option by enrolling in graduate classes during their junior and/or senior year. The credits can then be applied to the 30-credit M.A. in Writing Studies.

Who can apply: Students with a GPA of 3.3 or higher are encouraged to participate in this program in order to boost their writing skills before they apply for jobs. Interested students should contact the Graduate Director

of Writing Studies, Cristina Hanganu-Bresch (<https://directory.sju.edu/cristina-hanganu-bresch/>), in order to complete an application.

How it works: Our M.A. program typically requires full-time study for 15 months (2 summers + 2 semesters), but accepted undergraduate students can begin their coursework early with the goal of completing their M.A. in a single year after completing their B.A. in English.

English/Secondary Education English/Secondary Education Dual Major

The three Integrative Learning Courses for the English/Secondary Education Dual Major are as follows:

Code	Title	Hours
EDU 230	Eval: Secondary Grades 7-12	3
SPE 160	Intro to Special Education	3
SPE 205	Inclusive Classrooms w/ Field	3

The following are recommended for satisfying both Education and GEP requirements¹: EDU 150 Schools in Society w/ Field for the first-year seminar, EDU 157 Adolescent Development w/ Field for the social and behavioral science requirement and SPE 160 for the Ethics-Intensive overlay.

Teacher Certification for Secondary Schools

Students majoring in English who complete the English/Secondary Education Dual Major may apply to obtain an Instructional I, Secondary Education (12) Teaching Certificate from the State of Pennsylvania. In addition to their English advisor, English/Secondary Education dual majors will also be assigned an advisor from the Education Department who will guide them through their required Education courses. The Education advisor will also assist students seeking teacher certification in formally applying for the teacher certification program, usually in the spring semester of their sophomore year. Students must have an overall GPA of 3.0 or higher to enroll in EDU 491 Secondary Student Teaching in their senior year. Students must maintain an overall GPA of 3.0 or higher to obtain teacher certification upon graduation.

Pennsylvania's Secondary (referred to as "secondary" or "7-12") preparation program guidelines require a professional core of courses, early and varied field experiences, and student teaching. In addition to the subject-specific content requirements for secondary programs that are met by the student's major, candidates for the 7-12 teaching certificate in Pennsylvania must complete a prescribed sequence of coursework, which includes the specific requirements for Accommodations and Adaptations for Diverse Learners in Inclusive Settings and Meeting the Needs of English Language Learners under §49.13(4)(i).

Below is the required program for students to be eligible for a PA Level I Teaching Certificate in Secondary Education.

Code	Title	Hours
EDU 150	Schools in Society w/ Field	3
EDU 157	Adolescent Development w/Field	3
EDU 230	Eval: Secondary Grades 7-12	3
EDU 246	Language and Culture w/ Field	3
EDU 247	Literacy in Cont Areas w/Field	3
EDU 410	Instr Techniq English w/Field	3

EDU 491	Secondary Student Teaching	12
SPE 160	Intro to Special Education	3
SPE 205	Inclusive Classrooms w/ Field	3

1

In order to meet the certification requirements for the English/Secondary Education Dual Major, students are required to take an additional math class beyond the GEP Math Beauty requirement.

Creative Writing Minor Learning Goals and Outcomes

Goal 1: Develop creative abilities.

Outcome 1.1: Students will exercise their imaginations in crafting their own creative works.

Goal 2: Develop revision strategies and editing skills.

Outcome 2.1: Students will improve their creative work through revision and editing.

Goal 3: Practice a range of creative writing genres, including but not limited to: fiction, poetry, creative nonfiction, screenwriting, and playwriting.

Outcome 3.1: Students will write in various creative writing genres with an understanding of the conventions of each.

Goal 4: Learn to critique and revise creative work by way of workshops.

Outcome 4.1: Students will critique the creative work of others in a constructive and insightful manner.

Requirements

The minor in Creative Writing requires four creative writing courses beyond the common courses of the GEP (ENG 101 and ENG 102).

Code	Title	Hours
Three required courses:		
ENG 101	Craft of Language	3
ENG 102	Texts & Contexts	3
ENG 241	Creative Writing: Intro Wrkshop	3
Three additional Creative Writing courses from the list below:		
ENG 332	Playwriting	3
ENG 333	Read, Write, Adapt Thtre Drama	3
ENG 341	Poetry Workshop	3
ENG 342	Fiction Workshop	3
ENG 343	Creative Nonfiction	3
ENG 344	Screenwriting	3
ENG 384	The Essay	3
ENG 424	Contemporary American Poetry	3
ENG 426	Nature & Environmental Writing	3
ENG 443	Special Topics in Writing	3
ENG 444	Race, Class, and Gender	3
ENG 449	Travel Writing Abroad	3
ENG 450	Hospital Stories	3
ENG 451	N. Ireland Conflict & Story	3
ENG 452	Writing and Reading Animals	3

Independent studies may be approved by the Chair to count towards the Creative Writing minor depending on the topic.

English majors minoring in Creative Writing must take four courses beyond the ten courses required for the major.

English Minor

Learning Goals and Outcomes

Goal 1: Acquire knowledge of significant texts in the British, Irish, American, and Anglophone literary traditions.

Outcome 1.1: Students will demonstrate a familiarity with British, Irish, American, and Anglophone key texts and an understanding of the historical continuities among literary conventions and imaginative traditions.

Goal 2: Develop rhetorical skills.

Outcome 2.1: Students will recognize and use various rhetorical modes, including (but not limited to) narrative, exposition, analysis, and argument.

Goal 3: Develop creative abilities.

Outcome 3.1: Students will exercise their imaginations in crafting their own creative works and performances, particularly through creative writing workshops and theatre courses.

Goal 4: Develop revision strategies and editing skills

Outcome 4.1: Students will demonstrate an understanding of revision.

Outcome 4.2: Students will practice editing skills through examining their own writing and the writing of their peers.

Requirements

The minor in English requires four upper-level (200 or above) English courses beyond ENG 101 and ENG 102. Students may choose any combination of English courses in literature, writing, journalism, or drama/theatre, including Independent Study ENG 370 or ENG 470.

Journalism Minor

Learning Goals and Outcomes

Goal 1: Develop an understanding of the vital role that media organizations play in sustaining democracies.

Outcome 1.1: Students will demonstrate an understanding of the rights and responsibilities of a free press as well as an understanding of the various economic and social factors that influence the creation, dissemination, and consumption of journalism.

Goal 2: Learn basic journalism principles and accepted tenets of journalism ethics and the law, in part by way of significant moments in journalism history.

Outcome 2.1: Students will develop and produce stories, and adhere to reporting practices, that reflect an understanding of basic journalism principles and that follow ethical guidelines such as

those outlined in the Society of Professional Journalists Code of Ethics.

Goal 3: Develop reporting skills, from story ideation and discovery to pitching, sourcing, interviewing and information gathering.

Outcome 3.1: Students will produce a variety of journalism, from breaking news or game day stories to full-length features or multimedia packages, that reflects learned skills in story ideation and reporting.

Goal 4: Develop writing skills that help produce engaging journalistic content, including but not limited to news and feature stories, with particular attention paid to writing strong leads, organizing and focusing story angles and materials, and incorporating quotes.

Outcome 4.1: Students will produce a variety of journalism that reflects learned skills in the development of story angles, in organization of sourced materials and in writing.

Goal 5: Acquire skills with common and emerging multimedia tools, platforms and programs, aiding in the creation, hosting and promotion of journalistic work.

Outcome 5.1: Students will demonstrate familiarity with various multimedia tools and programs, and in particular, an understanding of the use of social media platforms for journalists and news organizations.

Goal 6: Develop revision strategies and copy editing skills consistent with accepted journalism practice and style.

Outcome 6.1: Students will practice revision strategies and demonstrate knowledge of copy editing skills and journalism style.

Requirements

The minor in Journalism requires six journalism courses.

Code	Title	Hours
Two required Journalism courses:		
ENG 261	News Reporting	3
ENG 492	English Internship	3
Four additional Journalism courses from the list below:		12
ENG 268	Fact-checking and Fake News	
ENG 269	Intro to Mass Communication	
ENG 346	The Art of The Interview	
ENG 350	Advanced News Reporting	
ENG 360	Feature Writing	
ENG 362	Photojournalism	
ENG 363	Sports Journalism	
ENG 364	Stunt Journalism	
ENG 365	Multimedia Journalism	
ENG 460	Magazine Writing	
ENG 461	Food Writing	
ENG 462	Travel Writing	
ENG 463	Literary Journalism	
ENG 464	Media, Politics & the Election	
ENG 465	Special Topics in Journalism	
ENG 466	Journalism & Entrepreneurship	
ENG 467	Communication and the Law	

ENG 468	Media/Culture in South Africa
ENG 469	The Art of Editing
<hr/>	
Total Hours	18

For English majors minoring in journalism: of the six required courses for the Journalism Minor, no more than two courses may also count towards the English Major.

English and Professional Writing B.L.S.

The Department of English, Writing & Journalism seeks to enlarge and refine the imaginative intelligence of its students—to enrich their intellectual lives as well as to help them develop their professional ones. The disciplined study of both literature and professional writing and speaking provides the means to those ends. Although the variety of the curriculum makes possible a student-determined emphasis on one or the other of these concentrations, the program requires competence in both. The English major offers both a humane and a liberalizing experience, while at the same time making available to its students the opportunity to acquire and practice the skills in professional writing and speaking that will enhance their careers.

For students who select the study of literature as their major track, the Department seeks to give an introduction to the most formative traditions—generic, historical, and critical—of British and American letters. Critical and analytical skills are developed by courses and seminars which offer an in-depth examination of a single author or specific topic. Because of their innate value in fostering intellectual maturity and as a preparation for more advanced study, the fundamentals of research will be systematically made available.

For those who choose the Professional Writing track, the program stresses the study of the theories and techniques of rhetoric as they are applied in particular professional fields including business communications, advertising, public relations, and journalism. Frequent practice in these techniques encourages students to communicate coherently, imaginatively, and with impact.

Learning Goals and Outcomes

Goal 1: Acquire knowledge of significant texts in the British, Irish, American, and Anglophone literary traditions.

Outcome 1.1: Students will demonstrate a familiarity with British, Irish, American, and Anglophone key texts and an understanding of the historical continuities among literary conventions and imaginative traditions.

Goal 2: Develop rhetorical skills.

Outcome 2.1: Students will recognize and use various rhetorical modes, including (but not limited to) narrative, exposition, analysis, and argument.

Goal 3: Develop creative abilities.

Outcome 3.1: Students will exercise their imaginations in crafting their own creative works and performances, particularly through creative writing workshops and theatre courses.

Goal 4: Acquire knowledge of significant schools of literary theory.

Outcome 4.1: Students will demonstrate an understanding of the historical development of literary theory and draw upon these models for their own literary analyses.

Outcome 4.2: Students will formulate their own theories about what literature is and does.

Goal 5: Acquire knowledge of research fundamentals in English.

Outcome 5.1: Students will locate, assess, and incorporate secondary sources (including electronic ones) into their own arguments.

Goal 6: Develop revision strategies and editing skills.

Outcome 6.1: Students will demonstrate an understanding of revision.

Outcome 6.2: Students will practice editing skills through examining their own writing and the writing of their peers.

Requirements

The **General Education Program** (GEP) at Saint Joseph's University involves a distinctive liberal arts education in the Jesuit, Catholic tradition. General education is essential to the University's mission, providing all students with the broad knowledge, essential skills, appreciation of diversity, and ethically informed perspective needed by those who would aspire to be "men and women for others." The GEP ensures mastery of skills required for further study, exposes students to the principal achievements and problems of the major fields of human learning, and introduces them to new disciplines that they may or may not wish to pursue. The **Major Concentration** component gives depth in a particular field and is thus a preparation for an effective career or for graduate study in that field. **Free or general electives** allow students to pursue interests, explore new fields, or to continue concentration in their major.

The Adult Learner General Education Program (GEP) applies to students who are completing a bachelor's degree offered through the SJU Adult Learner Program. These degrees include the Bachelor of Liberal Studies (BLS) and Bachelor of Business Administration degrees (BBA).

The Adult Learner GEP is comprised of Signature Core, Variable Core, Integrative Learning courses and a Diversity Overlay.

Signature Core

Code	Title	Hours
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition (or THE 153 Encountering the New Testament, or THE 155 Catholic Social Tradition)	3
ENG 102	Texts & Contexts	3
HIS 154	Forging the Modern World	3
Any course certified as Faith & Reason		3
Any course in written and oral communication		

Variable Core

- One approved course in Art, Literature, or Music, Theater, Film.
- One course in the Natural Sciences (lab-based or lecture based) in biology, chemistry, environmental science, or physics.

- Two courses in Mathematics. BLS degree majors require MAT 101 or higher; BBA degree majors require MAT 103 (or MAT 120 precalculus) and MAT 123 (or an alternate calculus course).
- One course in a Non-Native Language (e.g., SPA 111-SPA 112) or one approved alternative course in Literature in Translation or Classics. Students who are bilingual may request an exemption for the language requirement from the Department of Modern & Classical Languages.
- One course in the Social-Behavioral Sciences including Political Science, Economics, Sociology, and Psychology. Please note that some majors require a specific course.
- One course that is certified as a Philosophical Anthropology course.
- One course from Religious Studies or Theology that is certified as a Religious Difference course.
- ENG 101 Craft of Language.

Integrative Learning Courses

(2 courses required)

- Courses approved for ILC requirements will vary by major. Some majors have specific courses that must be taken.

Overlay

- Adult Learner Program students are required to complete one course that is certified as a diversity overlay.

Free Electives

Except for Early Childhood/Elementary Pre K-4 Education majors, all students must complete a minimum of 18 free elective credits. Elective credits may be used to pursue a minor or secondary major.

GEP Integrative Learning Component

Two courses

Any two courses offered through the College of Arts & Sciences (not English Courses). Students are encouraged to discuss these choices with their faculty advisor in the Department of English, Writing & Journalism.

Major Requirements

In addition to Craft of Language ENG 101 and Texts and Contexts ENG 102, English majors are required to take ten more courses:

One course in British Literature before 1832 or American Literature before 1860

One course in British/Irish/World Literature

One course in American Literature

One Writing course (creative writing, journalism, rhetoric)

Six major Electives. Students may choose to pursue a track in Literature or a track in Professional Writing.

Writing Studies M.A.

Director: Cristina Hanganu-Bresch (<https://directory.sju.edu/cristina-hanganu-bresch/>), PhD.

Program Description

The Writing Studies program is unique to the Philadelphia area. Our program bridges the gap between traditional master's degrees in English and creative writing degrees by emphasizing that all writing is creative. Our students take a wide variety of courses in order to explore the craft of writing from various perspectives.

This innovative program has several distinguishing features: it offers excellent training for magazine or journal editors and freelance writers; it provides rich growth opportunities for teachers of writing at the secondary or community college level; it provides important experience for traditional journalists; it incorporates collaborative workshops to stimulate creativity; and it develops skills important for success in corporate communications and public relations.

All of the teachers in the Writing Studies program are practicing writers who write in the genre that they teach. In other words, our public relations writing courses are taught by public relations writers, and published novelists teach our novel writing courses. All of our courses are small—typically fifteen students or less—to enable each student to get individual feedback from the instructor and detailed feedback from peers.

The students in the Writing Studies program are diverse in age, race, occupation, gender, and belief systems. The diversity of our students contributes to the success of our program. In addition to world-class writing faculty, students in our M.A. bring a wide range of ideas, creativity, and energy to our classes. Each class becomes its own community of writers.

In the Jesuit tradition of *eloquentia perfecta*, all Writing Studies courses engage students in using speech and writing effectively, logically, gracefully, persuasively, and responsibly. Students focus on developing the craft of a professional writer through drafting, revising, and incorporating feedback from peers and instructors as the writing progresses toward publication. We hope all of our students will become working writers who write for a wide variety of audiences.

This program is designed to position its graduates to be very competitive in the broad field of professional writing and communications. The courses in the program are all focused, in one way or another, on the work of the writer. Graduates will pursue careers in a wide range of areas: public relations, magazine and book editing, freelance writing (fiction and nonfiction), print and broadcast journalism, corporate communications, and the teaching of writing. The Writing Studies program accommodates both full-time and part-time students.

Learning Goals and Outcomes

Goal 1: Acquire knowledge of the writing process.

Outcome 1.1: Students will exercise patterns of invention for creating original work by following a process-oriented approach to writing that includes brainstorming, drafting, and revision.

Goal 2: Develop editorial skills.

Outcome 2.1: Students will formulate constructive responses to the work of their peers regarding stylistic choices and organizational principles in one or more creative literary forms (poetry, fiction, and creative nonfiction).

Outcome 2.2: Students will practice editing skills through examining their own writing.

Goal 3: Acquire knowledge of the publishing process.

Outcome 3.1: Students will locate publishing venues and prepare a manuscript for submission in one or more genres, such as fiction, nonfiction, poetry, journalism, academic writing, or online content.

Goal 4: Develop rhetorical skills through analysis and practice.

Outcome 4.1: Students will demonstrate knowledge of rhetorical concepts, such as audience, purpose, and medium.

Outcome 4.2: Students will practice analyzing appeals to character, emotion, and logic in persuasive discourse.

Goal 5: Develop long-form writing skills.

Outcome 5.1: Students will plan, write, revise, and edit a work of at least 60-80 pages.

Requirements
Degree Requirements

The M.A. in Writing Studies requires 30 credits of graduate work. Six credits will come from a thesis project (either an analytical study or a collection of original creative material at the 700 level). The remaining credits involve courses at the 500 and 600 level. The program includes provisions for internships and directed individual projects of various kinds.

All students in the program will take two core courses: **ENG 550 The Practice of Writing** and **ENG 560 Rhetoric Then and Now**. These courses provide breadth of perspective on all of the general issues and circumstances faced by writers in the process of engaging an audience and making a living through the craft of language. Other courses in the program are organized in three complementary areas:

Code	Title	Hours
AREA I: Writing and Culture (ENG 600-ENG 629)		
AREA II: Rhetoric and Composition: Theory and Practice (ENG 630-ENG 659)		
AREA III: Professional Writing (ENG 660-ENG 699)		

All graduates of the program are required to have at least one course from each area; two courses in an area would create a concentration. All of the courses are designed to have writing as the center of concern, and many of the courses will emphasize writing for publication, from blogs to print. Some courses may count in multiple areas; consult the graduate director for details.

Creative and Professional Writing
Graduate Certificate
Overview

Students who enroll in this certificate program may take courses within the existing Writing Studies M.A. program, housed in the English Department. The 15-credit certificate program takes half the time of the M.A. and does not require a thesis. Certificate students who wish to continue on to the M.A. are welcome to do so.

Learning Goals and Outcomes
Learning Goals and Outcomes

Goal 1: Acquire knowledge of the writing process (addressed specifically in ENG 550)

Students will be able to:

Objective 1.1: Exercise patterns of invention for creating original work by following a process-oriented approach to writing that includes brainstorming, drafting, and revision.

Goal 2: Develop editorial skills (addressed in all our offerings)

Students will be able to:

Objective 2.1: Formulate constructive responses to the work of their peers regarding stylistic choices and organizational principles in one or more creative literary forms, such as poetry, fiction, and creative nonfiction. (Addressed specifically in ENG 550 and all our workshop offerings)

Objective 2.2: Practice editing skills through examining their own writing. (Addressed specifically in ENG 550 and all our workshop offerings.)

Goal 3: Acquire knowledge of the publishing process (addressed specifically in ENG 550)

Students will be able to:

Objective 3.1: Locate publishing venues and prepare a manuscript for submission in one or more genres, such as fiction, nonfiction, poetry, journalism, academic writing, or online content.

Goal 4: Develop rhetorical skills through analysis and practice (addressed in all our course offerings)

Students will be able to:

Objective 4.1: Demonstrate knowledge of rhetorical concepts, such as audience, purpose, and medium.

Objective 4.2: Practice analyzing appeals to character, emotion, and logic in persuasive discourse.

Requirements
Certificate Requirements

Code	Title	Hours
ENG 550	The Practice of Writing	3
Choose 4 Electives:		12

Four elective courses of level ENG 600 or above within Writing Studies. Such courses include but are not limited to the following:

ENG 600	Poetry Today
ENG 612	Biography
ENG 614	The Short Story
ENG 615	Road to Revolution in 1960s
ENG 616	Writing and Inciting
ENG 617	Writing and the Other Arts
ENG 619	Reading & Writing Y.A. Novels
ENG 620	Special Topics in Lit/Culture
ENG 621	Horror in Literature & Film

ENG 630	Composition Theory
ENG 635	The Writing Teacher Writing
ENG 636	Writing & Empowerment
ENG 640	Experiments in Narrative
ENG 641	RhetoricalTheory:SpecialTopics
ENG 642	Style
ENG 643	Special Topics in Essay
ENG 646	Multimedia Writing Workshop
ENG 665	Memoir
ENG 668	Creative Nonfiction Workshop
ENG 669	Poetry Writing Workshop
ENG 670	Fiction Writing Workshop
ENG 671	Fiction Writing Workshop II
ENG 673	Screenwriting Workshop
ENG 675	Special Topics Writing Wkshop
ENG 676	Writing for Publication
ENG 677	Case Study:Public Relations
ENG 678	Case Study: MagazinePublishing
ENG 679	Special Topics in Journalism
ENG 680	Writing for Nonprofits
ENG 681	Writers at Work
ENG 682	New Media
ENG 683	Editing Practicum
ENG 684	Health Writing

Environmental Science in the GEP

Environmental Science in the GEP (See Curricula)

The GEP requires that all students take EITHER one semester of a lab-based natural science course (6 contact hours) OR two semesters of lecture-only natural science courses.

Non-science majors Environmental Science GEP courses:

Code	Title	Hours
ENV 105	The Environment	3

Non-science majors Environmental Science GEP lab-based courses:

Code	Title	Hours
ENV 106 & 106L	Exploring the Earth and Exploring the Earth Laboratory	4

Programs

Undergraduate Major

- Environmental Science (p. 191)

Undergraduate Minors

- Environmental Science (p. 193)
- Environmental and Sustainability Studies (p. 190)

Courses

ENV 102 Environ Theory & Ethics Sem (3 credits)

An introduction to the political, economic, social, scientific, and philosophical concerns involved in environmental issues. Students will read, discuss, and write about current and controversial topics or problems integrating the aforementioned disciplines of study. A major goal of this course is to expose the students to the interdisciplinary nature of environmental science and the challenges of solving environmentally related problems.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

ENV 105 The Environment (3 credits)

An examination of the fundamental themes of ecology with an emphasis on the impact of humans on their environment. Included are discussions of current interest topics such as oil spills, nuclear waste, and rain forest destruction.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology or Physics.

Attributes: GEP Natural Science, Undergraduate

ENV 106 Exploring the Earth (4 credits)

A lab-based course that provides an overview of the functioning of the Earth. Ecology, basic biology, environmental science, and current events are used to examine the earth. Topics include natural resources, population, pollution, ecosystems, biogeochemical cycles, and biodiversity.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

ENV 106L Exploring the Earth Laboratory (0 credits)

ENV 150 Global Change Biology (3 credits)

This course explores the scientific basis of global climate change, the impacts of climate change, and the solutions needed to solve the problem. It also explores Catholic Social Teaching on the subject of care for the environment.

Restrictions: Students cannot enroll who have a major, minor, or concentration in Environmental Science.

Attributes: First-Year Seminar, Undergraduate

ENV 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ENV 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ENV 302 Environmental Geology (3 credits)

This course will provide an introduction to the earth's environmental systems and resources through an integrated study of relevant topics in geology, hydrogeology, and environmental science.

Prerequisites: CHM 120 or CH 101

Restrictions: Enrollment is limited to students with a major in Biology, Chemistry, Environmental Science or Physics.

Attributes: Undergraduate

ENV 370 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ENV 390 Environmental Science Seminar (0 credits)

This series of speakers will introduce majors and minors to current environmental science research, career options and experts in relevant disciplines inside and outside of the natural sciences.

Attributes: Undergraduate

ENV 440 Environmental Toxicology (3 credits)

Course covers the physiological and systemic interaction of environmental pollutants with plants and animals.

Prerequisites: CHM 120 or (CH 101 and CH 103)

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Environmental Science.

Attributes: Undergraduate

ENV 470 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ENV 471 Environmental Law (3 credits)

This course provides students with an introduction to the laws and regulations that have been enacted to address environmental protection issues in the United States. The focus of this survey course will be the federal environmental regulatory system. The course addresses the history and regulatory components of a number of federal environmental statutes. A common theme is the role that enforcement mechanisms, like civil judicial and criminal enforcement actions, play in the achievement of the goals set forth in these statutes. The course will also explore current topics, such as the environmental and regulatory issues surrounding: regulation of e-waste; hydraulic fracturing and climate change.

Attributes: Undergraduate

ENV 490 Environmental Sci Internship (3 credits)

The Environmental Science Internship entails spending a minimum of ten (10) hours each week in a supervised fieldwork experience or approved environmental field course. Grading is based on student reports during weekly meetings with internship instructor, preparation of an internship journal, academic papers, exams, and formal evaluation by internship supervisor. Junior and senior Environmental Science majors and Environmental Science and Studies minors only

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Environmental Science.

Attributes: Undergraduate

ENV 493 Undergraduate Research in Env (3 credits)

This course pairs individual students with faculty mentors to perform independent environmental science related research.

Attributes: Undergraduate

Environmental And Sustainability Studies Minor

The environment is receiving significant attention in recent years in light of issues such as climate change, declining energy resources, and other sustainability related issues. A minor in Environmental and Sustainability Studies is meant to serve a broad student population and will provide students with an extensive understanding of environmental and sustainability issues. The minor will yield graduates who are truly "men and women for others" by preparing students for careers that will identify and study the causes and effects of current and future environmental challenges, educate others about the environment, and help write and analyze related policy.

Learning Goals and Outcomes

Goal 1: Students will develop an understanding of the importance of the environment, the extent to which societal actions impact it, the need for sustainability and how that sustainability can be achieved.

Outcome 1.1: Students will be able to describe the basic environmental challenges facing the world today, their causes, and possible solutions.

Outcome 1.2: Students will be able to describe the scientific, ethical, and moral imperatives behind the need to protect and sustain a healthy environment, and the role of environmental science and environmental scientists in those efforts.

Goal 2: Students will develop an understanding of the importance of the environment, the extent to which societal actions impact it, the need for sustainability and how that sustainability can be achieved.

Outcome 2.1: Students will demonstrate an understanding of the linkages between environmental science and non-natural science disciplines such as business, economics, history, politics, sociology, etc.

Requirements Requirements for the Minor

Students must take six courses for the Minor in Environmental and Sustainability Studies. Courses taken to fulfill requirements of the minor may also fulfill the GEP or overlay (Ethics, Globalization /Diversity, Writing Intensive) requirements as well as the student's major.

Code	Title	Hours
All students will take (preferably in this sequence):		
ENV 106 & 106L	Exploring the Earth and Exploring the Earth Laboratory	4
ENV 102	Environ Theory & Ethics Sem ¹	3
ENV 390	Environmental Science Seminar	0
Students are required to take four additional courses from the following four groups (Groups A-D). Courses do not need to be taken in any particular order, but some courses may require prerequisites. No more than two courses can be taken from each group.		12
Group A Understanding our planet		
BIO 165 & 165L	Exploring the Living World and Exp. Living World Lab	
CHM 100	Chemistry for the Consumer	
GIS 101	Introduction to GIS	

GIS 201	Intermediate GIS
PHY 112	Energy: Problems & Promises
PHY 113	Physics by Experiment
Group B Societal responses past and present	
ART 146	Sculpture and the Environment
ART 177	Photography & Climate Crisis
ENG 314	Irish Environmental Writing
ENG 426	Nature & Environmental Writing
ENG 433	Environmental Justice
ENG 434	Climate Change Stories
ENV 471	Environmental Law
HIS 386	American Environmental History
Group C Economic Issues and solutions	
ECN 375	Environmental Economics
ECN 370	Economic Development
GIS 175	Environmental Economics
MGT 212	Organizational Sustainability
SOC 316	Fair Trade Coffee: Study Tour
Group D Experiential learning	
ENV 490	Environmental Sci Internship
Total Hours	19

1

ENV 102 may not be offered every year and fulfills the Ethics Intensive overlay.

Note: Students majoring in Biology, Chemistry, Chemical Biology, or Physics may minor in Environmental and Sustainability Studies. These students should fulfill at least three of their electives from groups B-D. The fourth can be chosen from Group A or B of the Environmental Science Major.

First Year Seminars: Some FYS 150 courses (e.g., ENV 150) can count for this minor if they address environmental issues, with approval of the program director.

Environmental Science Major Program Overview

The Environmental Science Program prepares students for careers in the ever-growing field of environmental science. The curriculum of the Environmental Science Program emphasizes a deep understanding of contemporary environmental and sustainability issues through an interdisciplinary approach. This approach reflects the interdisciplinary nature of the requirements for careers in environmental related fields in academia, industry, government, non-profit and service organizations. Students enrolled in the major will work through a course of study that will develop a strong foundation in the natural sciences and mathematics while also exploring the complex interconnected nature of sustainability and environmental topics through courses focused on environmental topics in the humanities, social sciences, and business. Students have the opportunity to choose a course of study that focuses on what interests them most. Students also complete a semester-long experiential learning requirement that aims to give graduates an inside understanding of career paths for environmental science graduates. This course of study coupled with the General Education Curriculum at Saint Joseph's University creates a transformative Jesuit education that

prepares graduates to be agents of change in their communities through both professional and personal action.

Learning Goals and Outcomes

Goal 1: Students will develop an understanding of the importance of the environment, the extent to which societal actions impact it, the need for sustainability and how sustainability can be achieved.

Outcome 1.1: Students will be able to describe the basic environmental challenges facing the world today, their causes, and possible solutions

Outcome 1.2: Students will be able to describe the scientific, ethical, and moral imperatives behind the need to protect and sustain a healthy environment, and the role of environmental science and environmental scientists in those efforts.

Goal 2: Students will develop an understanding of the opportunities and challenges facing efforts to protect the environment and developing a sustainable society.

Outcome 2.1: Students will demonstrate an understanding of the linkages between environmental science and non-natural science disciplines such as business, economics, history, politics, sociology, etc.

Goal 3: Students will develop a strong foundation in the physical and natural sciences, including environmental science, biology, chemistry, and physics.

Outcome 3.1: Students will demonstrate knowledge of basic biology, including cell biology, genetics, and organismal biology

Outcome 3.2: Students will demonstrate knowledge of general chemistry and physics.

Goal 4: Students will develop the skills needed for a successful career in Environmental Science, including experimental design, surveying of scientific literature, data collection, data reduction and the presentation of scientific conclusions to a range of audiences.

Outcome 4.1: Students will demonstrate competency in operating basic laboratory equipment required to quantify and measure accurately.

Outcome 4.2: Students will apply skills in data reduction including choosing and interpreting appropriate statistical tests.

Outcome 4.3: Students will be able to develop cogent, well structured, and researched written and oral presentations of scientific material.

Goal 5: Students will understand the types of careers available to environmental scientists, create connections with people in the field of environmental science, and receive hands-on experience in the working world.

Outcome 5.1: Students will demonstrate an understanding of the role of environmental science and scientists in societal efforts towards sustainability and complete an internship applying their knowledge to real-world issues alongside environmental professionals.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

¹

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics		
MAT 155 or MAT 161	Fundamentals of Calculus Calculus I	3
Natural Science		
BIO 101 & 101L or BIO 151L	Bio I: Cells and Bio I: Cells Lab Phage Lab	4

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Biology		
BIO 102 & 102L or BIO 150L	Bio II: Genetics and Bio II: Genetics Lab Bio I: Cells Lab Phage	4

ENV 390	Environmental Science Seminar (each semester in major)	
Total Hours		48

Environmental Science Minor

Learning Goals and Outcomes

Goal 1: Students will develop an understanding of the importance of the environment, the extent to which societal actions impact it, the need for sustainability and how that sustainability can be achieved.

Outcome 1.1: Students will be able to describe the basic environmental challenges facing the world today, their causes, and possible solutions.

Outcome 1.2: Students will be able to describe the scientific, ethical, and moral imperatives behind the need to protect and sustain a healthy environment, and the role of environmental science and environmental scientists in those efforts.

Goal 2: Students will develop a strong foundation in the physical and natural sciences, including environmental science, biology, chemistry, and physics.

Outcome 2.1: Students will demonstrate knowledge of basic biology, including cell biology, genetics, and organismal biology.

Outcome 2.2: Students will demonstrate knowledge of general chemistry and physics.

Goal 3: Students will understand the types of careers available to environmental scientists, create connections with people in the field of environmental science, and receive hands-on experience in the working world.

Outcome 3.1: Students will demonstrate an understanding of the role of environmental science and scientists in societal efforts towards sustainability and complete an internship applying their knowledge to real-world issues alongside environmental professionals.

Requirements

The minor in environmental science requires completion of the following (along with their respective laboratory sections) and three additional courses representing at least two of the course groups (A, B and C).

Code	Title	Hours
BIO 101 & 101L or BIO 151L	Bio I: Cells and Bio I: Cells Lab Phage Lab	4
BIO 102 & 102L or BIO 150L	Bio II: Genetics and Bio II: Genetics Lab Bio I: Cells Lab Phage	4
BIO 201	Bio III: Organismic Biology	4

BIO 360	God and Evolution

Faith-Justice Studies Minor Overview

The Faith-Justice Studies minor is one of the distinguishing mission-driven academic programs at Saint Joseph's University. It empowers students to work across multiple disciplines by integrating learning from six courses to engage in analysis of social structures and systems of thought in light of Gospel values and other faith traditions. As part of the course of study, students explore the call that emerges from this analysis to stand in solidarity with the marginalized peoples of our world.

Students interested in pursuing the minor in Faith-Justice Studies are advised to contact the Faith-Justice Institute for further information.

Learning Goals and Outcomes

Through course work in the Faith-Justice Studies minor, students will:

- consider existing social values, norms, and/or priorities in light of Gospel values and/or other faith-based traditions of social justice.
- analyze institutions and social structures, and question prevailing systems of thought or action, that systematically contribute to problems such as poverty, racism, human rights violations, and violence.
- engage with the sufferings of the poor and marginalized and explore the call, not only to serve, but also to stand in solidarity.

Requirements

Students seeking the minor are required to successfully complete six courses from the program's listings with no more than three courses from any single discipline. At least one of the six courses must be a Theology course that directly addresses Catholic Social Thought, chosen from among the following:

Code	Title	Hours
THE 155	Catholic Social Tradition	3
THE 261	Christian Social Ethics	3
THE 361	Catholic Social Teaching	3
THE 366	Christian Medical Ethics	3
THE 372	Technology Ethics	3
THE 373	Economic Ethics	3

Students may use three credits of a senior capstone project to satisfy one of the course requirements provided they submit a proposal signed

by a faculty mentor or departmental chair from their major within the first six weeks of the semester during which the three credits will be earned.

During the senior year, students will be asked to create and submit a brief portfolio of their work to illustrate their engagement with the program's learning objectives.

The courses listed below are a partial listing of courses which may apply towards the Faith-Justice Studies minor. Some multi-section courses may have specific sections that satisfy the Faith-Justice Studies minor requirements. Students are therefore advised to refer to course schedules and to meet with the Director of the Faith-Justice Studies program during the registration period to confirm the full array of Faith-Justice Studies courses offered in any given semester.

If a student wishes to seek Faith-Justice credit for a course that has not yet been approved as a Faith-Justice Studies course, the student may petition to have the course approved. Students may use this option only once, according to the following guidelines:

1. The student will obtain written permission from the instructor of the course and the Director of the Faith-Justice Studies program within the first six weeks of the course,
2. The student will submit a written plan indicating how the course will satisfy Faith-Justice Studies course criteria,
3. The student will submit a brief report at the end of the semester outlining how Faith-Justice Studies objectives have been met, along with supporting written materials (examinations, journals, projects, etc.).

Gender Studies Minor

Gender Studies is an interdisciplinary field that investigates the social construction of gender in societies, politics, economies, the arts, and cultures in the United States and around the world. At Saint Joseph's, it is a multi-disciplinary minor that allows students from a variety of majors to investigate the ways in which gender intersects with race, ethnicity, class, sexuality, nationality, ability, age, and other identity factors to produce system-wide structures and individual-level psychologies. Gender, therefore, creates opportunities and constraints for individuals based on their particular identities within specific temporal, sociopolitical settings.

Gender Studies minors select approved courses from a variety of disciplines in the fine arts, humanities, education, health studies, social sciences, and business. These courses complement their major fields of study and give students a useful lens for understanding and interacting with their school, family, social, and professional environments, places where equality and justice claims are increasingly important.

Mission Statement

The Gender Studies Program gives students a grounding in gender, feminist, and intersectional theories. While learning about gender as a concept and using methods such as intersectional analysis, students explore how gender interacts with other aspects of identity. As minors, students study these theoretical constructs and learn how they function as systematic and structural processes at the individual, societal/

cultural, and/or institutional levels. Gender Studies minors will also have the opportunity to develop their own project(s) in various disciplines that are grounded in gender, feminist, and/or intersectional analysis.

Faculty Co-Directors

- L. Baglione (POL) and E. Morgan (MTF)

Committee on Gender Studies

- Albright
- Burkhalter
- Hall
- Hoffman
- Joyce
- Logue
- Regis
- Scola
- Sillup
- Wetzel

Learning Goals and Outcomes

Goal 1: *Learn Fundamental Knowledge*: Students will gain foundational knowledge of gender, feminism, and/or intersectionality as core concepts and theoretical constructs.

Outcome 1.1: Students will **identify, define, and/or explain** the core concepts and theories related to gender, feminism, and intersectionality, as appropriate to the discipline.

Goal 2: *Think and Make Analytical Arguments*: Students will think critically and develop arguments that address how gender, feminism, and intersectionality function as systematic and structural processes at the individual, societal/cultural, and/or institutional levels.

Outcome 2.1: Students will **articulate verbally and/or in writing arguments** that **analyze** how gender, feminism, and/or intersectionality function as systematic and structural processes at the individual, societal/cultural, and/or institutional levels, as appropriate to the discipline.

Goal 3: *Apply Skills to Analyze and Assess*: Students will apply their knowledge of gender, feminism, and intersectionality by developing a project, broadly defined, that analyzes and/or assesses real world phenomena and/or creative works through the lens of the core theoretical constructs.

Outcome 3.1: Students will **write, create, and/or present** a project that **analyzes and/or assesses** the application of gender, feminism, and intersectionality to real world phenomena and/or creative works, as appropriate to the discipline.

Requirements

Gender Studies minors **complete six (6) courses from the list** of approved classes. Their set of six courses must simultaneously satisfy **two additional** criteria:

1. No more than **three (3) courses** can be from the same discipline (with the same three-letter course code)

2. At least **one (1) course** must come from the designated “Theories Courses” list

These conditions help assure that students have a sufficiently multidisciplinary and theoretically sophisticated understanding of Gender Studies when they complete the minor.

Code	Title	Hours

SOC 202	Advanced Social Problems ^{Begen Section ONLY}	
SOC 356	Gender, Crime & CJ	
SOC 470	Special Topics ^{Begen Section ONLY}	
Total Hours		18

¹ Courses that qualify as Theories classes are those that are particularly heavy in gender, feminist, and/or intersectional theories. Students will read foundational theoretical texts themselves (rather than only reading texts which apply those theories as critical frameworks in the study of other topics) and engage rigorously with concepts that are at the root of gender, feminist, and/or intersectional studies.

- 2
- Gender, feminism, and/or intersectionality are woven through the fabric of the class and at the center of analysis. These theories and concepts must permeate the entire course and cannot simply be a single unit in the class. Theoretical frameworks and concepts that provide sustained analytical inquiry are expected, and course content, materials, and assignments must be critical and analytical in nature.
 - The courses analyze the construction and maintenance of gender as systematic and structural processes at the individual, societal/ cultural, and/or institutional levels, as appropriate to the discipline.
 - The courses emphasize the ways in which identities intersect, overlap, and interact to produce multiple experiences of gender, and then attend to the complex consequences of these intersections.
 - The courses encourage students to see themselves as potential social justice advocates and agents for social change.

Geographical Information Systems

The program in Geographical Information Systems is a four course (12 credit) interdisciplinary program that leads to an undergraduate certificate in geographical information systems and spatial literacy. It can be completed by students in conjunction with any major across the university.

Learning Goals and Outcomes

- Goal 1:** Develop critical interdisciplinary spatial literacy
- Goal 2:** Acquire proficiency in geospatial technologies and methods in order to discover, retrieve, interpret, analyze, visualize, and store spatial data
- Goal 3:** Understand and adopt the ethical principles and collaborative spirit of the academic GIS community
- Goal 4:** Understand the relationship between geography, culture, and justice and how they relate to real world issues

Requirements

GIS 201	Intermediate GIS	3
Choose 2 courses:		6
GIS 170	Special Topics in GIS	
GIS 270	Special Topics in GIS	
GIS 370	Special Topics in GIS	
Total Hours		12

Courses

GIS 101 Introduction to GIS (3 credits)

This course is designed to acquaint students with an introductory examination of geographic information systems (GIS). GIS tools are used to analyze spatial information, manage spatial data, and create maps used to present and visualize data. This course focuses on ArcGIS and how to apply GIS skills to answer research questions. GIS technology is used in a variety of disciplines including humanities, engineering, economics, environmental studies, engineering, management, urban planning, agriculture, forestry, public health, and many others.

Attributes: Undergraduate

GIS 127 Religion & Race in Philadelphia (3 credits)

"Religion and Race in Philadelphia" is a religious studies course that examines the co-constitution of religious beliefs, racial identities, and regional cultures from an historical perspective. This course will look at how the meanings of both "race" and "religion" are produced through the intersections of individuals, institutions, and ideologies in Philly. Using this religious and racial lens, this course will examine how Philadelphians have come to define their city, themselves, their communities, and their relationships to their natural and cultural environments. This course will use various geographical information systems (GIS) to visualize and analyze various aspects of Philadelphia's cultural landscape. No prior experience in GIS is required.

Attributes: Diversity Course, Globalization Course, Non-Western Studies (GEP), Undergraduate, Writing Intensive Course- GEP

GIS 170 Special Topics in GIS (3 credits)

This course examines selected introductory topics and techniques in GIS. Examples include map making, geospatial thinking, web-mapping, cartography and visualization, and the use of applications for specific majors or fields. Course content reflects recent trends in GIS and the job market.

Prerequisites: ECN 101 or GIS 101

Attributes: Undergraduate

GIS 172 Urban Economics (3 credits)

Urban Economics is broadly defined as the economic study of urban areas. This course will teach you how to examine issues that typically occur in urban areas, such as crime, poverty, education, inequality, public transit, and the distribution of public goods and government resources, from an economic perspective. Throughout this course, we will not only examine urban issues theoretically, but also use real-world data and geographic information systems software (GIS) to apply economic theory to examine these issues in real-time.

Prerequisites: ECN 101 or GIS 101

Attributes: Diversity Course, Globalization Course, Non-Western Studies (GEP), Undergraduate

GIS 175 Environmental Economics (3 credits)

This course examines the interactions between people and the environment by addressing the challenge of meeting the increasing demand for goods and services while simultaneously conserving natural resources for future generations. This course will also look at several current environmental issues including the effects of climate change, land tenure, globalization and trade, natural resource management, food waste, eco-labelling, and environmental justice. Since human numbers are increasing more rapidly in poor countries than anywhere else, special attention is paid to population growth and the prospects for environmentally sound agricultural development in Africa, Asia, and Latin America. There is a writing component to this course that requires students to write a technical paper on a developing country of their choice. This course will also utilize geographic information systems (GIS) software to apply economic theory to examine global environmental issues; no prior experience with GIS is required.

Prerequisites: ECN 101 or GIS 101

Attributes: Globalization Course, Undergraduate

GIS 201 Intermediate GIS (3 credits)

A continuation of GIS 101, this course will prepare students for more advanced geographical analysis and use of geographical information systems (GIS). Students will learn intermediate techniques to analyze spatial information, manage spatial data, and create map layouts to present and visualize data. This course focuses on ArcGIS and other softwares as well as how students can integrate geographic concepts and GIS skills in their major and intended field.

Prerequisites: GIS 101 or INT 170

Attributes: Undergraduate

GIS 270 Special Topics in GIS (3 credits)

This course examines selected intermediate topics and techniques in GIS. Examples include map construction, geovisualization, spatial analysis, and the use of applications for specific majors or fields. Course content reflects recent trends in GIS and the job market.

Prerequisites: GIS 101 or INT 170

Attributes: Undergraduate

GIS 370 Special Topics in GIS (3 credits)

This course examines selected topics and innovative techniques in GIS. Examples include remote sensing, location analysis, web mapping, cartographical design, GIS programming, and the use of specialized applications for specific majors or fields. Course content reflects recent trends in GIS and the job market.

Prerequisites: (GIS 101 and GIS 102) or (INT 170 and INT 270)

Attributes: Undergraduate

GIS 601 Introduction to GIS (3 credits)

This course is designed to acquaint students with an introductory examination of geographic information systems (GIS). GIS tools are used to analyze spatial information, manage spatial data, and create maps used to present and visualize data. This course focuses on ArcGIS and how to apply GIS skills to answer research questions. GIS technology is used in a variety of disciplines including humanities, engineering, economics, environmental studies, engineering, management, urban planning, agriculture, forestry, public health, and many others.

Restrictions: Enrollment is limited to Graduate level students.

GIS 670 Special Topics in GIS (3 credits)

This course examines selected advanced graduate topics and techniques in GIS. Examples include remote sensing, location analysis, web-mapping, cartographical design, GIS programming, and the use of applications for specific majors or fields. Course content reflects needs and interests of graduate students, as well as recent trends in GIS and the job market.

Restrictions: Enrollment is limited to Graduate level students.

Health Care Ethics Minor

The Interdisciplinary Minor in Health Care Ethics seeks to encourage learning and thinking from an interdisciplinary perspective and to foster a critical analysis of bioethical topics through the interplay between moral theory and medical practice. More and more people are beginning to realize the inherent importance of ethics in the clinical setting. Health care professionals are confronted with numerous complex ethical dilemmas that they may not be well prepared to handle. Therefore, it is imperative that they or those preparing to work in the field of health care be trained to understand the principles of ethics and how they can be utilized in clinical decision-making.

The Minor program is open to all majors in the university. Students have the option to pursue either the Basic Track or the Global Track. Both tracks are designed to expose students to the complex and growing field of biomedical ethics.

The Basic Track comprises one required course (THE 366: Christian Medical Ethics), Five electives and an exit interview. The Global Track is more rigorous. It requires the student to either take the Just Health Care in Developing Nations course (THE 368), that requires a study abroad for 2 weeks, or design a research project as part of an Independent Study that has been approved by a faculty member associated with the Minor program and the Institute of Clinical Bioethics. The idea is to encourage the student to explore many complex ethical dilemmas on the global scale, especially as they pertain to underdeveloped countries. Among the many issues to be considered are: the devastating impact of HIV/AIDS on Sub Saharan Africa, the ethics of human research in the developing world and the moral responsibility of developed countries to the health care needs of developing countries.

In addition to the course work, minors are encouraged to attend the events sponsored by the Institute of Clinical Bioethics especially the annual McCormick lecture.

Faculty

Director

- Aloysius Ochasi

Advisory Board

- Allan (MKT)
- Angiolillo (PHY)
- Brennan (ENG)
- Balotsky (MGT)
- Croce (University Press)
- Jursca-Keffer (FJI)
- Kuykendall (IHS)
- O'Sullivan (THE)
- Sillup (PMK)
- Sullivan (IHS)
- Warren (HIS)
- Zurbach (CHM)

Learning Goals and Outcomes

Goal 1: Students will gain an appreciation of philosophical and theological ethics both within the curriculum and through extracurricular activities.

Objective 1.1: Students will demonstrate the ability to discuss and argue positions on a wide range of ethical issues related to health care.

Goal 2: Students will gain insight into the clinical side of health care as well as the pharmaceutical industry, the health care insurance industry, health care administration and education and medical research.

Objective 2.1: Students will apply ethical theories and principles to the resolution of "real life" ethical dilemmas.

Goal 3: Students will possess the skills to analyze topics in health care from an ethical perspective.

Objective 3.1: Students will articulate ethical positions from the perspective of varied disciplines (Theology, Philosophy, Law, Business, Sociology, Public Health etc.).

Objective 3.2: Students will craft an ethical analysis of a designated bioethics topic and propose policy solutions or program development initiative. In addition, students will:

- Develop a basic understanding of moral philosophy and theology.
- Understand the basic ethical principles – beneficence, non-maleficence, autonomy and justice.
- Learn how to apply risk vs. benefit analysis to concrete ethical situations.
- Develop basic proficiency in the analysis of case studies in bioethics.
- Understand the distinction and interrelationship between ethics and law.
- Appreciate how advances in technology pose complex ethical questions for society.
- Identify a wide range of ethical challenges facing the medical, pharmaceutical and insurance industries.
- Understand the importance of bioethics for those who aspire to be health professionals.
- Attend and participate in events sponsored by the Institute of Catholic Bioethics, such as lectures, panels, service experiences, etc.
- Integrate ethical principles in the analysis of a topic in bioethics.

Requirements

Students seeking the Interdisciplinary Health Care Ethics Minor are required to complete six (6) courses from at least 3 departments; no more than 3 courses from any one department may count for credit toward the minor. The prerequisite course is PHL 154: Moral Foundations.

Basic Track

Six (6) Minor courses are required for this track. Students are expected to complete:

Code	Title	Hours
THE 366	Christian Medical Ethics	3
Select five electives courses (listed below)		
An exit interview		

Global Track

Six (6) Minor courses are required for this track. Students are expected to complete:

Code	Title	Hours
THE 366	Christian Medical Ethics	3
An exit interview		
Select five elective courses (listed below):		15
HCE 400	Fieldwork: Clinical Bioethics	
ECN 390	The Economics of Healthcare	
ENG 377	Inside-Out	
ENG 450	Hospital Stories	
PHL 250	Philosophy of Death	
PHL 264	Topics in Moral Psychology	
PHL 286	Philosophy of Mental Illness	
PHL 377	Inside-Out	

PMK 190	Healthcare Delivery Alternative
SOC 216	Alcohol, Drugs & Society
SOC 217	Mental Health & Society
SOC 323	Health and Society
THE 261	Christian Social Ethics
THE 349	Theology of Disability
THE 361	Catholic Social Teaching
THE 368	Just Hlth Care in Dev Nations
HSC 211	Health Care Systems
HSC 216	Alcohol, Drugs and Society
HSC 217	Soc Determinants Mental Health
HSC 251	Healthcare Law and Ethics
HSC 253	Nutrition: Health & Disease
HSC 256	HIV/AIDS
HSC 285	Med Terminology & Health Comm
HSC 323	Health and Society
HSC 345	DyingWell:The Hospice Movement

Total Hours**18**

History

History is the study of the human past as it is constructed and interpreted with human artifacts, written evidence, and oral traditions. It requires empathy for historical actors, respect for interpretive debate, and the skillful use of an evolving set of practices and tools.

As an inquiry into human experience, history demands that we consider the diversity of human experience across time and place.

As a public pursuit, history requires effective communication to make the past accessible; it informs and preserves collective memory; it is essential to active citizenship.

As a discipline, history requires a deliberative stance towards the past; the sophisticated use of information, evidence, and argumentation; and the ability to identify and explain continuity and change over time. Its professional ethics and standards demand peer review, citation, and acceptance of the provisional nature of knowledge.

The History Department offers a signature course in the General Education Program (GEP) that is required of all undergraduates at the University. HIS 154, Forging the Modern World, provides students with the opportunity to use the tools of historical inquiry to gain insight on the key events, ideas, individuals and groups that have shaped the world in which we live. The Department's advanced courses continue to emphasize the investigation of the ideas and institutions—religious, political, social, and economic—through which people have endeavored to order their world. Advanced courses, with their more precise focus on place, time, and method, allow students to gain a deeper understanding of the field and its practices. The Department also offers internships and independent research opportunities to enhance students' preparation for the future.

Faculty

The faculty in Saint Joseph's University's history department regularly carry out extensive historical research around the world. They are devoted to sharing their historical insight and knowledge with students and are dedicated to preparing them for successful careers as historians, lawyers, educators, writers and more.

Department of History Faculty & Staff (<https://www.sju.edu/departments/history/faculty-staff/>)

Programs

Undergraduate Major

- History (p. 206)

Undergraduate Minor

- History (p. 208)

Courses

HIS 150 First Year Seminar (3 credits)

First-Year seminar course in History.

Attributes: First-Year Seminar, Undergraduate

HIS 154 Forging the Modern World (3 credits)

Students will analyze primary and secondary sources to understand the predominant structures and relationships that have transformed our world from the early modern era to the twentieth century. Topics will include the development of political and economic ideas and systems (e.g., democracy, liberalism, conservatism, nationalism, fascism, colonialism, capitalism, socialism), changing conceptions of culture and identity (e.g. race, gender, ethnicity, art), and the conflicts and opportunities born of this transformation (e.g., anti-colonial movements, social revolutions, world wars, international organizations, globalization, religious and cultural conflicts). Readings and discussions will emphasize understanding how modern systems of political, economic and social meaning and exchange, including Western dominance, emerged.

Attributes: Signature Course, Undergraduate

HIS 170 Special Topics in History (3 credits)

Topics of interest in History that are not covered in a regularly offered course. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 191 Washington Leadership Seminar (3 credits)

Students who attend The Washington Center (TWC) take a leadership seminar through TWC. This course is an elective; it does not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 192 Washington Internship (3 credits)

Students who attend The Washington Center (TWC) for a normal academic semester (fall or spring) perform a 30-35 hour a week internship. The Department grants students two upper division courses (6 credits) for the internship (see HIS 411-412 below) and also this third elective course for these internship hours. This course is an elective; it does not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 193 Washington Center Elective (3 credits)

Students who attend The Washington Center (TWC) take one evening course at the Center in addition to performing their internship and participating in the leadership seminar. This course is an elective; it does not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 195 AP World History Credit (3 credits)

Students who receive a 4 or 5 on the AP World History exam will receive credit for this course.

Attributes: Undergraduate

HIS 196 AP World History Credit (3 credits)**HIS 201 U.S. History to 1877 (3 credits)**

This course will survey the history of what would become the United States from the pre-Columbian era through Reconstruction. We will examine significant developments in politics, society, economy, and culture, paying equal attention to individuals, institutions, and ideas. We will also study the practice of history, looking at the ways in which historians use primary and secondary sources to develop scholarly arguments. HIS 201 and 202 may be taken in any order.

Attributes: American Studies Course, Undergraduate

HIS 202 U.S. History since 1865 (3 credits)

This course will survey the history of the United States from Reconstruction through the present. We will examine significant developments in politics, society, economy, and culture, paying equal attention to individuals, institutions, and ideas. We will also study the practice of history, looking at the ways in which historians use primary and secondary sources to develop scholarly arguments. HIS 201 and 202 may be taken in any order.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 203 Historical Intro to Latin Am (3 credits)

A survey of the development of Latin American society, emphasizing the era from the independence movements of the nineteenth century to the present day. The course will focus on the changing social, economic and political structures of the region.

Attributes: International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

HIS 204 Latin American-U.S. Migration (3 credits)

This course will provide students with a deeper understanding of the processes that led migrants from Latin America and the Caribbean to the United States, and their experiences after arrival. The course focuses on three interdisciplinary topics: community formation; the variety of individual and group experiences; and current policy questions for the hemisphere.

Prerequisites: PHL 154

Attributes: Diversity Course, Ethics Intensive, Faith Justice Course, International Relations Course, Justice Ethics and the Law, Latin American Studies Course, Undergraduate

HIS 208 Historical Intro to Asian Civs (3 credits)

This course will introduce students to the culture, politics, geography, art, and religious traditions of the major countries of East and South Asia. It will also give a historical overview from earliest times to the present. The course will focus primarily on the Indian subcontinent, China and Japan, with some attention also to Korea and Southeast Asia. Throughout the course students will also learn how questions of history and culture shape identities and animate public life in contemporary Asia.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 209 AP European History Credit (3 credits)

Students who receive a 4 or 5 on the AP European History exam, or the IB equivalent, will receive credit for this course.

Attributes: International Relations Course, Undergraduate

HIS 210 History of Modern Africa (3 credits)

This course is designed to introduce key themes of the history of Modern Africa. These themes included African Imperialism, European Colonialism, Gender, Education, Development, and political and mental Decolonization. This class is intentional about its source base and includes only sources by Africans and those in African the Diaspora. It also has diverse readings that include, Poetry, Psychology, Literature, and Graphic novels. The culminating assignment is where students will be following a newspaper story in African Newspapers.

Attributes: Africana Studies Course, Diversity Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 270 Special Topics in History (3 credits)

Content and structure of the course are determined by the course supervisor. The special topic for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 296 Transfer History Credit (3 credits)**HIS 301 Latin America and the U.S. (3 credits)**

The complex relationship between the United States and the Latin American nations in the nineteenth and twentieth centuries.

Attributes: International Relations Course, Latin American Studies Course, Undergraduate

HIS 303 History of Modern Mexico (3 credits)

The major social, political, and economic factors that have shaped Mexico in the twentieth century.

Attributes: International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

HIS 304 Social Protest in Latin Am His (3 credits)

An examination of upheaval in Latin American history, from village riots to social revolutions. Students will analyze relevant theoretical and historiographical literature on social protest and explore case studies that will test the explanatory strength of these different models.

Attributes: International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

HIS 306 Sports & Spectacle Greece/Rome (3 credits)

The course draws on historical sources and material culture to investigate the genesis, evolution, and social importance of athletics (track and field events, combat sports, and equestrian competitions) and public spectacles (gladiatorial combats, chariot races, and reenactments of battles) in ancient Greece and Rome, respectively. Topics explored include: the history of the ancient Olympics and other Crown Games; the importance of religion, socio-economic status, and gender in ancient sports; the relation between politics and spectacles in ancient Rome; the ethical protocols of Greek athletics; and the role of ancient sports in the history of the modern Olympic Games.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Classical Studies or History.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

HIS 307 Ancient Greece & Rome Cinema (3 credits)

The course examines a variety of films set in the ancient Greek and Roman world and compares them to the textual and visual sources on which they are based, in an attempt to assess their faithfulness and departures. The course aims to investigate the uses and abuses of the classical past in the medium: how (in)accurately historical figures and events are portrayed on the big screen and how modern ideologies and concerns (about politics, ethnicity, morality, religion, gender, sexuality, race, and cinema itself) are dressed into an ancient costume.

Prerequisites: ENG 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Classical Studies or History.

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

HIS 308 Race & Ethnicity Greece/Rome (3 credits)

The course examines how the concepts of race and ethnic diversity are presented and debated in various Greek and Roman sources (literary as well as visual) and to what extent ancient thinking remains influential nowadays. The course explores a series of important ideas, including nation formation, ethnic superiority, and the use of anatomical, linguistic, and religious characteristics as criteria for ethnic and racial differentiation in the ancient Mediterranean world. The course also investigates the nexus between ancient racism and the social institutions and processes related to it, such as enslavement, colonization, migration, imperialism, assimilation, native revolts, and genocide.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Classical Studies or History.

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

HIS 313 The Crusades (3 credits)

In 1095, Pope Urban II gave a speech that launched the First Crusade, a speech that ushered in a new and violent age of relations among Christians, Muslims, and Jews. The actual gains of that Crusade and many others were minimal, but their legacy of intolerance and mistrust among the three monotheistic religions that claim common ancestry from Abraham persists to the present. This course will emphasize the Crusades of the eleventh through fifteenth centuries, and will conclude by examining the modern inheritance of these medieval campaigns.

Prerequisites: (THE 153 or THE 154 or THE 155) and HIS 154

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

HIS 315 The Glory that was Greece (3 credits)

From Homer to Alexander, the Greeks of antiquity made their mark on the world both of their own time and of the present. While many know the names of great philosophers and artists, such as Plato and Sophocles, few are acquainted with the historical circumstances that often served to inspire these founders of Western civilization. Through original historical and literary texts, this course will help students better to understand the complex context of military prowess, intellectual curiosity, and artistic inspiration that created the glory that was Greece.

Attributes: Ancient Studies Course, Ethics Intensive, GEP Art/Literature, Undergraduate

HIS 316 The Grandeur that Was Rome (3 credits)

From its beginnings as a muddy village, Rome grew to create the largest empire and greatest uniformity the Western world has ever known. This course will: trace the course of Rome's development in the areas of military, political, social and legal history; examine the effects of Christianity and endless expansion upon the empire; and critically assess various theories explaining its demise.

Prerequisites: ENG 101

Attributes: Ancient Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 317 The Rise of the West: 400-1000 (3 credits)

In recent years, scholarly debate has raged over the effects of "The Fall of Rome"; what was once viewed as a catastrophe faces re-evaluation from historians, archeologists, and sociologists. The slow merger of Roman, barbarian, and Christian cultures created a unique civilization, focused intently on survival in this world and salvation in the next. The course will examine the mental and physical constructs of this civilization, with the goal of appreciating the extraordinary creativity of a society with few hard and fast rules or institutions to guide it.

Prerequisites: ENG 101

Attributes: Ancient Studies Course, Medieval, Ren & Reform Studies, Undergraduate

HIS 318 Italian Renaissance 1100-1600 (3 credits)

Extraordinary creativity in all arenas flourished in Italy during the Renaissance. New forms of political theory and organization, finance, art, literature and views about human nature itself all drew on Roman and medieval traditions, and bloomed against a backdrop of constant warfare. The course will examine the formation and evolution of the northern Italian city-states and the culture they created.

Prerequisites: ENG 101

Attributes: Medieval, Ren & Reform Studies, Undergraduate

HIS 319 Reform/Rev in Europe 1500-1650 (3 credits)

Examines the Protestant Reformation, its impact on the religious practice of regular people during the sixteenth and seventeenth centuries, and the various responses to reformed thought offered by the Catholic Church. The course pays particular attention to the interaction of faith and reason during the Reformation conflicts.

Prerequisites: PHL 154 and ENG 101 and (THE 153 or THE 154 or THE 155)

Attributes: Faith-Reason Course, Justice Ethics and the Law , Medieval, Ren & Reform Studies, Undergraduate

HIS 324 Vietnam War in Film & History (3 credits)

This course examines two differently ways of constructing the past, one by historians, the other by filmmakers. We will examine the origins of American involvement in Vietnam, and the course of the conflict from the late 1950s through disengagement in 1973. At the same time, we will watch films that illustrate the evolving way that the war has been represented between 1968 and 1989.

Attributes: Undergraduate

HIS 327 Early Modern Europe 1400-1800 (3 credits)

Examines some of the key transformations in European history between the years 1400-1800. Topics include the Renaissance, the Reformation, the Dutch Revolt, the English Civil War, European encounters with the "New World," Absolutism and the rise of the nation state, the Scientific Revolution, and the French Revolution.

Attributes: Justice Ethics and the Law , Medieval, Ren & Reform Studies, Undergraduate

HIS 329 Crime & Punishment in Europe (3 credits)

Examines the development of European crime and punishment from 1200-1840. Focuses in detail on the social role of legal proceedings, judicial torture, physical punishment, and public execution in European society. As part of the course, students reenact a series of trials from the Spanish Inquisition. Concludes by studying the shift toward punishment by prison in the eighteenth and nineteenth centuries through the lens of Philadelphia's own, Eastern State Penitentiary.

Attributes: Justice Ethics and the Law , Medieval, Ren & Reform Studies, Undergraduate

HIS 330 Eng: Danes to Tudors, 700-1485 (3 credits)

The ways in which official decrees-royal, noble, and ecclesiastical-affected people in all walks of life, and will furthermore explore the various roles English men and women constructed for themselves. In so doing, students will gain insight into the ways inhabitants of this island thought of themselves and the world around them.

Attributes: Medieval, Ren & Reform Studies, Undergraduate

HIS 337 War & Peace in Imperial Russia (3 credits)

A survey of the major political, social, economic, and cultural developments in Russia from 980 to 1881. The course covers Kievan Rus, the Golden Horde, Muscovy, the consolidation of the Romanov autocracy, the expansion of the Russian Empire, the Napoleonic Wars, and the Great Reforms that emancipated the serfs. Students will read primary and secondary sources, as well as a memoir of their choosing.

Attributes: International Relations Course, Undergraduate

HIS 338 Russia & USSR, 1881-1991 (3 credits)

A survey of the major political, social, economic, and cultural events of Russia and the Soviet Union from 1881 to 1991. During this time, the lands of the Russian Empire and its successor, the Soviet Union, changed from a "backward" agricultural country to a technologically advanced superpower to fifteen new countries with diverse political and economic systems. The course will examine these developments through the decline of tsarism and the fall of the Romanov dynasty, the Russian revolutions and the foundation of the Soviet Union, Stalinism, World War II, the Cold War, and the reforms under Gorbachev that contributed to the collapse of the Soviet Union.

Attributes: International Relations Course, Undergraduate

HIS 339 The Mongol Empire (3 credits)

In the thirteenth century, the Mongols built the largest contiguous land empire that the world has ever known. This course will cover the rise, running, and fall of this enormous Eurasian empire. It will explore the society and culture of the Mongols, as well as how the Mongol Empire impacted the many peoples whom they conquered. Students will read and analyze primary sources written by those who experienced the Mongol Empire.

Attributes: Asian Studies Course, Medieval, Ren & Reform Studies, Non-Western Studies (GEP), Undergraduate

HIS 340 Stalinism in the USSR (3 credits)

An examination of the Soviet Union under the leadership of Joseph Stalin from 1928 to 1953. Course readings will focus on the experiences of ordinary people to demonstrate how Stalin's rule brought both opportunity and great tragedy. Stalinism, historians argue, was more than a political ideology such as Marxism and Leninism, but a way of life and civilization distinct from anything the modern world had yet experienced.

Attributes: International Relations Course, Undergraduate

HIS 341 Genocide & Human Rights (3 credits)

Through an examination of four twentieth-century genocides (the Armenian Genocide from 1915 to 1917, the Holocaust from 1933 to 1945, the genocide in Cambodia from 1976 to 1979, and the genocide in Rwanda in 1994), the course will explore the concept of genocide and the development of national and global laws to prevent it, promote human rights, and prosecute abusers. Students will read primary and secondary sources and study genocidal violence as a particularly vicious form of state policy, as well as a human and personal experience of terror and murder.

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Justice Ethics and the Law , Undergraduate

HIS 343 African Ethnicities (3 credits)

Scholars have noted that one of the worst words in any language is the word for brother because it informs one to treat their brothers one way and all others differently. This course has two major themes: learning the various ways that identities are constructed and used and, two, the multiple ways in which these identities have impacted morality. This class begins with introductions to different ethnic schools of thought and African moralities. It continues with case studies on the Akan, Yoruba, Afrikaner, Hutu, and Tutsi ethnic identities and ethics.

Prerequisites: ENG 101 and PHL 154

Attributes: Africana Studies Course, Ethics Intensive, International Relations Course, Non-Western Studies (GEP), Writing Intensive Course-GEP

HIS 346 Religion & Philosophy: Africa (3 credits)

Examines the role of religious thought and cultural philosophies in conflict and peace in Africa. The class will begin as a survey of the history, cultures and religions of Africa. After which, several case studies will be presented that put specific North-African interpretations of Judaism, Islam, Christianity or traditionalist beliefs at the center of either conflict or consensus in this region. A final extended case study will examine the Somali, where one has a unity of language, culture and religion, but due to decades of civil wars, no functional state. These case studies will focus on the specific religious beliefs or practices that either endeared religious groups to each other or transcended religious denominations to provide concrete examples for the ways in which the proponents of faiths and secularity coexist or cause conflict in Africa.

Prerequisites: THE 153 or THE 154 or THE 155

Attributes: Faith-Reason Course, International Relations Course, Undergraduate

HIS 348 Witches in Early Modern Europe (3 credits)

Examines popular and educated belief in the supernatural in early modern Europe, 1400-1800. Focuses especially on the "witch-craze" that occurred across Europe and its American colonies during the sixteenth and seventeenth centuries, as well as attitudes towards supernatural entities such as ghosts and werewolves.

Attributes: Gender Studies Course, Justice Ethics and the Law , Medieval, Ren & Reform Studies, Undergraduate

HIS 350 Exchnng & Conq in Mod E. Asia (3 credits)

An analysis of East Asian history from 1500 to the present, emphasizing the reciprocal influences of East Asia and the West. The primary focus will be on China and Japan, with attention also to Korea and Vietnam. Major topics will include the Jesuits in East Asia; approaches to modernization in China and Japan; the decline of China and the rise of Japan in the nineteenth century; colonialism and anti-colonial movements; the challenges of global culture; and debates over human rights in the late twentieth century.

Attributes: Asian Studies Course, International Relations Course, Undergraduate

HIS 351 Gndr, Ideolgy & Rev in E. Asia (3 credits)

This course will examine the institutional and ideological connections between gender roles and social unrest in East Asia since 1900. Questions central to the class will be: changing notions of the ideal man and woman, and how changes in society and politics have been reflected in gender roles for men and women. Topics may include traditional East Asian societies; foot binding; revolutionary movements including communism, nationalism and feminism; family-planning; the Japanese samurai ideal; and gender roles in film and fiction.

Attributes: Asian Studies Course, Gender Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 352 Late Imperial China (3 credits)

A survey of Chinese social, political, intellectual, and cultural history during the Ming and Qing dynasties. Major topics will include Ming voyages of discovery, Ming art and literature, the Manchu conquest, War of the Three Feudatories, Taiping Rebellion, and the advent of Western imperialism.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 353 Modern China (3 credits)

A survey of Chinese social, political, intellectual, and cultural history from 1900 to the present. Major topics will include the Opium Wars, emergence of Chinese nationalism, the Boxer Rebellion, collapse and fall of the Qing dynasty, the May Fourth Movement in literature and politics, competing strands of Chinese communism, warlords, the anti-Japanese war, the founding of the People's Republic, the Great Leap Forward, Cultural Revolution, Deng Xiaoping's Reforms, social protest of the 1980s, and the challenges of rapid economic development.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 354 Japan Since 1600 (3 credits)

A survey of Japanese history since 1600. Major topics include traditional Japanese social structure, bushido and samurai culture, Perry and the opening of Japan, the Meiji Restoration, militarism and modernization, expansion onto the Asian continent, Showa democracy, the Pacific War, the American Occupation, political and economic reconstruction, cinema and literature of post-war Japan.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 356 Modern South Asia (3 credits)

The nation-states of India, Pakistan, Bangladesh, Sri Lanka, Bhutan, Nepal and the Maldives Islands (and sometimes Afghanistan)-comprise incredible diversity of language, culture, religion, art, dress, architecture, and cuisine. This course places the region into historical, political and socioeconomic context. It offers a thematic and chronological study of modern South Asia with thorough examinations of the transition from the late Mughal to the British colonial period, the movements for independence and the social activism that grew out of them. Includes: gender, caste/casteism, minorities, territorial/sovereignty conflicts, pop culture and film, development economies, and the South Asian diaspora.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 357 History of Islam in Asia (3 credits)

The early history of Islam, and the ways it grew beyond the Arabian Peninsula and ultimately took hold in Central, South, Southeast Asia and East Asia. The course examines the expansion of Islam throughout Asia, its relationship with existing systems and geo-politics, the relationship between Islam and statecraft, and questions of gender, identity, belonging as well as the pressures of globalization, including the most current events affecting Asian Muslims.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 358 Contemporary China (3 credits)

History, politics, and China since 1976. Major topics covered will be the death of Mao and the end of the Cultural Revolution; the opening of relations with the United States; Deng Xiaoping's rise; opening and reform; China's "economic miracle"; the one-child policy; the 1989 democracy movement and its aftermath; China's rise as a global economic and political power; the environmental challenge accompanying China's economic development; and the Communist Party's strategies and tactics to maintain power.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 359 India & Pak: Colony to Nation (3 credits)

This course will examine the emergence of anti-colonial leaders in the Indian subcontinent and the evolution and interaction of their thinking; the politics of Indian nationalism; the history of the 1947 partition and its reverberations; the challenges of state building after independence from Britain and the movement for the independence of East Pakistan, that became Bangladesh in 1971. This course includes the Reacting to the Past role-playing game "Defining a Nation: India on the Eve of Independence."

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 360 Colonial America (3 credits)

A survey of the social, economic, cultural, and political developments in colonial America with special emphasis on the origins and evolution of the plantation system, slavery, religious diversity, cities, and scientific inquiry.

Attributes: American Studies Course, Diversity Course, Undergraduate

HIS 361 America in Age of Revolutions (3 credits)

A survey of American history from the era of the American Revolution through the mid-nineteenth century with special emphasis on independence, the 1800 revolution in politics, the transportation, agricultural, and industrial revolutions, and the social revolution accompanying modernization in the nineteenth century.

Attributes: American Studies Course, Undergraduate

HIS 362 The American Civil War (3 credits)

A history of the American Civil War and Reconstruction. The course will cover the causes, management, and consequences of the war in society, economics, politics, and culture.

Prerequisites: PHL 154

Attributes: Africana Studies Course, American Studies Course, Ethics Intensive, Undergraduate

HIS 363 American Medicine Since 1865 (3 credits)

This course will explore the history of American medicine and medical treatment beginning with the Civil War. It will continue by exploring the introduction of new scientific approaches and technologies, the enhancement of fields like surgery and psychiatry, the influence of growing professionalization, pharmaceutical discoveries, and public health concerns, including sanitization, and the people who shaped these changes and their institutions: doctors, nurses, hospitals, and insurance companies. Throughout, we will consider as well the ways in which medicine has been affected by wars, epidemics, and other crises, as well as attitudes about race, class, and gender.

Attributes: American Studies Course, Undergraduate

HIS 366 Reform and Reaction in the US (3 credits)

Reform affected all levels of U.S. politics, culture, and society in the first half of the twentieth century, linking the first Roosevelt administration to the last. Progressives and New Dealers tried to save the world abroad and preserve health and "normalcy" at home, as women, immigrants, and African-Americans pressed for greater opportunities. Two world wars complicated and deepened these trends. This course will examine the nature, contradictions, and social and political consequences of these important decades of reform, reaction, and transition.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 370 Special Topics in History (3 credits)

Topics of interest in History that are not covered in a regularly offered course. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 379 Black History Since Civil War (3 credits)

The history of Black Americans from Reconstruction to the present day. Students will examine the unity and diversity of the Black experience, including the myriad social, cultural, political, and economic conditions that created this experience. They will also explore the ways in which African-Americans have shaped American history and culture, and their efforts, in concert with other Americans, to subvert, transcend, and otherwise reform a discriminatory landscape and reassert the founding principles of the American republic.

Prerequisites: HIS 154

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Justice Ethics and the Law, Undergraduate

HIS 381 US in the World since WWI (3 credits)

Examines the role of the United States in the world from 1917 until the end of the Cold War. The course explores the nation's transformation from a hesitant embrace of international commitments to an expansive vision of global involvement.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 382 American Foreign Policy (3 credits)

This course offers an interdisciplinary perspective on the U.S.'s role in global events emphasizing both historical understanding and theoretical approaches. Beginning with World War I, the course will develop major themes and challenges for U.S. foreign policy in the 20th century and beyond: isolationism vs. internationalism, hegemony vs. empire, citizens' rights vs. state interests, and the extent to which the pursuit of national security (national power and prosperity) should recognize ethical limits.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 383 Food in American History (3 credits)

An examination of how food and foodways have historically shaped and reflected American culture, society, economy, and politics. Major topics include agriculture and labor; technology and industrial food processing; ethnic cuisines and traditions; restaurants and supermarkets; food, family, and gender; and the impact of government policies and regulations.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 385 Women in America (3 credits)

The history of American women from the antebellum period to present. This course will focus on the evolution of women's family and work roles, as well as their involvement in social reform and political movements. It will emphasize both the unity and the diversity of women's historical experiences, based upon factors such as race, ethnicity, class, and region.

Attributes: American Studies Course, Diversity Course, Gender Studies Course, Undergraduate

HIS 386 American Environmental History (3 credits)

A study of our historical place in the natural landscape through the methods of "environmental history," examining ecological relationships between humans and nature, political and economic influences on the environment, and cultural conceptions of the natural world. Drawing on methods from the natural sciences, the social sciences, and the humanities, the course will survey over 500 years of North American environmental history, with topics ranging from urban pollution and suburban sprawl to agricultural practices and wilderness protection.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 387 Popular Culture in the US (3 credits)

A survey of the production and consumption of commercialized leisure in the United States from the early nineteenth century to the present day. Throughout the nation's history, American popular culture has both reflected and shaped society's values, often serving as an arena of conflict among classes, races, and genders. By investigating selected sites on this contested terrain—from novels, stage shows, and movies to radio, television, and popular music—students will learn to think seriously, critically, and historically about the mass-produced culture that surrounds them every day.

Attributes: American Studies Course, Undergraduate

HIS 388 Reacting to the Past (3 credits)

Immerses students in moments of historical controversy through a series of extended role-playing games. By reading primary sources, conducting additional research, and participating in first-person debates, students will develop a more active, engaged, and empathetic understanding of both historic events and historical practice. Students will also participate in the playtesting of new "Reacting" games, thereby contributing to the development of an innovative interactive pedagogy.

Attributes: Undergraduate

HIS 391 American Military History (3 credits)

This course explores the development of the American military and its roles in America's wars from the period of the Spanish-American War to the present. Emphasis will be placed on growth and change in the military within a broader social, political, and economic context.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 392 Museums, Monuments, and Media (3 credits)

"Public history" is history as it is practiced outside of the classroom for a general audience: at museums, monuments, and historic sites; in film, television, and digital media. In this course, students will examine the history, methods, and impact of public history in the United States. Through case studies, debates, site visits, and hands-on projects, students will learn how to consume, critique, and create public history, and to assess how the past is used (and abused) for present purposes.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 396 Transfer History Credit (3 credits)**HIS 411 Washington Internship I (3 credits)**

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 412 Washington Internship II (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 470 Special Topics in History (3 credits)

Topics of interest in History that are not covered in a regularly offered course. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 471 Seminar in American History (3 credits)

Lectures, readings, and discussions focusing on an announced theme in United States history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101 and HIS 154

Attributes: American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 472 Seminar in European History (3 credits)

Lectures, readings, and discussion focusing on an announced theme in European history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101 and PHL 154

Attributes: Ethics Intensive, Undergraduate, Writing Intensive Course- GEP

HIS 473 Seminar in Eurasian History (3 credits)

Lectures, readings, and discussion focusing on an announced theme in Eurasian history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101 and HIS 154

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

HIS 474 Seminar in Latin Am His (3 credits)

Lectures, readings, and discussion focusing on an announced theme in Latin American history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: Latin American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 476 Seminar in Asian History (3 credits)

Lecture, readings, and discussion focusing on an announced theme in Asian history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: Asian Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 477 Seminar in African History (3 credits)

Lectures, readings, and discussion focusing on an announced theme in African history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: Africana Studies Course, Diversity Course, Undergraduate, Writing Intensive Course- GEP

HIS 478 Seminar Global Comparative His (3 credits)

Lectures, readings, and discussion focusing on an announced theme in global and comparative history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

HIS 480 Readings in Latin Amer Hist (3 credits)

A study of significant themes and periods in Latin American history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Latin American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 481 Readings in Asian Hist (3 credits)

A study of significant themes and periods in Asian history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Asian Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 482 Readings in European Hist (3 credits)

A study of significant themes and periods in European history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 483 Readings in American Hist (3 credits)

A study of significant themes and periods in American history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.
Prerequisites: ENG 101
Attributes: American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 484 Readings in African History (3 credits)

A study of significant themes and periods in African history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.
Prerequisites: ENG 101
Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 491 Philadelphia Area Internship (3 credits)

The Philadelphia Area Internship course supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations.
Attributes: International Relations Course, Undergraduate

HIS 493 Honors Research & Ind Study I (3 credits)

Independent research leading to the successful completion and defense of an Honors Thesis.
Prerequisites: ENG 101
Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 494 Honors Research & Ind Study II (3 credits)

Independent research leading to the successful completion and defense of an Honors Thesis.
Prerequisites: ENG 101
Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 496 Transfer History Credit (3 credits)

History Major
Learning Goals and Outcomes

Goal 1: Build historical knowledge.

- Outcome 1.1:** Gather and contextualize information in order to convey both the particularity of past lives and the scale of human experience.
- Outcome 1.2:** Develop a body of historical knowledge with breadth of time and place—as well as depth of detail—in order to discern context.

Goal 2: Develop historical methods.

- Outcome 2.1** Collect, sift, organize, question, synthesize, and interpret complex material.
- Outcome 2.2** Practice ethical historical inquiry that makes use of and acknowledges sources from the past as well as the scholars who have interpreted that past.

Goal 3: Recognize the provisional nature of knowledge, the disciplinary preference for complexity, and the comfort with ambiguity that history requires.

- Outcome 3.1:** Describe past events from multiple perspectives.
- Outcome 3.2:** Identify, summarize, appraise, and synthesize other scholars’ historical arguments.

Goal 4: Apply historical methods to the historical record because of its incomplete, complex, and contradictory nature.

- Outcome 4.1:** Consider a variety of historical sources for credibility, position, perspective, and relevance.
- Outcome 4.2:**Evaluate historical arguments, explaining how they were constructed and might be improved.

Goal 5: Create historical arguments and narratives.

- Outcome 5.1:** Generate substantive, open-ended questions about the past and develop research strategies to answer them.
- Outcome 5.2:** Craft well-supported historical narratives, arguments, and reports of research findings in a variety of media for a variety of audiences.

Goal 6: Use historical perspective as central to active citizenship.

- Outcome 6.1:** Apply historical knowledge and historical thinking to contemporary issues.
- Outcome 6.2:** Develop positions that reflect deliberation, cooperation, and diverse perspectives.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. *Diversity, Globalization or Non-western Area Studies,*
- 2. *Ethics Intensive*
- 3. *Writing Intensive, and*
- 4. *Diversity*

¹
Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

HIS 154	Forging the Modern World	3

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social/Behavioral Sciences		
Select any 100 level POL		

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

History majors can complete the Integrated Learning Component of the GEP by completing three courses from any one track shown below. Courses taken as part of the History Department's ILC may count toward a minor or a second major. They may not, however, count for credit elsewhere in the GEP. Subject to departmental approval, and under their advisor's guidance, students may petition to construct a different ILC.

1. The Arts and Letters Track consists of any three courses that count toward majors in any of the following departments:
 - English
 - Art
 - Modern and Classical Languages
 - Music, Theater and Film
 - Philosophy
 - Theology and Religious Studies
2. The Social Sciences Track consists of any three courses in any of the following majors:
 - Criminal Justice
 - Economic
 - Education
 - Political Science
 - Sociology
3. The Multi-disciplinary Track consists of three non-history courses that are all part of the same multi-disciplinary College of Arts and Sciences Program, including:
 - Africana Studies
 - American Studies
 - Ancient Studies
 - Asian Studies
 - Faith Justice Studies
 - Gender Studies
 - International Relations
 - Latin American Studies
 - Medieval/Renaissance/Reformation Studies

Honors Requirements

To receive Honors, students enroll in the senior year in HIS 493-HIS 494, two consecutive semesters of course-based research and study to produce a senior thesis. For students in the University Honors program, these two courses may be counted toward the eight course University Honors requirement. If you are interested in completing the College Honors project during your senior year, please contact the department chair early in the spring semester of your junior year. Specific requirements for the College Honors thesis may be found in this catalog under the Honors Program.

Internships

Qualified history majors are eligible to participate in a variety of internships for academic credit with historical, cultural, educational, governmental, and other organizations. See the HIS 411, HIS 412 and HIS 491 course description below.

Secondary Education Teacher Certification for Secondary Schools Dual Major in History and Secondary Education

History majors are eligible to complete a double major in History and Secondary Education. In addition to the subject-specific content requirements for secondary school teacher certification that are met by completing the major, dual majors become candidates for the Grades 7-12 teaching certificate in Pennsylvania by completing a prescribed sequence of coursework, which includes the specific requirements for Accommodations and Adaptations for Diverse Learners in Inclusive Settings and Meeting the Needs of English Language Learners under PA §49.13(4)(i).

Below is the recommended program for students to be eligible for a PA Level I teaching certificate in Secondary Education.

EDU 230	Eval: Secondary Grades 7-12	3
EDU 412	Instr Techniq Soc St w/Field	3
EDU 491	Secondary Student Teaching	12

Note: Candidates for Secondary School Teacher Certification must also complete two courses in Mathematics. One course is satisfied by the Mathematics GEP requirement. For History majors, the second Mathematics courses is taken as a free elective. It is recommended that MAT 118 be taken.

Also note that HIS/EDU double majors **must** take POL 111 as their POL 1** course.

Students seeking the double major are urged to declare their intentions as early as possible in their undergraduate careers and must register with the Teacher Education Department, which will guide candidates through their required Teacher Education courses and also assist students through the certification requirements of the Pennsylvania Department of Education. Students must have an overall Grade Point Average (GPA) of 3.0 or higher to be accepted into the teacher certification program and must have an overall GPA of 3.0 as one of the requirements to obtain teacher certification. See the Teacher Education Department section of the Catalog for more information.

History Minor Learning Goals and Outcomes

Based on the American Historical Association's Tuning Project

1. **Build historical knowledge.**
 - a. Gather and contextualize information in order to convey both the particularity of past lives and the scale of human experience.

- b. Develop a body of historical knowledge with breadth of time and place—as well as depth of detail—in order to discern context.
2. **Develop historical methods.**
 - a. Collect, sift, organize, question, synthesize, and interpret complex material.
 - b. Practice ethical historical inquiry that makes use of and acknowledges sources from the past as well as the scholars who have interpreted that past.
3. **Recognize the provisional nature of knowledge, the disciplinary preference for complexity, and the comfort with ambiguity that history requires.**
 - a. Describe past events from multiple perspectives.
 - b. Identify, summarize, appraise, and synthesize other scholars' historical arguments.
4. **Apply historical methods to the historical record because of its incomplete, complex, and contradictory nature.**
 - a. Consider a variety of historical sources for credibility, position, perspective, and relevance.
 - b. Evaluate historical arguments, explaining how they were constructed and might be improved.
5. **Create historical arguments and narratives.**
 - a. Generate substantive, open-ended questions about the past and develop research strategies to answer them.
 - b. Craft well-supported historical narratives, arguments, and reports of research findings in a variety of media for a variety of audiences.
6. **Use historical perspective as central to active citizenship.**
 - a. Apply historical knowledge and historical thinking to contemporary issues.
 - b. Develop positions that reflect deliberation, cooperation, and diverse perspectives.

Total Hours		18

Honors Program

Program Overview

The Saint Joseph's University Honors Program seeks to produce well-educated, articulate citizens who exemplify the highest standards of academic, professional and personal achievement. The program offers an enriched General Education curriculum that broadens cultural interests, integrates knowledge, sharpens writing skills, and encourages student involvement in the learning process.

The curriculum is composed of intellectually rigorous courses that satisfy both General Education and major requirements. Many Honors courses are interdisciplinary team-taught courses in the arts, sciences, social sciences, and business.

Membership in the University Honors Program

Membership in the University Honors Program is by invitation of the Honors Director prior to the student's first semester at the University.

University Honors Program

Graduation with University Honors requires successful completion of a minimum of eight Honors courses as part of the regular undergraduate degree requirements and a minimum cumulative GPA of 3.5. Two of those courses will comprise a College Honors thesis or Honors capstone sequence.

College Honors

College Honors is a two-semester independent reading/research thesis or capstone sequence that is typically completed in the senior year, under the supervision of a faculty mentor. Individual departments and interdisciplinary programs may determine their own College Honors experience by requiring a two-semester thesis, or offering students a choice of thesis or capstone sequence. University Honors students need only complete one College Honors thesis or capstone sequence, and may choose the major (or sometimes minor) department or program in which to complete that sequence. University Honors students should consult the College Honors Guidelines document on Canvas to determine the College Honors requirements/options in their major department or program.

Whether Honors thesis or Honors capstone sequence, College Honors will satisfy two of the eight Honors course requirements for completion of University Honors. In order to be eligible for College Honors, University Honors Program students must have a minimum overall GPA of 3.5 in all course work at the end of their junior year and must be on track for the completion of their eight required Honors courses for University Honors.

College Honors may be offered to non-Honors students who have a minimum 3.5 GPA. This will be at the discretion of the department in which the Honors thesis or Honors capstone sequence will be conducted. College Honors is an optional experience for non-Honors students.

College Honors Capstone Overview and Procedures

The College Honors capstone sequence comprises two courses, often but not always taken in consecutive semesters, that are already part of a student's own major (or sometimes minor) program and are "upgraded" with additional work to become Honors capstones. Honors capstones are not always actual capstones in a major, as not every major has a formal capstone or capstone sequence. Honors capstones are instead determined by the department or program in consultation with the Honors Program, and many department or programs choose not to offer a capstone option. If there is no Honors capstone option offered by a particular department or program, a thesis is the only available path to College Honors in that particular department or program. Current Honors students should consult the College Honors Guidelines document on Canvas to determine their options.

Students seeking to upgrade a course to become an Honors capstone should first consult with the instructor of their Honors capstone course option (as listed in the College Honors Guidelines document) in order to confirm that instructor's willingness to upgrade the course. If the instructor is willing, the student should register for the course when they

register for other classes. In the semester prior to taking that course, or at the very latest by the end of the first week of class, each student should submit an upgrade approval form (<https://forms.sju.edu/advsupport/view.php?id=43377>), including a statement of additional work to be upgraded, and evidence of the mentor's willingness to upgrade the course. The successful completion of two such "upgraded" courses will complete College Honors.

College Honors Thesis Overview

Although not every program offers a College Honors capstone option, every Honors student in good standing is eligible to complete a College Honors thesis. The College Honors thesis should be original in its conception and analysis. This may mean the discovery of new knowledge, the reinterpretation of standard methods, theories and assumptions, or the formulation of data produced from fresh investigations. The College Honors Thesis should be the result of serious research, original thinking and a clear understanding of the context in which this research is conducted. Students submitting a proposal for a College Honors Thesis should provide evidence of background knowledge and requisite skills before they begin their work. Interdisciplinary projects involving the student's minor as well as major are encouraged, but these require the approval of the Honors Director and the Department Chairs of both the student's major and minor.

The College Honors Thesis may take many forms: traditional narrative/analysis, in-depth study of specific texts or themes, empirical research, practical applications, or a creative/inventive endeavor. Projects involving empirical research should develop a coherent hypothesis, and test it professionally and systematically. Length may vary according to each subject; however, it is expected that the College Honors Thesis will be substantial in scope, length, and bibliography, and that it will be documented in accordance with the standards of the relevant discipline and include an abstract, title-page, table of contents, introduction, notes and bibliography. The final result will be shared in an oral presentation, as well as in a written thesis, and should place the specific topic in a broader scholarly context by demonstrating familiarity with the authoritative literature and research on the subject.

College Honors Thesis Procedures and Deadlines

Below are the procedures for students who are planning to pursue the College Honors Thesis. Current Honors students may find the timeline and deadlines provided in the College Honors Guidelines document available on Canvas.

By the end of their junior year, students should confirm with the Director of the Honors Program their intention to pursue the College Honors thesis. They will be expected to outline a general area of research and to name their primary mentor for the project. Students who plan to begin thesis work in the fall semester will be expected to remain in touch with their mentors throughout the summer months as they conduct preliminary research into their topics.

First semester of College Honors Thesis

By the end of the first week of class, each student must submit an approval form (<https://forms.sju.edu/advsupport/view.php?id=43377>), including a proposal outlining the project's general objectives, a bibliography, and a schedule of meetings to be held during the semester, as well as evidence of the mentor's willingness to supervise the thesis. After approval, the registrar will be asked to create the first-semester Honors thesis course. After the creation of this course, the mentor

should submit one of two initial Research Assessment forms: one for research (<https://forms.gle/F4JJD67YbBsBUS9h8/>) projects, or another for creative (<https://forms.gle/bNMC1TjAdQwiCM8a9/>) projects. During this first semester, each candidate, in consultation with their mentor, should also select a second reader for the thesis. The second reader should normally be from a different department and have a compatible interest in the thesis topic. The second reader will serve to offer advice, criticism and suggestions throughout the process of the College Honors Thesis. During this first semester, the Honors Director will also assign a member of the Honors Program Committee as a third reader of the thesis. These three faculty together form a thesis committee. The candidate must schedule a meeting with this committee that should take place before the last day of classes to present a clear progress report of the work completed and an outline of what lies ahead. Finally, the mentor should submit a second mid-year research (<https://forms.gle/GG6Sv7mq8u4XMRRf6/>) or mid-year creative (<https://forms.gle/WnsZBwqUmug6zWqF7/>) Research Assessment form.

Second Semester of College Honors Thesis

By the end of the first week of class, each student must submit another approval form (<https://forms.sju.edu/advsupport/view.php?id=43377>), including an updated proposal and new evidence of the mentor's willingness to continue supervising the thesis. After this form is approved, the registrar will create the second-semester Honors thesis course. Prior to midterm of the second semester, the candidate must present a first draft of the entire project to the mentor for critical review. In the final month of the second semester of thesis work, the candidate must submit a final draft to his/her mentor and the members of the thesis committee, including the second reader and the appointed representative from the Honors Program Committee. The candidate and mentor may also invite additional faculty members from related fields to the oral presentation, which should occur by the last day of classes. As soon as possible, the date, time and location of this presentation should be sent to the Honors administrative assistant. After the presentation, the mentor will complete a final research (<https://forms.gle/6vhZaA1hx5EEemZKJA/>) or final creative (<https://forms.gle/FqJu1uoMig3pRdFS6/>) online Research Assessment form. An electronic copy of the thesis should be sent in .pdf format to the Director of the Honors Program by no later than the conclusion of the examination period. This material must be filed with the Honors Director before recognition can be given at graduation.

Honors Recognition

Successful completion of the requirements for University Honors is noted on the student's academic transcript. Recognition of completion of the College Honors thesis or Honors capstone course sequence is noted on the student's academic transcript at the course level.

Learning Goals and Outcomes

Goal 1: Students will pursue a program of study of interdisciplinary courses and courses offered in traditional disciplines.

Objective 1.1: Explore issues in a multiplicity of disciplines and integrate knowledge from those disciplines.

Objective 1.2: Demonstrate analytic and critical skills in examining literary, artistic, historical, philosophical, theological, sociological, political, scientific, legal, linguistic, or business texts.

Goal 2: Students will engage in rigorous thought, critical analysis, and synthesis in the context of problem solving.

Objective 2.1: Engage in independent scholarly or creative research, analysis, and synthesis that prompt them to invent written arguments that reflect the acquisition of knowledge, insights, and skills.

Objective 2.2: Demonstrate confidence and clarity in speaking in classroom presentation, discussion, and debate that demand data gathering, analysis, and critical reflection.

Objective 2.3: Address topical, social, scientific, cultural, or business issues either inside or outside the classroom, and propose original, creative, and enduring solutions to real world issues and problems.

Objective 2.4: Engage in self-reflection and self-evaluation to promote intellectual self-confidence or spiritual humility.

Goal 3: Students will produce a scholarly or creative project or capstone experience under the guidance of members of the Honors faculty.

Objective 3.1: Engage in independent scholarly or creative research, analysis, and synthesis that prompt them to invent written arguments that reflect the acquisition of knowledge, insights, and skills.

Objective 3.2: Explore aesthetic dimensions in creative works – stories, poems, plays, paintings, sculpture, architecture, film, and music – and learn the style, perspective, and techniques of a major artist or movement.

Goal 4: Students will create an intellectual environment through scholarly, creative, social, cultural, or business activities.

Objective 4.1: Engage in independent scholarly or creative research, analysis, and synthesis that prompt them to invent written arguments that reflect the acquisition of knowledge, insights, and skills.

Objective 4.2: Explore aesthetic dimensions in creative works – stories, poems, plays, paintings, sculpture, architecture, film, and music – and learn the style, perspective, and techniques of a major artist or movement.

Objective 4.3: Address topical, social, scientific, cultural, or business issues either inside or outside the classroom, and propose original, creative, and enduring solutions to real world issues and problems.

Requirements

Successful completion of University Honors requires at least eight Honors courses. Students typically schedule Honors coursework in each of their eight semesters, although adjustments may be made to this schedule on the advice of the Honors Director.

The following further restrictions apply to the minimum eight-course requirement:

- At least two courses must be team-taught interdisciplinary Honors courses.
- Two courses must be the mandatory College Honors senior thesis or Honors capstone sequence, as determined by individual departments.
- Students will select their four remaining Honors courses from those offered and approved by the Honors Program.

To remain in the Honors program, students are expected to maintain a 3.50 GPA, which is the minimum required for graduation with University Honors. Students who are not making reasonable progress toward the eight-course requirement or whose GPA is below 3.50 are subject to removal from the Honors Program.

Students are assigned an advisor from the department in which they declare a major. They should, however, consult with the Honors Director and Associate Director to ensure that their course schedules are arranged in such a way as to integrate the fulfillment of university requirements with those of the Honors Program.

Courses

The following are taught as Honors courses. Additional Honors courses are offered with various departmental prefixes in a variety of subject areas each semester and will be indicated with an Honors attribute in the course schedule. (Note: 493-5 are typically offered with departmental prefixes and numbers appropriate to the student's major or minor; HON 493-5 would be used only in unusual circumstances.)

HON 150 Epic Tradition in Literature (3 credits)

This course explores the way in which literature seeks to define values in the real world. Beginning with a brief introduction to the world of epic for the Greeks and the Romans, we will trace themes and conflicts emerging from ancient epic and informing subsequent epics of the English Renaissance. Students will be exposed to the ongoing search for God in the fractured religious contexts of sixteenth- and seventeenth-century England.

Attributes: First-Year Seminar, Honors Course, Undergraduate

HON 201 Shakespeare in Short (1 credit)

This Honors course involves three Shakespeare plays and a mandatory trip to see one of them, *The Tempest*, performed at Quintessence Theatre in March. The course will involve videos, quizzes, discussions and questions on Canvas, as well as one essay and/or exam, due during finals week.

Attributes: Honors Course, Undergraduate

HON 221 Rebels&Revolutionaries:Art&Lit (3 credits)

In this course we will explore the works of 20th- and 21st-century visual artists and writers who have rebelled against the status quo and revolutionized the course of visual art and literature. We will delve into their texts and images through readings, discussions, and field trips, and consider what they teach us about our own time and our role in it.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Honors Course, Irish Studies Course, Undergraduate

HON 222 Leadership: Ancient&Mod Views (3 credits)

The Greco-Roman world produced some of history's most celebrated leaders. Through its presidents and entrepreneurs, the U.S. has dominated the global political and economic scene since the early 20th century. The course examines ancient and modern examples of leadership to deepen students' understanding and prepare them for future positions. Topics include: What motivates people to become leaders? What are the qualities associated with a successful leader? What flaws and weaknesses characterize a bad leader? How do leaders inspire others to share their vision? To what extent is the ability to lead determined, or undermined, by one's gender, race, or socioeconomic status? How does one overcome such obstacles?

Attributes: GEP Art/Literature, Honors Course, Undergraduate

HON 270 Honors Special Topics (3 credits)

Topics will vary by instructor each semester in which the class is offered.

Attributes: Honors Course, Undergraduate

HON 300 Community Engaged Scholarship (3 credits)

In this course, students will work with a community-based organization to design and conduct research on an issue related to homelessness or affordable housing. Throughout the semester, students will learn about research methods, research ethics, and the particular urban context within which they will be working. More importantly, students will gain experience working alongside staff of a community-based organization to solve problems or assess needs and strengths. This is a service-learning course.

Attributes: Diversity Course, GEP Social Science, Honors Course, Undergraduate

HON 301 Modern Mosaic I (3 credits)

An interdisciplinary study in Western European civilization from 1832 to 1939, analyzing developments in history, philosophy, science, music, the arts and literature.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 302 Modern Mosaic II (3 credits)

An interdisciplinary study in Western European civilization from 1832 to 1939, analyzing developments in history, philosophy, science, music, the arts and literature.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 303 Reason Revolution Reaction I (3 credits)

An interdisciplinary study in Western European civilization from 1500 to 1832 analyzing developments in history, philosophy, science, music, the arts, and literature.

Prerequisites: ENG 101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: English Area 4- British/Irish, GER Art/Literature, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 304 Reason Revolution Reaction II (3 credits)

An interdisciplinary study in Western European civilization from 1500 to 1832 analyzing developments in history, philosophy, science, music, the arts, and literature.

Prerequisites: ENG 101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: English Area 4- British/Irish, GER Art/Literature, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 305 America: Myth/Images/Real I (3 credits)

An interdisciplinary study of American culture from the early settlement years to the present, juxtaposing novels, films, historical documents, paintings, poems, legislation, and photographs.

Attributes: GEP Art/Literature, Honors Course, Undergraduate

HON 306 America: Myth/Images/Real II (3 credits)

A continued interdisciplinary study of American culture from the early settlement years to the present, juxtaposing novels, films, historical documents, paintings, poems, legislation, and photographs.

Attributes: GEP Art/Literature, Honors Course, Undergraduate

HON 309 Pens/Guns: Litr Road Am Civ War (3 credits)

An interdisciplinary study of the links between literature and politics leading up to and occurring during the American Civil War, with emphasis on the ways American writers used fiction, poetry, and other literary forms to react to and to comment publicly upon slavery and the sectional crisis that threatened the nation from the 1840s to the 1860s. Satisfies upper-level requirement for history majors, the American literature requirement for English majors, and the elective requirement for American Studies minors.

Prerequisites: PHL 154 and ENG 101

Attributes: Ethics Intensive, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 310 Womens Writing as Emancipation (3 credits)

This course explores how British and American women of the late seventeenth to early twentieth centuries used writing as a means of emancipation. Drawing on a wide variety of women's texts- narrative fictions, poetry, political polemics, conduct books, letters, autobiographies, social theories, sermons, etc.-we will examine both the historical circumstances in which women found themselves and the literary production that resulted.

Prerequisites: ENG 101

Attributes: American Studies Course, Diversity Course, English Area 4- British/Irish, English Area 5 - American Lit, English Early Lit, English Diversity, Gender Studies Course, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 311 Paradoxes, Prob & Proofs (3 credits)

Can a sentence be both true and false at the same time? Can a theorem be true if it has no proof? Can there be different sizes of infinity? Can a single solid ball be decomposed and reassembled to create two balls each with the same volume as the original? These questions all lie at the juncture of philosophy and the foundations of mathematics. This course examines the questions that have emerged in the 20th century about the nature of mathematical truth and the status of our mathematical knowledge. This is an interdisciplinary course that considers questions from both mathematical and philosophical perspectives.

Prerequisites: PHL 154

Attributes: Honors Course, Math Beauty, Undergraduate

HON 315 An Understanding of Suffering (3 credits)

The template through which this class will be offered is the Bio-Pscho-Social-Spiritual model. In so many words such a model is designed to help one arrive at an "Ecology of the Spirit" whereby one is led to respond to the question, What are the conditions through which a person is more open to be alert to the movements and workings of God's Spirit (whatever one's belief)? In effect, this "Ecology of the Spirit" may serve as a useful way of conceptualizing theologically suffering, trauma and evil, that is to say, a theodicy. This particular class is designed to accentuate the philosophical, psychological and theological meanings surrounding suffering and trauma. Using the faith and reason principle of *gratia perfecta natura* (grace perfects nature), I will suggest how God comes to a person in and through suffering, even in trauma. Various religious understandings of suffering and trauma will be offered with special emphasis given to the Catholic tradition. Through an appropriation of these understandings, the student will learn to become even more skilled in encountering suffering, one's own and that of others, and be a source and a resource for healing and hope. In this respect the student will become a competent and compassionate man/woman for others.

Prerequisites: PHL 154 and (THE 154 or THE 221) and ENG 101

Attributes: Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 316 Tragedy in Lit & Philosophy (3 credits)

This course, focused on classical, Shakespearean, and modern examples of tragedy, will seek to answer the following questions: Why do we enjoy seeing representations of tragic suffering? What does this tell us about human nature and our societies? Would a life without tragedy be fully human? What is the relationship between tragedy and trauma?

Attributes: English Area 3 - Shakespeare, English Area 4- British/Irish, English Early Lit, GEP Art/Literature, Honors Course, Philosoph Anthropol

HON 318 Society, Democracy, Republic (3 credits)

This Honors team-taught course will focus on the intellectual heritage of thinking and writing about collective human life, with particular reference to governance, decision-making, mores, social codes and conventional relationships of power (including both explicit power-sharing arrangements and customary divergences in status, authority, autonomy or control for various classes of persons). Despite an avowed focus on governance and the exercise of power, the course is devoted neither to the history of governments nor to political analysis. It will, instead, deal with principles, ethical frameworks and broadly humanistic values that we will illuminate through a large and varied sample of readings from the Ancient World and from the modern West. The intellectual content of the course will be rooted in social commentary and in literary and philosophical texts. Ethical considerations lie at its core.

Prerequisites: PHL 154

Attributes: Ethics Intensive, GEP Art/Literature, Honors Course, Undergraduate

HON 320 The Elections (3 credits)

This course coincides with the Federal Election cycle, and provides an analysis of the presidential, congressional, and gubernatorial races. Students will develop a basis for understanding the election cycle, especially drawing upon the changes that have taken place in American politics since the 1980s and the history of electioneering in America, especially in the modern era. This will include discussion of partisan realignment, the growing importance of personality and interest group politics, and the role of issues in influencing electoral choice. Particular attention will be devoted to understanding the tactics and strategies of the two major parties as they position themselves and then engage in the campaign process.

Prerequisites: ENG 101

Attributes: GEP Social Science, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 324 Russia as a Global Power (3 credits)

This course will examine Russia's rise and role as a global power in the 20th and 21st centuries. After suffering a devastating defeat in World War I, Russia, as the Soviet Union, remade its economic, cultural, and military power to be central to the defeat of the Axis states and then challenged the U.S. throughout the Cold War. The breakup of the Soviet Union set Russia's position back again, but since 2007, Putin has been increasingly assertive around the world. Combining the disciplines of History and Political Science, students will study the ebb and flow of Russian power using the tools of both disciplines. By examining secondary and primary sources, as well as theories of empire, war, state formation, and authoritarianism, students will achieve a strong understanding of Soviet and Russian foreign policy and the conceptual tools for better understanding post-Soviet Russia in the global arena.

Attributes: Honors Course, International Relations Course

HON 328 Anthro & Philo of the Body HON (3 credits)

This multidisciplinary course examines critical questions raised by the human body and our lived experience. We ask how our natures as complex human persons with rational, biological, and spiritual elements are both formed in response to bodily experience and how, in turn, these elements impact our experience and sense of the possible. This leads us to inquire into the ethical norms and responsibilities that have been fashioned around the body, as they pertain both to oneself and others. Specific topics may include: cultural relativism; the sources of normativity; the ethics of suffering and enduring; the ethics of pleasure; duties and possibilities of kindness; ordinary and transformative lived experiences; the corporeality of inequality and injustice.

Attributes: GEP Social Science, Honors Course, Philosoph Anthropol, Undergraduate

HON 370 Honors Special Topics (3 credits)

Topics will vary by instructor each semester in which the class is offered.

Attributes: Honors Course, Undergraduate

HON 384 Jew/Chr. Theologies Compared (3 credits)

The course studies fundamental religious questions as understood from various Jewish and Christian perspectives. Christian and Jewish students will gain an understanding of the other religious community while also deepening their understanding of their own. Other students will encounter the two traditions through a comparative lens. Topics to be discussed include the experience of God; the Bible; how Christians and Jews understand their relationship to God and the world; worship and prayer; and the destiny of the created universe.

Attributes: Honors Course, Religious Difference Course, Undergraduate

HON 388 Jews&Chr. Bible Interpretation (3 credits)

Although Jews and Christians share many of the same scriptural books, their respective collections are differently organized and named. Christians refer to their collection as the "Old Testament," while Jews call their texts the "Tanakh" (an acronym for the Hebrew words for Teaching, Prophets, and Writings). Despite, or because of this commonality, Christians and Jews have often battled over these scriptures' meanings. This course explores the ways that Jews and Christians have interpreted key texts, separately and together, over two millennia of learning from and disputing with each other. It also examines why the Bible has been a source of conflict between the two groups, with a focus on certain key passages, and why that is currently changing - as evidenced in recent official Catholic instructions.

Attributes: Honors Course, Religious Difference Course, Undergraduate

HON 390 Descending Tower: Commty Rsrch (3 credits)

Engaged scholarship can take several forms. Broadly defined, it means connecting the rich resources of the university to our most pressing social, civic, and ethical problems. One key way of sharing these resources is through research—not "on" the community, but "with" the community. This type of research model is one in which projects are developed collaboratively by community organization staff, faculty, and students, building on the unique strengths of those involved. In this course, students will work with a community-based organizations to design and conduct research. Throughout the semester, students will learn about research methods and ethics, and the particular urban context in which they will be working. More importantly, students will gain experience working alongside staff of a community-based organization to solve problems or assess needs and strengths.

Attributes: Honors Course, Undergraduate

HON 493 Independent Research I (6 credits)

Independent research, either for an Honors Independent Study, a College Honors Thesis, or a Research Concept Form

Attributes: Honors Course, Undergraduate

HON 494 Independent Research II (6 credits)

Independent research, either for an Honors Independent Study, a College Honors Thesis, or a Research Concept Form

Attributes: Honors Course, Undergraduate

HON 495 Capstone (6 credits)

Honors capstone research

Attributes: Honors Course, Undergraduate

Interdisciplinary Studies B.L.S.

Program Overview

The Bachelor of Liberal Studies Degree in Interdisciplinary Studies grants the flexibility, industry-focus and knowledge required to be competitive in today's dynamic job market. Concentrations offered in humanities and social sciences. The scope of these concentrations provides each student the opportunity to gain marketable skills and applicable concepts specific to their interests.

Please note: Prior to Fall 2021, this program was known as the Bachelor of Liberal Studies Degree in General Studies.

Programs

Interdisciplinary Studies Concentrations

- Interdisciplinary Studies - Humanities Concentration (p. 214)
- Interdisciplinary Studies - Social Science Concentration (p. 215)

Interdisciplinary Studies (Humanities Concentration)

The humanities are the backbone of civilization; the history of where we came from, the art that inspires us, the language that allows us to communicate and the philosophies that guide our actions. They are what transform a group of human beings into a civilized community. The humanities concentration further examines these facets of society and how they affect one another.

All students are presented with foundational coursework in the liberal arts through the General Education Program including math, English, history, science and a broad range of other related subjects. Through the Concentration, students pursue personal or professional interests in the humanities through introductory and upper division courses in Art/ Art History, Communication Studies, Modern and Classical Languages, English/Literature, Music, Theatre & Film, Philosophy, Religious Studies, and Theology.

Learning Goals and Outcomes

Goal 1. Students will develop content knowledge of the disciplines of the humanities.

Outcome 1.1: Students will demonstrate knowledge of key theories, concepts, and/or issues within the study of History, Languages, Literature, Philosophy, Religious Studies, Theology, and/or the Arts.

Goal 2. Students will develop an understanding of the methods of inquiry and critical thinking that typify the study of the humanities.

Outcome 2.1: Students will closely read, accurately analyze, and evaluate primary texts and/or works of art.

Outcome 2.2: Students will discuss how the texts/art works studied contribute to larger historical conversations, debates, and cultural traditions.

Outcome 2.3: Students will analyze texts or works of art as resources for understanding and appreciating the complexities of human identity, dignity, and experience.

Requirements

General Education Program Courses

The **General Education Program** (GEP) at Saint Joseph's University involves a distinctive liberal arts education in the Jesuit, Catholic tradition. General education is essential to the University's mission, providing all students with the broad knowledge, essential skills, appreciation of diversity, and ethically informed perspective needed by those who would aspire to be "men and women for others." The GEP ensures mastery of skills required for further study, exposes students to the principal achievements and problems of the major fields of human learning, and introduces them to new disciplines that they may or may not wish to pursue. The **Major Concentration** component gives depth in a particular field and is thus a preparation for an effective career or for graduate study in that field. **Free** or **general electives** allow students to pursue interests, explore new fields, or to continue concentration in their major.

The Adult Learner General Education Program (GEP) applies to students who are completing a bachelor's degree offered through the SJU Adult Learner Program. These degrees include the Bachelor of Liberal Studies (BLS) and Bachelor of Business Administration degrees (BBA).

The Adult Learner GEP is comprised of Signature Core, Variable Core, Integrative Learning courses and a Diversity Overlay.

Signature Core

Code	Title	Hours
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition (or THE 153 Encountering the New Testament, or THE 155 Catholic Social Tradition)	3
ENG 102	Texts & Contexts	3
HIS 154	Forging the Modern World	3
Any course certified as Faith & Reason		3
Any course in written and oral communication		

Variable Core

- One approved course in Art, Literature, or Music, Theater, Film.
- One course in the Natural Sciences (lab-based or lecture based) in biology, chemistry, environmental science, or physics.
- Two courses in Mathematics. BLS degree majors require MAT 101 or higher; BBA degree majors require MAT 103 (or MAT 120 precalculus) and MAT 123 (or an alternate calculus course).
- One course in a Non-Native Language (e.g., SPA 111-SPA 112) or one approved alternative course in Literature in Translation or Classics. Students who are bilingual may request an exemption for the language requirement from the Department of Modern & Classical Languages.

- One course in the Social-Behavioral Sciences including Political Science, Economics, Sociology, and Psychology. Please note that some majors require a specific course.
- One course that is certified as a Philosophical Anthropology course.
- One course from Religious Studies or Theology that is certified as a Religious Difference course.
- ENG 101 Craft of Language.

Integrative Learning Courses

(2 courses required)

- Courses approved for ILC requirements will vary by major. Some majors have specific courses that must be taken.

Overlay

- Adult Learner Program students are required to complete one course that is certified as a diversity overlay.

Free Electives

Except for Early Childhood/Elementary Pre K-4 Education majors, all students must complete a minimum of 18 free elective credits. Elective credits may be used to pursue a minor or secondary major.

Humanities Courses

Code	Title	Hours
Select two introductory level Humanities courses		6
Complete six upper division courses in the humanities from three disciplines including:		
	Art and Art History	
	Communication Studies	
	English	
	Linguistics	
	Modern & Classical Languages	
	Music	
	Theater and Film	
	Philosophy	
	Theology & Religious Studies	

Interdisciplinary Studies (Social Science Concentration)

The social sciences concentration within the Interdisciplinary Studies major covers a variety of fundamental concepts, from analysis of arguments to the examination of the inner workings of the mind.

The concentration is tailored to the student's specific interests, using six major courses in sociology/criminal justice, economics, history, political science and psychology. This program at Saint Joseph's University is best suited for those who seek to gain a broader knowledge of all aspects of society including human behavior, relationships among different groups of people and past events and achievements.

Learning Goals and Outcomes

Goal 1. Students will develop content knowledge of the social sciences.

Outcome 1.1: Students will demonstrate knowledge of the key theories, concepts, and issues within the social sciences.

Goal 2. Students will develop effective written, oral, and technological communication skills.

Outcome 2.1: Students will demonstrate effective written communication that is consistent with the format and standards of social science disciplines.

Outcome 2.2: Students will demonstrate effective and professional oral communication skills.

Outcome 2.3: Students will demonstrate effective communication using appropriate technology.

Goal 3. Students will develop an understanding of the methods of inquiry and critical thinking that typify the social sciences.

Outcome 3.1: Students will demonstrate the ability to locate appropriate sources by searching electronic and print databases.

Outcome 3.2: Students will demonstrate the ability to analyze empirical data and draw reasonable conclusions from them.

Goal 4. Students will develop an understanding of how social science disciplines apply the Ignatian principles of social justice, ethics, and service to others within our diverse society.

Outcome 4.1: Students will demonstrate an understanding of ethical and socially responsible behaviors as they relate to social science disciplines.

Outcome 4.2: Students will demonstrate an understanding of diverse human beliefs, abilities, experiences, identities, or cultures.

Requirements

General Education Program Courses

The **General Education Program (GEP)** at Saint Joseph's University involves a distinctive liberal arts education in the Jesuit, Catholic tradition. General education is essential to the University's mission, providing all students with the broad knowledge, essential skills, appreciation of diversity, and ethically informed perspective needed by those who would aspire to be "men and women for others." The GEP ensures mastery of skills required for further study, exposes students to the principal achievements and problems of the major fields of human learning, and introduces them to new disciplines that they may or may not wish to pursue. The **Major Concentration** component gives depth in a particular field and is thus a preparation for an effective career or for graduate study in that field. **Free or general electives** allow students to pursue interests, explore new fields, or to continue concentration in their major.

The Adult Learner General Education Program (GEP) applies to students who are completing a bachelor's degree offered through the SJU Adult Learner Program. These degrees include the Bachelor of Liberal Studies (BLS) and Bachelor of Business Administration degrees (BBA).

The Adult Learner GEP is comprised of Signature Core, Variable Core, Integrative Learning courses and a Diversity Overlay.

Signature Core

Code	Title	Hours
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition (or THE 153 Encountering the New Testament, or THE 155 Catholic Social Tradition)	3
ENG 102	Texts & Contexts	3
HIS 154	Forging the Modern World	3
Any course certified as Faith & Reason		3
Any course in written and oral communication		

Variable Core

- One approved course in Art, Literature, or Music, Theater, Film.
- One course in the Natural Sciences (lab-based or lecture based) in biology, chemistry, environmental science, or physics.
- Two courses in Mathematics. BLS degree majors require MAT 101 or higher; BBA degree majors require MAT 103 (or MAT 120 precalculus) and MAT 123 (or an alternate calculus course).
- One course in a Non-Native Language (e.g., SPA 111-SPA 112) or one approved alternative course in Literature in Translation or Classics. Students who are bilingual may request an exemption for the language requirement from the Department of Modern & Classical Languages.
- One course in the Social-Behavioral Sciences including Political Science, Economics, Sociology, and Psychology. Please note that some majors require a specific course.
- One course that is certified as a Philosophical Anthropology course.
- One course from Religious Studies or Theology that is certified as a Religious Difference course.
- ENG 101 Craft of Language.

Integrative Learning Courses

(2 courses required)

- Courses approved for ILC requirements will vary by major. Some majors have specific courses that must be taken.

Overlay

- Adult Learner Program students are required to complete one course that is certified as a diversity overlay.

Free Electives

Except for Early Childhood/Elementary Pre K-4 Education majors, all students must complete a minimum of 18 free elective credits. Elective credits may be used to pursue a minor or secondary major.

GEP Integrative Learning Component

Programs

Undergraduate Major

- International Relations (p. 216)

Undergraduate Minor

- International Relations (p. 219)

International Relations Major

International Relations is a degree program that offers the student a truly cross-disciplinary course of study. The major concentration emphasizes modern history, economics, and political science. The IR faculty encourages its majors to enhance the cross-disciplinary nature of their studies by completing a minor concentration in modern language, economics, history, political science, business, or one of the interdisciplinary and area studies programs that the University offers (Asian Studies, Latin American Studies, Gender Studies, American Studies); by studying abroad; and/or by participating in the Washington and Philadelphia Internship Programs.

Students majoring in International Relations acquire valuable skills in communication and analysis, independent judgment, appreciation of different societies and cultures, and knowledge of world affairs and trends, all of which are critical in the increasingly global environment of today and tomorrow.

International Relations is a major rooted in the Jesuit tradition of liberal arts, especially suited to those whose orientation may be toward graduate or legal studies, government service, international business, communications, and education.

Learning Goals and Outcomes

Goal 1: Students will gain a general knowledge of the field of International Relations, with exposure to the three core fields of the program, global politics, international economics, and modern history.

Outcome 1.1: Students will identify and demonstrate knowledge of contemporary scholarship in the areas they have studied.

Outcome 1.2: Students will identify and demonstrate knowledge of major historical and contemporary events in world affairs.

Goal 2: Students will be able to read and critically assess academic literature, orally articulate ideas, conduct research, and analyze data, appropriate to the undergraduate level.

Outcome 2.1: Students will apply relevant theoretical concepts to assess real world issues.

Outcome 2.2: Students will communicate an argument verbally to real world issues by analyzing or synthesizing relevant theories and concepts and/or analyzing and evaluating appropriate evidence.

Outcome 2.3: Students will ask their own research question and conduct well-organized, empirically-oriented, written analysis of it by identifying, analyzing and synthesizing relevant theories and concepts, and collecting, analyzing and evaluating appropriate evidence.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

International Relations majors must take three classes to satisfy the Integrated Learning Component of the GEP that stem from three groups or "types" of course, and students must take one class within each group.

Students may petition the IR Program Director for approval to take two courses within one category, and a third course within another category. The three groups are:

1. Social Justice
2. Foreign Languages and Literature (Modern and Classical Languages)
3. Global Literacy

The Social Justice category includes:

Any class designated as Faith-Justice or additional GEP Overlay "Diversity" (beyond the GEP DGNW requirement). Students may petition the IR committee for non-Faith-Justice courses to count toward this requirement.

The Foreign Languages and Literature category includes:

All classes in Modern and Classical Languages numbered 202 or higher. Must be in addition to the courses used to fulfill the GEP Non-Native Language Requirement. Or, study of a *different* (new) language *beyond* the GEP Non-Native Language Requirement may count towards this requirement. See the IR Director for more information.

The Global Literacy category includes:

Global Literacy is broadly defined as a course that would enhance students' ability to analyze pressing issues and phenomena in the contemporary global world. Students may petition the IR committee for non-Global Literacy courses to count toward this requirement. Courses include:

- GIS (Global Information Systems) courses: (INT 170)
- QAS (Quantitative Analytical Skills) courses: Any math (MAT) course (beyond the GEP Math "Beauty" requirement); Any computer science (CSC) course; Econometrics (ECN 410, requires ECN 101, ECN 102, MAT 118 or equivalent); Logic (PHL 220) or Symbolic Logic (PHL 240)
- Global Topics and Issues courses: ENG 202, ENG 226, ENG 261, ENG 309, ENG 311, ENG 312, ENG 315, ENG 317, ENG 325, ENG 407, ENG 409, ENG 415, ENG 468, REL 356, REL 358, REL 359, REL 360, SOC 316, SOC 340, SOC 349

Major Requirements

Code	Title	Hours
Foundational Courses (3 Courses):		
ECN 101	Introductory Economics Micro	3

POL 491	Philadelphia-Area Internship
Total Hours	44

- 1
- The Department strongly recommends that all students take the appropriate introductory and upper division courses prior to enrolling in a Capstone.
- 2
- IR majors who double-major in POL may not count more than 3 Upper Division courses towards either degree requirement.
- 3
- IR majors may only count 2 study abroad courses towards their degree requirements.
- 4
- P/NP requirement for all classes 2024 and beyond
- 5
- P/NP requirement for all classes 2026 and beyond.

Internships

The Washington Internship is described under Special Programs and allows students to work in Washington for a whole semester and earn course credits (POL 411/POL 412 Washington Internship). The Global Smarts Internship is described under the Political Science Program (as POL 490). The Philadelphia-Area Internship Program is described under the Political Science Program (as POL 491) and History Program (as HIS 491). IR students can take both HIS 491 and POL 491. However, only one of the two courses will be counted towards the IR course requirements.

University Honors Requirements

To receive University Honors credit, an Honors Program student who is a International Relations major must have a 3.5 GPA; complete the Honors curriculum of 8 specified courses; and must undertake two consecutive semesters of research/study in the form of a senior thesis with a faculty mentor, OR engage in honors-level work in two IR courses/capstone during their senior year. These two courses may be counted toward the student's total upper division IR courses/capstone, and one semester of the thesis can replace the Capstone Course requirement. Specific requirements for the Honors thesis may be found under the Honors Program.

1

Nine Upper Division IR electives - must complete courses in each of the constituent departments: minimum 1 course in Economics, 2 courses in Political Science, and 2 courses in History.

Below are following notes/restrictions for this requirement:

- For classes of 2023 and beyond, IR majors may only count 2 study abroad courses towards their major requirements.
- IR majors who double-major in POL may not count more than 3 Upper Division POL courses towards either degree requirement.

2

International Relations Capstone Course (40X level course) (certified Writing Intensive).

- IR majors who double-major in Political Science must complete a second Senior Capstone Course to fulfill the Political Science major requirements.
- The Capstone Courses do not count towards the Upper Division Course requirements for either major.

International Relations Minor

Learning Goals and Outcomes

Goal 1: Students will gain a general knowledge of the field of International Relations, with exposure to the three core fields of the program, global politics, international economics, and modern history.

Outcome 1.1: Students will identify and demonstrate knowledge of contemporary scholarship in the areas they have studied.

Outcome 1.2: Students will identify and demonstrate knowledge of major historical and contemporary events in world affairs.

Goal 2: Students will be able to read and critically assess academic literature, orally articulate ideas, conduct research, and analyze data, appropriate to the undergraduate level.

Outcome 2.1: Students will apply relevant theoretical concepts to assess real world issues.

Outcome 2.2: Students will communicate an argument verbally or in writing in response to real world issues by analyzing or synthesizing relevant theories and concepts and/or analyzing and evaluating appropriate evidence.

Outcome 2.3: Students will ask their own research question and conduct well-organized, empirically-oriented, written analysis of it by identifying, analyzing and synthesizing relevant theories and concepts, and collecting, analyzing and evaluating appropriate evidence.

Requirements

Plus 4 upper division IR courses. ¹		12
Total Hours		18

¹
In completing these 4 upper division courses, students must take at least one approved in each of the contributing departments: 1 ECN, 1 HIS, and 1 POL class.

Irish Studies Minor

With its interdisciplinary focus on Irish literature, culture and politics as well as the problematics of immigration, migration and diaspora, Saint Joseph’s University’s Irish Studies program is an exceptional platform from which to investigate issues of diversity, globalization and social justice.

After registering with the program coordinator, students earn the Irish Studies minor by completing any six approved courses. Irish and Ireland-related courses taken while studying abroad may also count towards the minor, upon approval by the program coordinator.

Learning Goals Outcomes

- Goal 1:** Understand Ireland’s complex present and past through multiple disciplinary perspectives.
- Goal 2:** Demonstrate understanding of Irish culture and its contexts.
- Goal 3:** Employ primary and secondary sources (including digital resources) appropriate for the study of Ireland.

Requirements

Justice and Ethics in the Law Minor

The Justice and Ethics in the Law (JEL) minor emphasizes the ethical, business, social, and political structures that underlie the law. This interdisciplinary minor examines how justice is defined in legal regimes as well as the ethical issues raised by the enforcement of law, legal procedure, conflicting rights, and the making (and maintaining) of constitutions. All students will have the opportunity for an internship. JEL emphasizes skills that may be applied to academic and professional life: analytic and problem solving skills; critical reading ability of complex texts; writing skills including preparing and revising papers; oral communication and listening abilities; and research and time-management skills. Given the number of writing intensive, diversity, globalization, social science, and ethics intensive classes listed in the minor, students may satisfy much of the General Education Program through the minor.

Internships must be related to justice, ethics, or law, please see JEL Director for permission to approve course.

Faculty Director

- Dr. Christopher Close, HIS

Advisory Board

- Dr. Jeffrey Bone, MGT
- Dr. Laura Bucci, POL
- Dr. Michael Kates, PHL
- Dr. Chunrye Kim, SOC
- Dr. James O’Sullivan, THE
- Dr. Paul Patterson, ENG

Learning Goals and Outcomes

- Goal 1:** Students will develop logical reasoning skills.
- Objective 1.1:** Demonstrate ability to analyze legal cases.
- Goal 2:** Students will demonstrate an understanding of the interrelationship between law, ethics and justice in a multi-disciplinary context.
- Objective 2.1:** Demonstrate basic knowledge of similarities and differences in the concept of justice in moral, historical, or legal contexts.
- Objective 2.2:** Identify and explain fundamental questions of ethics.

Objective 2.3: Describe how justice is defined in legal (as opposed to ethical) contexts.

Goal 3: Students will demonstrate an understanding of the relationship between law and social justice in a multi-disciplinary context.

Objective 3.1: Define conceptions of social justice.

Objective 3.2: Compare and contrast conceptions of social justice in moral, historical, or legal contexts.

Requirements

Total of six courses:

- Two core courses in Legal Reasoning (one from the College of Arts and Sciences and one from the Haub School of Business)
- Two Ethics-Intensive courses (see approved list)
- Two Electives (see approved list)

Note: No more than three courses may be taken in the same department and no class may count twice as part of the minor.

Legal Reasoning Courses

Minors must take two Legal Reasoning courses (MGT 360, MGT 361, or MGT 362 and one course from the College of Arts and Sciences) that expose students to logical reasoning, reading cases, writing briefs, and/or research. Students may take additional Legal Reasoning courses and count them as electives.

SOC 267	Introduction to Corrections	3
SOC 302	Criminal Law	3
SOC 310	Policing in Black and Blue	3
SOC 377	Inside-Out	3

1

These courses only count towards the minor when they cover certain topics. Students should consult with the instructor and the Justice and Ethics in the Law Director to confirm.

2

Students must have any internship certified by the Justice and Ethics in the Law Director in order to count for credit towards the minor. Sociology has internships offered through independent study that may accommodate law, justice, and ethics work.

Latin American and Latinx Studies Minor

The Latin American and Latinx Studies (LALS) Program provides a multidisciplinary education on key issues and dynamics in Latin America and Latinx communities in the United States and prepares students for work and future study in an array of fields, including business, government and diplomacy, education, health care, journalism and communications, private and public development organizations and non-profits. It also offers an array of relevant programming on campus and promotes experiential learning in and related to the region.

The Minor in Latin American and Latinx Studies (LALS) equips students with multiple frameworks for understanding and analyzing significant realities in Latin America and Latinx communities. Students explore perspectives and approaches from within the region and among peoples of Latin American origins in the U.S., including those expressed in the primary languages of Latin America. By selecting courses most relevant to their primary areas of study, students prepare themselves for professional opportunities in or related to Latin America and Latinx communities.

Faculty Director

- Dr. Heather Hennes (Modern and Classical Languages)

Latin American and Latinx Studies Advisory Board

- Fr. Peter Clark (Theology and Religious Studies)
- Dr. Richard Gioioso (Political Science)
- Dr. Claudia Pérez-Lotero (Modern and Classical Languages)
- Dr. Michelle Ramírez (Sociology)
- Dr. Elaine Shenk (Modern and Classical Languages)
- Dr. Richard Warren (History)

Learning Goals and Outcomes

Goal 1: be knowledgeable about the history, cultures, economic, business, political and/or social trends of Latin America and/or Latinx communities in the United States.

Objective 1.1: describe accurately and with substantive detail some aspect of the history, cultures, economic, business, political and/or social trends of Latin America and/or Latinx communities.

Goal 2: develop modes of analysis and ways of critical thinking about Latin America and/or Latinx communities through multiple lenses (e.g., artistic, business, economic, historical, literary, political, sociological).

Objective 2.1: apply appropriate, discipline-specific theoretical and/or analytical frameworks to interpret ideas and beliefs, events, practices, texts (broadly conceived), and/or material culture from Latin America and/or among Latinx communities.

Requirements

Students complete the Minor in Latin American and Latinx Studies (LALS) with six courses. To ensure the interdisciplinary focus of the minor, courses from at least three participating departments must be represented among the six courses. Students may petition the LALS Program Director to receive credit for courses not listed below, such as courses taken abroad. Students participating in a study abroad or a study tour to Latin America are encouraged to ask the LALS Program Director about financial support for travel.

Please note: Students may count a maximum of two of the following courses towards the Minor in Latin American and Latinx Studies: SPA 201 SPA 202, SPA 301, SPA 302, SPA 303. Students studying another language of the region (French, Portuguese) can request that comparable courses count toward the LALS minor.

Course Offerings

Code	Title	Hours
ARH 106	Latin American Art & Architect	3
ECN 370	Economic Development	3
ECN 482	Latin American Economies	3
HIS 203	Historical Intro to Latin Am	3
HIS 204	Latin American-U.S. Migration	3
HIS 301	Latin America and the U.S.	3
HIS 303	History of Modern Mexico	3

HIS 474	Seminar in Latin Am His	3
HIS 480	Readings in Latin Amer Hist	3
HIS 304	Social Protest in Latin Am His	3
POL 328	U.S. Immigration	3
SPA 415	Iconic Women of Latin America	3
SPA 428	Rainforest: A Literary Journey	3
SPA 201	Intermediate Spanish I ¹	3
POL 331	Latin American Politics	3
POL 337	Contemp Cuban Pol & Society	3
POL 352	Global Political Economy	3
REL 272	Religion/Global/Rights-Bolivia	3
SOC 316	Fair Trade Coffee: Study Tour	3
SPA 202	Intermediate Spanish II ¹	3
SPA 301	Spanish Conversation ¹	3
SPA 302	Spanish Composition ¹	3
SPA 303	Spanish for Heritage Speakers ¹	3
SPA 310	Intro to Latin American Lit ¹	3
SPA 320	Cur Evnts in the Sp-Lang Media	3
SPA 350	Intro to Latin Amer Cultures	3
SPA 353	Latin American Cinema	3
SPA 360	Spanish in the Community	3
SPA 401	Topics in Latin Am Cultures	3
SPA 420	Major Latin American Authors	3
SPA 422	Culture and Dictatorship	3
SPA 423	Latin Am Short Story	3
SPA 425	Imagery of the Conquest	3
SPA 426	Culture in Revolution	3
SPA 431	Commonplaces of Colonial Exp	3
SPA 466	Spanish Dialectology	3
SPA 467	Lang Contact & Pol in U.S.	3
THE 356	Liberation & Pol Theologies	3
THE/HSC 368	Just Hlth Care in Dev Nations	3

1

Students may count a maximum of two of the following courses towards the Minor in Latin American Studies: SPA 202, SPA 301, SPA 302, SPA 303

Provisional Courses

The following courses may count toward the Minor in Latin American and Latinx Studies, depending on course content in a given semester, including the student's final project. Students who would like to include these courses in their program of study should consult with the LALS Program Director in advance.

Code	Title	Hours
ECN 321	International Trade	3
FMK 402	Future Issues in Food Mktg	3
HIS 491	Philadelphia Area Internship	3
IBU 210	Intro Internat. Business	3
POL 403	Capstone: Nations&Nationalism	3
POL 491	Philadelphia-Area Internship	3
SPA 470	Topics in Spanish	3
MCC 150	First Year Seminar	3

Linguistics

The SJU Linguistics Program is designed to heighten students' awareness of the complex nature of language and communication and their important, but often overlooked role, in daily life. Linguistics courses aim to increase students' knowledge and understanding of human communication and to understand the nature of language in general, bringing students to a point where they can apply this knowledge in particular fields such as criminal justice, education, forensics, languages, law, psychology, sociology, speech therapy, or translation. Linguistics students will be prepared to become language professionals, pursue graduate studies in linguistics, speech-language pathology or TESOL, or to practice the skills of a linguist in a variety of professional fields.

Linguistics is the study of how languages work, where they come from, how they are used in society, how they change over time and how they are learned. Linguists serve as translators, interpreters, speech therapists, professors, researchers, and language teachers, to name a few professional roles. They also investigate issues including language acquisition, literacy, bilingualism, speech pathology, and language planning or policy. Linguists sometimes speak or have knowledge of more than one language though depending on their specialization, some speak only their native language.

The role of language in human life is much larger than simple communication. Rather, language is used to describe our world, to interact with people from our own or other cultures, to strengthen and weaken relationships, and more. The linguistics major at Saint Joseph's University welcomes students who are interested in studying how all aspects of language work physiologically, cognitively, pragmatically, and socially.

Classes cover four of the main areas of linguistics: pragmatics, applied linguistics, sociolinguistics and phonetics. Course topics range from language learning, discourse analysis and language contact to language teaching methods and forensic linguistics. Several linguistics classes are cross-listed in other departments, such as sociology and philosophy, allowing students to integrate the study of linguistics with other fields of interest.

Majors have the option of choosing a general linguistics concentration, learning how languages work, where they originate, how they are used in society, how they change over time and how they are learned. The linguistics program also offers a major concentrations in Teaching English as a Second Language (TESOL) for students interested in teaching English at home or abroad. Students interested in pursuing a graduate degree in speech therapy/pathology or audiology should major in communication sciences & disorders, also housed in the Linguistics Program.

Contact the Linguistics Program Director, Dr. Jennifer Ewald for more information and visit the Linguistics Program website at <https://sites.sju.edu/mcl/linguistics> (<https://sites.sju.edu/mcl/linguistics/>).

Programs

Undergraduate Majors

- Communication Sciences & Disorders (p. 227)
- Linguistics (p. 228)

Undergraduate Minors

- Linguistics (p. 231)
- Teaching English to Speakers of Other Languages (p. 231)

Linguistics in the GEP

These GEP requirements are fulfilled by the following courses:

Code	Title	Hours
Ethics-Intensive Overlay		
LIN 260	Language and the Law	3
Social Sciences		
LIN 200	Introduction to Linguistics	3
LIN 317	Sociolinguistics	3
LIN 340	Communication in Soc Contexts	3
Diversity Overlay		
LIN 317	Sociolinguistics	3
LIN 401	Bilingualism & Lang Diversity	3
First Year Seminar		
LIN 150	First Year Seminar	3
Writing Intensive Overlay		
LIN 420	SLP/AuD Research Methods	3

Courses

LIN 150 First Year Seminar (3 credits)

Topics vary: Linguistics and Communication; Language, Communication and Culture; Language and Interaction

Attributes: First-Year Seminar, Undergraduate

LIN 170 Topics in Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics. Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LIN 200 Introduction to Linguistics (3 credits)

This course is an introduction to the study of language and areas of linguistics. It focuses on how language works, where it comes from, how it is used in society, how it changes over time and how it is learned. We will also explore commonly-held beliefs about the nature of language and language use in real-life contexts.

Attributes: American Studies Course, Communication Studies ILC Crs, GEP Social Science, Undergraduate

LIN 203 English Grammar (3 credits)

To prepare current and future English language teachers, this course focuses on various aspects of English grammar, especially those are particularly challenging for ESL/EFL learners. It provides useful background knowledge for English language teachers and preparation that strengthens applications for teaching positions, fellowships, and scholarships. This course is beneficial to Linguistics and TESOL majors/minors who plan to teach English in any context and at any level as well as to students in ENG, COM, EDU, and other academic areas where a solid grasp on the linguistic structure of English would be useful. This course counts toward an English elective.

LIN 210 Speech Science (3 credits)

In this course, we will investigate the physiological, acoustical, and perceptual bases of speech and basic audiological science. We will discuss these topics from both theoretical and practical perspectives. As students interested in the field of communication sciences and disorders, you will gain a solid background in speech perception and production as well as understand how speakers process certain sounds in their audiological system. This will require a comprehension of the anatomical and physiological processes we use in our speech and hearing mechanisms. We will also discuss the fields of Speech-Language Pathology (SLP) and Audiology and explore how scientific content applies to the diagnosis and treatment of people with communication disorders. This course is open to all students, assumes no prior knowledge of SLP.

LIN 211 Speech Development & Disorders (3 credits)

This course investigates speech sound development and speech sound disorders (SSDs) by addressing the biological bases of speech sound production, acoustic aspects of speech sound production, the development and progression of speech sound production, linguistic factors that influence communication, and cultural factors that influence speech sound production. Students will gain a solid background in speech development, production, and the different types of SSDs. We will implement applied transcription using IPA symbols, gain an understanding of the anatomy and physiology related to speech sound production, and demonstrate how to treat specific speech disorders. We will also explore how scientific content applies to the diagnosis and treatment of people with SSDs. This course is open to all students, assumes no prior knowledge, and has no prerequisites.

LIN 220 Logic (3 credits)

A study of the logic of ordinary language; the function of language, forms of argument, fallacies, definition; analysis of propositions and deductive reasoning, analogy and scientific hypothesis testing. See PHL 220.

Attributes: Justice Ethics and the Law, Undergraduate

LIN 240 Symbolic Logic (3 credits)

The study of a method for translating arguments from ordinary language into a symbolic notation which reveals logical structure, procedures for establishing the validity or invalidity of deductive arguments so symbolized, and properties of formal deductive systems-independence of axioms, expressive and deductive completeness, and consistency. See PHL 240.

Attributes: Undergraduate

LIN 250 Social Media Discourse (3 credits)

The focus of this course is on understanding and investigating linguistic aspects of electronic social media such as email, texting, Twitter, Facebook, etc. This course has two goals: (1) to analyze everyday social media discourse from a linguistic perspective and (2) to learn how to conduct linguistic research in the context of a student-designed investigation on some type of social media discourse. To that end, we will examine previous research in related areas and students will conduct an original research project based on a selected context of social media discourse. This course will be taught as a seminar in which students are expected to come to class prepared to discuss and/or lead the majority of discussions about course readings. This course is open to students from all academic majors.

Attributes: American Studies Course, Communication Stds Maj Choices, Undergraduate

LIN 260 Language and the Law (3 credits)

This course is an introduction to linguistic issues that influence interaction in a variety of legal contexts. It explores the role of language used in court cases and police investigations while paying special attention to particular discourse contexts such as courtroom talk, interpreter interactions and police interrogations/ interviews. Particular emphasis will be placed on recognizing and understanding ethical issues related to linguistic sources of disadvantage before the law for both educated and uneducated native speakers, minority speakers and non-native speakers of a given language. This course will help prepare students for careers in which a particular sensitivity to, and understanding of, the use of language is vital. By looking closely at areas studied by linguists, we will seek to uncover the role and the ethical nature of oral and written interactions that take place in the legal field. These linguistic issues affect the concept of justice as well as its application in the legal system and also influence how humans are perceived and, in turn, treated by those who apply the law (police officers, lawyers, judges, etc.). This course fulfills the GEP Ethics-Intensive overlay requirement; it also fulfills a requirement in the Sociology and Criminal Justice majors/minors. This course is open to students from all academic majors.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

LIN 270 Topics in Linguistics (3 credits)

This course is an introduction to the study of how language is represented in the human mind and what processes are involved in language use, including producing, comprehending, and storing both spoken and written language. Together, we will explore questions such as the following: How do humans store and recognize words? How do we analyze speech? What processes are involved when we speak and read? We will study spontaneously-occurring speech errors and misperceptions and carry out experimental investigations on language production and comprehension. This course is open to students from all academic majors.

Attributes: Undergraduate

LIN 280 Second Lang Acquis & Lrning (3 credits)

This course focuses on the study of existing approaches to describing second language acquisition and learning. Drawing on current research in the field of linguistics, we will explore various aspects of language (e.g., negation, questions, references to the past) as well as particular factors (e.g., age, motivation, personality, learner beliefs) that affect the acquisition and learning of specific languages. Paying particular attention to English language learning, we will devote significant course time to understanding L2 developmental sequences as they relate to theories of acquisition and learning based on social, psychological and educational frameworks. Students will also be challenged to consider the relationship between their understanding of and experiences with language acquisition and learning as well as the relationship between language learning theories and language teaching. This course will be beneficial to students who are majoring or minoring in Linguistics and/or TESOL or who plan to teach language (English, Spanish, Italian, French, German, etc.) at any level; it will also be of interest to students who are studying a second language and want to understand the adult language learning process more fully.

Attributes: Undergraduate

LIN 281 First Language Acquisition (3 credits)

Starting before they are even born, most children acquire language with tremendous ease in a very short period of time. It is a remarkable achievement, usually taken for granted unless something goes awry. This course focuses on the acquisition of a first language in infancy and childhood by highlighting issues in various areas of linguistic analysis: sounds, word and sentence meaning, word order and language use in various communicative contexts. We will also focus on different theories that try to account for the cognitive and linguistic processes that together result in first language acquisition as well as atypical language development from which much is learned about the process of first language acquisition. Of benefit and interest to all academic majors, this course is particularly relevant to students in the areas of linguistics, education, autism studies, psychology and health-related areas including speech therapy/speech language pathology.

Attributes: Undergraduate

LIN 301 Teaching Lang at Home/Abroad (3 credits)

Teaching Language at Home and Abroad is an introduction to language teaching and is designed for students interested in teaching a second or foreign language for professional, academic or personal reasons. It will help prepare students to tutor or teach English as a second language (ESL), English as a foreign language (EFL), or other languages such as French, German, Italian, or Spanish in a variety of educational settings at home and abroad. In addition to a career in language teaching, other future opportunities might include teaching positions in community service ESL classes, the Peace Corps, or through grants/fellowships including Fulbrights, among others. In this course, we will explore topics such as language acquisition, teaching methods, materials preparation and assessment. This course is open to students from all academic majors

Attributes: Undergraduate

LIN 310 Hearing Science (3 credits)

In this course, we will investigate the physiological, acoustical, and perceptual bases of audiological science. We will discuss these topics from both theoretical and practical perspectives. As students interested in the field of communication sciences and disorders, you will learn how speakers process certain sounds in their audiological system. This will require a comprehension of the anatomical and physiological processes we use in our hearing mechanism. We will also discuss the field of Audiology and explore how scientific content applies to the diagnosis and treatment of people with communication disorders. This course is open to all students, assumes no prior knowledge of SLP, and has no prerequisites.

Attributes: Undergraduate

LIN 317 Sociolinguistics (3 credits)

This course focuses on the use of language within its social context. In this course, we will gain an appreciation for the diversity that exists in human language and for the communicative values inherent in every language variety; scrutinize assumptions about linguistic identity and difference; examine issues of subordination and privilege in our own and others' lives as related to issues of language; explore the relevance of social categories (e.g., class, age, gender, ethnicity, other social groups) as related to language variation; explore how sociolinguistic research informs policy decisions in classrooms and government legislation; and become familiar with data-collection and research methodologies used to investigate specific topics within the field of sociolinguistics. This course counts for a Sociology major/minor. See SOC 317. This course is open to students from all academic majors.

Attributes: Communication Studies ILC Crs, Diversity Course, GEP Social Science, Undergraduate

LIN 318 Psycholinguistics (3 credits)

This course is an introduction to the study of how language is represented in the human mind and what processes are involved in language use, including producing, comprehending, and storing both spoken and written language. Together, we will explore questions such as the following: How do humans store and recognize words? How do we analyze speech? What processes are involved when we speak and read? We will study spontaneously-occurring speech errors and misperceptions and carry out experimental investigations on language production and comprehension. This course is open to students from all academic majors.

Attributes: Communication Studies ILC Crs, Undergraduate

LIN 320 Phonetics (3 credits)

This course explores the repertory of sounds found in human language. As a field of study, phonetics includes three areas: (a) articulatory phonetics (how humans create speech sounds); (b) acoustic phonetics (how sounds are transmitted through the air); and (c) perceptual phonetics (how humans perceive sounds based on changes in air pressure). In this class we will focus primarily on the first area, along with an introduction to the second. To this end we will examine the anatomy of the human vocal tract to understand how speech sounds are created. We will also study the International Phonetic Association (IPA) transcription alphabet, create broad and narrow transcriptions, and practice producing and classifying sounds of various world languages. Time will also be spent on prosodic characteristics of human speech, including pitch, stress, tempo, and loudness. Finally, we will discuss how the study of phonetics is applied within fields such as Speech-Language Pathology (SLP), Teaching English to Speakers of Other Languages (TESOL), or teaching languages (e.g., Mandarin, French, Japanese, etc.). This course is open to student from all academic majors. This course counts for a major elective course toward the Autism Behavior Studies major, the Autism Studies minor, and IHS Area Studies.

Attributes: Undergraduate

LIN 321 Intro: Communication Disorders (3 credits)

This course will serve as an introduction to communication disorders, providing students interested in pursuing graduate-level coursework with the foundation necessary to do so. Basic anatomy and physiology of mechanisms that pertain to these systems will be discussed, and relevant neuroanatomy will be covered. We will also examine the professional roles and responsibilities of Speech-Language Pathologists and Audiologists. This course covers prerequisite content required for students planning to pursue higher-level study in the speech and hearing sciences, including speech-language pathology and audiology. This course counts towards the Linguistics Major/Minor.

Attributes: Undergraduate

LIN 322 Intro to Audiology (3 credits)

This course will serve as an introduction to the modern practice of audiology, and will address the profession and practice through an overview of the anatomy (structure) and physiology (function) of the auditory system, the physical properties of sound relevant to hearing assessment, techniques for hearing assessment, common pathologies of the auditory system, and the impact of hearing loss. This course covers prerequisite content required for students planning to pursue a higher level degree in communication disorders, including speech-language pathology and/or audiology. Subject matter assumes no prior knowledge of audiology.

Attributes: Undergraduate

LIN 323 Anatomy&Phys of Speech&Hearing (3 credits)

This course will serve as an introduction to the anatomy and physiology of speech, hearing, and swallowing mechanisms, including anatomy and physiology of respiration, phonation, resonance, hearing, mastication, deglutition, neuroanatomy, and neurophysiology. This course covers prerequisite content required for students planning to pursue a higher-level degree in communication disorders, including speech-language pathology and/or audiology. Subject matter assumes no prior knowledge of anatomy and physiology. This course is of interest to students pursuing specializations in Linguistics, Autism Studies, IHS and Special Education.

Attributes: Undergraduate

LIN 330 Discourse, Style & Presupp (3 credits)

This course builds on Sociolinguistics. Here we examine issues of register, variety (dialect), discourse structure, style, presupposition. The student will be invited to (1) examine discourse samples to analyze presupposition, implications, and fallacies. The insights of argument structure will organize this approach.

Attributes: Undergraduate

LIN 340 Communication in Soc Contexts (3 credits)

Communication in Social Contexts analyzes how people communicate with each another in various social contexts. We will focus on recent research topics in discourse analysis and explore particular contexts of discourse such as that which takes place in the legal field (police interrogations; naturalization interviews); family interactions (homecoming routines; ventriloquizing); childhood settings (apologies, sporting events), the workplace (medicine, business, media) and the classroom (teacher-student, student-student, teacher-teacher interactions). Special attention will be given to classroom discourse, the area of applied linguistics research that investigates empirical linguistic data from classroom interaction. This course is open to student from all academic majors. This course counts for the American Studies minor.

Attributes: American Studies Course, Communication Studies ILC Crs, GEP Social Science, Undergraduate

LIN 370 Special Topics in Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics. Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LIN 381 History of the Eng Language (3 credits)

A survey of the outer and inner history of the English language, from its Indo-European origins to its present American and world-wide use. The course will be based on modern linguistic methods and information. See ENG 381.

Attributes: Undergraduate

LIN 401 Bilingualism & Lang Diversity (3 credits)

This course is an exploration of bilingualism and linguistic diversity both within the U.S. and beyond its borders. Bilingualism is examined from both sociolinguistic and psycholinguistic perspectives, as we identify historical, geographical and socio-political issues that shape the identity of bilinguals in the U.S. who come from languages and cultures other than our own. In addition to examining the theoretical and methodological issues in bilingualism research, students will also engage this reality through community observations and interviews with representatives of the bilingual communities. This course is open to students from all academic majors.

Attributes: Diversity Course, Undergraduate

LIN 420 SLP/AuD Research Methods (3 credits)

In this course, we will learn about conducting clinical research and its application to evidence-based practice and demands for accountability in the fields of speech-language pathology and audiology. The course will include a general orientation to research design and statistical analysis, followed by specific discussions of various types of research methods and conclude with attention to the acquisition of research grants. This course is writing intensive and therefore will review issues such as the development of clear research questions, support of ideas, organization, style and writing conventions.

Attributes: Undergraduate, Writing Intensive Course- GEP

LIN 470 Topics in Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Attributes: Undergraduate

LIN 474 Language and Thought (3 credits)

Rene Descartes held a view called "mind-body dualism", according to which human persons are fundamentally thinking substances that are somehow causally linked to particular physical substances: bodies. One of his reasons for holding this view was that he believed that the human faculty of language could never, even in principle, be adequately explained by any purely physical description of things. Language, as he saw it, is evidence of mind, and indeed he believed that where language is absent, mind is also absent. Creatures without language are, in Descartes' view, mindless organic automata. Few today would defend Descartes' view in all details, but the general sense that language is an important "mark of the mental" has not gone away. Instead, it has given rise to a cluster of narrower but interesting and important questions: Are certain kinds of mental states impossible without language? Does the specific language that we speak influence our thoughts in some way? Do our innate tendencies of thought force our languages to take certain forms? We could restate these questions in a somewhat different way. Does language hold thought on a leash? Does thought hold language on a leash? See PHL 474.

Attributes: Undergraduate

LIN 475 Language and Meaning (3 credits)

This course examines the core issues in the philosophy of language, including the nature of meaning, problems of reference, and the relation between language and thought. Further issues include the status of propositions, the problem of whether linguistic competence implies innate knowledge of some sort, the nature of metaphor, the private language problem, the indeterminacy of translation and language as symbolic capital. See PHL 475.

Attributes: Undergraduate

LIN 490 TESOL Internship (3 credits)

This course is a practicum in which the student applies their knowledge of Linguistics in a professional work environment. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon their experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on their internship experience. This course is intended as an advanced course for Linguistics majors or TESOL minors who have completed the other course requirements.

Attributes: Undergraduate

LIN 491 Linguistics Internship (3 credits)

This course is a practicum in which the student applies his/her knowledge of Linguistics in a professional work environment. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon his/her experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on his/her internship experience. This course is intended as an advanced course for Linguistics majors/minors who have completed the other course requirements.

Attributes: Undergraduate

LIN 492 Speech Language Pathology (3 credits)

This course is a practicum in which the student applies their knowledge of Speech Language Pathology in a professional work environment. The majority of the work for this course is performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon their experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a journal and a final project or paper related to the student's internship experience. This course is intended as an advanced course for Linguistics majors with a concentration in Speech Language Pathology who have completed other introductory course requirements.

Prerequisites: LIN 210 or LIN 320

Attributes: Undergraduate

LIN 493 Ind Research in Linguistics (3 credits)

This will allow the student to round out the major/minor with a supervised research project that will help expand the student's interests and development.

Attributes: Undergraduate

LIN 494 Ind Research in Linguistics (3 credits)

This will allow the student to round out the major/minor with a supervised research project that will help expand the student's interests and development.

Attributes: Undergraduate

LIN 496 Special Topics Transfer Course (3 credits)**LIN 497 Special Topics Transfer Course (3 credits)**

Communication Sciences & Disorders Major

The Linguistics Program, housed within the Department of Modern and Classical Languages, offers three majors (Communication Sciences & Disorders, Linguistics and Linguistics-TESOL Concentration).

To be a speech therapist/pathologist, a Master's degree in SLP is required for state certification. Graduate SLP programs have varying requirements. Students should check their targeted graduate programs early on to determine those graduate programs' admission requirements and plan accordingly.

Learning Goals and Outcomes

Goal 1: Students will know what the field of linguistics is and understand how language works.

Outcome 1.1: Identify the main areas of linguistic analysis by providing relevant examples and explaining how linguistic analysis is used to describe how language works.

Goal 2: Students will know how to perform linguistic research.

Outcome 2.1: Conduct original linguistic research according to standards within the field.

Goal 3: Students will discuss linguistic topics and apply what they learn to real-life settings.

Outcome 3.1: Communicate effectively in oral presentations and discussions on linguistic-related topics.

Outcome 3.2: Analyze linguistic issues or problems (qualitatively or quantitatively) in real-life settings and formulate creative responses.

Goal 4: Students will be aware of and appreciate language differences that exist among speakers of the same or different languages in light of their own language background.

Outcome 4.1: Identify particular aspects of linguistic beauty and creativity in their various forms (i.e., sounds, instances of lexical variation, acquisition stages, morphological irregularities, etc.).

Outcome 4.2: Identify their own language beliefs and values as well as those of others and respectfully discuss linguistic differences that characterize speakers from various linguistic backgrounds.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
PHY 101	General Physics I	3

25 SLP observation hours are also required		
Total Hours		36

Linguistics Major

Learning Goals and Outcomes

Goal 1: Students will know what the field of linguistics is and understand how language works.

Outcome 1.1: Identify the main areas of linguistic analysis by providing relevant examples and explaining how linguistic analysis is used to describe how language works.

Goal 2: Students will know how to perform linguistic research.

Outcome 2.1: Conduct original linguistic research according to standards within the field.

Goal 3: Students will discuss linguistic topics and apply what they learn to real-life settings.

Outcome 3.1: Communicate effectively in oral presentations and discussions on linguistic-related topics.

Outcome 3.2: Analyze linguistic issues or problems (qualitatively or quantitatively) in real-life settings and formulate creative responses.

Goal 4: Students will be aware of and appreciate language differences that exist among speakers of the same or different languages in light of their own language background.

Outcome 4.1: Identify particular aspects of linguistic beauty and creativity in their various forms (i.e., sounds, instances of lexical variation, acquisition stages, morphological irregularities, etc.).

Outcome 4.2: Identify their own language beliefs and values as well as those of others and respectfully discuss linguistic differences that characterize speakers from various linguistic backgrounds.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Select 3:		9
ABA 100	Intro Autism Spectrum Disorder	
EDU 151	Cognition & Learning w/ Field	
EDU 246	Language and Culture w/ Field	
ENG 206	Public Speaking & Presentation	
LAT 411	Advanced Latin Grammar	
PSY 120	Lifespan Development	
PSY 220	Sensation and Perception	
PSY 222	Neuropsychology	

MCL language courses beyond those used to satisfy the GEP language requirement (e.g., American Sign Language, Chinese, French, German, Greek, Italian, Latin, or Spanish)

Total Hours 9

Major Requirements

There are two ways to major in Linguistics:

1. Linguistics
2. Linguistics - TESOL Concentration (p. 230)

Course requirements for the Linguistics Major include a general introduction to the field and at least one course in several of the main areas of linguistics (applied linguistics, sociolinguistics, psycholinguistics, phonetics, and pragmatics). Specific course requirements and options are listed below. Course requirements for the Linguistics Major-TESOL concentration include a general introduction to the field of linguistics, an English grammar course, a course on language acquisition, a language teaching methods course and phonetics.

Please note that students may also choose to combine a major in Linguistics with a minor in TESOL (a total of at least 13 courses¹) or to complete a double minor in both Linguistics and TESOL (a total of at least 9 courses¹) or a double major in Linguistics and Communication Sciences & Disorders.

1

Please note that students who are double majoring/minoring may count a maximum of 3 courses toward requirements in each area.

Code	Title	Hours
LIN 200	Introduction to Linguistics	3
LIN 318	Psycholinguistics	3
or PSY 229	Psycholinguistics	
Select one of the following Pragmatics options:		3
LIN 260	Language and the Law	
or SOC 260	Language and the Law	
LIN 250	Social Media Discourse	
LIN 340	Communication in Soc Contexts	
Select one of the following Applied Linguistics options;		3
LIN 280	Second Lang Acquis & Lrning (Applied Linguistics options)	
or LIN 301	Teaching Lang at Home/Abroad	
or LIN 281	First Language Acquisition	
Select one of the following Sociolinguistics options:		3
LIN 317	Sociolinguistics	
LIN 401	Bilingualism & Lang Diversity	
SOC 317	Sociolinguistics	
Select one of the following Phonetics options:		3
LIN 320	Phonetics	
SPA 381	Spanish Phonetics & Phonology	
SPA 466	Spanish Dialectology	
Select any four additional courses from the following:		15
Any LIN linguistics course or		
PHL 220	Logic	
PHL 240	Symbolic Logic	
PHL 474	Language and Thought	

PHL 475	Language and Meaning
SPA 375	Translation ¹
SPA 380	Intro to Spanish Linguistics ¹

Linguistics Minor

As an increasingly interdisciplinary field, Linguistics is closely related to many other academic fields including Autism Studies, Classical and Modern Languages, Communication Studies, Computer Science, Criminal Justice, Education, English, Philosophy, Political Science, Psychology, Sociology, and TESOL. Students of Linguistics often pursue careers as clinical psychologists, educators, information technology specialists, lawyers, linguists, marketing and advertising consultants, social workers, speech pathologists, speech therapists, teachers, translators and interpreters. For that reason, several courses in other SJU programs count toward a major or minor in Linguistics while fulfilling requirements in their respective programs.

Students who are interested in English language teaching may also want to consider adding a second minor in TESOL (Teaching English to Speakers of Other Languages). For more information, visit the TESOL website at <http://www.sju.edu/majors-programs/undergraduate/minors/teaching-english-speakers-other-languages-tesol> (<http://www.sju.edu/majors-programs/undergraduate/minors/teaching-english-speakers-other-languages-tesol/>).

Learning Goals and Outcomes

Goal 1: Students will know what the field of linguistics is and understand how language works.

Objective 1.1: Identify the main areas of linguistic analysis by providing relevant examples and explaining how linguistic analysis is used to describe how language works.

Goal 2: Students will know how to perform linguistic research.

Objective 2.1: Conduct original linguistic research according to standards within the field.

Goal 3: Students will discuss linguistic topics and apply what they learn to real-life settings.

Objective 3.1: Communicate effectively in oral presentations and discussions on linguistic-related topics.

Objective 3.2: Analyze linguistic issues or problems (qualitatively or quantitatively) in real-life settings and formulate creative responses.

Goal 4: Students will be aware of and appreciate language differences that exist among speakers of the same or different languages in light of their own language background.

Objective 4.1: Identify particular aspects of linguistic beauty and creativity in their various forms (i.e., sounds, instances of lexical variation, acquisition stages, morphological irregularities, etc.).

Objective 4.2: Identify their own language beliefs and values as well as those of others and respectfully discuss linguistic differences that characterize speakers from various linguistic backgrounds.

Requirements

A student may minor in Linguistics by taking six courses:

Code	Title	Hours
LIN 200	Introduction to Linguistics	3
Select five additional preapproved courses		15
Total Hours		18

Those approved include all courses taught in Linguistics (LIN) and some courses in English, French, Philosophy, Psychology, Sociology, and Spanish. Contact the Linguistics Program Director, Dr. Jennifer Ewald for more information and visit the Linguistics Program website at <http://www.sju.edu/int/academics/cas/linguistics/index.html> (<http://www.sju.edu/int/academics/cas/linguistics/>).

Teaching English to Speakers of Other Languages Minor

Teaching English to Speakers of Other Languages (TESOL) is a six-course minor that provides essential training for the challenging task of teaching the English language at home or abroad in private language schools, community centers or bilingual programs, and in other contexts that do not require state certification. A minor in TESOL incorporates important pedagogical training that prepares students to teach English with both cultural and linguistic sensitivity. This minor opens doors to opportunities to travel, live, and work around the globe. Students who are interested in TESOL might also be interested in studying linguistics, including areas such as dialectology and forensic linguistics. While completion of a TESOL minor does not certify students to teach English as a second or foreign language, it does offer undergraduate students numerous professional and volunteer opportunities. TESOL can be combined with any number of majors or minors and enhances students' applications for fellowships such as the Fulbright. The coursework also provides general background for related graduate study and equips students to serve as English language teachers in the United States and in other countries.

As an increasingly interdisciplinary field, Linguistics is closely related to many other academic fields including Autism Studies, Classical and Modern Languages, Communication Studies, Computer Science, Criminal Justice, Education, English, Philosophy, Political Science, Psychology, Sociology, and TESOL. Students of Linguistics often pursue careers as clinical psychologists, educators, information technology specialists, lawyers, linguists, marketing and advertising consultants, social workers, speech pathologists, speech therapists, teachers, translators and interpreters.

Learning Goals and Outcomes

Goal 1: Students will know what the field of linguistics is and understand how language works.

Outcome 1.1: Identify the main areas of linguistic analysis by providing relevant examples and explaining how linguistic analysis is used to describe how language works.

Goal 2: Students will know how to perform linguistic research.

Outcome 2.1: Conduct original linguistic research according to standards within the field.

Goal 3: Students will discuss linguistic topics and apply what they learn to real-life settings.

Outcome 3.1: Communicate effectively in oral presentations and discussions on linguistic-related topics.

Outcome 3.2: Analyze linguistic issues or problems (qualitatively or quantitatively) in real-life settings and formulate creative responses.

Goal 4: Students will be aware of and appreciate language differences that exist among speakers of the same or different languages in light of their own language background.

Outcome 4.1: Identify particular aspects of linguistic beauty and creativity in their various forms (i.e., sounds, instances of lexical variation, acquisition stages, morphological irregularities, etc.).

Outcome 4.2: Identify their own language beliefs and values as well as those of others and respectfully discuss linguistic differences that characterize speakers from various linguistic backgrounds.

Requirements

A TESOL minor consists of 6 courses (18 credits) including the following:

Code	Title	Hours
LIN 203	English Grammar	3
LIN 301	Teaching Lang at Home/Abroad	3
Select four of the following:		12
LIN 200	Introduction to Linguistics	
LIN 150	First Year Seminar	
LIN 280	Second Lang Acquis & Lrning	
LIN 320	Phonetics	
LIN 340	Communication in Soc Contexts	
LIN 317	Sociolinguistics	
or LIN 401	Bilingualism & Lang Diversity	
EDU 246	Language and Culture w/ Field	
PHL 220	Logic	
PHL 240	Symbolic Logic	
PHL 474	Language and Thought	
PHL 475	Language and Meaning	
SOC 260	Language and the Law	
SOC 317	Sociolinguistics	
SPA 380	Intro to Spanish Linguistics	
SPA 381	Spanish Phonetics & Phonology	
SPA 460	Advanced Oral Communication	
SPA 461	Methods for Teaching Spanish	
SPA 466	Spanish Dialectology	
SPA 467	Lang Contact & Pol in U.S.	
SPA 480	Topics in Spanish Linguistics	
FRE 470	Topics in French	
or ITA 470	Topics in Italian	
Total Hours		18

Managing Neurodiversity at Work Minor

Code	Title	Hours

PSY 209	Autism:Co-Occurring Conditions
SPE 339	Educ Stds w/Low Incid Disabil
ABA 201	Skill Assess & Instr ABA&ASD
ABA 468	Resources& Advocacy for Autism
ABA 469	Adult/Transition Autism

Total Hours **18**

Mathematics

The Department of Mathematics offers a B.S. degree in mathematics, a B.S. degree in Data Science and a double major in mathematics and secondary education that includes teaching certification. The objective of the bachelor's degree program in mathematics is to prepare students for professional careers in a variety of industries and for graduate programs leading to the M.S. and Ph.D. Students also may opt for advanced degrees in education, business administration, law, or medicine.

Faculty

Well-versed in a wide range of mathematical concepts, from algebraic topology to statistics and data science, the faculty in Saint Joseph's Department of Mathematics are dedicated to sharing their knowledge and research experience with students. Classroom sizes are small and hands-on, providing students with the opportunity to work closely with mathematics faculty and prepare for successful careers after graduation.

Department of Mathematics Faculty & Staff (<https://www.sju.edu/departments/math/faculty-staff/>)

Programs

Undergraduate Major

- Mathematics (p. 237)

Undergraduate Minor

- Mathematics (p. 238)

Courses

MAT 101 Mathematical Explorations I (3 credits)

For humanities majors, the course covers set theory and a number of its applications, topics from logic including propositions, truth tables, number systems, and elementary geometry. Other topics may be covered at instructor's discretion.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MAT 102 Mathematical Explorations II (3 credits)

This is a second course for humanities majors. The course covers elementary probability, including independent and dependent events, conditional probability, binomial probability, and certain applications in a wide variety of situations. MAT 101 is not required for MAT 102.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MAT 103 Quantitative Appl in Business (3 credits)

Topics in finite mathematics: matrices, solving linear systems, optimization using linear programming, simplex algorithm. Pre-calculus topics: linear, quadratic, exponential, and logarithmic functions and their graphs, mathematical models, and certain applications.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MAT 107 Contemporary Topics in Math (3 credits)

This course is designed to enable the student to recognize, understand and apply various mathematical concepts and principles that are the foundation for many things that we take for granted in our everyday lives, such as Voting, Traveling, Finances, Government and the wonders of Nature.

Attributes: Undergraduate

MAT 110 Fundamental Math for Educators (3 credits)

This course is designed to ensure that pre-service educators have a deep understanding of the essential mathematical core standards and competencies required to enter the teaching profession. Students will develop basic mathematical skills, will be able to employ problem solving strategies, will be able to communicate mathematical concepts, and will be able to construct and evaluate mathematical arguments.

Attributes: Undergraduate

MAT 111 The Mathematics of Patterns (3 credits)

This course focuses on mathematics as the science of identifying, understanding and describing patterns. Patterns that occur in nature and empirical studies can be identified and modeled using fundamental ideas such as functions (mathematical rules), probability (long term behavior), exploratory data analysis (statistics) and geometry. Through a series of guided investigations students will master the reasoning used to identify the patterns, the mathematical model used to describe the pattern and the computational techniques necessary to further explore and apply the pattern in new situations. This course is designed specifically for students intending to become elementary or middle school teachers.

Attributes: Undergraduate

MAT 118 Introduction to Statistics (3 credits)

Introduction to statistics and probability: measures of central tendency, variability, correlation, regression, chance and randomness, random variables, probability distributions, law of large numbers, central limit theorem. Students will be required to use a computer software package to solve various statistical problems. Designed for Social Science majors. Students may NOT receive credit for this course and for MAT 128.

Attributes: Undergraduate

MAT 120 The Mathematics of Modeling (3 credits)

This course focuses on functions, graphs, and algebraic techniques. Topics include an introduction to functions and graphs, linear, exponential, logarithmic, and trigonometric functions. Functions are used for solving multidisciplinary application problems.

Prerequisites: Math Placement with a score of MA120

Attributes: Undergraduate

MAT 121 Math Modeling for MS Teachers (3 credits)

Designed for students who will become middle school teachers, this course will explore mathematical topics in the context of building of building models to solve problems. The emphasis will be on using multiple representations to develop mathematical models that describe some phenomena and learning the mathematical techniques necessary for working with the model in order to effectively answer questions about the situation being modeled. Students will interpret results given the context of the model and develop their communication skills for explaining mathematics.

MAT 122 Trigonometry (3 credits)

Topics include Angle Measurements; Triangles; Trigonometric and Inverse Trigonometric Functions and Graphs; Solving Trigonometric Equations; Essential Trigonometric Identities; Laws of Sine, Cosine, and Tangent; Vectors; Parametric Equations; Polar Coordinates. This course will emphasize application and modeling problems related to the topics.

MAT 123 Differential Calculus (3 credits)

Review of mathematical models using polynomial, rational, exponential and logarithmic functions with business applications. Introduction to differential calculus including limits, rates of change and the derivative, optimization using the derivative. Students may NOT receive credit for both this course and for any of the following courses: MAT 155 or MAT 161.

Attributes: Undergraduate

MAT 128 Applied Statistics (3 credits)

Introduction to statistics and probability: design of a study, measures of central tendency, variability, correlation, regression; probability, random variables, probability distributions, central limit theorem; inferential statistics, hypothesis testing, etc. Students will be required to use a computer software package to solve various statistical problems. Data analysis projects will be assigned. Students may NOT receive credit for both this course and for MAT 118.

Attributes: Undergraduate

MAT 130 Whole Truth about Whole Number (3 credits)

This course involves studying properties of natural numbers and integers. Topics include divisibility, prime numbers, the Euclidean Algorithm and cryptography for putting messages into code.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 131 Linear Methods (3 credits)

This course studies basic properties and applications of matrices and vectors. Then, matrices and vectors will be used in a variety of applications, including vector geometry, elementary graph theory, solving word problems involving systems of linear equations, least-squares functions, and geometric transformations. The course also covers some topics in basic logic, including logical operators, the conditional, truth tables, quantifiers, and syllogisms. Students in this course will be required to have a graphing calculator that can perform standard matrix operations.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 132 Math of Games & Politics (3 credits)

This course will focus on both computational and theoretical aspects of probability theory, game theory and social choice theory. Topics include expected value, counting methods and conditional probability, dominant strategies, combinatorial games, Nash equilibria, social dilemmas and, for zero sum games, saddle points and the Minimax theorem. Social choice theory topics include voting methods, weighted voting, fairness criteria and impossibility theorems.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 134 Math of Uncertainty: Rules/Prob (3 credits)

This course provides students with an in-depth introduction to probability and its many real-life applications. Students will study counting techniques including permutations, combinations, binomial coefficients, occupancy problems and runs within random orderings and will prove combinatorial identities. Students will study topics in probability including sample spaces, DeMorgan's Laws, conditional probability, independent events, Bayes Theorem, random variables and expected value. Students will examine many of the classical problems in probability theory including Prisoner's Dilemma, Gambler's Ruin and the Birthday Problem as well as lotteries, card games and random walks.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 135 Sounding Number: Music & Math (3 credits)

Music has many connections to mathematics. The ancient Greeks discovered that chords with pleasing sounds are related to simple ratios of integers. Other connections include equations describing the sounds of musical instruments, the mathematics of digital recording, the use of symmetry in composition, and the systematic exploration of patterns by African and Indian drummers. This course introduces basic concepts in trigonometry, set and group theory, and combinatorics and investigates their applications in the analysis, recording, and composition of music. Along the way, we consider the role of creativity in mathematics and the ways in which mathematics has inspired musicians. The course will involve hands-on laboratory work in audio engineering and music composition.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 138 Symmetry (3 credits)

"Symmetry" is a ubiquitous concept in modern mathematics and science. Certain shapes and images seem more symmetric than others, yet is not immediately obvious how to best measure and understand an object's symmetry. In fact, the quest to more precisely quantify the concept of symmetry has been a driving force in science and mathematics, and will form the central theme of this course.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 150 First Year Seminar (3 credits)

This course investigates several beautiful topics within mathematics. Depending on the instructor, these topics might include: prime numbers, the different sizes of infinity, the Platonic solids, the fourth dimension, fractals, chaos, probability, and the math of voting.

Attributes: First-Year Seminar, Undergraduate

MAT 155 Fundamentals of Calculus (3 credits)

This course covers differential calculus and the beginning of integral calculus. Topics include limits, continuity, differentiation, applications of derivatives, indefinite and definite integrals, and the fundamental theorem of calculus.

Prerequisites: MAT 120 or Math Placement with a score of MA162 or Math Placement with a score of MA161 or Math Placement with a score of MA155 or MA 107

Restrictions: Students cannot enroll who have a major in Actuarial Science, Chemistry, Mathematics or Physics.

Attributes: Math Beauty, Undergraduate

MAT 161 Calculus I (4 credits)

Limits; slopes, rates of change and the derivative; techniques of differentiation; implicit differentiation; derivatives of transcendental functions; related rates; linear approximation; L'Hospital's Rule; the Mean Value Theorem; applications of differentiation (including curve sketching and optimization); introduction to integration; the Fundamental Theorem of Calculus. Students may NOT receive credit for both this course and for any of the following courses: MAT 123 or MAT 155.

Prerequisites: MAT 120 or Math Placement with a score of MA162 or Math Placement with a score of MA161

Attributes: Math Beauty, Undergraduate

MAT 162 Calculus II (4 credits)

Areas between curves, volumes, average value of a function, integration by parts, improper integrals, approximate integration, arc length, area of a surface of revolution, differential equations and applications, parametric curves, polar coordinates, and Taylor polynomials.

Prerequisites: MAT 161 or MAT 155 or Math Placement with a score of MA162 or MA 110 or MA 122

Attributes: Math Beauty, Undergraduate

MAT 170 Special Topics in Mathematics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 210 Theory of Numbers (3 credits)

Division Algorithm; Mathematical induction; Euclidean algorithm; fundamental theorem of arithmetic; linear Diophantine equations; modular arithmetic; number theoretic functions; prime numbers; Fermat's last theorem; quadratic residues, primitive roots, Chinese Remainder theorem. This course fulfills the GEP Mathematics requirement but is at a slightly more advanced level than courses in the range of MAT 130 - MAT 139.

Attributes: Math Beauty, Undergraduate

MAT 213 Calculus III (4 credits)

Study of vectors, curves, functions of several variables, partial derivatives, tangent planes, maximum and minimum values, Lagrange multipliers, double integrals, triple integrals, spherical and cylindrical coordinates, vector fields, line integrals, sequences, series, convergence tests, power series, and Taylor series.

Prerequisites: MAT 162 or MA 221

Attributes: Math Beauty, Undergraduate

MAT 226 Introduction to Linear Algebra (3 credits)

Linear systems, matrices, linear transformations, determinants, vector spaces, dimension, orthogonality, eigenvalues, eigenvectors, and diagonalization.

Prerequisites: MAT 155 or MAT 161

Attributes: Math Beauty, Undergraduate

MAT 232 Chaos, Fractals & Dynamic Syst (3 credits)

Introduction to dynamical systems: one dimensional dynamics; attracting, repelling, periodic and chaotic orbits; bifurcation; dynamics in the complex plane, Julia sets, the Mandelbrot set; two dimensional dynamics. Introduction to fractals: self-similarity, iterated function systems, fractal dimension.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 233 History of Mathematics (3 credits)

Development of mathematical ideas over 2500 years, beginning with Greek geometry and including Euclid, Archimedes, Newton, Euler, Gauss, and Poincare.

Prerequisites: MAT 161 or MAT 155

Attributes: Math Beauty, Undergraduate

MAT 238 Differential Equations (3 credits)

Solution of ordinary differential equations using analytic, numerical, and qualitative techniques. Modeling via differential equations, systems of differential equations. Laplace transforms; discrete dynamical systems. Use of a computer software package is required.

Prerequisites: MAT 162 or MA 221

Attributes: Math Beauty, Undergraduate

MAT 250 Fundamentals of Mathematics (3 credits)

The course consists of the following elements. Fundamentals of Logic: propositional logic, predicate logic, rules of inference and proofs; Fundamentals of Algebra: sets, functions, and relations; Fundamentals of Counting and Set Theory: natural numbers, mathematical induction, cardinality of sets, infinity; Fundamentals of Analysis: building number systems, basics of epsilon-delta calculus, continuity, convergence, and uniform convergence.

Prerequisites: MAT 161 or MAT 155

Attributes: Math Beauty, Undergraduate

MAT 270 Special Topics in Mathematics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 290 Career Prep Seminar (1 credit)

What will YOU do with your degree in Mathematics, Computer Science, Information Technology, or Actuarial Science? Learn how to explore the variety of professional options open to you based on your major and on your unique personality and individual traits. This professional development seminar will help you build practical skills through a series of hands on assignments, a detailed self-assessment, goal-planning for a successful future, and multiple points of engagement with alumni. This one-credit course meets once a week to provide instruction and support in topics including internship search and application, resume/cover letter prep, post-grad options, professional communication and networking/ interviewing . Is an internship right for you? Do you know the best way to search for one? Why do I need to network - how will that help me? Register now to get the answers to these and many other questions and invest in your future!

Attributes: Undergraduate

MAT 311 Numerical Analysis (3 credits)

An introduction to numerical methods for solving a variety of problems. Included will be root finding, numerical integration and differentiation, polynomial approximation, ordinary differential equations, discussion of convergence issues, error analysis and machine arithmetic, introduction to Python programming.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 313 Mathematical Optimization (3 credits)

The course covers basic ideas in optimization beginning with linear programming, the simplex method and duality and finishes with non-linear optimization and algorithms and conditions leading to a solution of non-linear problems.

Prerequisites: MAT 226

Attributes: Math Beauty, Undergraduate

MAT 316 Operations Research (3 credits)

The course will cover some of the basic models and techniques used in operations research. Topics include: linear programming, the simplex method, duality, network problems, transportation problems, and time permitting, game theory.

Prerequisites: MAT 226

Attributes: Math Beauty, Undergraduate

MAT 321 Probability (3 credits)

The first part of a two-semester sequence, this course includes discrete probability and counting methods, conditional probability and independence, Bayes' Theorem, discrete and continuous random variables, expectation, variance, moment-generating functions, special probability distributions, joint distributions, marginal and conditional distributions, independent random variables, covariance and correlation, conditional expectations, and distributions of functions of random variables.

Prerequisites: MAT 213 (may be taken concurrently)

Attributes: Math Beauty, Undergraduate

MAT 322 Mathematical Statistics (3 credits)

Random samples, sample size, statistics and sampling distributions, the Central Limit Theorem, methods of point estimation including moment matching, percentile matching, maximum likelihood estimation, main properties of point estimators, asymptotic properties of MLE, evaluation of goodness of a point estimator, Rao-Blackwell theorem, UMVUE, interval estimation, hypothesis testing, power of tests, the Neyman-Pearson lemma, regression analysis, analysis of variance, categorical data analysis (Chi-square test). Data analysis projects will be assigned.

Prerequisites: MAT 321

Attributes: Undergraduate

MAT 328 Design of Experiments (3 credits)

In this course we discuss proper design and analysis of experiments, including the role of randomization, selecting sample sizes, and allocating treatments to experimental units. Designs covered include completely randomized designs, designs with factorial treatment structure, random and mixed effects designs, complete and incomplete blocked designs, Latin squares, confounding, split plots, fractional factorials, and response surfaces. Examples and exercises are taken from a broad range of subject areas. Appropriate computer programs are used for analysis of real data sets.

Prerequisites: MAT 118 or MAT 128 or MAT 213 or DSS 210

Attributes: Undergraduate

MAT 332 Geometry (3 credits)

An axiomatic treatment of the foundations of geometry. Axioms of incidence, order, congruence, Bolyai- Lobachevsky parallel axiom, angle of parallelism. A rigorous development of selected topics in non-Euclidean geometry.

Prerequisites: MAT 155 or MAT 161

Attributes: Math Beauty, Undergraduate

MAT 334 Combinatorics & Graph Theory (3 credits)

Introduction to combinatorics and graph theory and to methods by which each theory is applied to the other. Topics include basic counting formulas; generating functions; the principle of inclusion-exclusion; counting labeled trees (Cayley's Theorem, Kirchhoff's Theorem, Prüfer's Theorem); directed Euler circuits; Pólya-deBruijn theory; Möbius inversion.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 336 Logic & Foundations (3 credits)

Cantor's set theory and the crisis in foundations (Cantor's paradox, Russell's paradox); the intuitionist challenge and the formalist response; formal logic and meta mathematics (Propositional Calculus, Predicate Calculus, formal number theory); Goedel's incompleteness theorems of 1931.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 340 Math Methods Phys Sci (3 credits)

The course condenses the material of several full-semester mathematics courses, such as complex analysis, Fourier analysis, and group theory, with the focus on mathematical methods used in the physical and related sciences.

Prerequisites: MAT 213

Attributes: Math Beauty, Undergraduate

MAT 370 Special Topics in Mathematics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 403 Abstract Algebra (3 credits)

Group theory, including finite groups, subgroups, cyclic groups, permutation groups, group isomorphisms, and cosets; introduction to rings and fields, including integral domains, polynomial rings, unique factorization domains and Euclidean domains.

Prerequisites: MAT 250

Attributes: Undergraduate

MAT 404 Abstract Algebra II (3 credits)

A more in-depth treatment of rings and fields including integral domains, fields, field extensions, homomorphisms, and the insolubility of the quintic by radicals. Galois theory.

Prerequisites: MAT 403

Attributes: Math Beauty, Undergraduate

MAT 409 Real Analysis (3 credits)

Elementary topology of Euclidean spaces, including open, closed and compact sets; convergence of sequences and series; least upper bound axiom and its equivalents; sequences of functions, pointwise and uniform convergence, continuity, differentiation and integration of sequences.

Prerequisites: MAT 250

Attributes: Math Beauty, Undergraduate

MAT 410 Complex Analysis (3 credits)

Analytic functions; complex integration; singularities.

Prerequisites: MAT 213

Attributes: Math Beauty, Undergraduate

MAT 415 Differential Geometry (3 credits)

The local and global theory of curves and surfaces in Euclidean space. Topics include Frenet frames, orientation, geodesics, the second fundamental form, and Gauss curvature.

Prerequisites: MAT 213 and MAT 226

Attributes: Math Beauty, Undergraduate

MAT 418 Topology of Point Sets (3 credits)

Open and closed sets, closure and interior, continuity, metric spaces, connectivity, compactness; the Heine-Borel and Bolzano-Weierstrass Theorems. The Classification of Surfaces may also be covered.

Prerequisites: MAT 409

Attributes: Undergraduate

MAT 420 Convex Analysis (3 credits)

This course covers the algebraic properties of affine sets, convex sets, cones, affine and convex functions, quasi-convex and pseudo-convex functions, topological properties of convex sets and functions, separation theorems, duality correspondences, Caratheodory's Theorem, extreme points and faces of convex sets, polyhedral convex sets and functions, systems of linear inequalities, and related topics.

Prerequisites: MAT 226 and MAT 409

Attributes: Math Beauty, Undergraduate

MAT 423 Applied Statistical Methods (3 credits)

Statistical models, design and analysis of experiments, regression, Monte Carlo methods, and other advanced topics in statistics.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 424 Regression and Time Series (3 credits)

The first part of the course covers Generalized Linear Models (GLMs).

Topics include exponential family, important link functions, estimations (maximum likelihood estimation, generalized moment matching), diagnostic tests for model validations (graphical methods, chi-square statistics, t and F tests, AIC and BIC, likelihood ratio test), applications of GLMs on real data, prediction and confidence intervals. It also includes penalized regression (ridge and lasso regression, k-nearest neighbors algorithm). The second part of the course covers Time Series Analysis. Topics include an introduction to discrete stochastic processes, random walks, stationary processes, autocorrelation functions, and partial autocorrelation functions, various time series models (exponential smoothing, autoregressive (AR) model, moving average (MA) model, ARMA model), autoregressive conditional heteroskedastic (ARCH) model, generalized ARCH (GARCH) model, variants of GARCH, predictions and their confidence intervals using time series models.

Prerequisites: MAT 322

Attributes: Math Beauty, Undergraduate

MAT 470 Topics in Mathematics (1-3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 471 Independent Study (3 credits)**MAT 472 Independent Study (3 credits)****MAT 481 Data Science Capstone (3 credits)**

The capstone course provides students with a comprehensive learning experience that integrates ideas and experiences gained from the three core disciplines of mathematics, statistics and computer science, and applies them to their chosen application domain. Working with a family advisor, students will engage in the process of solving a real-world data science problem.

MAT 491 Mathematics Internship I (3 credits)

The course goals are: to gain first-hand experience of the daily activities of professionals in mathematics and related fields, to verify an interest in a particular area of mathematics, to develop and hone skills required for mathematical professions, to establish contacts outside the academic community who will facilitate a career in mathematics. An internship journal and an academic paper are also required.

MAT 492 Mathematics Internship II (3 credits)

The course goals are: to gain first-hand experience of the daily activities of professionals in mathematics and related fields, to verify an interest in a particular area of mathematics, to develop and hone skills required for mathematical professions, to establish contacts outside the academic community who will facilitate a career in mathematics. An internship journal and an academic paper are also required.

MAT 493 Independent Research (3 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research (6 credits) must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register. Honors Students must complete this sequence.

Attributes: Math Beauty, Undergraduate

MAT 494 Independent Research (3 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research (6 credits) must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register. Honors Students must complete this sequence.

Attributes: Math Beauty, Undergraduate

MAT 704 Statistics for Research (3 credits)

This class covers statistical inference on two samples, design of experiments, repeated measures, analysis of covariance, multiple regression, categorical data analysis, and factor analysis.

Mathematics Major Learning Goals and Outcomes

Goal 1: Students will gain a general knowledge of the field of mathematics including knowledge of the application of mathematics to other fields.

Outcome 1.1: Students will know the mathematical theory underlying calculus, including the formal definition of a limit and the compactness of the unit interval.

Outcome 1.2: Students will know the definitions, examples and some basic theorems about groups, rings and fields.

Goal 2: Students will master specific skills in mathematics.

Outcome 2.1: Students will be able to perform basic computations such as calculating derivatives and iterated integrals and various operations with matrices.

Outcome 2.2: Students will be able to identify and apply the appropriate method to solve a specific mathematical problem, apply the appropriate proof technique to prove a specific mathematical statement, or determine whether a given solution or proof is logically sound.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. *Diversity, Globalization or Non-western Area Studies,*
2. *Ethics Intensive*

3. *Writing Intensive, and*

4. *Diversity*

¹

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics		
MAT 161	Calculus I	4
Natural Science		
PHY 105	University Physics I	3
PHY 105L	University Physics Lab I	1

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
CSC 120	Computer Science I	4
or CSC 115	Intro to Computer Science	
or CSC 133	Python Programming for All	

Open ILC courses:

Courses automatically approved as fulfilling this requirement include: all ASC, ECN and CSC courses and also all BIO, CHM and PHY courses.

Courses outside of this list require Advisor and Chair approval to count as fulfilling this requirement.

GEP Electives

Seven courses

Major Requirements

Code	Title	Hours
MAT 162	Calculus II	4
MAT 213	Calculus III	4
MAT 250	Fundamentals of Mathematics	3
MAT 226	Introduction to Linear Algebra	3
MAT 403	Abstract Algebra	3
MAT 409	Real Analysis	3

Any SIX additional "math elective" courses, which include all MAT, DSC and ASC courses above the level of 200.

Actuarial Science

Actuarial Science is an inter-college major with combined coursework from the Haub School of Business and the College of Arts and Sciences.

Please see Actuarial Science major (p. 414) or Actuarial Science minor (p. 415) for more information.

Secondary Education Teacher Certification for Secondary Schools

Advisor

• *Dr. Berezovski*

Students who are pursuing Secondary Teacher Certification in Mathematics (and who do not want to pursue a graduate degree) double major in Mathematics and Secondary Education. Their primary major is Mathematics. If they complete their student teaching during their senior year, they are exempt from one of the mathematics elective courses required for the Mathematics major.

Below is the required program coursework for students to be eligible for a PA Level I Teaching Certificate in Secondary Education (Math).

Code	Title	Hours
EDU 150	Schools in Society w/ Field	3
EDU 157	Adolescent Development w/Field	3
EDU 230	Eval: Secondary Grades 7-12	3
EDU 246	Language and Culture w/ Field	3
EDU 247	Literacy in Cont Areas w/Field	3
EDU 416	Instr Techniq Math w/Field	3
EDU 491	Secondary Student Teaching	12
SPE 160	Intro to Special Education	3
SPE 205	Inclusive Classrooms w/ Field	3

Mathematics Minor

All science-related disciplines rely on the fundamental language of mathematics. Many biological and medical phenomena can be studied mathematically or have substantial quantitative components. Mathematical areas, such as combinatorics, graph theory, differential equations, and statistics, are being applied to the problem of genetic mapping. Differential geometry and topology are currently being used to study the basic physical and chemical properties of DNA. Mathematical modeling of the heart enabled researchers to understand why ventricular fibrillation occurs.

The beauty of mathematics can also be found in non-science areas as well. Fibonacci sequences can be found in art and music. Topics from geometry, trigonometry, and algebra can be found in architecture. Fractals can be seen in nature.

A minor in mathematics creates unique career opportunities.

Learning Goals and Outcomes

Goal 1: Students will master specific skills in mathematics.

- Outcome 1.1:** Students will be able to perform basic computations such as calculating derivatives and iterated integrals and various operations with matrices.
- Outcome 1.2:** Students will be able to identify and apply the appropriate method to solve a specific mathematical problem, apply the appropriate proof technique to prove a specific mathematical

statement, or determine whether a given solution or proof is logically sound.

Requirements

Code	Title	Hours
MAT 155 or MAT 161	Fundamentals of Calculus Calculus I	3
MAT 162	Calculus II	4
Four (4) MAT courses 200-level or higher		12
AP credit may be accepted for Calculus I and Calculus II (refer to AP credit guide).		
Total Hours		19

Medieval, Renaissance and Reformation Studies Minor

The Medieval, Renaissance and Reformation Studies program includes courses offered by the departments of History; Art; Music, Theater and Film; English; Modern and Classical Languages; Philosophy; and Theology and Religious Studies. Courses taken to satisfy requirements of this program may also serve to satisfy GEP or major requirements, including Integrative Learning Courses where appropriate. Participants choose a minimum of six courses from the approved curriculum, with at least one from each group and no more than three from any one department. Substitutions may be approved upon request to the director. Students who successfully complete the program requirements earn a Minor in Medieval, Renaissance, and Reformation Studies. For more information, see the program website (<https://sites.sju.edu/medievalstudies/>).

Modern and Classical Languages

Mission

In an increasingly interdependent world community, the mission of the Department of Modern and Classical Languages is to help students become articulate, knowledgeable and culturally aware, in accordance with the values and traditions of Saint Joseph's University and the Society of Jesus. We pursue this mission by:

- Fostering language proficiency
- Promoting an appreciation for the richness and complexity of language

- Deepening students' understanding of cultural diversity
- Encouraging student engagement in active, collaborative and critical learning
- Emphasizing a learner-centered pedagogy and care for the individual

Upper Division Courses Taken in Study Abroad Programs

The Department will count a maximum of four upper division courses toward the major. This represents half of the upper division courses required. A total of three courses taken abroad may count for the minor.

Other Related Programs

In addition to the Spanish major and minor, a minor in Latin American Studies is also available. See the Latin American Studies Program website at: <https://www.sju.edu/degree-programs/latin-american-and-latinx-studies-minor> (<https://www.sju.edu/degree-programs/latin-american-and-latinx-studies-minor/>).

A student may wish to consider a major/minor in Linguistics (p. 223), Communication Sciences and Disorders (p. 227) or TESOL (p. 231) . See the Advisor for Linguistics, Dr. Jennifer Ewald, for more information and visit the Linguistics Program website at: <https://sites.sju.edu/mcl/linguistics/>.

Faculty

Faculty within the Department of Modern and Classical Languages have received several prestigious fellowships and are well-established experts in language, culture, history and more. Faculty members are dedicated to providing an interactive, learner-centered environment that allows students to actively participate in the curriculum and make significant use of digital media and current events.

Modern & Classical Languages Faculty & Staff (<https://www.sju.edu/departments/mcl/faculty-staff/>)

Modern and Classical Languages in the GEP

Art/Literature through Modern and Classical Languages in the GEP

(See Curricula (p. 39))

Students who wish to satisfy the Literature/Fine Arts portion of the GEP by completing a course in Modern and Classical Languages should select one of the following:

Code	Title	Hours

Completion of GEP non-native language requirement

Most students fulfill their GEP non-native language requirement by taking a two-semester course sequence (101-102, 102-201, 201-202, 202-301) in the following languages: American Sign Language, Chinese, French, Gaelic (for Gaelic MLA 103-104), German, Italian, Japanese, Russian and Spanish. Students placed in 301 (Conversation) are only required to take one semester of a non-native language.

English as a Second Language

All international students whose primary language is not English or who have English language deficiencies ought to take ESL 201 and ESL 202, Composition and Critical Thinking for Non-Native Speakers of English, in their first two semesters. ESL 201 and ESL 202 will satisfy the GEP non-native language requirement for students whose native language is not English.

Non-Native Language Courses outside the University

Students wishing to study a non-native language to fulfill the General Education Program requirements on either the introductory or intermediate level not offered at Saint Joseph's University may be permitted to pursue such study at a four-year college or university of their choice. Permission will come from the appropriate academic Dean with the approval of the chair of the Department of Modern and Classical Languages.

In such cases, the student will pay Saint Joseph's University full tuition. In addition, the student will pay the tuition for the course taken elsewhere. When the student earns a C or above in the course(s) taken elsewhere, and all the course credits transfer back to SJU, Saint Joseph's University will reimburse the student's tuition for the course taken elsewhere up to but not exceeding the amount of one fifth of the student's semester tuition (excluding fees). If there is a tuition charge above this amount where the courses are being taken, the student will be responsible for the remaining charges.

If a student wishes to take language courses at other institutions beyond those which are required for the GEP, they may do so by following the pre-approved instructions for students taking courses elsewhere, but tuition costs for such courses will not be reimbursed by the University.

Secondary Education

Modern Languages/Secondary Education Double Major

The Modern Languages/Secondary Education Double Major requires a course in culture and civilization in the modern language, as well as a course in basic or applied linguistics. The three Integrative Learning Courses for the Education Track are as follows: SPE 160/160F

Introduction to Special Education; SPE 310/310F Assessment: Identification and Progress Monitoring, and SPE 203/203F: Teaching in Inclusive Environments. The following are recommended for satisfying both Education and GEP requirements: first-year EDU 150/150F Schools in Society for the first-year seminar, EDU 157/157F Adolescent Development for the social and behavioral science requirement, and a Linguistics course for the Art/Lit requirement.

Teacher Certification for Secondary Schools

Students majoring in French, Italian and Spanish who complete the double major in Secondary Education may apply to obtain an Instructional I, Secondary Education (12) Teaching Certificate from the State of Pennsylvania. In addition to their Modern Languages advisor, Modern Languages/Secondary Education double majors will also be assigned an advisor from the Education Department who will guide them through their required Education courses. The Education advisor will also assist students seeking teacher certification in formally applying for the teacher certification program, usually in the spring semester of their sophomore year. Students must have an overall GPA of 3.0 or higher to enroll in EDU 497 Secondary Student Teaching in their senior year. Students must maintain an overall GPA of 3.0 or higher to obtain teacher certification upon graduation.

Programs

Undergraduate Majors

- French (p. 260)
- Francophone Studies (p. 260)
- Italian (p. 262)
- Italian Studies (p. 263)
- Spanish (p. 264)

Undergraduate Minors

- Chinese Language and Culture (p. 259)
- French (p. 261)
- Italian (p. 263)
- Spanish (p. 265)

Courses

French

FRE 101 Beginning French I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students with no experience with the French language. Fulfills one course of a sequence that fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of FR101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the French 102 Placement, French 201 Placement, French 202 Placement or French 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

FRE 102 Beginning French II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid/high level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 101 or Language Placement with a score of FR102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the French 201 Placement, French 202 Placement or French 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

FRE 170 Special Topics in French (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

FRE 201 Intermediate French I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high/intermediate low level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 102 or Language Placement with a score of FR201

Restrictions: Students with the French 202 Placement or French 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

FRE 202 Intermediate French II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar, pronunciation, and writing will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the intermediate low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 201 or Language Placement with a score of FR202

Restrictions: Students with the French 301 Placement attribute may **not** enroll.

Attributes: Undergraduate

FRE 270 Special Topics in French (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

FRE 301 French Conversation (3 credits)

This course is designed to help students improve their oral communication skills in French through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions, and tailoring the discourse to the audience and context. This course is aimed at developing the intermediate mid/high level according to ACTFL - American Council on the Teaching of Foreign Languages. Counts toward the Francophone Studies Program. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 202 or Language Placement with a score of FR301

Attributes: Undergraduate

FRE 302 French Composition (3 credits)

This course is designed to improve students' ability to communicate in written French and to develop the writing skills they will need to succeed in advanced French courses. Skills are developed through a process-oriented approach to writing, including steps related to vocabulary generation, organizing an outline, writing a draft, editing and revising, and writing a final version. *Prerequisite:* completion of the GEP language requirement in French. Fulfills the GEP Writing-Intensive Overlay requirement.

Prerequisites: FRE 301 or Language Placement with a score of FR302

Attributes: Undergraduate, Writing Intensive Course- GEP

FRE 309 Love and Hatred (3 credits)

Love and hatred are emotions that are at once universal and complicated. Studying these two themes will allow us to discover Francophone literature from diverse genres and time periods. In addition, the course will incorporate videos, music and art to enhance our understanding of the roles played by love and hatred in the Francophone world across the centuries.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 310 Identity (3 credits)

This course focuses on a complex and multi-layered concept at the heart of what it means to be human. Exploring this idea in Francophone literature, music and film will allow us to develop a nuanced view of identity, belonging and community, learning about diverse cultural perspectives while also developing skill at analyzing and commenting on literary texts in different genres.

Prerequisites: FRE 301 or FRE 302 or Language Placement with a score of FR310

Attributes: GEP Art/Literature, Undergraduate

FRE 315 Comp Stylistics & Translation (3 credits)

Students will compare the linguistic structures and modes of expression in English and in French, doing exercises in translation (English-French and French-English) as a means of acquiring a better understanding of both languages and improving their expression in written and spoken French.

Prerequisites: FRE 301 or FRE 302

FRE 321 Love & Desire in Med Fr Lit (3 credits)

Study of the origin and development of the literature and culture of the Middle Ages. Students will read a selection of texts that evoke love and desire in a variety of thematic form and we will also examine representations of love in desire in music, images, and other cultural products and practices. Fulfills the GEP Art/Literature requirement.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 322 Making our Voices Heard (3 credits)

A study of representations of women in works written by French women writers of the Middle Ages and Renaissance, with special emphasis on issues of female identity and voice in the texts. Fulfills the GEP Art/Lit requirement., Diversity course, Gender Studies course, Medieval, Ren & Reform Studies.

Prerequisites: FRE 301 or FRE 302

Attributes: Gender Studies Course, Medieval, Ren & Reform Studies, Undergraduate

FRE 325 The Francophone World (3 credits)

This course is an introductory course for the Francophone Studies major while serving simultaneously as a language and culture course for French majors organized around the notion of "Francophonie." There are four major intellectual components to the course: 1) the historical background of French and Belgian colonization (through research and readings), with particular reference to North America, to the Caribbean, to North Africa and to Sub-Saharan Africa; 2) a sampling of critiques of French colonialism; 3) select texts in postcolonial theory; 4) an overview of the contemporary Francophone world.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 330 Medieval to Early Mod France (3 credits)

This course offers a cultural orientation to the French nation, focusing on the development of languages, ideas, art, architecture and social, political and economic structures within the geographical area sometimes identified as "The Hexagon," from the tenth century to the seventeenth.

Fulfills the GEP Art/Lit requirement.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 331 France: Enlightenment to Today (3 credits)

This course offers a cultural orientation to France and the francophone world, focusing on the evolution of ideas, artistic and literary movements, and political, social and economic structures, from the eighteenth century to the twenty-first. Fulfills the GEP Art/Lit requirement.

Prerequisites: FRE 301 or FRE 302

Attributes: European Studies Course, GEP Art/Literature, Undergraduate

FRE 351 French Canada (3 credits)

In this course, we will explore the culture, history, and literature of French-speaking Canada, concentrating specifically on Québec and Acadia.

By focusing on questions of language, heritage, and identity, students will examine what it means to be a Francophone in Canada, deepen their knowledge of the unique cultural contributions made by these communities, and enhance their understanding of the complex identities of French speakers in eastern Canada.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 352 Francophone America (3 credits)

In this course, we focus on the question of identity: What does it mean to be a part of a Francophone community in the United States? By exploring the culture, history, and literature of Louisiana and New England as well as the places where we see French influence in Philadelphia and at SJU, students will deepen their appreciation of the richness of Francophone communities in the United States and enhance their understanding of the challenges facing members of a group whose language and heritage sets them apart.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 366 Current Events in Fr-LangMedia (3 credits)

This course is intended to give students a better understanding of the contemporary French-speaking world and its cultures through analysis and discussion of current events covered in the Francophone news media, both in France and elsewhere. The course will develop listening and reading skills, as well as writing and speaking skills.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 370 Special Topics in French (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the French-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: Language Placement with a score of FR370

Attributes: Undergraduate

FRE 402 Advanced French Composition (3 credits)

This course will develop students' ability to communicate in written French by adding complexity and versatility to their writing skills. The course will guide students in a process-oriented approach to writing, seeking to increase their autonomy as writers and giving them writing and editing practice in a variety of genres.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate, Writing Intensive Course- GEP

FRE 403 Adv Convrsion: A Just Society (3 credits)

This conversation course focuses on current events and contemporary culture, paying particular attention to ethical thinking and the notion of fairness as a principle of social organization. Discussion of controversial topics will be an important aspect of students' work. The course will be informed by justice-focused ethical frameworks (Rawls, Nussbaum, Pope Francis). Participants will be asked to reflect on and to analyze issues as they are represented in television news reports, newspaper and magazine articles, popular songs, film and other media in French.

Prerequisites: FRE 301 or FRE 302

Attributes: Ethics Intensive, Undergraduate

FRE 409 Love and Hatred (3 credits)

Please see the course description for FRE 309. Students taking 409 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 409.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 410 The French Novel (3 credits)

Reading, discussion and analysis of novels from a period ranging from the 17th century to the present. The period(s) of study will be selected by the professor.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 412 Short Nar in Francophone Lit (3 credits)

Reading, discussion, and analysis of short stories and folktales from a variety of French-speaking areas, including Europe, North America, Africa, and the Caribbean. We will seek to define the genres and examine how their content and form change over time and by region, which will foster an understanding of how the tales reflect the culture(s) in which they were produced.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 413 French Poetry (3 credits)

A study of the various forms of French poetry with a particular emphasis on the evolution of the genre from Romanticism to Modernism.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 414 The French Essay (3 credits)

Reading, discussion, and analysis of selected works of representative essayists from the 16th to the 21st century, including Montaigne, Pascal, Diderot, Gide, Camus, Sartre, Barthes, Foucault, and Derrida.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 421 Love & Desire Med Fr Lit & Cul (3 credits)

Please see the description for FRE 321. Students taking FRE 421 will have additional readings and projects to complete. Students who have taken at least three 300-level courses should enroll in FRE 421.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 422 Fr Wom Writ of Mid Ages & Ren (3 credits)

Please see the description for FRE 322. Students taking 422 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 422.

Prerequisites: FRE 301 or FRE 302

Attributes: Diversity Course, Gender Studies Course, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

FRE 431 The French Enlightenment (3 credits)

Exploring the meaning of the French label for this period, "le siècle des Lumières," reading a variety of texts by major authors (including Voltaire, Rousseau and Diderot, among others) and discussing the major ideas and intellectual projects of the time are the principal activities of the course. Students will gain knowledge of the literature and the social and intellectual culture of this particularly important period in the history of ideas in the West.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 434 French Romanticism (3 credits)

A study of the origins of French Romanticism, its philosophical background, and its various forms of expression from Chateaubriand to Gerard de Nerval. Although principal emphasis will be placed on the study of the major genres, developments in music and the visual arts during the period will also be studied.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 451 Francophone Canada (3 credits)

Please see the description for FRE 351. Students taking 451 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 451.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 452 Francophone America (3 credits)

Please see the description for FRE 352. Students taking 452 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 452.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 461 Caribbean Francophone Liter (3 credits)

This course will teach students to read and appreciate contemporary francophone literature of Martinique, Guadeloupe and Haiti by familiarizing them with the colonial and post-colonial history of the region, its cultural richness and its literary modes. Students will read works in different genres by major authors of the French Caribbean.

Prerequisites: FRE 301 or FRE 302

Attributes: Africana Studies Course, GEP Art/Literature, Latin American Studies Course, Undergraduate

FRE 462 Contemptry Francophone Cinema (3 credits)

An intensive study of selected recent French-language films. The principal activities of the course will be the viewing, analysis, and discussion of a variety of cinematographic works dealing with important issues in the French-speaking world. The course is designed to increase familiarity with francophone cultures, to promote understanding of the film medium, and to improve general language skills, with a particular emphasis on listening and speaking.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 466 The Francophone Press (3 credits)

An introduction to the press of the French-speaking world. The work of the course may include library and internet research, extensive readings in French-language newspapers and magazines, viewings of television news, round-table discussions of current events and regular writing assignments. The course aims to familiarize students with the contemporary Francophone world and its information media. It is also designed to improve students' general language skills in French.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 470 Topics in French (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the French-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 471 Economic and Business French (3 credits)

An introduction to business notions and to social, economic and political problems in the francophone business world. The primary focus will be on France, although other French-speaking countries in Europe and elsewhere may also be covered. The course will emphasize the acquisition and use of fundamental economic and business concepts and vocabulary as tools for understanding the francophone business environment and communicating appropriately in a business setting.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 490 Internship (3 credits)**FRE 491 Internship (3 credits)****FRE 493 Independent Research in French (3 credits)****FRE 494 Independent Research in French (3 credits)****FRE 570 Special Topics in French (3 credits)**

The purpose of this course is to explore specific topics within the literatures and/or cultures of the French-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Restrictions: Enrollment is limited to Graduate level students.

German

GRM 101 Beginning German I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students who have limited experience with the German language. Fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of GR101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the German 102 Placement, German 201 Placement, German 202 Placement or German 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

GRM 102 Beginning German II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students who have limited experience with the German language. Fulfills the GEP non-native language requirement.

Prerequisites: GRM 101 or Language Placement with a score of GR102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the German 201 Placement, German 202 Placement or German 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

GRM 170 Special Topics in German (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRM 201 Intermediate German I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. A review of grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high/intermediate low level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: GRM 102 or Language Placement with a score of GR201

Restrictions: Students with the German 202 Placement or German 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

GRM 202 Intermediate German II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. A review of grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the intermediate low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. Prerequisite: Fulfills the GEP non-native language requirement.

Prerequisites: GRM 201 or Language Placement with a score of GR202

Restrictions: Students with the German 301 Placement attribute may **not** enroll.

Attributes: Undergraduate

GRM 270 Special Topics in German (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRM 301 German Conversation (3 credits)

This course is designed to help students improve their oral communication skills in German through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions, and tailoring the discourse to the audience and context. Fulfills the GEP non-native language requirement.

Prerequisites: GRM 202 or Language Placement with a score of GR301

Attributes: Undergraduate

GRM 303 From Bismark to Hitler (3 credits)

The period spanning 1871 to 1945 in Germany is a tumultuous period of transition in the country's history. This course is intended to deepen the students' knowledge of German history, literature, culture and politics. Readings, discussions and analysis both of a series of literary texts, as well as background readings on the time period. This course is taught in German.

Prerequisites: GRM 301 or Language Placement with a score of GR303

Attributes: GEP Art/Literature, Undergraduate

GRM 306 Advanced German Conv & Comp (3 credits)

The purpose of this course is to improve the student's oral and written command of German by further developing the four linguistic skills on an advanced level.

Restrictions: Enrollment is limited to students with a minor in German.

Attributes: Undergraduate

GRM 309 German Civilization & Culture (3 credits)

A survey of the culture and civilization of Germany and other German-speaking countries, their history, politics, economic and social aspects, art, and folklore through the reading of literary texts. Emphasis is placed on modern trends. Fulfills the GEP Art/Literature requirement.

Attributes: GEP Art/Literature, Undergraduate

GRM 310 Selections in German Lit I (3 credits)

An introduction to German literature with selected readings from the works of principal writers from various periods.

Prerequisites: GRM 301

Attributes: GEP Art/Literature, Undergraduate

GRM 320 Contemporary German Cinema (3 credits)

German Cinema as a mode of present-day artistic expression. Viewing and analysis of contemporary German movies by outstanding directors dealing with key issues in modern Germany.

Prerequisites: GRM 301

Attributes: GEP Art/Literature, Undergraduate

GRM 321 Getting to Know the Germ Media (3 credits)

The course will strengthen oral and written communication in German through discussion and analysis of the press, Deutsche Welle (German direct news broadcasts) using a variety of online news sources as well as German TV culture. The focus will be on contemporary culture and current events.

Prerequisites: GRM 301 or Language Placement with a score of GR321

Attributes: Undergraduate

GRM 330 German Business I (3 credits)

It is true that the world is increasingly more globalized, particularly with respect to business and economic issues. Therefore, it is essential, even for those not directly involved in the business world, to be familiar with its workings and language. Yet it is equally true, despite globalization, that linguistic, cultural and economic differences persist and play an important role in the business world. It is the aim of this course to offer students insights into Business German from a micro point of view.

Initially, we will have a general overview of the German economy, before embarking on a more detailed exploration of German business writing (cover letter, resumes, business correspondences), as well as common German business practices. Particular emphasis will be placed on vocabulary building. Prerequisite: GRM 301 or departmental approval.

Attributes: Undergraduate

GRM 370 Topics in German Culture (3 credits)

The course will survey the most significant aspects of German culture through time. It is designed to give a broad overview of important cultural movements and personalities. We will discuss the highlights of selected areas in the culture of the German-speaking countries: in art, architecture, literature, music, history, politics and science. In particular, we will study representative figures of these areas, especially those who have had an impact on European and world culture.

Attributes: Undergraduate

GRM 493 Independent Research (3 credits)

Italian

ITA 101 Beginning Italian I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students with no experience with the Italian language.

Prerequisites: Language Placement with a score of IT101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Italian 102 Placement, Italian 201 Placement, Italian 202 Placement or Italian 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

Restrictions: Students with the Italian 301 Placement attribute may **not** enroll.

Attributes: Undergraduate

ITA 206 The Roman Experience (3 credits)

This month-long, full-immersion course will improve students' command of Italian as it provides an enriching cultural experience. Students will discover what it means to live amidst ancient ruins, baroque basilicas, and artistic treasures as they navigate the eternal city. Through daily excursions and task-based activities students will acquire practical skills as they are immersed in Roman art, cuisine, culture and history. In particular, we will examine forces that have shaped the world we have inherited through units on the Jesuits in Rome. This course counts toward the minor and major in Italian, and for the major in Italian Studies.

Prerequisites: ITA 102

Attributes: GEP Art/Literature, Undergraduate

ITA 270 Special Topics in Italian (3 credits)

Topics will vary according to the semester in which the class is offered. Check the semester listing for current topic.

Attributes: Undergraduate

ITA 301 Italian Conversation (3 credits)

This course is designed to help students improve their oral communication skills in Italian through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions, and tailoring the discourse to the audience and context.

Prerequisites: ITA 202 or Language Placement with a score of IT301

Attributes: GEP Art/Literature, Undergraduate

ITA 302 Italian Composition (3 credits)

This course is designed to improve students' ability to communicate in written Italian and to develop the writing skills they will need to succeed in advanced Italian courses. Skills are developed through a process-oriented approach to writing, including steps related to vocabulary generation, organizing an outline, writing a draft, editing and revising, and writing a final version.

Prerequisites: (ITA 301 or Language Placement with a score of IT302) and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

ITA 303 Advanced Italian Conversation (3 credits)

The purpose of this course is to improve students' oral command of the language by means of an intensive practical presentation of the structures and stylistics of the language. We shall read both literary texts and short newspaper articles. Conducted in Italian.

Prerequisites: ITA 301

Attributes: Undergraduate

ITA 304 Advanced Italian Composition (3 credits)

The purpose of this course is to improve students' written command of the language by means of an intensive practical presentation of the structures and stylistics of the language. We shall read both literary texts and short newspaper articles. The course will be organized thematically around two main areas: issues in contemporary society and Roman literary and historical landscapes. Conducted in Italian. Prerequisite: ITA 301 or permission of the instructor.

Attributes: Undergraduate

ITA 306 The Roman Experience (3 credits)

The purpose of this course is to improve students' oral and written command of Italian through an intensive full-immersion presentation of the structures and stylistics of the language. The course is organized thematically around two main areas: issues in contemporary society and Roman literary, artistic and social landscapes. Students will read twentieth-century writers' appreciation of Rome, and newspaper articles on local cultural and social issues. While visiting sites described in the readings, interviewing the denizens on local issues, and observing the art and architecture that has left its imprint on western civilization as we know it, students will be asked to comment on their observations both in writing and in group conversation. They will acquire a very personal appreciation of the meraviglie di Roma and will formulate oral and written analyses on social, historical and artistic subjects. Conducted in Italian.

Prerequisites: ITA 301

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

ITA 309 I giovani e l'Italia di oggi (3 credits)

This course offers a unique perspective on contemporary Italy by placing the young generation at the center of study. Students will to improve their communication skills while exploring a variety of narratives - songs, short stories, film, music, poems and newspaper articles-written by, for, or about Italian culture; the course will therefore introduce the analytical tools necessary for literary and film analysis. Political engagement, school life, adolescence, and generational conflicts are among the themes we will discuss. Class activities will provide students the opportunity to express and debate their personal views, which will guide the development and refinement of oral and written proficiency. The expansion of vocabulary and the study of grammar will be incorporated in the discussion of the trends and habits of the young Italian generation. Requirements include a variety of presentations, role-play dialogues, and creative and collaborative projects. Conducted in Italian.

Prerequisites: ITA 301 and ITA 302

Attributes: GEP Art/Literature, Undergraduate

ITA 310 Italian Stylistics (3 credits)

This course introduces the fundamental principles and techniques of literary analysis in each of the major genres (lyric poetry, short story, theatre, epic poetry, novel), while presenting a sampling of masterpieces and authors from across the Italian literary tradition. By introducing students to the major writers and movements of Italian literature from the thirteenth through the twentieth centuries, we will examine the work of different styles and themes, with specific attention to historical and cultural frameworks. We will pay close attention to the vocabulary used in literary study, as well as to linguistic and stylistic difficulties in textual analysis.

Attributes: GEP Art/Literature, Undergraduate

ITA 315 Italy Through Art (3 credits)

In this language and culture course students refine their skills while learning about Italy through the medium of art. The approach encourages the development of a critical understanding of individual works by introducing students to the visual language of art. As a survey course, the subject content is chronologically wide ranging, extending from Magna Grecia to the Novecento, and includes a variety of media, including painting, sculpture and architecture. Among the artists covered are Cimabue, Giotto, Donatello, Masaccio, Piero della Francesca, Botticelli, Leonardo, Raffaello, Michelangelo, Cellini, Giorgione, Tiziano, Tintoretto, Caravaggio, Canaletto, Guardi, Canova, Modigliani, and De Chirico. By analyzing a variety of cultural artifacts, students will build vocabulary and use advanced grammatical structures. We will also read critical articles on art history and study the University's Art collection, which includes replicas of Michelangelo's most famous sculptures. The course is complemented visits to the Barnes Foundation and the Philadelphia Museum of Art. Conducted in Italian.

Prerequisites: ITA 202

Attributes: GEP Art/Literature, Undergraduate

ITA 320 Italian Through Film (3 credits)

Course aims to improve students' speaking and listening skills and their understanding of Italian culture by viewing and discussing Italian film. Conducted in Italian.

Attributes: Undergraduate

ITA 330 The Ita Bus Wrld & its Lang (3 credits)

This course explores the language and culture of the Italian business world at an intermediate-high to advanced level. Besides developing writing and speaking skills-such as writing c.v., business letters and job descriptions; practicing job interviews, business meetings and presentations-the course analyzes socio-economic issues such as the position of women in the work force, the globalization of the markets of the European Union, and business etiquette through the analysis of Italian articles, the internet and visual materials (TV and movies). Conducted in Italian.

Attributes: Diversity Course, Undergraduate

ITA 340 Italian Culture & Civilization (3 credits)

A survey of the culture of Italy, its geography, history, politics, outstanding personalities, arts, literature, economic and social problems, sciences, and education. Conducted in Italian.

Prerequisites: ITA 301

Attributes: GEP Art/Literature, Undergraduate

ITA 345 Art Fashion: la moda italiana (3 credits)

The goal of this course is to facilitate future educators in the teaching of foreign language and to allow those students, who are Education Majors and Minors, to fully comprehend how the multi-dimensional world of bilingualism plays and will continue to play a very important role in the future of this country. This course will examine the intricacies of acquiring a second language through the pedagogical years and into adulthood and will be taught in Italian. It will also examine the communication skills of Italian students learning English and of American students learning Italian. Emphasis shall be placed on the characteristics of interaction within the contexts that facilitate second language acquisition. Students will explore social, environmental and cultural differences and the roles they play in promoting or impeding L2 fluency and pronunciation. Theories and methodologies will be discussed, language classes observed and, eventually, students may have the possibility to teach specific grammar points in first year classrooms. Conducted in Italian.

Prerequisites: (ITA 301 and ITA 302) or (Language Placement with a score of IT345)

Attributes: GEP Art/Literature

ITA 350 Topics & Meth for Teaching Ita (3 credits)

The goal of this course is to facilitate future educators in the teaching of foreign language and to allow those students, who are Education Majors and Minors, to fully comprehend how the multi-dimensional world of bilingualism plays and will continue to play a very important role in the future of this country. This course will examine the intricacies of acquiring a second language through the pedagogical years and into adulthood and will be taught in Italian. It will also examine the communication skills of Italian students learning English and of American students learning Italian. Emphasis shall be placed on the characteristics of interaction within the contexts that facilitate second language acquisition. Students will explore social, environmental and cultural differences and the roles they play in promoting or impeding L2 fluency and pronunciation. Theories and methodologies will be discussed, language classes observed and, eventually, students may have the possibility to teach specific grammar points in first year classrooms. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT350

Attributes: Undergraduate

ITA 355 In Viaggio: Medioevo-Barocco (3 credits)

This interdisciplinary course focuses on the cultures of Medieval and Renaissance Italy and their enduring influence on contemporary Italian culture. As we examine the ways in which power and gender are reflected in cultural artifacts, we will study a variety of texts (including painting, sculpture, poetry and letters exchanged between friends and family members). These works allow us to trace the evolution of the concepts of sacred and profane love from the thirteenth to the sixteenth centuries. At the center of our inquiry are two issues central to early modern Italy: the self-fashioning of the subject and the structures and practices of power. Weekly themes—patronage and propaganda, the family, love and marriage, and women's roles in early modern society—will provide a frame for class discussion. Conducted in Italian.

Prerequisites: ITA 202

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ITA 356 In Viaggio: Barocco-Novecento (3 credits)

This language and culture course provides the tools to “travel” to the rich world of modern Italy and is designed to help students gain familiarity with Italian figures, art objects, cinematic texts, and literary works while developing and improving communication skills. The course focuses on interpretation and intercultural communication and showcases a sampling of culturally significant works. As we focus on the cultures of Baroque, Enlightenment, Risorgimento and Contemporary Italy, we will examine the ways in which power and gender are reflected in cultural artifacts and we will study the way in which art works and literary works have influenced Italian culture and western civilization.

Prerequisites: ITA 202

Attributes: GEP Art/Literature, Undergraduate

ITA 360 Modern Italian Culture (3 credits)

The purpose of this course is to study some of the principal characteristics of contemporary Italian culture. The course explores such topics as regionalism, the formation of a national language, the question of national identity, terrorism, the separatist movements, gender relations, feminism, and popular culture. It studies Italian cultural trends in Italy today, outlines their history over the last one hundred years, and explores the future of Italian culture and society. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT360

Attributes: GEP Art/Literature, Undergraduate

ITA 365 Italian Society and the Media (3 credits)

The goal of this course is to develop advanced-level oral/aural and reading/writing skills while addressing key aspects of contemporary Italian culture through the consideration of exclusively authentic materials, such as Italian newspaper and magazine articles, Italian TV broadcasting, and Italian internet sites. We shall also learn how to critique the written and visual Italian media, as well as how to navigate Italian websites. Students will choose readings and topics initially within a given list of categories and, later, among a virtually endless variety of internet sources. Among the topics we may address are: style, fashion and design; geography, art and tourism; the environment; immigration and racism; the position of young people and women in Italian society; current Italian and international events from an Italian perspective. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT365

Attributes: GEP Art/Literature, Undergraduate

ITA 370 Topics in Italian (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Italian-speaking world. Topics will vary according to the semester in which the class is offered. Check the semester listing for current topic.

Prerequisites: ITA 301 or Language Placement with a score of IT370

Attributes: Undergraduate

ITA 380 Ita Journeys from Marco Polo (3 credits)

This interdisciplinary course investigates Italy's dual role as the home of legendary travelers and the destination for tourists over the centuries.

Through a variety of texts-travel diaries, letters to kings and queens, maps, travel guides and film—we will explore the reality and metaphor of travel in the lives and works of pilgrims, poets, explorers and artists.

We will consider three historical periods: the age of discovery (ca. 1300-1600), the grand tour (ca. 1600-1800) and the age of global tourism (ca. 1800- present). The course concludes with a virtual tour of various regions of contemporary Italy. As a final project, students will author their own travel guide to the Italian city (or cities) of their choice. Recommended for students who wish to further their cultural and linguistic preparation before studying abroad, this content-based language course emphasizes the vocabulary and idiomatic expressions necessary for travel in Italy. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT380

Attributes: GEP Art/Literature, Undergraduate

ITA 401 Early Ita Cinema-Stage to Scrn (3 credits)

This course traces the birth and development of silent film, the transition to sound, and film under fascism, with emphasis on film's relationship to theatre, literature and social and cultural history. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT401

Attributes: Undergraduate

ITA 402 L'italiano al Cinema (3 credits)

This course investigates major films as both aesthetic and cultural objects. It will introduce major directors, movements, and genres in Italian cinema from World War II to the present. We will study both “film d'autore” (Visconti, De Sica, Fellini, Scola, Risi, Monicelli) and “nuovi registi” (Bellocchio, Giordana, Muccino). We will analyze typically Italian historical drama, “commedia all' italiana” and postmodern pastiche and explore contemporary social issues such as regional, ethnic and gender diversity. We will read literary sources, screenplays and film criticism. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT402

Attributes: GEP Art/Literature, Undergraduate

ITA 420 From Novel to Film (3 credits)

This course studies representations of Italian society from unification (1860) to the present in literary works and films. We shall consider films by contemporary Italian filmmakers (Visconti, Damiani, Rosi, Fratelli, Taviani), and the literary works on which they are based, including works by D'Annunzio, Pirandello, Levi, and Sciascia. While comparing cinematographic and literary techniques, we shall explore ideological and cultural currents, such as Romanticism, Risorgimento, Realism and Neo-realism. Topics discussed will include: the problems of unification; regionalism and separatism between industrial north and rural south; solitude and marginalization; the search for an identity. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT420

Attributes: GEP Art/Literature, Undergraduate

ITA 425 Art&Madman:Renaissance&Reform (3 credits)

What separates genius from madness? Is creativity inspiration or insanity? This interdisciplinary course examines tales of psychosis, violence and the making of artistic masterpieces. We will explore the lives and works of artists and poets, such as Sandro Botticelli, Leonardo Da Vinci, Michelangelo Buonarroti, Vittoria Colonna, Benvenuto Cellini, Galileo Galilei, Caravaggio and Artemisia Gentileschi. A variety of works [poetry, prose, painting and sculpture] will be studied against the backdrop of the crisis of the Italian Renaissance. We will look closely at Counterreformation intellectual debates, religious dissent and persecution. At the center of our inquiry is the figure of the artist-genius, madman, or both? This course will be complemented by guest speakers and a trip to the Philadelphia Museum of Art. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT425

Attributes: GEP Art/Literature

ITA 430 Images of Rome:Papi Rome - Pres (3 credits)

This course will interpret the symbolic and political importance of Rome in literary works and film. The course is organized historically: from the struggle over Rome within the Risorgimento movement to fascist and war-torn Rome; from the 50's Rome of reconstruction to the economic boom of the 1960's, to the socio-political problems of a new multicultural city in the 80's and 90's. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT430

Attributes: GEP Art/Literature, Undergraduate

ITA 435 Rebels and Revolutionaries (3 credits)

The course aspires to provide an understanding of the culture of Baroque, Enlightenment and Risorgimento Italy and of its influence on contemporary Italian culture (especially as regards definition of concepts of gender, language and national identity). It considers a variety of genres-novels, poems, essays and plays-in the context of ideological and cultural currents. Audio-visual materials (videos, movies, cd roms) will be used and a variety of subtexts and interdisciplinary relationships will be explored, especially with history, art and philosophy. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT435

Attributes: GEP Art/Literature, Undergraduate

ITA 440 Profane and Sacred Love (3 credits)

The course aspires to provide an understanding of the culture of Medieval and Renaissance Italy and of its influence on contemporary Italian culture. It focuses on how power and gender relationships are reflected in the literature-canzoni, sonetti, ballate, novelle. The works studied belong to the tradition of Courtly Love, Neo-Platonic love and the literature of the Renaissance courtesans and follows the evolution of concepts of sacred and profane love in Italian literature from the thirteenth to the sixteenth centuries. The course considers a variety of subtexts and interdisciplinary relationships especially with history and art history. Audio-visual materials (videos, movies, cd roms) will be used to bring home to the students the sights and sounds of this vibrant age. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT440

Attributes: GEP Art/Literature, Undergraduate

ITA 445 The Medici Court (3 credits)

For the Medici, art and propaganda went hand in hand. This interdisciplinary course investigates the city and family that nurtured artists and humanists [including Brunelleschi, Fra Angelico, Donatello, Botticelli, Poliziano and Michelangelo]. Tracing the rise and fall of the dynasty, we will consider how the Medici fashioned an enduring image of princely power through architecture and music. We will study a variety of texts, including painting, sculpture, poetry and intimate letters exchanged between family members. This course will be complemented by visiting the Medici Collection at the Philadelphia Museum of Art. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT445

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ITA 450 Italy in Age of Grand Tour (3 credits)

This course focuses on travel through Italy as an educational experience and cultural initiation and aims to improve students' reading, writing and speaking skills in Italian, while familiarizing them with culturally important sites and encouraging them to think critically about the notion of the Grand Tour. Conducted in Italian

Prerequisites: ITA 301 or Language Placement with a score of IT450

Attributes: Undergraduate

ITA 455 Women's Voices (3 credits)

We will investigate the relation between the emergence of a self-professed woman novelist and the changing ideologies concerning the moral and intellectual nature of women and their role in society. We will not only study the way prominent women intellectuals helped shape the debate on women's condition and on women's writing, but also their original contribution to the interpretation of twentieth century history (e.g. Fascism, the Resistance, the Second World War and the Holocaust). Among the literary theoretical issues we will encounter: the relationship of genre to gender, of gender to writing, and the role of gender values in historiographical representation. We shall read autobiographical and historical novels, as well as essays and non-fictional prose. The course will be complemented by a film and a lecture series. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT455

Attributes: GEP Art/Literature, Undergraduate

ITA 460 Dante, Petrarch, Boccaccio (3 credits)

This course explores intersections between the lives and the major works of the three "crowns" of Italian literature: Dante Alighieri [1265-1321], Francesco Petrarca [1304-1374] and Giovanni Boccaccio [1313-1375]. By reading selections from Dante's *Commedia*, Petrarch's *Canzoniere* and Boccaccio's *Decameron*, the course aims to contextualize and interpret the literary masterpieces that marked the end of the Middle Ages and the beginning of the Renaissance. We will touch on the social world in which the three crowns lived, highlighting the authors' conceptions of politics, theology, philosophy and the visual arts. Throughout the course, particular attention will be granted to the rivalries, friendships and collaborations that unite the three crowns of Florence. Conducted in Italian.

Prerequisites: ITA 301

Attributes: GEP Art/Literature, Undergraduate

ITA 465 Birth of a Nation:Risorgimento (3 credits)

This course encourages a critical approach to the study of Italian unification in its aesthetic, cultural, and political dimensions as well as their repercussions on present-day Italian society and culture. The making of Italians, as Massimo D'Azeglio famously put it, would engage the best Italian minds for the following 150 years. The divisions between North and South, between Church and State, between the government and the people were created or compounded by the making of Italy. The course studies the debate on Italian Unification and the development of an Italian identity in a variety of historical artistic and literary sources, including diaries, letters, treatises, paintings, sculptures, poems and short stories.

Prerequisites: ITA 301

Attributes: Undergraduate

ITA 470 Topics in Italian (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Italian-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic. Fulfills the GEP Art/Lit requirement..

Attributes: Undergraduate

ITA 490 Internship (3 credits)**ITA 491 Internship (3 credits)****ITA 493 Independent Research in ITA (3 credits)**

Concentrated focus on a selected topic in Italian. Topic and content vary from semester to semester.

Attributes: Undergraduate

Italian Studies

IST 115 Italy Through Art (3 credits)

Taught in English. Conducted in Rome, this course introduces students to the visual language of art, while providing an enriching cultural experience. The eternal city is an expansive, open-air museum where ancient and modern meet. Students will learn about Rome's artistic heritage while living amidst ancient ruins, baroque basilicas and contemporary monuments. As we view art objects first-hand, we will explore the making and meaning of Italian art, by addressing methodological issues including form and function, style, materials and technique. We begin with a consideration of ancient Rome, through direct experience with monuments that have survived centuries. Next, we explore the early developments of Christianity by visiting Roman basilicas and churches. Our excursion to Tuscany focuses on Renaissance humanism and Medici patronage. Upon return to Rome we examine Baroque masterpieces adorning Roman piazzas and churches. We conclude with art and architecture of the period after 1870, when Rome became the capital of Italy. The course is complemented by guest lectures and site visits to Roman museums, churches and palaces, as well as excursions to Assisi, Florence, Pompeii and Sorrento. Counts toward the major and minor in art history, the Italian Studies major, the major and minor in Classical Studies, and the minor in Medieval, Renaissance, Reformation Studies.

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

IST 150 Ital Cinema-Neoreal to Present (3 credits)

This course investigates major Italian films as both aesthetic and cultural objects. It offers an introduction to Italian cinema from the 1940's to the Present, and also to Italian social and cultural history of that time. It introduces major directors, movements, and genres in Italian cinema, focusing on movies that not only are influential masterpieces, but also offer incisive interpretations of their cultural and social milieus, including regional, ethnic and religious diversity; gender diversity; social tensions and class issues. Visconti, De Sica, Fellini, Scola, Bellocchio, Giordana are among the directors we study.

Attributes: First-Year Seminar, GEP Art/Literature, Undergraduate

IST 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

IST 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

IST 350 Mangia! Flavors of Italy (3 credits)

The expression "Mangia, mangia!" is commonly associated with American stereotypes of Italians. But is the perceived Italian love of food the same in the United States and in Italy? Is it an issue of quantity or quality? Of socio-economics, politics, or education? Is it global, local or both? In this interdisciplinary course, we will explore the role of food in Italian culture and in the shaping of Italian identity, in Italy and abroad. We will trace its evolution through a variety of texts: literature, works of art, music, and film, as well as family recipes. Guest lectures made by Italian chefs in Philadelphia, food tastings, and a visit to the Italian Market, will enrich the course.

IST 360 Italian Identities (3 credits)

In this course, taught in English, we will explore the complex nature of Italian Identities, focusing on race, sex and gender roles, religion, food, art and science. Does not count toward a minor in Italian. Counts towards a major in Italian Studies and it may count toward the major in Italian, with permission of the Chair of Modern and Classical Languages.

Attributes: GEP Art/Literature, Undergraduate

IST 370 Topics in Italian Studies (3 credits)

The purpose of this course is to explore specific topics within the Italian-Speaking World. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic. Classes are taught in English.

Attributes: GEP Art/Literature, Undergraduate

IST 375 Shadow State: Mafia in Italy (3 credits)

This course explores the nature of organized crime in Italy, its origins, its economic aspects, its connection with politics, its reality beyond stereotypes, and finally, the way it is portrayed in Italian Arts and literature. No pre-requisites required. Does not count toward a minor in Italian. May count toward the major, with permission of the Chair of Modern and Classical Languages.

Attributes: GEP Art/Literature, Undergraduate

IST 420 Italian Cinema and the Sacred (3 credits)

Italian culture has been widely influenced by the sacred and many intellectuals have used the Bible as source of inspiration. In this course, we will analyze how Italian filmmakers have approached the dimension of the sacred and how they have depicted it in their movies. We will explore a range of directors from 1940's Neorealism to the present in order to understand how the relationship with the sacred has evolved over time. Throughout our analyses, we will engage in dialogue with selected Italian writers in order to see how they have approached the sacred. The course also considers the role of Jesuits in Italian society through the study of a film set in a Jesuit monastery in contemporary Venice.

Attributes: GEP Art/Literature, Undergraduate

IST 460 The Art of Dante's Inferno (3 credits)

This course offers an interdisciplinary reading of Dante's Inferno from the perspectives of the history of art, music and cinema. Primary sources from across the arts span seven centuries of reception, and include a variety of interpretations. As we examine the interaction between Dante's poem and other forms of art, we will consider the ways in which those works shape interpretations of one of the greatest works of world culture. Throughout the course students will connect the poem's ethics to contemporary society. We will study the moral philosophy underpinning the Inferno and examine Dante's understanding of the 'Seven Deadly Sins' and the law of contrapasso. In considering Dante's ethics of punishment we will reflect upon the ways in which artists have depicted judgment and retribution in their interpretations and responses. Guest lectures and site visits will complement the course. Counts toward the major/minor in Art History.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

Japanese

JPN 101 Beginning Japanese I (4 credits)

Proficiency-based instruction will encourage the development of speaking and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students with no experience with the Japanese language.

Prerequisites: Language Placement with a score of JP101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Asian Studies Course, Undergraduate

JPN 102 Beginning Japanese II (4 credits)

Proficiency-based instruction will encourage the development of speaking and listening comprehension, with some focus on understanding Japanese characters. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid level according to ACTFL - American Council on the Teaching of Foreign Languages.

Prerequisites: JPN 101 or Language Placement with a score of JP102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Asian Studies Course, Undergraduate

JPN 170 Special Topics in Japanese (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

JPN 201 Intermediate Japanese I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high/intermediate low level according to ACTFL - American Council on the Teaching of Foreign Languages.

Prerequisites: JPN 102 or Language Placement with a score of JP201

Attributes: Asian Studies Course, Undergraduate

JPN 202 Intermediate Japanese II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the intermediate low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages.

Spanish

SPA 101 Beginning Spanish I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is reserved for beginning students with no experience with the Spanish language. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of SP101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Spanish 102 Placement, Spanish 201

Placement, Spanish 202 Placement or Spanish 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

SPA 102 Beginning Spanish II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 101 or Language Placement with a score of SP102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Spanish 201 Placement, Spanish 202

Placement or Spanish 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

SPA 111 Adult Learner Beginning SPA I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is reserved for PLS students with no experience with the Spanish language. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

SPA 112 Adult Learner Beginning SPA II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is reserved for PLS students with no experience with the Spanish language. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 111 or SPA 101

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

SPA 170 Special Topics in Spanish (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

SPA 201 Intermediate Spanish I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 102 or Language Placement with a score of SP201

Restrictions: Students with the Spanish 202 Placement or Spanish 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

SPA 202 Intermediate Spanish II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar, pronunciation, and writing will accompany active student participation in task-oriented group work in the classroom. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement. With some limitations, this course may count toward the Latin American Studies minor.

Prerequisites: SPA 201 or Language Placement with a score of SP202

Restrictions: Students with the Spanish 301 Placement attribute may **not** enroll.

Attributes: Latin American Studies Course, Undergraduate

SPA 210 Intermediate Spanish I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in classroom. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 102 or SPA 112

Restrictions: Enrollment is limited to PLS/HDC level students.

SPA 270 Special Topics in Spanish (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

SPA 301 Spanish Conversation (3 credits)

This course is designed to help students improve their oral communication skills in Spanish through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement. With some limitations, this course may count toward the Latin American Studies minor.

Prerequisites: SPA 202 or Language Placement with a score of SP301

Attributes: Latin American Studies Course, Undergraduate

SPA 302 Spanish Composition (3 credits)

This course is designed to improve students' ability to communicate in written Spanish and to develop the writing skills they will need to succeed in advanced Spanish courses. Skills are developed through a process-oriented approach to writing, including steps related to vocabulary generation, organizing an outline, writing a draft, editing and revising, and writing a final version. This course is not open to native or heritage speakers of Spanish. With some limitations, this course may count toward the Latin American Studies minor.

Prerequisites: (SPA 301 or Language Placement with a score of SP302) and ENG 101

Attributes: Latin American Studies Course, Undergraduate, Writing Intensive Course- GEP

SPA 303 Spanish for Heritage Speakers (3 credits)

This course is designed for students with familial connections to Spanish and therefore is open only to heritage speakers. The course aims to build vocabulary and will develop oral and writing skills through the study of culture and topics of current interest from the United States and throughout the Spanish-speaking world. This course may count toward the Latin American and Latinx Studies minor.

Prerequisites: Language Placement with a score of SP303

Attributes: Latin American Studies Course, Undergraduate

SPA 310 Intro to Latin American Lit (3 credits)

The purpose of this course is to introduce students to the reading and discussion of literature in Spanish. We will read selections in prose and verse from a variety of Spanish-speaking countries in Latin America. We will interpret works in terms of their literary attributes and in relation to the sociocultural and historical contexts in which they were created. Through these readings we will not only come to know others' cultures and experiences, but will also contemplate some of the universal themes and struggles that unite us. The language of instruction is Spanish. This course counts toward the major and minor in Spanish and the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP310

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 311 Intro to Spanish Literature (3 credits)

This course introduces students to major literary works and also "non-canonical" texts of Spain's literature. Through a representative sampling of short stories, poems, essays, and plays, students are introduced to the analysis of the principal literary movements from medieval times to contemporary Spain. The course also examines non-canonical genres like comic, graphic novel, and flash fiction.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 315 Animals in Literature (3 credits)

This course studies how animals are represented in twentieth-century Latin American literature. Students will analyze some of the works of the most representative Latin American authors, for instance, Horacio Quiroga, Leopoldo Lugones, Rubén Darío, and Luis Sepúlveda. The readings of these texts will focus on topics addressed by animal ethics, such as nonhuman sentience, idealization and objectification of animals, animal exploitation, relationships between human and nonhuman animals, and care for the animal species. Through the study of these topics, students will also analyze how these writers directly or indirectly have advocated animal conservation.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 320 Cur Evnts in the Sp-Lang Media (3 credits)

Students will develop communication skills in Spanish as they research and discuss current events and issues in Latin America as reported in Spanish-language news media. Students will research in a variety of online news outlets publishing in text, audio and video. The reading and discussion will be driven largely by students' areas of interest and may venture into a wide range of areas, such as health, ecology and the environment, social issues, international and domestic politics, culture, business, economics, science and/or technology. Students will also follow issues suggested by their classmates and instructor. Through class discussion and written and oral reflection, students will develop critical thinking skills: analyzing source material, comparing differing perspectives, and situating the issues discussed within a broader context. Students will also conduct research to deepen their understanding of a current issue of their choosing, as it relates to Latin America. The class will discuss vocabulary and language structures as they arise in daily readings and discussions, and students will keep glossaries of new vocabulary. The primary objective of this course is to help students advance their Spanish language proficiency while learning about the Spanish-speaking world. The language of instruction is Spanish. This course counts toward the major and minor in Spanish and the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303

Attributes: Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 321 Visions of the Nat Wld Lat Am (3 credits)

In this course students consider diverse perspectives on the natural environment in Latin America as expressed in a variety of genres including narrative fiction, poetry, myth, songs, visual art, film and news media. All source material is from Latin America and reflects a variety of perspectives from within the region. The primary goal of the course is to challenge ourselves to see the environment through multiple and diverse lenses so as to appreciate its complex significance for others and for ourselves. Students in this course will broaden their knowledge of the region's topography and natural resources, as well as Spanish vocabulary to describe nature, natural resources, and various economic and cultural activities related to them. They will conduct research and share their findings with the class. The language of instruction is Spanish. This course counts toward the major and minor in Spanish and the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 330 Spanish for Business (3 credits)

This course will acquaint the student with business terminology and phraseology used in Spain and Latin America. Business letters will be composed and answered in Spanish. Special information on such fields as advertising, foreign trade, transportation, money, banking, and finance will be presented and studied in Spanish. Problems of grammar and style will be studied as the need arises.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 331 Span for Internatnl Business (3 credits)

This course is principally for students who are majoring in the Haub School of Business. This class will assist students in a career in Business or International Relations. Comparisons will be made among the business practices of different Spanish speaking countries. All activities will be in Spanish.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 335 SPA for Medical Professions I (3 credits)

Spanish for Medical Professions I is a course designed to help intermediate-level students gain Spanish language proficiency and cultural competencies that will facilitate their future interactions with Spanish speakers in situations related to health care. The course aims to increase students' healthcare-related vocabulary, communication skills, health literacy, and cultural competence. Students will practice oral communication through role-plays, presentations, and class discussions. They will read, write, and speak about a variety of healthcare-related topics.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 336 SPA for Medical Professions II (3 credits)

Spanish for Medical Professions II is a course designed to help mid-intermediate-level students continue developing Spanish language proficiency and cultural competencies to facilitate future interactions with Spanish-speakers in situations related to health care. Students will continue developing their knowledge of the human body and its afflictions (cardiovascular, endocrine, and nervous systems) as well as reproductive and mental health. In combination with these topics, this course will focus on current issues of public health such as an introduction to the linguistic policies in the US healthcare system and their effects on Latinx communities, access to healthcare for LGBTQ communities, and an overview of the evolutions of stigmas and taboos surrounding mental illnesses. The course aims to increase students' healthcare-related vocabulary, communication skills, health literacy, and cultural competence. Students will practice oral communication through role-plays, presentations, and class discussions. They will also read, write, and speak about a variety of healthcare-related topics. SPA 335 and 336 are two independent courses. Students do not need to complete SPA 335 in order to enroll and succeed in SPA 336.

Prerequisites: SPA 302 or SPA 303 or SPA 335

Attributes: Undergraduate

SPA 350 Intro to Latin Amer Cultures (3 credits)

The purpose of this course is to orient students to the diverse peoples and places of Latin America. Students will use Spanish to discuss the geography, history, politics and cultures of the region. Some attention will be paid to current issues in Latin America, as reported in online news sources from the region.

Prerequisites: SPA 302 (may be taken concurrently) or SPA 303 (may be taken concurrently) or Language Placement with a score of SP350

Attributes: Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 351 Introd to Spanish Cultures (3 credits)

The purpose of this course is to orient students to Spain's rich and diverse cultural heritage, varied terrain and dynamic history. Students will also discuss current issues and events, as reported in Spanish online news sources. Students may not count both 351 and 356 for credit toward a Spanish major or minor. Both may be taken but only one may count for major/minor credit. The other may count for elective credit, and SPA 356 can satisfy the GEP Art/Lit requirement.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP351

Attributes: Undergraduate

SPA 352 (Post)Modern City in Spain (3 credits)

Cities are the stage of social and political changes at the same time that events transform urban space. On occasion, alterations are sudden and traumatic, such as the devastation and reconstruction after a war. However, transformations are most often caused by economic and social factors that are subtle and happen over a long period of time. For these reasons, cities have captivated the imagination of writers and filmmakers alike. This course examines representations of Spanish cities from the nineteenth to the early twenty-first century. The course will focus on different periods of Spain's history in which cities underwent relevant transformation.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 353 Latin American Cinema (3 credits)

This course examines some of the historical debates, social issues and cultural currents of Latin America in the twentieth and twenty first centuries through some of its more relevant films. The course covers a variety of historical periods and nations to offer a general understanding of the region. This course counts toward the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 356 Spain:Study Tour (3 credits)

Spain is one of the most dynamic countries in Europe today. It's a mixture of the old and new. Some of the major influences of the ancient and contemporary worlds will be studied through history, literature, film, art, architecture, regional languages, politics, economic development and music. The highlight of the course is the experience in Spain itself. Students may not count both 351 and 356 for credit toward a Spanish major or minor. Both may be taken but only one may count for major/minor credit. The other may count for elective credit.

Prerequisites: SPA 301 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 357 Spain in the New Millenium (3 credits)

After several years of unprecedented economic expansion between 1995 and 2007, in which Spain became the seventh largest economy in the world, the 2008 economic crisis eroded that prosperity and changed the social structure of the country. While the economic growth and historic low unemployment drew a wave of immigrants who transformed Spain into a more multicultural society, the crisis truncated the future of an entire generation and initiated the rise of populism. Some questions that articulate the topics discussed are: What does it mean to be a Spaniard? Is there more than one Spanish identity? These questions will guide us to deepen our understanding of political and sociological issues in Spain during the last twenty years. Some of the topics discussed will deal with how soccer can construct a national identity; "peripheral" nationalism as in the case of Catalonia and the Basque Country bids for independence; the issue of immigration and how it has influenced Spanish society; and the rise of populism. These topics may change as the issues that affect Spain evolve.

Prerequisites: Language Placement with a score of SP357 or SPA 302 or SPA 303

Attributes: Undergraduate

SPA 358 Spanish for Medical Profession (3 credits)

Spanish for Medical Professions is a course designed to help intermediate-level students gain Spanish language proficiency and cultural competencies that will facilitate their future interactions with Spanish speakers in situations related to health care. The course aims to increase students' healthcare-related vocabulary, communication skills, health literacy, and cultural competence. Students will practice oral communication through role-plays, presentations, and class discussions. They will read, write, and speak about a variety of healthcare-related topics.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 360 Spanish in the Community (3 credits)

This service-learning course focuses on cultural, social, historical, linguistic, and political issues relevant to Latin communities in Philadelphia. The course is designed to promote solidarity with Latinos, learn about cultural norms and values, reflect on issues of social justice prevalent in these communities, and develop oral and written proficiency in Spanish. Class materials include both written and community texts, presentations, film and news media. Active participation in both the community and the classroom are key components of the course. In addition to classes on campus, each student will carry out three hours per week of work at a designated service placement site in a Latin community in or near Philadelphia. This class focuses on learning how to "read the texts" of your service experience, how to read the texts of concepts and theories and how to make connections between the two.

Prerequisites: SPA 302 or SPA 303

Attributes: Faith Justice Course, Latin American Studies Course, Service Learning Course, Undergraduate

SPA 370 Topics in Spanish (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Spanish-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP370

Attributes: Undergraduate

SPA 375 Translation (3 credits)

This course aims to help students deepen their understanding of the Spanish language and to broaden their vocabulary through the practice of translation. We will consider a range of discursive, lexical and syntactic topics and will translate a variety of texts (fiction and non-fiction, of different registers and for various purposes). Students will translate from Spanish to English and from English to Spanish. Class discussions will be held in both languages, as determined by the task at hand. Open to non-native, native, and heritage speakers of Spanish. This course counts for the Linguistics major/minor.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP375

Attributes: Undergraduate

SPA 380 Intro to Spanish Linguistics (3 credits)

This course is an introduction to the study of language and principles of Spanish linguistics including: the sound system (phonetics and phonology), the formation of words (morphology), sentence structure (syntax), as well as word and sentence meaning (semantics); in addition, we will discuss linguistic change throughout time (historical linguistics), linguistic variation in geographical space (dialectology) and within society (sociolinguistics), language use for communication (pragmatics), language learning (second language acquisition), and language teaching (pedagogy and applied linguistics). This course counts for the Linguistics major/minor.

Prerequisites: SPA 301 or SPA 303 or Language Placement with a score of SP380

Attributes: Undergraduate

SPA 381 Spanish Phonetics & Phonology (3 credits)

This course focuses on specific sounds of Spanish as well as the underlying sound system that determines how and where these sounds are distributed in the language. The course includes theoretical concepts related to phonetics and phonology, as well as a particular emphasis on phonetic aspects that are typically challenging for those who speak Spanish as a second language. Students will examine sounds spoken by both native and non-native speakers of Spanish, as well as an introduction to how sounds vary across dialects due to linguistic and extralinguistic factors.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 401 Topics in Latin Am Cultures (3 credits)

This course is a focused study of select aspects of Latin American cultures. It is designed to help students build a framework for understanding some of the geographical, historical, social, and political circumstances that have shaped Latin American realities and cultural manifestations. The course will take a thematic approach, and topics will vary. It would be helpful though not required that the student have some kind of introduction to Latin America prior to or concurrent with this course.

Prerequisites: SPA 302 or SPA 303

Attributes: Non-Western Studies (GEP), Undergraduate

SPA 402 Topics in Spanish Cultures (3 credits)

This course provides an in-depth look at select aspects of Spanish cultures and civilization. It also provides a framework for understanding these cultural manifestations within their geographical, historical, political and social contexts. The course will take a thematic approach, and topics will vary. It would be helpful though not required that the student have some kind of introduction to Spain prior to or concurrent with this course.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 415 Iconic Women of Latin America (3 credits)

In this course, we study representations of iconic women from various countries and historical periods in Latin America. We analyze salient aspects of literary, cinematic, and artistic works that have helped shape and nuance their evolving legends. We also describe the mutual relationships between these representations and their historical, political and cultural contexts: both those in which they emerged and those that they have helped shape. We discuss the ways in which these representations reflect and at times challenge gender norms and stereotypes. The primary objective of this course is for students to use increasingly advanced written and spoken Spanish to deepen their understanding of Latin American cultures. The language of instruction is Spanish. This course counts toward the major and minor in Spanish, the Latin American and Latinx Studies minor and the Gender Studies minor.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: Diversity Course, Gender Studies Course, Latin American Studies Course, Undergraduate

SPA 420 Major Latin American Authors (3 credits)

An in-depth study of selected texts by major authors in different genres, such as (poetry, fiction, essay, and/or theater,) with special emphasis on the interrelationship of genre, form, and content. This course counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) or Language Placement with a score of SP420

Attributes: GEP Art/Literature, Undergraduate

SPA 422 Culture and Dictatorship (3 credits)

In this course we approach the topic of dictatorships in Latin America through a variety of genres, including works of fiction and non-fiction, testimonies and memoir, film and visual art. We discuss the ways in which these cultural texts register and articulate social and ideological struggles in relation to the broader historical and cultural context. This course counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) or (Language Placement with a score of SP422)

Attributes: GEP Art/Literature, Latin American Studies Course, Undergraduate

SPA 423 Latin Am Short Story (3 credits)

In this course students conduct close readings of short stories and/or nouvelle by Latin American authors. We analyze the stories within their cultural, historical and ideological frameworks. Counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Undergraduate

SPA 425 Imagery of the Conquest (3 credits)

Most official histories of early contact between Europeans and Amerindians in Latin America will present a Eurocentric version of American reality. This course will explore Amerindian and mestizo perspectives as expressed through a variety of texts, such as narrative, poetry and song, illustrations and painting, maps, uprisings, and other forms of expression. The objective is to better understand pre-Colombian civilizations and the effects of European colonization on Amerindian cultures. The course will analyze how Amerindian and mestizo subjects authorize their voices, represent their own unique identities, and respond to the cultural changes brought about through conquest and colonization. It would be helpful though not required that the student have some kind of introduction to Latin America prior to or concurrent with this course.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 426 Culture in Revolution (3 credits)

In this course students will become familiar with three main milestones of Latin American history and culture in the 20th century: the Mexican, Cuban and Nicaraguan Revolutions. Beginning with a discussion of the concept of "revolution" and a brief historical introduction to these periods, we will discuss cultural policies of the new regimes, including the literacy campaigns derived from those policies. Students will also become familiar with the different cultural manifestations of those periods, including literature, visual arts, and popular music. Counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Undergraduate

SPA 428 Rainforest: A Literary Journey (3 credits)

This course explores Las narrativas de la selva, a set of Latin American texts written during the 20th century that deal with stories of failure by modern, urban, male subjects who escape the city to fulfill in the Amazon rainforest their dreams of freedom, self-realization, and financial independence. Over time, the rainforest has been represented in a variety of forms: from the image of a paradise to that of an inferno, to that of a benevolent shelter. Throughout those representations, Latin American writers have brought into question notions of national identity, sovereignty, economic development, care for the environment, among others. The primary goal of this course is to introduce students to referential and theoretical texts about Latin American narrativas de la selva. Through them, students will reflect on the following questions: What are the most recurrent representations of the rainforest in this narrative production? What environmental problems are problematized in these texts? What role do the indigenous people play in these narratives? What kind of relationships between human communities and the rainforest are represented in these stories?

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 431 Commonplaces of Colonial Exp (3 credits)

In this course students think about how various spaces became places through human experience in Colonial Spanish America. They engage in reflective discussion about the physical conditions, value systems, beliefs and politics that created such places and, in some cases, have changed their meaning over time. They explore the dynamics of spaces endowed with different values by different peoples at different times. Through these discussions students think about some commonplaces of colonial experience, as well as the experience of colonial legacies and colonial places in the 21st century. It would be helpful though not required that the student have some kind of introduction to Latin America prior to or concurrent with this course.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 451 Narrative & Film of Dem Spain (3 credits)

This course examines narrative and film in Spain from the demise of the Franco dictatorship (1975) until today. In doing so, the course focuses on cultural and aesthetic renovations such as the cinema of Pedro Almodovar in the "movida madrileña" and the new representations of Spanish youth in the 1990s with the "generación Kronen." This course also analyzes additional approaches for understanding Spanish culture through the social cinema of Fernando León de Aranoa, and the role of Franco's traumatic dictatorship in today's society. Finally, we will examine the current socioeconomic crisis in Spanish society and how it affects younger generations.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) and PHL 154

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

SPA 452 History on the Big Screen (3 credits)

This course examines Spain's history and culture through the analysis of historical films. The course begins with a brief introduction to the concept of History and a definition of historical cinema. After this introduction, the class will focus on some key historical periods of Spanish history such as the Conquest of America; the rise and decay of the Spanish Empire; the Spanish Civil War, Franco dictatorship, and the transition to democracy. In addition to introducing students to key moments and aspects of Spanish history and culture, this course invites students to think critically about History's objectivity and how historical events are often shaped to satisfy current political projects. Other underlying issues will be reflecting on whether film may be considered History or not.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Undergraduate

SPA 453 Comics and Graphic Novels (3 credits)

This course will examine the evolution of comics (usually referred to as "tebeos") in Spain from the Spanish Civil War (1936-1939) to the present. During Francisco Franco's dictatorship, this genre was heavily influenced by the Fascist ideology of the government. On the one hand, some editorials sympathized with the government and used their publications to spread an ultra-conservative ideology. On the other hand, some artists circumvented censorship by drawing harmless comical stories that, in fact, were a critical portrayal of the miseries of the post-war era. After Franco's death in 1975, comics were free of censorship and became a space of transgression to express the political, religious, and sexual liberation of the late 1970s and early 1980s. In the early 2000s, graphic novels became more accepted by the public and received deserved recognition by critics. In the second part of the semester, we will analyze graphic novels that deal with social and political issues within an ethical framework.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) and PHL 154

Attributes: Ethics Intensive, Undergraduate

SPA 460 Advanced Oral Communication (3 credits)

In this course, we will analyze communication from a linguistic perspective and also focus on the development of advanced oral communication skills. Drawing on current research in the field of linguistics (including discourse analysis, cross-cultural communication, semantics, pragmatics, etc.) we will explore various aspects of "communication" as well as study methods used to investigate oral communication. Significant class time will also be devoted to the continued development of students' own communicative competence and oral language proficiency. Students will engage in activities aimed at developing their interpersonal and presentational communicative skills. This course will be beneficial to students who are majoring or minoring in Spanish as well as those who plan to use Spanish for personal or professional reasons outside the classroom. Because of its emphasis on communication skills for non-native speakers, this course is not open to native speakers of Spanish. This course also counts for a Linguistics minor.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 461 Methods for Teaching Spanish (3 credits)

This course is designed for students who are potentially interested in teaching Spanish at the university, secondary or elementary levels. We will explore general aspects of Spanish phonology, morphology, syntax, and semantics as they bear upon teaching the Spanish language. Topics discussed include second language acquisition, pedagogical theory, materials preparation and language teaching methodology. This course also counts for a Linguistics minor.

Prerequisites: SPA 380 and (SPA 302 or SPA 303)

Attributes: Undergraduate

SPA 466 Spanish Dialectology (3 credits)

In this course, students will become familiar with the range of dialect features exhibited in the Spanish spoken in Spain, Latin America, and the United States. We will also discuss the relationship between language and dialect, examine the role of the standard language in both written and oral usage, and identify the factors that have contributed to the diversity of the Spanish language. This course also counts for the Linguistics major/minor and for Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) or Language Placement with a score of SP466

Attributes: Undergraduate

SPA 467 Lang Contact & Pol in U.S. (3 credits)

This course is designed to engage students in a critical analysis of the history and politics of language contact within the context of the United States. Given the demographic shifts in population taking place currently in the U.S., the course will focus primarily on the contact between Spanish and English. We will discuss bilingualism and the characteristics of language contact, language ideologies, language planning and policy, Official English movements, and bilingual education. We will examine the language of hegemony used to maintain the dominance of English vis-a-vis Spanish (and other languages) present in our society. We will also do some comparative study connecting this reality to what is happening with Spanish in other situations of language contact. This course counts for the Linguistics major/minor.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: Diversity Course, Latin American Studies Course, Undergraduate

SPA 470 Topics in Spanish (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Spanish-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: Language Placement with a score of SP470

Attributes: Undergraduate

SPA 480 Topics in Spanish Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics as they relate to the Spanish language. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic. This course also counts for the Linguistics major/minor.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 490 Spanish Internship I (3 credits)

This course is a practicum in which the student applies his/her communication skills in Spanish in a work environment related to his/her professional area. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon his/her experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on his/her internship experience. This course is intended as an advanced course for Spanish majors or minors who have completed the other course requirements for the major or minor.

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

SPA 491 Spanish Internship II (3 credits)

This course is a practicum in which the student applies his/her communication skills in Spanish in a work environment related to his/her professional area. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon his/her experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on his/her internship experience. This course is intended as an advanced course for Spanish majors or minors who have completed the other course requirements for the major or minor.

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

SPA 493 Independent Research in Span I (3 credits)

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

SPA 494 Independent Research in Spn II (3 credits)

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

Chinese Language and Culture Minor Requirements

Code	Title	Hours
CHN 102	Beginning Chinese II	4
CHN 201	Intermediate Chinese I	3
CHN 202	Intermediate Chinese II	3
CHN 301	Chinese Conv and Comp I (and higher)	3
CHN 302	Chinese Conv and Comp II	3
One course in Chinese culture, which may be taken in English, from a pre-approved list.		3
Total Hours		19

Francophone Studies Major

Learning Goals and Outcomes

Goal 1. Have a nuanced understanding of the Francophone world as a whole, viewed through multiple disciplinary perspectives.

Outcome 1.1: Students will be able to display knowledge of the formal structures of La Francophonie.

Outcome 1.2: Students will demonstrate an ability to apply theoretical frameworks, intellectual standards or analytical techniques from at least two distinct disciplines to issues in the Francophone world.

Goal 2. Have an understanding of the colonial and postcolonial history of France and at least one other region in the Francophone world.

Outcome 2.1: Students will be able to speak in general terms about the historical background and the postcolonial evolution of metropolitan France and at least one other French-speaking region of the world.

Outcome 2.2: Students will demonstrate an ability to speak and write knowledgeably about colonial and postcolonial relations between at least one major Francophone region and metropolitan France.

Goal 3. Have an understanding of one significant culture of a major Francophone region, including its relations with mainstream French language and cultural traditions.

Outcome 3.1: Students will demonstrate an ability to speak knowledgeably about one significant Francophone culture outside of France.

Outcome 3.2: Students will be able to explain the cultural relations of at least one Francophone region with France.

Goal 4. Be able to use French effectively as a vehicle for communication.

Outcome 4.1: Students will demonstrate that they can narrate and describe in spoken French with few major errors.

Outcome 4.2: Students will demonstrate that they can compose substantive written texts in French with few major errors.

Outcome 4.3: Students will be able to pursue research, gather data, do analysis and report results and conclusions by using French as a tool of investigation and as a means of communication.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

GEP Electives

A varying number of courses, typically nine to twelve.

Major Requirements

The Francophone Studies major is an interdisciplinary program designed for students interested in the language, literature and culture of France, but also the art, history, philosophy and political systems of the wider French-speaking world. The major is also appropriate for students interested in multiple academic disciplines and cross-discipline perspectives. The Francophone Studies major requires 10 courses

Code	Title	Hours
FRE 315	Comp Stylistics & Translation (or a substitute course in French/Francophone culture/civilization)	3
Minimum of four (4) additional courses in French language, culture or literature, of which two will be at the level FRE 301-FRE 315 and two will be at the level FRE 321 or higher.		12
Five (5) courses (may be in English) and will be chosen from at least two of the three categories listed below:		15
Culture and Society		
REL 271	African & Caribbean Religions	
Historical and Political Frameworks		
HIS 327	Early Modern Europe 1400-1800	
HIS 343	African Ethnicities	
POL 113	Intro to Comparative Politics	
POL 115	Intro to Global Politics	
Conceptual Foundations		
LTT 461	Franco-Afro-Caribbean Story	
PHL 304	African Philosophy	
Total Hours		30

French Major

Mission

In a complex, increasingly interdependent world community, the French program helps students become articulate, knowledgeable and culturally aware global citizens in accordance with the values and traditions of

Saint Joseph's University and of the Society of Jesus. We actively pursue this mission by:

- Fostering proficiency in French
- Promoting an appreciation for the richness and complexity of language in general
- Deepening students' understanding of cultural diversity
- Encouraging student engagement in active, collaborative and critical learning in the French-language classroom
- Emphasizing learner-centered pedagogy and care for the individual

Learning Goals and Outcomes

Goal 1: Effective communication in the target language (TL)

Outcome 1.1: Students will narrate and describe in the TL in spoken form in all major time frames using connected discourse of paragraph length with general clarity of lexicon and a moderate level of detail.

Outcome 1.2: Students will compose written texts in the TL that summarize, evaluate or describe concrete or abstract items, notions, events or persons, in major time frames in paragraph length discourse, with a lexicon relevant to the topic.

Goal 2: Critical and interpretive thinking in the target language (TL)

Outcome 2.1: Students will interpret and analyze the main ideas, relevant facts and details about works of literary, cinematic and/or artistic expression in the target language (TL).

Outcome 2.2: Students will be able to pursue research, gather data, do analysis and report results by using TL as a tool of investigation and as a means of communication.

Goal 3: Knowledge of the target language (TL) culture(s)

Outcome 3.1: Students will be able to describe accurately in the TL with moderate detail some aspect of the TL cultures (perspectives, products, and/or practices)

Outcome 3.2: Students will compare and contrast in the target language similarities and differences between the students' own cultures and those of the target language (TL).

Goal 4: Inclusion and diversity

Outcome 4.1: Students will engage respectfully, in a local and global context, with diverse human beliefs, abilities, experiences, identities, or cultures.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. *Diversity, Globalization or Non-western Area Studies,*
2. *Ethics Intensive*
3. *Writing Intensive, and*
4. *Diversity*

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

GEP Electives

A varying number of courses, typically nine to twelve.

Major Requirements

The French major emphasizes the acquisition of competence in spoken and written French, a sound understanding of the structures of modern French, and the ability to understand and analyze literary texts and cultural notions from a variety of periods. All courses are offered in French.

Course requirements for the major in French are as follows:

- Three courses numbered 202 to 320
- Seven courses numbered 321 or higher

Students in French are strongly encouraged to participate in a study abroad program such as those in Paris, France. Please see Study Abroad. Courses from other institutions must be pre-approved by the appropriate Associate Dean in consultation with Dr. Burr, the study abroad coordinator in French.

Study Abroad Courses

For study in Francophone countries, including semester-long programs in Paris, France, see Study Abroad.

French Honor Society

The department has an active chapter of Pi Delta Phi, the National French Honor Society. A yearly initiation ceremony is held during the spring semester. Qualified students are encouraged to apply; please contact the French faculty for more information.

French Minor Requirements

Completing the French Minor requires taking six courses (18 credits) numbered FRE 202 or higher. For further information, please contact Dr. Kristin Burr (klburr@sju.edu).

Italian Major

Learning Goals and Outcomes

Goal 1: Effective communication in the target language (TL)

Outcome 1.1: Students will narrate and describe in the TL in spoken form in all major time frames using connected discourse of paragraph length with general clarity of lexicon and a moderate level of detail.

Outcome 1.2: Students will compose written texts in the TL that summarize, evaluate or describe concrete or abstract items, notions, events or persons, in major time frames in paragraph length discourse, with a lexicon relevant to the topic.

Goal 2: Critical and interpretive thinking in the target language (TL)

Outcome 2.1: Students will interpret and analyze the main ideas, relevant facts and details about works of literary, cinematic and/or artistic expression in the target language (TL).

Outcome 2.2: Students will be able to pursue research, gather data, do analysis and report results by using TL as a tool of investigation and as a means of communication.

Goal 3: Knowledge of the target language (TL) culture(s)

Outcome 3.1: Students will be able to describe accurately in the TL with moderate detail some aspect of the TL cultures (perspectives, products, and/or practices)

Outcome 3.2: Students will compare and contrast in the target language similarities and differences between the students' own cultures and those of the target language (TL).

Goal 4: Inclusion and diversity

Outcome 4.1: Students will engage respectfully, in a local and global context, with diverse human beliefs, abilities, experiences, identities, or cultures.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

GEP Electives

A varying number of courses, typically nine to twelve.

Major Requirements

Course requirements for the major in Italian are as follows:

10 courses conducted in Italian (30 credits) at the 100 level or higher

Code	Title	Hours
ITA 101	Beginning Italian I	
ITA 102	Beginning Italian II	
ITA 201	Intermediate Italian I	
ITA 202	Intermediate Italian II	
ITA 301	Italian Conversation	
ITA 302	Italian Composition	
ITA 303	Advanced Italian Conversation	
ITA 306	The Roman Experience	
ITA 310	Italian Stylistics	
ITA 315	Italy Through Art	
ITA 320	Italian Through Film	
ITA 330	The Ita Bus Wrld & its Lang	
ITA 340	Italian Culture & Civilization	
ITA 350	Topics & Meth for Teaching Ita	

Medieval/Early Modern

Select one of the following:

ITA 380	Ita Journeys from Marco Polo
ITA 425	Art&Madman:Renaissance&Reform
ITA 440	Profane and Sacred Love
ITA 445	The Medici Court
ITA 460	Dante, Petrarch, Boccaccio

Modern

Select two of the following:

ITA 309	I giovani e l'Italia di oggi
ITA 345	Art Fashion: la moda italiana
ITA 360	Modern Italian Culture
ITA 370	Topics in Italian
ITA 401	Early Ita Cinema-Stage to Scrn
ITA 402	L'Italiano al Cinema
ITA 420	From Novel to Film
ITA 430	Imges of Rome:Papl Rome - Pres
ITA 435	Rebels and Revolutionaries
ITA 450	Italy in Age of Grand Tour

ITA 455	Women's Voices
ITA 465	Birth of a Nation:Risorgimento
ITA 206	The Roman Experience

The remaining ITA credits must include ITA courses at the 300 or 400 levels.

Italian Honor Society

The department has an active chapter of the National Italian Honor Society, Gamma Kappa Alpha. A yearly initiation ceremony is held during the spring semester. For more information, including requirements and an application, please visit the Italian Program homepage: <http://www.sju.edu/academics/cas/mcl/languages/italian/honors.html>. (<http://www.sju.edu/academics/cas/mcl/languages/italian/honors.html>)

Italian Minor Requirements

Completing the Italian Minor requires taking six courses (18 credits) numbered ITA 101 or higher. For further information, please contact Dr. Paola Giuli (giuli@sju.edu) or Dr. Kristi Grimes (kgrimes@sju.edu).

Italian Studies Major Learning Goals and Outcomes

Goal 1: Communicate effectively in both spoken and written Italian

Outcome 1.1: Successfully manage in spoken Italian a variety of uncomplicated communicative tasks in straightforward social and academic situations

Outcome 1.2: Write compositions and summaries related to work and/or school experiences; narrating and describing in different time frames when writing about everyday events and situations.

Goal 2: Demonstrate knowledge of the grammatical structure of modern Italian

Outcome 2.1: Narrate and describe in spoken Italian with general clarity of grammatical structures

Outcome 2.2: Compose written texts in Italian with general clarity of grammatical structures

Goal 3: Develop modes of analysis and ways of critical and interpretive thinking that may be applied to a variety of career paths

Outcome 3.1: Interpret the main ideas, relevant facts and details of authentic Italian language texts that are narrative and/or descriptive and that employ standard linguistic conventions for written expression.

Outcome 3.2: Pursue research, gather data, do analysis and report results by using Italian as a tool of investigation and as a means of communication

Goal 4: Demonstrate familiarity with theoretical frameworks that help to integrate the study of Italy and Italian culture into research in other fields.

Outcome 4.1: Demonstrate knowledge of a selection of Italian texts and cultural artifacts (specific to their chosen area of concentration

from classical times to the present) and the historical contexts in which they were created

Goal 5: Demonstrate knowledge of contemporary Italian culture and current events

Outcome 5.1: Understand and explain significant cultural phenomena of the Italian-speaking world, including the value of Italian as a world language

Goal 6: Respect diversity and difference both in the context of their own culture and globally

Outcome 6.1: Accurately describe with moderate detail -- simply in Italian and with a more sophisticated expression in English -- some aspect of the cultures (perspectives, products, and/or practices) of the Italian-speaking world.

Outcome 6.2: Compare and contrast -- simply in Italian and with a more sophisticated expression and greater level of detail, in English -- similarities and differences between American cultures and those of the Italian speaking world.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

GEP Electives

A varying number of courses, typically nine to twelve.

Major Requirements

The requirements for the Italian Studies major are 10 courses, of which 6 must be ITA courses starting at the 100 level or higher (conducted

entirely in Italian). The remaining 4 courses may be conducted in English, and are interdisciplinary courses spanning a variety of disciplines, including Art, English, History, Music, Linguistics, Philosophy and Classics, including the following:

Code	Title	Hours
CLA 302	Mystery&Monument:Ancient Rome	3
CLA 307	Ancient Greece & Rome in Film	3
CLA 320	Golden Age of Rome	3
HIS 316	The Grandeur that Was Rome	3
IST 370	Topics in Italian Studies	3
IST 375	Shadow State: Mafia in Italy	3
LTT 150	First Year Seminar	3
MTF 158	Western Music Hist: 1750-Pres	3
PHL 402	Plato and Aristotle	3
POL 336	The EU and European Politics	3

(This list is illustrative, not exhaustive; for more information, please consult the faculty in Italian.)

Study Abroad Courses

For study at SJU in Rome and Florence, Italy, see Study Abroad.

Spanish Major

The Spanish major emphasizes the learning of both spoken and written Spanish, a sound understanding of the linguistic structures of modern Spanish, an appreciation for cultures of the Spanish-speaking world, and the ability to analyze literary texts from a variety of periods. Students may choose from a variety of offerings in Latin American or Peninsular literature, film, culture, language, and Spanish linguistics. All courses are offered in Spanish. See individual faculty members for more information.

Learning Goals and Outcomes

Goal 1: Effective communication in the target language (TL)

Outcome 1.1: Students will narrate and describe in the TL in spoken form in all major time frames using connected discourse of paragraph length with general clarity of lexicon and a moderate level of detail.

Outcome 1.2: Students will compose written texts in the TL that summarize, evaluate or describe concrete or abstract items, notions, events or persons, in major time frames in paragraph length discourse, with a lexicon relevant to the topic.

Goal 2: Critical and interpretive thinking in the target language (TL)

Outcome 2.1: Students will interpret and analyze the main ideas, relevant facts and details about works of literary, cinematic and/or artistic expression in the target language (TL).

Outcome 2.2: Students will be able to pursue research, gather data, do analysis and report results by using TL as a tool of investigation and as a means of communication.

Goal 3: Knowledge of the target language (TL) culture(s)

Outcome 3.1: Students will be able to describe accurately in the TL with moderate detail some aspect of the TL cultures (perspectives, products, and/or practices)

Outcome 3.2: Students will compare and contrast in the target language similarities and differences between the students’ own cultures and those of the target language (TL).

Goal 4: Inclusion and diversity

Outcome 4.1: Students will engage respectfully, in a local and global context, with diverse human beliefs, abilities, experiences, identities, or cultures.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
LIN 200	Introduction to Linguistics	3
Select two of the following:		6
LIN 280	Second Lang Acquis & Lrning	
LIN 301	Teaching Lang at Home/Abroad	
LIN 317	Sociolinguistics	
LIN 320	Phonetics	
LIN 340	Communication in Soc Contexts	
LIN 401	Bilingualism & Lang Diversity	
LIN 470	Topics in Linguistics	
LIN 490	TESOL Internship	
Any approved Latin American Studies course outside of Modern and Classical Languages		

Other courses that specifically focus on some aspect of the Spanish-speaking world may be approved as an IL course if deemed appropriate

by the Spanish major advisor. See Dr. Heather Hennes for more information about the major.

GEP Electives

A varying number of courses, typically nine to twelve.

Major Requirements

Requires 10 SPA courses (30 credits) including:

Code	Title	Hours
SPA 202	Intermediate Spanish II (depending on placement)	3
SPA 301 or SPA 303	Spanish Conversation (depending on placement) Spanish for Heritage Speakers	3
SPA 302	Spanish Composition ¹	3
SPA 310 or SPA 311	Intro to Latin American Lit Intro to Spanish Literature	3
SPA 380 or SPA 466	Intro to Spanish Linguistics Spanish Dialectology	3
Select one of the following:		
SPA 350	Intro to Latin Amer Cultures	
SPA 351	Introd to Spanish Cultures ²	
SPA 356	Spain:Study Tour ²	
SPA 357	Spain in the New Millenium	
SPA 320	Cur Evnts in the Sp-Lang Media	

The remaining SPA credits must include at least 2 4xx level SPA courses. Students must also complete a Foreign Language Capstone, which is an Oral Proficiency Interview (OPI) in Spanish. For more information, please refer to: <http://www.languageTesting.com/academic.cfm>. and follow the links to Tests>Speaking>OPI

1

Heritage speakers of Spanish having completed SPA 303 complete a SPA elective in place of SPA 302.

2

A student may count only one of these two courses toward the major or minor.

Study Abroad

Spanish majors and minors are strongly encouraged to study abroad in a Spanish-speaking country of their choice. The Center for International Programs (<http://www.sju.edu/academics/centers/cip/studyabroad>) provides information on SJU-approved programs in Argentina, Chile, Central America, and Spain, as well as programs in other Latin American countries, for which students may petition credit. Modern and Classical Languages faculty also offer Study Tour Courses to Argentina/Uruguay and Spain. Study Tours offered by other departments have included destinations such as Bolivia, Cuba, the Dominican Republic and Nicaragua. Study Tours offered by other departments do not count toward the Spanish major or minor, (except as Integrative Learning courses for the major) but they do complement students' interests in Spanish. Students who are interested in studying abroad should meet with Dr. Elaine Shenk, the Spanish Program Coordinator for Study Abroad.

Spanish Honor Society

The department has an active chapter, Omicron Phi, of the National Spanish Honorary Society Sigma Delta Pi. A yearly initiation ceremony is

held in the spring semester. Qualified students are encouraged to apply; please contact the Spanish faculty for more information.

Spanish Minor Requirements

Requires 6 SPA courses (18 credits) including:

Code	Title	Hours
SPA 202	Intermediate Spanish II (depending on placement)	3
SPA 301 or SPA 303	Spanish Conversation (depending on placement) Spanish for Heritage Speakers	3
SPA 302	Spanish Composition ¹	3
Beginning with the Class of 2024, Spanish minors will be required to take one 400-level course.		

1

Heritage speakers of Spanish having completed SPA 303 complete a SPA elective in place of SPA 302.

The remaining SPA credits must include SPA courses at the 300 and 400 levels. See Dr. Claudia Pérez Lotero for more information about the minor.

Music, Theatre and Film

Department Overview and Mission

Built on the praxis of analysis and creation, the Department of Music, Theatre & Film offers a wide range of courses in two major degree programs – the B.A. in Music (Music major or Music major with concentration in Music Therapy), and the B.A. in Theatre & Film (with a concentration in Theatre, Musical Theatre, or Film/TV). In addition, the Department offers stand-alone minors in Music, Theatre Studies, and Film/TV Studies, as well as being a partner department in the Music Industry minor. At the core of all degree programs are the shared values of historical insight, analytical rigor, technical proficiency, and creative expression.

Within each of its disciplines, the Department offers a breadth of courses that not only equip students with the tools to understand and evaluate an existing body of work, but also teach the necessary technical skills to bring their own work to fruition while fostering both creativity and engagement in the world around them. The curriculum aims to prepare students for careers in their respective fields or for further study at the graduate level, but perhaps more importantly, to give graduates a foundation of organizational, analytical, technical, and creative tools from which they might launch any future endeavor.

Faculty

Faculty and staff in the Department of Music, Theatre and Film hold accomplished roles as actors, musicians, directors, composers, filmmakers and much more. Well established in their professions, they are dedicated to sharing their career experiences, knowledge and expertise with their students, offering important insights into the world of music, theatre and film.

Department of Music, Theatre & Film Faculty & Staff (<https://www.sju.edu/departments/mtf/faculty-staff/>)

Programs

Undergraduate Majors

- Music (p. 272)
- Theatre & Film (p. 274)

Undergraduate Minors

- Music (p. 274)
- Music Industry (p. 272)
- Film/TV (p. 271)
- Theatre Studies (p. 276)

Courses

MTF 141 Guitar Class for Beginners (1 credit)

This class is intended as an introduction to acoustic and classical guitar techniques employed in contemporary guitar styles. The focus of this course will involve learning basic open chords, learning to read and play music on the guitar, bar chords, and basic fingerstyle technique. The course will also cover the fundamental music theory necessary for playing songs and basic fret board knowledge.

MTF 142 History of Rock and Pop (3 credits)

This course examines the history of popular music in the English-speaking world from the mid twentieth century to the present day. Genres examined include swing, doo-wop, rock and roll, soul, funk, disco, heavy metal, and punk.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 143 Music in Film (3 credits)

This course focuses on the ways music functions in narrative film. In the first weeks, students will develop analytical skills to describe the ways music can enhance, comment on, undermine, and direct a viewer's interpretation. The remainder of the semester will follow a generally chronological structure, focusing on influential composers and directors, theoretical writings, and the wide variety of twentieth-century and twenty-first musical styles used in soundtracks. Class discussions and writing assignments will guide students in the study of the interlocking histories of music, film, politics, and culture. This course is designed for all students. Previous musical training is not required.

Attributes: GEP Art/Literature, Undergraduate

MTF 144 Introduction to Music Therapy (3 credits)

This course is an introduction to the field of music therapy. Students will study the history, theory, practice, and applications of music therapy for a variety of clinical populations. They will learn about ongoing research in the field, acquiring a broad understanding of the current state of practice and research. The course is open to all students who are interested in learning more about the field of music therapy.

Attributes: GEP Art/Literature, Undergraduate

MTF 150 First Year Seminar (3 credits)

The First-Year Seminar is designed to introduce students to learning in a college context. First-Year Seminars focus in depth on a question or topic of disciplinary or interdisciplinary interest. By means of its specific focus, the seminar will explore the thinking, research, and writing practices in a particular field. Topics vary according to individual instructors.

Attributes: First-Year Seminar, Undergraduate

MTF 151 Music Fundamentals (3 credits)

A study of elements of music including notation, rhythm, scales, intervals, melody, harmony, and form. To facilitate reading skills, class exercises in ear training are included. Previous musical training unnecessary.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 152 Music Appreciation (3 credits)

This course is a survey of music from the Middle Ages to the Twentieth Century. Emphasis is placed on the elements of music, styles of major historical periods, and the lives and works of representative composers.

Attributes: Undergraduate

MTF 153 Vocal Performance (1 credit)

In this course you will learn to professionally train your singing voice through breath management, phrasing, diction, performance practice, and accurate musicianship. Students will receive one individual sixty minute lesson each week. This course may be repeated for credit.

Students should be able to read music. An audition and permission of the instructor is required.

MTF 154 Piano Performance (1 credit)

Students will receive one individual piano lesson each week, between 30 and 60 minutes in length. This course may be repeated for credit.

Students must be able to read music. An audition and permission of the instructor are required.

Attributes: Undergraduate

MTF 155 Instrumental Performance (1 credit)

Students will receive one individual instrumental lesson each week, between 30 and 60 minutes in length. This course may be repeated for credit. Students must be able to read music. An audition and permission of the instructor are required.

Attributes: Undergraduate

MTF 156 Intro to World Music (3 credits)

This course introduces students to the traditional music of cultures around the world, including music of India, Indonesia, Latin America, Africa, and the Middle East. Students will learn to listen critically and to articulate their observations about the music of numerous regions and societies.

Attributes: Diversity Course, GEP Art/Literature, Irish Studies Course, Undergraduate

MTF 157 Western Music Hist: MidAge-1750 (3 credits)

This course considers the history of Western music from the Middle Ages to the end of the Baroque Period, focusing on the relationship between historical, social, and cultural currents and the development of music. Students will acquire a framework for thinking critically about music and articulating their observations, and they will learn to recognize the musical characteristics of important styles, genres, and historical periods.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate, Writing Intensive Course- GEP

MTF 158 Western Music Hist: 1750-Pres (3 credits)

This course considers the history of Western Music from the second half of the eighteenth century to the present day, focusing on the relationship between historical, social, and cultural currents and the development of music. Students will acquire a framework for thinking critically about music and articulating their observations and learn to recognize the musical characteristics of important styles, genres, and historical periods. This course welcomes students who have not taken MTF 157, Western Music History: The Middle Ages to 1750.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 159 Contemporary Music (3 credits)

An investigation of the chief developments in the concept and style of music which have occurred in the Twentieth century.

MTF 161 Introduction to Theatre (3 credits)

This course examines major traditional and modern plays with emphasis upon the styles and conventions which govern the relationship between drama and its audience; relevance of these styles to the work of actors, directors, and designers.

Attributes: GEP Art/Literature, Undergraduate

MTF 162 History of Broadway Musical (3 credits)

This course provides a basic overview of the historical developments of musical theatre as an uniquely American art form, and the study of the structures and genres from early Twentieth Century influences through the "Golden Age" of musicals to contemporary musical theatre.

Attributes: Undergraduate

MTF 170 Special Topics & Indep Study (3 credits)

Student majors may pursue investigation of topics beyond those listed in the catalog. Major GPA of 3.0 required, as is prior approval by the chair and faculty mentor. Course number dependent on relevant level of coursework.

MTF 181 Filmmaking Methods (3 credits)

An introduction and overview to the complete production cycle. Each class session is dedicated to a different department - writing, producing, directing, design, cinematography, grip and electrical, location sound, editing, digital post, audio post, marketing and distribution - designed to both introduce and involve students in the breadth of the production experience.

Attributes: GEP Art/Literature

MTF 186 Acting for the Camera (3 credits)

This course provides on-camera experience for students in order to develop their technique for on - camera acting for film, television and commercials. Special emphasis on audition techniques for on-camera auditions and creating an individual reel for audition purposes.

Attributes: GEP Art/Literature, Undergraduate

MTF 191 Introduction to Film (3 credits)

This course is an introduction to the study of cinematic form and style, taking cinema to be located at the confluence of art, industry and technology. This course examines the cultural meanings of cinema as well as its aesthetic construction, including such elements as narrative structure, cinematography, design, editing and sound. Selections from historical and contemporary films will be viewed and analyzed.

Attributes: GEP Art/Literature, Undergraduate

MTF 192 History of Narrative Film (3 credits)

Providing an overview of significant works that exemplify film as visual media, this course is a survey of movements and makers that helped shape the evolution of screen narrative. Storytelling techniques and trends will be explored from early, spectacle-driven serial films through the postmodern, CGI-driven productions of today.

Attributes: GEP Art/Literature, Undergraduate

MTF 193 History of Television (3 credits)

This course is designed to give students a comprehensive understanding of television in the United States. It will provide deep examinations of its origins, development, design, purpose of programming, and the variety of genres and their role in the formation of our ideas about history, nation, and cultures.

Attributes: GEP Art/Literature, Undergraduate

MTF 194 Black American Cinema (3 credits)

This course will provide an analytical and critical examination of the films created by and starring influential Black American entertainers in film's 100+ year history. Possible areas of study include the films of selected directors and performers, Black American filmmaker movements, Black horror, Black American women, 1970s Black American social realism films, Blaxploitation, 1980s Black star power comedies, 1990s urban dramas, and Black folklore drama. May be repeated for credit under rotating iterations.

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

MTF 195 Genre Film Studies (3 credits)

A critical and analytical examination of the work of selected film genres that have shaped cinema and cinematic culture from the silent era to the present day. Example course topics include horror, sci-fi, thriller, teen films, Westerns, documentary, and melodrama. May be repeated for credit under rotating iterations.

Attributes: GEP Art/Literature, Undergraduate

MTF 241 Basic Conducting (3 credits)

This course will focus on the basic technical aspects of conducting a musical ensemble. Emphasis will be placed on learning how to communicate musical ideas to an ensemble using traditional conducting gestures. Included in the course will be the study of patterns, phrasing, and rehearsal techniques.

Prerequisites: MTF 251

MTF 251 Music Theory I (3 credits)

This course introduces the student to the practice of tonal harmony. Students will learn the principles of chord construction and voice leading, examine the ways in which chords function in tonal music, and be able to compose effective progressions in four-part vocal style. Students must demonstrate to the instructor a familiarity with treble and bass clef notation and basic rhythmic notation.

Prerequisites: MTF 151

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 252 Music Composition I (3 credits)

In this course students will complete structured projects in instrumental composition. Contemporary and traditional approaches to melody, harmony, rhythm, form and timbre will be explored.

Prerequisites: MTF 351

Attributes: GEP Art/Literature, Undergraduate

MTF 253 Choral Music (3 credits)

A study and performance of choral music with emphasis on vocal development and performing technique. Prior choral experience unnecessary. Participation in concerts and a term paper required. Prerequisite: Participation for one semester in University Singers prior to enrollment.

MTF 254 Jazz in Performance (3 credits)

A study and performance of the repertoire of the contemporary jazz ensemble with emphasis on the history of contemporary "BIG BAND" jazz and the mastery of its performance technique and stylistic interpretation. Participation in the fall and spring concert series and several short papers required. Participation in the Jazz Band in the fall semester prior to enrollment.

Attributes: GEP Art/Literature, Undergraduate

MTF 255 Ensemble Performance (1 credit)

Students are placed in ensembles with other instrumentalists (making duos, trios, etc). Their ensemble learns at least one substantial musical work, practicing independently and as a group, and receives weekly in-depth coachings from the professor. The ensemble performs in a recital at the end of the semester.

Attributes: Undergraduate

MTF 256 Intro to Music Technology (3 credits)

An introductory course leading to an understanding and creative application of the elements of music technology, including MIDI, digital audio recording and editing, notation software, and sound design.

Prerequisites: MTF 251

Attributes: Undergraduate

MTF 257 American Music (3 credits)

This course examines music produced in the United States from the early Colonial period to the present day. Students will consider a variety of styles, with an emphasis on folk, art, and African-American music.

Attributes: American Studies Course, GEP Art/Literature, Music Industry Course, Undergraduate

MTF 258 Major Composers (3 credits)

Major composers courses are semester-long studies of a single composer and his or her contributions to music history. Students read a biography of the composer and study several of his or her pieces in detail. Examples of courses in the Major Composers series include Ludwig van Beethoven and Johann Sebastian Bach.

Attributes: GEP Art/Literature, Undergraduate

MTF 261 Theatre Performance Practicum (3 credits)

Rehearsal and performance of a campus theatre production (produced by SJU Theatre Company and directed by a faculty director) with the student in the role of actor or stage manager. Comprehensive study of both the rehearsal and performance processes. In order to register for the course, the production must be the third campus production in which the student has served as cast member or stage manager. Departmental approval is required in order for the student to register for the course.

Attributes: GEP Art/Literature, Undergraduate

MTF 262 Theatre Production Practicum (3 credits)

A practical application of theatre production studies where the student works as a stage manager or run crew chief on a production produced by the Department of Music, Theatre & Film under the guidance of a faculty Director.

Attributes: Undergraduate

MTF 263 Acting I (3 credits)

Study of the fundamentals of the acting process based upon Stanislavsky's system of acting. Course culminates in scene study preparation and performance of contemporary scenes.

Attributes: GEP Art/Literature, Undergraduate

MTF 264 Acting II (3 credits)

Exploration of various methods and styles of acting; further development of techniques of voice, movement, characterization, script analysis, emotion memory, comic timing, and monologues. Extensive laboratory work in scene performance.

Prerequisites: MTF 263

Attributes: GEP Art/Literature

MTF 265 Directing for the Stage (3 credits)

Study of the basic techniques of play direction, including composition, picturization, play selection, auditions and casting, blocking and staging, including historic perspectives on notable directors. This course culminates in student-directed scenes from modern and contemporary plays.

Attributes: GEP Art/Literature, Undergraduate

MTF 266 Theatre History (3 credits)

This course examines the history of theatre from the Ancient Greek period through contemporary theatrical forms of the 21st century, focusing on major periods of theatre development including the Italian Renaissance, the Elizabethan age, Restoration Drama as well as the modern European and American theatre movements.

Prerequisites: MTF 161

Attributes: Undergraduate

MTF 267 Prod Design: Theatre & Film (3 credits)

Students study the basic elements of theatrical/ film production in scenery and lighting. An intensive hands-on lab is required as part of completion of the course.

Attributes: GEP Art/Literature

MTF 268 Musical Theatre Performance (3 credits)

Practice in performance techniques used in musical theatre auditions as well as practice in scene study from the musical theatre repertoire.

Attributes: GEP Art/Literature, Undergraduate

MTF 269 Musical Theatre Dance Styles (3 credits)

A performance/studio course in dance in which a variety of basic technique in musical theatre dance styles are examined including basic jazz as well as stylistic interpretations of select prominent music theatre choreographers (Jerome Robbins, Bob Fosse, Michael Bennett, etc.).

Attributes: GEP Art/Literature

MTF 270 Special Topics & Indep Study (3 credits)

Student majors may pursue investigation of topics beyond those listed in the catalog. Major GPA of 3.0 required, as is prior approval by the chair and faculty mentor. Course number dependent on relevant level of coursework.

MTF 281 Producing & Business of Film (3 credits)

This hands-on course addresses the inner workings of creative producing: business structures, project origination, building a team, acquiring production resources, budgeting and scheduling, managing day-to-day production and incorporating marketing tools. Additionally, the course will address how different business models may affect films' content, style, themes and inclusiveness.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Art/Literature

MTF 282 Screenwriting (3 credits)

An intensive workshop in writing for the screen, focusing primarily on the short form. Through the study of character and conflict, structure and setting, and rudimentary rehearsal and performance of draft scene-work, students will develop their own short pieces, culminating in a revised script and a visualized shooting plan ready to move into production.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course-GEP

MTF 283 Series Screenwriting (3 credits)

Each student will first develop their own series concept, show bible, and pilot. Students will then work in groups to script episodes for selected shows. Top work will be selected for production in MTF 381 Episodic TV/ Web Series Production.

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course-GEP

MTF 284 Digital Filmmaking (3 credits)

An introductory creative film production workshop that focuses upon visual storytelling, camera operation, digital editing and sound. Students will develop their personal creativity as they complete film projects in narrative and documentary modes, incorporating elements and techniques from music and theatre. Students will also view relevant selections from historical and contemporary films.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Art/Literature, Undergraduate

MTF 285 Short Film Production (3 credits)

Building on the skills developed in Digital Filmmaking (MTF 284), this course is an intermediate-level collaborative workshop in producing the short film. There is a particular emphasis upon theoretical and technical lighting and camera operation, shot structure, and production design.

Prerequisites: MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 286 Documentary Film (3 credits)

A hybrid course in the study and making of documentary film, students will explore the ethical issues of representation, identity, truth, argument, and advocacy through the examination of historically significant work, consideration of contemporary practice, and the execution of their own documentary project. No prerequisite, however, MTF 284 Digital Filmmaking is recommended.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

MTF 287 Commercial Production (3 credits)

This course is a workshop focusing on the production of commercial and industrial projects. Working in small groups, students will create advertisements, PSAs and other client-based media.

Attributes: GEP Art/Literature, Undergraduate

MTF 288 Genre Film Workshop (3 credits)

This course focuses upon the conventions, styles, makers, themes, and social commentary within such popular film genres as sci-fi, fantasy, thriller, horror, samurai, film noir, and Westerns. After conducting analytical studies, students will apply their knowledge to completing creative projects.

Attributes: GEP Art/Literature, Undergraduate

MTF 291 American Film (3 credits)

This course is a selected study of the intersection of American culture and the cinema. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: American Studies Course, GEP Art/Literature, Undergraduate

MTF 292 European Cinemas (3 credits)

A selected study of cinematic movements and filmmakers from European nations, specifically in how they both reflect and exemplify the culture in which they are produced. Possible areas of study include German Expressionism, Russian Formalism, the French New Wave, Italian Neo-Realism, New German Cinema and British Social Realism. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: GEP Art/Literature, Undergraduate

MTF 293 Five Films (3 credits)

From films ignored at their inception to widely-regarded masterpieces to movies of unique personal and cultural influence, this course examines cinema through the unique lens of five films, providing a deep dive into the historical context, development & production, popular & critical reception, and influence & legacy of movies that have had a lasting impact. No Prerequisites, MTF 191 Introduction to Film and/or MTF 192 History of Narrative Film recommended, may be repeated for credit.

Attributes: GEP Art/Literature, Undergraduate

MTF 294 Non-Western World Cinemas (3 credits)

A selected study of emerging cinematic movements and filmmakers from around the globe, that have pushed beyond the boundaries of established cinematic norms and innovated what film can be in its relation to culture and society. Possible areas of study include the cinemas of the Middle East, Africa, Asia, and Latin America. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: Diversity Course, GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

MTF 295 Major Figures in Film (3 credits)

A critical and analytical examination of the work of selected directors and producers who have had a profound impact on the evolution of contemporary cinema. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: Gender Studies Course, GEP Art/Literature

MTF 351 Music Theory II (3 credits)

This course serves as a continuation of MTF 251 Music Theory I. Topics include diatonic harmony, formal design, and an introduction to chromatic harmony. Students will further develop their skills in both written theory and ear-training.

Prerequisites: MTF 251

Attributes: GEP Art/Literature, Undergraduate

MTF 352 Music Composition II (3 credits)

In this course students will complete structured projects in both vocal and instrumental composition. Students will engage in analysis of selected works as well as the study of instrumental resources.

Prerequisites: MTF 252 and MTF 351

Attributes: GEP Art/Literature, Undergraduate

MTF 353 Advanced Vocal Performance (3 credits)

In this course, advanced vocalists take weekly lessons with a member of the studio faculty, learning four-six solo works from three different historical periods, including the twentieth or twenty-first century. They also participate in University Singers. In addition to their lessons, individual practice, and choir, students are required to give an outreach performance in a community venue, such as a nursing home or hospital. MTF 359 is open only to advanced singers who have already completed three semesters of studio lessons at SJU and who have the permission of the instructor to enroll.

Attributes: GEP Art/Literature

MTF 354 Advanced Piano Performance (3 credits)

In this course, which is open to advanced pianists who have already completed three semesters of lessons in a piano studio at SJU, students dedicate themselves to concentrated piano study. They study works from at least three historical periods, which they present formally at their end-of-semester jury, and take one or more private lessons each week, practicing an average of fourteen hours per week. Students perform in the studio recital at the end of the semester and give one off-campus, outreach performance in a hospital, nursing home, local school, or similar community venue. Prerequisites: Enrollment in MTF 154 Piano Performance for 3 semesters and permission of the instructor are required.

Attributes: GEP Art/Literature

MTF 355 Adv Ensemble Performance (3 credits)

In this course, advanced instrumentalists or vocalists participate in three chamber groups, coached by member(s) of the music faculty. They learn three different musical works, including at least one from the twentieth or twenty-first century, and participate in the studio recital. In addition, students are required to give an outreach performance in a community venue, such as a nursing home or hospital. Prerequisites: Advanced performers who have already completed 3 semesters of Ensemble Performance at SJU and who have the permission of the instructor to enroll.

Attributes: GEP Art/Literature, Undergraduate

MTF 357 Music Theory III (3 credits)

This course serves as a continuation of MTF 351 Music Theory II. Topics include borrowed chords, modulation to distant keys, enharmonic relationships, and chromatic harmony. Emphasis on part-writing, composition, and analysis.

Prerequisites: MTF 351

Attributes: GEP Art/Literature

MTF 359 Adv Instrumental Performance (3 credits)

In this course, advanced instrumentalists take weekly lessons with a member of the studio faculty, learning three solo works from three different historical periods, including the twentieth or twenty-first century. They also participate in a collaborative ensemble with another student musician. In addition to their lessons and individual practice, students are required to give an outreach performance in a community venue, such as a nursing home or hospital. Prerequisites: Advanced instrumentalists who have already completed 3 semesters of studio lessons at SJU and who have the permission of the instructor to enroll.

MTF 363 Styles of Acting (3 credits)

An advanced acting course that explores scene study performance of complex scenes including classic works (Shakespeare, Moliere) and plays from the modern period (August Strindberg, Tennessee Williams and Sam Shepard).

Prerequisites: (MTF 263 or MTF 264)

Attributes: GEP Art/Literature, Undergraduate

MTF 370 Special Topics (3 credits)

Special Topics courses are upper-level classes on a variety of subjects in Music History. These courses synthesize score analysis, close reading of musicological literature, critical listening, and discussion in a stimulating seminar environment.

Prerequisites: MTF 251 and MTF 351 and MTF 157 and MTF 158

Attributes: GEP Art/Literature, Writing Intensive Course- GEP

MTF 381 Episodic Series Production (3 credits)

Building on the skills developed in MTF 284 Digital Filmmaking and working from a show developed in MTF 283 Series Screenwriting, this course is a collaborative workshop in producing an episodic series. Students will rotate crew positions on each episode of the show, producing installments suitable for campus and public broadcast.

Prerequisites: MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 382 Advanced Screenwriting (3 credits)

Building on the work of MTF 282 Screenwriting and/or MTF 283 Series Screenwriting, students will develop and write either a feature film script or a long-form series bible, pilot, and tv spec script. May be repeated for credit. May be taken as an Independent Study.

Prerequisites: MTF 282 or MTF 283 or ENG 344

Attributes: GEP Art/Literature

MTF 383 Directing for Film/TV (3 credits)

An advanced workshop in the practices and techniques of screen directing. Students will explore script breakdown, visualization and storyboarding, casting and working with actors, blocking and set-direction through the analysis, direction and production of class projects. Course may be taken as an Independent Study.

Prerequisites: MTF 282 and MTF 284

Attributes: GEP Art/Literature

MTF 384 Advanced Light, Camera, Design (3 credits)

An advanced workshop in shaping the aesthetics of the image. Considering the image as a confluence of both production design and cinematography, students will explore how what is in front of the camera creates meaning as much as how it is lit and captured. Alongside the theoretical and technical skill of lighting and camera operation, students will perform script analysis for aesthetic direction and design, as well as working beyond illumination toward the art of cinematography.

Prerequisites: MTF 284 or ART 173

Attributes: GEP Art/Literature

MTF 385 Sound Design (3 credits)

An advanced workshop in the skills of film sound recording, editing and mixing. This course examines the fundamentals of sound gear and technology, location and soundstage recording techniques, and the creation of film soundtracks, including dialogue editing, sound effects, automated dialogue replacement (ADR), music editing and mixing to picture.

Prerequisites: MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 386 Editing & Post-Production (3 credits)

An advanced workshop in the necessary skills of post-production and the required workflow of moving a project toward delivery. Topics include advanced techniques in non-linear editing, the demands of various video formats, digital video effects, compositing, color correction and delivery across multiple platforms. Course may be taken as an Independent Study.

Prerequisites: MTF 284

Attributes: GEP Art/Literature

MTF 388 Documentary Workshop (3 credits)

An advanced workshop in the planning and production of documentary film. Students will conceive and execute a project of their own design while exploring such issues as collaborative design and production, cross-cultural investigation, documentary ethics and empowerment, and community and individual representation.

Prerequisites: MTF 284

Attributes: GEP Art/Literature

MTF 389 Professional Production Studio (3 credits)

A participatory workshop in the production of a professional media project. Projects will be selected by merit or university need, produced and directed by the instructor, and funded through the department and university. Students will have the opportunity to work on a live set and participate according to their ambition, ability and experience. May be taken as an Independent Study.

Prerequisites: MTF 181 or MTF 282 or MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 391 Film Theory & Criticism (3 credits)

An advanced course in the study of the critical trends and theoretical positions that have influenced, enlightened and framed the creation and critique of cinema throughout its first century.

Prerequisites: MTF 191

MTF 392 Special Topics in Film (3 credits)

A study of film/tv in either production or studies beyond those listed in the catalog.

Attributes: GEP Art/Literature, Undergraduate

MTF 470 Special Topics & Indept Study (3 credits)

Student majors may pursue investigation of topics beyond those listed in the catalog. Major GPA of 3.0 required, as is prior approval by the chair and faculty mentor. Course number dependent on relevant level of coursework.

MTF 491 Internship (3 credits)

Junior and Senior MTF majors may broaden their perspective by completing an approved internship in Music, Theatre, or Film/TV. Students are expected to spend six to eight hours per week on site, and to maintain a weekly journal of their experiences and to secure a report by their immediate supervisor at mid semester and upon completion of the work. Prior approval by the chair is required.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 492 Internship: Music/Theatre/Film (3 credits)

Junior and Senior MTF majors may broaden their perspective by completing an approved internship in Music, Theatre, or Film/TV. Students are expected to spend six to eight hours per week on site, and to maintain a weekly journal of their experiences and to secure a report by their immediate supervisor at mid semester and upon completion of the work. Prior approval by the chair is required.

MTF 493 Indep Prj: Mus, Theat, Film I (3 credits)

Students pursuing advanced independent projects, especially those in connection with departmental or university honors, may register for these courses under the direct mentorship of department faculty. Prior approval of both faculty mentor and chair required.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 494 Indep Prj: Mus, Theat, Film II (3 credits)**MTF 495 Senior Project Development (3 credits)**

A student majoring in either Music or Theatre & Film must execute a supervised senior project with acts as a capstone experience on their work in the department. Working closely with their faculty mentor, the student will prepare a major piece of creative or critical work (composition, performance, film, screenplay, or thesis) inclusive of a public presentation in an appropriate venue. Depending on the scope and nature of the project, students will complete the work in either one or two semesters decided in consultation with the faculty mentor and with permission of the chair.

Attributes: GEP Art/Literature, Undergraduate

MTF 496 Senior Project (3 credits)

A student majoring in either Music or Theatre & Film, must execute a supervised senior project which acts as a capstone experience on their work in the department. Working closely with their faculty mentor, the student will prepare a major piece of creative or critical work (composition, performance, film, screenplay, or thesis) inclusive of a public presentation in an appropriate venue. Depending on the scope and nature of the project, students will complete the work in either one or two semesters decided in consultation with the faculty mentor and with permission of the chair.

Attributes: GEP Art/Literature, Undergraduate

Film and TV Minor

The Film and TV minor is a great option for students fascinated by cinema and television who have chosen to major in another discipline. The program values creative expression, analytical rigor, historical insight, and technical proficiency within a liberal arts format, providing tools that will help launch any future endeavor. Through required courses, students gain a foundation in digital filmmaking, screenwriting, and the cultural relevance and history of film and television, before moving on to upper level elective courses based on individual interest. To complete the film studies minor, students take six courses.

Learning Goals and Outcomes

Goal 1: Development of Creative Voice and Abilities

Outcome 1.1: Students will develop the ability to create performing arts works that express their creativity and unique voices.

Outcome 1.2: Students will acquire skills in creative inquiry, analysis and self-reflection.

Goal 2: Development of Critical and Rhetorical Skills

Outcome 2.1: Students will develop the ability to craft well-organized, reasoned, critical, and thoroughly-researched written and oral work.

Goal 3: Knowledge and Analysis of Significant Works

Outcome 3.1: Students will develop an awareness and analytical understanding of significant and diverse creative and theoretical works within the performing arts, and the cultural and historical contexts in which they were produced.

Goal 4: Knowledge of Professional Practices

Outcome 4.1: Students will acquire the creative, technical, and analytical tools to begin professional work in the field or to pursue graduate studies.

Goal 5: Development of Social and Ethical Awareness

Outcome 5.1: Students will develop an understanding of social issues, ethics and inclusivity within the performing arts.

Goal 6: Development of Collaborative and Service Skills

Objective 6.1: Students will engage, share and collaborate as creative citizens by completing performing arts projects that include campus, local, national and/or international communities.

Requirements

The Film and TV Minor requires completion of the following:

Code	Title	Hours
MTF 191	Introduction to Film	3
MTF 282	Screenwriting	3
or MTF 283	Series Screenwriting	
MTF 284	Digital Filmmaking	3
MTF 285	Short Film Production	3
Two Film Electives from list:		6
MTF 181	Filmmaking Methods	
MTF 186	Acting for the Camera	
MTF 192	History of Narrative Film	
MTF 193	History of Television	
MTF 194	Black American Cinema	
MTF 195	Genre Film Studies	
MTF 281	Producing & Business of Film	
MTF 283	Series Screenwriting	
MTF 286	Documentary Film	
MTF 287	Commercial Production	
MTF 288	Genre Film Workshop	
MTF 291	American Film	
MTF 292	European Cinemas	
MTF 293	Five Films	
MTF 294	Non-Western World Cinemas	
MTF 295	Major Figures in Film	
MTF 381	Episodic Series Production	
MTF 382	Advanced Screenwriting	
MTF 384	Advanced Light, Camera, Design	
MTF 385	Sound Design	
MTF 386	Editing & Post-Production	
MTF 388	Documentary Workshop	
MTF 389	Professional Production Studio	
MTF 391	Film Theory & Criticism	
MTF 392	Special Topics in Film	
Total Hours		18

Music Industry Minor

The objective of the Minor in Music Industry is to meet a growing demand on the part of current and potential students for program of study in the music industry. The minor will allow students from both the College of Arts and Science and the Haub School of Business to gain and expand both theoretical and practical knowledge necessary for success in the music industry and it will be equally attractive to business students who need a greater understanding and appreciation of music to pursue careers in the music industry.

Requirements

Code	Title	Hours
MTF 151	Music Fundamentals *	3
MTF 251	Music Theory I	3
Choose one (1) of the following:		3
MTF 142	History of Rock and Pop	

MTF 157	Westrn Music Hist: MidAge-1750	
MTF 158	Western Music Hist: 1750-Pres	
MTF 257	American Music	
Required:		
MKT 341	Music Marketing	3
MKT 344	Business of Recorded Music	3
Choose one (1) course:		3
MKT 342	Music and Entertainment Law	
MKT 490	Internship in Marketing I	
or MTF 491	Internship	
MKT 493	Indep Study in Marketing	
or MTF 493	Indep Prj: Mus, Theat, Film I	
Total Hours		18

*

If a student places out of MTF 151 with a score of 4 or 5 on the AP Music Theory Exam, they would enroll in MTF 251 Music Theory I and MTF 351 Music Theory II to meet this requirement.

Music Major

Learning Goals and Outcomes

Goal 1: Development of Creative Voice and Abilities

Objective 1.1: Students will develop the ability to create performing arts works that express their creativity and unique voices.

Objective 1.2: Students will acquire skills in creative inquiry, analysis and self-reflection.

Goal 2: Development of Critical and Rhetorical Skills

Objective 2.1: Students will develop the ability to craft well-organized, reasoned, critical, and thoroughly-researched written and oral work.

Goal 3: Knowledge and Analysis of Significant Works

Objective 3.1: Students will develop an awareness and analytical understanding of significant and diverse creative and theoretical works within the performing arts, and the cultural and historical contexts in which they were produced.

Goal 4: Knowledge of Professional Practices

Objective 4.1: Students will acquire the creative, technical, and analytical tools to begin professional work in the field or to pursue graduate studies.

Goal 5: Development of Social and Ethical Awareness

Objective 5.1: Students will develop an understanding of social issues, ethics and inclusivity within the performing arts.

Goal 6: Development of Collaborative and Service Skills

Objective 6.1: Students will engage, share and collaborate as creative citizens by completing performing arts projects that include campus, local, national and/or international communities.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

In addition students must choose three courses from the following list of options:

- Any course in Art History.
- Any course in Computer Science.
- Any course in Psychology.
- Any course in Modern and Classical Languages at or above 300.
- Any course in History at or above 200.
- Any course in English at or above 200.
- Any course in Sociology at or above 200.
- Any course in Philosophy at or above 200.
- Any course in Political Science at or above 300.
- Any course in Communication Studies at or above 200.

Students are encouraged to discuss their academic goals with their advisor and to make a plan for fulfilling the ILC which meets their specific objectives. Other CAS courses will be accepted with the approval of the Department Chair.

GEP Electives

10-12 to courses, depending on how many required courses in variable core and choice of major concentration

Major Requirements

11 courses plus 4 semesters of performance

Code	Title	Hours
Music Theory Core		
MTF 151	Music Fundamentals ¹	3
MTF 251	Music Theory I	3

MTF 351	Music Theory II	3
---------	-----------------	---

Music History Core

MTF 157	Westrn Music Hist: MidAge-1750	3
MTF 158	Western Music Hist: 1750-Pres	3
MTF 156	Intro to World Music	3
or MTF 257	American Music	

Music Theory Upper Level

MTF 252	Music Composition I	3
or MTF 357	Music Theory III	

Music History Upper Level

MTF 370	Special Topics	3
---------	----------------	---

Music Capstone

MTF 496	Senior Project	3
---------	----------------	---

Performance

Four semesters ²

Music Electives

Select two of the following: 6

MTF 142	History of Rock and Pop
MTF 143	Music in Film
MTF 144	Introduction to Music Therapy
MTF 156	Intro to World Music (if not selected above)
MTF 159	Contemporary Music
MTF 162	History of Broadway Musical
MTF 241	Basic Conducting
MTF 252	Music Composition I (if not selected above)
MTF 253	Choral Music
MTF 254	Jazz in Performance
MTF 256	Intro to Music Technology
MTF 257	American Music (if not selected above)
MTF 258	Major Composers
MTF 268	Musical Theatre Performance
MTF 352	Music Composition II
MTF 353	Advanced Vocal Performance
MTF 354	Advanced Piano Performance
MTF 355	Adv Ensemble Performance
MTF 357	Music Theory III (if not selected above)
MTF 359	Adv Instrumental Performance
MTF 370	Special Topics

1

If a student places out of Music Fundamentals, this requirement is met by taking Music Theory I, II, and III.

2

A combination of four semesters of participation in a department-sponsored performance ensemble or private studio.

Ensembles include: Jazz Ensemble, University Singers, Concert Choir, Chamber Music

Private Studios include: Guitar, Piano, Strings and Voice

Music Therapy Concentration

11 courses plus 10 credits of lessons.

GEP Integrative Learning Component

All Music Therapy Concentrators are required to take the following courses in Psychology to fulfill the ILC:

- PSY 100 Introductory Psychology or PSY 101 Intro Psychology Seminar
- PSY 120 Lifespan Development or PSY 231 Developmental Psychology
- PSY 122 Abnormal Psychology/Non-Majors or PSY 232 Adv. Psychological Disorders

Code	Title	Hours
Music Theory Core		
MTF 151	Music Fundamentals ¹	3
MTF 251	Music Theory I	3
MTF 351	Music Theory II	3
Music History Core		
MTF 157	Westrn Music Hist: MidAge-1750	3
MTF 158	Western Music Hist: 1750-Pres	3
MTF 156	Intro to World Music	3
or MTF 257	American Music	
Music Theory Upper Level		
MTF 252	Music Composition I	3
or MTF 357	Music Theory III	
Music History Upper Level

Music Therapy Capstone		
MTF 495	Senior Project Development	3
MTF 496	Senior Project	3
Music Electives		
MTF 144	Introduction to Music Therapy	3
Performance		
Six semesters of voice lessons.		
Two semesters of piano lessons.		
Two semesters of guitar lessons.		

1
If a student places out of Music Fundamentals, this requirement is met by taking Music Theory I, II, and III.

Music Minor
Overview

The minor in Music will deepen your understanding of and appreciation for music. Saint Joseph’s music faculty members are accomplished, award-winning professionals whose goal is to provide you with an excellent, personalized education.

The curriculum offers students majoring in another discipline the opportunity to explore their interest in music in a number of dynamic courses that cover music theory, composition, history and culture, and performance in a department-sponsored performance ensemble or private studio.

In addition to MTF 251 Music Theory I, students take five music courses to complete the minor, plus one semester of performance.

Learning Goals and Outcomes

Goal 1: Development of Creative Voice and Abilities

- Objective 1.1:** Students will develop the ability to create performing arts works that express their creativity and unique voices.
- Objective 1.2:** Students will acquire skills in creative inquiry, analysis and self-reflection.

Goal 2: Development of Critical and Rhetorical Skills

- Objective 2.1:** Students will develop the ability to craft well-organized, reasoned, critical, and thoroughly-researched written and oral work.

Goal 3: Knowledge and Analysis of Significant Works

- Objective 3.1:** Students will develop an awareness and analytical understanding of significant and diverse creative and theoretical works within the performing arts, and the cultural and historical contexts in which they were produced.

Goal 4: Knowledge of Professional Practices

- Objective 4.1:** Students will acquire the creative, technical, and analytical tools to begin professional work in the field or to pursue graduate studies.

Goal 5: Development of Social and Ethical Awareness

- Objective 5.1:** Students will develop an understanding of social issues, ethics and inclusivity within the performing arts.

Goal 6: Development of Collaborative and Service Skills

- Objective 6.1:** Students will engage, share and collaborate as creative citizens by completing performing arts projects that include campus, local, national and/or international communities.

Requirements

The Music Minor (6 courses plus one semester of performance)

Students wishing to minor in Music may do so by fulfilling the following requirements:

Code	Title	Hours
MTF 251	Music Theory I	3
Select five additional Music courses from the offerings in Music Theory, Composition, History and Culture, and Advanced Performance.		

One Semester participation in a department-sponsored performance ensemble or private studio.

Theatre & Film Major
Learning Goals and Outcomes

Goal 1: Development of Creative Voice and Abilities

- Outcome 1.1:** Students will develop the ability to create performing arts works that express their creativity and unique voices.
- Outcome 1.2:** Students will acquire skills in creative inquiry, analysis and self-reflection.

Goal 2: Development of Critical and Rhetorical Skills

Outcome 2.1: Students will develop the ability to craft well-organized, reasoned, critical, and thoroughly-researched written and oral work.

Goal 3: Knowledge and Analysis of Significant Works

Outcome 3.1: Students will develop an awareness and analytical understanding of significant and diverse creative and theoretical works within the performing arts, and the cultural and historical contexts in which they were produced.

Goal 4: Knowledge of Professional Practices

Outcome 4.1: Students will acquire the creative, technical, and analytical tools to begin professional work in the field or to pursue graduate studies.

Goal 5: Development of Social and Ethical Awareness

Outcome 5.1: Students will develop an understanding of social issues, ethics and inclusivity within the performing arts.

Goal 6: Development of Collaborative and Service Skills

Objective 6.1: Students will engage, share and collaborate as creative citizens by completing performing arts projects that include campus, local, national and/or international communities.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

¹

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

As part of the GEP, all majors in Theatre & Film will select three courses total from at least two of the following categories:

- ART: Art Studio Course
- ART: Art History Course
- COM: Communications Studies Course
- ENG: Any English Course
- CSC: Computer Science Courses
- CAS: Any chair-approved CAS course in Cinema Studies presented from the perspective of an independent discipline (i.e. Sociology, Psychology, Political Sciences, etc.)

GEP Electives

11-13 courses, depending on how many required courses in variable core and choice of major concentration.

Major Requirements

Code	Title	Hours
Core Courses:		
MTF 161	Introduction to Theatre	3
or MTF 162	History of Broadway Musical	
or MTF 191	Introduction to Film	
MTF 263	Acting I ¹	3
MTF 284	Digital Filmmaking	3
MTF 496	Senior Project ²	3

Select one of the following tracks to complete major:

Track 1 – Theatre Concentration

MTF 261	Theatre Performance Practicum
or MTF 262	Theatre Production Practicum
MTF 264	Acting II
MTF 265	Directing for the Stage
MTF 266	Theatre History
MTF 267	Prod Design: Theatre & Film
MTF 363	Styles of Acting

Track 2 - Musical Theatre Concentration

MTF 151	Music Fundamentals
MTF 251	Music Theory I
MTF 261	Theatre Performance Practicum
MTF 264	Acting II
or MTF 363	Styles of Acting
MTF 268	Musical Theatre Performance
MTF 269	Musical Theatre Dance Styles
Four semesters of private voice lessons	

Track 3 - Film/TV Concentration

MTF 192	History of Narrative Film
MTF 282	Screenwriting
or MTF 283	Series Screenwriting
MTF 285	Short Film Production
MTF 381	Episodic Series Production
MTF 383	Directing for Film/TV

Select one of the following Film/TV electives: ³

Production Courses

MTF 181	Filmmaking Methods
---------	--------------------

MTF 186	Acting for the Camera
MTF 281	Producing & Business of Film
MTF 283	Series Screenwriting
MTF 286	Documentary Film
MTF 287	Commercial Production
MTF 288	Genre Film Workshop
MTF 382	Advanced Screenwriting
MTF 384	Advanced Light, Camera, Design
MTF 385	Sound Design
MTF 386	Editing & Post-Production
MTF 388	Documentary Workshop
MTF 389	Professional Production Studio
Studies Courses	
MTF 193	History of Television
MTF 194	Black American Cinema
MTF 195	Genre Film Studies
MTF 291	American Film
MTF 292	European Cinemas
MTF 293	Five Films
MTF 294	Non-Western World Cinemas
MTF 295	Major Figures in Film
MTF 391	Film Theory & Criticism
MTF 392	Special Topics in Film

1

MTF 263 Acting I may be replaced by MTF 265 Directing for the Stage or MTF 267 Theatre Design for Film/TV Track.

2

See course description below for explanation of the department's capstone experience.

3

If a student will be writing a Thesis for their Senior Project, s/he is required to take MTF 391- Film Theory and Criticism; if s/he will be writing a feature screenplay, s/he is required to take MTF 382 –Advanced Screenwriting.

Theatre Studies Minor Overview

The Theatre Studies minor offers students who have chosen to major in another discipline the opportunity to explore their interest in theatre. With its unique focus on analysis, creativity and organization, the minor develops skills that are valuable in any endeavor. Encompassing six courses in total, the curriculum provides a cultural and historical understanding of the art form and allows students to make discoveries about their individual interests and talents. Within the context of a liberal arts education, the minor engages students of all levels – from beginner to those with experience – in a broad range of coursework that embraces acting, musical theatre performance, directing and an introduction to stage and lighting design. Additionally, production and performance opportunities are available to all students during the academic year through the SJU Theatre Company.

Learning Goals and Outcomes

Goal 1: Development of Creative Voice and Abilities

Outcome 1.1: Students will develop the ability to create performing arts works that express their creativity and unique voices.

Outcome 1.2: Students will acquire skills in creative inquiry, analysis and self-reflection.

Goal 2: Development of Critical and Rhetorical Skills

Outcome 2.1: Students will develop the ability to craft well-organized, reasoned, critical, and thoroughly-researched written and oral work.

Goal 3: Knowledge and Analysis of Significant Works

Outcome 3.1: Students will develop an awareness and analytical understanding of significant and diverse creative and theoretical works within the performing arts, and the cultural and historical contexts in which they were produced.

Goal 4: Knowledge of Professional Practices

Outcome 4.1: Students will acquire the creative, technical, and analytical tools to begin professional work in the field or to pursue graduate studies.

Goal 5: Development of Social and Ethical Awareness

Outcome 5.1: Students will develop an understanding of social issues, ethics and inclusivity within the performing arts.

Goal 6: Development of Collaborative and Service Skills

Outcome 6.1: Students will engage, share and collaborate as creative citizens by completing performing arts projects that include campus, local, national and/or international communities.

Requirements

Code	Title	Hours
MTF 161	Introduction to Theatre	3
MTF 263	Acting I	3
MTF 265	Directing for the Stage	3
Select three (3) other MTF Theatre courses for electives.		9
Total Hours		18

Neuroscience

Neuroscience is a major and minor that focuses on the study of the brain and nervous system. The interdisciplinary nature of neuroscience requires familiarity with multiple disciplines, including biology, chemistry, computational science, physics, and psychology. As a result, courses and laboratory experiences emphasize behavioral, cellular, molecular, cognitive, computational, pharmacological, and biophysical approaches.

Faculty Co-Directors

- Dr. Stephen Moelter (Psychology)
- Dr. C. Nicole Sunnen (Biology)

Neuroscience Program Advisory Board

- The Neuroscience Program Advisory Board will be created early in the 2023-2024 academic year with faculty representatives from academic departments that make a substantive contribution to the program.

Programs

Undergraduate Major

Neuroscience (p. 278)

Undergraduate Minor

Neuroscience (p. 280)

Courses

NSC 170 Special Topics in Neuroscience (3 credits)

Concentrated focus on a selected topic in Neuroscience. Topic and content vary from semester to semester.

Attributes: Undergraduate

NSC 190 Neuroscience Orientation (0 credits)

Introduction to the neuroscience program, including current developments and future prospects. Designed to prepare students for current studies and future careers. Required for all first-year neuroscience students; open to all interested students.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

NSC 205 Introduction to Neuroscience (3 credits)

Introduction to neuron structure and function, synaptic transmission, organization of the nervous system, brain-behavior relationships, and current neuroscience methods.

Prerequisites: BIO 102 or BIO 119 or BIO 133 or PSY 201

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

NSC 206 Intro. to Neuroscience II (3 credits)

This course focuses on the biological foundations of behavior and cognition. Fundamental methods and processes of the behavioral neuroscience will be emphasized including motivation, emotion, language, attention, memory, and mental illness.

Prerequisites: (NSC 205 or BS 260 or PS 260 or NS 260) and (PSY 100 (may be taken concurrently) or PSY 101 (may be taken concurrently) or PS 101 or PS 111)

Attributes: Undergraduate

NSC 270 Special Topics in Neuroscience (3 credits)

Concentrated focus on a selected topic in Neuroscience. Topic and content vary from semester to semester.

Attributes: Undergraduate

NSC 290 Neuroscience Colloquium (1 credit)

This course will introduce students to Neuroscience faculty, research, and career options. Students will read primary literature in the field, attend related seminars, and submit reflections or reports based on these activities.

Restrictions: Enrollment is limited to students with a major in Neuroscience.

Attributes: Undergraduate

NSC 340 Intro: Neuropsychopharmacology (3 credits)

This course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in neurologic and psychiatric disorders.

Prerequisites: NSC 205 or PSY 205 or PSY 201 or BIO 205 or BS 260 or BS 206 or BS 311 or NS 260 or PC 303

Attributes: Undergraduate

NSC 370 Special Topics in Neuroscience (3 credits)

Concentrated focus on a selected topic in Neuroscience. Topic and content vary from semester to semester.

Attributes: Undergraduate

NSC 422 Neurodevelopment Disorders (3 credits)

An introduction of Neurodevelopmental Disorders, with an emphasis on autism spectrum disorder and attention deficit-hyperactivity disorder.

This course aims to expose students to clinical and scientific thinking about atypical child development. This course will include material on clinical diagnosis and treatment, as well as brain-behavior relationships.

Prerequisites: PS 101

Attributes: Undergraduate

NSC 424 Developmental Cognitive Neuros (3 credits)

This course examines the relations between neural and cognitive development from birth through adolescence. Topics will include: principles of brain development, developmental elasticity, neurocognitive development in various domains (e.g., attention, memory, language), neurodevelopmental disorders, and implications for education.

Prerequisites: (NS 261 or PS 261) and (PS 200 or PS 329)

Attributes: Undergraduate

NSC 425 Biophysics of the Brain (3 credits)

This course introduces biophysical models of the brain and the nervous system functioning. In particular the physics of the neocortex is presented through the analysis of EEG studies. Simulations with software packages are employed to illustrate with various examples the models and their results. Linear electrical analogs and some basics of neural network theory are part of the course content. Elements of Biophysics of consciousness are also presented and a set of case studies is analyzed and discussed.

Prerequisites: PY 202 or PY 212

Attributes: Undergraduate

NSC 428 Neuropsychology (3 credits)

This course is designed to introduce upper-level students interested in careers in medicine, clinical psychology, and related health science disciplines to the structure-function relationships of the human brain. The course emphasizes adult brain anatomy and function. The behavioral effects of brain damage (e.g., agnosia, neglect, aphasia, apraxia, amnesia) will be related to neuropsychological theories of brain function and examined in depth through readings, case material, and presentations.

Prerequisites: (PSY 100 or PSY 101 or PS 101 or PS 111) and (BIO 102 or BS 119 or BS 133 or PSY 201)

Attributes: Undergraduate

NSC 432 Genes and Brains (3 credits)

Advances in the fields of neuroscience and genetics have begun to unravel complex ways in which our genes control proper functioning and dysfunctioning of our brains. In this course-based undergraduate research experience (CURE), students investigate emerging ideas in neurogenetics through rigorous and collaborative laboratory-based research. Students apply the scientific method to test hypotheses, collect and interpret data, and examine broader relevance of their experiments through analysis of primary literature.

Prerequisites: BS 260 or NS 260

Attributes: Undergraduate

NSC 455 Molec Basis Neuro Disorders (3 credits)

In this course, students will practice reading and interpreting primary scientific literature focused on the molecular basis of neurological disorders and neurodevelopmental disorders. Students will be challenged to draw connections between known and proposed molecular bases for these varied conditions, propose models and techniques for studying them, and to identify potential targets for treatments. and draw connections between studies and mechanisms and to propose novel experiments, treatments, and avenues of research.

Prerequisites: BS 260 or NS 260 or PS 260 or NSC 205

Attributes: Undergraduate

NSC 460 Neurobiology (3 credits)

In-depth study of the molecular and cellular components of neurons and neural networks. Neuronal functions including synaptic transmission, neurotransmitter release, signaling pathways, and gene expression will be covered. Primary literature will be used to analyze the cellular mechanisms and components regulating neural systems including sensation, integration, sleep, learning, and memory.

Prerequisites: BS 260 or NS 260 or PS 260 or NSC 205

Attributes: Undergraduate

NSC 470 Special Topics in Neuroscience (3 credits)

Topics will vary according to the semester in which the class is offered.

NSC 490 Seminar in Neuroscience (1 credit)

This course focuses on current research and techniques in the field of Neuroscience through primary literature review, discussion, and analysis. Topics will be chosen based on current discoveries and advancements in the field.

Prerequisites: BS 260 or NS 260 or PS 260 or NSC 205

Attributes: Undergraduate

NSC 491 Neuroscience Capstone (1 credit)

This course is the culmination of student directed research or independent study. Students will present and discuss research with the class. Students will justify research predictions and design, explain primary findings, and defend conclusions in the field of neuroscience.

Prerequisites: NS 495 or NSC 490

Restrictions: Enrollment is limited to students with a major in Neuroscience.

Attributes: Undergraduate

NSC 492 Neuroscience Internship (3 credits)

Internships enable the student to gain first-hand experience working in some field of neuroscience. Interns should work a minimum of 10 hours weekly for 12 weeks to earn credit for a single course. Permission to take an internship for course credit must be obtained prior to beginning the internship.

Prerequisites: (NS 260 and NS 261) or (NSC 205 and NSC 206)

Attributes: Undergraduate

NSC 493 Neuroscience Internship II (3 credits)

Internships enable the student to gain first-hand experience working in some field of neuroscience. Interns should work a minimum of 10 hours weekly for 12 weeks to earn credit for a single course. Permission to take an internship for course credit must be obtained prior to beginning the internship. Permission of the Neuroscience program is required.

Prerequisites: NSC 492

Attributes: Undergraduate

NSC 494 Undergraduate Research (1-6 credits)

Laboratory or field work in neuroscience on a specific problem in cooperation with a faculty member of the department. Normally requires three hours of work per week for each unit of credit. This course may be taken for credit multiple semesters but only one semester counts as a neuroscience elective. In subsequent semesters this course will count as a general elective. Students need to complete the application form for independent study and have the approval of the program and Associate Dean.

Prerequisites: (NS 260 and NS 261) or (NSC 205 and NSC 206)

Attributes: Undergraduate

NSC 495 Undergraduate Research II (1-6 credits)

Laboratory or field work in neuroscience on a specific problem in cooperation with a faculty member of the department. Normally requires three hours of work per week for each unit of credit. This course may be taken for credit multiple semesters but only one semester counts as a neuroscience elective. In subsequent semesters this course will count as a general elective. Students need to complete the application form for independent study and have the approval of the program and Associate Dean.

Prerequisites: NSC 494

Attributes: Undergraduate

Neuroscience Major

The interdisciplinary nature of the neuroscience major requires familiarity with multiple disciplines. The curriculum begins with foundational science and mathematics courses in biology, chemistry, physics, and calculus and an orientation course in neuroscience that serves as a common starting point.

In the second and third year, students begin to complete a series of core neuroscience courses that provide majors with a deep understanding of how the components of the nervous system work together to coordinate physiological and cognitive functions and how changes in regulation can impact thought and action. Neuroscience students add breadth to their major by exploring electives within multiple fields of study (e.g., biology, computer science, data science, pharmacology, physics, psychology), that extend disciplinary boundaries and provide opportunities to explore areas of interest. A series of introductory and advanced research core courses, labs, and elective experiences "cap" the program, enabling students to demonstrate expertise with techniques and topics.

Learning Goals and Outcomes

1. Knowledge Base: Students will demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in neuroscience.
2. Critical Thinking: Students will demonstrate the ability to read, interpret, and analyze scientific literature.
3. Communication: Students will demonstrate the ability to communicate effectively in a variety of formats including written and oral communication.

4. Scientific Reasoning: Students will demonstrate the ability to use scientific reasoning to systematically explore ideas, issues, objects or works through the collection and analysis of evidence that results in informed conclusions or judgments.
5. Professional and Personal Development: Students will emerge from the major with realistic ideas about how to implement their knowledge, skills, and values in occupational pursuits in a variety of settings.

Assessment of select program learning objectives is completed during required senior seminar and capstone course experiences through written work, including programmatic reflection, and oral presentations.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
MAT 155 or MAT 161	Fundamentals of Calculus Calculus I	
BIO 101 & 101L	Bio I: Cells and Bio I: Cells Lab	
PSY 100 or PSY 101	Introductory Psychology Intro Psychology Seminar	
PHL 286	Philosophy of Mental Illness (Suggested)	

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II	4
CHM 215 & 215L	Organic Chemistry II and Organic Chemistry Lab II	4

Neuroscience Minor

The interdisciplinary nature of neuroscience requires familiarity with components of biology and psychology among other disciplines. A minor in neuroscience will provide an understanding of how different components of the nervous system work together to coordinate physiological, physical, and cognitive functions. Students will gain an appreciation of this complex system and how changes in regulation can impact thoughts and actions.

Requirements

Students complete the Neuroscience minor with six courses: two required courses and four electives. For the elective courses, no more than two of the four may be selected from the same academic department, including cross-listed courses.

To ensure the interdisciplinary nature of the program, students wishing to complete the minor must select elective courses offered by at least one participating department other than their own major. No more than two of the four elective courses can be offered by the same department (including cross-listed courses).

With permission of the Neuroscience Program Director, students can count one semester of appropriate research toward the minor (as an elective)

Students may request to receive credit for courses not listed above from the Neuroscience Program Director. The determination of the appropriateness of courses for inclusion in the minor will be made only if the student's work in the class meets one or more of the following criteria:

- Coursework includes a substantive treatment of brain/behavior relationships.
- Coursework includes a substantive treatment of methodology, techniques, and approaches relevant to neuroscience.
- Coursework in other ways contributes to an understanding of the relationship between nervous systems and behavior or other issues typically addressed by neuroscientists.

Philosophy

Department Overview and Mission

At its core, philosophy promotes inquiry aimed at understanding and truth. It raises questions concerning topics such as the nature of morality and justice, persons, God and religious belief, beauty, knowledge, science, reason, and reality. It seeks to answer such questions by critically examining arguments from a range of diverse perspectives informed by both historical and contemporary ideas. Inquiry also promotes agency. People familiar with the philosophical practice of giving and asking for reasons are able to recognize and evaluate evidence, to identify assumptions, to appreciate both the scope and limits of their knowledge, and to make better decisions. They are thereby better able to engage in the complex task of becoming people for and with others. The philosophy department encourages inquiry and promotes agency in a deliberately diverse and inclusive, student-centered moral and intellectual community.

Faculty

Members of the Philosophy Department are active researchers and committed teachers. Our areas of scholarly expertise inform our teaching, inviting students to participate in on-going inquiry into and critical reflection on important topics in the discipline. We specialize in a

wide range of areas including but not limited to social and political philosophy, various periods in the history of philosophy, epistemology, metaphysics, feminist philosophy, the philosophy of religion. Our faculty have published in the most prestigious journals in their fields and some have monographs with Oxford University Press and other outstanding venues.

Department of Philosophy Faculty & Staff (<https://www.sju.edu/departments/philosophy/faculty-staff/>)

Philosophy in the GEP

To achieve the aims of philosophy in the University's GEP, all students are required to take two philosophy courses: one course that deals with morality, PHL 154 Moral Foundations, and one course that deals with philosophical themes critical to reflection upon the nature of humans as persons. This second course can be chosen from among a number of courses in the Philosophical Anthropology area. In addition, students may choose to take a philosophy course to satisfy the GEP signature requirement in the Faith and Reason area.

Jesuit Tradition Signature GEP Course: PHL 154 Moral Foundations

A critical study of the various ways in which agents, actions, and social practices are evaluated from the moral point of view, as this has been articulated in major ethical theories. Tools for this study include an introduction to philosophical reasoning and concepts basic to the moral point of view, such as rights, duties, virtue and character. Theories studied include but are not limited to Consequentialism, Deontology, and Natural Law. This course is a prerequisite for any Ethics Intensive course as well as for the required course in the Philosophical Anthropology area. The Moral Foundations course pursues the following student learning outcomes:

- Students will identify, analyze, evaluate, and construct arguments.
- Students will articulate moral concepts, principles, and theories from major Western moral traditions and employ them in constructing and critically evaluating moral arguments.
- Students will also understand the relevance of normative moral theory to philosophical consideration of issues pertaining to the diversity of human beliefs, abilities, experiences, identities, or cultures.

Variable GEP Course: PHL NNN: Philosophical Anthropology

The requirement of a course in Philosophical Anthropology reflects the conviction that humans are beings who seek to explain to themselves who they are. To paraphrase St. Augustine, if no one asks me what a human being is, I know; if I want to explain it to a questioner, I do not know. The self-knowledge required to meet the challenge posed by Augustine's questioner may be achieved by courses falling into one or more of the following general categories: the metaphysics of the person, individual and society, and the meaning of life. Philosophical Anthropology courses pursue the following student learning outcomes

- Students will articulate the complexity of the concept of personhood distinctive of the Jesuit, Catholic tradition through an understanding of a philosophical problem concerning human beings as rational, social, cultural, biological, aesthetic, or spiritual beings. Examples of such problems include freedom of the will, the nature of the mind and its relation to the body, the nature of the self and its social construction, human community and diversity, the meaning of death and life, the nature and significance of art, and the role of religion in human identity.

- Students will identify and explain features or conditions of human persons that ground, promote, or hinder their capacity to be agents—that is, the capacity to make choices, have responsibilities, or live meaningful lives.

Programs

Undergraduate Major

- Philosophy (p. 290)

Undergraduate Minor

- Philosophy (p. 293)

Courses

PHL 101 Human Person (3 credits)

An inquiry into the concept of personhood distinctive of the Jesuit, Catholic tradition through an understanding of a philosophical problem concerning human beings as rational, social, biological, historical, aesthetic, or spiritual beings.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

PHL 150 First Year Seminar (3 credits)

Various first-year seminars are offered each year by philosophy faculty.

Attributes: First-Year Seminar, Undergraduate

PHL 154 Moral Foundations (3 credits)

A critical study of the various ways in which agents, actions, and social practices are evaluated from the moral point of view, as this has been articulated in major Western ethical theories. Tools for this study include an introduction to philosophical reasoning and concepts basic to the moral point of view, such as rights, duties, virtue and character. Theories studied include but are not limited to Consequentialism, Deontology, and Natural Law. Satisfies the GEP Jesuit tradition course requirement.

Attributes: Signature Course, Undergraduate

PHL 170 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHL 201 Knowledge and Existence (3 credits)

Three basic problems concerning reality and the quest to know reality: 1) the origin, validity, and limits of human knowledge; 2) Graeco-Christian, modern, and contemporary approaches to being and causality; and 3) the problem of God. Does not satisfy the GEP variable course requirement in the Philosophical Anthropology area.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 210 Logic and the Law (3 credits)

The course is designed to develop reasoning skills that are useful for law school preparation, law school itself, and the legal profession. It will begin by introducing fundamental concepts in informal logic-included will be a review of validity and soundness and a variety of deductive forms. We will then discuss strategies for evidential reasoning and fundamental concepts in formal propositional and predicate logic. After establishing this background, we will apply it to the sorts of reasoning questions that appear on the Law School Admissions Test (LSAT). At the end of the course, we will examine Supreme Court or other prominent legal cases and issues in the philosophy of law, analyzing the arguments involved using the skills that have been honed throughout the semester.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Undergraduate

PHL 220 Logic (3 credits)

A study of the logic of ordinary language: the functions of language, forms of argument, fallacies, definition; analysis of propositions and deductive reasoning; inductive reasoning, analogy and scientific hypothesis testing. An introduction to symbolic logic is provided.

Techniques are developed for translating arguments in ordinary language into a canonical language that highlights their logical form. The predicate and propositional calculi are used to establish the validity of simple arguments. Does not fulfill the philosophy GEP.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Undergraduate

PHL 240 Symbolic Logic (3 credits)

The study of the semantic and syntactic properties of propositional and predicate logics- natural deduction systems of the first order. Some results in meta-logic (such as the soundness and completeness proofs for particular systems) may be addressed, and attention may also be paid to the properties of axiomatic deductive systems in contrast to systems of natural deduction. The usefulness of formal systems for studying the property of validity in natural language arguments will also be addressed, in part by learning techniques for "translating" arguments from one language to the other. Does not fulfill the philosophy GEP.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Undergraduate

PHL 250 Philosophy of Death (3 credits)

A study of the reality of death as the boundary of human experience.

The course explores the meaning of death and its relationship to the meaning of life, examines evidence for and against the thesis that death is the end of human existence, and considers implications for selected contemporary issues (e.g., death with dignity, medical definition of death).

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 252 Philosophy of Karl Marx (3 credits)

This course focuses on the thought and philosophical legacy of the influential but easily misunderstood nineteenth-century German philosopher, economist, and political theorist Karl Marx. Essential themes and ideas include: alienation, species-being, dialectic, historical materialism, class struggle, exploitation, ideology critique, and capitalism and its alternatives. Students will read and critically engage Marx's own writings, but attention may also be paid to philosophers working in the Marxist tradition (e.g., analytic Marxism and Frankfurt School critical theory) as well as to critics of Marx and Marxism.

Prerequisites: PHL 154

Attributes: Diversity Course, Faith Justice Course, Philosoph Anthropol, Undergraduate

PHL 256 Freedom and Determinism (3 credits)

A metaphysical and epistemological analysis and evaluation of the various philosophical positions on the determinism-free will issue. Various kinds of determinism (hard, soft, theological, etc.) will be critically examined, and various ways of arguing in support of free-will (from choice, deliberation, remorse, etc.) will be assessed.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law, Philosoph Anthropol, Undergraduate

PHL 258 The Authentic Self (3 credits)

This course will center on careful textual study of primary sources in philosophy that deal with these questions "What is the human being? What does it mean to be a Self?, Who am I?, and What is personal identity?" These questions about anthropology outline the original field of philosophy because they also include metaphysics, morals, and religion. A key element that will emerge is the role of rationality, of will, and of desire. This is related to the question of freedom, not just the theoretical freedom of the will, but the necessity to make a specific act of the will, namely to will to be one's authentic Self. Focus on works of Plato, Augustine, Descartes, Locke, Kant, Hegel, Husserl, and Charles Taylor.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 260 Philosophy of Human Nature (3 credits)

In this course we shall inquire into the nature of human beings by reading and discussing major philosophical texts from the western intellectual tradition along with essays written by contemporary philosophers. In particular we shall explore such topics as the nature of human rationality, knowledge and belief, immortality, virtue, free will, self-deception, the mind-body problem, and physicalism vs. dualism with respect to human persons.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 262 Freedom, Citizenship, Culture (3 credits)

This course will survey recent trends in political philosophy with special attention to competing conceptions of political freedom, civic identity and responsibility, and the political significance of community and cultural diversity. Does our political freedom depend primarily upon securing the negative liberties celebrated in the classical liberal tradition? Does it also require adequate social rights, democratic self-determination and/or active and ongoing participation in the political process? How should claims of freedom be balanced alongside the need to promote the common good, political solidarity and unity, and a sense of common belonging? How should the demands of citizenship be weighed against commitments arising from membership in sub-state cultural groups and other forms of human community?

Prerequisites: PHL 154

Attributes: Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 264 Topics in Moral Psychology (3 credits)

This course will explore human moral judgment, decision making, and behavior. Included are examinations of issues about whether the psychological processes involved in human moral practice are innate, about the respective roles of emotion and reasoning in moral judgment, and about the extent to which cultural forces shape our moral beliefs. Following the lead of much of the field in recent years, our focus will be primarily on working out the philosophical implications of recent scientific investigation on the topics.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 266 Rel & Phil in Amer Identity (3 credits)

From the founding of the American nation under the influence of Puritanism to the rise of Transcendentalism in the nineteenth century, philosophic and religious propositions have decisively shaped the American character. This course examines several important episodes in American thought in order to determine what makes Americans different from other sorts of people, what habits of thought inform their decisions, and what principles govern their understanding of the relation between religion and public life. This course typically involves making two off-campus visits to historical sites in Philadelphia.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 268 The Self: East and West (3 credits)

Philosophers East and West, ancient and modern, have struggled with the question: What does it mean to be a Self? What does it mean to be genuinely myself in the world in which I find myself? And what are important erroneous as well as "accurate" ideas that have practical consequences in the experience of myself? The course is intended to be an introduction to, and survey of, four philosophical notions of the Self, from East and West, from antiquity to recent times: Buddhism, Confucianism, Stoicism and Existentialism.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 270 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHL 274 From Athens to Philadelphia (3 credits)

This course investigates how a city like Philadelphia was built and considers how a city can be built justly. This involves inquiring into the nature of cities and city life in the United States and attempting to formulate criteria for a just city. Attention will be given to topics of urban planning, to philosophical theories of justice, and to the Great Migration, the movement in the 20th century of African-Americans from the rural south into cities of the northern states. Students will be required to make several trips into Center City in Philadelphia as part of this course.

Prerequisites: PHL 154

Attributes: Diversity Course, Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 284 Philosophy & Personal Relation (3 credits)

This course is a philosophical exploration of relationships between individuals, particularly friendship and love, but including sex, marriage, and family, as well as any other ways in which individuals relate. Building on theories of philosophers and other thinkers, this course may consider, for example, what makes personal relationships valuable, how personal life relates to social context, how personal relationships like love and friendship have changed over time, how gender, race, age and other differences figure in personal relationships.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 285 Philosophy of Medicine (3 credits)

This course examines critical philosophical questions that arise from the nature and practice of medicine and medical research. Emphasizing how human persons define, understand, experience, and negotiate such states as health, illness, suffering, and death, the course also asks questions such as what does it mean to receive a medical diagnosis, what is the proper aim of medical therapies, what role should medical research and inquiry play in the practice of medicine, how should medical resources be distributed? Specific relevant topics may include: disease ontology, causation, and classification; the roles of informed consent and confidentiality in medicine; the phenomenology of illness and suffering; historical conceptions of medicine; reproductive and end-of-life issues.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 286 Philosophy of Mental Illness (3 credits)

This course will explore philosophical questions at the heart of the fields of psychiatry, clinical psychology, and other mental health professions. Broadly, we will identify and critically evaluate assumptions that underlie labeling and treating certain individuals as "insane"/"mentally ill"/"mentally disordered." We will use conceptual tools within the philosophy of mind, philosophy of science, philosophy of medicine, and moral philosophy to consider questions such as: What is insanity? Is it a disease or illness, "just like diabetes"? What is a disease in the first place? How do we define a "good" or "healthy" human life? What are the ethical implications of labeling people as mentally disordered? Might so-called mental disorders be better described as forms of "neurodiversity," to be celebrated instead of cured?

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 288 Minds & Souls (3 credits)

This course surveys both the main issues and theories in contemporary philosophy of mind as well as traditional and contemporary conceptions of the soul. It philosophically examines the difference between these distinct approaches, and will inquire: Why have soul theories been largely eclipsed by other approaches until relatively recently? Why are a few philosophers taking another look at soul theories? How do broader worldview considerations inform the debates? The topic of "singularity" will also be covered.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 294 Reproducing Persons (3 credits)

This course examines how race, class, sex, gender identity, sexual orientation, queer and trans identity, nationality affects how we, as human persons, reproduce ourselves. It begins with a criticism of the ways in which white supremacy has established the dominant ideology of 'reproductive choice' (which centers the experiences of white middle-class women and reinforces social and political institutions that harm marginalized peoples) and contrasts this with the inclusive but revolutionary theoretical framework of Reproductive Justice, as developed by African American feminists. Drawing on the work of leading philosophers and women's studies scholars, the course seeks to not only address ethical and legal questions as they relate to women's reproductive lives but also to examine the material circumstances in which the reproduction of persons is realized.

Prerequisites: PHL 154

Attributes: Diversity Course, Gender Studies Course, Philosoph Anthropol, Undergraduate

PHL 295 Philosophy of the Environment (3 credits)

This course examines philosophical problems and questions that arise when we consider our place as human persons embedded in the natural world. We ask how our natures as complex human persons with rational, biological, and spiritual elements are both formed by and, in turn, form the natural world. As creatures bound by norms, we can also interrogate our ethical responsibilities as they pertain to the environment and one another. Specific topics covered may include global warming, responsibilities to future generations, population and consumption, wilderness preservation and restoration, the extinction crisis, environmental disobedience.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 302 Philosophy of Race (3 credits)

Race has long played a prominent role in our social existence, and continues to do so even in what some have called a "post-racial society." In this course, we will take a philosophical approach to understanding a set of related questions about race. What is the origin and basis for racial concepts? Is race socially constructed? Does it have a biological basis? Does racial discourse serve to further entrench racial divisions? How does racial oppression relate to other forms of oppression such as class- and gender-based oppression? What is "privilege"? What could it mean to say that a person has moral obligations deriving from harms which s/he has not personally brought about, and do persons ever have such obligations? We will also investigate issues such as affirmative action, racial solidarity, and the ways in which racial oppression differentially affects men and women.

Prerequisites: PHL 154

Attributes: Africana Studies Course, Diversity Course, Philosoph Anthropol, Undergraduate

PHL 303 Phil of Race Class & Gender (3 credits)

This course introduces the student to the role of identity in contemporary life and prepares students to live, work, and interact with others in situations defined not by the similarity of those involved, but their differences. The course proceeds in three ways. First, in order to see how racial, ethnic, class, sexual, gendered, intersectional, and other identities have been understood, we study basic modern theories of human identity, of what it means to be a person. Then we turn to experiences and theories of the specific identities that are the focus of our class. Many of our readings introduce the student to oppressive experiences of race, ethnicity, class, sex and gender identities and the diverse responses that people have elaborated in an effort to overcome their marginalization and dehumanization. Third, we examine, in particular, different ways in which oppressed people have theorized race, class, and gender identities in an effort to develop emancipatory identities.

Prerequisites: PHL 154

Attributes: Diversity Course, Philosoph Anthropol, Undergraduate

PHL 304 African Philosophy (3 credits)

Introduction to African philosophical approaches to: the problems of God, causality and chance, freedom, fate and destiny, the concepts of spirit, the philosophical wisdom of the African proverbs and the implications of Africa's history for philosophy, with applications to Western thought. Selected Readings from modern African novels, essays in anthropology, traditional philosophical, religious and literary texts, and essays by contemporary African philosophers.

Prerequisites: PHL 154

Attributes: Africana Studies Course, Undergraduate

PHL 308 Asian Philosophies (3 credits)

This course will examine the concepts of self, nature, and society in the Asian philosophical paradigms as they have been articulated by contemporary Asian philosophers in one or more historical traditions, including Indian philosophy, Chinese philosophy, and Japanese philosophy.

Prerequisites: PHL 154

Attributes: Asian Studies Course, Non-Western Studies (GEP), Philosoph Anthropol, Undergraduate

PHL 309 Personhood in Islamic Phil (3 credits)

Reflection on personhood in Arab-Islamic philosophy is informed, broadly, by two different sources: the Quran, and Quranic Islam more generally, in which personhood is approached via legal, moral, and religious concepts; and falsafa, or Greek (and, in particular, Platonic, Aristotelian, and neo-Platonic) philosophy, where the operative concepts are rather scientific: metaphysical, epistemological, and psychological. This course examines the many ways in which thinkers in the Arab-Islamic tradition, informed by these sources, have considered the existence and nature of persons, both divine and human. Much of the course will focus on the high classical period (9th to 12th c. CE), though we will also cover some significant post-classical, modern, and contemporary thought. Broad topics to be addressed include the existence and attributes of God, the order of the cosmos and the place of human persons within it, human nature, as well as the proper ethical ordering of human life and of the political state. We will discuss these ideas as they operate within the Islamic world and also how they interact with the broader Western philosophical tradition.

Prerequisites: PHL 154

Attributes: Non-Western Studies (GEP), Philosoph Anthropol, Undergraduate

PHL 310 Philosophy of Art (3 credits)

An examination of the philosophical questions arising from the human activity of creating and appreciating art (of all kinds: visual, musical, literary, etc.). Questions can include: the relation of perception and aesthetic appreciation to knowledge; the relation between emotion and belief; the relation between artist/creator, audience/spectator, and art work. How is art distinguished from nature as possible object of aesthetic appreciation? Must art even be aesthetic? If not, how is the category 'art' defined, and by whom?

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 311 Philosophy of Law (3 credits)

Philosophy of Law examines some of the philosophical questions raised by law and legal systems, such as the nature and limits of law, the relation between law and morality, the challenges in applying the principles of constitutional, contract, criminal and tort law, and specific issues such as civil disobedience, equality and liberty, rights and responsibility, and punishment and excuses.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Philosoph Anthropol, Undergraduate

PHL 312 Animal Ethics (3 credits)

Animal ethics refers to the moral and legal obligations of humans to nonhuman animals. To determine these obligations, we will give the first few weeks of the course to considering the shared mental faculties of humans and animals. Traditionally obligations in ethics and law are owed in ethics to persons, and so it is necessary to find out whether any nonhuman animals qualify as persons. Related to the issue of nonhuman animals qualifying as persons, we will examine several moral theories in modern Western philosophy: Kant's theory of duty, the original and contemporary versions of utilitarianism, the social contract theory of John Rawls, and Martha Nussbaum's capabilities theory. In addition we will investigate the current situation in law for the permitted treatment of animals.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

PHL 320 Business, Society and Ethics (3 credits)

This course will discuss ethical issues in the practice of business. Topics will typically include ethical issues in marketing, finance, human resources, the environment, product liability, global sales and labor practices, etc. The course will address these issues in business practice through the lenses of traditional ethical theories.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 322 Philosophy of Science (3 credits)

Scientific values, theories, and practices play a central role in the ways modern human beings live, act, and interact. Increasingly, science affects how we understand our very natures as rational, biological, and social beings. This course examines the nature, role, and meaning of scientific inquiry and knowledge. It addresses topics such as scientific realism and anti-realism, the nature of observation, the structure of scientific theories, philosophical problems in the history of science, the role of values in science, the role of science in human affairs.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 324 Philosophy of Social Sciences (3 credits)

This course will involve an analysis of the metaphysical conceptions of the human person presupposed by various theories of the social sciences. The course will also examine the relation of various criteria for knowing to the theories which issue from them. Other topics may include materialism, positivism, historicism, cultural relativism, and various epistemological questions.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 326 Philosophy of Sports (3 credits)

This course will investigate a variety of philosophical issues surrounding sports. The main focus will be on ethical topics such as the use of performance enhancing drugs, the appropriateness of institutions surrounding college athletics, and the use of government funds to subsidize stadiums and arenas for professional sports franchises. These issues will be investigated by employing common methods in moral philosophy, informed by empirical research in economics and a variety of other scientific disciplines.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

PHL 330 Social and Political Phil (3 credits)

This course serves as an introduction to major works in the history of social and political philosophy. With a survey of important figures and texts from pre-modern, modern and contemporary periods, the course will address basic philosophical questions about the individual, society and the political order, such as: What is justice? In what sense is the political order a kind of community? What is the philosophical basis and justification of law and political authority? What are the social and political implications of a commitment to human freedom and equality? What are the necessary social conditions for realizing freedom, justice and human flourishing? Major authors might include Plato, Aristotle, Augustine, Aquinas, Hobbes, Locke, Rousseau, Hume, Smith, Kant, Marx, Mill, Arendt, and Rawls.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Philosoph Anthropol, Undergraduate

PHL 331 Inequality: A Phil Exploration (3 credits)

This course explores the problem of inequality from a philosophical perspective. To that end, we reconstruct and critically evaluate arguments for and against inequality in ancient, modern, and contemporary political philosophy. When, if ever, are social, political, and economic inequalities justified? Is inequality simply a reflection of human nature, or is it the product of society's major institutions? Who has a moral responsibility to combat unjust forms of inequality that already exist? To answer these questions, we survey the works of major figures such as Plato, Aristotle, Locke, Rousseau, Wollstonecraft, Marx, DuBois, Rawls, and MacKinnon.

Prerequisites: PHL 154

Attributes: Diversity Course, Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 332 Economic and Social Philosophy (3 credits)

This course will investigate the idea of social justice from several philosophical perspectives and/or traditions. Issues to be addressed may include: distributive justice, private property, the working poor, economic globalization, and capitalism and its alternatives.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 334 Ethics and Criminal Justice (3 credits)

This course will address ethical issues in the criminal justice system at both the theoretical and applied levels. Typical theoretical issues addressed might include the following: the relationship between law and morality; theories of punishment; conditions for the moral and/or legal responsibility of individuals; notions of procedural justice. Typical applied ethics issues might include the following: limits on the police use of deception and of deadly force; search and seizure rules; plea bargaining; mitigation and excuse defenses (e.g. insanity); mandatory sentencing, especially life without parole; capital punishment.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 336 Violence and Non-Violence (3 credits)

This course will focus on two levels: philosophical reflection on the moral dimensions of violence and nonviolence in general, and analysis of some specific moral issues concerning the resort to violence. Issues include the morality of war, especially under current conditions, and criminal punishment. Theories of nonviolence, and practical alternatives to violence, will be examined.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 338 Vio & Recnciliatn in N. Ireln (3 credits)

The course will examine violence and reconciliation in Northern Ireland from both a philosophical and empirical perspective. Special attention will be paid to both the socio-historical roots of "The Troubles" and the moral context of discourses of retribution and forgiveness. During the stay in Northern Ireland, SJU students are guests of Corrymeela, an ecumenical community committed to the work of reconciliation by providing a "safe and shared space" where people can meet as Protestants and Catholics, British and Irish, rich and poor, and through open dialogue and interaction grow in trust with one another. Students will also visit selected sites in Derry and Belfast.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 340 Topics in Political Philosophy (3 credits)

This course will examine recent developments and debates in social and political philosophy. The emphasis of the course will be on contemporary discussions of a problem or set of problems, though some attention may be paid to the treatment of these problems in the history of philosophy. Topics to be examined might include political legitimacy, human rights, private property and distributive justice, just and unjust war, cosmopolitanism and patriotism, global justice, social unity and solidarity, toleration, multiculturalism, and the role of religion in politics.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

PHL 342 Dimensions of Freedom (3 credits)

Political philosopher Hannah Arendt claims that the ability to forgive and the ability to make and keep promises are at the center of human freedom, the capacity to interrupt automatic processes and begin something new. The experience of imprisonment will be an important focus of class discussion, and a starting point to examine multiple dimensions of human freedom. These include: negative vs. positive freedom; freedom of action vs. inner freedom (thought, imagination, will); political freedom vs. political oppression; the extent to which freedom in any of these senses is a good, worthy of the value we tend to give it. For each dimension, we will also ask what inner and/or external conditions limit or even preclude its exercise.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 344 A Good Life (3 credits)

The course will begin with an examination of Plato's classical account of a good life, grounded in the health of the body and soul and in active participation in a just community. We will then turn to the modern German philosophical tradition that further specifies this conception of a good life in terms of the reflective, yet concrete self-realization of the person grounded in right relations to oneself, other persons, nature, the institutions in which one's life is embedded, and to the future. Key topics will include human freedom and responsibility, the need for mutual recognition among human beings, and the notion of common sense. We will also spend time on the difficult human problems of rampant consumerism, commodification, and the instrumentalizing of human reason. In Germany we will explore specific ways in which the now philosophically grounded themes of health, sustainability, and community are manifest in institutions and cultural practices. We will spend the majority of our time in the award winning "Green City" of Freiburg, a socially innovative and historic university town, and capital of the Black Forest. We will then travel to the idyllic, medieval city of Tübingen and finally to Frankfurt, a major urban center well-known for its sustainable practices and innovative ideas.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Study Tour, Undergraduate

PHL 350 God in Recent Philosophy (3 credits)

The course examines three different conceptions of God: [1] Popular Theism: God conceived as similar to a human person - though incorporeal, unobservable, and possessed with superhuman attributes. This is the view of God held by most traditional theists. [2] Perfect Existence Theism: in which God is not a being of any kind, not even a personal being, even though personal language can be used in speaking of God. This is the view of God espoused by Thomas Aquinas; and [3] Panentheism: God conceived as inclusive of rather than independent of the world; the relation between God and the world being like the relation between the mind and its body. This view has been defended by Charles Hartshorne. In the case of each form of theism, questions arise as to how it deals with the problem of evil: how its view of God squares with the fact that the world contains vast amounts of moral and physical evil.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 351 Reason, Faith, and Relativism (3 credits)

Intelligent, sincere, and equally well-informed people often strongly disagree. This seems especially true when it comes to religious beliefs. In that context, people will often appeal to "faith," which some construe as belief without good reason. It is therefore important to ask what counts as good reason for holding a belief, and whether all beliefs are subject to the same standard. If two individuals hold contradictory beliefs, then certainly one of them is wrong, but might both be justified in holding those beliefs? If so, does this imply that truth is relative? This course deals with the general topic of rational belief formation in a world that is religiously, ideologically, and culturally diverse.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 352 Kierkegaard, Nietzsche, Dostoevsky (3 credits)

Against the backdrop of classical metaphysics and human rationality, the sources and early development of existential themes are developed. Selected readings from Kierkegaard (Either/Or, Fear and Trembling), Nietzsche, (Thus Spoke Zarathustra, Beyond Good and Evil), and Dostoevsky (Notes from the Underground).

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 353 Philosophy, Science & Religion (3 credits)

A consideration of important issues in philosophy and philosophy of religion within the historicizing context of the scientific world-view of the times. Simultaneously, the course will consider the implications of the current (and changing) scientific world-view (genetics, astronomy, physics) for philosophical and religious reflection, including the idea of God. Philosophically as well as scientifically, the course will take its point of departure in Darwin and come back to consider the radical implications for philosophy and religion prophetically seen by his contemporary Nietzsche. Satisfies Signature core course requirement in Faith and Reason

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 354 Philosophy of Religion (3 credits)

Philosophical analysis of some of the following topics: religious experience, testimony, belief, human destiny, evil, knowledge of and language and arguments about God. Readings from classical and contemporary sources.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 355 Phil Iss in Christian Doctrine (3 credits)

This course will investigate the coherence and plausibility of some of the most central teachings of Christianity. A sampling of potential topics includes: heaven and hell, the Trinity, Original Sin, the Atonement, and the Incarnation. There will also be a discussion of different methods of deciding when a teaching is essential to Christianity, and an exploration of various alternative interpretations of the doctrines.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 356 Religious Diversity (3 credits)

Religious diversity is an inescapable fact. It is hard to imagine anyone is thinking their religion (should they have one) to be the only one that exists or the only one capable of evincing commitment and devotion. The diversity of religions raises questions that are practical as well as theoretical. The fact of religious diversity has elicited various philosophical reactions, ranging from exclusivism to relativism to inclusivism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Honors Course, Undergraduate

PHL 358 Atheism & Prob of God (3 credits)

After a study of the classical arguments concerning God's existence, the course examines examples of 19th century atheism (Feuerbach, Marx, Nietzsche) and belief (Kierkegaard, Dostoevsky), and 20th century atheism (Sartre, Camus) and belief (Rahner, Marcel).

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 359 Existence of God (3 credits)

This course will focus on arguments for and against the existence of God. It will begin by examining the ontological, cosmological, and design arguments for the existence of God. Included will be a discussion of purported evidence for the existence of God from modern biology and cosmology. It will then examine arguments against the existence of God based on human and animal suffering, followed by arguments against the existence of God arising from the scarcity of credible miracle claims.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 360 Philosophy of God in Aquinas (3 credits)

This course will examine the philosophical writings of Thomas Aquinas on the existence and nature of God. Topics include the procedure of philosophical theology, the methodological problem of attaining true knowledge of God, Aquinas's "five ways" of demonstrating the existence of God, and arguments for the various "attributes" of God: simplicity, perfection, goodness, infinity, ubiquity, unchangeableness, eternity, and oneness. Aquinas's innovative method of analogical predication will be employed to offer a philosophical interpretation of core theistic assertions that God has life and knowledge that God wills and loves, that God exercises providence both justly and mercifully, that God is all-powerful and perfect happiness. This course may be taken to satisfy the major requirement for a course in the ancient or medieval period.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

PHL 361 Vision, Experience Faith (3 credits)

This course engages students with the puzzle of whether religious faith is strengthened or weakened by reflection on human perceptual experience, in particular visual experience. The status of religious experience as a possible support for justified religious belief will be examined. Contemporary scientific accounts of visual experience will be considered.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155)

Attributes: Faith-Reason Course, Undergraduate

PHL 362 Faith & Reason in Kantian Phil (3 credits)

This course begins with an examination of two types of traditional arguments for the existence of God: those based on putative grounds of reason and those based on putative grounds of experience. The questionable success of such proofs will raise several questions: what is the nature of human reason, what is the nature of faith as a distinct epistemic attitude, and how should we think about the relation between them? We shall then pursue Kant's systematic answers to these questions with the hope that they will give us a workable and empowering alternative to the arguments studied earlier in the course. Possible further topics for the course include (1) the possibility of understanding the history of arguments for God's existence as a progressive development of reason's awareness and articulation of its needs, and (2) the application of Kant's analysis of reason to some fundamental claims and themes of the Christian religion in order to show how they can be understood as having a basis in reason.

Prerequisites: (PHL 154 and ENG 101) and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 364 God, Evil, and Hiddenness (3 credits)

This course will examine recent arguments against the existence of God based on the problem of evil and the problem of divine hiddenness. (The problem of evil is the problem of reconciling God's existence with the presence and severity of suffering in the world, and the problem of divine hiddenness is the issue of understanding why God would provide so few clear and dramatic signs of his presence.) Although no prior mathematical knowledge will be presupposed, as part of the process of understanding the arguments students will also be expected to master some basics of probability theory.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 365 Christianity and Evidence (3 credits)

This course will investigate several topics surrounding Christianity and evidence. The course is divided into two sections. The first is an exploration of the question of whether we have good evidence for Christianity. Included in this first unit will be a discussion of both scriptural evidence and the evidence provided by purported miracles in the modern world. The second section will examine the relationship between belief and evidence, in an attempt to understand whether Christian belief (and religious belief more generally) should be based on evidence in the same way as many other kinds of beliefs.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 370 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHL 377 Inside-Out (3 credits)

This class offers a unique opportunity to have meaningful discussions about a range of topics from inside a correctional facility. Inside-Out classes bring together students from Saint Joseph's University and adult students who are incarcerated to learn about and discuss topics such as the causes of crime, racism, literature, philosophy, and restorative justice. Through the readings and dialogue, inside and outside students will be able to integrate their theoretical knowledge with lived experiences. It is through this exchange that we hope to critically analyze and challenge the current system in the U.S. that has resulted in a higher incarceration rate than other similar countries.

Attributes: Faith Justice Course, Justice Ethics and the Law, Service Learning Course, Undergraduate

PHL 395 Junior Seminar (3 credits)

Readings, research, and discussion concerning a common theme. Junior majors, minors with chair's permission.

Prerequisites: PHL 154

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Philosophy.

Attributes: Undergraduate

PHL 401 Ancient Philosophy (3 credits)

What is the nature of ultimate reality? What standards must our beliefs meet if they are to qualify as knowledge? Is the soul distinct from the body, and what sort of trait is virtue? These are among the most basic questions of philosophy, and they took shape originally in the ancient world of Greece and Rome. This class provides a critical survey of the questions and possible answers provided by the founders of the western philosophical tradition. Philosophers discussed include the Presocratics, Socrates, Plato, Aristotle, the Stoics.

Prerequisites: PHL 154

Attributes: Ancient Studies Course, Undergraduate

PHL 402 Plato and Aristotle (3 credits)

A focused examination of the major ethical, metaphysical, and political theories of Plato and Aristotle. The class will cover the ideas of these two philosophers on such topics as the nature of virtue, the soul, change in the physical world, substance, the best political regime, and the relation between political activity and philosophy.

Prerequisites: PHL 154

Attributes: Ancient Studies Course, Undergraduate

PHL 404 Love, Friendship, Ancient World (3 credits)

This course explores a number of descriptions of love and friendship found in works of literature and philosophy from ancient Greece and Rome. Two topics in particular will be studied in these works on love and friendship. The first is the connection between friendship, justice, and politics that is asserted in a number of ancient works. The second is the presentation of erotic love as a form of divine madness that can be both dangerous and beneficial. Some authors to be read include Sophocles, Euripides, Plato, Aristotle, Cicero, and Catullus.

Prerequisites: PHL 154 and ENG 101

Attributes: Ancient Studies Course, Philosoph Anthropol, Undergraduate

PHL 409 Philosophy of St. Augustine (3 credits)

This course examines the philosophical thought of Augustine of Hippo through three of his most important works. The course will engage with a number of themes that are central to Augustine's thought—for example, sin and free choice, evil, the human condition, human flourishing, desire, cognition, memory, time, as well as creation and its relationship to God, and the nature of God Itself.

Prerequisites: PHL 154

Attributes: Medieval, Ren & Reform Studies, Philosoph Anthropol, Undergraduate

PHL 410 Medieval Philosophy (3 credits)

An introduction to medieval philosophy through a study of its most important thinkers (e.g., Augustine, Boethius, Anselm, Aquinas) and its central questions (e.g., the existence and nature of God, the problem of evil, the compatibility of human freedom and divine foreknowledge, the limitations of human reason, the immortality of the soul, happiness, virtue, natural law).

Prerequisites: PHL 154

Attributes: Medieval, Ren & Reform Studies, Undergraduate

PHL 412 The Philosophy of Aquinas (3 credits)

A close examination of Thomas Aquinas's writings on topics such as proofs for the existence of God, the nature of God, creation, providence, the relation of body and soul, immortality of the soul, human knowing, happiness, virtue, natural law

Prerequisites: PHL 154

Attributes: Medieval, Ren & Reform Studies, Philosoph Anthropol, Undergraduate

PHL 420 Early Modern Philosophy (3 credits)

A critical analysis of the rationalist and empiricist movements of the 17th and 18th centuries. Emphasis will be placed on the epistemological and metaphysical theories of the following thinkers: Descartes, Spinoza, Leibniz, Locke, Berkeley, and Hume.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 428 The Enlightenment& Its Critics (3 credits)

This course provides a survey of the "critical tradition" in philosophy - a tradition seeking to ascertain the nature and limits of human reason in the hopes of moving toward social and cultural progress. The course will begin with the critical tradition's roots in the thinkers of the French and German Enlightenments of the 18th century, continue with three of the Enlightenment's major critics - Marx, Nietzsche, and Freud - and culminate in the critical social theories of the Frankfurt School and Michel Foucault in the 20th century. In the end, the course will consider the tenability of the Enlightenment project and its hopes for the future as well as the status of critical social theory today.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 430 Kant's Critique of Pure Reason (3 credits)

In this course we shall pursue a close study and critical assessment of Kant's highly original theory of transcendental idealism as it is presented in his seminal work, the Critique of Pure Reason. Specific topics will include, but are not limited to, the nature of human reason, the nature of experience, the possibility of synthetic a priori knowledge, the relation between mind and world, the limits of human knowledge, transcendental idealism vs. transcendental realism, varieties of skepticism and responses to them, self-knowledge, the problem of free will, and philosophical method. We shall begin the course by sketching some of the problems that Kant inherited from early modern philosophy and to which he is responding.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 432 German Idealism (3 credits)

In this course we shall explore the views of the major thinkers of the German idealist period-namely, Kant, Fichte, Schelling, and Hegel-with respect to such topics as the nature of human reason, knowledge and the self, the relation between mind and world, the unconditioned, freedom and morality, the nature and role of art, God and religion, and reason in history. We shall begin the course by sketching the philosophical context and a set of problems that helped motivate the movement as a whole. Some attention may also be paid to some of the lesser-known figures of the period, such as Reinhold, Jacobi, and Maimon.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 434 Existentialism (3 credits)

A study of the Existentialist movement, from its 19th century origins in Kierkegaard and Nietzsche and the Phenomenology of Husserl to its most prominent 20th century representatives, including Heidegger, Jaspers, Sartre and Camus.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 440 Phenomenology (3 credits)

A study of the philosophical background, methods, and results of the phenomenological movement in 20th century European thought. After examining a cluster of philosophical problems that gave rise to the movement, we shall focus mainly, though not exclusively, on the work of Husserl, Heidegger, and Sartre. In addition to our study of philosophical method, we shall explore phenomenological accounts of various matters such as consciousness, perception, hermeneutics, the existential nature of human beings, transcendence, self-deception, and otherness.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 446 Feminist Epistemology (3 credits)

Feminist challenges to traditional ways of thinking in epistemology, philosophy of science, metaphysics and ethics. Examination of feminist criticisms regarding: the nature and justification of knowledge; dominant conceptions of rationality and objectivity; various dualistic ontologies; and prevailing conceptions of the self. Consideration of possible gender-bias in traditional philosophical methods.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 450 American Philosophy (3 credits)

Philosophy in the American context: the "American experience", historical and contemporary; philosophical concerns that arise in that context; the classical American philosophers-Edwards, Peirce, James, Royce, Dewey, and Whitehead. Central concerns: the meaning of experience; scientific inquiry as a model of knowing; the meaning of religion and religious experience; the problems of value (moral and aesthetic); the problem of community.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: American Studies Course, Faith-Reason Course, Undergraduate

PHL 461 Contemporary Thomism (3 credits)

St. Thomas Aquinas, one of the greatest philosopher-theologians of the Middle Ages, employed both faith and reason to conceive a remarkably comprehensive and nuanced understanding of reality. Recently, some philosophers have been returning to the works of Aquinas and attempting to transpose his vision to meet the distinctive intellectual challenges of our own quite different age. After providing an introduction to Aquinas' thought, this course will examine in depth the writings of one or more contemporary Thomists (e.g., Bernard Lonergan, Jacques Maritain, Etienne Gilson, Karl Rahner, Pierre Rousselot, Joseph Marechal, Josef Pieper).

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 470 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 471 Problems in the Theory of Know (3 credits)

A critical examination of key problems in contemporary epistemology. Problems relating to the analysis of knowledge and justification will be examined. Topics may include: knowledge and warrant; knowledge closure; skepticism of various forms; foundationalism, coherentism, reliabilism, contextualism; virtue epistemology; internalism and externalism; the role of formal (probabilistic) models in epistemology.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 473 Philosophy of Mind (3 credits)

A critical examination of metaphysical and epistemological issues in the contemporary philosophy of mind. These issues include the problem of reductionism, the problems of intentionality and mental representation, personal identity, conceptual foundations of psychology, and the possibility of artificial minds.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 474 Language and Thought (3 credits)

Rene Descartes held a view called "mind-body dualism," according to which human persons are fundamentally thinking substances that are somehow causally linked to particular physical substances: bodies. One of his reasons for holding this view was that he believed that the human faculty of language could never, even in principle, be adequately explained by any purely physical description of things. Language, as he saw it, is evidence of mind, and indeed he believed that where language is absent, mind is also absent. Creatures without language are, in Descartes' view, mindless organic automata. Few today would defend Descartes' view in all details, but the general sense that language is an important "mark of the mental" has not gone away. Instead, it has given rise to a cluster of narrower but interesting and important questions: Are certain kinds of mental states impossible without language? Does the specific language that we speak influence our thoughts in some way? Do our innate tendencies of thought force our languages to take certain forms?

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 475 Language and Meaning (3 credits)

This course examines the core issues in the philosophy of language, focusing on the nature of linguistic meaning. What is linguistic meaning? Are meanings things in the world, ideas in our minds, or something else? How does the meaning of a sentence depend on the meaning of the words that compose it? In what ways does the content we communicate go beyond the words we use? How is meaning related to grammar? In what ways does meaning depend on context? We will examine how philosophers and linguists have answered these questions.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 481 History of Analytic Philosophy (3 credits)

This course will explore important figures and themes from the history of analytic philosophy. We will start with the birth of modern logic in the seminal works of Gottlob Frege and Bertrand Russell. As time permits, we will also discuss the project of philosophical analysis in the works of G.E. Moore, Russell and the early Ludwig Wittgenstein, the rise of logical positivism and emotivism (Rudolph Carnap, Susan Stebbing, A. J. Ayer, C. L. Stevenson), W. V. Quine's critique of Logical Positivism (in particular, his critique of the analytic-synthetic distinction), and the rise of ordinary language philosophy in the works of J. L. Austin, Peter Strawson, and the later Wittgenstein.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 493 Independent Research in Phil (3 credits)**PHL 494 Independent Research in Phil (3 credits)****PHL 495 Senior Seminar (3 credits)**

Readings, research, and discussion concerning a common theme; a paper is required. Senior majors; minors with chair's permission.

Prerequisites: PHL 154

Attributes: Undergraduate

Philosophy Major

Majoring in philosophy is a time-honored way of gaining a liberal arts education, i.e., an education fitting for a person who would be free. Philosophy majors at Saint Joseph's University will have an opportunity to read some of the most profound and challenging works ever written. In the classroom they will partake in lively discussions of life-changing ideas. Majors will develop their capacity to think clearly and creatively, to argue logically and express their thoughts persuasively, to criticize rationally and converse openly, to uncover assumptions and recognize implications and to raise those important questions that are often overlooked.

As a deliberately pluralistic department possessing expertise across a broad range of philosophical traditions and methods, we are able to offer courses across all major historical periods (i.e., ancient, medieval, modern, contemporary) and areas of field specialization (e.g., epistemology, metaphysics, language, religion, ethics, and social and political philosophy). Majors are challenged to grapple with perennial philosophical problems (e.g., free will, skepticism, objectivity, the nature and existence of God) and are introduced to methods of inquiry that allow for the development and appropriation of philosophical modes of thinking, speaking, and writing. An active Undergraduate Philosophy Society provides a forum for gathering with other students also genuinely interested in philosophy, and provides an excellent opportunity for student-faculty dialogue outside the classroom.

Learning Goals and Outcomes

Goal 1: Students will appreciate the role of arguments in philosophy

Objective 1.1: Students will identify, analyze, evaluate, and construct arguments

Goal 2: Students will demonstrate knowledge of logic (at a level appropriate for undergraduate majors)

Objective 2.1: Students will recognize basic deductive and inductive argument forms as well as different types of informal fallacies

Objective 2.2: Students will evaluate arguments by applying basic logical concepts, such as validity and soundness and strength and cogency

Goal 3: Students will gain an appreciation for the history of philosophy, including major figures and texts

Objective 3.1: Students will explain and critically engage some of the main ideas, problems, theories, methodologies, or schools of thought from the ancient or medieval periods of Western philosophy

Objective 3.2: Students will explain and critically engage some of the main ideas, problems, theories, methodologies, or schools of thought from the modern or contemporary periods of Western philosophy

Goal 4: Students will display, at a level appropriate for undergraduate majors, the skills required for engaging in philosophy as a specialized academic discipline

Objective 4.1: Students will complete an advanced, seminar-style class resulting in a research paper or project that shows (1) mastery (appropriate to an undergraduate philosophy major) of a particular philosophical problem, area, or text; and (2) the ability to contribute to a specialized discussion of that problem, area or text.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

Code	Title	Hours
PHL 154	Moral Foundations	3
THE 154	Catholic Theological Tradition	3
ENG 102	Texts & Contexts	3
HIS 154	Forging the Modern World	3
XXX NNN: Faith and Reason Course Area (see course list)		
XXX 150: First Year Seminar		

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
ENG 101	Craft of Language	3
THE NNN: Religious Difference		
PHL NNN: Philosophical Anthropology (see list of courses)		
MAT NNN: Mathematics - Beauty		
Non-Native Language (0-2 courses)		
Natural Science (One four-credit lab course or two three-credit non-lab courses)		
Social/Behavioral Science		
Fine Arts/Literature		

General Education Overlays

See this page about Overlays (p. 41).

- Writing Intensive
- Ethics Intensive
- Diversity/Globalization/Non-Western

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Electives

14-18 courses

Major Requirements

8 courses:

1. Logic or Symbolic Logic
2. History course: Ancient/Pre-Modern
3. History course: Modern/Contemporary
4. PHL elective course
5. PHL elective course
6. NON-GEP PHL elective
7. PHL 495 Senior Seminar or PHL 395 Junior Seminar
8. GEP Faith and Reason (if taken in Philosophy) or PHL elective Course

Philosophy majors have the option of pursuing one of five tracks (p. 291):

1. History of Philosophy;
2. Social-Political/Philosophy of Law;
3. Mind, Language, Science;
4. Philosophy of Religion; and .
5. Arts and Humanities

Tracks

Philosophy majors have the option of pursuing one of five tracks. Major concentration requirements are the same for all five tracks, though the integrated learning requirements (ILC) will vary from track to track.

History of Philosophy Track

Code	Title	Hours
Select three of the following:		9
HIS 315	The Glory that was Greece	
CLA 201	Love, Sex, Conqst: Classic Myth	
CLA 202	Classical Epic: Gods & Heroes	
CLA 204	Comedy: Ancient and Modern	
POL 301	Law and Social Change	
THE 333	Knowl & Love of God: Mid Ages	
HIS 317	The Rise of the West: 400-1000	
HIS 319	Reform/Rev in Europe 1500-1650	
Greek, Latin, German, French (1 or more in the SAME language)		

Social-Political/Philosophy of Law Track

Code	Title	Hours
Select three of the following:		9
Any Economics course		
POL 111	Intro to American Politics	
POL 113	Intro to Comparative Politics	
POL 115	Intro to Global Politics	

POL 117	Intro to Political Thought
POL 301	Law and Social Change
POL 303	Political Ideology in America
POL 305	Politics, Ideology, & Film
POL 310	Constitutional Politics
POL 311	Const Law:Rights & Civil Lib
POL 312	Social Controv & Supreme Court
POL 320	Injustice & the Law
POL 323	Women and American Politics
POL 324	Race & Ethnic Politics in U.S.
POL 326	Protesting Inequality
POL 328	U.S. Immigration
POL 340	Political Geography
POL 350	Haunted by the Past
POL 352	Global Political Economy
POL 367	Ethics in Internation Affairs
POL 368	Women, Gender & World Politics
POL 407	Capstone: Theories of Justice
SOC 101	Intro to Sociology
SOC 102	Social Problems
SOC 205	Ethnic & Minority Relations
SOC 208	Sociology of Gender
SOC 211	Classical Sociological Theory
SOC 219	Social Deviance
SOC 253	Race and Social Justice
SOC 260	Language and the Law
SOC 330	Urban Sociology
SOC 334	Miscarriages of Justice
SOC 345	Law and Social Policy
SOC 353	Restorative Justice Practice
SOC 355	Race, Crime & CJ
SOC 356	Gender, Crime & CJ
SOC 360	Sociology of Law

Mind, Language, Science Track

Code	Title	Hours
Select three of the following:		9
Any Mathematics course		
Any Natural Science course		
Any Computer Science course		
Any Linguistics course		
PSY 220	Sensation and Perception	
PSY 222	Neuropsychology	
PSY 221	Animal Learning and Memory	
PSY 224	Drugs, the Brain, & Behavior	
PSY 226	Psychology of Emotion	
PSY 225	Comparative Animal Behavior	
PSY 234	Psychology of the Self	
PSY 122	Psychological Disorders	

Arts and Humanities Track

Code	Title	Hours
Select three of the following:		9
Honors Courses		
CLA 321	Anc World Sexuality & Gender	
LTT 461	Franco-Afro-Caribbean Story	
THE 326	Letters of Paul	
THE 333	Knowl & Love of God: Mid Ages	
THE 359	Religion, Violence & Terrorism	
THE 370	Special Topics in Theology	
Art/Music/Film Courses		
MTF 151	Music Fundamentals	
MTF 157	Westrn Music Hist: MidAge-1750	
MTF 158	Western Music Hist: 1750-Pres	
MTF 251	Music Theory I	
MTF 258	Major Composers	
MTF 291	American Film	
MTF 292	European Cinemas	
MTF 293	Five Films	
MTF 294	Non-Western World Cinemas	
MTF 295	Major Figures in Film	
MTF 391	Film Theory & Criticism	
Any ART Studio Course		
Classics		
CLA 201	Love,Sex,Conqst:Classic Myth	
CLA 202	Classical Epic: Gods & Heroes	
CLA 203	Life & Death on Ancient Stage	
CLA 204	Comedy: Ancient and Modern	
CLA 321	Anc World Sexuality & Gender	
Literature (English Department)		
Any ENG course 301-331		
Literature (Modern Languages)		
CHN 310	Selections in Chinese Lit	
Any course in FRE literature/film 410-462		
Any course in GRM literature/film 305-406		
JPN 310	Selections in Japanese Lit I	
SPA 310	Intro to Latin American Lit	
Any course in SPA literature/film 410-456		

Philosophy of Religion Track

Code	Title	Hours
One Theology/Religious Studies course beyond the GEP		3
Select two of the following:		6
HIS 313	The Crusades	
HIS 316	The Grandeur that Was Rome	
HIS 317	The Rise of the West: 400-1000	
HIS 319	Reform/Rev in Europe 1500-1650	
HIS 346	Religion & Philosophy: Africa	
SOC 327	Sociology of Religion	
SOC 368	Cults as Social Movements	
Latin or Greek (1 or more in the SAME language)		

Philosophy Minor

Learning Goals and Outcomes

Goal 1: Students will develop the skills of identifying, analyzing, evaluating, and constructing philosophical arguments

Outcome 1.1: Students will be able to recognize arguments that appear in written texts by identifying philosophical conclusions and the premises that support them

Outcome 1.2: Students will be able to evaluate the premises of arguments

Outcome 1.3: Students will be able to construct arguments in order to express philosophical ideas both orally and in writing

Goal 2: Students will demonstrate knowledge of logic (at a level appropriate for undergraduate majors)

Outcome 2.1: Students will recognize basic deductive and inductive argument forms as well as different types of informal fallacies

Outcome 2.2: Students will be able to apply basic logical concepts, such as validity and soundness and strength and cogency, in their evaluation of arguments

Goal 3: Students will gain an appreciation for the history of philosophy, including major figures and texts

Outcome 3.1: Students will be able to explain (in writing, or through oral communication, or on examinations) some of the main ideas, problems, theories, methodologies, or schools of thought from the ancient or medieval periods of Western philosophy

Outcome 3.2: Students should be able to explain (in writing, or through oral communication, or on examinations) some of the ideas, problems, theories, methodologies, or schools of thought from the modern or contemporary periods of Western philosophy

Goal 4: Students will display, at a level appropriate for undergraduate majors, the skills required for engaging in philosophy as a specialized academic discipline

Outcome 4.1: Students will successfully complete an advanced, seminar-style class which features the construction and evaluation of arguments for specific philosophic positions and a focused examination of a particular philosophical problem(s), area, or text

Outcome 4.2: Students will complete a final paper or research project, typically in the context of completing an advanced, seminar-style class

Requirements

Students seeking to complete a minor in philosophy must take the two philosophy courses required in the GEP.

Code	Title	Hours
PHL 154	Moral Foundations	3
PHL xxx	Philosophical Anthropology	3
Select four more philosophy courses		12
Total Hours		18

We recommend that philosophy minors take a philosophy course to satisfy the GEP Faith and Reason signature course area, as well as one to satisfy the Ethics Intensive overlay.

Physics

Physicists study the properties and behavior of matter and energy in a wide variety of contexts, ranging from the sub-microscopic particles from which all ordinary matter is made (particle physics) to the behavior of the Universe as a whole (cosmology). Physics primarily is the science that deals with exploring the Rules of Nature. The fundamental understanding of nature that comes from the study of physics is central to all of the natural sciences, applied sciences and technology; and, thus, profoundly affects the life of every human along with their environment.

The Department of Physics of Saint Joseph's University offers students a comprehensive and flexible curriculum in the discipline of physics.

The program offers several advisory tracks (Materials Science and Nanotechnology, Astrophysics, Biophysics, Engineering Physics, Computational Physics and Engineering, Medical Physics, Physics Education, Pre-Med and Pre-Dental) which will allow students to specialize in variety of areas and prepare for a range of careers. The program begins with a core grouping of three introductory physics courses (freshman and sophomore years) in the foundations of classical Newtonian mechanics and Maxwellian electricity and magnetism, geometrical optics, thermodynamics and fluids along with a one-semester program in nonclassical (modern) physics: this course, based on developments in physics that occurred in the first quarter of the twentieth century, introduce students to quantum theory and special relativity. Each of the introductory physics courses is accompanied by a laboratory, which not only complements the didactic material but also trains the student in the methodology of doing experimental physics. During this time, students master the language of physics, i.e., mathematics. Students take three semesters of calculus, Differential Equations and Introduction to Linear Algebra. In addition, they are exposed to modern computational techniques in Numerical Analysis. These physics and mathematics courses provide the foundation to explore a vast array of upper division courses, including physics electives in particular areas of interest. The upper-level courses include the study of classical mechanics, statistical mechanics, electricity and magnetism, quantum mechanics, and experimental methods of physics. Elective topics include solid state physics, biophysics, nuclear and particle physics, computational physics, astrophysics, physics of fluids, advanced quantum mechanics, complex systems and more.

The Department of Physics at Saint Joseph's University has developed a research-oriented culture for both its faculty and students. Most students will engage in research, alongside faculty mentors, at some point during their four years. The ability to put into practice what is learned in the classroom is paramount to the growth of the scientist and the professional. In the research laboratory, the student will learn to design and perform experiments, to analyze data using computational methods, and draw appropriate conclusions. Students will also be exposed to the interfaces of physics where physics meets biology, chemistry and engineering; to that end, the student of physics will witness how the methods of physics are central to addressing key problems in the disciplines of biology, chemistry and engineering. The various tracks will provide the students with an interdisciplinary education.

Undergraduates participate in research in three different ways. First, they may decide to take research for academic credit. Within the major, students take three physics electives and one or more of these may be used to perform scientific research under the guidance of our physics

faculty. Second, students may opt to do research as a Summer Scholar. Saint Joseph's University is well known for its 10-week Summer Scholars Research Program. Historically, the Physics Department, through the generosity of its alumni, Dean and Provost, has been able to provide stipends for all physics students who have wanted to do summer research. Students selected to participate in the Summer Scholars Program not only receive a stipend but also are provided low-cost housing by the University. Lastly, students may opt to volunteer in a laboratory at SJU or elsewhere.

Department Mission

At its core, the mission of the Department of Physics at Saint Joseph's University is to educate students who are broadly trained in the discipline of physics, critical thinking and complex problem solving. They will have the ability to attack problems and enter professional areas, not only in the field of physics, but also in the areas of biology, chemistry, the applied sciences and engineering. Graduates of the department will be able to succeed in a wide range of professional careers where the principles of physics and critical thinking skills associated with a degree in physics are used on a routine basis.

In the spirit of the mission of the university, we believe that our students, through the liberal arts training gleaned from the General Education Program, in particular the "ethical dimension in learning", and the concentration curriculum in physics, will become lifelong learners and will use their knowledge and education for the betterment of humanity.

Five Year Combined B.S. in Physics/M.S. in Education Option

In addition to the Physics Education track which will allow students to complete an undergraduate double major in Physics and Education and earn a secondary-education (7-12) certification in four years, students can choose to pursue a five-year combined BS in Physics/MS in Education which will also lead to a secondary-education (7-12) certification. Students interested in the five-year program should speak to the Chair of the Department of Physics as early in their academic careers as possible.

Faculty

The full-time faculty and staff in the Department of Physics at Saint Joseph's University have engaged in significant research and teaching with real-work knowledge and experience in a wide range of physics topics, including soft condensed matter, fluid dynamics, granular materials, patterns in solidification, crystallization, flame fronts, fluid flow, pattern formation and much more.

Department of Physics Faculty & Staff (<https://www.sju.edu/departments/physics/faculty-staff/>)

Physics in the GEP

The GEP requires that all students take EITHER one semester of a lab-based natural science course (6 contact hours) OR two semesters of lecture-only natural science courses. Students who entered SJU in the fall of 2010 or later, or transfer students who entered SJU on the GEP curriculum and who wish to satisfy the natural science GEP by completing courses in Physics may do so by taking the first semester of the science majors, lab-based course sequence, PHY 101 (<https://academiccatalog.sju.edu/search/?P=PHY%20101>)/PHY 101L (<https://academiccatalog.sju.edu/search/?P=PHY%20101L>) or PHY 105 (<https://academiccatalog.sju.edu/search/?P=PHY%20105>)/PHY 105L (<https://academiccatalog.sju.edu/search/?P=PHY%20105L>), or one of the lab-based, one-semester courses for non-science majors, as they become available. Alternatively, students may fulfill one or both semesters of the natural science GEP by completing one or two of the special one-semester lecture-only Physics courses designed for non-science majors listed below.

academiccatalog.sju.edu/search/?P=PHY%20105L), or one of the lab-based, one-semester courses for non-science majors, as they become available. Alternatively, students may fulfill one or both semesters of the natural science GEP by completing one or two of the special one-semester lecture-only Physics courses designed for non-science majors listed below.

Non-science majors Physics GEP lecture-only courses:

Code	Title	Hours
PHY 110	Understanding Natural World	3
PHY 111	The Astronomical Universe	3
PHY 112	Energy: Problems & Promises	3
PHY 114	Tech Breakthroughs of 20th Cen	3

Non-science majors Physics GEP lab-based courses:

Code	Title	Hours
PHY 115	Investigations in Astronomy	4

Programs

Undergraduate Major

- Physics (p. 301)

Undergraduate Minor

- Physics (p. 303)

Courses

PHY 100 Physics Orientation (1 credit)

In this orientation course students are presented with an overview of all aspects of physics, including current topics, career opportunities in the field, academic standards, and integrity, as well as general information about the University and services that help students achieve academic success.

Attributes: Undergraduate

PHY 101 General Physics I (3 credits)

This two-semester sequence is an algebra-based physics course intended primarily for students majoring in biological and health sciences. Emphasis is on understanding fundamental principles and applying them to the analysis of physical phenomena, with several applications that arise in biology. Topics include classical kinematics and dynamics, fluids, waves, optics, electricity and magnetism and optics.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 101L General Physics Laboratory I (1 credit)

A two-semester laboratory sequence to accompany PHY 101-102.

Attributes: GEP Natural Science, Undergraduate

PHY 102 General Physics II (3 credits)

This two-semester sequence is an algebra-based physics course intended primarily for students majoring in biological and health sciences. Emphasis is on understanding fundamental principles and applying them to the analysis of physical phenomena, with several applications that arise in biology. Topics include classical kinematics and dynamics, fluids, waves, optics, electricity and magnetism and optics.

Prerequisites: PHY 101

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 102L General Physics Laboratory II (1 credit)

A two-semester laboratory sequence to accompany PHY 101-102.

Attributes: Undergraduate

PHY 105 University Physics I (3 credits)

This two-semester sequence is a calculus-based physics course intended primarily for students majoring in physics, chemistry, mathematics, or computer science. Emphasis is on developing both qualitative and quantitative understanding of fundamental physical principles, and the ability to apply those principles to analyze physical phenomena. Topics include classical kinematics and dynamics, electricity and magnetism, waves, and optics.

Prerequisites: MAT 161 (may be taken concurrently)

Restrictions: Enrollment is limited to students with a major in Actuarial Science, Chemistry, Computer Science, Mathematics, Mathematics - Secondary Educat or Physics.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 105L University Physics Lab I (1 credit)

A two-semester laboratory sequence to accompany PHY 105-106.

Attributes: GEP Natural Science, Undergraduate

PHY 106 University Physics II (3 credits)

This two-semester sequence is a calculus-based physics course intended primarily for students majoring in physics, chemistry, mathematics, or computer science. Emphasis is on developing both qualitative and quantitative understanding of fundamental physical principles, and the ability to apply those principles to analyze physical phenomena. Topics include classical kinematics and dynamics, electricity and magnetism, waves, and optics.

Prerequisites: PHY 105

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 106L University Physics Lab II (1 credit)

A two-semester laboratory sequence to accompany PHY 105-106.

Attributes: Undergraduate

PHY 110 Understanding Natural World (3 credits)

This course offers the non-science major an opportunity to explore how physics impacts everyday life. Topics will vary depending upon the interests of the class, but may include: the physics of sports, why musical instruments sound different from each other, rainbows and other optical phenomena, the physics of toys, Einstein's theory of relativity, and how a laser works. Although mathematics will not be the focus of the course, a working knowledge of algebra, geometry, and simple trigonometry is necessary. Emphasis is placed on developing critical thinking and scientific observation skills.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science, Undergraduate

PHY 111 The Astronomical Universe (3 credits)

In this course designed for the non-science major, the student is introduced to modern astronomical knowledge and theories. The planets, stars, and galaxies are investigated. Space exploration is discussed. Minimal mathematics is used and no previous science is required.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science

PHY 112 Energy: Problems & Promises (3 credits)

The goal of this course is to teach the student how to read, analyze, and intelligently comment on news articles about energy and the environment. The physics is straightforward and requires no more than basic business mathematics. Topics include: fossil fuels, large scale renewables, small scale renewables, nuclear power, megawatt accounting for conservation, transportation, and emissions control. The course emphasizes how real data shapes economics and policy, so the exact content will vary with current events.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science, Undergraduate

PHY 113 Physics by Experiment (4 credits)

In this course, students build up the basic principles of geometrical optics, electricity, thermodynamics, and/or classical mechanics by carrying out guided experiments and interpreting their results. Mathematics, at the level of geometry and simple algebra, is introduced when and as it is needed. This course is a Laboratory /Lecture combination.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 114 Tech Breakthroughs of 20th Cen (3 credits)

This course will explore a smorgasbord of major technological advances that occurred during the 20th century. Many of these developments occurred as a result of the historical, political, and economic factors that shaped much of the landscape of the previous century. The scientific achievements will be discussed in the historical context upon which they occurred paying particular emphasis on the interesting personalities that were responsible for many of the discoveries.

Attributes: GEP Natural Science

PHY 115 Investigations in Astronomy (4 credits)

This course, designed for the non-science major, provides an introduction to the science of astronomy. Topics include the roles of observation, theory, philosophy, and technology in the development of the modern conception of the Universe. The Copernican Revolution, the birth and death of stars, our Milky Way galaxy, time, and our ancestral heritage in the cosmos will be discussed and explored. No previous science, nor mathematics beyond the level of high school algebra, is required.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 115L Investigations in Astro Lab (0 credits)**PHY 150 First Year Seminar (3 credits)**

First year seminar course in Physics.

Attributes: First-Year Seminar, Undergraduate

PHY 170 Special Topics in Physics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHY 200 Survey of Physics (3 credits)

Covers the basic concepts in physics, including biological and medical applications of pressures and fluids, bioelectricity, biodynamics, and kinesiology.

Prerequisites: (MAT 120 (may be taken concurrently) or MA 107) or (MAT 155 (may be taken concurrently) or MA 110) or (MAT 161 (may be taken concurrently) or MA 122)

PHY 200L Survey of Physics Laboratory (1 credit)

A laboratory course to accompany PHY 200.

Attributes: Undergraduate

PHY 201 Introductory Physics I (3 credits)

Algebra- and trigonometry-based general physics course covering principles of mechanics and heat with applications to the health sciences. First course in a two-semester course sequence. This course is not interchangeable with one-semester physics courses such as PHY 200.

Prerequisites: (MAT 120 (may be taken concurrently) or MA 107) or (MAT 155 (may be taken concurrently) or MA 110) or (MAT 161 (may be taken concurrently) or MA 122)

Attributes: Undergraduate

PHY 201L Intro. Physics I Laboratory (1 credit)

A laboratory course to accompany PHY 201.

Attributes: Undergraduate

PHY 202 Introductory Physics II (3 credits)

Algebra- and trigonometry-based general physics course covering principles of wave motion, electricity and magnetism, optics, and modern physics with applications to the health sciences. Second course in a two-semester course sequence. This course is not interchangeable with one-semester physics courses such as PHY 200.

Prerequisites: PHY 201 or PHY 101

Attributes: Undergraduate

PHY 202L Intro. Physics II Laboratory (1 credit)

A laboratory course to accompany PHY 202.

Attributes: Undergraduate

PHY 211 Physics I (3 credits)

First semester of a three-semester, calculus-based general physics course sequence. It covers principles of mechanics and heat with applications to the health sciences. The course may involve the use of physics web resources, computer-controlled laboratory experiments, and spreadsheets for data analysis.

Prerequisites: (MAT 161 (may be taken concurrently) or MA 122 (may be taken concurrently))

Attributes: Undergraduate

PHY 211L Physics I Laboratory (1 credit)

A laboratory course to accompany PHY 211.

Attributes: Undergraduate

PHY 212 Physics II (3 credits)

Second semester of a three-semester, calculus-based general physics course sequence. It covers principles of waves, electricity, magnetism, optics, and modern physics with applications. The course may involve the use of physics web resources, computer-controlled laboratory experiments, and spreadsheets for data analysis. This course meets the PHY 202 prerequisite for all physics elective courses where applicable.

Prerequisites: PHY 211 or PHY 105

Attributes: Undergraduate

PHY 212L Physics II Laboratory (1 credit)

A laboratory course to accompany PHY 212.

Attributes: Undergraduate

PHY 213 Physics III (3 credits)

Third semester of a three-semester, calculus-based general physics course sequence. It is an introduction to the physics of waves, geometrical optics, fluids, and classical thermodynamics. The course may involve the use of physics web resources.

Prerequisites: (PHY 212 or PHY 106) and (PHY 202 or PHY 102) and (MAT 162 or MA 221)

Attributes: Undergraduate

PHY 213L Intro. Physics III Laboratory (1 credit)

A laboratory course to accompany PHY 213.

Prerequisites: PHY 212 and PHY 212L

Attributes: Undergraduate

PHY 235 Views of the Cosmos (3 credits)

An introduction to the study of the universe from scientific, religious, and philosophical standpoints. Surveys mankind's efforts to understand the nature of the cosmos, including its origins, evolution, and eventual demise. Viewpoints of many religious groups, cultures, and scientific thinkers will be discussed and compared. Contemporary debates in cosmology will be fully explored without mathematics.

Attributes: GEP Natural Science, Undergraduate

PHY 235L Views of the Cosmos Laboratory (1 credit)**PHY 251 Modern Physics I (3 credits)**

An analytical survey of the experiments, theories, and principles that led to the modern view of physical reality. Topics include: an introduction to special relativity theory, the dual nature of waves and particles, uncertainty relations, Bohr theory of hydrogen, fundamental aspects of quantum mechanics, the quantum theory of the hydrogen atom, and, if time permits, many-electron atoms.

Prerequisites: PHY 106

Attributes: Undergraduate

PHY 252 Modern Physics II (4 credits)

An extension of PHY 251 to include specific applications of the quantum theory. Topics include: structure and spectra of many-electron atoms and molecules, classical and quantum statistics, theory of solids, nuclear structure and dynamics, and an introduction to elementary particles.

Prerequisites: PHY 251

Attributes: Undergraduate

PHY 253 Survey of Nanotechnology (3 credits)

Nanotechnology embraces the disciplines of applied physics, materials science, supramolecular chemistry, and biological engineering to name a few. An overview of this highly interdisciplinary field will be given with a focus on the role of physics principles that guides this technology and on the new and exotic materials used.

Prerequisites: PHY 106

Attributes: Undergraduate

PHY 257 Math Methods in Physics (3 credits)

Advanced mathematical methods for physics: includes linear vector spaces, orthogonal functions, partial differential equations, complex variables, and transform techniques. Emphasis is on application of these mathematical techniques in solving problems in physics.

Prerequisites: PHY 106 or PY 212

Attributes: Undergraduate

PHY 270 Special Topics in Physics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHY 301 Classical Mechanics (3 credits)

Newtonian particle dynamics is presented with special emphasis on damped and forced simple harmonic motion and central-force motion. Generalized coordinates are introduced, and both Lagrange's formulation and Hamilton's formulation of classical mechanics are developed.

Prerequisites: PHY 106

Attributes: Undergraduate

PHY 303 Thermal Physics (3 credits)

The laws of thermodynamics are introduced and studied in the classical manner and the statistical mechanical foundations of thermodynamics are developed, including quantum statistics.

Prerequisites: PHY 251

Attributes: Undergraduate

PHY 307 Electricity and Magnetism (3 credits)

The classical (non-quantum) theory of electric and magnetic fields and charge interactions is presented. The appropriate tools of vector analysis are developed as they are needed. The Maxwell equations in both differential and integral form are introduced.

Prerequisites: PHY 106 and PHY 257

Attributes: Undergraduate

PHY 308 Waves and Optics (3 credits)

The study of electromagnetic waves and their associated boundary-value problems. Other topics include a brief analysis of geometrical optics, and detailed study of interference, diffraction, and polarization phenomena associated with electromagnetic waves.

Prerequisites: PHY 106 and PHY 257

Attributes: Undergraduate

PHY 311 Experimental Methods of Phy I (3 credits)

Laboratory intensive with some lecture. Provides the theory of operation and laboratory experiences for both analog and digital circuitry. Emphasis placed on written and oral communication skills and team work.

Prerequisites: (PHY 106 or PY 212) and (PHY 106L or PY 212L)

Attributes: Undergraduate

PHY 312 Experimental Methods in Phy II (3 credits)

Laboratory intensive. Focus on modern physics experiments.

Prerequisites: PHY 106 and PHY 106L

Attributes: Undergraduate

PHY 315 Einstein, Bohr, & Modern Phys (3 credits)

An examination of the lives and achievements of the great physicists of the first half of the twentieth century, including Albert Einstein, Niels Bohr, Werner Heisenberg, Wolfgang Pauli, and others, as they developed the basis of special relativity, general relativity, quantum physics, and nuclear physics. Considers the personal and philosophical dilemmas they faced, through an analysis of historical source materials such as letters, papers, and interview transcripts, and delves into the cultural impact of their work.

Prerequisites: PHY 200 or PHY 202 or PHY 212 or PHY 102 or PHY 106

Attributes: Undergraduate

PHY 321 Quantum Mechanics I (3 credits)

The Schrodinger formulation of quantum theory is developed with its constructs of wave packets, differential operators, and eigenvalue equations. Special emphasis is given to the quantum theory of measurement. Applications include various one-dimensional problems, central potentials and angular momenta. The transition to the matrix formulation of quantum theory is developed.

Prerequisites: PHY 251 and (MAT 213 or MA 222)

Attributes: Undergraduate

PHY 330 Descriptive Astronomy (3 credits)

Covers basic concepts of astronomy, its historical development, and theories of the origin of the universe. The search for life in the universe, the colonization of outer space, and the social and moral issues of the space program are also covered.

Attributes: Undergraduate

PHY 331 Nonlinear Dynamics and Chaos (3 credits)

This course introduces the theoretical foundations of nonlinear dynamics and chaos. Phase space analysis, bifurcations, routes to chaos, renormalization and universality, fractals and strange attractors are presented for a variety of nonlinear systems including maps and flows. Several examples are used to illustrate the theory, from physics, chemistry, biology, neuroscience, economics and social science.

Simulations are used throughout the course either by numerical computations with Matlab, Mathematica, or specific software packages.

Prerequisites: MAT 161 or MAT 155

Attributes: GEP Natural Science, Undergraduate

PHY 332 Intro. to Network Science (3 credits)

Basics of networks theory is introduced. Different network architectures are studied and analyzed. These include random and scale-free networks. Their properties and evolution are presented. In each component of the course a variety of examples of how these networks can model real processes and systems in various fields (data science, social science, mathematics, physics, environmental science, epidemiology, computer science, biology and chemistry, business analytics) will be analyzed. In particular the application of network science in Physics will be included for example for topics such as aggregation phenomena, lattices, neuro physics, critical phenomena, percolation to name few. Also the application of these physics topics to other fields will be presented. This course can be taken only by students in their third year or above.

Prerequisites: (MAT 161 or MA 122 or MA 110)

Attributes: GEP Natural Science, Undergraduate

PHY 357 Mathematical Methods (3 credits)

This course is an introduction to mathematical methods used in physics, chemistry, and related sciences: vector calculus, functions of complex variable, Fourier series, Fourier transform, series solutions of ordinary differential equations, and introduction to group theory. These topics are introduced in the context of specific problems in various areas of physics and physical science such as fluid dynamics, electricity and magnetism, quantum mechanics, thermodynamics, biophysics, and mechanics.

Prerequisites: (PHY 212 or PHY 106) and MAT 123

Attributes: Undergraduate

PHY 370 Special Topics in Physics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHY 390 Physics Seminar (0 credits)

Topics and agenda may include outside speakers, local speakers, and discussion of special topics in physics and related areas. Physics majors are required to attend each semester. Physics minors are also encouraged to attend. Graded on a P/NP basis.

Attributes: Undergraduate

PHY 401 Advanced Mechanics (3 credits)

This course will further develop the Lagrangian and Hamiltonian formulations of classical mechanics. Additional emphasis will be given to such topics as: collision theory, noninertial reference frames, nonlinear mechanics and chaos, continuum mechanics, and topics in special relativity.

Prerequisites: PHY 301

Attributes: Undergraduate

PHY 403 Quantum Mechanics II (3 credits)

A continuation of the development of quantum theory started in PHY 321. Topics to include: identical particles including fundamental molecular quantum theory, time-independent and time dependent perturbation theory, the WKB and adiabatic approximations, scattering, and an introduction to field theory.

Prerequisites: PHY 321

Attributes: Undergraduate

PHY 405 Solid State Physics (3 credits)

A study of matter in its solid state. Topics include crystal structure, electrical conduction in metals and semiconductors, dielectrics, magnetic materials, and superconductivity. Includes applications to solid-state devices.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 407 Soft Condensed Matter Physics (3 credits)

This course will study the physics of materials such as fluids, liquid crystal, polymers (including biological polymers such as proteins and DNA), colloids, emulsions, foams, gels, and granular materials.

Prerequisites: PHY 251 and PHY 252 and PHY 257

Attributes: Undergraduate

PHY 408 Advanced Electromagnetism (3 credits)

A selection of advanced topics in electromagnetism such as electrostatics, boundary-value problems, fields, and wave propagation in material media. Other topics include propagation in waveguides and transmission lines, gauge transformations, relativistic theory of electromagnetic fields, and numerical techniques in electromagnetism.

Prerequisites: PHY 307 and MAT 238

Attributes: Undergraduate

PHY 409 Statistical Mechanics (3 credits)

Topics include ensembles and distribution functions, quantum statistics, Bose-Einstein and Fermi-Dirac statistics, and partition functions.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 411 Nuclear Physics (3 credits)

The phenomena of natural and artificial radioactivity are investigated. Various models of nuclear structure are introduced and examined.

Nuclear reactions are studied with emphasis upon fission and fusion.

Some of the apparatus of nuclear physics, such as particle accelerators and radiation detection devices, are analyzed.

Prerequisites: PHY 251 and MAT 213

Attributes: Undergraduate

PHY 412 Physics of Radiation Therapy (3 credits)

An introduction to the basics of radiation physics, radiation therapy, and dosimetry.

Prerequisites: PHY 102 or PHY 106 or PHY 202 or PHY 212

Attributes: Undergraduate

PHY 413 Materials of Electronics (3 credits)

This course will focus on the materials used to conduct electrical charge and spin and hence information from one region in space and time to another. Conduction processes in metals, traditional semiconductors, and in organic conducting and semi-conducting materials will be explored with a particular emphasis on the underlying physics principles employed.

Prerequisites: PHY 251 and PHY 252 and PHY 257

Attributes: Undergraduate

PHY 415 Computational Physics (3 credits)

Introduction to problem solving in physics using mathematical modeling, numerical methods, computer simulations and the fundamentals of programming. Topics may include: numerical solutions of Laplace and Poisson equations for electrostatic boundary-value problems, Monte Carlo simulation techniques, chaos theory.

Prerequisites: PHY 106 and MAT 213

Attributes: Undergraduate

PHY 417 Astrophysics (3 credits)

Application of the principles of classical and modern physics to astronomical phenomena. Topics include the acquisition and analysis of primary astronomical data; stellar energy production, structure, and evolution, including red giants, white dwarfs, neutron stars, and black holes; galactic structure and evolution; and cosmology.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 419 Biophysics (3 credits)

Application of physics to biological systems. Topics include: molecular biomechanics, fluids, interaction of photons and charged particles with matter, transport phenomena, electrical properties of membranes and nerves, Fourier techniques and signal analysis, image reconstruction, fundamentals of radiology, and health physics issues.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 421 Physics of Fluids (3 credits)

The mechanics of continuous media, including balance laws for mass and momentum. Hydrostatic equilibrium, compressible and incompressible flow, vorticity and circulation. Pressure and shear, viscosity, and an introduction to Newtonian and non-Newtonian fluids. Applications may include geophysical flows.

Prerequisites: PHY 106 and PHY 257

Attributes: Undergraduate

PHY 423 Biomechanics (4 credits)

The role played by physical forces in shaping our natural world can be seen in the morphology, behavior, material composition, and spatial distribution of every organism, whether aquatic or terrestrial, plant or animal. This course exposes students to the role of physics in biological systems at the organismic and super-organismic level. Each week the course will focus on a different sub-discipline of Biomechanics presenting the underlying physical principles and the biological ramifications of those principles. In addition, laboratory exercises will present techniques and experimental approaches available to measure forces relevant to biological systems, as well as the quantitative and analytical skills necessary to work in this field.

Prerequisites: PHY 101 or PHY 105

Attributes: Undergraduate

PHY 423L BioMechanics Lab (0 credits)**PHY 425 Biophysics of the Brain (3 credits)**

This course introduces biophysical models of the brain and the nervous system functioning. In particular the physics of the neocortex is presented through the analysis of EEG studies. Simulations with software packages are employed to illustrate with various examples the models and their results. Linear electrical analogs and some basics of neural network theory are part of the course content. Elements of Biophysics of consciousness are also presented and a set of case studies is analyzed and discussed.

Prerequisites: (PHY 102 or PY 202) or (PHY 106 or PY 212) or (MAT 161 or MA 122 or MA 110)

Attributes: Undergraduate

PHY 435 General Relativity (3 credits)

An introduction to the general theory of relativity. Topics include special relativity, tensor analysis, curved manifolds, the equivalence principle, Einstein's field equations, spherical static solutions, black holes, and cosmology.

Prerequisites: PHY 251 (may be taken concurrently)

Attributes: Undergraduate

PHY 440 Introduction to Nanoscience (3 credits)

Introduction to broad topics of nanoscience and technology, including micro- and nanofabrication methods, small scale surface modification and characterization, physical and chemical properties of nanomaterials, and quantum phenomena, and their application in natural and engineering sciences. Up-to-date novel experimental and theoretical methods via research-based studies.

Prerequisites: PHY 321

Attributes: Undergraduate

PHY 463 Physics of Stars & Black Holes (3 credits)

An introduction to the physics and astrophysics of stellar evolution, including stellar birth, nucleosynthesis, main sequence stars, binary systems, white dwarfs, neutron stars, and black holes.

Prerequisites: PHY 251 and PHY 301

Attributes: Undergraduate

PHY 465 Introduction to Cosmology (3 credits)

An introduction to the physical properties and evolution of the universe, including its age, content, dynamics, and fate.

Prerequisites: PHY 251 and PHY 301

Attributes: Undergraduate

PHY 470 Adv Special Topics in Physics (3 credits)

The topics to be discussed are decided upon by agreement between students and teacher. This sequence is designed for Honors and other qualified students.

Attributes: Undergraduate

PHY 480 Intro to Materials Sci & Eng (3 credits)

General introduction to different types of materials: metals, ceramics, polymers, and composite materials. The relationship between structure and properties of materials are studied, along with the illustration of their fundamental differences and their applications.

Prerequisites: (CHM 125 or CHM 126) and (PHY 303 or PHY 409)

Attributes: Undergraduate

PHY 492 Internship in Physics (3 credits)**PHY 493 Research Project in Physics (1-4 credits)**

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research Project (6 credits) Must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register.

Attributes: Undergraduate

PHY 494 Research Project in Physics (1-4 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research Project (6 credits) Must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register.

Attributes: Undergraduate

PHY 495 Undergrad Research in Physics (2 credits)

Students will engage in a supervised research project related to physics or biophysics.

Attributes: Undergraduate

PHY 496 Advanced Research in Physics (3 credits)

Students will engage in an advanced research project related to physics or biophysics under the close supervision of a faculty member.

Attributes: Undergraduate

PHY 498 Directed Research in Physics (3 credits)

Students will engage in research of an experimental, computational, or theoretical nature in either physics or biophysics under the close supervision of a faculty member.

Attributes: Undergraduate

PHY 700 Graduate Physics Seminar (1 credit)

Reports and seminars on topics of current physics interest presented by students. Depending on the instructor, topic may be one of student's or instructor's choice.

Restrictions: Enrollment is limited to Graduate level students.

PHY 701 Medical Physics (3 credits)

Biomedical applications of physics are covered with emphasis on diagnostic and treatment implications. Problem-solving opportunities and detailed literature review in the areas of physics pertinent to orthopedic and/or neurologic physical therapy practice are included.

Restrictions: Enrollment is limited to Graduate level students.

PHY 703 Entrepreneurship & Physics (2 credits)

This course provides an overview of the tasks performed by physicists working in the private sector and industry. This includes an introduction of entrepreneurship basics. Students are also involved in projects which may include design, testing, cost feasibility and market analysis of simple products. Professional industrial physicists from the private, public, and government sectors are invited to give presentations and interact with the students.

Restrictions: Enrollment is limited to Graduate level students.

PHY 710 Advanced Mechanics (3 credits)

Advanced methods for analyzing classical physical systems, making use of Lagrangian, Hamiltonian, and Newtonian techniques. Includes single and multiple particle systems, rigid bodies, symmetry and conservation principles, normal modes of oscillation, continuous systems, and modifications needed for special relativity.

Restrictions: Enrollment is limited to Graduate level students.

PHY 721 Quantum Mechanics (3 credits)

The course covers the essential theoretical formulation of quantum mechanics and its formal structure. It analyzes kinematics and dynamics of a set of quantum systems in various representations. The course also introduces the path integral formulation of quantum mechanics and quantum mechanics in phase space. Several examples and applications will be used to illustrate the concepts. These include addition of angular momenta, and charged particle in a magnetic field.

Restrictions: Enrollment is limited to Graduate level students.

PHY 730 Advanced Nonlinear Dynamics (3 credits)

The course covers advanced topics in chaos and nonlinear dynamics including center manifolds, homoclinic and heteroclinic tangles and chaotic transport, topology of chaos-branched manifolds, invariant sets, and universality. Also, the symmetry of chaos, chaos in Hamiltonian and conservative systems, KAM theorem, stochastic layers and diffusion, and chaos in quantum systems. Theory will be applied to various systems in physics, chemistry, biology, and other fields. Numerical and computational techniques will be presented and used in the applications.

Restrictions: Enrollment is limited to Graduate level students.

PHY 757 Mathematical Methods (3 credits)

Advanced mathematical methods to model systems in physics, physical science and engineering. Integral transforms. Series solutions of ordinary differential equations. Special functions. Solution of partial differential equations, with boundary and initial conditions and their applications. Complex variables, complex integration and their applications. Calculus of variations.

Restrictions: Enrollment is limited to Graduate level students.

PHY 799 Graduate Research in Physics (3-5 credits)

A research project in the student's chosen track under the direction of a faculty advisor.

Restrictions: Enrollment is limited to Graduate level students.

PHY 807 Advanced Electromagnetism (3 credits)

Advanced methods to study boundary-value in electrostatics. Electrostatics of macroscopic media. Magnetostatics, Faraday's Law, and quasi-static fields. Maxwell Equations, macroscopic electromagnetism and conservation laws. Electromagnetic waves and wave propagation in different media. The course will cover some applications such as wave guides, resonant cavities, optical fibers, scattering and diffraction.

Restrictions: Enrollment is limited to Graduate level students.

PHY 809 Statistical Mechanics (3 credits)

Foundations of classical statistical mechanics with applications. Phase transitions, critical phenomena, and renormalization group theory. Quantum statistics such as Bose-Einstein and Fermi-Dirac distributions and their applications. Advanced topics in non-equilibrium statistical mechanics such as classical and quantum theory of linear response, Langevin and Fokker-Planck equations and their applications.

Restrictions: Enrollment is limited to Graduate level students.

PHY 817 Quantum Information (3 credits)

Provides a broad survey of the fundamentals and physical implementation of the rapidly-evolving field of quantum information and computation. It discusses the concept of qubits, quantum entanglement, quantum coherence, and quantum gates and algorithms, with a focus on superconductor-based approaches.

Restrictions: Enrollment is limited to Graduate level students.

PHY 832 Network Theory & Applications (3 credits)

Different types of networks are analyzed. These include random and scale-free networks. Their properties and evolution are studied. Examples of how these networks can model real processes and systems are introduced.

Restrictions: Enrollment is limited to Graduate level students.

PHY 833 Pattern Formation (3 credits)

This course covers different techniques to explore mechanisms of macroscopic pattern formation in a variety of physical systems such as fluids, materials, chemical and biophysical systems. The course introduces both time- and space-patterns. The concept of self-organization and formation of coherent structures is discussed in depth. The course also introduces basic techniques for digital pattern recognition.

Restrictions: Enrollment is limited to Graduate level students.

PHY 840 Biophysics Exptl Techniques (3 credits)

Presentation of the available technologies for the research in biophysics, with emphasis on lab-on-a-chip and its interfaces with the atomic force microscopy (AFM) and mass spectrometry. It covers microfluidics techniques, including channel microfluidics and digital microfluidics. The concept of lab-on-a-chip technology is introduced, showing the possibilities for faster and accurate bio-analytical applications when compared to conventional methods.

Restrictions: Enrollment is limited to Graduate level students.

PHY 841 Physical Approach to Life Sci. (3 credits)

The course applies physics and mathematics to obtain quantitative information that sheds light on biological processes, particularly at the cellular and molecular level. It includes microfluidics (with lab-on-chip technologies), random walks, diffusion with drift, statistical mechanics and rate equations, with applications to enzyme kinetics, molecular motors, biological electricity, and protein folding. Throughout the course, the student is guided in up-to-date discussion on selected papers and presentations on current platforms in the discipline.

Restrictions: Enrollment is limited to Graduate level students.

PHY 850 Materials Sci Exptl Techniques (3 credits)

Introduces students to the principles and applications of state-of-the-art experimental techniques for the measurement and analysis of the structure and properties of materials. The course will involve a mixture of lectures, demonstrations and hands-on laboratory exercises. Topics are selected from advanced microscopy, electronic, optical, and thermodynamic methods of probing materials.

Restrictions: Enrollment is limited to Graduate level students.

PHY 851 Quantum Materials (3 credits)

Introduces students to quantum effects in materials. Topics include superconductivity, magnetism, graphene and nanomaterials, topological insulators, charge and spin density waves, classical and quantum phase transitions, and interfaces.

Restrictions: Enrollment is limited to Graduate level students.

PHY 890 Graduate Special Topics (3 credits)

This course is designed to allow in-depth exploration of one of a variety of topics of current interest in physics. The topic will be designated by the instructor.

Restrictions: Enrollment is limited to Graduate level students.

Physics Major

Learning Goals and Outcomes

Goal 1: The student will develop the skills to be able to analyze phenomena quantitatively, be able to build scientific models, and use the scientific method to test those models, and as such, experimentation will be a central part of the student's curriculum.

Outcome 1.1: Be conversant with fundamental laboratory methods including developing skills in experimental design, the use of electronic equipment, and analysis of data including computational methods of processing and analyzing data.

Outcome 1.2: Be able to translate problems in the natural sciences, especially those related to the physical world, into mathematical formulations utilizing calculus, differential equations, and linear algebra.

Goal 2: The student will gain an appreciation and understanding, and pursue a mastery of the foundations of physics including Newtonian mechanics, classical electricity and magnetism, thermodynamics, and quantum theory.

Outcome 2.1: Solve problems using classical Newtonian mechanics

Outcome 2.2: Solve problems in classical electricity and magnetism including wave phenomena and optics.

Outcome 2.3: Understand the development of quantum mechanics from the failure of classical mechanics under certain conditions and be able to solve paradigmatic problems using fundamental quantum theory.

Outcome 2.4: Understand the development of classical thermodynamics and in conjunction with quantum theory, appreciate the need for a statistical approach to thermodynamics.

Goal 3: The student will gain an appreciation for, and integrate the contributions of physics within an historical and sociological context and be able to articulate the development of physical thought in both oral and written form.

Outcome 3.1: Competent in articulating ideas and laboratory research using oral and written forms of communication, especially as they pertain to disseminating these to the general public.

Outcome 3.2: Able to integrate the discipline of physics into a broader worldview, one that is able to see the developments in physics as useful to humankind.

Goal 4: The student will gain an appreciation for the central themes of physical thought as they apply to other areas of the natural sciences, the applied sciences, and technology.

Outcome 4.1: Through the General Education Program and, in particular, the Integrated Learning Courses, students in physics will develop their knowledge of the other areas of the natural sciences.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. Diversity, Globalization or Non-western Area Studies,
2. Ethics Intensive
3. Writing Intensive, and
4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Mathematics		
MAT 161	Calculus I	4
Natural Science		
PHY 105 & 105L	University Physics I and University Physics Lab I	4

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
Mathematics		
MAT 213	Calculus III	4
Chemistry		
CHM 120 & 120L	General Chemistry I and General Chemistry Lab I	4
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II	4

GEP Electives

Six courses.

Major Requirements

Code	Title	Hours
MAT 162	Calculus II	4
MAT 226	Introduction to Linear Algebra	3
MAT 238	Differential Equations	3
MAT 311	Numerical Analysis	3

PHY 106 & 106L	University Physics II and University Physics Lab II	4
PHY 213 & 213L	Physics III and Intro. Physics III Laboratory	4
PHY 251	Modern Physics I	3
PHY 301	Classical Mechanics	3
PHY 307	Electricity and Magnetism	3
PHY 308	Waves and Optics	3
PHY 311	Experimental Methods of Phy I	3
PHY 312	Experimental Methods in Phy II	3
PHY 321	Quantum Mechanics I	3
PHY 409	Statistical Mechanics	3
Two PHY 3-credit electives, which must be at the 300- level or higher		6
Total Hours		51

Students are also required to enroll in PHY 390 Physics Seminar each semester.

Advisory Tracks

Advisory Track in Materials Science

A student may elect to pursue a course of study if interested in the area of materials science and nanotechnology. These courses will prepare the student for either entry into various areas of the electronics and nanotechnology industries or for entry into a variety of graduate programs in physics and materials science engineering.

Code	Title	Hours
Select two of the following courses for Physics Electives:		6
PHY 480	Intro to Materials Sci & Eng	3
PHY 440	Introduction to Nanoscience	3
PHY 370	Special Topics in Physics	3
PHY 405	Solid State Physics	3

Advisory Track in Astrophysics

A student may elect to pursue a course of study if interested in the area of astrophysics and cosmology. These courses will prepare the student for either be employed into various areas of the astrophysics and fields related to it and/or for entry into graduate programs in astrophysics, cosmology and gravitational waves.

Code	Title	Hours
Select the two following courses for Physics Electives:		
PHY 463	Physics of Stars & Black Holes (Select three of the following)	3
PHY 465	Introduction to Cosmology	3
Students can also select the following course as free elective		
PHY 435	General Relativity	3

Advisory Track in Engineering Physics

A student may elect to pursue this course of study if there is interest to pursue a carrier in science and technology, to enter in graduate school in engineering, to find engineering employment in the private and public sector.

Code	Title	Hours
Select two of the following courses for Physics Electives:		
PHY 405	Solid State Physics	3
PHY 370	Special Topics in Physics	3
PHY 413	Materials of Electronics	3
PHY 421	Physics of Fluids	3
PHY 440	Introduction to Nanoscience	3
PHY 480	Intro to Materials Sci & Eng	3
PHY 415	Computational Physics	3
PHY 423	Biomechanics	4
PHY 407	Soft Condensed Matter Physics	3

Advisory Track in Biophysics

A student may elect to pursue a course of study if there is an interest to pursue a carrier in science and bio-technology, to enter in graduate school in Biophysics or Biomedical Engineering, to find employment in in the private and public sector. This track is very interdisciplinary and gives students strong preparation in the three natural sciences. Biophysics is a growing and important field to be in. For this track the the requirement of Numerical Analysis (MAT311) is waived.

Code	Title	Hours
Select the two following courses for Physics Electives:		
PHY 419	Biophysics	3
CHM 341	Molecular Structure Biochemist	3
For this track it is advised to take these courses as free electives		
CHM 210	Organic Chemistry I	3
CHM 210L	Organic Chemistry Lab I	1
CHM 215	Organic Chemistry II	3
CHM 215L	Organic Chemistry Lab II	1
BIO 101	Bio I: Cells	4
BIO 101L	Bio I: Cells Lab	0

Advisory Track in Medical Physics

A student may elect to pursue a course of study leading there is interest to pursue a medical physics career . This track will prepare students to pursue a Masters or a PhD in Medical Physics in other Universities.

Code	Title	Hours
Select two of the following courses for Physics Electives:		
PHY 419	Biophysics	3
PHY 412	Physics of Radiation Therapy	3
For this track it is advised to take the following courses as free electives		
PHY 408	Advanced Electromagnetism	3
PHY 257	Math Methods in Physics	3

Pre-Medical, Pre-Dental Advisory Track

Physics majors may elect an advisory course sequence designed to meet medical /dental school admission requirements. For this track the requirements of Quantum Mechanics (PHY321) and Numerical Analysis (MAT311) are waived.

Code	Title	Hours
Select two of the following courses for Physics Electives:		
CHM 341	Molecular Structure Biochemist	3
PHY 419	Biophysics	3
For this track it is advised to take these courses as free electives		
CHM 210	Organic Chemistry I	3
CHM 215	Organic Chemistry II	3
CHM 215L	Organic Chemistry Lab II	1
CHM 210L	Organic Chemistry Lab I	1
BIO 101	Bio I: Cells	4
BIO 101L	Bio I: Cells Lab	0
BIO 102	Bio II: Genetics	4
BIO 102L	Bio II: Genetics Lab	0
BIO 201	Bio III: Organismic Biology	4
BIO 201L	Bio III: Organismic Biol Lab	0

Advisory Track in Computational Physics and Engineering

This advisory course sequence is designed to prepare the student for an entry level position or graduate work in Computer Science and Engineering and to seek employment in the area of science and technology, computational science and engineering. For this advisory track in the General Education Integrative Learning Component (ILC) CHM120/120L/120R and CHM125/125L/125R can be replaced by (CSC133 or CSC115 or CSC120) and CSC357.

Code	Title	Hours
Select the following two courses for Physics Electives:		
PHY 257	Math Methods in Physics	3
PHY 415	Computational Physics	3
For this track it is advised to take two of these courses as free electives*		
CSC 202	Computer Architecture	3
CSC 351	Database Management Systems	3
CSC 362	Artificial Intelligence	3
CSC 490	Internship	3
MAT 313	Mathematical Optimization	3
MAT 316	Operations Research	3

- * Other Physics electives can be taken with the permission of the Physics Department's Chair

Physics/Secondary Education Physics/Secondary Education Double Undergraduate Major

Pennsylvania's Secondary (referred to as "secondary" or "7-12") preparation program guidelines require a Professional Core of courses, early and varied field experiences, and student teaching. In addition to the subject-specific content requirements for secondary programs that are met by the student's major, candidates for the 7-12 teaching certificate in Pennsylvania must complete a prescribed sequence of coursework which includes the specific requirements for Accommodations and Adaptations for Diverse Learners in Inclusive

Settings and Meeting the Needs of English Language Learners under §49.13(4)(i)).

For this advisory track the required courses of Introduction to Linear Algebra (MAT226), Numerical Methods (MAT311), Statistical Mechanics (PHY409) and Quantum Mechanics (PHY321) are waived (students could choose to take PHY409, PHY321 as Physics electives).

Below the courses needed in this track to complete a the physics and education majors and earn secondary-education (7-12) certification in four years.

Code	Title	Hours
EDU 150	Schools in Society w/ Field ¹	3
EDU 157	Adolescent Development w/Field (may fulfill the GEP Social Science requirement) ¹	3
EDU 230	Eval: Secondary Grades 7-12	3
SPE 205	Inclusive Classrooms w/ Field	3
EDU 246	Language and Culture w/ Field (ELL)	3
EDU 247	Literacy in Cont Areas w/Field	3
SPE 160	Intro to Special Education ¹	3
EDU 418	Instr Techniq Science w/Field ¹	3
EDU 491	Secondary Student Teaching	12

¹

You must register for the field experience with any "F" course.

Note: Students may or may not be able to complete the requirements for certification within the normal 8 semesters. This will be largely controlled by the number of GEP variable core courses the student has to take, AP credit received and other factors. Given the complexity of the requirements it is essential that students interested in pursuing secondary education certification speak with their academic advisor about this early in their program of study.

Physics Minor Learning Goals and Outcomes

Goal 1: The student will develop the skills to be able to analyze phenomena quantitatively, be able to build specific models, and see how the scientific method is used to test those models.

Outcome 1.1: Be conversant with fundamental laboratory methods, the use of the electronic test equipment, and analysis of data including computational methods of processing and analyzing data.

Outcome 1.2: Translate problems in the natural sciences, especially those related to the physical world, into mathematical formulations utilizing calculus and other sophisticated mathematical tools

Goal 2: The student will gain an appreciation and understanding of the foundations of physics including classical mechanics, classical electricity and magnetism, thermodynamics and quantum theory.

Outcome 2.1: Solve problems using classical Newtonian mechanics.

Outcome 2.2: Solve problems in classical electricity and magnetism including wave phenomena and optics.

Outcome 2.3: Understand the development of quantum mechanics from the failure of classical mechanics under certain conditions

and be able to solve paradigmatic problems using fundamental quantum theory.

Outcome 2.4: Understand the development of classical thermodynamics and in conjunction with quantum theory, appreciate the need for a statistical approach to thermodynamics.

Requirements

A student may elect to minor in Physics by taking the following:

Code	Title	Hours
PHY 105 & 105L	University Physics I and University Physics Lab I	4
PHY 106 & 106L	University Physics II and University Physics Lab II	4
PHY 251	Modern Physics I	3
Any three (3) PHY courses		9-12
Total Hours		20-23

Modifications are subject to the Chair's approval in consultation with the department. Interested students should contact the chair prior to the fall semester of their junior year.

Political Science

Political Scientists study power and how it operates at different levels – among individuals, within and between institutions and individuals, and between countries, international organizations, corporations, societal groups, and individuals in the international arena. Our department hopes students will connect the classroom with the wider issues in global, national, and local politics by attending our many events, trips, and study tours and participating in internships.

Faculty

The political science faculty are deeply committed to sharing their research and career knowledge working in U.S. politics, political science, international relations and various other experiences with their students. Many have been published in several well-regarded journals and have conducted research in gender politics, race/ethnic politics, intersectionality, elections, economic transformation, labor relations, comparative politics and much more.

Department of Political Science Faculty & Staff (<https://www.sju.edu/departments/politicalscience/faculty-staff/>)

Programs

Undergraduate Major

- Political Science (p. 314)

Undergraduate Minor

- Political Science (p. 316)

Courses

POL 111 Intro to American Politics (3 credits)

This course is an introduction to American political processes and institutions. The goal of this course is to acquaint the student with the theory and practice of American government. Students will learn about the basic structure, function, and dynamics of American government and the political system within the context of the major political issues of our time. Beyond studying the institutional structures and activities of government, we will also evaluate the relationships between individuals, groups, and institutions in terms of influence, process, and outputs in various domains.

Attributes: American Studies Course, GEP Social Science, Undergraduate

POL 113 Intro to Comparative Politics (3 credits)

An introduction to the study of comparative political systems, this course focuses attention on the institutions and political cultures of select countries from different world regions. While exploring the varieties of democracy and authoritarianisms, as well as the complexity of democratizing today, this course also introduces students to the comparative method.

Attributes: GEP Social Science, Globalization Course, International Relations Course, Undergraduate

POL 115 Intro to Global Politics (3 credits)

This course is an introductory survey of the major approaches (Realism, Liberalism, and Constructivism), interpretations and problems in the field of Global Politics, with a heavy emphasis on current events. Topics include security (war, peace, terrorism), international political economy (hegemony, development, globalization), and trans boundary issues (migration, human rights).

Attributes: GEP Social Science, Globalization Course, International Relations Course, Undergraduate

POL 117 Intro to Political Thought (3 credits)

When is it justified to overthrow a tyrant? Do men and women have different virtues? Are markets just? Political theorists ask questions about justice, equality, law, property, community, and duty. This course examines questions that affect today's political world by examining the foundations of political thought - Plato, Aristotle, Aquinas, Machiavelli, Hobbes, Locke, Adam Smith, Madison, Rousseau, Marx - as well as contemporary theorists such as Foucault, and feminist Wendy Brown.

Attributes: Undergraduate

POL 150 First Year Seminar (3 credits)

Depending on the instructor, the First-Year Seminar courses focus on particular topics of interest in Political Science and Politics (e.g., Ethics in International Relations; Diversity and Inequality; Gender and Global Politics; Student Liberties and the Supreme Court). Does not count for major credit.

Attributes: First-Year Seminar, Undergraduate

POL 170 Special Topics: Political Sci (3 credits)

Depending on the instructor, these courses will focus on a particular topic of interest in Political Science and Politics (e.g., The Presidential Election, The Arab Spring, Guns and the Supreme Court). Does not count for major credit.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

POL 190 Strategies for Success (1 credit)

Our class is designed to provide students with the tools needed to thrive and succeed at SJU and in your major. We will focus on the development and application of college-level study skills, personal success strategies, and the use of campus resources that enhance individual student achievement. Topics discussed will include: learning styles, study techniques, note-taking, test-taking, effective writing and reading, time management, career and educational planning, personal wellness and finance, and interpersonal skill development. We will investigate the variety of offices and resources available to students across campus, as well as how to use some of the more common software systems (Canvas, Starfish, Google Applications, etc). Successfully completing POL 190 is required of all incoming Freshmen students majoring in Political Science or International Relations, and grading is based on P/NP.

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Undergraduate

POL 191 Washington Leadership Seminar (3 credits)

Students who attend The Washington Center (TWC) take a leadership seminar through TWC. This course is an elective; it does not count for POL major or minor credit.

POL 192 Washington Internship (3 credits)

Students who attend The Washington Center (TWC) for a normal academic semester (fall or spring) perform a 30-35 hour a week internship. The Department grants students two upper division courses (6 credits) for the internship (see POL 411-412 below) and also this third elective course for these internship hours. This course is an elective; it does not count for POL major or minor credit.

POL 193 Washington Center Elective (3 credits)

Students who attend The Washington Center (TWC) take one evening course at the Center in addition to performing their internship and participating in the leadership seminar. If this course is in Political Science, we transfer it back as POL 193. This course is an elective; it does not count for POL major or minor credit.

POL 195 IDEAL Learning (1 credit)

This course is for students interested in pursuing the IDEAL Learning sequence and who want to explore applying for the IDEAL Scholars program. We will take the skills acquired from POL 190 to the next level by examining various ways for understanding leadership, strengthening our ability to navigate the college environment, exploring multi-level mentoring networks, and developing affinity-based community learning. Chair/Instructor approval required.

Prerequisites: POL 190 (may be taken concurrently)

Attributes: International Relations Course, Undergraduate

POL 196 POL AP (3 credits)**POL 270 Special Topics (3 credits)**

Depending on the instructor, these courses will focus on a particular topic of interest in Political Science and Politics (e.g., The Presidential Election, The Arab Spring, Guns and the Supreme Court). Students may count only two POLs 270 and/or 370 courses for major or minor credit.

Attributes: Undergraduate

POL 290 Career Prep Seminar (1 credit)

What will YOU do with your Political Science or International Relations degree? Learn how to explore the variety of professional options open to you based on your major and on your unique personality and individual traits. This professional development seminar will help you build practical skills through a series of hands on assignments, a detailed self-assessment, goal-planning for a successful future, and multiple points of engagement with alumni. This course meets once a week to provide instruction and support in topics including internship search and application, resume/cover letter prep, post-grad options, professional communication and networking/interviewing. Is an internship right for you? Do you know the best way to search for one? Why do I need to network - how will that help me? Get the answers to these and many other questions and invest in your future! All majors are required to complete this seminar in the Fall semester of their Sophomore year; graded on a P/NP basis. Political Science and International Relations minors are also encouraged to register.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in International Relations or Political Science.

Attributes: Undergraduate

POL 291 IDEAL Scholars (1 credit)

This course is for students who have been accepted into the IDEAL Learning program and will further develop mentoring, leadership, and community-building skills. Students will have the opportunity to practice and share the knowledge they have gained by engaging in hands-on projects, activities, and faculty/student interactions. Chair/Instructor approval required.

Prerequisites: POL 190 (may be taken concurrently) or POL 195 (may be taken concurrently)

Attributes: International Relations Course, Undergraduate

POL 292 IDEAL Leaders (1 credit)

This course is for students who have been accepted into the IDEAL Learning program and who want to take on a leadership role within the initiative. IDEAL Leaders will directly apply the skills they have acquired by mentoring, leading, and building community within the program. Chair/Instructor approval required.

Prerequisites: POL 291 (may be taken concurrently)

Attributes: International Relations Course, Undergraduate

POL 301 Law and Social Change (3 credits)

Brown v. Board of Education is heralded as a great success. A disenfranchised minority turned to the courts when the legislature and executive failed to respond. To what extent has this approach been successful? Since Brown, other groups have turned to the courts as an authority when they believe they are disadvantaged by the larger political system. Should the courts play a role in social change? What should it look like? Case studies will include: school integration in the 1960s, birth control and abortion, gun rights, capital punishment or juvenile life without parole, and marriage equality.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 303 Political Ideology in America (3 credits)

Why did Ben Franklin say that the Swedes were "blackening" the colonies? Why did Lincoln change his mind about slavery? The course examines classic texts (for example, the American Revolution, the constitutional convention, Lincoln-Douglas debates) by linking them to other important intellectual and political movements in American thought (for example, white -women's suffrage, the 20th century civil rights movements). The course examines the changing political vocabulary in American politics - and the expansion of rights to men, laborers, women, racial minorities, and LGBT people.

Attributes: American Studies Course, Undergraduate

POL 304 Engaging Communities (3 credits)

How do communities identify and solve problems in partnership with other stakeholders in their local environment? Engaging Communities is an examination of how institutions develop trust and reciprocal partnerships within their neighborhoods and surrounding communities. The class will study the theory and practice of constructing mutually beneficial relationships among and between hospitals, higher education institutions, non-profit organizations, local government, community groups, and residents to improve the quality of life locally in Philadelphia and the surrounding counties. Students will learn about multiple ways to elicit and increase community participation and civic engagement, utilize the fundamentals of project management, and create models for assessment.

Prerequisites: POL 111 or POL 113

Attributes: Undergraduate

POL 305 Politics, Ideology, & Film (3 credits)

How do ideologies – bodies of thought – affect individuals, social movements, nations, institutions, and groups? This course examines ideologies like fascism, communism, racism, colonialism, capitalism. We use films and primary documents from Europe, Asia, Latin America, Russia, and the United States to place each ideology in historical, political, and/or economic context. Students are expected to master the complexities of the ideologies in historical context as well as evaluate ideologies that have shaped national and international politics in the twentieth and twenty-first centuries. Classic articles in the social sciences and humanities help students explore popular responsibility for the actions of a leader (are the German people responsible for Hitler's atrocities?), torture (is it ever ethical to torture someone for information?), and capital punishment (are there conditions when it is acceptable for the state to end a life?).

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Undergraduate

POL 306 Political Participation in US (3 credits)

Why do people participate in American politics and civic life? Why don't they? Why should they? This course emphasizes the political science literature on political participation and civic engagement. We will begin by examining the factors that make participation more or less likely including socialization, partisanship, networks, and geography. Demographic and social identities can shape how easily and how often we wish to involve ourselves in democratic processes. From there, we will focus on forms of political participation. Who votes? Who donates money? Who protests? Throughout we will acknowledge the constraints that make forms of participation easier from some than others. Finally, we will address the consequences for political life if individuals opt out of politics. What does isolation and decline in civic life mean for the rise of political and economic inequality, efficacy, and social connectedness?

Attributes: Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 307 Reproduction and the Court (3 credits)

In the 1970s, Latinx women were coerced into being sterilized - but courts did not see a violation of their rights. Is there a constitutional right to reproduce? Buy birth control? End a pregnancy? This course considers the changing opinions of the U.S. Supreme Court (SCOTUS) with an emphasis on race and gender. It includes a SCOTUS simulation (moot court) in which students act as justices and attorneys.

Attributes: American Studies Course, Gender Studies Course, Justice Ethics and the Law , Undergraduate

POL 309 Advising and Advocacy (3 credits)

How do citizens and groups advocate for interests? How do they advise leaders to make changes? And, when are they more likely to influence the policy direction of the nation? This course offers an analysis of modern American "advising and advocacy" styles and models, with a focus on the politics of domestic policymaking. Students will study the use of power and authority, the importance of strategic opportunities, the nature of decision-making in a separated system, and the role that government, interest groups, and public opinion play in those decisions. Based on these perspectives, we will bring our informed insights to address an important question within our current circumstances: how to represent those who were/are marginalized in the political landscape. Thus, students in this class will serve as advocates for those who may not have the strongest voices in political discussions and advise elected officials on how to construct a policy agenda that attends to underserved citizens and historically marginalized communities. Indeed, a primary goal of the class is to study and critically analyze how systems of inequality and disadvantage inform politics and policy from a social justice perspective.

Attributes: American Studies Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 310 Constitutional Politics (3 credits)

From the time the Constitution was ratified, the three branches of American government (legislative, executive, and judiciary) have competed for control over American policy and law. The Supreme Court is - on the one hand - extremely powerful because it can declare an act of either the legislature or executive unconstitutional (judicial review). Yet the Court lacks any power to enforce its decisions and it relies on the other branches to enforce its decisions (for example, President Eisenhower bringing in the military to uphold the desegregation of schools). Through the reading of cases and the viewing of documentaries, this course explores how the Supreme Court has shaped American politics for over two centuries. Topics include free speech in wartime, internment of Japanese-Americans during WWII, desegregation, abortion rights, and same-sex marriage.

Attributes: Justice Ethics and the Law , Undergraduate

POL 311 Const Law:Rights & Civil Lib (3 credits)

A study of contemporary issues of civil rights and liberties in the United States through classic Supreme Court decisions. Issues addressed include freedom of speech, press, and association, racial and gender discrimination and the issue of fundamental rights, including the right of privacy. Students read cases and learn to brief cases. The course highlight is a simulation of two Supreme Court cases. Students read and research to portray justices and attorneys in the two moot court simulations.

Prerequisites: ENG 101

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 312 Social Controv & Supreme Court (3 credits)

Americans look to the Supreme Court to rule on moral and social issues like capital punishment and abortion. Why do citizens rely on nine unelected judges to define their rights in a democracy? This class analyzes how the Supreme Court has, over time, changed American law in two controversial rights: gun ownership and marriage equality. The class begins by considering the judiciary in our constitutional democracy then turns to the two case studies. The Supreme Court decided four marriage cases in June of 2015 and the course integrates these new rulings. Students will examine documents from the Founding (e.g. the Federalist Papers), read modern accounts of both gun and marriage cases, and learn to read and brief Supreme Court decisions.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate

POL 313 Public Policy (3 credits)

This course investigates public policymaking within the United States with an emphasis on the social construction of public policy. Students will assess the significance of social, economic, and political factors that influence policymaking and implementation; how problems become a part of the political agenda; and the major political ideological perspectives in the U.S. that impact policy process and content. The course is a study of policy in practice, as students will evaluate current social problems along with empirical social science research to determine the strengths and weaknesses as well as the intended and unintended effects of a particular social policy at the state and/or national level.

Attributes: American Studies Course, Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 316 State and Local Government (3 credits)

This upper division course focuses on understanding variation across America's federal system. How can we move from thinking about one American government, to 51 governments (all the states plus the national), or to the significantly larger number of local and municipal governments? What role do the states and localities play in shaping American democracy? In what ways are states hindering democracy or helping it flourish? In this course we will focus on three broad themes in the state politics literature: structural power, interest group activism, and individual political behavior. Throughout we will acknowledge that variation at the subnational level matters for engagement, equality, and the presence of a functioning democracy.

Attributes: American Studies Course, Undergraduate

POL 318 Pennsylvania Politics (3 credits)

This course is a study of the Commonwealth of Pennsylvania, its recent history, its politics, and the way its government is conducted. The course will have distinct, but overlapping emphases: The Political Environment: What are the political forces driving the agenda in this state? The issues: What are the issues that actually matter in this state? The Structure: How do the Governor's Office, the General Assembly, other statewide offices, and other departments of state government actually work? To assist in learning about these matters, several experienced and knowledgeable guest speakers will address the class. In addition, at various points in the semester, the class will be formed into a focus group to discuss various issues confronting the state.

Attributes: American Studies Course, Undergraduate

POL 319 Public Opinion & Media (3 credits)

This course is a brief overview of the role of public opinion and media in American democracy. We hold attitudes about relevant political and social groups, many of which shape our thoughts and actions. Further, if government is to be "by the people," understanding what "the people" want is of major importance to legislators, organized groups, and interested political scientists. The media, a critical source of political information, can inform the public, provide a mirror of public perception, but also shape ideas. In this course, we examine several complex questions: What is public opinion? Where does it come from? How and when does it change? Does everyone's opinion matter equally?

Attributes: American Studies Course, Undergraduate

POL 320 Injustice & the Law (3 credits)

Fifty years after the passage of the Civil Rights Act of 1964, which eliminated most forms of de jure discrimination, we are still witnessing the lingering effects of de facto inequality within American society. To be sure, the CRA of 1964 and its subsequent amendments eliminated the use of discriminatory practices in housing, employment, business, and education. But overcoming de facto inequality has been harder to accomplish. What explains the gap between established legal doctrine and the reality of many Americans of color? The goal of the course is for students to study the potential and limits of law as a tool for social justice, as well as the role of law in the creation and maintenance of systems of racial injustice. Primarily through the lens of race, students will examine the empirical realities of laws and policies that were ostensibly passed to overcome injustice, broadly defined, as well as the sociopolitical causes and consequences of de facto racial segregation in American society.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate

POL 322 Campaigns & Elections (3 credits)

The Campaigns and Elections course is an examination of modern American political campaigns, with a focus on the dramatic changes that have occurred in electoral politics in recent years. The course will have three distinct, but overlapping emphases: 1. The Strategic Campaign: How are campaigns carried on and managed? How should they be? What are the new technologies that have so drastically changed the nature of political campaigns? 2. Voting Behavior; what are the deep and fundamental changes that have occurred in voting behaviors and attitudes in recent years? What are the implications of these changes for the electoral process? 3. The Media and Campaigns: How do the media influence campaigns and electoral outcomes? What are the implications of the pervasive relationship between politics and the mass media? To assist in learning about the real world of politics, several guest speakers with considerable experience in political campaigns will address the class. In addition, at various points during the semester, the class will be formed into a focus group to discuss various campaign-related issues.

Attributes: American Studies Course, Undergraduate

POL 323 Women and American Politics (3 credits)

This course is designed to provide students with a critical examination of women as political actors in the United States. We will analyze various forms of women's political participation, both in the traditional spheres of what is considered politics – women as voters and politicians – and also in more "non-traditional" spheres of political activism. We will examine how women are mobilized to participate in politics, focusing keenly on the differences among women in their political activism in an effort to understand how the intersection of gender, race, class, sexuality, age, and ability influence women's political activism. The primary goal of this course is to familiarize students with key issues, questions, and debates in the women and politics scholarship, mainly from a U.S. perspective. Students will become acquainted with many of the critical questions and concepts scholars have developed as tools for thinking about the gendered political experience. In this course you will learn to "read" and analyze gender politically, exploring how it impacts our understanding of the political world.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 324 Race & Ethnic Politics in U.S. (3 credits)

From its first days, the United States has faced the dilemma of how to incorporate populations different from the majority population into the polity. This dilemma continues today and appears in discussions of such issues as affirmative action, immigration and naturalization, language policy, and social welfare policy. In this course, we will examine the major theories that attempt to explain the roles of race and ethnicity in U.S. politics and the ways in which individuals use race and ethnicity as resources for political organization. We will examine the phenomenon of ethnicity and race in the political development of the United States. Finally, we will look at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Among the topics to be covered include the meaning of race and ethnicity, the history of racial and immigration politics, prejudice, group participation and mobilization, political representation, and public opinion.

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Faith Justice Course, Undergraduate

POL 325 Intersectionality (3 credits)

Our course is designed to provide students with a critical examination of intersectionality, a term "coined" by Kimberlé Crenshaw to theorize the experiences of Black women in the U.S. Indeed, the intersectionality work we "know" today arose from, and was rooted in, Black women's activism, oppositional knowledge and resistance, and collective action. Yet, as some have recently outlined, the field of intersectional studies has developed in ways that mask that origin, neutralize, and limit the potential of intersectional action. Therefore, to truly understand intersectionality, we must emphasize the canonical works produced and practiced by Black women and women of color activists, academics, and practitioners, and we will center their work in our class. Our study is grounded in the understanding that intersectionality is a political intervention as much as a theoretical lens lived within the tradition(s) of social justice. Throughout, we will study how theory informs practice (a key feminist expectation) and also how both guide what we know our political world. Thus, students will learn to read and analyze intersectionality politically, through the lens of power, and from a social justice perspective.

Attributes: American Studies Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 326 Protesting Inequality (3 credits)

Through the lens of political science, this course examines the political causes and consequences of inequality in the United States and how citizens have responded to the empirical realities of unequal circumstances. While inequality is an economically, politically, socially, and morally complex phenomenon, this course emphasizes that inequality does not "just happen" but rather is a result of the way our society is structured. Nevertheless, citizens-agents have protested inequality on various occasions and in many different ways. It is on these citizen protest movements that we will focus most of our attention, including, but not limited to, the "Poor People's Movements" of the 1960s, the Welfare Rights Movement in the 1990s, and the Occupy Movement of the 2010s.

Attributes: American Studies Course, Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 328 U.S. Immigration (3 credits)

In this course, students will critically engage with the politics of immigration in the United States. While the national narrative broadly celebrates the arrival and incorporation of newcomers, these processes have been highly contested and problematic both in popular discourse and public policy since the country's founding. The question of 'who immigrates' has been, and continues to be, shaped by decisions on how to manage geopolitical and geoeconomic forces, domestic political, economic and social preferences, popular sentiment and humanitarian considerations. Furthermore, understanding how immigrants integrate in society necessarily involves examining 'difference' on a number of axes, including race and ethnicity, language and culture, religion, gender, socioeconomic and educational levels, and legal status. This course provides students with the opportunity to explore key aspects of the discourse and reality of immigration to the U.S., including the American Dream, assimilation, ethnic neighborhoods, transnationalism, borders and security by considering the values, interests and roles of actors at all levels, including civil society organizations, national and sub-national governments, communities, households and individuals in the continuous re-making of the U.S. as a nation of immigrants.

Attributes: American Studies Course, Faith Justice Course, Irish Studies Course, Justice Ethics and the Law , Latin American Studies Course, Undergraduate

POL 331 Latin American Politics (3 credits)

This course addresses the political, economic and social development of modern Latin America. It examines the transformation of traditional authority structures, efforts to promote economic development, and concerns for the consolidation of democracy, adjustment to globalization, and U.S.-Latin American relations.

Attributes: Faith Justice Course, International Relations Course, Justice Ethics and the Law , Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

POL 333 Asian Democ at the Crossroads (3 credits)

This course will examine and discuss the political dynamics and policy behaviors of three successful democracies in Northeast Asia: Japan, South Korea, and Taiwan. While all three countries are successful democracies with economic power, each country also faces a series of critical challenges in their politics, economy, and society. The global implications of their struggles are never trivial and the examination of three countries will provide us with the better grasp of contemporary global issues. The thematic focus of the course lies in the comparative analysis of each country in terms of political system, political economy, state-society relations, and foreign relations. To this end, the course will also explore the intricacies of the cultural, historical, and psychological contexts in which behavioral and policy motivations may be explained.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 334 Russian Politics (3 credits)

In 1917, the USSR was born out of the ashes of the Russian empire, and in 1991, it died. Since the Soviet Union disintegrated, Russia has struggled to develop a new national identity, a healthy economy, a well-functioning polity, an efficacious state, and a new orientation in world affairs. This course investigates the significance of the Soviet legacy for the contemporary political situation in Russia and evaluates the impact of new forces unleashed since the end of the communist era. In learning about the USSR and developments in today's Russia, the class applies some of comparative politics' "big concepts:" revolution, the state, the nation, federalism, totalitarianism, authoritarianism, and democracy.

Attributes: International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 336 The EU and European Politics (3 credits)

This course will provide students with a hands-on opportunity for learning about the politics of the European Union and its member states. As an organization that is both supranational and intergovernmental in nature, the EU's actions are subject to the actions within its institutions and the decisions of its members. Therefore European politics has a great impact on what the Union does. The key and (unique) learning tools in this course are three simulations of EU institutions -the EU Parliament, the Councils of the EU, and the European Council. Students will take on roles of actual EU politicians and engage in policy making. The simulations will require students to perform extensive outside research to prepare to play their roles and will give participants an excellent understanding of these institutions and how they work. Class members will also become expert in the politics of "their" countries (the countries from which their alter egos are from) as well as on the issue under consideration (which will vary depending on pressing European and world events).

Attributes: Globalization Course, International Relations Course, Irish Studies Course, Undergraduate

POL 337 Contemp Cuban Pol & Society (3 credits)

The Cuban revolution is one of the seminal events of Latin American twentieth century history. This course provides the tools to understand the forces that gave rise to the revolution, how 'the Revolution' has evolved over the more than five and a half decades since the Castro government has been in power, and how Cuban society has transformed - politically, economically, socially and culturally. Particular focus is placed on Cuba since the demise of the Soviet Union, the so called "Special Period," in which Cuba transitioned from a 2nd World client state into an isolated underdeveloped country. Political reforms since then have contributed to an aperture toward the outside world, as well as to steps towards greater economic freedom for Cubans. Many other topics, including race, gender, the arts, Cuba's foreign relations with the U.S. and the rest of the world, citizenship, religion, health care and Cuba's future, will be discussed as well.

Attributes: Africana Studies Course, American Studies Course, International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

POL 339 Asian Dictators (3 credits)

This course will examine and discuss the political dynamics and policy behaviors of two authoritarian communist regimes in East Asia: China and North Korea. What are the natures of Chinese and North Korean societies? What are the guiding principles and norms in their political systems? What are the historical as well as contemporary implications of their economic systems? To this end, this course will explore the intricacies of the cultural, historical, and psychological contexts in which behavioral and policy motivations could be explained. Along with the comparative analysis of each country (political system, political economy, state-society relations, and foreign relations), major contemporary issues and challenges will be also examined. Can Chinese Communist Party keep its authoritarian grip on its people forever? Will China ever be democratized? Has China's long economic boom ended? What are the mechanisms behind North Korea's tight and cruel control of its citizens and their devotion to the Kim dynasty? Can North Korea enter and survive the global economy? More fundamentally, where is China heading? What does North Korea want?

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 340 Political Geography (3 credits)

Political Geography is a course of political and spatial inquiry; it helps students compare and contrast people, places, and processes around the world. This course explores how spatial phenomena including physical geography, borders, and nation-states affect social and political phenomena including domestic, regional and global governance, differences and dynamics of power, and identity, and vice versa. Furthermore, Political Geography focuses on 'scale' - personal, local, regional, national, and global - to understand and explain patterns and processes, as well as conflict and cooperation in international affairs.

Attributes: International Relations Course, Irish Studies Course, Undergraduate

POL 350 Haunted by the Past (3 credits)

War apologies abound. Since the end of the Cold War, what we have been witnessing is a world-wide surge in memory. We are living in the era where collective apologies have become more and more common, and, as in Nigerian writer Wole Soyinka, to reconcile with the past has become critical part of contemporary politics of memory and regret. More concretely, this course will explore the following questions: Can a state apologize? Can the current generations apologize for the past wrongs and /or feel responsible? Or, should they? How do individuals articulate the link between identification with the state (and national pride) and sense of individual responsibility? How do individuals get their information about past wrongs? How much confidence do they have in the various sources (textbooks, mass media, internet, friends and family, etc.) at their disposal? Is reconciliation possible? Can memories go beyond national borders? Can it be something universal? The course will start with the introduction and examination of the role of history and memory in the (re-) formation of communal identity and explores for the possibility of communal reconciliation with past wrongs. Along with the examination of conceptual frameworks such as engagement and denial/avoidance, the ethical dimensions of political reconciliation will be discussed in terms of (1) retributive justice and (2) restorative justice.

Prerequisites: PHL 154

Attributes: Asian Studies Course, Ethics Intensive, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 352 Global Political Economy (3 credits)

Global economic relations are international, political and complex; they involve cross border flows of goods, money, services and people, and they reflect and create power. This course focuses on the nature and impact of the movement of goods (trade), capital (money, foreign direct investment, bailouts), services (call centers), people (migration), and even "bads" (pollution and disease) to understand the challenges of and opportunities for development, globalization and international cooperation in today's world. It emphasizes the analysis of historic booms and busts in various national economies as well as current global events and trends.

Prerequisites: POL 115

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Undergraduate

POL 354 Superpower ColdWar Foreign Pol (3 credits)

For about 45 years after World War II, the United States and the USSR were locked in a multi-pronged battle for dominance in the international system. Although some have called this era "the Long Peace," the superpower competition resulted in massive, global direct and structural violence. This course will examine and explain American and Soviet interactions and behaviors during the period with special emphasis on the nuclear arms race and arms control and the battle for influence in the Middle East. As a final product for the course, students will write and present a literature review and argument or hypothesis in response to a self-generated, course-related research question.

Attributes: American Studies Course, Faith Justice Course, Globalization Course, International Relations Course, Undergraduate

POL 356 American Foreign Policy (3 credits)

This course explores US foreign policy since the end of World War II. After a conceptual introduction (Part I) which explores the utility of interests, institutions, and ideas for accounting for American policy, the course examines the US-Soviet competition and the ways that that "cold" conflict affected U.S. behavior not only toward the USSR, but also toward other regions (Part II). Part III investigates the early post-Cold War period and the attempts and failures in constructing some kind of "New World Order," and Part IV explores how the US has been responding to the twin challenges of terrorism and globalization.

Attributes: American Studies Course, International Relations Course, Undergraduate

POL 364 IR of East Asia: War and Peace (3 credits)

The course will examine and discuss the most intriguing dynamics of international relations in East Asia. Along with the historical analysis of international relation in the region since the mid-19th century, the course will engage in the discussion of pressing issues that characterize contemporary international politics in the region, including (1) regional economic development and interactions, (2) Sino-Taiwanese tension and the U.S. involvement, (3) North Korean nuclear crisis, (4) Japan and its post-Cold War security profile, and (5) regional tension over Japan's militaristic past.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 367 Ethics in International Affairs (3 credits)

What is morality in international politics? Is ethical reasoning and action possible in international affairs? If possible, when and how? Proponents of Realism often claim that there is virtually no room for morality in international affairs, and states and state actors are rational thinkers interacting in anarchy. For them, ethics are simply luxury and irrelevant. On the other hand, thinkers under the tradition of IR liberalism/idealism emphasize the ethical dimension of state decision making and state behaviors. On what moral ground or ethical reasoning, are the moral behaviors taking place and observed/unobserved? The primary objective of the course is to help students enhance their analytical ability for the study of international ethics. To this end, the course will explore the main traditions and theories of international ethics with a focus on such topical areas as just war and use of force, universal human rights and humanitarian intervention, and national collective memory and post-conflict reconciliation.

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Justice Ethics and the Law , Undergraduate

POL 368 Women, Gender & World Politics (3 credits)

This course explores the political power of women (and with less focus, LGBTQ+ people) as domestic and global actors around the world. After a brief introduction to selected feminist writings from authors from various parts of the world, we will investigate the conditions under and extent to which women are empowered in various domestic political settings. We will then examine the ways that women act in and are acted upon by the global system. Our goal is to identify the ways that gender and intersections affect women and societies throughout the world. As a final product for the course, students will write and present a literature review and argument or hypothesis in response to a self-generated, course-related research question.

Attributes: Faith Justice Course, Gender Studies Course, Globalization Course, International Relations Course, Undergraduate

POL 370 Special Topics (3 credits)

Depending on the instructor, these courses will focus on a particular topic of interest in Political Science and Politics (e.g., The Presidential Election, The Arab Spring, Guns and the Supreme Court). Students may count only two POLs 270 and/or 370 courses for major or minor credit.

Attributes: Undergraduate

POL 390 Minternship 1 (1 credit)

These supervised mini-internships provide students an opportunity to intern in offices, initiatives, projects across the SJU campus that are related to skill-building within Political Science and International Relations. Students will: (1) develop writing, communication, and interpersonal skills; (2) examine various venues through which they can apply their knowledge and skills; and (3) integrate academic learning into professional life. Credit for 390, 391, and 392 can be combined to meet the 3-credit experiential learning requirement for Political Science and International Relations. Registration and placement require the permission of the instructor and/or department chair. Chair/Instructor approval required.

Attributes: International Relations Course, Undergraduate

POL 391 Minternship 2 (1 credit)

These supervised mini-internships provide students an opportunity to intern in offices, initiatives, projects across the SJU campus that are related to skill-building within Political Science and International Relations. Students will: (1) develop writing, communication, and interpersonal skills; (2) examine various venues through which they can apply their knowledge and skills; and (3) integrate academic learning into professional life. Credit for 390, 391, and 392 can be combined to meet the 3-credit experiential learning requirement for Political Science and International Relations. Registration and placement require the permission of the instructor and/or department chair. Chair/Instructor approval required.

Attributes: International Relations Course, Undergraduate

POL 392 Minternship 3 (1 credit)

These supervised mini-internships provide students an opportunity to intern in offices, initiatives, projects across the SJU campus that are related to skill-building within Political Science and International Relations. Students will: (1) develop writing, communication, and interpersonal skills; (2) examine various venues through which they can apply their knowledge and skills; and (3) integrate academic learning into professional life. Credit for 390, 391, and 392 can be combined to meet the 3-credit experiential learning requirement for Political Science and International Relations. Registration and placement require the permission of the instructor and/or department chair. Chair/Instructor approval required.

Attributes: International Relations Course, Undergraduate

POL 402 Capstone: Contentious Pol in US (3 credits)

Contentious politics consists of many "non-traditional" forms of political action, including social movements, protests, riots, and even political violence. This capstone political science seminar examines contentious politics in the U.S. through the lens of 1960/70s radical social movements, a key moment in U.S. politics in which the New Left imagined, theorized, negotiated, and contested the meaning of democracy and power. Students will examine and analyze the origins, ideologies, claims/grievances, goals, and strategies of radical political groups that roughly fall under the banner of the New Left: anti-war, feminism, black liberation, American Indian Movement, Chicano Movement, and Gay Liberation. We will study the politics of the struggle over rights, democracy, power, and the use/nonuse of violence within the New Left through a careful study of the primary texts (statements, agendas, etc.) produced by these groups. Students will investigate what the New Left helps us understand about power, politics, and violence in a modern democracy and evaluate the effectiveness of protest as a means to forward a political agenda, broadly defined.

Prerequisites: POL 111 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 403 Capstone: Nations&Nationalism (3 credits)

The primary objective of this seminar is to help students enhance their analytical abilities for the study of contemporary national problematique. In the rapidly changing contemporary global world, why are people still attracted, swayed, and annoyed by what is national? What is so important about being a part of nation? What drives people to develop specific allegiance toward a nation? And, how? More fundamentally, what is a nation?

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

POL 404 Capstone: Revolts&Revolutions (3 credits)

Why do revolts against governments deemed illegitimate occur and when do they become full-fledged revolutions? This course explores both the causes of uprisings and the conditions under which they succeed in bringing about new political and social orders by examining (1) what happened in the "great" revolutions, (2) how scholars have accounted for them, and (3) examining more recent instances of revolts which have sometimes failed and others succeeded. In this study, students will develop their writing and research skills, having the opportunity to find various types of information, write different forms of essays, and appropriately cite and present their materials.

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Globalization Course, International Relations Course, Undergraduate, Writing Intensive Course- GEP

POL 405 Capstone: Pol of Labor & Work (3 credits)

Our capstone in political science extends our understanding of democracy by looking within one of the most common political institutions we will experience in our lifetimes: the workplace. Many of you are currently holding jobs, some part-time and others full-, some well-paid and others less well paid, some free (interning), some with inconsistent or too few hours, some with a terrible manager, some within the home (nannying/care work). You may be working in different organizations, or in different geographies. After graduation, the process only continues. This semester we will focus on the politics of work. What avenues do workers have to improve their autonomy, workplace conditions, and compensation? What barriers (employer, legal, political) challenge this process? What roles does organized labor serve? Though our focus is primarily the United States, we will acknowledge that worker conditions are shaped by different legal, geographic, and industrial contexts: country, state, law, industry, and time period. The policies regulating the workplace are political decisions. State repression of labor organizations has not been unusual historically, though what that might look like has shifted over time.

Prerequisites: POL 111

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Undergraduate

POL 407 Capstone: Theories of Justice (3 credits)

What is political justice? We begin with an in-depth reading of the work that has defined justice in the 20th and 21st centuries: John Rawls' A Theory of Justice. We will also read selections from Rawls' Political Liberalism and his work on international justice, The Law of Peoples. In order to consider alternative theories of justice and criticisms of Rawls, we will read classic critical commentaries in the form of articles and book chapters from Michael Walzer, Michael Sandel, Alistair MacIntyre, Ronald Dworkin, Susan Okin, Robert Nozick, Brian Barry, Amartya Sen, and James Fishkin. Course requires in-depth reading of major political theorists of justice and encourages a sophisticated understanding of political justice through the weekly writing of critical, interpretive, and comparative essays. Students are encouraged to compare and contrast theories in order to develop a vocabulary of political ideology (liberalism, communitarianism, conservatism, feminism, legalism, utilitarianism, and post-modernism) as well as an understanding of different types of justice (e.g., distributive v. restorative).

Prerequisites: PHL 154 and POL 111 and POL 117 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 408 Capstone: The Armed Citizen? (3 credits)

What is the role of firearms in a constitutional democracy? Do guns pose a threat, prevent tyranny, or secure rights? This seminar interrogates (1) the meaning of the Second Amendment in the context of the creation of the Constitution and current controversies over the relationship between firearms and violence in the U.S. (2) the interpretations of the U.S. Supreme Court in *Heller v. District of Columbia* (2008) and (3) the theoretical issues raised by guns in a constitutional democracy (including *Stand Your Ground* laws). The course demands reading primary and secondary texts in political theory, public law, and history.

Prerequisites: POL 111 and POL 117 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 409 Global Migration (3 credits)

Migration has become a topic of increasing focus and concern in the 21st century, with some arguing that it will be one of the defining issues of our time. This is certainly the case for those tens of millions of individuals who are currently on the move, for the sending communities and societies from which they emigrate and the destinations that receive them, and the nation-states that control their entrance and exit. In this seminar, we will cover the "big" issues of migration in a comparative format through engagement with some of the most important examples of the extensive body of literature in Migration Studies. Concretely, we will critically examine: the demographics of migration in key regions of the world; theories that explain mobility; host-immigrant relations and integration; the role of gender, race, and ethnicity in migration; the growth of transnational ties as an aspect of globalization; security; and the analysis of immigration policies and citizenship. Throughout the course of the semester, we will question continually challenge ourselves to question the approach to migration as a problem to be solved versus as a process to manage. As a capstone seminar, Global Migration as Problem and Process includes reading requirements that are extensive and challenging and approaches learning through a collective approach as we share our individual insights and understandings. We will learn from each other. Students must come to class having read the assignment materials critically so that we can grapple with ideas and engage in debate. Avid participation is required. There will be minimal formal lecturing and most seminar time will consist of open discussion. Furthermore, this capstone will draw upon the knowledge students have gained from many of their other Political Science classes. The course materials will draw heavily from empirical evidence (qualitative and quantitative) to explore the topics discussed above, while applying major theoretical concepts in Political Science. Students should come prepared to integrate the knowledge they have gained over the past four years.

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Faith Justice Course, Globalization Course, International Relations Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 411 Washington Internship I (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for POL major or minor credit.

Attributes: Undergraduate

POL 412 Washington Internship II (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for POL major or minor credit.

Attributes: Undergraduate

POL 413 International Internship I (3 credits)

Some study abroad programs offer internship credit for one or two classes. Please note: subject to administrative approval, students may earn two courses of UD POL credit if their internship is in the 32- hour/ week range.

Attributes: International Relations Course, Undergraduate

POL 414 International Internship II (3 credits)

Some study abroad programs offer internship credit for one or two classes. Please note: subject to administrative approval, students may earn two courses of UD POL credit if their internship is in the 32- hour/ week range.

Attributes: International Relations Course, Undergraduate

POL 415 Applied Research Mixed Methods (3 credits)

Public policy scholars and practitioners have a wide variety of methodological tools at their disposal. Yet, it can be challenging to determine which techniques are best equipped to answer particular research questions, as well as how to fruitfully combine distinct methods. Gaining a familiarity with the discipline's vast methodological "toolkit" is essential to building the knowledge and skills necessary to engage in political and social research— for scholars, policymakers, and practitioners. In this course, students will explore the principle methodological approaches employed in political inquiry—encompassing experimental, quantitative-statistical, and qualitative techniques— and examine how these tools may be productively "mixed" to make descriptive and causal inferences about political phenomena. In addition to learning to evaluate and critique distinct methodological approaches, students will "learn by doing" and gain experience applying various techniques to answer specific research questions. To provide the necessary technical skills for applied research, the course will introduce students to software programs that are commonly used for quantitative and qualitative research. Students will apply the skills and techniques in the context of a semester-long research project, which will include formulating a research question, developing a research design, and engaging in original empirical research (including data collection and data analysis). The project could form the basis of a graduate-level thesis or article manuscript prepared for submission to a peer-reviewed publication.

Prerequisites: POL 111 or POL 113

Restrictions: Enrollment is limited to students with a major, minor, or concentration in International Relations, Political Science or Public Policy.

Attributes: International Relations Course, Undergraduate

POL 470 Research in the Discipline (3 credits)

This course is designated for an independent study project in consultation with and approval from a specific faculty member. Depending on the faculty member, the project will focus on a particular topic of interest in Political Science or International Relations.

Attributes: Undergraduate

POL 490 Global Smarts Internship (3 credits)

The Global Smarts Internship allows students to intern with the prestigious World Affairs Council of Philadelphia while making a commitment to social justice. Mentors travel to under-resourced middle schools in Philadelphia to prepare 8th graders for a city-wide Model United Nations event in May in which the middle-schoolers compete with students from elite private and well-funded suburban schools. As Global Smarts mentors help their middle-school students with skills and content, they develop their own academic skills (e.g. oral presentation, research, and writing) and their work experience. During this semester, mentors help their students understand two important issues of justice (previous topics have included ending forced labor, women's education, and providing clean and affordable energy). Throughout the semester, students reflect critically and consciously about their service and the systemic injustice in Philadelphia's public education system. This opportunity for community-engaged learning requires an interview in Fall (several weeks before Spring registration).

Attributes: International Relations Course, Service Learning Course, Undergraduate

POL 491 Philadelphia-Area Internship (3 credits)

The Philadelphia Area Internship Program supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample cover letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations. Course is open to ALL majors.

Attributes: International Relations Course, Undergraduate

POL 493 Honors Research in Pol Sci I (3 credits)

Majors with a minimum GPA of 3.5 in Political Science courses may apply to the Honors Program to earn College Honors. Applications are due in Spring of the junior year for the right to perform a year-long research project under the supervision of a Political Science Department member. To succeed in the application, the student should be in conversation with that faculty member early on in the junior year. Then, the student works closely with her/his mentor over the course of the senior year to prepare and present a thesis that passes the scrutiny of the mentor, an outside faculty reader with complementary expertise, and a member of the Honors Committee. Specific requirements for the College Honors thesis may be found under "Honors Program". Prior approval from the Honors Program and Department is necessary. Students who complete Departmental Honors are not required to take a POL Capstone Course. One semester of HON research counts for the Capstone Course and the other for an upper division POL course.

Attributes: Undergraduate, Writing Intensive Course- GEP

POL 494 Honors Research in Pol Sci II (3 credits)

Majors with a minimum GPA of 3.5 in Political Science courses may apply to the Honors Program to earn College Honors. Applications are due in Spring of the junior year for the right to perform a year-long research project under the supervision of a Political Science Department member. To succeed in the application, the student should be in conversation with that faculty member early on in the junior year. Then, the student works closely with her/his mentor over the course of the senior year to prepare and present a thesis that passes the scrutiny of the mentor, an outside faculty reader with complementary expertise, and a member of the Honors Committee. Specific requirements for the College Honors thesis may be found under "Honors Program". Prior approval from the Honors Program and Department is necessary. Students who complete Departmental Honors are not required to take a POL Capstone Course. One semester of HON research counts for the Capstone Course and the other for an upper division POL course.

Attributes: Undergraduate

Political Science Major

Political Scientists study power and how it operates at different levels – among individuals, within and between institutions and individuals, and between countries, international organizations, corporations, societal groups, and individuals in the international arena. Our department hopes students will connect the classroom with the wider issues in global, national, and local politics by attending our many events, trips, and study tours and participating in internships.

Learning Goals and Outcomes

Goal 1: Learn Fundamental Knowledge: Students will gain foundational knowledge in the major sub-fields of political science and understand the content, core concepts, and theories within each sub-field.

Outcome 1.1: Students will identify, define, or analyze the content, core concepts, and theories within the sub-fields.

Goal 2: Think and Make Arguments: Students will think critically and develop arguments based on evidence.

Outcome 2.1 Students will articulate verbally or in writing an argument which defines, analyzes, or synthesizes relevant theories and concepts.

Outcome 2.2 Students will apply relevant theoretical concepts to assess real world issues.

Goal 3: Think and Apply their Skills to Analysis: Students will evaluate arguments based on empirical evidence and assertions rooted in the discipline.

Outcome 3.1 Students will apply a variety of tools, methods, and perspectives to investigate and interpret issues relevant to the discipline.

Goal 4: Apply their Skills to the “Real World”: Students will be prepared for entry into professional careers, graduate schools, and other avenues related to Political Science as a discipline.

Outcome 4.1 Students will demonstrate career preparation through experiential learning opportunities that are closely related to Political Science or a related field through the development of interpersonal, analytical, and problem-solving skills.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social/Behavioral Sciences		
POL 111	Intro to American Politics	3

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
ECN 101	Introductory Economics Micro	3
or ECN 102	Introductory Economics Macro	
Any upper division History Course (200-499)		3
Any upper division ECN, ENG, HIS, PHL, PSY, SOC or continuing Non-Native Language course beyond the GEP requirements		3

GEP Electives

At least nine courses.

Major Requirements

Code	Title	Hours
One Additional Introductory Course (see POL 111 under GEP Variable Courses):		
POL 113	Intro to Comparative Politics	3
or POL 115	Intro to Global Politics	
or POL 117	Intro to Political Thought	
Professional Development		
POL 190	Strategies for Success ⁷	1
POL 290	Career Prep Seminar ⁶	1
Lower and Upper Division Courses		

Select any two POL courses numbered 100-499 6

Select seven POL courses numbered 300-499 ^{1, 2, 3} 21

Experiential Learning Course

Select one of the following: 3

POL 411 Washington Internship I

POL 412 Washington Internship II

POL 413 International Internship I

POL 414 International Internship II

POL 490 Global Smarts Internship

POL/HIS 491 Philadelphia-Area Internship

OR any Service Learning course (with SLR attribute)

OR completion of all three POL 390, POL 391, and POL 392
Minternships (1 credit each)

Capstone Course

Select one POL Capstone course from among 400-409 ^{4, 5} 3

Total Hours 38

1

POLs 270s count, but only twice.

2

POL majors who double-major in IR may not count more than three (3)
upper division courses towards either degree requirement.

3

For classes of 2023 and beyond, POL majors may only count 2 study
abroad courses towards their degree requirements.

4

POL majors who double-major in IR must complete a second Senior
Capstone Course to fulfill the IR major requirements. In addition,
Capstone Courses do not count towards the Upper Division Course
requirements for either major.

5

The Department strongly recommends that all students take the
appropriate introductory course prior to enrolling in a Capstone Course.

6

P/NP requirement for all classes 2024 and beyond.

7

P/NP requirement for all classes 2026 and beyond.

Typical Course Sequence

Course	Title	Hours
Freshman		
Fall		
POL 111	Intro to American Politics	3

1

Note that the number of free electives may vary depending on AP credits
awarded, the natural science option completed (one lab course vs. two
non-lab courses), and number of courses completed for the non-native
language requirement

University Honors

University Honors Requirements

To receive University Honors credit, an Honors Program student who is a Political Science major must have a 3.5 GPA; complete the Honors curriculum of 8 specified courses; and must undertake two consecutive semesters of research/study in the form of a senior thesis with a faculty mentor, OR engage in honors-level work in two POL courses/capstone during their senior year. These two courses may be counted toward the student's total upper division POL courses/capstone, and one semester of the thesis can replace the Capstone Course requirement. Specific requirements for the Honors thesis may be found under the Honors Program.

Political Science Minor

Learning Goals and Outcomes

Learning Goals and Outcomes

Goal 1: Learn Fundamental Knowledge: Students will gain foundational knowledge in the major sub-fields of political science and understand the content, core concepts, and theories within each sub-field.

Outcome 1.1: Students will identify, define, or analyze the content, core concepts, and theories within the sub-fields.

Goal 2: Think and Make Arguments: Students will think critically and develop arguments based on evidence.

Outcome 2.1 Students will articulate verbally or in writing an argument which defines, analyzes, or synthesizes relevant theories and concepts.

Outcome 2.2 Students will apply relevant theoretical concepts to assess real world issues.

Goal 3: Think and Apply their Skills to Analysis: Students will evaluate arguments based on empirical evidence and assertions rooted in the discipline.

Outcome 3.1 Students will apply a variety of tools, methods, and perspectives to investigate and interpret issues relevant to the discipline.

Goal 4: Apply their Skills to the "Real World": Students will be prepared for entry into professional careers, graduate schools, and other avenues related to Political Science as a discipline.

Outcome 4.1 Students will demonstrate career preparation through experiential learning opportunities that are closely related to Political Science or a related field through the development of interpersonal, analytical, and problem-solving skills.

Requirements

Minors in Political Science will compete 6 courses that satisfy the following requirements:

Code	Title	Hours
POL 111	Intro to American Politics	3
or POL 117	Intro to Political Thought	
Two (2) upper division POL courses (POL 270 through 300 level)		6

Any other three (3) POL courses ¹	9
Total Hours	18

- ¹
- Only one POL 270 counts towards the minor, unless otherwise approved in advance by the Chair.
 - Only one "Experiential Learning" course counts towards the minor (POL 191, POL 192, POL 193, POL 411, POL 412, POL 413, POL 414, POL 490, POL 491 or HIS 491)
 - Only one Study Abroad or other course that is not taken in residence counts towards the minor
 - International Relations majors must take either POL 111 or POL 117 and 2 POL classes that do not count for the IR major in addition to three other POL classes.

Pre-Health Science Post Baccalaureate Certificate

The Post-Baccalaureate Pre-Health certificate program is designed for students who are pursuing admission to medical, dental, optometry, veterinary, podiatry and other health profession programs. The program focuses on the core courses required for admission to these schools and that are useful for taking the Medical College Admission Test (MCAT), Dental Admission Test (DAT), and the Optometry Admission Test (OAT). Note that additional pre-requisite courses may be required by certain professional schools. Up to two courses may be transferred to SJU to be used towards the certificate requirements.

Requirements

Code	Title	Hours
BIO 101 & 101L	Bio I: Cells and Bio I: Cells Lab	4
BIO 102 & 102L	Bio II: Genetics and Bio II: Genetics Lab	4
CHM 120 & 120L	General Chemistry I and General Chemistry Lab I	4
CHM 125 & 125L	General Chemistry II and General Chemistry Lab II	4
CHM 210 & 210L	Organic Chemistry I and Organic Chemistry Lab I	4
CHM 215 & 215L	Organic Chemistry II and Organic Chemistry Lab II	4
PHY 101 & 101L	General Physics I and General Physics Laboratory I	4
PHY 102 & 102L	General Physics II and General Physics Laboratory II	4
Optional: ¹		
CHM 340 or BIO 404	Biochemistry (with permission of the Biology Chair) Biochemistry	3
THE 261 or THE 366	Christian Social Ethics Christian Medical Ethics	3

1

Optional elective options. Other electives may be considered based on the student's interests and professional goals. Social science courses, calculus, and statistics are recommended if not completed as part of the student's undergraduate program. Additionally, substitutes for core courses based on the requirements of professional schools may be approved by the program director.

Psychology

Department Overview

Psychology is the scientific study of human and animal behavior, in all of its many manifestations. The Department of Psychology of Saint Joseph's offers students an exciting and challenging curriculum. The broad range of courses provides opportunities for understanding Psychology as a scientific, clinical, and corporate discipline. The Department's focus is on relevant, current research and the application of that research in experimental, clinical, counseling, health care and business settings. The full spectrum of activities and concerns of psychologists are covered, with consideration given to ethical issues.

University students with a wide range of interests find Psychology personally appealing and professionally relevant. Students use the Psychology major as a gateway to a diverse range of employment opportunities, including the health and legal professions, human resources and management positions, education and school counseling, and other social, industrial and organizational situations. Students wishing to pursue careers in the mental health professions can take advantage of our clinical concentration of courses. For those students interested in pursuing graduate study in Psychology, the Department offers training in the areas of behavioral neuroscience, clinical psychology and neuropsychology, behavioral pediatrics, social psychology, cognitive psychology, and developmental psychology.

Our graduates are currently college professors, researchers, school psychologists, clinical psychologists, counselors, developmental psychologists, personnel managers, educators, learning disability specialists, social workers, physicians, attorneys, and successful businessmen and women.

Departmental Mission

Few abilities are more central to a person's successful and productive functioning in modern society than the sophisticated, insightful appreciation of human behavior. The psychology curriculum provides a theoretical and scientific framework for students to develop sophisticated insight into behavior, both their own and that of others.

The Department promotes excellence through the teacher/scholar model and provides an atmosphere for students to be intellectually curious, socially responsible, to reason well, and to become independent learners. This academic experience will change the way they conceive of their world and themselves and will promote a life-long commitment to social justice and learning.

The Department serves its academic discipline and the larger community through faculty scholarship and the preparation of future scholars, as well as providing students with the intellectual, interpersonal, and communication skills that promote success in a variety of career paths.

Guided by the philosophy of science as a worldview and its application to psychological processes, the Department of Psychology supports the University's mission by:

- Excelling in teaching, scholarship, and service.
- Making a vital contribution to the general education of the University's students.
- Modeling *cura personalis* through advising, mentoring, community and professional service, and assuming positions of leadership within and outside the University.
- Preparing courses that reflect the historic roots of the discipline as well as contemporary thought, and making explicit the connections between basic science and real world applications.
- Emphasizing professional ethics of psychology as a discipline.
- Conducting and disseminating high quality research, in partnership with students.
- Providing students with experientially based learning.
- Preparing students to contribute to the common good.

Faculty

Faculty members in the Department of Psychology serve the larger community by providing students with the intellectual, interpersonal and communication skills that promote success in a variety of career paths. Faculty publish on a wide range of topics including neuropsychology, sleep processes, sensory and perceptual processing, psychopharmacology, depression and anxiety disorders, autism, human visual memory, moral development in children, the neural and hormonal mechanisms of social behavior and much more.

- Art Therapy
- Industrial/Organizational Psychology (<https://www.sju.edu/degree-programs/industrial-and-organizational-psychology-minor/>)

Courses

PSY 100 Introductory Psychology (3 credits)

This course introduces the student to the research problems, methods, findings, and basic theory that constitute the scientific investigation of human and animal behavior.

Attributes: GEP Social Science, Undergraduate

PSY 101 Intro Psychology Seminar (3 credits)

This course introduces the student to the research problems, methods, findings, and basic theory that constitute the scientific investigation of human and animal behavior.

Restrictions: Students cannot enroll who have a major in Psychology.

Attributes: GEP Social Science, Undergraduate

PSY 120 Lifespan Development (3 credits)

This course looks at the changes that take place in our lives: in our bodies, our personalities, our ways of thinking, our feelings, our behavior, our relationships, and the roles we play during different periods of our lives. In this course we seek to describe these changes through the scientific research that has observed, measured, recorded and interpreted objective data on growth and development. Additionally we will seek to explain these changes in so far as possible, attempting answers to why they have occurred and what influential roles heredity and environment play. NOTE: This course counts toward the Psychology minor, but not the Psychology major. This course is not open to students who have already completed PSY 231. This course is only open to students who are not and do not plan to be Psychology majors. Psychology majors should take PSY 231 instead.

Restrictions: Students cannot enroll who have a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 121 Child Development (3 credits)

An attempt will be made to understand the development of children as it occurs in biological, psychosocial, and cultural contexts. Emphasis will be given to contemporary psychological research on children and its implications for the understanding of the everyday behavior of the child. Notes: This course is only open to students who are not and do not plan to be Psychology majors. This course is not open to students who have taken PSY 231.

Restrictions: Students cannot enroll who have a major in Psychology.

Attributes: Undergraduate

PSY 122 Psychological Disorders (3 credits)

How do we define what behaviors are abnormal? This course will provide an overview to the study of psychopathology, more commonly known as abnormal psychology. As an introductory course to abnormal psychology, it will focus primarily on the description of various psychological disorders, their clinical course, and the current understanding of the causes of these disorders. Notes: This course counts toward the Psychology minor, but not the Psychology major. This course is not open to students who have already completed PSY 232. This course is only open to students who are not and do not plan to be Psychology majors. Psychology majors should instead take PSY 232.

Restrictions: Students cannot enroll who have a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 123 Psychology of Men and Women (3 credits)

Stop being part of the problem and try becoming part of the solution!! Find out what the battle between the sexes, sometimes referred to as "The Longest War," is really about. Explore the nature of the psychological experiences unique to growing up male and female in contemporary society and its effects on behavior and relationships. Current non-technical readings drawn from diverse disciplines (Biology, Sociology, History, as well as Psychology) will serve as the basis of classroom discussions. These will be supplemented by lectures summarizing the latest psychological research on gender similarities and differences.

Note: This course does not count toward Psychology major.

Attributes: Undergraduate

PSY 124 Human Sexuality (3 credits)

The human sexual experience will be examined openly and objectively from physical, social, and psychological perspectives. Issues of current concern such as pornography, homosexuality, and sexuality and the handicapped will be explored in depth. Lectures and discussions may be supplemented by audio-visual materials and guest speakers.

Attributes: Gender Studies Course, Undergraduate

PSY 125 Forensic Psychology (3 credits)

This course will provide a broad overview of the field of forensic psychology and the numerous ways that the discipline of psychology may be applied to the practice of the law. Forensic psychology focuses on the application of psychological research, methods, and expertise to issues that come before the legal system. The mental disorders that are encountered in forensic evaluations will be considered, along with the manner in which forensic psychologists assist judges and juries in determining criminal responsibility and punishment. Students will learn about the psychological underpinnings of crime; issues around competency to stand trial; issues around the insanity defense, capital murder and the death penalty; issues around child custody matters; jury selection; and interrogation procedures. Note: May be used for Psychology minor. Does not count for Psychology major. For majors, counts as free elective only.

PSY 126 Psychology of Culture (3 credits)

How does culture affect human behavior? The aim of this course is to use psychological theory and research to examine culture's effects on people cross-culturally. This course will examine how people are influenced by their culture and how people consider culture in the way they think about and treat others. This course will also focus on facets of cultures, including gender, race, ethnicity, and poverty. In addition, the course will examine how interactions among these facets influence people across-cultures.

Attributes: Undergraduate

PSY 127 Behavioral Economics (3 credits)

This course will explore recent discoveries in human psychology that have transformed our understanding of economics and created the influential new field of behavioral economics. Classical economics assumed that people make rational decisions based on all available information to optimize their well-being. However, beginning in the 1970s, psychologists proved that people take mental shortcuts that lead to predictable errors, such as always expected a new war to be quickly won, or becoming swept up in speculative bubbles for houses or stocks. This class will provide examples of how social scientists are applying this new understanding of human decision making to improve outcomes in a broad array of fields, including personal finance, artificial intelligence, government regulation, emergency medicine, commercial aviation and even the selection of NFL and NBA draft picks. Note: This course does not count toward the Psychology major. It may be counted toward the Psychology minor.

Attributes: Undergraduate

PSY 128 Psychology and Architecture (3 credits)

This course explores the relationships between psychology, architecture, and urban planning. A primary focus will be how the intersection of these disciplines can influence the future of communities and the communities of the future. Students will gain an understanding of how psychological theory can inform the development of successful spaces, buildings, and cities, and thriving and sustainable communities. Current research topics and theories to be covered include environmental psychology, psychology of architecture, and urban anthropology. Note: This course does not count toward the Psychology major. It may be counted toward the Psychology minor.

PSY 129 Industrial/Organizational Psyc (3 credits)

Industrial/Organizational Psychology is the scientific study of human behavior in organizations and workplaces. The focus of I/O Psychology is both individual and group performance, satisfaction, safety, health and well-being through a variety of quantitative and qualitative methods. By studying worker attitudes and behaviors, I/O psychologists are able to recommend or create improved hiring practices, training programs, feedback systems and management techniques to boost company performance.

Attributes: Undergraduate

PSY 130 Art Therapy (3 credits)

Art therapy uses different forms of creative expression to help people explore and transform feelings, thoughts, and ideas. It can help to process and cope with emotional issues, as well as facilitate self-awareness, understanding, healing, and well-being. Art therapy can be especially useful for people who find it difficult to talk about their thoughts and emotions. In this course, students will examine theories and models of art therapy. Through discussion of readings, sharing of experiences, group work, and art therapy activities, students will increase their understanding of the history, theory, practice, and applications of art therapy in various settings.

Attributes: ARTS Major ILC Courses, GEP Art/Literature, Undergraduate

PSY 131 Controversies in Psychology (3 credits)

This course will examine major controversial issues throughout the history of psychology. From ancient Greeks arguing about where the mind is to 20th century disputes about how the brain works and beyond, we will address the many philosophical, historical, and biological inputs leading to modern psychology. Colorful characters include: Frankenstein, Mesmer, Darwin, Pavlov, Freud, James, Watson, Binet, Piaget, Skinner, Maslow, and many more. Controversies about eugenics and the treatment of women and minorities in psychology will be addressed as well.

Attributes: Undergraduate

PSY 132 Professional Development (3 credits)

This course is intended to give students a comprehensive understanding of the similarities and differences among the various mental health professions; for example, the similarities and differences among social work, counseling, and clinical psychology. The course will examine differences in theoretical orientation and areas of specialization in the various disciplines that make up the modern field of mental health professions. Students will gain an in-depth understanding of the various career paths in the mental health professions and will be able to consider and explore their interests among the various paths. The course will also cover multicultural and ethical issues in practice. Guidance and support for the application process for various Master-level programs will be offered to students. This PLS course is required for the post-baccalaureate certificate program. Students not enrolled in the post-baccalaureate program will need permission to take the course from the program director.

Attributes: Undergraduate

PSY 150 Gender Matters (3 credits)

This course provides an overview of research and theories on the biological, psychological, and the social aspects of gender. Areas of similarities as well as differences between men and women will be discussed. Significant attention will be given to the impact gender has on the everyday lives of women and men in contemporary American society today. Does not count toward Psychology major or minor.

Attributes: Diversity Course, First-Year Seminar, Gender Studies Course, Undergraduate

PSY 170 Special Topics in Psychology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PSY 190 Intro Research Method Soc Sci (3 credits)

This introductory course in research methods prepares students to understand and apply the techniques and methods of descriptive and inferential research as they are applied to the social sciences. Topics include the scientific method, ethical issues in research, survey design, research design, and basic analysis of data. This foundational course of study will take the student through the various steps of a traditional research design.

Prerequisites: (PSY 100 or PSY 101 or SOC 101) and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

PSY 191 Applied Stats for Social Sci (3 credits)

This course is an introduction to the basic principles of statistical analyses. Topics will include basic probability theory, types of data, and statistical reasoning. Students will learn common statistical analyses involving differences between means, correlation, and regression.

Prerequisites: PSY 100 or PSY 101

PSY 200 Personality Psychology (3 credits)

What are the forces that make us who we are, and uniquely different from all others? Is it our unique genetic make-up, our familial environment, our neighborhoods and peers, our culture? This course examines and strives to integrate human personality from several levels of analysis: trait level, biological level, motivational level, environmental level including microenvironments (family) as well as macro environments (neighborhoods, culture), and cognitive level. Important psychological questions are built into this analysis, including the nature/nurture debate, conscious/unconscious processes, and free-will/determinism.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 201 Biological Bases of Behavior (3 credits)

This is an introductory-level course exploring the relationship between human behavior and the functioning of the brain. Topics to be covered include research techniques in neuroscience, the structure and function of the peripheral and central nervous systems, the structure and function of nerve cells, the chemistry of the nervous system, and drug effects in the nervous system.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Attributes: Undergraduate

PSY 205 Neuroscience Foundations (3 credits)

This course will introduce students to the diverse disciplines of the neurosciences, with an emphasis on methodologies and historical research and perspectives. Students will obtain an understanding of the anatomy of the central and peripheral nervous systems, with a specific focus on electrical and chemical cellular transmission, and the pharmacology of synaptic transmission. Note: This course is an elective that can also be used to satisfy the requirements of the Behavioral Neuroscience minor.

Prerequisites: (BIO 102 or BIO 119 or BIO 133 or BS 110 or BS 134 or BS 136 or PSY 201)

Attributes: Undergraduate

PSY 206 Behavioral Neuroscience (3 credits)

In this advanced course, students will explore the neural and hormonal regulation of social behavior. Topics to be covered will include: sleep and other biological rhythms, neurological and psychiatric disorders, emotion, learning and memory, behavioral endocrinology, ingestive behavior, and reproductive behavior. Note: This course is an elective that can also be used to satisfy the requirements of the Behavioral Neuroscience minor.

Prerequisites: PSY 205 or BIO 412

Restrictions: Enrollment is limited to students with a minor in Behavioral Neuroscience.

PSY 207 Cognitive Neuroscience (3 credits)

This course will introduce students to the emerging interdisciplinary field of cognitive neuroscience. Students will learn methodological and investigative techniques and strategies used in research in cognitive neuroscience. Students will be also exposed to current research in psychophysiology and neuroradiology that further understanding of behaviors such as attention, perception, learning and memory, language, reasoning, and consciousness. Note: This course is an elective that can also be used to satisfy the requirements of the Behavioral Neuroscience minor

Prerequisites: PSY 205 or BIO 412

PSY 208 Human/Animal Relations (3 credits)

Non-human animals play an integral part in lives of humans. This course will explore the important relationship between human and non-human animals. Topics to be covered include: the history of animal domestication, and the influence of animals on human culture and religion. Moreover, the ethical implications of human interactions with animals in the laboratory, in captivity, as livestock, and in the wild will be considered. Note: This course is an elective that can also be used to satisfy the requirements of the Animal Studies minor.

Prerequisites: PSY 100 or PSY 101

Attributes: Undergraduate

PSY 209 Autism:Co-Occurring Conditions (3 credits)

Autism Spectrum Disorder (ASD) is a developmental and psychiatric disorder characterized by significant difficulties with social interaction, communication, and repetitive behaviors, which is estimated to affect approximately 1 in 68 individuals. This course is designed to examine and review a range of medical, psychiatric, and other conditions which commonly co-occur with ASD. These include genetic disorders, seizure disorders, attention deficit hyperactivity disorder, anxiety disorders, depression, obsessive compulsive disorder, sleep disturbances, gastrointestinal problems, eating disorders, overweight and obesity, and lowered quality of life. We will review and discuss the nature, time-course, impact, assessment, and treatment for each co-occurring condition, as time permits. The ultimate goal of this course is to broaden understanding of the critical role that co-occurring conditions play in the lives of individuals with ASD and their families, as well as in helping us to better understand the causes and characteristics of ASD.

Prerequisites: PSY 100 or PSY 101

PSY 210 Research Methods (3 credits)

This course is an introduction to the techniques and methods of descriptive and inferential research as they are applied to psychological science. Topics include archival research, naturalistic observation, participant-observer research, clinical-case studies, correlational research, quasi-experimental designs, between- and within-subject experimental designs, and factorial-design research. Particular emphasis on ethical issues in psychological research is given.

Prerequisites: (PSY 101 or PSY 100) and ENG 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate, Writing Intensive Course- GEP

PSY 211 Stats for the Social Sciences (4 credits)

This course is an introduction to the basic principles of statistical analyses, descriptive and inferential, that are used in the social sciences. Topics include measures of central tendency, variability, correlational analyses, regression, estimation, hypothesis testing, and selected parametric and non-parametric tests. Laboratory work will include the use of computer-based statistical packages to aid in analysis and interpretation of discipline- appropriate research data.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 212 Multicultural Psychology (3 credits)

We live in a multicultural society that requires an appropriate understanding of cultural diversity. This course will provide students with a theoretical and practical understanding of the effects of culture on human thinking and behavior. The course considers current theories and research on culture, gender, race and ethnicity with the goal of better understanding the ways in which the multicultural context influences psychological processes. The aim of the course is to achieve a better appreciation of cultural groups and consideration of cultural issues in interpreting social experiences.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Diversity Course, Gender Studies Course, Undergraduate

PSY 220 Sensation and Perception (3 credits)

The world around us abounds with all manner of sensory stimuli-visual, olfactory, auditory, tactile, and gustatory. This course will explore the manner in which we internalize this information and use it as knowledge about what is going on around us. Each of the senses will be considered from biological and phenomenological perspectives, and the process by which we derive meaning from sensory activity will be examined. Topics to be covered include object perception, visual attention, music and speech perception, somatosensory processing, taste preferences, and smell recognition.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 221 Animal Learning and Memory (3 credits)

Other than that which is genetically coded, everything we know is derived from and reflects memory for information that we have learned in the past. This course introduces the student to the scientific investigation of the basic processes of learning and memory. Topics of discussion will include the traditional theories, methodologies, and empirical findings of habituation and sensitization, classical conditioning, and instrumental conditioning. In addition, mechanisms of retention, sources of forgetting, and the biological basis of learning and memory processes will be considered.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Animal Studies, Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 222 Neuropsychology (3 credits)

Neuropsychology will introduce students to understanding human brain/behavior relationships. Emphasis will be placed on commonly used approaches in assessing and measuring human behavior and how the human brain is responsible for cognition, language, memory, spatial processing, emotion, and personality. Students will gain an understanding of principles of brain organization, individual differences, and professional and clinical issues in neuropsychology.

Prerequisites: (PSY 100 or PSY 101 or PS 101 or PS 111) and (BIO 102 or BS 119 or BS 133 or PSY 201)

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 223 Health Psychology (3 credits)

Health psychology is a field that incorporates many sub-disciplines of psychology with modern medicine. This course seeks to provide the student with an understanding of how social, psychological, and biological variables combine to cause illness, and how behavior and environments can be changed to promote health. One important focus of the course concerns understanding the nature of stress and the impact stress has on health.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 224 Drugs, the Brain, & Behavior (3 credits)

How do drugs affect consciousness and behavior? This course will examine the action of many different drugs, both medicinal and illicit, from biological, behavioral, and social perspectives. The relationship between alterations in behavior produced by drug administration and the changes that the drug produces in the functioning of the nervous system will be emphasized. Topics to be covered include routes of drug administration, drug absorption, transport and elimination, mechanisms of drug action, the histories of miscellaneous drugs, and the behavioral and biological activity of alcohol, nicotine, caffeine, the opiates, the hallucinogens, the antipsychotics, amphetamines, and cocaine.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 225 Comparative Animal Behavior (3 credits)

This course examines the evolution and development of animal behavior. Students will gain an understanding of the behavioral diversity and commonalities among animal species. An emphasis will be placed on comparing the characteristics of human behavior with those of other species, with special attention given to the cognitive capabilities of non-human animals.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 226 Psychology of Emotion (3 credits)

This course will introduce students to major theories and topics of the psychology and biology of emotion. Areas explored include the role of the brain and peripheral physiology in emotion, how emotion is expressed, the role of cognition, cultural differences, social aspects of emotion, development of emotions, and the role of emotion in health and psychopathology.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 227 Cognitive Psychology (3 credits)

Cognitive psychology is the study of how the human mind processes information. Learning and organizing new information, remembering facts and events, recognizing objects, reading, using language, and problem solving are examples of cognitive tasks people perform every day. In this course you will learn about the mental processes underlying these tasks. Particular emphasis will be given to mental representations of information, computational models of mental processes, and applications of cognitive psychology.

Prerequisites: PS 111 or PS 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 228 Science of Creativity (3 credits)

This course introduces undergraduate students to the scientific exploration of what it means to "be creative." Students will evaluate the evidence that supports the definitions, approaches, assessments, models, and recommendations offered in support of cultivating creativity. The course will emphasize cognitive neuroscience approaches and include critical analysis of major domains of creativity, including musical, visual-artistic, and scientific.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 229 Psycholinguistics (3 credits)

This course is an introduction to the study of how language is represented in the human mind and what processes are involved in language use, including producing, comprehending, and storing both spoken and written language. Together, we will explore questions such as the following: How do humans store and recognize words? How do we analyze speech? What processes are involved when we speak and read? We will study spontaneously-occurring speech errors and misperceptions and carry out experimental investigations on language production and comprehension.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 230 Social Psychology (3 credits)

The discipline of social psychology can be described as the study of the "power of the situation." Although we like to think that our behavior and our attitudes are freely chosen by us, this course illuminates how powerful outside situational forces can be in shaping both. It involves the understanding of how people influence, and are influenced by, others around them; how we form impressions of others and of ourselves; what determines our attraction to others (or lack thereof); why we help one another, and why we hurt one another. In addition to a basic understanding of these phenomena, an equally important goal is to develop critical and integrative ways of thinking about theories and research in social psychology.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Attributes: Undergraduate

PSY 231 Developmental Psychology (3 credits)

This course examines the mechanisms that contribute to psychological growth and change throughout life. The goal of this course is to provide students with an understanding of the influence of biological, cognitive, emotional, social and cultural factors on development from infancy into adulthood. Theories of development and applications to real-world problems will provide a context for understanding how humans change during the life cycle. Lectures and discussions will interweave theory, methodology and research findings about how we develop and demonstrate our abilities to perceive, think, feel, remember, plan, and ultimately realize our potential as human beings. Note: This course is not open to students who have taken PSY 120 or PSY 121.

Prerequisites: PS 101 or PSY 100 or PS 111 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 232 Adv. Psychological Disorders (3 credits)

This course will provide an overview to the study of psychological disorders or abnormal behavior. Our current understanding of psychological disorders from biological, behavioral, cognitive, and psychodynamic perspectives will be presented. Attention will be given to the nature, causes, and course of various psychological disorders as well as treatment for specific disorders. Note: This course is restricted to Psychology majors. Others should instead take PSY 122, Abnormal Psychology. This course is not open to students who have already completed PSY 122. This course is a prerequisite for PSY 300 (Clinical Psychology) and PSY 301 (Psychological Assessment), both of which are required for the clinical concentration.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 233 Adulthood and Aging (3 credits)

Continuing demographic changes occurring globally as well as nationally have accelerated research in and theorizing about heretofore-neglected periods of human development. The 'graying' of the human population has accelerated interest in the topic of adulthood and aging at both the theoretical and empirical levels. This course will explore the adult experience using a life-span perspective and a contextual analysis including contributions from the fields of anthropology, biology, psychology, and sociology.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 234 Psychology of the Self (3 credits)

This course has been designed to provide in-depth considerations of both classic and current issues regarding the self. As a concept, the self is consistently referred to in many fields of psychology. But what is the self and how is it represented? This course will consider the self from a social psychological perspective. Special focus will be on defining the self and identifying the influences that various aspects of the self have on our perceptions, emotions, and behavior.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 235 Psychology of Gender (3 credits)

This course will examine a wide variety of psychological issues concerning gender. Topics will include gender bias in research, theories of gender, gender typing, cultural emphases on gender differences, gender and the self-concept, and psychological phenomena unique to women's and men's experiences.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 236 Ethics in Psychology (3 credits)

Ethics and professional issues in clinical psychology will be addressed in this course. The focus will be on ethical principles as applied to psychological assessment and diagnosis, psychotherapy and clinical judgment, clinical research, and client-patient and student-teacher relationships. Case studies will be used to illustrate ethical and professional issues, as well as examples from clinical practice and modern media.

Prerequisites: (PSY 100 or PSY 101 or PS 101) or PS 111 and PHL 154

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Ethics Intensive, Justice Ethics and the Law, Undergraduate

PSY 237 Child Psychological Disorders (3 credits)

This course will provide a comprehensive introduction to abnormal child psychology. Assessment, diagnosis, and treatment of children and adolescents will be discussed. Specific disorders covered will include attention-deficit/hyperactivity disorder, anxiety disorders of childhood, affective (mood) disorders, conduct disorder and other disruptive behavior disorders, learning disabilities, autism spectrum disorders, and sleep disorders.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 238 Social Development (3 credits)

Social development involves the ways that children grow and interact with others, including parents, peers, siblings and authority figures. This course will cover social development from infancy through adolescence. The course will cover the major theories of social development, as well as issues such as parenting styles, gender development, moral development, aggression and motivation.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

PSY 239 Psychology of Media (3 credits)

Every one of us is exposed to, and thus influenced by, some aspect of the media. This course will examine some of the major aspects of the media, including 1) media content, with emphasis upon depictions of gender, age, race, sexuality, violence, advertising, and news, 2) effects of exposure to that content, and 3) who owns and thus controls the content of what we see, hear, and play. As a laboratory course, students will also engage in the full research process, from reviewing the scholarly work of others, formulating an original research hypothesis, testing that hypothesis, and drawing logical conclusions from the data.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 240 Sports Psychology (3 credits)

This course examines the application of psychological theories and research to sports and exercise behaviors. It will provide students with knowledge about psychological factors that affect performance in sports such as motivation, concentration, focus, confidence, anxiety, and relaxation. Students will also be introduced to mental skills that will enhance performance, make athletic participation more enjoyable, and learn skills that can be transferred to other aspects of their lives. Skills to be covered in this class will include: how to set measurable goals and strategies to achieve them, visualization and imagery techniques, leadership, team-building, and how to best cope and recover from injuries.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 244 Psychology in Film (3 credits)

This course will develop students' understanding of foundational knowledge in Psychology through a consideration of classic and contemporary films. It will examine current issues and theories in Psychology through the process of film analysis. It will also explore the effects popular cinema has on the attitudes and perceptions of foundational concepts and theories in Psychology.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 250 Adolescent Development (3 credits)

This course emphasizes the physical, social, emotional, and cognitive developmental changes that occur during adolescence. Topics relevant to adolescent development in various contexts, including families and the parent-adolescent relationship, self and identity development, the increasingly important role of peers, school adjustment, and the nature and implications of psychosocial problems will be covered.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 260 Neurocognitive Development (3 credits)

This course will explore the relations between neural and cognitive development from birth through adolescence. We will examine how the brain changes and develops to support the basic building blocks of cognition (e.g., attention, object knowledge, social cognition, memory, language, executive function). We will review the major methods of developmental cognitive neuroscience, including techniques to assess brain structure and function (MRI/fMRI), electrophysiological recordings (EEG/ERPs), and behavioral marker tasks. The relation of developmental cognitive neuroscience to broader scientific issues (e.g., neuroplasticity, gene-environment interaction, critical/sensitive periods) and application to the study of atypical development and education will also be discussed.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 270 Special Topics in Psychology (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 290 Professional Prep Seminar (1 credit)

What can you do with a degree in Psychology Major? Do you know how to search for an internship or a job? Are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance your knowledge about internships and careers within your major and help you build practical skills through class instruction, assignments, and alumni exposure throughout the semester. This one-credit course meets once a week through the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication, and networking/interviewing.

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 300 Clinical Psychology (3 credits)

This is an advanced course that provides an overview of the field of clinical psychology. Students are expected to have taken Abnormal Psychology and are familiar with the various psychological disorders covered in that course. The primary goals of the Clinical Psychology course are to familiarize students with the history of clinical psychology as a field, including the roles in which clinical psychologists serve and settings in which they work, as well as current issues and debates in the field; provide a foundation in student's understanding of the various theoretical orientations that guide how clinical psychologists approach their work; orient the student to the various types of assessments that are employed to aid in the treatment conceptualization; and help students clarify their own interests and approaches in the mental health field and mapping them to the client populations and presenting problems of interests and the appropriate graduate programs to suit their goals.

Prerequisites: PSY 100 or PSY 101 and PSY 232

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology Clinical, Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 301 Psychological Assessment (3 credits)

This course covers the theory, construction, use, and interpretation of the wide range of available psychological, neuropsychological, and educational tests. Tests of intellectual ability, academic achievement, industrial aptitude, and personality and clinical variables will be reviewed. Specific emphasis will be placed on reliability, validity, ethics, the utility of test measures, test administration, and interpretation and communication of test results.

Prerequisites: PSY 232 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology Five Year or Psychology.

PSY 370 Advanced Topics: Nat Sci I (1-4 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 371 Advanced Topics: Nat Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 372 Advanced Topics: Soc Sci I (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 373 Advanced Topics: Soc Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 374 Independent Study I (3 credits)

The content of the Independent Study is negotiated between student and faculty mentor. The content cannot be that of an existing course in the curriculum unless that course will not be offered during the time that the student completes his or her program of study. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 375 Independent Study II (3 credits)

The content of the Independent Study is negotiated between student and faculty mentor. The content cannot be that of an existing course in the curriculum unless that course will not be offered during the time that the student completes his or her program of study. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 390 Internship I (3 credits)

Internship entails spending eight hours each week (for a total of 112 hours) at a site in which students' work will be supervised and evaluated. Settings include clinical, clinical research, counseling, hospital, educational research, special education, correctional, and industrial facilities. Permission of instructor required.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment limited to students with a class of Junior or Senior. Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 391 Internship II (3 credits)

Internship entails spending eight hours each week (for a total of 112 hours) at a site in which students' work will be supervised and evaluated. Settings include clinical, clinical research, counseling, hospital, educational research, special education, correctional, and industrial facilities. Permission of instructor required.

Restrictions: Enrollment limited to students with a class of Junior or Senior. Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 392 Independent Research I (3 credits)

Students are responsible for designing and conducting an original research project under the direction of a faculty mentor. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 393 Independent Research II (3 credits)

Students are responsible for designing and conducting an original research project under the direction of a faculty mentor. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 410 Neuroscience Practicum (3 credits)

Students will use a range of techniques including pharmacology, immunohistochemistry, enzyme-linked immunoassay, and behavioral tests to do applied work in the areas of neuroendocrinology, neuropharmacology and social neuroscience. Students spend 10 hours per week in the laboratory and attend class. The academic component of the experience includes readings related to the substance of the practice, discussions with the faculty supervisor, a professional presentation, and a written report appropriate to the discipline. Course grades are based on laboratory performance and academic work. Note: This course is restricted to sophomores, juniors, and seniors.

Prerequisites: PSY 201 or BIO 101 or CHM 120

PSY 470 Special Topics in Psychology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PSY 491 Research Seminar: Nat Sci I (3 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled.

The semester's topic will be treated in depth in a seminar format.

Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 492 Research Seminar: Nat Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format. Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 493 Research Seminar: Soc Sci I (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format. Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 494 Research Seminar: Soc Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format. Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

Industrial and Organizational Psychology Minor

The Industrial/Organizational Psychology minor is an interdisciplinary program between the Psychology department in the College of Arts & Science and the Management Department of the Haub School of Business. According to the US Department of Labor, Industrial/Organizational Psychology is the fastest-growing subfield of psychology, with a 26% growth rate projected from 2008 – 2018, and 53.4% between 2012 and 2022. Furthermore, Psychology is one of the primary sub-disciplines of Management and is a particular point of emphasis in Human Resource Management (e.g. recruitment, selection, motivation, and training) and Organizational Behavior (teams, negotiation, stress, satisfaction, and commitment). This minor is one of the few undergraduate minors in the country in this area; the interdisciplinary nature of it allows us to offer expertise in both Psychology and Management.

Requirements

Code	Title	Hours
Required:		
PSY 230	Social Psychology	3
MGT 110	Essent'ls of Organizational Beh	3
or MGT 120	Essentials of Management	
or PSY 129	Industrial/Organizational Psyc	
Plus two additional courses among the following:		6

PSY 200	Personality Psychology	
PSY 226	Psychology of Emotion	
PSY 227	Cognitive Psychology	
PSY 301	Psychological Assessment	
PSY 390/391	Internship I	
Plus two additional courses among the following:		6
MGT 211	Perspectives on Leadership	
MGT 220	Intro Human Resource Managemen ¹	
MGT 221	Diversity in the Workplace	
MGT 222	Influence,Negotiation&Conflict	
MGT 311	Leading Teams	
MGT 321	International Talent Mgt	
MGT 322	Decision Making w/ Analytics ²	
MGT 425	Managing HR: Resrch/Appl	
Total Hours		18

1

Except for HSB students

2

Among the 4 minor-elective courses, students would be required to take a research oriented course (MGT 322) unless they have taken a research oriented course in their major.

Psychology Major Learning Goals and Outcomes

Goal 1: Knowledge Base in Psychology. Students will develop an understanding of the major concepts, theoretical perspectives, empirical findings, and historical trends in Psychology.

Objective 1.1: Students will demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in Psychology as a social science.

Objective 1.2: Students will demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in psychology as a natural science.

Goal 2: Scientific Inquiry and Critical Thinking. Students will develop scientific reasoning and problem solving skills. They will be able to understand and apply basic research methodology in psychology, including research design, data analysis, and interpretation.

Objective 2.1: Students will be able to understand and apply basic research design strategies.

Objective 2.2: Students will be able to understand and apply basic data analysis strategies.

Goal 3: Ethical and Social Responsibility in a Diverse World. Students will develop an understanding of ethically and socially responsible behaviors in professional and personal settings in a landscape of increasing diversity.

Objective 3.1: Students will understand and apply ethical psychological principles.

Objective 3.2: Students will be able to understand diversity, appreciate ethical behavior, and reflect other values that are the underpinnings of Psychology as a discipline.

Goal 4: Communication. Students will demonstrate competence in written and oral communication skills.

Objective 4.1: Students will demonstrate competence in written communication.

Objective 4.2: Students will demonstrate competence in oral communication.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

¹
Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

- Art, Music/Theatre/Film, or Literature
- Non-Native Language
- Philosophical Anthropology
- Religious Difference
- Mathematics:
 - Any Math 'Beauty' course
- Natural Science:
 - Two non-lab courses, or one science course with lab to fulfill this requirement.

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

- A social science course offered by the Department of Sociology, Political Science or Economics.
- Any two courses selected from the College of Arts and Sciences Day Division course offerings.

GEP Electives

Psychology majors will take between 10 and 14 free electives depending upon whether a student enters the University with AP credit.

Major Requirements

Thirteen courses are required, including an experiential course. Eleven courses are required if students use an acceptable Psychology special elective to fulfill their experiential requirement, or if they use a study abroad course or a service-learning course to fulfill their experiential requirement. The experiential course does not have to be a course offered by the Psychology Department.

Psychology Breadth Requirement

Code	Title	Hours
PSY 100 or PSY 101	Introductory Psychology Intro Psychology Seminar	3
PSY 201	Biological Bases of Behavior	3
PSY 212	Multicultural Psychology	3
PSY 231	Developmental Psychology	3
PSY 123-139 or PSY 170 or PSY 220-269: Any Psychology Elective		
PSY 220-229 or PSY 260-269: Advanced Natural Science-Based Psychology Elective		
PSY 230-239 or PSY 250-259: Advanced Social Science-Based Psychology Elective		
PSY 220-269: Advanced Any Psychology Elective		
Select one from the following for Advanced Special Psychology Elective:		
PSY 205-209		
PSY 220-269		
PSY 390-392		

Psychology Research Sequence

Code	Title	Hours
PSY 210	Research Methods	3
PSY 211	Stats for the Social Sciences	4
One of the following Capstone Research Seminars:		
PSY 491	Research Seminar: Nat Sci I	
PSY 492	Research Seminar: Nat Sci II	
PSY 493	Research Seminar: Soc Sci I	
PSY 494	Research Seminar: Soc Sci II	

Experiential Requirement

Psychology majors must satisfy an experiential course requirement. This requirement can be satisfied in a number of ways, and with either a Psychology course or a course offered by another academic department. Students must complete one of the following:

Code	Title	Hours
PSY 390 or PSY 391	Internship I Internship II	3
PSY 374 or PSY 375	Independent Study I Independent Study II	3
PSY 392 or PSY 393	Independent Research I Independent Research II	3

Any Service Learning course

Any Study Abroad/Tour program/course

Independent Study

Code	Title	Hours
PSY 374	Independent Study I	3
or PSY 375	Independent Study II	

The content of the Independent Study is negotiated between student and faculty mentor. The content cannot be that of an existing course in the curriculum unless that course will not be offered during the time that the student completes his or her program of study.

Independent Research

Code	Title	Hours
PSY 392	Independent Research I	3
or PSY 393	Independent Research II	

Students are responsible for designing and conducting an original research project under the direction of a faculty mentor.

Internship

Code	Title	Hours
PSY 390	Internship I	3
or PSY 391	Internship II	

Internship entails spending eight hours each week in a supervised field experience. Settings include clinical, clinical research, counseling, hospital, educational research, special education, correctional, and industrial facilities. Site locations of recent internships have included the following:

- Fox Chase Cancer Center
- Women Organized Against Rape
- North Light Community Center
- Center for the Treatment of Anxiety
- Delaware County DA Office Inglis House
- Overbrook School for the Blind, Elwyn
- Children's Hospital of Pennsylvania
- Center for Autistic Children
- Beck Institute for Cognitive Behavior Therapy
- Saunders House
- Comcast-Spectator HERS Foundation

Dr. Phyllis Anastasio (Post Hall 221, panastas@sju.edu) oversees the internship course for the Psychology Department.

Free Electives

Psychology majors have seven to ten free electives (depending upon how Foreign Language, Social Sciences, and Experiential requirements are met). There are no restrictions on these elective courses other than ordinary prerequisites. Students may elect to take additional Psychology courses, or may use these electives to fulfill the requirements of a minor in another related discipline.

Clinical Psychology Concentration

The Department of Psychology offers a clinical concentration of courses in support of those Saint Joseph's Psychology majors who are interested

in pursuing careers in clinical psychology, counseling psychology, and related mental health fields. Psychology majors are eligible to take an additional sequencing of courses to gain greater understanding of the field of clinical psychology. The goals of the clinical concentration are:

- To ensure that students take additional courses required by graduate programs in clinical psychology (e.g., Developmental Psychology and Abnormal Psychology).
- To help students better understand the field of clinical psychology and to make informed choices on fit with various types of graduate programs (e.g., social work vs. clinical psychology vs. health psychology) and the type of theoretical orientation the various types of programs provide (e.g., psychodynamic, cognitive-behavioral, socio-cultural).
- To encourage students to gain some exposure to the clinical psychology profession (e.g., to the tasks clinicians perform and/or to special populations with whom they work).

Completion of all **six** courses listed below is required to earn the designation of 'Clinical Concentration' on a student's transcript. Of these six courses, up to and no more than 3 may also count toward the Psychology major requirements.

Code	Title	Hours
PSY 231	Developmental Psychology	3
PSY 232	Adv. Psychological Disorders (prerequisite for PSY 300 and PSY 301)	3
PSY 200, PSY 236, or PSY 237	Clinical Concentration Elective	3
PSY 300	Clinical Psychology	3
PSY 301	Psychological Assessment	3
PSY 390	Internship I	3

Requirements For Departmental Honors

Faculty of the Psychology Department encourage students to participate in the Honors program. Students may take any psychology course for Honors credit with the permission of the instructor. A contract is negotiated between student and faculty member on what additional work is to be done for Honors credit.

Students who seek Departmental Honors must complete one set of the following two research-intensive sequences of courses and earn a minimum grade of 'B' in each course:

1. Complete a two-semester Honors thesis. Students attempting this option need to identify a member of the Psychology faculty who would be willing to serve as a mentor and oversee the independent project for two semesters, in advance of registering for the associated courses (PSY 392 and PSY 393)..
2. Upgrade two research seminar courses (PSY 491- 494) and complete an individual research project in each course.

Students in the 5-year BS/MS program seeking Departmental Honors may choose one of the following two options:

1. Upgrade both Graduate Directed Studies I and II (PSY 591 and 592) to include an Honors thesis as well as work on a master's thesis.
2. Conduct an individual, independent, in-depth project in one of the Department's four Research Seminar courses (PSY 491-494), followed

by an upgraded project completed in either Graduate Directed Studies I or II (PSY 591 or PSY 592).

Requirements for University Honors and University Scholar may be found on the Saint Joseph's web pages for the Honors Program.

Requirements for Psi Chi, the International Honor Society in Psychology

Saint Joseph's University maintains an active chapter of Psi Chi (ΨΧ), the International Honor Society in Psychology. The purpose of Psi Chi is to encourage, stimulate, and maintain excellence in scholarship, and to advance the science of Psychology. Membership in Psi Chi is open to all students who meet the following minimum qualifications:

- Registration for major or minor standing in Psychology.
- A rank in the upper 35% of their graduating class in general scholarship.
- Completion of the following courses:
 - Introductory Psychology (either PSY 100 or PSY 101)
 - Research Methods (PSY 210)
 - Statistics for the Social Sciences (PSY 211)
 - At least one other Psychology course
- A cumulative GPA not lower than 3.2 in all Psychology classes, as well as in overall cumulative grades.
- Two-thirds affirmative vote of those members present at a regular meeting of the chapter.
- High standards of personal behavior.
- Approval of the International Psi Chi office.

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format. Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Psychology Minor

Learning Goals and Outcomes

Goal 1: Knowledge Base in Psychology. Students will develop an understanding of the major concepts, theoretical perspectives, empirical findings, and historical trends in Psychology.

- Objective 1.1:** Students will demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in Psychology as a social science.
- Objective 1.2:** Students will demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in psychology as a natural science.

Goal 2: Scientific Inquiry and Critical Thinking. Students will develop scientific reasoning and problem solving skills. They will be able to understand and apply basic research methodology in psychology, including research design, data analysis, and interpretation.

Objective 2.1: Students will be able to understand and apply basic research design strategies.

Objective 2.2: Students will be able to understand and apply basic data analysis strategies.

Goal 3: Ethical and Social Responsibility in a Diverse World. Students will develop an understanding of ethically and socially responsible behaviors in professional and personal settings in a landscape of increasing diversity.

- Objective 3.1:** Students will understand and apply ethical psychological principles.
- Objective 3.2:** Students will be able to understand diversity, appreciate ethical behavior, and reflect other values that are the underpinnings of Psychology as a discipline.

Goal 4: Communication. Students will demonstrate competence in written and oral communication skills.

- Objective 4.1:** Students will demonstrate competence in written communication.
- Objective 4.2:** Students will demonstrate competence in oral communication.

Requirements

Completing a Psychology minor requires six courses:

Code	Title	Hours
PSY 100	Introductory Psychology	3
or PSY 101	Intro Psychology Seminar	
PSY 120	Lifespan Development ¹	3
PSY 201	Biological Bases of Behavior ¹	3
Select three additional courses from the following:		9
PSY 121-129 or 131 or 170		
PSY 212	Multicultural Psychology	
PSY 220-230		
PSY 233-269		
Total Hours		18

Psychology minors are strongly advised to complete PSY 100, PSY 120, PSY 201, and 100-level electives BEFORE taking 200-level psychology electives. PSY 210 may be substituted for PSY 120 (<https://academiccatalog.sju.edu/search/?P=PSY%20120>) or PSY 201 (<https://academiccatalog.sju.edu/search/?P=PSY%20201>).

The academic advisor for minors is the departmental Advising Coordinator, Dr. Josephine Shih

Public Policy

The Public Policy major, minor, and Master's degree include multidisciplinary coursework that concentrates on the theory, analysis, and application of policy. Students will be prepared with the requisite skills and knowledge to pursue careers in the public or private sector or graduate work in public policy and related disciplines. Public Policy students will investigate policy as well as the relationships among all of the actors and entities that have a voice in the policymaking process. This process is inherently cross-disciplinary, and thus brings together scholarship from Political Science, Economics, and Sociology, among other disciplines.

The Public Policy major offers a “rigorous, student-centered education rooted in the liberal arts” that encourages students to investigate social problems, explore ethical standards and considerations, and examine issues of equity across a variety of contexts. The goal is to “prepare students for personal excellence, professional success, and engaged citizenship” by equipping them with the skills that are necessary for understanding the broad, societal impact of public policy.

Programs

Undergraduate Major

- Public Policy (p. 339)

Undergraduate Minor

- Public Policy (p. 340)

Graduate

- Public Policy (p. 341)

Courses

COM 371 Civic Media (3 credits)

This course engages students in questions about media, technology, sociality, and society. Students examine both theoretical and experiential foundations in order to understand the relationship between mediated communication and human communities. Those who complete this course will gain hands on experience engaging audiences and developing communities through various social media platforms.

Prerequisites: COM 200 and COM 201

Attributes: Undergraduate

COM 460 Health Communication Advocacy (3 credits)

This course will address the topic of health as it is enacted and defined within the discipline of communication studies. This course systematically explores and elaborates key concepts, principles, and underlying theories pertinent to public health communication campaigns and advocacy practices. Specifically, this course will provide students with conceptual and applied knowledge about communication interactions and its effects on health care, health practitioners, and patients. Topics include but are not limited to patient-provider interaction, social and cultural issues of health, mass media representations of health and healthy behaviors, and communication within health organizations.

Attributes: Undergraduate

ECN 101 Introductory Economics Micro (3 credits)

By analyzing the behavior of buyers and sellers in product and factor markets, this course explains how a market economy determines how scarce resources are allocated to the production and distribution of various goods and services. Supply-and-demand models are used to explain the determination of the prices of products and of factor inputs, and the consequences of government controls and of different types of market structures on prices, wages, and economic efficiency are analyzed.

Attributes: GEP Social Science, International Relations Course, Undergraduate

ECN 330 Economics of Labor (3 credits)

This course provides students with an introduction into labor markets. We will discuss models for behavior, incorporating labor supply and labor demand. Topics within labor economics, such as investments in human capital, discrimination, job search, and labor unions will also be covered. Throughout the course we will investigate multiple questions such as: How do individuals decide how many hours to work? How is a person's salary determined? What are the benefits associated with attaining a college degree? Is there convincing evidence of labor market discrimination? Throughout this course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to the study of labor economics. Note: Can count towards the B.S. in Quantitative Economics with the completion of additional coursework and permission of the instructor.

Prerequisites: ECN 101 and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

ECN 340 Public Finance & Public Policy (3 credits)

This course examines the nature of government spending, the decision-making process, and trends. It describes and evaluates several kinds of taxation and proposals for reform. It utilizes microeconomics to investigate tax incidence and the welfare effects of taxation.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 370 Economic Development (3 credits)

The field of Economic Development involves both aspects of macroeconomic and microeconomic theory and analysis. This course presents an overview of the variety of economic growth theories and their empirical evaluation in both developed and developing economies. These theories are compared against practical institutional explanations as to why some economies experience slow growth and underdevelopment, while others see higher growth rates. We explore the relationship between economic growth, poverty, inequality, sustainability and human development

Prerequisites: ECN 101 and ECN 102

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Undergraduate

ECN 375 Environmental Economics (3 credits)

Environmental Economics examines the interactions between people and the environment by addressing the challenge of meeting the increasing demand for goods and services while simultaneously conserving natural resources for future generations. This course utilizes economic theory and geographic information systems (GIS) software to examine global environmental issues including externalities, public goods, criteria for evaluating environmental policies, the role of economic analysis in environmental policy decisions, discussion of pollution control planning, environmental conservation policy in The United States, and international environmental conservation concerns.

Prerequisites: ECN 101 or GIS 101

Attributes: Globalization Course, International Relations Course, Undergraduate

ECN 382 Urban Economics (3 credits)

Urban Economics is broadly defined as the economic study of urban areas. This course will teach you how to examine issues that typically occur in urban areas, such as crime, poverty, inequality, and the distribution of public goods and government resources, from an economic perspective. Throughout this course, we will not only examine urban issues theoretically, but also use real-world data and geographic information systems software (GIS) to apply economic theory to examine these issues in real-time.

Prerequisites: ECN 101 or GIS 101

Attributes: Diversity Course, Undergraduate

ECN 390 The Economics of Healthcare (3 credits)

This course examines major policy issues associated with the delivery of health care in the United States from an economic perspective. Particular emphasis will be placed on the challenges and trade-offs involved in containing health care costs, maintaining quality, and ensuring access. This course will provide students with a better understanding of the major health policy issues.

Prerequisites: ECN 101

Attributes: Undergraduate

ECN 410 Econometrics (3 credits)

Basic principles of econometrics beginning with the classical linear regression model and the method of least squares. Special problems arising from the violation of classical assumptions, and statistical procedures for dealing with them, are covered. Identification and estimation problems are also studied, as well as forecasting with single-equation regression and simultaneous system of equations. Modern time-series models are evaluated, with numerous forecasting illustrations from economics and business.

Prerequisites: ECN 101 and ECN 102 and (MAT 118 or MAT 128 or DSS 210)

Attributes: Undergraduate

ECN 484 Race and the Economy (3 credits)

This course will examine the causes and consequences of racial disparities in economic outcomes. We begin with a history of slavery and its economic consequences. Then we will look at official government policies, such as red-lining, that have contributed to racial disparities. We will examine the data on racial disparities in poverty, unemployment, income, and wealth. The rest of the course will focus on an economic analysis of racial differences in various aspects of the economy, including education, health care, and housing. We will also study current government policy and proposals to mitigate the disparities.

Prerequisites: ENG 101 and ECN 101

Attributes: American Studies Course, Faith Justice Course, Undergraduate, Writing Intensive Course- GEP

ECN 487 Research Methods (3 credits)

This course is an upper-level economics elective that provides students with an introduction into research methods. We will discuss current research in applied microeconomics and apply the methods learned to create original research. Throughout the course we will investigate multiple facets of research including literature review, data analysis, and analytic writing. Throughout the course, students will be given verbal and written feedback about their analysis and writing. Throughout this course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to writing a comprehensive research paper. In order to gain the most from these discussions, students are required to take on an active role in these discussions.

Prerequisites: ECN 101 and ECN 410 and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

ECN 491 Economics Internship (3 credits)

This course combines work experience with academic study. Students work in internships for the duration of the semester (some 10 hours per week) with approved employers in the private and public sectors (or non-governmental and non-profit organizations) in the Philadelphia area. Their work experience is complemented with relevant required readings. In addition, students must keep a journal, write a final report and meet regularly with their adviser. A successful academic internship is a three-way partnership between the student, the employer, and the faculty adviser. Note: May count towards the B.S. in Quantitative Economics for students in a quantitative internship with instructor approval.

Prerequisites: ECN 290 (may be taken concurrently)

Attributes: Undergraduate

GIS 101 Introduction to GIS (3 credits)

This course is designed to acquaint students with an introductory examination of geographic information systems (GIS). GIS tools are used to analyze spatial information, manage spatial data, and create maps used to present and visualize data. This course focuses on ArcGIS and how to apply GIS skills to answer research questions. GIS technology is used in a variety of disciplines including humanities, engineering, economics, environmental studies, engineering, management, urban planning, agriculture, forestry, public health, and many others.

Attributes: Undergraduate

GIS 201 Intermediate GIS (3 credits)

A continuation of GIS 101, this course will prepare students for more advanced geographical analysis and use of geographical information systems (GIS). Students will learn intermediate techniques to analyze spatial information, manage spatial data, and create map layouts to present and visualize data. This course focuses on ArcGIS and other softwares as well as how students can integrate geographic concepts and GIS skills in their major and intended field.

Prerequisites: GIS 101 or INT 170

Attributes: Undergraduate

HIS 392 Museums, Monuments, and Media (3 credits)

"Public history" is history as it is practiced outside of the classroom for a general audience: at museums, monuments, and historic sites; in film, television, and digital media. In this course, students will examine the history, methods, and impact of public history in the United States. Through case studies, debates, site visits, and hands-on projects, students will learn how to consume, critique, and create public history, and to assess how the past is used (and abused) for present purposes.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 491 Philadelphia Area Internship (3 credits)

The Philadelphia Area Internship course supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations.

Attributes: International Relations Course, Undergraduate

POL 111 Intro to American Politics (3 credits)

This course is an introduction to American political processes and institutions. The goal of this course is to acquaint the student with the theory and practice of American government. Students will learn about the basic structure, function, and dynamics of American government and the political system within the context of the major political issues of our time. Beyond studying the institutional structures and activities of government, we will also evaluate the relationships between individuals, groups, and institutions in terms of influence, process, and outputs in various domains.

Attributes: American Studies Course, GEP Social Science, Undergraduate

POL 113 Intro to Comparative Politics (3 credits)

An introduction to the study of comparative political systems, this course focuses attention on the institutions and political cultures of select countries from different world regions. While exploring the varieties of democracy and authoritarianisms, as well as the complexity of democratizing today, this course also introduces students to the comparative method.

Attributes: GEP Social Science, Globalization Course, International Relations Course, Undergraduate

POL 304 Engaging Communities (3 credits)

How do communities identify and solve problems in partnership with other stakeholders in their local environment? Engaging Communities is an examination of how institutions develop trust and reciprocal partnerships within their neighborhoods and surrounding communities. The class will study the theory and practice of constructing mutually beneficial relationships among and between hospitals, higher education institutions, non-profit organizations, local government, community groups, and residents to improve the quality of life locally in Philadelphia and the surrounding counties. Students will learn about multiple ways to elicit and increase community participation and civic engagement, utilize the fundamentals of project management, and create models for assessment.

Prerequisites: POL 111 or POL 113

Attributes: Undergraduate

POL 306 Political Participation in US (3 credits)

Why do people participate in American politics and civic life? Why don't they? Why should they? This course emphasizes the political science literature on political participation and civic engagement. We will begin by examining the factors that make participation more or less likely including socialization, partisanship, networks, and geography. Demographic and social identities can shape how easily and how often we wish to involve ourselves in democratic processes. From there, we will focus on forms of political participation. Who votes? Who donates money? Who protests? Throughout we will acknowledge the constraints that make forms of participation easier from some than others. Finally, we will address the consequences for political life if individuals opt out of politics. What does isolation and decline in civic life mean for the rise of political and economic inequality, efficacy, and social connectedness?

Attributes: Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 309 Advising and Advocacy (3 credits)

How do citizens and groups advocate for interests? How do they advise leaders to make changes? And, when are they more likely to influence the policy direction of the nation? This course offers an analysis of modern American "advising and advocacy" styles and models, with a focus on the politics of domestic policymaking. Students will study the use of power and authority, the importance of strategic opportunities, the nature of decision-making in a separated system, and the role that government, interest groups, and public opinion play in those decisions. Based on these perspectives, we will bring our informed insights to address an important question within our current circumstances: how to represent those who were/are marginalized in the political landscape. Thus, students in this class will serve as advocates for those who may not have the strongest voices in political discussions and advise elected officials on how to construct a policy agenda that attends to underserved citizens and historically marginalized communities. Indeed, a primary goal of the class is to study and critically analyze how systems of inequality and disadvantage inform politics and policy from a social justice perspective.

Attributes: American Studies Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 313 Public Policy (3 credits)

This course investigates public policymaking within the United States with an emphasis on the social construction of public policy. Students will assess the significance of social, economic, and political factors that influence policymaking and implementation; how problems become a part of the political agenda; and the major political ideological perspectives in the U.S. that impact policy process and content. The course is a study of policy in practice, as students will evaluate current social problems along with empirical social science research to determine the strengths and weaknesses as well as the intended and unintended effects of a particular social policy at the state and/or national level.

Attributes: American Studies Course, Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 316 State and Local Government (3 credits)

This upper division course focuses on understanding variation across America's federal system. How can we move from thinking about one American government, to 51 governments (all the states plus the national), or to the significantly larger number of local and municipal governments? What role do the states and localities play in shaping American democracy? In what ways are states hindering democracy or helping it flourish? In this course we will focus on three broad themes in the state politics literature: structural power, interest group activism, and individual political behavior. Throughout we will acknowledge that variation at the subnational level matters for engagement, equality, and the presence of a functioning democracy.

Attributes: American Studies Course, Undergraduate

POL 319 Public Opinion & Media (3 credits)

This course is a brief overview of the role of public opinion and media in American democracy. We hold attitudes about relevant political and social groups, many of which shape our thoughts and actions. Further, if government is to be "by the people," understanding what "the people" want is of major importance to legislators, organized groups, and interested political scientists. The media, a critical source of political information, can inform the public, provide a mirror of public perception, but also shape ideas. In this course, we examine several complex questions: What is public opinion? Where does it come from? How and when does it change? Does everyone's opinion matter equally?

Attributes: American Studies Course, Undergraduate

POL 323 Women and American Politics (3 credits)

This course is designed to provide students with a critical examination of women as political actors in the United States. We will analyze various forms of women's political participation, both in the traditional spheres of what is considered politics – women as voters and politicians – and also in more "non-traditional" spheres of political activism. We will examine how women are mobilized to participate in politics, focusing keenly on the differences among women in their political activism in an effort to understand how the intersection of gender, race, class, sexuality, age, and ability influence women's political activism. The primary goal of this course is to familiarize students with key issues, questions, and debates in the women and politics scholarship, mainly from a U.S. perspective. Students will become acquainted with many of the critical questions and concepts scholars have developed as tools for thinking about the gendered political experience. In this course you will learn to "read" and analyze gender politically, exploring how it impacts our understanding of the political world.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 324 Race & Ethnic Politics in U.S. (3 credits)

From its first days, the United States has faced the dilemma of how to incorporate populations different from the majority population into the polity. This dilemma continues today and appears in discussions of such issues as affirmative action, immigration and naturalization, language policy, and social welfare policy. In this course, we will examine the major theories that attempt to explain the roles of race and ethnicity in U.S. politics and the ways in which individuals use race and ethnicity as resources for political organization. We will examine the phenomenon of ethnicity and race in the political development of the United States. Finally, we will look at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Among the topics to be covered include the meaning of race and ethnicity, the history of racial and immigration politics, prejudice, group participation and mobilization, political representation, and public opinion.

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Faith Justice Course, Undergraduate

POL 326 Protesting Inequality (3 credits)

Through the lens of political science, this course examines the political causes and consequences of inequality in the United States and how citizens have responded to the empirical realities of unequal circumstances. While inequality is an economically, politically, socially, and morally complex phenomenon, this course emphasizes that inequality does not "just happen" but rather is a result of the way our society is structured. Nevertheless, citizens-agents-have protested inequality on various occasions and in many different ways. It is on these citizen protest movements that we will focus most of our attention, including, but not limited to, the "Poor People's Movements" of the 1960s, the Welfare Rights Movement in the 1990s, and the Occupy Movement of the 2010s.

Attributes: American Studies Course, Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 328 U.S. Immigration (3 credits)

In this course, students will critically engage with the politics of immigration in the United States. While the national narrative broadly celebrates the arrival and incorporation of newcomers, these processes have been highly contested and problematic both in popular discourse and public policy since the country's founding. The question of 'who immigrates' has been, and continues to be, shaped by decisions on how to manage geopolitical and geoeconomic forces, domestic political, economic and social preferences, popular sentiment and humanitarian considerations. Furthermore, understanding how immigrants integrate in society necessarily involves examining 'difference' on a number of axes, including race and ethnicity, language and culture, religion, gender, socioeconomic and educational levels, and legal status. This course provides students with the opportunity to explore key aspects of the discourse and reality of immigration to the U.S., including the American Dream, assimilation, ethnic neighborhoods, transnationalism, borders and security by considering the values, interests and roles of actors at all levels, including civil society organizations, national and sub-national governments, communities, households and individuals in the continuous re-making of the U.S. as a nation of immigrants.

Attributes: American Studies Course, Faith Justice Course, Irish Studies Course, Justice Ethics and the Law , Latin American Studies Course, Undergraduate

POL 331 Latin American Politics (3 credits)

This course addresses the political, economic and social development of modern Latin America. It examines the transformation of traditional authority structures, efforts to promote economic development, and concerns for the consolidation of democracy, adjustment to globalization, and U.S.-Latin American relations.

Attributes: Faith Justice Course, International Relations Course, Justice Ethics and the Law , Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

POL 334 Russian Politics (3 credits)

In 1917, the USSR was born out of the ashes of the Russian empire, and in 1991, it died. Since the Soviet Union disintegrated, Russia has struggled to develop a new national identity, a healthy economy, a well-functioning polity, an efficacious state, and a new orientation in world affairs. This course investigates the significance of the Soviet legacy for the contemporary political situation in Russia and evaluates the impact of new forces unleashed since the end of the communist era. In learning about the USSR and developments in today's Russia, the class applies some of comparative politics' "big concepts:" revolution, the state, the nation, federalism, totalitarianism, authoritarianism, and democracy.

Attributes: International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 336 The EU and European Politics (3 credits)

This course will provide students with a hands-on opportunity for learning about the politics of the European Union and its member states. As an organization that is both supranational and intergovernmental in nature, the EU's actions are subject to the actions within its institutions and the decisions of its members. Therefore European politics has a great impact on what the Union does. The key and (unique) learning tools in this course are three simulations of EU institutions -the EU Parliament, the Councils of the EU, and the European Council. Students will take on roles of actual EU politicians and engage in policy making. The simulations will require students to perform extensive outside research to prepare to play their roles and will give participants an excellent understanding of these institutions and how they work. Class members will also become expert in the politics of "their" countries (the countries from which their alter egos are from) as well as on the issue under consideration (which will vary depending on pressing European and world events).

Attributes: Globalization Course, International Relations Course, Irish Studies Course, Undergraduate

POL 337 Contemp Cuban Pol & Society (3 credits)

The Cuban revolution is one of the seminal events of Latin American twentieth century history. This course provides the tools to understand the forces that gave rise to the revolution, how 'the Revolution' has evolved over the more than five and a half decades since the Castro government has been in power, and how Cuban society has transformed - politically, economically, socially and culturally. Particular focus is placed on Cuba since the demise of the Soviet Union, the so called "Special Period," in which Cuba transitioned from a 2nd World client state into an isolated underdeveloped country. Political reforms since then have contributed to an aperture toward the outside world, as well as to steps towards greater economic freedom for Cubans. Many other topics, including race, gender, the arts, Cuba's foreign relations with the U.S. and the rest of the world, citizenship, religion, health care and Cuba's future, will be discussed as well.

Attributes: Africana Studies Course, American Studies Course, International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

POL 352 Global Political Economy (3 credits)

Global economic relations are international, political and complex; they involve cross border flows of goods, money, services and people, and they reflect and create power. This course focuses on the nature and impact of the movement of goods (trade), capital (money, foreign direct investment, bailouts), services (call centers), people (migration), and even "bads" (pollution and disease) to understand the challenges of and opportunities for development, globalization and international cooperation in today's world. It emphasizes the analysis of historic booms and busts in various national economies as well as current global events and trends.

Prerequisites: POL 115

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Undergraduate

POL 356 American Foreign Policy (3 credits)

This course explores US foreign policy since the end of World War II. After a conceptual introduction (Part I) which explores the utility of interests, institutions, and ideas for accounting for American policy, the course examines the US-Soviet competition and the ways that that "cold" conflict affected U.S. behavior not only toward the USSR, but also toward other regions (Part II). Part III investigates the early post-Cold War period and the attempts and failures in constructing some kind of "New World Order," and Part IV explores how the US has been responding to the twin challenges of terrorism and globalization.

Attributes: American Studies Course, International Relations Course, Undergraduate

POL 367 Ethics in International Affairs (3 credits)

What is morality in international politics? Is ethical reasoning and action possible in international affairs? If possible, when and how? Proponents of Realism often claim that there is virtually no room for morality in international affairs, and states and state actors are rational thinkers interacting in anarchy. For them, ethics are simply luxury and irrelevant. On the other hand, thinkers under the tradition of IR liberalism/idealism emphasize the ethical dimension of state decision making and state behaviors. On what moral ground or ethical reasoning, are the moral behaviors taking place and observed/unobserved? The primary objective of the course is to help students enhance their analytical ability for the study of international ethics. To this end, the course will explore the main traditions and theories of international ethics with a focus on such topical areas as just war and use of force, universal human rights and humanitarian intervention, and national collective memory and post-conflict reconciliation.

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Justice Ethics and the Law , Undergraduate

POL 368 Women, Gender & World Politics (3 credits)

This course explores the political power of women (and with less focus, LGBTQ+ people) as domestic and global actors around the world. After a brief introduction to selected feminist writings from authors from various parts of the world, we will investigate the conditions under and extent to which women are empowered in various domestic political settings. We will then examine the ways that women act in and are acted upon by the global system. Our goal is to identify the ways that gender and intersections affect women and societies throughout the world. As a final product for the course, students will write and present a literature review and argument or hypothesis in response to a self-generated, course-related research question.

Attributes: Faith Justice Course, Gender Studies Course, Globalization Course, International Relations Course, Undergraduate

POL 402 Capstone: Contentious Pol in US (3 credits)

Contentious politics consists of many "non-traditional" forms of political action, including social movements, protests, riots, and even political violence. This capstone political science seminar examines contentious politics in the U.S. through the lens of 1960/70s radical social movements, a key moment in U.S. politics in which the New Left imagined, theorized, negotiated, and contested the meaning of democracy and power. Students will examine and analyze the origins, ideologies, claims/grievances, goals, and strategies of radical political groups that roughly fall under the banner of the New Left: anti-war, feminism, black liberation, American Indian Movement, Chicano Movement, and Gay Liberation. We will study the politics of the struggle over rights, democracy, power, and the use/nonuse of violence within the New Left through a careful study of the primary texts (statements, agendas, etc.) produced by these groups. Students will investigate what the New Left helps us understand about power, politics, and violence in a modern democracy and evaluate the effectiveness of protest as a means to forward a political agenda, broadly defined.

Prerequisites: POL 111 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 403 Capstone: Nations&Nationalism (3 credits)

The primary objective of this seminar is to help students enhance their analytical abilities for the study of contemporary national problematique. In the rapidly changing contemporary global world, why are people still attracted, swayed, and annoyed by what is national? What is so important about being a part of nation? What drives people to develop specific allegiance toward a nation? And, how? More fundamentally, what is a nation?

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

POL 404 Capstone: Revolts&Revolutions (3 credits)

Why do revolts against governments deemed illegitimate occur and when do they become full-fledged revolutions? This course explores both the causes of uprisings and the conditions under which they succeed in bringing about new political and social orders by examining (1) what happened in the "great" revolutions, (2) how scholars have accounted for them, and (3) examining more recent instances of revolts which have sometimes failed and others succeeded. In this study, students will develop their writing and research skills, having the opportunity to find various types of information, write different forms of essays, and appropriately cite and present their materials.

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Globalization Course, International Relations Course, Undergraduate, Writing Intensive Course- GEP

POL 405 Capstone: Pol of Labor & Work (3 credits)

Our capstone in political science extends our understanding of democracy by looking within one of the most common political institutions we will experience in our lifetimes: the workplace. Many of you are currently holding jobs, some part-time and others full-, some well-paid and others less well paid, some free (interning), some with inconsistent or too few hours, some with a terrible manager, some within the home (nannying/care work). You may be working in different organizations, or in different geographies. After graduation, the process only continues. This semester we will focus on the politics of work. What avenues do workers have to improve their autonomy, workplace conditions, and compensation? What barriers (employer, legal, political) challenge this process? What roles does organized labor serve? Though our focus is primarily the United States, we will acknowledge that worker conditions are shaped by different legal, geographic, and industrial contexts: country, state, law, industry, and time period. The policies regulating the workplace are political decisions. State repression of labor organizations has not been unusual historically, though what that might look like has shifted over time.

Prerequisites: POL 111

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Undergraduate

POL 411 Washington Internship I (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for POL major or minor credit.

Attributes: Undergraduate

POL 412 Washington Internship II (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for POL major or minor credit.

Attributes: Undergraduate

POL 413 International Internship I (3 credits)

Some study abroad programs offer internship credit for one or two classes. Please note: subject to administrative approval, students may earn two courses of UD POL credit if their internship is in the 32- hour/ week range.

Attributes: International Relations Course, Undergraduate

POL 414 International Internship II (3 credits)

Some study abroad programs offer internship credit for one or two classes. Please note: subject to administrative approval, students may earn two courses of UD POL credit if their internship is in the 32- hour/ week range.

Attributes: International Relations Course, Undergraduate

POL 415 Applied Research Mixed Methods (3 credits)

Public policy scholars and practitioners have a wide variety of methodological tools at their disposal. Yet, it can be challenging to determine which techniques are best equipped to answer particular research questions, as well as how to fruitfully combine distinct methods. Gaining a familiarity with the discipline's vast methodological "toolkit" is essential to building the knowledge and skills necessary to engage in political and social research—for scholars, policymakers, and practitioners. In this course, students will explore the principle methodological approaches employed in political inquiry—encompassing experimental, quantitative-statistical, and qualitative techniques—and examine how these tools may be productively "mixed" to make descriptive and causal inferences about political phenomena. In addition to learning to evaluate and critique distinct methodological approaches, students will "learn by doing" and gain experience applying various techniques to answer specific research questions. To provide the necessary technical skills for applied research, the course will introduce students to software programs that are commonly used for quantitative and qualitative research. Students will apply the skills and techniques in the context of a semester-long research project, which will include formulating a research question, developing a research design, and engaging in original empirical research (including data collection and data analysis). The project could form the basis of a graduate-level thesis or article manuscript prepared for submission to a peer-reviewed publication.

Prerequisites: POL 111 or POL 113

Restrictions: Enrollment is limited to students with a major, minor, or concentration in International Relations, Political Science or Public Policy.

Attributes: International Relations Course, Undergraduate

POL 490 Global Smarts Internship (3 credits)

The Global Smarts Internship allows students to intern with the prestigious World Affairs Council of Philadelphia while making a commitment to social justice. Mentors travel to under-resourced middle schools in Philadelphia to prepare 8th graders for a city-wide Model United Nations event in May in which the middle-schoolers compete with students from elite private and well-funded suburban schools. As Global Smarts mentors help their middle-school students with skills and content, they develop their own academic skills (e.g. oral presentation, research, and writing) and their work experience. During this semester, mentors help their students understand two important issues of justice (previous topics have included ending forced labor, women's education, and providing clean and affordable energy). Throughout the semester, students reflect critically and consciously about their service and the systemic injustice in Philadelphia's public education system. This opportunity for community-engaged learning requires an interview in Fall (several weeks before Spring registration).

Attributes: International Relations Course, Service Learning Course, Undergraduate

POL 491 Philadelphia-Area Internship (3 credits)

The Philadelphia Area Internship Program supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample cover letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations. Course is open to ALL majors.

Attributes: International Relations Course, Undergraduate

SOC 101 Intro to Sociology (3 credits)

Introduction to the scientific approach to the study of society, including the study of social structures; studies such topics as how we acquire self-identity, gender, our behavior in groups, bureaucracies, stereotyping, the role of the state, survey research, culture, and collective behavior.

Attributes: Diversity Course, GEP Social Science, Undergraduate

SOC 102 Social Problems (3 credits)

A sociological analysis of contemporary social issues including economic crises, concentration of wealth, poverty, crime, sexism, race and ethnic relations, mental illness, population growth, war and peace, and relations with other countries.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 253 Race and Social Justice (3 credits)

In this course we will examine the issue of social justice as it pertains to race and ethnicity. The course will address the social and cultural constructions of race and ethnicity and their effects on social institutions, interpersonal relationships, and quality of life primarily in the U.S., but also abroad. Specifically, we will focus on how advantages and disadvantages are distributed among individuals and societies, why this process occurs, and how we can work to achieve balance and equality. As part of our discussions, we will focus on the contributions of racial and ethnic minorities in our changing social, economic, political, and legal institutions by examining controversial topics central to debates on racial justice and policy.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 312 Research Methods (3 credits)

Presents the main ways of gathering social scientific information, e.g., questionnaires, interviews, observation, experiments, content analysis, etc.; Specific emphasis placed on the ethical considerations when conducting social science research.

Prerequisites: SOC 101 or SOC 102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

SOC 313 Data Analysis (3 credits)

This course introduces students to the Statistical Package for the Social Sciences (SPSS) for conducting quantitative data analysis. Using the General Social Survey and other publicly available data sets, we will learn about transforming variables, conducting univariate and bivariate analysis, requesting descriptive and inferential statistics, and learning how to interpret these statistics. Emphasis is on doing the analysis and presenting the analysis for research projects. This course is a prerequisite for Seminar, SOC 495.

Prerequisites: SOC 312

Attributes: Undergraduate

SOC 349 Poverty Ethics & Social Policy (3 credits)

This course offers an overview of poverty in the United States, explores the ethical principles surrounding poverty and our response to it, and examines social policies that seek to ameliorate poverty. Students will work on a semester-long academic assignment which will engage them in one aspect of poverty and social policy.

Prerequisites: PHL 154 and (SOC 101 or SOC 102)

Attributes: Ethics Intensive, Undergraduate

SOC 355 Race, Crime & CJ (3 credits)

This course examines the topic of race and ethnicity in relation to crime and criminal justice processing. More specifically, we focus on several issues: 1) the role of privilege and marginalization in the context of race and ethnicity and the criminal justice system; 2) the impact of these factors on intergroup relationships generally and the responses of the criminal justice system to criminal behavior, victimization, and employment within the criminal justice field; 3) how the responses of the criminal justice system affect the lives of offenders, victims, and agents of the criminal justice system for various racial/ethnic groups; 4) the current patterns of crime and victimization in relation to race/ethnicity? In addressing these questions, it is important to note that this is an upper-level sociology/criminal justice course, so do not expect it to be lecture driven, although some lectures will be presented. Much of the course work will revolve around class discussions and written analysis of the readings.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 378 Urban and Public Policy (3 credits)

This course will offer a foundation in how sociologists study cities and public policy. We will examine assets of cities and key areas of need that cities face (such as education, poverty, housing, and crime), and we will study policy options to improve cities and their larger metropolitan areas. These are broad policy areas of study, so we will hone in on specific policies. For example, we will explore how cities have formulated their initiatives to end homelessness, we will consider juvenile justice alternatives, and we will look at how cities can position themselves to be sustainable in the effort to reduce greenhouse gas emissions.

Attributes: Africana Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 401 Higher Education Policy (3 credits)

What should students gain from college? How should higher education be funded? How is college connected to inequalities along racial, gender, class, and other lines, and what role should individual campuses play in mitigating those inequalities? Policy decisions shape each of these questions and their potential answers. In this course, we will examine contemporary higher education policy and connections to inequality. Topics will include financial aid, diversity, access to college, different types of college settings, and funding.

Attributes: Undergraduate

SOC 490 Internship (3 credits)

The student is placed according to his/her interests in a criminal justice, social service, or health care setting for a semester. In this way, he/she may apply classroom-acquired skills and knowledge while gaining practical work experience. Permission of internship director required.

Attributes: Criminal Justice Course, Undergraduate

SOC 491 Internship (1-6 credits)

The student is placed according to his/her interests in a criminal justice, social service, or health care setting for a semester. In this way, he/she may apply classroom-acquired skills and knowledge while gaining practical work experience. Permission of internship director required.

Attributes: Undergraduate

PUB 601 Higher Education Policy (3 credits)

What should students gain from college? How should higher education be funded? How is college connected to inequalities along racial, gender, class, and other lines, and what role should individual campuses play in mitigating those inequalities? Policy decisions shape each of these questions and their potential answers. In this course we will examine contemporary higher education policy and connections to inequality. Topics will include financial aid, diversity, access to college, different types of college settings, and funding.

PUB 604 Engaging Communities (3 credits)

How do communities identify and solve problems in partnership with other stakeholders in their local environment? Engaging Communities is an examination of how institutions develop trust and reciprocal partnerships within their neighborhoods and surrounding communities. The class will study the theory and practice of constructing mutually beneficial relationships among and between hospitals, higher education institutions, non-profit organizations, local government, community groups, and residents to improve the quality of life locally in Philadelphia and the surrounding counties. Students will learn about multiple ways to elicit and increase community participation and civic engagement, utilize the fundamentals of project management, and create models for assessment.

PUB 609 Advising and Advocacy (3 credits)

What makes a president "great?" What is leadership? Why do some presidents succeed and others fail? This course offers an analysis of the contemporary American Presidency with emphasis on the use of power, the role of personality, the nature of decision-making, and the relationship with the media, interest groups, and public opinion. We will investigate how presidents decide their policy priorities; what factors affect presidents' public standing; what conditions shape the president's relationship with Congress; and so on. Having carefully studied the presidency from the above perspectives, we will bring our informed insights to bear on two important questions confronting current and future presidents: race and gender. While the topic of the course is the presidency in general, the secondary goal of the class is to introduce and critically analyze how race and gender shape the ideas we have about our nation's highest office.

PUB 610 Econometrics (3 credits)

Basic principles of econometrics beginning with the classical linear regression model and the method of least squares. Special problems arising from the violation of classical assumptions, and statistical procedures for dealing with them, are covered. Identification and estimation problems are also studied, as well as forecasting with single-equation regression and simultaneous system of equations. Modern time-series models are evaluated, with numerous forecasting illustrations from economics and business.

PUB 613 Public Policy (3 credits)

This course investigates public policymaking within the United States with an emphasis on the social construction of public policy. Students will assess the significance of social, economic, and political factors that influence policymaking and implementation; how problems become a part of the political agenda; and the major political ideological perspectives in the U.S. that impact policy process and content. The course is a study of policy in practice, as students will evaluate current social problems along with empirical social science research to determine the strengths and weaknesses as well as the intended and unintended effects of a particular social policy at the state and/or national level.

PUB 615 Applied Research: Mixed Method (3 credits)

Public policy scholars and practitioners have a wide variety of methodological tools at their disposal. Yet, it can be challenging to determine which techniques are best equipped to answer particular research questions, as well as how to fruitfully combine distinct methods. Gaining a familiarity with the discipline's vast methodological "toolkit" is essential to building the knowledge and skills necessary to engage in political and social research—for scholars, policymakers, and practitioners. In this course, students will explore the principle methodological approaches employed in political inquiry—encompassing experimental, quantitative-statistical, and qualitative techniques—and examine how these tools may be productively "mixed" to make descriptive and causal inferences about political phenomena. In addition to learning to evaluate and critique distinct methodological approaches, students will "learn by doing" and gain experience applying various techniques to answer specific research questions. To provide the necessary technical skills for applied research, the course will introduce students to software programs that are commonly used for quantitative and qualitative research. Students will apply the skills and techniques in the context of a semester-long research project, which will include formulating a research question, developing a research design, and engaging in original empirical research (including data collection and data analysis). The project could form the basis of a graduate-level thesis or article manuscript prepared for submission to a peer-reviewed publication.

PUB 616 State and Local Government (3 credits)

This graduate-level "advanced topics" course focuses on understanding variation across America's federal system. How can we move from thinking about one American government, to 51 governments (all the states plus the national), or to the significantly larger number of local and municipal governments? What role do the states and localities play in shaping American democracy? In what ways are states hindering democracy or helping it flourish? In this course we will focus on three broad themes in the state politics literature: structural power, interest group activism, and individual political behavior. Throughout we will acknowledge that variation at the subnational level matters for engagement, equality, and the presence of a functioning democracy.

PUB 623 Women and American Politics (3 credits)

This course is designed to provide students with a critical examination of women as political actors in the United States. We will analyze various forms of women's political participation, both in the traditional spheres of what is considered politics—women as voters and politicians—and also in more "non-traditional" spheres of political activism. We will examine how women are mobilized to participate in politics, focusing keenly on the differences among women in their political activism in an effort to understand how the intersection of gender, race, class, sexuality, age, and ability influence women's political activism. The primary goal of this course is to familiarize students with key issues, questions, and debates in the women and politics scholarship, mainly from a U.S. perspective. Students will become acquainted with many of the critical questions and concepts scholars have developed as tools for thinking about the gendered political experience. In this course you will learn to "read" and analyze gender politically, exploring how it impacts our understanding of the political world.

PUB 630 Economics of Labor (3 credits)

This course concentrates on the analysis of the major contemporary issues concerning labor relations and labor unions; in particular: unemployment, wage-price relations, the settlement of disputes, minimum-wage legislation, wage differentials and discrimination, and competition from imports. Discussion is not confined to the purely economic dimensions of these topics. The course includes descriptive material on the development and present structure of the labor union movement in this country and on the more interesting and significant features of labor-management relations in selected foreign countries. Note: Can count towards quantitative track with the completion of additional coursework and permission of the instructor.

Restrictions: Enrollment is limited to Graduate level students.

PUB 636 EU and European Politics (3 credits)

This course will provide students with a hands-on opportunity for learning about the politics of the European Union and its member states. As an organization that is both supranational and intergovernmental in nature, the EU's actions are subject to the actions within its institutions and the decisions of its members. Therefore European politics has a great impact on what the Union does. The key and (unique) learning tools in this course are three simulations of EU institutions—the EU Parliament, the Councils of the EU, and the European Council. Students will take on roles of actual EU politicians and engage in policy making. The simulations will require students to perform extensive outside research to prepare to play their roles and will give participants an excellent understanding of these institutions and how they work. Class members will also become expert in the politics of "their" countries (the countries from which their alter egos are from) as well as on the issue under consideration (which will vary depending on pressing European and world events).

PUB 640 Public Finance & Public Policy (3 credits)

This course examines the nature of government spending, the decision-making process, and trends. It describes and evaluates several kinds of taxation and proposals for reform. It utilizes microeconomics to investigate tax incidence and the welfare effects of taxation.

PUB 649 Poverty, Ethics, & Public Poli (3 credits)

This course offers an overview of poverty in the United States, explores the ethical principles surrounding poverty and our response to it, and examines social policies that seek to ameliorate poverty. Students will work on a semester-long academic assignment which will engage them in one aspect of poverty and social policy.

PUB 655 Race, Crime & CJ (3 credits)

This graduate-level course examines the topic of race and ethnicity in relation to crime and criminal justice processing. More specifically, we focus on several issues: 1) the role of privilege and marginalization in the context of race and ethnicity and the criminal justice system; 2) the impact of these factors on intergroup relationships generally and the responses of the criminal justice system to criminal behavior, victimization, and employment within the criminal justice field; 3) how the responses of the criminal justice system affect the lives of offenders, victims, and agents of the criminal justice system for various racial/ethnic groups; 4) the current patterns of crime and victimization in relation to race/ethnicity? In addressing these questions, it is important to note that this is an upper-level sociology/criminal justice course, so do not expect it to be lecture driven, although some lectures will be presented. Much of the course work will revolve around class discussions and written analysis of the readings.

PUB 656 American Foreign Policy (3 credits)

This graduate-level "advanced topics" course explores US foreign policy since the end of World War II. After a conceptual introduction (Part I) which explores the utility of interests, institutions, and ideas for accounting for American policy, the course examines the US-Soviet competition and the ways that that "cold" conflict affected U.S. behavior not only toward the USSR, but also toward other regions (Part II). Part III investigates the early post-Cold War period and the attempts and failures in constructing some kind of "New World Order," and Part IV explores how the US has been responding to the twin challenges of terrorism and globalization.

PUB 667 Ethics in IR (3 credits)

What is morality in international politics? Is ethical reasoning and action possible in international affairs? If possible, when and how? Proponents of Realism often claim that there is virtually no room for morality in international affairs, and states and state actors are rational thinkers interacting in anarchy. For them, ethics are simply luxury and irrelevant. On the other hand, thinkers under the tradition of IR liberalism/idealism emphasize the ethical dimension of state decision making and state behaviors. On what moral ground or ethical reasoning, are the moral behaviors taking place and observed/unobserved? The primary objective of the course is to help students enhance their analytical ability for the study of international ethics. To this end, the course will explore the main traditions and theories of international ethics with a focus on such topical areas as just war and use of force, universal human rights and humanitarian intervention, and national collective memory and post-conflict reconciliation.

Restrictions: Enrollment is limited to Graduate level students.

PUB 668 Women, Gender, & Global Polit (3 credits)

To some scholars and policy makers, the idea that conditions in which women and girls live is important to global politics is almost ridiculous, but others stress that until we understand how "gender makes the world go around" (Cynthia Enloe), we will fail to (1) see accurately the nature of power, (2) achieve just outcomes for all people, and (3) understand how masculinity and femininity affect the political and social world. This course exposes students to the development of feminism (a body of thought that advocates for female, and more recently, gender, equality) and examines the extent to which women have become empowered in politics in their own countries, as well as globally. Moreover, many feminist scholars and activists have become sensitive to the ways that elements of a person's identity (race, class, gender, national origin, ethnicity, etc.) intersect in complex ways to provide her with elements of privilege and/or disadvantage. A central contention of this course is that empowerment is more than simply achieving the vote or becoming an elected official, and traditionally, some people (based on identity) have had an easier time achieving access and opportunities than have others. Empowerment means that all persons, regardless of gender, have influence over decisions that matter to them, security (both at home and in the global arena), economic opportunities, and are treated justly (are believed to possess inalienable human rights that are not somehow forfeited because of their gender).

PUB 670 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to Graduate level students.

PUB 675 Environmental Economics (3 credits)

Introduces the environmental concerns facing optimal allocation of resources and factors of environmental policy. Topics include environmental policy analysis, externalities, public goods, criteria for evaluating environmental policies, the role of economic analysis in environmental policy decisions, discussion of pollution control planning, economic analysis of environmental policy in The United States, and international environmental issues.

PUB 682 Urban Economics (3 credits)

Urban Economics is broadly defined as the economic study of urban areas. This course will teach you how to examine issues that typically occur in urban areas, such as crime, poverty, inequality, and the distribution of public goods and government resources, from an economic perspective. Throughout this course, we will not only examine urban issues theoretically, but also use real-world data and geographic information systems software (GIS) to apply economic theory to examine these issues in real-time.

PUB 687 Research Methods (3 credits)

This graduate-level course provides students with an introduction into research methods. We will discuss current research in applied microeconomics and apply the methods learned to create original research. Throughout the course we will investigate multiple facets of research including literature review, data analysis, and analytic writing. Students will be given verbal and written feedback about their analysis and writing. Throughout this course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to writing a comprehensive research paper. In order to gain the most from these discussions, students are required to take on an active role in these discussions.

Restrictions: Enrollment is limited to Graduate level students.

PUB 688 Capstone Seminar (3 credits)

This graduate-level course provides students with an introduction into research methods. Students will learn the process of developing an original research project, including a literature review, research design, and analysis of findings. Throughout the course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to writing a comprehensive research paper.

Restrictions: Enrollment is limited to Graduate level students.

PUB 689 Healthcare Economics (3 credits)

This course examines major policy issues associated with the delivery of health care in the United States from an economic perspective. Particular emphasis will be placed on the challenges and trade-offs involved in containing health care costs, maintaining quality, and ensuring access. This course will provide students with a better understanding of the major health policy issues.

Restrictions: Enrollment is limited to Graduate level students.

PUB 690 Global Smarts Internship (3 credits)

The Global Smarts Internship allows students to intern with the prestigious World Affairs Council of Philadelphia while making a commitment to social justice. Mentors travel to under-resourced middle schools in Philadelphia to prepare 8th graders for a city-wide Model United Nations event in May in which the middle-schoolers compete with students from elite private and well-funded suburban schools. As Global Smarts mentors help their middle-school students with skills and content, they develop their own academic skills (e.g. oral presentation, research, and writing) and their work experience. During this semester, mentors help their students understand two important issues of justice (previous topics have included ending forced labor, women's education, and providing clean and affordable energy). Throughout the semester, students reflect critically and consciously about their service and the systemic injustice in Philadelphia's public education system. This opportunity for community-engaged learning requires an interview in Fall (several weeks before Spring registration).

PUB 691 Philly Area Internship (3 credits)

The Philadelphia Area Internship Program supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample cover letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations.

PUB 692 Museums, Monuments, and Media (3 credits)

"Public history" is history as it is practiced outside of the classroom for a general audience: at museums, monuments, and historic sites; in film, television, and digital media. In this course, students will examine the history, methods, and impact of public history in the United States. Through case studies, debates, site visits, and hands-on projects, students will learn how to consume, critique, and create public history, and to assess how the past is used (and abused) for present purposes. *Restrictions:* Enrollment is limited to Graduate level students.

PUB 701 Thesis Supervision I (3 credits)

An integrative course in which the student is expected to complete a research paper toward the completion of a Masters thesis, utilizing the research methods and subject matter competence obtained in previous courses. This is the first of two required courses for completing a Masters thesis.

Restrictions: Enrollment is limited to Graduate level students.

PUB 702 Thesis Supervision II (3 credits)

Master's Thesis supervision for students in the PUB 4+1 program.

Restrictions: Enrollment is limited to Graduate level students.

Public Policy Major Overview

The Public Policy major offers exciting opportunities to learn about the creation, adoption, implementation and analysis of public policy. In this multidisciplinary major, students will learn how, for whom, and under what conditions policy succeed or fail. A goal of the major is that students experience the policy process outside as well as inside the classroom.

Learning Goals and Outcomes

Goal 1: Learn Fundamental Knowledge: Students will gain foundational knowledge in the primary sub-fields of Public Policy and understand the content, core concepts, and theories within the discipline.

Outcome 1.1: Students will identify, define, and explain the content, core concepts, and theories that guide the creation of public policy from an integrated, interdisciplinary perspective.

Goal 2: Think and Make Arguments: Students will think critically and develop arguments based on evidence.

Outcome 2.1: Students will articulate verbally and/or in writing an argument which defines, explains, and/or analyzes the content, process, and outcomes of public policy.

Goal 3: Think and Apply their Skills to Analysis: Students will evaluate arguments based on empirical evidence and assertions rooted in the discipline.

Outcome 3.1: Students will apply a variety of tools, methods, and perspectives to critically analyze and evaluate issues relevant to the discipline of Public Policy.

Goal 4: Apply their Skills to the "Real World": Students will be prepared for entry into professional careers and other avenues related to Public Policy as a discipline.

Outcome 4.1: Students will demonstrate career preparation through experiential learning opportunities that are closely related to Public Policy or a related field through the development of interpersonal, analytical, and/or problem-solving skills.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

1. *Diversity, Globalization or Non-western Area Studies,*
2. *Ethics Intensive*
3. *Writing Intensive, and*
4. *Diversity*

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social Science Requirement		
ECN 101	Introductory Economics Micro	3

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Any three upper division courses in College of Arts & Sciences excluding ECN, POL, and SOC courses.

Not from student's major

Public Policy M.S.

Saint Joseph University's gives current students the opportunity to combine any Bachelor's degree work with a Master's degree program in Public Policy. Our exciting and challenging curriculum of study allows students to engage in an in-depth study of Public Policy, while providing opportunities for research with nationally renowned faculty in Political Science, Economics, and Sociology, among other disciplines. This unique program is designed for successful completion over five academic years.

As a 4+1 program, the M.S. degree will require students to minor in public policy, which includes coursework across economics, international relations, political science, sociology. Those who apply will be evaluated for acceptance into the program during the spring of their junior year. These undergraduate applicants will be asked to submit a complete undergraduate transcript, two letters of recommendation/reference, a resume, and an essay describing their interests and goals of graduate education in public policy. Minimum GPA requirement is 3.00.

The 4+1 M.S. in Public Policy requires 30 credit hours of coursework, three courses (nine credit hours) of which may be completed during the student's senior year. Students will typically take the remaining seven courses (21 credit hours) during their +1 year. Students will need to complete their Public Policy minor during their senior year, but may use graduate classes in place of undergraduate equivalents.

Sociology

Sociology is the study of social organization and group dynamics that influence human interaction. The major provides students with an understanding of the world beyond personal biases and assumptions, and considers structural forces around diversity, equity, and inclusion. Students who major in sociology are prepared for careers in law, business, marketing, public policy, politics, health, and a host of other possibilities. Students learn to conduct research, synthesize scholarly information, and present developed arguments in a variety of subjects.

Faculty

The Department of Sociology and Criminal Justice prides itself on excellence in teaching and on individual faculty members bringing their research interests and expertise in sociology into the classroom.

Faculty & Staff: Department of Sociology and Criminal Justice (<https://www.sju.edu/departments/sociology/faculty-staff/>)

Programs

Undergraduate Major

- Sociology (p. 349)

Undergraduate Minors

- Sociology (p. 351)
- Health Equity & Social Justice (p. 349)

Courses

SOC 101 Intro to Sociology (3 credits)

Introduction to the scientific approach to the study of society, including the study of social structures; studies such topics as how we acquire self-identity, gender, our behavior in groups, bureaucracies, stereotyping, the role of the state, survey research, culture, and collective behavior.

Attributes: Diversity Course, GEP Social Science, Undergraduate

SOC 102 Social Problems (3 credits)

A sociological analysis of contemporary social issues including economic crises, concentration of wealth, poverty, crime, sexism, race and ethnic relations, mental illness, population growth, war and peace, and relations with other countries.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 103 Intro to Anthropology (3 credits)

This is an introductory course in anthropology, which can be defined as the holistic study of the human species. We will spend time examining the four fields of anthropology: archaeology, physical/biological anthropology, linguistic and cultural anthropology, and their various contributions to understanding the human condition.

Attributes: Undergraduate

SOC 150 Social Problems and Change (3 credits)

Freshman seminar courses examine a range of topics dealing with sociology and criminal justice. Please be advised that the "Social Problems and Social Change" seminar is part of a two-semester service-learning course for first-year students. This Social Problems section of SOC 150 includes attributes for service learning, faith justice, and gender studies. All other sections only fulfill the attributes below.

Attributes: First-Year Seminar, Undergraduate

SOC 170 Special Topics in Sociology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SOC 190 Strategies for Success (1-3 credits)

Our class is designed to provide students with the tools needed to thrive and succeed at SJU and in your major. We will focus on the development and application of college-level study skills, personal success strategies, and the use of campus resources that enhance individual student achievement. Topics discussed will include: learning styles, study techniques, note-taking, test-taking, effective writing and reading, time management, career and educational planning, personal wellness and finance, and interpersonal skill development. We will investigate the variety of offices and resources available to students across campus, as well as how to use some of the more common software systems (Canvas, Starfish, Google Applications, etc). Successfully completing SOC 190 is required of all incoming Freshmen students majoring in Sociology or Criminal Justice, and grading is based on P/NP.

Prerequisites: SOC 101 or SOC 102 or SOC 150 or SOC 202

Attributes: Undergraduate

SOC 202 Advanced Social Problems (3 credits)

This is the second course of a two-course sequence (with a designated section of FYS 150) that explores contemporary social problems in society—their inception, consequences, and methods of modification and eradication. In comprehending the social and philosophical background concerning contemporary social problems, students will acquire an appreciation of the complexity involved in defining social problems and a greater understanding of the social structure itself. Students will strive to understand how social problems are identified and the social systems which are involved. Some of the issues we will address include binge drinking, addiction, hate crimes, intimate partner violence, and “hooking up.” To obtain a full understanding of each issue, we will continually ask several questions: How was this identified as a social problem? What is the history of this issue? What are the structural causes of this problem? How can it be eradicated? Which social groups or institutions are affected by this problem? What groups benefit by the existence of this problem? What are the most popular arguments surrounding this issue? By answering these questions, we will develop a greater understanding of the social problems facing American society.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, Service Learning Course, Undergraduate

SOC 205 Ethnic & Minority Relations (3 credits)

This course provides an analysis of relationships between dominant and minority groups, with a particular focus on ethnic and racial stratification in the U.S. As part of this discussion, we focus on intersecting statuses that shape the outcomes of individuals and groups experiences, including their interactions with each other and social institutions. While the course largely focuses on issues of race/ethnicity, we will also address other forms of minority-dominant group relations, such as sexual orientation, social class, and gender, as the intersectionality of statuses is important in any attempt to gain a better understanding of all these types of relationships. We begin the course by addressing the issue of race as a social construct rather than a biological fact, but a construction that carries very real consequences. We then shift to a focus on prejudice, stereotypes, and discrimination, with particular attention on how they serve to create, sustain, and reproduce oppression and inequalities. We then examine how privileged statuses, particularly white privilege serve to marginalize nonwhites and the damaging paradox of this privilege for economically disenfranchised whites. We conclude the course by addressing the future of race and racism in the 21st century, such as colorblind racism, and the implications for coalition building across racial/ethnic lines.

Attributes: Africana Studies Course, Diversity Course, GEP Social Science, Undergraduate

SOC 206 Theories of Crime (3 credits)

The goal of this course is to examine the current state of criminological theory. It examines the efforts of criminologists in various academic disciplines to explain the cause of crime. Traditional theories will also be discussed.

Prerequisites: SOC 101 or SOC 102 or SOC 150

Attributes: Criminal Justice Course, Justice Ethics and the Law, Undergraduate

SOC 207 Juvenile Justice (3 credits)

A study of delinquency and its causes, with attention to both social-psychological and structural-theoretical frameworks.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Justice Ethics and the Law, Undergraduate

SOC 208 Sociology of Gender (3 credits)

The study of the learned patterns of behavior of males and females in the United States and cross-culturally; topics include hormonal and sex differences, gender socialization, the contemporary women's movement; special emphasis is placed upon the connection of sexism, racism, and class inequality.

Attributes: American Studies Course, Diversity Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 209 Sociology: Intimate Relations (3 credits)

Examines family life in the United States, its cross-cultural and historical antecedents; current changes and family process, including courtship and marriage in contemporary society.

Attributes: Gender Studies Course, GEP Social Science, Undergraduate

SOC 211 Classical Sociological Theory (3 credits)

This course examines the scholars who shaped the field of sociology. The class examines the background of classical sociological thinkers and the social forces that shaped their writing. It looks at how the industrial revolution, the decreasing power of religious organizations, the rise of science, and the growth of capitalism all influenced the founding of sociology. The class also examines the tensions between structures and agency that shape human behavior and will look at how cultural and economic forces increase, perpetuate, and challenge social inequalities.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Undergraduate

SOC 215 Gender, Race, and Justice (3 credits)

Using insights from the disciplines of anthropology, sociology, and history, this course will examine how race, class, and gender shape our lived experiences related to justice. The course will also explore the ways in which theoretical and academic knowledge can be integrated with personal and political action in our communities

SOC 216 Alcohol, Drugs & Society (3 credits)

This course explores a sociological approach to substance use and its impact on contemporary American society. What social factors such as gender, race, and class shape substance use? How do major social institutions such as criminal justice, education, and health care deal with substance use? What public policies and programs exist to regulate substance use, and how well do they work? Examples of topics discussed include women and substance use, college student binge drinking, substance use on the national agenda, and the community impact of crack cocaine.

Attributes: Criminal Justice Course, GEP Social Science, Undergraduate

SOC 217 Mental Health & Society (3 credits)

This course examines the connections between mental health and society. What are the major forms of mental and behavioral health and illness? How widespread are mental disorders and what predicts their occurrence? What impact do they have on society and institutions such as health care and criminal justice? What professions and organizations treat mental disorders?

Attributes: American Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 219 Social Deviance (3 credits)

This course examines examples of deviance, e.g., the Holocaust, state terror and torture, and mental illness. It explores how laypersons and experts conceptualize deviance, how definitions of deviance change, who labels behavior deviant, and the consequences for those labeled deviant.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Undergraduate

SOC 225 Intro to American CJ (3 credits)

This course provides an introduction to the criminal justice system in the U.S. The primary goal of this course is to foster a general understanding of the functions and impact of the 3 components of the criminal justice system: police, courts, and corrections. In addressing these components, we will examine each component from the due process and crime control perspectives of criminal justice. Due process stresses individual rights while crime control stresses the protection of the society at large. Some of the topics that we will cover include policing, the courts, incarceration and alternative sanctions, the War on Drugs, and the War on Terrorism. The course will conclude with a discussion of the future of criminal justice.

Attributes: American Studies Course, Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 232 Sociology of Human Sexuality (3 credits)

This course examines anthropological and sociological perspectives on human sexuality. Among the topics to be covered: reproductive ritual; deviant patterns of sexual behavior; ideologies of sexuality; legal shaping of sexual behavior; and the methods by which we obtain good information on sexual behavior.

Attributes: Gender Studies Course, Undergraduate

SOC 252 Media & Popular Culture (3 credits)

This course will examine the organization of contemporary media and popular culture from a variety of sociological perspectives. Particular attention will be paid to the production and consumption of popular music, talk shows, and sporting events. There will be discussion on how fads spread through society, how our identities are shaped by and mediated through popular culture, and why the media focuses so much attention on seemingly mundane events. This class will examine how recent technological changes influence how we consume popular culture. We will utilize discussions of Nike, Netflix, Starbucks, videogames, nightlife in Philadelphia, Shakespeare, and digital gambling to understand how popular culture is organized.

Attributes: GEP Social Science, Undergraduate

SOC 253 Race and Social Justice (3 credits)

In this course we will examine the issue of social justice as it pertains to race and ethnicity. The course will address the social and cultural constructions of race and ethnicity and their effects on social institutions, interpersonal relationships, and quality of life primarily in the U.S., but also abroad. Specifically, we will focus on how advantages and disadvantages are distributed among individuals and societies, why this process occurs, and how we can work to achieve balance and equality. As part of our discussions, we will focus on the contributions of racial and ethnic minorities in our changing social, economic, political, and legal institutions by examining controversial topics central to debates on racial justice and policy.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 254 Violence and Victims (3 credits)

This course is designed to explore the serious problem of violence in our society from a sociological perspective. We will address a variety of types of violence, its causes, consequences, and theories for prevention. Topics which will be discussed include wife abuse, rape, child abuse, gang warfare, and street violence. An emphasis will be placed on understanding the structural causes of violence such as gender, race, and social class inequality as well as the effect of pornography, the media, and drugs/alcohol on violence. Particular attention will be given to the consequences of violence for both individual victims and society as a whole. We will also focus on the practical reality of violence in this society by speaking with several practitioners and touring a local domestic violence shelter.

Attributes: Criminal Justice Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 260 Language and the Law (3 credits)

This course is an introduction to linguistic issues that influence interaction in a variety of legal contexts. It explores the role of language used in court cases and police investigations while paying special attention to particular discourse contexts such as courtroom talk, interpreter interactions and police interrogations/ interviews. Particular emphasis will be placed on recognizing and understanding ethical issues related to linguistic sources of disadvantage before the law for both educated and uneducated native speakers, minority speakers and non-native speakers of a given language. This course will help prepare students for careers in which a particular sensitivity to, and understanding of, the use of language is vital. By looking closely at areas studied by linguists, we will seek to uncover the role and the ethical nature of oral and written interactions that take place in the legal field. These linguistic issues affect the concept of justice as well as its application in the legal system and also influence how humans are perceived and, in turn, treated by those who apply the law (police officers, lawyers, judges, etc.). This course fulfills a requirement in the Sociology and Criminal Justice majors/minors

Prerequisites: PHL 154

Attributes: Criminal Justice Course, Ethics Intensive, Justice Ethics and the Law , Undergraduate

SOC 262 White Collar Crime (3 credits)

This course is designed to give the student an understanding of the meaning of white collar crime and the types of activities in which white collar criminals engage. Initially, the lectures focus on the development of a comprehensive definition of white collar crime and then, having established this foundation, turn to the variety of white collar crimes in the U.S. today.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Undergraduate

SOC 264 Criminal Courts & Procedures (3 credits)

An analysis of the legal and practice problems presented in the administration of criminal justice from investigation to post-conviction review. Subjects include right to counsel, law of arrest, search and seizure, police interrogation and confessions, prosecutorial discretion, plea bargaining, bail, and juries. Case method used. Suggested for pre-law students.

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 265 Sociology of Education (3 credits)

Schools are the center of major contemporary social questions: Who benefits come from going to college, and is it worth the high cost? Are standardized tests helpful for measuring accomplishment or potential? Are students from particular schools, states, or family backgrounds doing better than others? Sociology of education tackles these kinds of questions by examining the many roles that schools and school actors play, from socializing individuals to reproducing status over generations. This class provides an introduction to American education. Readings focus on primary and secondary education, with a focus on education's role in stratification, namely the way that schools provide advantages or disadvantages to individuals according to particular characteristics, most commonly race/ethnicity, class, and gender.

Attributes: Criminal Justice Course, Undergraduate

SOC 267 Introduction to Corrections (3 credits)

An analysis of the history and development of modern correctional systems. The focus will be on the corrections process as experienced by both offender and official. Special topics will include prisoner rights, litigation, women and corrections, and juveniles and the correctional process. Cross-cultural perspectives and recent correctional innovations will also be examined in order to give the student a comprehensive view.

Prerequisites: SOC 101 or SOC 102

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 270 Special Topics (3 credits)

Course content determined by instructor. This course number/title will be given to new courses being offered within the academic year that are not listed in the catalog. The course will explore some topic related to sociology or criminal justice, focusing on the role of institutions in explaining human behavior.

Attributes: American Studies Course, Undergraduate

SOC 285 Sociology of Medicine (3 credits)

This course is designed to give the student a general introduction to the myriad ways culture, society, and organizations impact medicine and health care. This course is designed to give the student a general introduction to the material and there are no prerequisites for the course. Students will cover topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the social science and policy implications for the field of medicine and encourage the application of such ideas and concepts to a variety of contemporary healthcare issues.

Attributes: Undergraduate

SOC 290 Professional Prep Seminar (1 credit)

What can you do with a degree in sociology or criminal justice? Do you know how to search for an internship or a job? Are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance your knowledge about internships and careers within your major and help you build practical skills through class instruction, assignments, and alumni exposure throughout the semester. This one-credit course meets once a week throughout the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication, and networking/interviewing.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

SOC 300 Community Engaged Scholarship (3 credits)

Engaged scholarship can take several forms. Broadly defined, it "means connecting the rich resources of the university to our most pressing social, civic, and ethical problems" (Boyer, 1996, p. 19). One key way of sharing these resources is through research - not "on" the community, but "with" the community. This type of research model is one in which the research projects are developed with community organization staff, faculty, and students together, building on the unique strengths of those involved. In this course, students will work with a community-based organization to design and conduct research on an issue related to homelessness or affordable housing. Throughout the semester, students will learn about research methods, research ethics, and the particular urban context within which they will be working. More importantly, students will gain experience working alongside staff of a community-based organization to solve problems or assess needs and strengths.

Restrictions: Enrollment limited to students with the Honors Program Student attribute.

Attributes: GEP Social Science, Honors Course, Undergraduate

SOC 301 Community Organizing for Just. (3 credits)

How should one respond in the face of social injustice? What strategies should groups adopt in organizing to make positive social change? What kind of foundation is useful and prophetic for promoting justice? This course will consider the framework, methods, and practices of faith-based community organizing for responding to social injustice. Students will examine theological and sociological roots of faith-based community organizing as a response to injustice. Students will also integrate course learning with a community organizing action project.

Attributes: Faith Justice Course, Undergraduate

SOC 302 Criminal Law (3 credits)

This course addresses substantive criminal law with a focus on the origins and goals of this body of law, the various categories of crimes, including the elements required to prove individuals' culpability, the available defenses to criminal charges, and the applicable punishments for those who commit offenses.

Attributes: Criminal Justice Course, Justice Ethics and the Law , Undergraduate

SOC 305 Social Epidemiology (3 credits)

Social epidemiology examines the social determinants of health at the individual, community, and population levels. In this seminar, we will discuss the theories that explain how society influences individuals and the research studies that show social patterns in health outcomes. We will learn how research on social factors and health is done, primarily through observational data and statistical analyses. We will consider how social epidemiology can influence health services and health policies. Throughout the course, you will apply these tools and perspectives to current issues that are important to you.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Social Science

SOC 306 Medical Anthropology (3 credits)

The course surveys the field of medical anthropology, which is commonly viewed as a branch of socio-cultural anthropology that intersects with the concerns of biological (physical) anthropology, medicine, and public health. The course also explores how medical anthropology addresses social issues such as health disparities and culturally competent healthcare.

Prerequisites: (AN 103 or SO 101 or SO 111 or PS 101 or PS 111 or EC 101) or (SOC 101 and SOC 102)

Attributes: Undergraduate

SOC 307 Death and Dying (3 credits)

The study of the phases of death and dying, and the social reactions and social implications, to examine the dominant approach to death, dying, and loss in the United States today, and in Western cultures in general, in relation to approaches taken by people in other cultures, subcultures, and in other places or times.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Social Science, Undergraduate

SOC 310 Policing in Black and Blue (3 credits)

The killing of Trayvon Martin and the rise of Black Lives Matter has thrust the nation's police departments into a state of crisis. The public's distrust of the police is at a 20 year high, despite the falling rates of crime nationally. In this course, students will look at the role of police in society and consider the social, economic, and cultural factors that have led to the current climate. We will take care to examine this crisis from multiple viewpoints, including: community residents, politicians, activists and the police themselves. In our study of the policing crisis, we will consider the sociological roots of the urban ghetto and how policing strategies were developed to "manage" racially segregated, high crime communities. Specifically we will consider how the police became the first-responders in dealing with a host of social problems (from poverty to addiction and mental illness), paying particular attention to the war on drugs, mass-incarceration, mandatory sentencing and zero tolerance. We will review stop and frisk, community policing, focused deterrence, stop snitching, de-escalation, and the use of force. Criminal Justice course

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate

SOC 312 Research Methods (3 credits)

Presents the main ways of gathering social scientific information, e.g., questionnaires, interviews, observation, experiments, content analysis, etc.; Specific emphasis placed on the ethical considerations when conducting social science research.

Prerequisites: SOC 101 or SOC 102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

SOC 313 Data Analysis (3 credits)

This course introduces students to the Statistical Package for the Social Sciences (SPSS) for conducting quantitative data analysis. Using the General Social Survey and other publicly available data sets, we will learn about transforming variables, conducting univariate and bivariate analysis, requesting descriptive and inferential statistics, and learning how to interpret these statistics. Emphasis is on doing the analysis and presenting the analysis for research projects. This course is a prerequisite for Seminar, SOC 495.

Prerequisites: SOC 312

Attributes: Undergraduate

SOC 316 Fair Trade Coffee: Study Tour (3 credits)

This course is designed to trace the path of fair trade coffee beans as they are grown in a cooperative in Nicaragua or Costa Rica until they reach a consumers' cup in the United States. In this class, we will examine the labor- intensive activities that go into producing a cup of coffee, the environmental impacts of producing shade grown and organic coffees, and the economic benefits that farmers receive for growing coffee in Central America. We will travel to Central America and live alongside coffee farmers who are growing fair trade coffee. We will learn about the "Coffee Crisis" that greatly affected Central American farmers in the early 2000s, and we will look at the limits and possibilities of producing coffee in a cooperative. Prior to attending the trip, we will read about the political and economic dynamics of Central America, the history of coffee and the fair trade movement, and what fair trade means in the minds of ethical consumers. In thinking about the stories behind their purchases, students will gain broader insight into the limits and possibilities of integrating their values into their everyday shopping patterns.

Attributes: GEP Social Science, Latin American Studies Course, Undergraduate

SOC 317 Sociolinguistics (3 credits)

(Please see LIN 317 for description)

Attributes: Communication Studies ILC Crs, Diversity Course, GEP Social Science, Undergraduate

SOC 322 Sociology of Motherhood (3 credits)

The course considers motherhood as a political and cultural issue in society. Topics will include the social construction of public debates about teenage mothers, single mothers, welfare mothers, and abortion. We will also review the work of scholars who examine how social class and privilege construct our notions of "good" mothers and appropriate childrearing.

Prerequisites: SOC 101 and SOC 102 or SOC 150

Attributes: Gender Studies Course, Undergraduate

SOC 323 Health and Society (3 credits)

An overview of health care in the United States with attention to its historical antecedents; definitions of illnesses; examines the effect of social factors on the occurrence of illness and its treatment; studies the organization of health facilities. Satisfies Gender Studies Minor requirement.

Attributes: Diversity Course, GEP Social Science, Undergraduate

SOC 325 Women and Health (3 credits)

This course will look at the health industry from a feminist perspective. We will examine the role of women in providing health care, gender differences in the care given to patients, and health care issues specific to women. The course will also consider race and class differences among women working in and served by the health care industry.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Undergraduate

SOC 327 Sociology of Religion (3 credits)

Examines major sociological attempts to interpret the role of religious belief systems in modern industrial society and culture with emphasis on: a historical and structural analysis of religious belief systems and politics in the United States; the role of religion in community formation, national, and ethnic identity; and contemporary religious movements as attempts to channel or cope with forces of change.

Prerequisites: SOC 101 or SOC 102

Attributes: Undergraduate

SOC 330 Urban Sociology (3 credits)

What makes some neighborhoods in cities great places to live? Why do other neighborhoods struggle? In this course, we will learn how sociologists study cities, what social policies have affected cities, how inequalities along the lines of race/ethnicity and social class have shaped cities, how cities might fit into a sustainable vision for the future, and what we can learn from cities in other countries. By the end of the course, students will understand what can be done to improve the quality of life for families in urban neighborhoods.

Prerequisites: SOC 101 or SOC 102 or SOC 150

Attributes: Africana Studies Course, Diversity Course, GEP Social Science, Undergraduate

SOC 331 Urban Ethnography (3 credits)

Though it is certainly useful to analyze cities with numbers and statistical analyses, one can perhaps best capture life within cities through ethnography. Ethnography allows the researcher to dig deep and analyze any number of social settings. Ethnography encompasses several different methods, but in this course we will concentrate on observation and writing field notes. Both sociologists and anthropologists use these methods in their research. In this course, you will not only learn to practice ethnography, but you will also read and critique several urban ethnographies.

Attributes: Criminal Justice Course, GEP Social Science, Undergraduate

SOC 334 Miscarriages of Justice (3 credits)

As a social institution created and staffed by humans, the legal system makes mistakes. From eyewitness misidentification to false confessions, prosecutorial misconduct to wrongful convictions, errors both large and small, intentional or not, happen with alarming frequency in the American legal system. This course will examine the breadth of the injustices across the system and what, if anything, can be done about them.

Attributes: Undergraduate

SOC 335 Classes and Power in US (3 credits)

Examines the social, economic, and political inequalities in the United States; analyzes causes of social stratification; studies social mobility and the existence of a power elite.

Attributes: Africana Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 338 Police and the Community (3 credits)

This course will examine factors contributing to cooperation or friction between law enforcement personnel and the community. Emphasis will be placed on political, social and economic forces which influence this. Policies addressing this problem will be reviewed.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Undergraduate

SOC 340 The Ethical Consumer (3 credits)

The recent "ethical turn" in markets has led to a growing number of products that give proceeds to a charitable or altruistic cause. We see Pink Ribbons when we shop for a car, fair trade coffee at Wal-Mart, and product (RED) clothing at the GAP. Many of these products and brands are creating significant social change; others are "greenwashing" or "fairwashing" markets by making false promises. In this course we will read research from sociology, marketing, and psychology to understand the consumer behavior of individuals trying to change the world through shopping; we will examine the strengths and weaknesses of these "consumer-dependent" social movements; and we will examine the social forces that led "shopping for a cause" to become a modern means for creating social change. This course will conclude with an attempt to put our ideas into practice through group-projects designed to raise funds for local mission-driven businesses such as Cal's Cupcakes, Alex's Lemonade, or Fair Trade retailers.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, GEP Social Science, Undergraduate

SOC 345 Law and Social Policy (3 credits)

An exploration of various dimensions of the relationship between law and social policy in contemporary U.S. society. In assessing how judicial opinions and legislative efforts affect social relations and institutional arrangements, inquiry is focused upon: (1) the ways in which social problems become defined as legal issues; (2) the forces which shape the initiation and ultimate formulation of legislative acts designed to affect public policy; (3) the role which cultural values and assumptions play in framing legal arguments and influencing judicial opinions and remedial programs; (4) the issue of compliance and the ways in which it is measured and enforced, and (5) the strengths and limitations of the law as a means of achieving specific social policy objectives.

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 349 Poverty Ethics & Social Policy (3 credits)

This course offers an overview of poverty in the United States, explores the ethical principles surrounding poverty and our response to it, and examines social policies that seek to ameliorate poverty. Students will work on a semester-long academic assignment which will engage them in one aspect of poverty and social policy.

Prerequisites: PHL 154 and (SOC 101 or SOC 102)

Attributes: Ethics Intensive, Undergraduate

SOC 353 Restorative Justice Practice (3 credits)

This course places restorative justice theory into practice. Students will learn and become proficient in several restorative practices including peacemaking circles, sentencing circles, restorative conferencing, reparative boards, youth aid panels and victim offender mediation. As an experiential course, students will participate in all of the practices throughout the semester. Some of these practices are hundreds of years old. Many criminal justice agencies see potential widespread application. The skills taught in this course can be used in any situation involving conflict.

Attributes: Criminal Justice Course, Undergraduate

SOC 355 Race, Crime & CJ (3 credits)

This course examines the topic of race and ethnicity in relation to crime and criminal justice processing. More specifically, we focus on several issues: 1) the role of privilege and marginalization in the context of race and ethnicity and the criminal justice system; 2) the impact of these factors on intergroup relationships generally and the responses of the criminal justice system to criminal behavior, victimization, and employment within the criminal justice field; 3) how the responses of the criminal justice system affect the lives of offenders, victims, and agents of the criminal justice system for various racial/ethnic groups; 4) the current patterns of crime and victimization in relation to race/ethnicity? In addressing these questions, it is important to note that this is an upper-level sociology/criminal justice course, so do not expect it to be lecture driven, although some lectures will be presented. Much of the course work will revolve around class discussions and written analysis of the readings.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 356 Gender, Crime & CJ (3 credits)

An examination of the gendered nature of criminal victimization, offending, and criminal justice processing from a feminist sociological perspective. Students will read and critically evaluate in a seminar format feminist criminologists' analyses of topics such as fear of crime, gangs, prostitution, corporate violence against women, policing, and corrections. Special emphasis will be given to the intersections of gender, racial/ethnic and social class inequalities.

Attributes: Criminal Justice Course, Diversity Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 360 Sociology of Law (3 credits)

An analysis of contemporary theories of law; examines the statements of the main exponents of the consensus, pluralist, elitist, and dialectical models of law creation; focus also on the tie between the models and the social context in which they emerged and developed.

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 363 Race Relations in Philadelphia (3 credits)

The purpose of this course is to explore the topic of race relations with reference to a case study of Philadelphia. It is a unique course insofar as it directly addresses the issue of race in a multidisciplinary way, and it offers a unique opportunity to explore a topic and a city that are only dealt with indirectly in other courses. This course will explore the impact of race on social, economic, and political life in Philadelphia. Utilizing a socio-historical approach, it will focus on the work of W.E.B. DuBois and other social scientists who have documented the effects of race on Philadelphians in such diverse areas as housing, health care, employment, and family life.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 365 Crime & Urban Communities (3 credits)

From the beginning of the study of sociology in the United States, sociologists have studied life within a community context, documenting how space matters. The physical and social aspects of neighborhoods affect how likely crime is to occur in them and how residents can fight this crime. In addition to learning how space affects crime, we will learn key theories and concepts which sociologists use in studying urban crime, we will discuss current major issues in crime such as re-entry, and we will study crime-fighting strategies.

Attributes: Africana Studies Course, Undergraduate

SOC 368 Cults as Social Movements (3 credits)

This course looks at the social psychology and the social movement aspect of selected cults. Questions that the course examines: What is a cult? Who joins cults? Why do people stay in cults? What is daily life in a cult like? What should we as a society do about cults? How do we study cults?

Attributes: Criminal Justice Course, GEP Social Science, Undergraduate

SOC 370 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SOC 377 Inside-Out (3 credits)

This class offers a unique opportunity to have meaningful discussions about a range of topics from inside a correctional facility. Inside-Out classes bring together students from Saint Joseph's University and adult students who are incarcerated to learn about and discuss topics such as the causes of crime, racism, literature, philosophy, and restorative justice. Through the readings and dialogue, inside and outside students will be able to integrate their theoretical knowledge with lived experiences. It is through this exchange that we hope to critically analyze and challenge the current system in the U.S. that has resulted in a higher incarceration rate than other similar countries.

Attributes: Faith Justice Course, Justice Ethics and the Law , Service Learning Course, Undergraduate

SOC 378 Urban and Public Policy (3 credits)

This course will offer a foundation in how sociologists study cities and public policy. We will examine assets of cities and key areas of need that cities face (such as education, poverty, housing, and crime), and we will study policy options to improve cities and their larger metropolitan areas. These are broad policy areas of study, so we will hone in on specific policies. For example, we will explore how cities have formulated their initiatives to end homelessness, we will consider juvenile justice alternatives, and we will look at how cities can position themselves to be sustainable in the effort to reduce greenhouse gas emissions.

Attributes: Africana Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 386 Violence in Intimate Relations (3 credits)

Women and children have a higher probability of being seriously injured or killed by someone with whom they are intimately associated rather than by a stranger. This course will examine questions such as: What factors contribute to the prevalence of intimate violence in the U.S.? How does intimate violence differ across groups (e.g., by race/ethnicity, social class)? How are 456 various forms of intimate violence (i.e., partner abuse, child abuse, elder abuse) interrelated?

Attributes: Undergraduate

SOC 390 Special Topics (3 credits)

Course content determined by instructor. This course number/title will be given to new courses being offered within the academic year that are not listed in the catalog. The course will explore some topic related to sociology or criminal justice, focusing on the role of institutions in explaining human behavior.

Attributes: Undergraduate

SOC 401 Higher Education Policy (3 credits)

What should students gain from college? How should higher education be funded? How is college connected to inequalities along racial, gender, class, and other lines, and what role should individual campuses play in mitigating those inequalities? Policy decisions shape each of these questions and their potential answers. In this course, we will examine contemporary higher education policy and connections to inequality. Topics will include financial aid, diversity, access to college, different types of college settings, and funding.

Attributes: Undergraduate

SOC 470 Special Topics (3 credits)

Course content determined by instructor. Past topics include: Extremist Movements, The Ethical Consumer, Feeding Philadelphia, Family Violence, and Interrogation.

Restrictions: Enrollment limited to students with a class of Senior. Enrollment is limited to students with a major in Criminal Justice or Sociology.

Attributes: Undergraduate

SOC 490 Internship (3 credits)

The student is placed according to his/her interests in a criminal justice, social service, or health care setting for a semester. In this way, he/she may apply classroom-acquired skills and knowledge while gaining practical work experience. Permission of internship director required.

Attributes: Criminal Justice Course, Undergraduate

SOC 491 Internship (1-6 credits)

The student is placed according to his/her interests in a criminal justice, social service, or health care setting for a semester. In this way, he/she may apply classroom-acquired skills and knowledge while gaining practical work experience. Permission of internship director required.

Attributes: Undergraduate

SOC 494 Independent Research Sociology (3 credits)**SOC 495 Seminar I (3 credits)**

This course is where students complete the required senior thesis. An Honors section is available for those students completing College Honors.

Prerequisites: SOC 313 and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

SOC 497 College Hon. Independent Study (3 credits)

College Honors candidates in Sociology will complete a second honors course during the Spring of the senior year (SOC 497) which includes research, extending the senior capstone experience beyond what non-Honor students complete.

Health Equity & Social Justice Minor

Health equity involves identifying the root causes of the uneven distribution of health-related burdens and outcomes. Social justice is the view that everyone deserves equal rights and opportunities including access to and control over the basic material and non-material resources that sustain and promote health at a high level of satisfaction. In the U.S. and worldwide there are health inequities that are avoidable, unnecessary, and unjust. These inequities are the result of policies and practices that create an unequal distribution of money, power, and resources among communities based on but not limited to race, class, gender, sexual orientation, and place. In order to ensure that communities have the opportunity to attain and promote health at a high-level of satisfaction we must address the social determinants of health in order to achieve health equity. Future health care practitioners and researchers interested in this goal require training in the social and behavioral sciences in order to critically examine the causes and consequences of health inequities.

Taken together, a selection of courses will teach students to identify and critically evaluate measures, causes, and consequences of health disparities, which will prepare a new generation of leaders to make significant changes in the delivery of health care to improve health equity for local and global populations.

Learning Goals and Outcomes

Goal 1: Health equity and social justice minors will describe health disparities that are based on but not limited to race, class, gender, sexual orientation, and place within the United States and around the world.

Objective 1.1: Students can describe the broader social, economic, and political factors associated with health inequities both in the US and around the world.

Goal 2: Health equity and social justice minors will identify and critically evaluate measures, causes, and consequences of these health disparities.

Objective 2.1: Students can critically assess research studies that describe the root causes of health disparities.

Goal 3: Health equity and social justice minors will describe evidence-based policies and practices that can reduce inequities in our national and global healthcare systems.

Objective 3.1: Students can critically assess the limits and possibilities of policies and practices designed to reduce health inequities in the US and around the world.

Requirements

Code	Title	Hours
Part 1:		
SOC 101 or SOC 103	Intro to Sociology Intro to Anthropology	3
Part 2 - At least one course from the following:		3
SOC 306	Medical Anthropology	
SOC 285	Sociology of Medicine	
SOC 323	Health and Society	
Part 3 - Choose four courses from the following: If 2 or more from Part 2 are taken, then fewer courses are needed from Part 3.		12
SOC 205	Ethnic & Minority Relations	
SOC 217	Mental Health & Society	
SOC 216	Alcohol, Drugs & Society	
SOC 232	Sociology of Human Sexuality	
SOC 253	Race and Social Justice	
SOC 215	Gender, Race, and Justice	
SOC 325	Women and Health	
SOC 305	Social Epidemiology	
Total Hours		18

Sociology Major

Learning Goals and Outcomes

Goal 1: Sociology majors will demonstrate comprehension of the discipline of sociology and its role in contributing to our understanding of social reality.

Outcome 1.1 Students can apply the sociological imagination, sociological principles, and theoretical concepts.

Goal 2: Sociology majors will develop knowledge of sociological research methods.

Outcome 2.1 Students can design a research study in an area of choice and explain why various methodological decisions were made.

Outcome 2.2 Students can run basic statistical analyses to answer research questions.

Goal 3: Sociology majors will understand how to communicate within their discipline.

Outcome 3.1 Students can engage in social scientific technical writing that accurately conveys data findings.

Outcome 3.2 Students can orally present research or course material clearly and concisely.

Goal 4: Sociology majors will understand the operation of culture and social structure.

Outcome 4.1 Students can describe the significance of variations by race, class, gender, sexual orientation, and age, and thus critically assess societal systems.

Requirements

The traditional undergraduate programs includes a minimum of 120 credits distributed across three components: A General Education component divided into Signature Courses, Variable Courses, and an Integrative Learning requirement; a Major and Divisional component; and Free Electives. In addition to course requirements as specified in each area, students must complete one certified course in each of the following overlay areas¹:

- 1. Diversity, Globalization or Non-western Area Studies,
- 2. Ethics Intensive
- 3. Writing Intensive, and
- 4. Diversity

1

Overlay requirements are part of the 120 credit requirements

General Education Signature Courses

See this page about Signature courses (p.).

General Education Variable Courses

See this page about Variable courses (p.). Six to Nine courses

Code	Title	Hours
Social/Behavioral Science		
SOC 101	Intro to Sociology	3

General Education Overlays

See this page about Overlays (p. 41).

General Education Integrative Learning Component

See this page about Integrative Learning Component (p.). Three courses:

Code	Title	Hours
MAT 118	Introduction to Statistics (This is necessary for use of SPSS)	3
Social Science attribute	Select any CAS course outside of sociology with a "social science"	3
Arts & Sciences	Any course outside of sociology within the College of Arts and Sciences	3

GEP Electives

8 elective courses

Major Requirements

Code	Title	Hours
SOC 102	Social Problems	3
SOC 211	Classical Sociological Theory	3
SOC 312	Research Methods	3
SOC 313	Data Analysis	3
SOC 495	Seminar I	3
SOC 470	Special Topics	3
Experiential learning: Includes study abroad, internship, study tour, or service learning		3
Major Electives: 18 credits worth of SOC courses numbered above 102		18
Total Hours		39

Sociology Minor

Learning Goals and Outcomes

Goal 1: Sociology majors will demonstrate comprehension of the discipline of sociology and its role in contributing to our understanding of social reality.

Outcome 1.1: Students can apply the sociological imagination, sociological principles, and theoretical concepts.

Goal 2: Sociology majors will develop knowledge of sociological research methods.

Outcome 2.1: Students can critically assess research studies and explain why various methodological decisions were made.

Goal 3: Sociology majors will understand the operation of culture and social structure.

Outcome 3.1: Students can describe the significance of variations by race, class, gender, sexual orientation, and age, and thus critically assess societal systems.

Requirements

Code	Title	Hours
SOC 101	Intro to Sociology	3
SOC 102	Social Problems	3
SOC 211	Classical Sociological Theory	3
SOC 312	Research Methods	3
or SOC 313	Data Analysis	
Two upper division courses 201 and above		6
Total Hours		18

For Criminal Justice majors, the minor in sociology requires SOC 211, SOC 312, or SOC 313 and four upper division SOC courses that do not also count towards the requirements for majors in criminal justice.

Theology and Religious Studies

Department Mission Statement

The Department of Theology and Religious Studies explores the human quest for the transcendent as expressed in the world's diverse religious traditions. It makes an essential contribution to the mission of Saint Joseph's University as a Catholic Jesuit institution to strive "to be an inclusive and diverse community that educates and cares for the whole person, encouraging and modeling a lifelong commitment to thinking critically, making ethical decisions, pursuing social justice, and finding God in all things." We endeavor to engage ourselves and our students in the critical study of theological and religious traditions, praxis, and intellectual inquiry, both historically and in the contemporary world. We are committed to a rigorous presentation of the methods and content of both Christian Theology and Religious Studies as academic disciplines.

In pursuit of this mission, the department recognizes four primary goals:

- Instill in students a capacity for methodical analysis and understanding of the world's diverse theological and religious traditions;
- Provide students with a scholarly, multifaceted understanding of the foundations of Christian faith, its development in different times and cultures, and its implications for life in society, especially within the Roman Catholic tradition;
- Engage students in exploring the richness of the spiritual expressions and experiences encountered through the study of religions other than Christianity;
- Foster in students and professional colleagues an appreciation for the diversity that exists within the contemporary study of theology and religion as reflected in the department's faculty and their research endeavors.

Student Organizations

The Department sponsors a chapter of Theta Alpha Kappa, the national honor society for theology and religious studies. Students also participate in the activities of Campus Ministry and the post-graduate volunteer service programs. Faculty members advise students and alumni on career opportunities, job placements, and on professional and graduate school programs.

Faculty

An active department in research and scholarship, faculty members within the Department of Theology and Religious Studies have been

featured in several impressive publications and have received awards and grants for their innovative teaching methods. Many are directors and members of the Institute for Jewish-Catholic Relations (<https://sites.sju.edu/ijcr/>) at Saint Joseph's University and have developed research on everything from the implications of technology and media on spiritual and moral practices to economic justice, human rights and human development.

Department of Theology & Religious Studies Faculty & Staff (<https://www.sju.edu/departments/theology-religious-studies/faculty-staff/>)

Theology and Religious Studies in the GEP

All students must successfully complete the Signature Core course, "Faith, Justice and the Catholic Tradition," as well as any one of a number of courses designated as Religious Difference courses.

Signature Core

THE 154 Faith, Justice and the Catholic Tradition

This course is designed to introduce students to central theological themes (such as the doctrines of Christ, the human person, sin/grace/salvation, and the sacraments) and moral claims (such as the preferential option for the poor, solidarity, and the common good) typical of the Roman Catholic Tradition. Through a critical examination of primary texts, students will investigate the historic grounds of faith and will learn how and why a concern for social, economic and political justice is rooted not only in the Christian Gospel but also in fundamental Christian doctrines and liturgical practices.

Variable Core

Religious Difference - 1 course

This course will require students to gain a critical understanding of one or more religious worldviews that differ from the Roman Catholic perspective. Students will engage in either in-depth study of the beliefs and practices of one or more non-Christian religious traditions or take a comparative religions course that in some measure addresses the issue of religious diversity. This course will also address issues related to the construction of religious identity in today's pluralistic world.

Students will be able to:

- Identify some of the general features typical of many religions, such as conceptions of deity, transmission of traditions, religious community, ritual practice, religious experience, and ethical norms.
- Recognize and discuss examples of the impact of historical, socio-political, and cultural contexts on the teachings, sacred texts and/or material culture, and other manifestations over time of at least one non-Christian religious tradition.
- Articulate how some of the categories of the discipline of Religious Studies outlined in the previous points are expressed in at least one non-Christian religion.
- Discuss some of the implications of living in a religiously diverse world.

Some Typical Religious Difference courses include:

Code	Title	Hours
THE 211	Hebrew Bible	3
THE 380	Interreligious Dialogue	3
THE 384	Jews/Chr. Theologies Compared (when Team-taught)	3

THE 385	Jesus the Jew in History (when Team-taught)	3
REL 101	Comparative Religion	3
REL 211	Hebrew Bible	3
REL 212	Israelite Religion	3
REL 231	Judaism	3
REL 241	Islam	3
REL 261	Hinduism	3
REL 270	Special Topics in Relig Stud ¹	3
REL 271	African & Caribbean Religions	3
REL 336	Jewish Thought	3
REL 338	Jew&Chr Responses to Holocaust	3
REL 351	Indian Buddhism	3
REL 352	East Asian Buddhism	3
REL 356	Death & Afterlife Chinese Rel	3
REL 357	Food Practices & Chinese Relig	3
REL 383	Ancient Greek Religions	3
THE 387	Jews&Chr. Entwined Histories (when Team-taught)	3

¹

Not all "Special Topics" courses meet this requirement. Please check individual sections of REL 270 or REL 370 for specific information.

- Theology (p. 369)
- Religious Studies (p. 366)

Undergraduate Minor

- Theology and Religious Studies (p. 367)

Courses

Religious Studies

REL 101 Comparative Religion (3 credits)

An Introduction to the comparative study of religion which examines the historical evolution of religions, nature and diversity of religious experience, the concept of a religious world and the diverse types of religious worldviews, the role of myth and ritual in the maintenance of religious worlds, the problem of religious change and the concept of transcendence.

Attributes: Religious Difference Course, Theology Level 2, Undergraduate

REL 102 What is Religion? (3 credits)

This course is an opportunity for students to be initiated into the critical study of religion. Best described as intensive and experimental, this class offers students an opportunity to analyze classical and contemporary theories of religion. We will challenge attempts to classify an experience as mythic, mystical, magical, functional, or numinous. All readings, evaluations, and discussions will address the contested question, what is religion?

Attributes: Religious Difference Course, Undergraduate

REL 150 First Year Seminar (3 credits)

Seminar subjects vary.

Attributes: First-Year Seminar, Undergraduate

REL 170 Special Topics (3 credits)

Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications differ by section.

Attributes: Undergraduate

REL 211 Hebrew Bible (3 credits)

This course will examine the biblical traditions and texts of the Hebrew Scriptures as products of particular historical and cultural communities, and as literary and theological documents.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 212 Israelite Religion (3 credits)

Combining the evidence of biblical texts and ancient Near Eastern texts, this course analyzes the historical and social context of religion in ancient Israel. Special topics include the worship of different deities; the priesthood and the system of sacrifices in the Temple; the relationship between politics and religion, and some specific religious practices maintained by kings David, Solomon and their successors (such as prophecy, holy war and child sacrifice); popular religious practices (such as devotion to the dead and magic); and the origins and development of monotheism, the concept of the messiah and other ideas central to the origins of Judaism and Christianity.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 221 Intro to the New Testament (3 credits)

This course will examine the biblical traditions and texts of the Christian Scriptures as products of particular historical and cultural communities, and as literary and theological documents.

Attributes: Ancient Studies Course, Undergraduate

REL 231 Judaism (3 credits)

A comprehensive survey of the development of Judaism from its pre-exilic roots to the present, to include the evolution of its theology, ethics, and traditions. The impact of the modern world upon traditional Judaism; major movements within Judaism today and their beliefs about God, Torah, and Israel.

Attributes: Religious Difference Course, Theology Level 2, Undergraduate

REL 241 Islam (3 credits)

An introduction to the historical development of Islam together with its basic beliefs and practices, from the time of Muhammad to the modern period. The prophet Muhammad, the Qur'an and Hadith, the Shari'ah, Kalam, Shiism, Sufism, and Islamic modernism will be examined.

Attributes: Asian Studies Course, Medieval, Ren & Reform Studies, Non-Western Studies (GEP), Religious Difference Course, Theology Level 2, Undergraduate

REL 261 Hinduism (3 credits)

A survey of the Hindu religious traditions on the Indian subcontinent with a focus on the period from the Epic (c. 200 BCE-200 CE) until modern times. The major forms of Hindu belief and practice will be covered: Vaishnavism, Shaivism, traditions of the Goddess, and popular village traditions.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 262 Modern Hinduism (3 credits)

This course explores the ideas, beliefs, and practices of lived Hinduism. We will compare and contrast diverse Hindu cultures that are found in rural and urban India, in the United States, and here on campus. Our study will include a variety of examples taken from the expressive arts and architecture, literature, rituals and festivals, fashion and film, current events, online communities and bloggers.

Attributes: Asian Studies Course, Religious Difference Course, Undergraduate

REL 265 Daoism (3 credits)

In an effort to see and experience Daoist thought and practice on its own terms, approximating the worldview of its practitioners, this course takes an interdisciplinary approach, examining three distinct kinds of religious phenomena: 1) ritual performance, 2) sacred scripture, and 3) art and material culture. Through this interdisciplinary approach, students will learn how to investigate these phenomena according to corresponding sets of methodologies, namely 1) ethnography; 2) translation and hermeneutics; and 3) art-historical and visual and material analyses. Because both scripture and art cannot be removed from liturgy in the Daoist tradition, students will also learn to engage with and employ frameworks from the field of ritual theory, specifically anthropological approaches to ritual practice.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 270 Special Topics in Relig Stud (3 credits)

Concentrated focus on a selected theme in theology or religion at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications differ by section.

Attributes: Undergraduate

REL 271 African & Caribbean Religions (3 credits)

An examination of selected indigenous African religious traditions in their native contexts and/or religious traditions of indigenous African origin that have developed in the Caribbean and related contexts outside of Africa. Topics may vary, but representative samples may include a focus on individual systems (such as Haitian Vodou) or phenomena found in a number of systems (such as rites of passage).

Attributes: Africana Studies Course, Non-Western Studies (GEP), Religious Difference Course, Theology Level 2, Undergraduate

REL 272 Religion/Global/Rights-Bolivia (3 credits)

This class will first examine central religious beliefs of indigenous Bolivian religions (e.g., cosmology, communal origin myths, spirits and divine figures, rituals and ritual spaces, and the relationship of natural and supernatural). Along the way, the class will wrestle with broader questions in the study of religion, such as interpreting the archaeological record, inducing religious experience, and the relationship between religious authority and social or political power. The class will then explore the moral implications of these beliefs alongside the principles of Catholic Social Teaching. The course will pay particular attention to the economic sphere, using case studies to explore how indigenous beliefs and practices are shaping distinctive economic forms that contrast those promoted by global capitalism.

Attributes: Diversity Course, Globalization Course, International Business Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 300 Religious Song and Poetry (3 credits)

How do we express love, loyalty, and devotion to people, saints, and God/gods? This class will explore poetry, hymns, pop music, and visual arts that praise various divine beings and religious figures. Our study will include diverse expressions and acts of devotion, the lives of the artists who created them, and their religious and historical contexts. Examples will be taken from Hinduism, Islam, Christianity, Sikhism, Buddhism, and American pop culture (be prepared to share your playlist!).

Attributes: Religious Difference Course, Undergraduate

REL 310 Welcoming the Stranger (3 credits)

This course will examine how ancient communities grappled with welcoming the stranger and how various communities negotiated interpersonal relations. In addition, the course will focus on how to articulate an ethical response to the issue of migration in light of the diverse theological and philosophical ethical perspectives on the topic. Key themes in the historical and religious traditions will include: the biblical representation of the ger (stranger); ancient comparative hospitality rituals; and legal discourse in rabbinic and contemporary Jewish sources. Key topics in the theological and philosophical ethical traditions will include: distinctions between forced migrants in theory and law— including internally displaced people, asylum seekers, refugees, economic migrants, and ecological/environmental migrants. These distinctions will be explored through both an empirical/legal lens as well as an ethical lens informed by the overlapping consensus of the post-war Universal Declaration of Human Rights tradition and Catholic Social Teaching.

Attributes: Ethics Intensive, Religious Difference Course, Undergraduate

REL 311 Comparative Religious Ethics (3 credits)

Comparative religious ethics is a field of study that explores what different religious traditions say (and have said) about important ethical and moral questions, past and present. This course aims to provide students with the tools and knowledge to understand, comparatively analyze, and evaluate the ethical teachings and moral prescriptions of the religious traditions of Judaism, Christianity, and Islam. Students will examine the similarities and differences between the ways in which each of these religious traditions form and inform the ethical and moral aspects of the lives of their adherents. Prior knowledge of Judaism, Christianity, and/or Islam is preferred but not required. Students with no knowledge of one or more of these traditions will be assigned extra readings for the first few weeks of class.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Religious Difference Course, Undergraduate

REL 312 Spirit Disc in Compar Perspect (3 credits)

Throughout the world's religious traditions we find a variety of spiritual disciplines pursued by individuals in the hope of transforming an existence experienced as sinful, delusory, fragmented or otherwise unsatisfactory into one that is graced, enlightened, whole. The specific methods employed vary widely, as do their specific goals. Nevertheless, when viewed from a comparative perspective many of these practices share elements in common. This course will examine a number of such spiritual disciplines, drawn from the traditions of Hinduism, Buddhism, Greco-Roman Hellenism, and Christianity. Attention will be given to issues of their historical development, diversity of form, points of similarity and contemporary relevance.

Attributes: Religious Difference Course, Undergraduate

REL 321 Religion&Law in the Anc World (3 credits)

This course looks at the world's earliest known law: the law of ancient Sumer, Babylon, Egypt, and other ancient Near Eastern societies. The course goes on to examine the relationship between these legal systems and the legal texts of ancient Israel and Judah found in the Hebrew Bible, as well as other issues related to the study of biblical law. Finally, the course considers the legacy of ancient Near Eastern law and its impact on the development of modern legal institutions and systems.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 322 Myth and History in the Bible (3 credits)

This course examines a range of narratives from the Bible and considers how they functioned in the ancient communities from which they come. It looks at the role of myth and the nature of history writing in the ancient world and explores ways to identify both genres in biblical texts. It also examines current debates over what should count as history in the Bible and the impact of archaeological and extra-biblical literary evidence on these debates. The course will focus primarily on narratives from the Hebrew Bible (e.g., creation myths, ancestral and royal legends, political-historical narratives), though some stories from the New Testament may be considered as well. Please note: This course can be used to satisfy the GEP Religious Difference requirement or the GEP Faith and Reason requirement, but not both.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Ancient Studies Course, Faith-Reason Course, Religious Difference Course, Undergraduate

REL 323 Psalms (3 credits)

The most influential of all Old Testament books for Christian spirituality, the Psalms offer a special glimpse into the religious life of ancient Israel. Placed within their larger historical background, psalms of various types (laments, hymns, royal and wisdom psalms, etc.) will be studied for their literary and religious character. The question of the Psalter's theology as a whole will be addressed as well.

Attributes: Ancient Studies Course, Undergraduate

REL 325 Synoptic Gospels (3 credits)

This course will progress in two movements. It first will investigate the historical background of the growth of the gospel tradition. It then will read the Gospels as viable literary texts, making use of the most recent advances in the literary critical study of Matthew, Mark, and Luke-Acts. In this way, the course will focus upon the theological uniqueness of each book, as well as tracing their interrelatedness.

Attributes: Ancient Studies Course, Undergraduate

REL 326 Letters of Paul (3 credits)

The aim of this course is to examine the main characteristics of Paul's faith as found in his epistles. The course will establish the broad argument of each of the letters, their historical setting, and their literary and rhetorical character, and demonstrate how these elements work together to express Paul's gospel.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Ancient Studies Course, Faith-Reason Course, Undergraduate

REL 327 Religion & Race in Phila (3 credits)

This course examines the co-constitution of religious beliefs, racial identities, and regional cultures from an historical perspective primarily in the urban Northeast. We will examine how transatlantic and transnational African and European religious traditions (real, imagined, historical, invented) shaped that history. Because this is a religious studies course, we will think about religions as institutions that profoundly influence individual's epistemologies and actions, as well as the communities, societies, and nations, in which they are located. We will understand race as a social construction that emerged in recent centuries in concert with religious (and scientific) ideas about human origins and anthropologies. Most importantly, we will see how these two constructs - "race" and "religion" - developed and evolved in a particular region of the United States to make visible place-based distinctions and geo-cultural histories. A complicated, multi-scalar picture will emerge of the varied ways in which beliefs, identities, and places influence and are implicated by one another.

Prerequisites: ENG 101

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Undergraduate

REL 328 Global Christianities (3 credits)

Africa is home to the largest population of many Christian denominations in the world and home of the fastest growing concentration of Christians in the world. This course will examine the variety of Christianities in Africa in their global context and explore how Christianity there is influencing and being influenced by Christianity worldwide. Students will learn to problematize, to complicate, and to relentlessly question prevailing religious and cultural ideas about the other, where those ideas originate, how they are constructed and maintained, and who that maintenance and construction serves.

Attributes: Diversity Course, Undergraduate

REL 329 Indigenous Ecologies (3 credits)

This course offers case studies in the diversity of relationships between religion and indigenous ecology, which is the interaction between an indigenous culture and its environment. The approach is anthropological and historical. This includes attention to the evolutionary origins of religion, emic-etic tensions, and the use of archaeology to recover the stories of marginalized peoples. Sample topics are Traditional Ecological Knowledge, attributions of personhood, relations between herbalism and shamanism, and ways that environments shape rituals and beliefs. These reveal alternatives to western assumptions that distinguish "natural" from "supernatural" and "science" from "religion." They also suggest policies for addressing environmental challenges.

Attributes: Diversity Course, Globalization Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 331 Topics in Ancient Judaism (3 credits)

Study of a selected topic in Judaism in the Persian, Hellenistic, and Roman periods. Sample topics include collections of texts, such as the Dead Sea Scrolls or works of Josephus; regions or cities, such as Judaism in Egypt or Jerusalem; a series of events, such as the Maccabean Revolt; an individual or group, such as the Herodian dynasty; or a theme, such as Judean interactions with imperial powers. Course may be taken more than once for credit as topic changes.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 332 Past/Present in ISR and PLS (3 credits)

Digging at Tel Dor: This study tour combines excavating the archeological site of Tel Dor, Israel with travel in the country before, during, and after the excavation season. By participating on a dig, students gain first-hand knowledge of both historical and modern day Israel and the rich history that gives rise to the complexities of the modern Middle East. Digging brings the social, economic, political, intellectual, and religious history of the site "to life" through uncovering and then analyzing the ancient remains-the architecture with associated vestiges of daily life. Students will be part of every step of the archeological process from digging, processing, and analyzing to recording and storage. To witness the full range of historical periods presented in lectures, we will visit the archeological sites of Caesarea, Megiddo, Sepphoris, Beth Shean, Belvoir, Masada and Qumran, spanning the Canaanite through the Crusader periods (20th c. BC - 12th c. AD: the Early, Middle and Late Bronze and Iron Ages, and the Persoan Hellenistic, Roman, Byzantine, First Moslem, and Crusader Periods). Before, during and after the excavation season the group will tour the cities of Jerusalem, Tel Aviv, Haifa, and Nazareth, focusing on the historical interaction of Christians, Jews, and Muslims.

Attributes: Ancient Studies Course, Religious Difference Course, Study Tour, Undergraduate

REL 333 Jerusalem: History & Holiness (3 credits)

The city of Jerusalem has had a nearly unsurpassed historical and religious prominence for three millennia, right up through the present. In this course we will explore Jerusalem from multiple, complementary perspectives. We will consider the history of the city as well as religious developments within the Jewish, Christian, and Muslim traditions. We will begin with biblical Jerusalem and then move forward in time, highlighting periods, events, and ideas that have lasting influence through close studies and discussions of selected topics. We will draw on theoretical approaches to the study of sacred space using tools from the field of comparative religion.

Attributes: Religious Difference Course, Undergraduate

REL 334 Rise of Rab Judaism & Xianity (3 credits)

In the aftermath of the Nazi genocide of Jews in the 20th century, and with new discoveries such as the Dead Sea Scrolls, scholars from many disciplines have sought to better understand the origins of Rabbinic Judaism and Christianity. A growing consensus sees their emergence in the Roman period as the result of a complex series of responses to historical events, particularly the destruction of the Second Temple in Jerusalem in the year 70 C.E. Not only were defining features of each tradition established, but the basic dynamic of their interrelationship was set and would prevail for nearly two millennia. This course provides an in-depth study of religious differentiation by surveying the history, beliefs, and practices of biblical Israel, late Second Temple Judaism, the church as a Jewish eschatological movement, and ultimately Rabbinic Judaism and patristic Christianity in the post-Temple Roman world. Special attention is devoted to the construction of their distinctive and sometimes opposed religious identities.

Attributes: Religious Difference Course, Undergraduate

REL 335 Christian Origins (3 credits)

A study of the cultural and historical matrices of the early Jesus movement, its rise and early developments, and the emergence of institutionalized practices and belief systems that coalesced in the formation of Christianity. The course is organized chronologically and employs the standard tools and theoretical approaches of modern historical-critical methodology, such as those derived from anthropology, sociology, literary criticism, and classical archaeology.

Attributes: Ancient Studies Course, European Studies Course, Medieval, Ren & Reform Studies, Undergraduate

REL 336 Jewish Thought (3 credits)

This course will introduce students to Jewish theology from biblical to modern times. It will focus on selected topics such as God, revelation, ethics and human nature, chosenness, Jewish views of other religions, messianism, the afterlife, and suffering and evil (with special reference to the Holocaust).

Attributes: Religious Difference Course, Undergraduate

REL 337 Sabbath in Judaism&Christianity (3 credits)

In our modern lives, it is hard to imagine 'shutting off'. However, the observance of a Sabbath is valued in Judaism and Christianity. This course considers the Sabbath as not just abstention from work but entry into sacred time. It covers the biblical period through the present, and includes diverse forms of observance and claims for its significance. We will study the Sabbath primarily in the Jewish tradition, and explore the tensions between adherence to biblical models and adaptation to new circumstances. We will focus on biblical interpretation as context within which the Sabbath evolved and was (re)defined, and consider the Sabbath as mythological time, as a marker of social identity, and as a practice governed by religious law. We will also consider the Sabbath in the Christian tradition, especially where Christian observance diverges from Jewish observance, such as the shift from Saturday to Sunday.

Attributes: Religious Difference Course, Undergraduate

REL 338 Jew&Chr Responses to Holocaust (3 credits)

The Jewish Holocaust represents the classic negative event of our age, a manifestation of evil transcending the human imagination. This course will examine how Jews and Christians have responded to this event and why it caused changes in both Jewish and Christian self-understandings. The course will introduce students to the personages, issues and events of the Holocaust, before turning to religious and moral issues such as suffering and guilt.

Attributes: European Studies Course, Faith Justice Course, Religious Difference Course, Theology Level 3, Undergraduate

REL 341 The Quran and Its Interpreters (3 credits)

This course will explore a basic source of Islamic faith and practice, the Quran and its interpretation. We will examine compilation of the Quran, its major themes, and samples from its reception history, both classical and modern. We shall investigate how this 1400-years old text has been interpreted in many different ways, by analyzing legal, theological, mystical, existential, feminist and critical perspectives on it. We shall also make occasional comparisons with the bible and its interpretation. The course will enable the student to have better insight not only on the Quran, but also on the process of interpretation of sacred texts.

Attributes: Africana Studies Course, Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 342 Women in Muslim Tradition (3 credits)

This course will seek to comprehend and explain some of the major aspects of the life and culture of Muslim women. Women are and have always been an integral part of the Muslim society, contrary to what might be generally portrayed and perceived. Far from being a monolithic culture or society, the Muslim world comprises many diverse cultural tendencies, which makes it difficult to generalize. Thus in order to study Muslim women and their status, role and situation, we will touch upon the difference historical, political, and economic forces that have shaped the culture of the Muslim world as a whole. We will be exploring the religious and social issues that have been central during the modern transformation of Muslims societies and will touch upon how Muslim women are portrayed in the media and the ramification of such portrayal.

Attributes: Africana Studies Course, Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 343 Reason Science&Faith in Islam (3 credits)

This course has three major parts. In the first part, we shall look at primary sources of Islam tradition, that of Qur'an and hadith, which will give us a starting point as we turn to the ways in which miracles have been discussed in the tradition. In the second part, we shall look at two classical Muslim thinkers, Ghazali and Ibn Rushd, who differed on miracles as well as on the relation between reason and faith. Analyzing their disagreement will offer us critical insights about common sense, science, rationality and dynamics of Quranic interpretation. In the third part, we shall look at contemporary interpretation of miracles as well as the relation between faith and reason by looking at a crucial Muslim thinker, Bediuzzaman Said Nursi, as well as some of the other approaches to science in modern era. In this part we shall also engage with the epistemological and scientific implications of Islamic understandings of miracles with the help of two Western thinkers, David Hume and Charles S. Peirce. In the final portion of the course, students will present their research on the issue of the relation between reason, science and faith in Muslim context. Please note: This course can be used to satisfy the GEP Religious Difference requirement or the GEP Faith and Reason requirement, but not both.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Asian Studies Course, Faith-Reason Course, Medieval, Ren & Reform Studies, Religious Difference Course, Undergraduate

REL 351 Indian Buddhism (3 credits)

The development of the Buddhist religion from the time of its founder, Siddhartha Gautama, until its decline in India in the 12th century. The basic teachings of the Buddha, the early Buddhist community or Sangha, the elaboration of the Abhidharma, the rise of Mahayana Buddhism and the development of Tantra will be covered.

Attributes: Asian Studies Course, Religious Difference Course, Undergraduate

REL 352 East Asian Buddhism (3 credits)

The focus of this course will be on the form of Buddhism that has been dominant in East Asia, a form known as "Great Vehicle" or Mahayana Buddhism. After quickly examining the origin and development of Buddhism in India this course will examine its development in China in some depth, as well as its spread to Korea and Japan.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 355 Superhumans in Chinese Relig (3 credits)

Immortals, Ancestors, Ghosts and Gods: This course examines four religions of China-Confucianism, Daoism, Chinese "folk" or popular religion, and Buddhism-in their historical and contemporary contexts. As its title suggests, the class is built around an exploration of the important role that superhumans such as demons, dragons, buddhas, and ghosts play in each of these traditions. Taking as our starting point the Ming period (1368-1644) popular novel, Monkey, in this class we will examine a wide range of primary and secondary sources including paintings, websites, poetry, scripture, articles of clothing, miracle stories, newspapers, statuary, and ritual implements. By combining an historical overview of the topic with a hands-on exploration of the manner in which practices and 445 beliefs related to superhumans remains relevant in China today, the class aims to deepen students' appreciation of the ways religion continues to shape world events, national policy, daily life, and cultural production within and beyond the region.

Attributes: Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 356 Death & Afterlife Chinese Rel (3 credits)

Across regions and millennia, human beings have pondered the perennial question of what happens when we die. This class takes a close look at the fascinating ways this question has been answered in the part of the world now called China. From the very outset, we enter into a world of tombs and transcendence, exploring some of China's earliest burial sites. As the course progresses, we turn to the Daoist quest for immortality, the Buddhist conception of reincarnation, and the Confucian practice of ancestor worship. The class considers points where these worldviews diverge, but takes a more interested look at the places where they have harmonized throughout China's long history. Upon completion of the course, students will have a map of China's afterlife, and an introduction to the beings who preside there, from the Supreme Gods of its Heavens, to the Ten Kings of its Hells.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 357 Food Practices & Chinese Relig (3 credits)

This course examines the practices and beliefs surrounding food associated with Chinese religious traditions such as Buddhism, Confucianism, Daoism, Chinese "folk" or "popular" religion, and Islam. The topics we will cover include religious prescriptions and prohibitions related to food, connections between food-practices and hierarchy, and the roles that food plays in creating and sustaining relationships between, for instance, the living and dead or humans and nonhumans. In addition to studying a variety of texts and objects, we will learn about religious observances related to food cultivation, storage, distribution, preparation, and consumption from guest speakers and through field trips to Philadelphia area sites including a restaurant and a temple.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course

REL 358 Yoga: Ancient & Modern Paths to Freedom (3 credits)

In this course we will explore the fascinating world of yoga as it has evolved in South Asia (the Indian subcontinent), where it has for millennia been associated with a pronounced South Asian interest in both "world renunciation," and "Axial Age" value that has significantly shaped the worldviews of at least three religions of South Asian origin: Hinduism, Buddhism and Jainism, as well as in the acquisition of power, both "worldly" and "supernatural." We will also examine how yoga traditions were transformed by India's encounter with the West both during colonial times and during the second half of the 20th century. Issues of particular concern, as we trace these developments, will be the historical and cultural contexts of yoga in South Asia, the relationship between yoga practice and South Asian religious beliefs, in particular traditions of religious renunciation, the role of South Asian constructions of concepts of the role of "body" and "mind" in spiritual practice (and the relationships of health, spirituality and religion), the role of yoga as a symbol of the "spiritual East" in the contexts of colonialism and post-colonial nationalism in India as well as its commodification in the contemporary global environment. We will also be examining yoga's "journey to the West" and its status in contemporary American life by examining the genesis of "modern postural yoga," the form of yoga with which most people are familiar (the form of yoga that focuses on the performance of various yoga postures or asana, such as triangle pose, head stand, etc.) While the focus will be on the specific traditions labeled "yoga," the course will also serve as an introduction of the religious of South Asia, since historically yoga and all its varieties has been embedded in specific South Asian religious worldviews. While some attention will be given to Buddhist forms of yoga, the principal focus will be on the traditions associated with the Vedic and Hindu religious traditions, and their modern transformations.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 359 Meditation, Yoga, and the Dao (3 credits)

Asian Spiritual Practices and their Modern Concepts: What is the purpose of life, and how is this purpose to be realized? This course will examine four influential Asian spiritual traditions that offer a variety of answers to these questions, two of which originated in ancient India (Buddhism and that component of the Hindu religious traditions known as yoga) and two in China (Confucian and Daoist traditions of self-cultivation). Each of these traditions in its own way argues that the true potential of a human being is realized only through a process of transformation, which leads from a condition of deficiency (characterized variously as suffering, ignorance, lack of vitality, imbalance, and ultimately mortality) to a condition of true freedom and happiness. The course will examine these traditions both in their original Asian contexts and in the adaptations in Western culture, paying particular attention to research that provides scientific models for thinking about the value of such transformative practices.

Attributes: Religious Difference Course, Undergraduate

REL 360 Religion & Art in East Asia (3 credits)

Vision and Visualization: This class is about ways of seeing in East Asian religions, with an emphasis on the Buddhist and Daoist traditions. It investigates the visual arts of these religious traditions with special attention to how these materials function in the context of ritual practice. Specific topics include the production of mandalas (or sacred circles) and their uses in the visualization practices of China, Tibet, and Japan; the uses of maps, charts, diagrams, and talismans in the Daoist ritual traditions of China and Taiwan; the relationship between sacred texts and ritual visualizations in late imperial Daoism; the religious and ritual dimensions of Chinese landscape painting; and the practices surrounding sacred icons in the Buddhist and Shinto traditions of Japan. In addition to providing a comprehensive introduction to the visual culture of several East Asian religions, this class also asks students to consider the implications these diverse practices have for how we ourselves perceive, understand, and engage with the visual world around us.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 365 Sacred Stuff Material Religion (3 credits)

Sacred Stuff approaches the study of religious experience through the material world, objects, feelings, and sensations. What does religion feel like? How does it taste or smell? We will explore varieties of religion through our senses and study sacred objects crafted by artists inspired by the divine.

Attributes: Asian Studies Course, Religious Difference Course, Undergraduate

REL 370 Spec Topics in Relig Studies (3 credits)

Concentrated focus on a selected theme in theology or religion at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications vary by section. Does not fulfill the GEP.

Attributes: Undergraduate

REL 380 Prophecy in the Ancient World (3 credits)

Who were the ancient prophets, both biblical and non-biblical? When do gods speak directly to humans via prophets, and when is a third-party human intermediary necessary to mediate between that prophet and the ruler? This course will probe the scope of political authority in Mesopotamia, Ancient Israel, and Ancient Greece with a particular focus on the role of prophets and diviners in society. Through critical analysis of a spectrum of ancient sources from Mari (modern-day Syria), Ancient Israel and Judah, and Delphi and Claros (Greece), we will investigate the system of mediation among prophets, intermediaries, and kings to undertake an interdisciplinary study of ancient prophecy.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 382 Women & Religion in Anc Wrld (3 credits)

An investigation of issues related to women and gender through case studies from the Ancient Near East and Ancient Israel through Late Antiquity. In addition to literary sources, students will also consider the importance of archaeology in the discussion of ancient religions and women's ritual practices. Primary sources will illustrate issues such as gender identity, difference, sameness, subordination, privilege, cultural dynamics, marginalization, oppression, resistance, and the role of women in historical and social change. Emphasis will be placed on developing epistemological theoretical, and methodological awareness and critical understanding of the implications for the broader study of religion, gender, and human diversity.

Attributes: Ancient Studies Course, Diversity Course, Gender Studies Course, Religious Difference Course, Theology Level 3, Undergraduate

REL 383 Ancient Greek Religions (3 credits)

This course will be an introduction to the world of thought and practice that contemporary scholars call ancient Greek religion. The main materials of the course will be drawn from the ancient Greeks themselves—from poets, artists, playwrights, and mythographers. Emphasis will be placed on the myths and festivals that formed the fabric of ancient Greek religious practice and outlook. Ancient perspectives on cosmos (universe), polis (city and its society), psyche (self) and theos (gods) will be explored.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 392 Directed Readings in Religion (3 credits)

A study of significant themes or issues in Theology or Religious Studies under the direction of faculty in the department. Frequent consultations and written reports are required. Prior written permission of the instructor and approval from the chair is required. Does not fulfill the Theology/Religious Studies GEP.

Attributes: Undergraduate

REL 395 Approaches to Study of Religion (3 credits)

A selected survey of the variety of theories and methodological approaches employed in the modern academic study of religion. Approaches to be examined in class include the psychological, sociological, anthropological, archeological, theological, feminist, and socio-biological. Classic thinkers may be included, but most of the course will focus on authors who represent recent developments, such as the new evolutionary approaches to religion. Course work will emphasize direct engagement with the writings of the major theorists themselves (reading and analysis of primary texts).

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

REL 470 Spec Topics in Religs Studies (3 credits)

Concentrated focus on a selected theme in theology or religion at a highly-advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications vary by section. Does not fulfill the GEP.

Attributes: Undergraduate

REL 491 Intern in Religious Studies I (3 credits)

This course is an experiential learning experience in which students work 10 hours per week (total 130 hours) in an organization related to the Religious Studies. The internship is a way to see how different areas of religious studies are used "on the ground" in public, private, non-profit, community, and church-related organizations. In addition to their hours, students must keep a journal, meet regularly with their faculty adviser, and complete a final essay that connects their learning experience in the internship to their other coursework and the goals of the major. For the required application, please see the department chair.

Attributes: Undergraduate

REL 492 Intern in Religious Studies II (3 credits)

This course is an experiential learning experience in which students work 10 hours per week (total 130 hours) in an organization related to the Religious Studies. The internship is a way to see how different areas of religious studies are used "on the ground" in public, private, non-profit, community, and church-related organizations. In addition to their hours, students must keep a journal, meet regularly with their faculty adviser, and complete a final essay that connects their learning experience in the internship to their other coursework and the goals of the major. For the required application, please see the department chair.

Attributes: Undergraduate

REL 493 Ind Research in Religion (3 credits)

Directed independent reading and research supported by discussion with other students and instructors. Open to senior theology majors and minors and other senior students by permission of the Chair. Does not fulfill the Theology/Religious Studies GEP.

Attributes: Undergraduate

REL 494 Ind Research in Religion (3 credits)

Directed independent reading and research supported by discussion with other students and instructors. Open to senior theology majors and minors and other senior students by permission of the Chair. Does not fulfill the Theology/Religious Studies GEP.

Attributes: Undergraduate

REL 495 Theory & Method Study Religion (3 credits)

A survey of a wide array of theories and methods employed in the modern study of religion, such as psychological, sociological, anthropological, phenomenological, feminist, socio-biological, and other approaches. Both classic and recent theoretical models will be discussed, with special interest in current methodological developments in the academic study of religion. Emphasis will be placed on direct engagement with the writings of the major theorists themselves. Open to junior and senior theology majors and minors and other junior and senior students by permission of the Chair.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

Theology

THE 150 First Year Seminar (3 credits)

Seminar subjects vary.

Attributes: First-Year Seminar, Undergraduate

THE 153 Encountering the New Testament (3 credits)

This course examines the biblical traditions and texts of the Christian Scriptures as products of particular historical and cultural communities, and as literary and theological documents. Although it focuses on the New Testament, the course will also introduce biblical studies more generally, including the relationship between the Hebrew Bible and New Testament. Special attention will be paid to the need for historical- and literary-critical methods to interpret the Bible as mandated by the 1943 Papal encyclical, "Divino Afflante Spiritu," and later Church documents. This course will also help students acquire familiarity with the great diversity in the New Testament about regarding the person and significance of Jesus, the role and structure of the Christian community, and how discipleship is understood.

Attributes: Signature Course, Undergraduate

THE 154 Catholic Theological Tradition (3 credits)

This course critically engages the Christian, particularly Catholic, understanding of humanity in relation to God. It undertakes this study from historical/chronological, philosophical, or thematic/topical approaches. It introduces central Christian theological concepts, such as the doctrines of Christ, the human person, sin/grace/salvation, sacramentality, and moral principles such as the preferential option for the poor, solidarity, and the common good.

Attributes: Signature Course, Theology Level 1, Undergraduate

THE 155 Catholic Social Tradition (3 credits)

This course engages students in study of Christian teachings and practices related to the call to social responsibility, particularly in what is known as Catholic Social Teaching. Students examine the theological, historical, and biblical foundations of ethical commitments, explore a variety of central principles within the tradition (for instance, human dignity, social justice, rights, solidarity, and preferential option for the poor); and analyze how these ethical insights inform analysis of situations in the contemporary world (for instance, economic justice, international development, human rights, war and peace, the forced migration, and care for the global environment).

Attributes: Signature Course, Undergraduate

THE 170 Special Topics in Theology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

THE 211 Hebrew Bible (3 credits)

This course will examine the biblical traditions and texts of the Hebrew Scriptures as products of particular historical and cultural communities, and as literary and theological documents.

Attributes: Religious Difference Course, Undergraduate

THE 241 Intro to Systematic Theology (3 credits)

An investigation into the sources, norms, and key categories of Christian theology from its origins to the present. The ancient sources, contemporary issues, and related political, social and economic contexts will be studied using analytical, autobiographical, and narrative resources.

Attributes: Undergraduate

THE 261 Christian Social Ethics (3 credits)

This course provides a general overview of the forms and teachings of Christian ethics and how they impact the broader society. Specific social forms based upon human rights, theological virtues, conceptions of justice and the common good will be analyzed through teachings on war, the conquest, race, gender, class and the relationship between church and state. Particular attention will be given to the recent papal encyclicals.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Health Care Ethics Course, Justice Ethics and the Law , Undergraduate

THE 270 Special Topics in Theology (3 credits)

Concentrated focus on a selected theme in theology at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications differ by section.

Attributes: Undergraduate

THE 323 The Psalms (3 credits)

The most influential of all Old Testament books for Christian spirituality, the Psalms offer a special glimpse into the religious life of ancient Israel. Placed within their larger historical background, psalms of various types (laments, hymns, royal and wisdom psalms, etc.) will be studied for their literary and religious character. The question of the Psalter's theology as a whole will be addressed as well.

Attributes: Ancient Studies Course, Undergraduate

THE 324 NT&Chr Atts to Jews/Judaism (3 credits)

The New Testament and Christian Attitudes toward Jews and Judaism: Although the New Testament conveys God's love in Christ to billions of readers, over the centuries "erroneous and unjust interpretations... relative to the Jewish people" (Pope John Paul II, 1997) promoted hostility and violence. This course explores this recurring "anti-Jewish" dynamic with a special focus on contemporary Catholic teaching on Gospel interpretation and particularly problematic scriptural passages.

Attributes: Religious Difference Course, Undergraduate

THE 325 Synoptic Gospels (3 credits)

A study of each Synoptic Gospel in its own unique historical and cultural context with special emphasis on the application of the most recent critical methodology. Students will grapple with the problems of historical distance by applying recent literary and historical methods to questions such as the identification of literary genre, narrative structure, agendas and target audience, rhetorical techniques, and tensions between author's creativity and use of older sources.

Attributes: Ancient Studies Course, Undergraduate

THE 326 Letters of Paul (3 credits)

The aim of this course is to examine the main characteristics of Paul's faith as found in his epistles. The course will establish the broad argument of each of the letters, their historical setting, and their literary and rhetorical character, and demonstrate how these elements work together to express Paul's gospel.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Ancient Studies Course, Faith-Reason Course, Undergraduate

THE 331 Early Christn Thought (3 credits)

An historical and theological investigation of the Christian community during the first four centuries. Among the topics to be considered are the relationship of the early church to classical culture, conflicts over issues of orthodoxy and heresy, and the links between historical context and early Christian doctrinal claims. The course will also investigate the development of the canon of Scripture, Christian leadership structures, the creeds, and early Christian traditions of martyrdom, monasticism, the sacraments and worship.

Attributes: Undergraduate

THE 333 Knowl & Love of God: Mid Ages (3 credits)

A study of major figures in the history of Latin Christian thought from 400 C.E. to 1500 C.E. with a concentration on theories concerning how we know God and what it means to love both God and neighbor. Emphasis is on the reading of primary sources, both scholastic and monastic, in translation. Course content will require that we consider who God is, who we are in relation to God, Jesus Christ's role in both our knowledge of God and our capacity to love, and the relationship between faith and reason.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

THE 334 Revolt, Reform, Reunion? (3 credits)

This course explores the religious, social, political, and cultural factors that precipitated the Protestant Reformation, with particular emphasis given to theological issues, such as justification, the role of scripture in the life of the church, church structure, the nature of ministry, and the sacraments. In addition, the course examines the progress that has been made in the 20th and 21st centuries to overcome the difference of the 16th century as a result of ecumenical dialogue between Roman Catholic Church, various Protestant churches, and the Anglican Communion.

Attributes: Undergraduate

THE 335 Gendr & Christian Spirituality (3 credits)

An examination of some of the spiritual classics written by both the men and women of the Christian faith. Emphasis on reading and study of primary texts, largely medieval, with an eye to any discernible differences between men as spiritual authors and women as spiritual authors. Course will also examine the given perceptions of gender, spirituality and eroticism.

Attributes: Diversity Course, Faith Justice Course, Gender Studies Course, Undergraduate

THE 339 Darwin, Dogma, and Ecology (3 credits)

In his 2015 encyclical, *On Care for our Common Home* (*Laudato Si'*), Pope Francis makes an urgent appeal to "every person living on this planet" for dialogue and action in the face of impending environmental collapse. Of course, the pope's argument is grounded in Roman Catholic teaching; however, his critique is more philosophical than theological. It concerns not just the detrimental effect modern technology has had on the environment, but, more fundamentally, how modern science understands our knowledge of the world, and how in turn this understanding has adversely affected human action. The course will investigate the development within Catholicism of an evolutionary worldview that critically embraces neo-Darwinian science, but also distinguishes between religious faith-traditions and secular faith-traditions, suggesting how the former might prove more effective than the latter in addressing the ecological crisis.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 340 Atheism and the Case for God (3 credits)

Over the past twenty years several best-selling authors have mounted a concerted attack on religion, advancing an argument that is, purportedly, so fresh and compelling as to earn them the title, "The New Atheists." The more important and enduring cultural phenomenon affecting religious practice today is the secularism that has increasingly dominated modern civilization, religious belief and practice became significant options rather than cultural givens. This course deals with the question of whether secularism arose in reaction to religion, or as one of religion's greatest success stories. Much of the analysis will be historical: When and how did the secular movement arise? What notion of "God" did it reject? But the course will also address questions that are more philosophical and theological in nature: Has natural science disproved religion? And is secularism properly understood as necessarily concurrent with scientific advance?

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 341 Jesus through the Centuries (3 credits)

An inquiry into Western Christianity's understandings of the meaning and significance of Jesus Christ, including New Testament Christologies, the controversies of the 4th and 5th century councils, medieval atonement theories, post-Enlightenment problems and reformulations, and contemporary liberation Christologies. Students will be encouraged to develop their own Christological position as an integral part of the course.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 342 Does God Exist? (3 credits)

"Is there a God?" is the first and foremost question for many. In this course, students will explore a variety of theories regarding the question of whether or not a singular (monotheistic) God exists. The arguments that address this age-old question will be evaluated epistemologically, that is, through the lens of what kind of knowledge is being considered and how this knowledge is attained. In grappling with the topic, the course will also consider such related questions as the following: What is there a great nothingness and silence from the heavens? What is the meaning of life? Can we attain true happiness and fulfillment in this life? If God exists, why is there so much evil, violence and hunger in the world? Does life end at death or is it just changed?

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 343 Theology of Word and Sacrament (3 credits)

The course explores the Christian's experience of God speaking and acting in the world and the Christian's response of listening and praising God in the Christian community. The interrelationship of the words and actions of God and His people are examined.

Attributes: Undergraduate

THE 344 Theology of the Church (3 credits)

The spirit of the Church as Christian community, the people of God who witness to the Christian mission between the resurrection of Christ and his Parousia. The foundations of the church in the Scriptures, modern interpretations of its composition, relationship to the world, and goals. Readings from Vatican II and contemporary theologians.

Attributes: Undergraduate

THE 345 Evil as a Theological Problem (3 credits)

An examination of the profound challenge both to religious understandings of a meaningful and ordered existence and to theological claims regarding an omnipotent, beneficent deity rendered by the occurrence of evil and the suffering that accompanies it. The course will contextualize particular manifestations of evil and investigate how evil is identified, explained, challenged and interpreted through texts in theology and popular culture, with particular attention to its modern and contemporary manifestations.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 211)

Attributes: Faith-Reason Course, Undergraduate

THE 346 Salvation as Story & Belief (3 credits)

In this course, redemption is presented in its two simultaneous dimensions - the unique and salvific role of Christ in the plan of Salvation, as well as the role of individual persons in response to Christ. This two-fold nature of salvation results in the paradoxical formulation of redemption as both an accomplished event as well as an unfinished, developing relationship. The mysteries of the Incarnation will be investigated as the already, complete aspect of redemption, while an inquiry into human morality and moral values will address the developing, relational dimension of redemption.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 347 Death and Rebirth (3 credits)

The course deals with the systematic theological topic of eschatology, the study of the "last thing" (eschaton), which is God or the Reign of God; and the "last things" (eschata), which are death, individual judgment, heaven, hell, purgatory, the Second Coming of Christ, the resurrection of the body, general judgment, and the consummation of all things in the perfection of the Kingdom of God. The course includes a survey of traditional, (especially biblical) approaches to eschatology, but its methodology will proceed largely "from below" as an exercise in "hope seeking understanding." Thus, the course will include an ecumenical perspective, and community service in the form of care for the dying (especially hospice). Students will be expected to make critical judgments concerning cultural practices relating to care of the dying, treatment of the dead, and the acceptance of death as an event of life.

Attributes: Health Care Ethics Course, Undergraduate

THE 348 Theology and Science (3 credits)

An exploration of the Galileo Case, evolution, contemporary Big Bang cosmology, and quantum theory show how the relationship between theology and science has developed to the present day. The scientific, methodological and theological issues will be critically evaluated for their significance today. Students will thus be provided with the basic tools for understanding and participating in the contemporary dialogue between science and theology.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Theology Level 3, Undergraduate

THE 349 Theology of Disability (3 credits)

This course will examine the relationship between the way in which human disability is approached, on the one hand, from the perspective of the theological anthropology found in the Christian faith and, on the other hand, how it is approached by other contemporary discourses. More specifically, the course will examine the adequacy of certain contemporary approaches to disability and inquire into ways in which the Christian theological tradition can contribute to the project of rethinking and re-imagining the nature of human disability as well as the nature of the human person in general.

Attributes: Diversity Course, Faith Justice Course, Health Care Ethics Course, Undergraduate

THE 350 The Beauty of God (3 credits)

This course explores how beauty serves as a way to God. In the history of all three major monotheistic faith traditions (Judaism, Christianity, and Islam), it was believed that God identified himself through various divine names. Focusing primarily, though not exclusively, on the Judeo-Christian tradition, this course examines beauty as one of these divine names. Consequently, the mode of theology that will ground this exploration is what has recently come to be called theological aesthetics. As a mode of theology, or a theo-logic, theological aesthetics draws from the principles of human reason as the art of thinking well (hence as a logic) and the event of divine revelation. Insofar as it unites theology with beauty, a theological aesthetic not only draws from the grammar, language, and thinking associated with beauty and art, but attempts to tie these more deeply to both human reason and divine revelation. Taking its cue from aesthetic experience, this course is divided into three basic parts: part 1 is the encounter with the object of interest, namely God's existence; part 2 examines the subjective aspects of the encounter, namely, the socio-cultural dimensions of how we come to understand God, "religion," faith, etc.; and part 3 examines the results inspired by the encounter, namely, the reception of divine beauty in revelation, music, responding to evil and human suffering, and mysticism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

THE 351 Ignatian Spirit in Jesuit Trad (3 credits)

An examination of and reflection on the religious vision of Ignatius of Loyola and its embodiment in the life of the Society of Jesus, including a reading of the Spiritual Exercises. An overview of the major movements and influential persons in Jesuit history, a study of Jesuit spirituality and theology, and a consideration of the role of the Jesuits in broader church life.

Attributes: European Studies Course, Undergraduate

THE 352 Recent Trends in Roman Catholic (3 credits)

Recent Trends in Roman Catholicism: This course will deal with the documents of Vatican II, current understandings of the sacraments of the Catholic Church, the movements towards unification among the Christian churches, recent suggestions for the exercise of the papacy in the future, and the modern emphasis on social justice as part of Catholic life and practice.

Attributes: Undergraduate

THE 353 American Catholicism (3 credits)

American Catholicism: This course deals with the diverse dynamics within the life of the Roman Catholic Church in the United States with a main focus on the 19th and 20th centuries. It will study the theological development of this indigenous Catholic tradition and situate it within its broader historical and cultural context.

Attributes: American Studies Course, Undergraduate

THE 354 Beauty&ConsciousnessInTheArts (3 credits)

This course is designed to enable students to examine the relationship between faith and reason in the context of beauty and consciousness. It will do this in two ways. First, with the goal to acquiring a relative mastery, it will offer students an opportunity to engage and explore certain themes pertaining to beauty and consciousness that are relevant to major figures within the Christian theological tradition. Second, it will enable students to demonstrate their relative mastery over these themes by bringing them into conversation with contemporary presentations of those themes as they appear in artistic form.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

THE 355 American Religious Thought (3 credits)

An historical survey of the traditions of American religious thought with special regard for the 19th and 20th centuries; a critical examination of representative religious thinkers and theologians; a study of the role of religion in American life and society.

Attributes: Undergraduate

THE 356 Liberation & Pol Theologies (3 credits)

An inquiry into the critique and vision brought to theology by the perspective of the poor and oppressed in the 20th century via the paradigm known as liberation and political theology. An extensive examination of the context and methods of Latin American liberation theology followed by an examination of European political theology and African-American liberation theology. Other topics for consideration may include the work of Hispanic, Asian, African, and North American feminist liberation theologians.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith Justice Course, Faith-Reason Course, Latin American Studies Course, Undergraduate

THE 357 Feminist Theologies (3 credits)

An inquiry into the sources, contexts, methods, and symbols of Christian theology from the perspective of women in the process of human liberation. The roles of women in church and society, the history of the women's movement in North America, and the experiences and theological perspectives offered by feminists of differing racial, ethnic and socioeconomic background will be examined. Feminist reflections within other religious traditions may also be considered.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith Justice Course, Faith-Reason Course, Gender Studies Course, Undergraduate

THE 358 Faith, Justice & Jesuit Miss (3 credits)

This course will challenge students to reflect theologically on the historic grounds of the Christian faith and how and why, for many throughout Christian history, a concern for social, economic, and political justice is rooted in the Christian Gospel. It will also familiarize students with the historical, social, religious, economic, political, educational and cultural context of contemporary Bolivia; teach students how to stand outside their own epistemological system and more fully understand the reality of the cultural "other;" and assist students to integrate this knowledge into a complex understanding of the demands of faith and the work of justice within the specific context of contemporary Bolivia. When taught as a study tour, the class will spend 10 days over Spring Break in Bolivia visiting the mission sites of the Jesuit organization Fe y Alegria.

Attributes: Ethics Intensive, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

THE 359 Religion, Violence & Terrorism (3 credits)

Religiously motivated violence constitutes one of the most important socio/economic/political factors in the twenty-first century. This course will probe both the roots and the recent manifestations of violence and terrorism in the name of religious convictions and traditions. Through rigorous investigation of both primary and secondary literature, this course will provide a thorough presentation of the theological roots of religious violence, as well as its contemporary manifestations. The course will unfold in three parts: 1) the roots of religious violence: scripture, sacrifice and ancient conquest; 2) cosmic struggle: the violence of apocalypticism then and now and 3) contemporary manifestations: sexism and racism; recent religious wars and genocides; and terrorism. When taught as a study tour, will include international travel.

Attributes: Globalization Course, Irish Studies Course, Undergraduate

THE 360 Rel Vision in Film & Fiction (3 credits)

This course introduces fiction and films that are driven by religious sensibilities and theological insights. Issues rising throughout the course include deity, sin, forgiveness, grace, redemption, virtue, and community. Student expectations entail critical analysis and theological reflection, as well as a very basic grasp of the phenomenon of human religiosity.

Attributes: American Studies Course, Undergraduate

THE 361 Catholic Social Teaching (3 credits)

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and integrated appropriation of these documents. Beginning with *Rerum Novarum* (1891), we will examine the most important papal, conciliar, and episcopal social teaching texts up to the present time, identifying foundation principles, tracing central theological, ethical, and ecclesial concerns, and locating each document in its proper historical context.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Health Care Ethics Course, Undergraduate

THE 362 Fth & Jus: Sctpt & Soc Values (3 credits)

Faith and Justice: Scripture and Social Values: How and why a concern for social, economic, and political justice is rooted in and demanded by the Christian gospel, and what this has to say about the nature and mission of the church. An overview of the social teaching of the Catholic Church in the past century with emphasis on the thought of the most recent popes. Consideration of certain social justice issues: war and peace, crime and punishment, world hunger, racism, human rights, and the international economic order.

Attributes: Faith Justice Course, Latin American Studies Course, Undergraduate

THE 363 Ignatius & Cty: Jesuit Urb Mis (3 credits)

Ignatius and the City: Jesuit Urban Missiology: This course reviews the theology and spirituality of Ignatius of Loyola and how his early followers in the Society of Jesus established a particular missiology. Study of the network of ministries created by the first generation of Jesuits in Rome will be the first part of the course with particular emphasis on the urban context. An examination of how that missiology has been used in and around the City of Philadelphia in the 18th, 19th, and 20th centuries will also be included in the course.

Attributes: Undergraduate

THE 364 Pursuit of Love: Sexual Ethics (3 credits)

This course explores some basic questions: What is love, and what does it mean for Christians to try to live as God-like lovers in all that they do, and specifically in living as sexual beings? If love is considered a necessary context for genital involvement, what specific characteristics must this love have in order to render its genital expression morally acceptable? How do we distinguish morally appropriate genital activity from that which is not? These questions are addressed within the general theological framework of Christianity that recognizes human sexuality as a multi-faceted reality involving our bodies, minds and hearts. In dealing with the moral questions and arguments surrounding premarital sexual activity, contraception, same-sex genital acts, masturbation and abortion, how can we resolve the possible tension that may arise between the promptings of our personal conscience and the official moral teachings regarding sexuality that are put forth by the Catholic Church, other Christian churches and some major religions of the world?

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

THE 365 Marriage/Same Sex Union/Divorc (3 credits)

Marriage, Same Sex Unions, and Divorce: Examining the Ethical Issues: The Judeo-Christian tradition regards marriage as a divinely instituted reality designed, not only to enhance the humanity of men and women and to establish a stable environment for the nurturing of children, but to serve also as a reminder and embodiment of God's loving relationship with His people. This course lays bare the tension between the biblical and theological texts highlighting the sacred status of marriage and the many secular aspects of contemporary society that portray marriage as "just a piece of paper" or as little more than a legal fiction. This tension shapes discussions of the psychological, social and ethical dimensions of love, marriage, and sexuality. People who marry today do so in the face of numerous questions and challenges: the "hook-up" culture, accepted, even expected, cohabitation, the extended meaning of "family," recognition of same-sex civil unions and/or marriages, undefined gender roles, and high divorce rates that are supported, perhaps even encouraged, largely by "no-fault" divorce laws. These issues are addressed, along with the ethical arguments surrounding various kinds of reproductive technology and family-planning methods. In addition, the course explains the Catholic Church's laws regarding the "impediments" or obstacles to a valid marriage, and the granting of annulments, and delves, finally, into the social, ethical and theological controversies surrounding divorce and remarriage, with particular attention given to their effects on children.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

THE 366 Christian Medical Ethics (3 credits)

With the technological inauguration of the age of new medicine we have at our disposal more means than norms for intervention in the life, health, and death processes of human existence. Even more crucial is the question: "Should we do everything that is within our capacity to do?" Consideration will be given to the contribution of Christian ethicists in their reflection on the issues involved in abortion, reproductive engineering (AIH, AID, IVF, cloning, etc.), care of the dying, euthanasia, medical experimentation, organ transplantation, and the rights of patients.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Health Care Ethics Course, Justice Ethics and the Law, Latin American Studies Course, Undergraduate

THE 367 Suffering and Death (3 credits)

Biblical, Systematic and Ethical Perspectives: Dramatic advances in medical information and technology increase daily and these advances are being implemented almost immediately. As a result, people who have succumbed to their illnesses only a few years ago can now have their lives extended by being treated aggressively. This treatment does prolong the lives of many people, but in the process it also causes people to endure much pain and suffering. As a result many Christians are focusing on the age old question of "why do innocent openly have to suffer?" Various answers have been given to this question by society: Dr. Kevorkian's "death machine," Oregon's "Death With Dignity Act," direct abortion of defective fetuses, and even infanticide. It has been said that "only the suffering human person knows that he/she is suffering and wonders why; and he/she suffers in a humanly speaking still deeper way if he/she does not find a satisfactory answer." This course will examine the meaning of personal suffering, as well as the Christian response to the suffering of others from biblical and systematic perspectives. Students will then apply these insights to two specific medical ethics issues-physician-assisted suicide and medical treatments for handicapped newborns.

Attributes: Undergraduate

THE 368 Just Hlth Care in Dev Nations (3 credits)

Just Health Care in Developing Nations: An investigation of adequate health care as a fundamental human right. The course will proceed from the premise that socially induced needs are a result of historical development of material and social conditions, coupled with a social consensus that some things are necessary for happiness, social life, or some other goal. It will consider the inability of many societies to supply adequate health care as an issue of basic personal dignity, a claim against society, and as a matter of justice. The course will examine the issue of just health care for all peoples from both public health and ethical perspectives. When taught as a study tour, students will travel internationally.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Globalization Course, Health Care Ethics Course, Justice Ethics and the Law , Latin American Studies Course, Theology Level 3, Undergraduate

THE 370 Special Topics in Theology (3 credits)

Concentrated focus on a selected theme in theology or religion at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Other certifications differ by section.

Attributes: Undergraduate

THE 371 Christianity and Media (3 credits)

This course offers an opportunity to explore the relationships between Christianity and the wide variety of modes of communication that we refer to as "media." In the course, students will engage in two basic tasks. First, students will engage in the descriptive task of identifying the current state of the media with respect to religion. How are religions and religious issues portrayed in various media? How do Christians understand and use media for their various purposes? Second, the class will engage in the normative task of judging the social and moral worth of the various modes of communication using the resources of the discipline of Christian social ethics. Does the current media landscape support human flourishing and the just society? If so, what should be done to ensure that this continues? If not, how might it be shaped so that it supports such development?

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Undergraduate

THE 372 Technology Ethics (3 credits)

This course will engage in critical reflection on technology, its role in human lives, and its impact on society. The course will examine various theories of the nature technology. It will also investigate particular resources available within the discipline of Christian social ethics that are central to understanding and evaluation the moral worth of various technologies, such as common good, justice, human dignity, development, and solidarity. These conceptual tools will then be used to explore the ethical implications of technology will be the assessment of a variety of particular cases of both commonplace and emerging technologies (e.g., civil engineering, cellular telecommunications, social media, surveillance, digital divide, data security, product manufacturing and disposal, intellectual property, body modification, and the post-human movement).

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Justice Ethics and the Law , Undergraduate

THE 373 Economic Ethics (3 credits)

Economic Ethics: This course will examine the historical, social and philosophical conditions that gave rise to economics as a distinct discipline. Both the theory and practice of economics will be subjected to an ethical analysis drawing upon biblical and theological sources, particularly emphasizing Catholic teaching. Different economic systems will be compared and different forms of economic life and teaching within the Christian church will be discussed.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Globalization Course, Justice Ethics and the Law , Undergraduate

THE 374 War and Peace (3 credits)

Throughout Christian tradition, theologians have argued for and against Christian participation in war. This course will examine these arguments through reading relevant biblical, theological, historical and philosophical materials. We may explore how the various arguments have been represented (or misrepresented) in popular culture through film.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Irish Studies Course, Undergraduate

THE 380 Interreligious Dialogue (3 credits)

This course will involve both study and immersion: study of the history and theology of dialogue chiefly but not exclusively in Catholic Christian circles; immersion by writing and by regular involvement with local temples, mosques, synagogues, meditation centers, etc. Lecture with discussion and meditation. Reflection and research papers, focusing on one's own interior dialogue as well as exterior dialogue.

Attributes: Religious Difference Course, Undergraduate

THE 381 One True Religion? (3 credits)

This course examines Christian responses to two important questions: Can the world's many religions, which have different beliefs and different practices, all be true, or must only be true? If, as Christianity has claimed throughout its history, salvation is possible only through the mediation of Jesus the Christ, does this mean that anyone who is not Christian is not "saved," or is consigned to hell? Among the topics explored: classical and contemporary theories of truth; the relationship of truth and salvation; Christian theories of exclusivism, inclusivism, pluralism, and particularism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 382 Religion, Society, and God (3 credits)

This course is an inquiry into the theological and philosophical nature of religion. What is the origin and development of religious traditions? Are there characteristics which are universal and how does theology and philosophy view them? The course will look at diverse modes of religious experience and conceptions of God, human existence and community. The philosophical and theological perspectives on the meaning of belief, symbolism and ritual in the spiritual quest for the transcendent.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 384 Jews/Chr: Theologies Compared (3 credits)

The course studies fundamental religious questions as understood from various Jewish and Christian perspectives. Christian and Jewish students will gain an understanding of the other religious community while also deepening their understanding of their own. Other students will encounter the two traditions through a comparative lens. Topics to be discussed include the experience of God; the Bible; how Christians and Jews understand their relationship to God and the world; worship and prayer; and the destiny of the created universe.

Attributes: Religious Difference Course, Undergraduate
