This course will be an introduction to the market research process with applications to either students' own companies or companies in the market place. This course will cover qualitative research, as well as converting management problems to answerable research questions. Each section will have a focus on best practices to collect and interpret the data. The focus of the course is qualitative research as it is a powerful tool which plays a part in conducting food and beverage marketing research into customer value analysis, branding and naming, new product launch, customer satisfaction, and market segmentation, among other food and beverage marketing areas. Its techniques include all types of focus groups, in depth one-one-one interviews, intercept studies and observational research. Students will be assessed by completing a full market research report from hypothesis generation to analysis and will involve multiple qualitative methods.

FMK 732 Consumer Advertising & Promo. (3 credits)

Communications in Food & Beverage Marketing is designed to investigate the strategy and tactics required to create and execute an integrated consumer marketing communications program in the food industry. Communication theory and application will be discussed in their relation to advertising. Targeting, the creative process, media options, budgeting and the evaluation of advertising and consumer promotion will be highlighted. Effective creation, communication and implementation of promotional strategies will be evaluated. The role of consumer promotions (coupons, rebates, contests, sampling, etc. within the context of Marketing Strategy will be examined, as well as their advantages and limitations. Creative strategies to maximize impact and program development/evaluation will also be discussed.

Restrictions: Enrollment limited to students in the MBAFMKT or MSFMKT programs. Enrollment is limited to Graduate level students.

FMK 734 Trade Promotion & Optimization (3 credits)

While consumer advertising and promotion is more visible to the consumer, trade promotion is about half of a food companies' budget. One can think of consumer promotion getting product to move off the shelf, trade promotion is how to get products on the shelf. This course will look at the various forms of trade promotion such as off invoice, bill backs, slotting allowances, advertising allowances, sponsorships, end caps etc. Attention will be given to optimization of trade promotions.

FMK 742 Multicul&Int Food&Beverage Mkt (3 credits)

Multi-Cultural & International Food & Beverage Marketing will explore the opportunity for food and beverage retailers and manufacturers to increase sales by better understanding the tastes and needs of an ethnic community. As the U.S. consumer demographics are shifting, it is critical to have a better understanding of current customers and potential customers. We will discuss products, advertising, promotional opportunities, community relations and important holidays. The goal will be to show how companies can create an "attitude" that will let people find the foods and beverages that they want in an atmosphere that makes them feel good. While the growth markets are the emerging markets, the bulk of food and beverage trade is still in the developed markets of the world such as the E.U., Canada, and Asia. This course will study exactly what the new rules of trade are and how they affect American food business. This course also explores the expanding market opportunities in the BRIC (Brazil, Russia, India and China) for food and beverage products and retailing formats, focusing on how business models differ between emerging countries and between developing countries.

Restrictions: Enrollment limited to students in the MBAFMKT or MSFMKT programs. Enrollment is limited to Graduate level students.

FMK 743 International Marketing (3 credits)

While the "growth markets" are the emerging global markets, the bulk of food and beverage international trade is still in the developed markets of the world such as the E.U., Canada, and Asia. This course will study exactly what the rules of trade are in global food marketing and how they affect American food business. This course also explores the expanding market opportunities in the BRIC (Brazil, Russia, India and China) for food and beverage products. The course will also focus on how business models differ between emerging countries and between developing countries.

Restrictions: Enrollment is limited to Graduate level students.

FMK 753 Food & Beverage Retail Mktg (3 credits)

Retailing in the food and beverage industry is constantly changing. From dollar stores to full service supermarkets to online venues, the industry has never been more diverse and competitive. Food & Beverage Retailing Marketing will seek to understand the strategic decisions that retailers make throughout the diversity of retail formats. A variety of perspectives including manufacturer and consumer on the retail landscape will also be covered. Students will be responsible for developing a retailing strategy in this course.

Restrictions: Enrollment is limited to students with a major in Food Marketing. Enrollment is limited to Graduate level students.

FMK 762 Food & Beverage Policy (3 credits)

Sustainability, both operational and environmental, and consumer well-being are driving forces within the food and beverage industry and stimulating key issues in food and beverage policy, especially for food and beverage security, environmental and obesity challenges. Food & Beverage Policy, Sustainability and Consumer Well Being will introduce marketers to fundamentals and current issues in food and beverage policy, sustainability stakeholders, and food and beverage well-being concepts. The course emphasizes a marketing perspective to drive consumer well-being and sustainability for competitive advantage and meaningful differentiation thereby optimizing growth and profitability in the context of a regulated environment.

Restrictions: Enrollment limited to students in the MBAFMKT or MSFMKT programs. Enrollment is limited to Graduate level students.

FMK 772 Foodservice Mktg Management (3 credits)

Foodservice Marketing Management provides an introduction to the role and function of foodservice marketing and the foodservice marketing channel. Students will develop an understanding of the commercial and non-commercial on-site segments and the underlying factors and processes that shape strategy and tactics for foodservice marketing. This course examines the dynamics of the ever-changing distribution network between a manufacturer and the foodservice operator. Manufacturers face the challenges of maintaining or increasing their market share against the competition and selecting the best distribution channels to get their products to the foodservice operator. Distributors' challenges include the increased costs of operations and pressure between balancing manufacturer brands and their own private label brands, and how that effects what foodservice operators and customers will buy. Students will learn logistics and ordering technologies, marketing incentives, and how direct or brokers sales forces play in the success of a manufacturer product as it travels through the distribution channel.

Restrictions: Enrollment limited to students in the MBAFMKT or MSFMKT programs. Enrollment is limited to Graduate level students.

FMK 781 Indep Study: Food & Bev Mktg (3 credits)

Independent Study in Food and Beverage Marketing is designed to accommodate those students who have an interest in a research-worthy topic that can be examined on an independent research basis. The student will work closely with a professor on a research area that will require the identification of a topic, a literature review, appropriate methodology, and analysis.

Restrictions: Enrollment is limited to students with a major in Food Marketing. Enrollment is limited to Graduate level students.

FMK 783 Food & Beverage Mktg Digi Stra (3 credits)

The food and beverage industry is changing as consumer preferences and technology changes. Digital Strategy for Food & Beverage Marketing investigates current trends in the food and beverage industry focused along technological advances through the internet and social media. Specifically, the rise of online grocery ordering and delivery will be investigated from a consumer and retailer perspective. The best strategies for online ordering will be discussed utilizing consumer behavior and preferences. Additionally, consumers are flocking online and on mobile channels to stay connected with brands through social media sites such as Facebook, Twitter, Snapchat and Instagram. The benefits and strategies for these social networking sites will be analyzed and discussed. The strategies for engaging customers through the mobile platform will also be discussed including loyalty programs, product information and shopping assisting tools.

FMK 784 Food & Beverage Indry Summit (2 credits)

The content for Food & Beverage Industry Summit seminar is based on the annual Department of Food Marketing Food Industry Summit event. Students will attend the one day event and then continue the discussion of the topic during the second day of the course. The actual topics for the course are determined when the Department selects the topic for the Food Industry Summit. These will be contemporary and important issues to the industry.

Restrictions: Enrollment limited to students in the MBAFMKT or MSFMKT programs. Enrollment is limited to Graduate level students.

FMK 785 ST: Food & Beverage Mktg (3 credits)

Future Issues/Special Topics in Food and Beverage Marketing is designed to address areas that will be very contemporary and may have just appeared on the food and beverage horizon or issues that warrant special examination. These may be open to the public for either all or part of the course.

Restrictions: Enrollment is limited to students with a major in Food Marketing. Enrollment is limited to Graduate level students.

FMK 786 ST: Food & Beverage Mktg (1 credit)**FMK 795 Capstone (3 credits)**

This integrative course is designed to permit students, near the end of the course of study, to integrate the knowledge from their previous courses. Also, this capstone course is intended to give students the opportunity to demonstrate the application of the concepts learned during their tenure in the program.

French (FRE)

FRE 101 Beginning French I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students with no experience with the French language. Fulfills one course of a sequence that fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of FR101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the French 102 Placement, French 201 Placement, French 202 Placement or French 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

FRE 102 Beginning French II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid/high level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 101 or Language Placement with a score of FR102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the French 201 Placement, French 202 Placement or French 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

FRE 170 Special Topics in French (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

FRE 201 Intermediate French I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high/intermediate low level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 102 or Language Placement with a score of FR201

Restrictions: Students with the French 202 Placement or French 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

FRE 202 Intermediate French II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar, pronunciation, and writing will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the intermediate low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 201 or Language Placement with a score of FR202

Restrictions: Students with the French 301 Placement attribute may **not** enroll.

Attributes: Undergraduate

FRE 270 Special Topics in French (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

FRE 301 French Conversation (3 credits)

This course is designed to help students improve their oral communication skills in French through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions, and tailoring the discourse to the audience and context. This course is aimed at developing the intermediate mid/high level according to ACTFL - American Council on the Teaching of Foreign Languages. Counts toward the Francophone Studies Program. Fulfills the GEP non-native language requirement.

Prerequisites: FRE 202 or Language Placement with a score of FR301

Attributes: Undergraduate

FRE 302 French Composition (3 credits)

This course is designed to improve students' ability to communicate in written French and to develop the writing skills they will need to succeed in advanced French courses. Skills are developed through a process-oriented approach to writing, including steps related to vocabulary generation, organizing an outline, writing a draft, editing and revising, and writing a final version. Prerequisite: completion of the GEP language requirement in French. Fulfills the GEP Writing-Intensive Overlay requirement.

Prerequisites: FRE 301 or Language Placement with a score of FR302

Attributes: Undergraduate, Writing Intensive Course- GEP

FRE 309 Love and Hatred (3 credits)

Love and hatred are emotions that are at once universal and complicated. Studying these two themes will allow us to discover Francophone literature from diverse genres and time periods. In addition, the course will incorporate videos, music and art to enhance our understanding of the roles played by love and hatred in the Francophone world across the centuries

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 310 Identity (3 credits)

This course focuses on a complex and multi-layered concept at the heart of what it means to be human. Exploring this idea in Francophone literature, music and film will allow us to develop a nuanced view of identity, belonging and community, learning about diverse cultural perspectives while also developing skill at analyzing and commenting on literary texts in different genres.

Prerequisites: FRE 301 or FRE 302 or Language Placement with a score of FR310

Attributes: GEP Art/Literature, Undergraduate

FRE 315 Comp Stylistics & Translation (3 credits)

Students will compare the linguistic structures and modes of expression in English and in French, doing exercises in translation (English-French and French-English) as a means of acquiring a better understanding of both languages and improving their expression in written and spoken French.

Prerequisites: FRE 301 or FRE 302

FRE 321 Love & Desire in Med Fr Lit (3 credits)

Study of the origin and development of the literature and culture of the Middle Ages. Students will read a selection of texts that evoke love and desire in a variety of thematic form and we will also examine representations of love in desire in music, images, and other cultural products and practices. Fulfills the GEP Art/Literature requirement.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 322 Making our Voices Heard (3 credits)

A study of representations of women in works written by French women writers of the Middle Ages and Renaissance, with special emphasis on issues of female identity and voice in the texts. Fulfills the GEP Art/Lit requirement., Diversity course, Gender Studies course, Medieval, Ren & Reform Studies.

Prerequisites: FRE 301 or FRE 302

Attributes: Gender Studies Course, Medieval, Ren & Reform Studies, Undergraduate

FRE 325 The Francophone World (3 credits)

This course is an introductory course for the Francophone Studies major while serving simultaneously as a language and culture course for French majors organized around the notion of "Francophonie." There are four major intellectual components to the course: 1) the historical background of French and Belgian colonization (through research and readings), with particular reference to North America, to the Caribbean, to North Africa and to Sub-Saharan Africa; 2) a sampling of critiques of French colonialism; 3) select texts in postcolonial theory; 4) an overview of the contemporary Francophone world.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 330 Medieval to Early Mod France (3 credits)

This course offers a cultural orientation to the French nation, focusing on the development of languages, ideas, art, architecture and social, political and economic structures within the geographical area sometimes identified as "The Hexagon," from the tenth century to the seventeenth. Fulfills the GEP Art/Lit requirement.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 331 France: Enlightenment to Today (3 credits)

This course offers a cultural orientation to France and the francophone world, focusing on the evolution of ideas, artistic and literary movements, and political, social and economic structures, from the eighteenth century to the twenty-first. Fulfills the GEP Art/Lit requirement.

Prerequisites: FRE 301 or FRE 302

Attributes: European Studies Course, GEP Art/Literature, Undergraduate

FRE 351 French Canada (3 credits)

In this course, we will explore the culture, history, and literature of French-speaking Canada, concentrating specifically on Québec and Acadia. By focusing on questions of language, heritage, and identity, students will examine what it means to be a Francophone in Canada, deepen their knowledge of the unique cultural contributions made by these communities, and enhance their understanding of the complex identities of French speakers in eastern Canada.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 352 Francophone America (3 credits)

In this course, we focus on the question of identity: What does it mean to be a part of a Francophone community in the United States? By exploring the culture, history, and literature of Louisiana and New England-as well as the places where we see French influence in Philadelphia and at SJU- students will deepen their appreciation of the richness of Francophone communities in the United States and enhance their understanding of the challenges facing members of a group whose language and heritage sets them apart.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 366 Current Events in Fr-LangMedia (3 credits)

This course is intended to give students a better understanding of the contemporary French-speaking world and its cultures through analysis and discussion of current events covered in the Francophone news media, both in France and elsewhere. The course will develop listening and reading skills, as well as writing and speaking skills.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 370 Special Topics in French (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the French-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: Language Placement with a score of FR370

Attributes: Undergraduate

FRE 402 Advanced French Composition (3 credits)

This course will develop students' ability to communicate in written French by adding complexity and versatility to their writing skills. The course will guide students in a process-oriented approach to writing, seeking to increase their autonomy as writers and giving them writing and editing practice in a variety of genres.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate, Writing Intensive Course- GEP

FRE 403 Adv Convrstion: A Just Society (3 credits)

This conversation course focuses on current events and contemporary culture, paying particular attention to ethical thinking and the notion of fairness as a principle of social organization. Discussion of controversial topics will be an important aspect of students' work. The course will be informed by justice-focused ethical frameworks (Rawls, Nussbaum, Pope Francis). Participants will be asked to reflect on and to analyze issues as they are represented in television news reports, newspaper and magazine articles, popular songs, film and other media in French.

Prerequisites: FRE 301 or FRE 302

Attributes: Ethics Intensive, Undergraduate

FRE 409 Love and Hatred (3 credits)

Please see the course description for FRE 309. Students taking 409 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 409.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 410 The French Novel (3 credits)

Reading, discussion and analysis of novels from a period ranging from the 17th century to the present. The period(s) of study will be selected by the professor.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 412 Short Nar in Francophone Lit (3 credits)

Reading, discussion, and analysis of short stories and folktales from a variety of French-speaking areas, including Europe, North America, Africa, and the Caribbean. We will seek to define the genres and examine how their content and form change over time and by region, which will foster an understanding of how the tales reflect the culture(s) in which they were produced.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 413 French Poetry (3 credits)

A study of the various forms of French poetry with a particular emphasis on the evolution of the genre from Romanticism to Modernism.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 414 The French Essay (3 credits)

Reading, discussion, and analysis of selected works of representative essayists from the 16th to the 21st century, including Montaigne, Pascal, Diderot, Gide, Camus, Sartre, Barthes, Foucault, and Derrida.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 421 Love & Desire Med Fr Lit & Cul (3 credits)

Please see the description for FRE 321. Students taking FRE 421 will have additional readings and projects to complete. Students who have taken at least three 300-level courses should enroll in FRE 421.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 422 Fr Wom Writ of Mid Ages & Ren (3 credits)

Please see the description for FRE 322. Students taking 422 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 422.

Prerequisites: FRE 301 or FRE 302

Attributes: Diversity Course, Gender Studies Course, GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

FRE 431 The French Enlightenment (3 credits)

Exploring the meaning of the French label for this period, "le siècle des Lumières," reading a variety of texts by major authors (including Voltaire, Rousseau and Diderot, among others) and discussing the major ideas and intellectual projects of the time are the principal activities of the course. Students will gain knowledge of the literature and the social and intellectual culture of this particularly important period in the history of ideas in the West.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 434 French Romanticism (3 credits)

A study of the origins of French Romanticism, its philosophical background, and its various forms of expression from Chateaubriand to Gerard de Nerval. Although principal emphasis will be placed on the study of the major genres, developments in music and the visual arts during the period will also be studied.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 451 Francophone Canada (3 credits)

Please see the description for FRE 351. Students taking 451 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 451.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 452 Francophone America (3 credits)

Please see the description for FRE 352. Students taking 452 will have additional reading and projects to do. If you have taken at least three 300-level courses, you should enroll in 452.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 461 Caribbean Francophone Liter (3 credits)

This course will teach students to read and appreciate contemporary francophone literature of Martinique, Guadeloupe and Haiti by familiarizing them with the colonial and post-colonial history of the region, its cultural richness and its literary modes. Students will read works in different genres by major authors of the French Caribbean.

Prerequisites: FRE 301 or FRE 302

Attributes: Africana Studies Course, GEP Art/Literature, Latin American Studies Course, Undergraduate

FRE 462 Contemptry Francophone Cinema (3 credits)

An intensive study of selected recent French-language films. The principal activities of the course will be the viewing, analysis, and discussion of a variety of cinematographic works dealing with important issues in the French-speaking world. The course is designed to increase familiarity with francophone cultures, to promote understanding of the film medium, and to improve general language skills, with a particular emphasis on listening and speaking.

Prerequisites: FRE 301 or FRE 302

Attributes: GEP Art/Literature, Undergraduate

FRE 466 The Francophone Press (3 credits)

An introduction to the press of the French-speaking world. The work of the course may include library and internet research, extensive readings in French-language newspapers and magazines, viewings of television news, round-table discussions of current events and regular writing assignments. The course aims to familiarize students with the contemporary Francophone world and its information media. It is also designed to improve students' general language skills in French.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 470 Topics in French (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the French-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 471 Economic and Business French (3 credits)

An introduction to business notions and to social, economic and political problems in the francophone business world. The primary focus will be on France, although other French-speaking countries in Europe and elsewhere may also be covered. The course will emphasize the acquisition and use of fundamental economic and business concepts and vocabulary as tools for understanding the francophone business environment and communicating appropriately in a business setting.

Prerequisites: FRE 301 or FRE 302

Attributes: Undergraduate

FRE 490 Internship (3 credits)**FRE 491 Internship (3 credits)****FRE 493 Independent Research in French (3 credits)****FRE 494 Independent Research in French (3 credits)****FRE 570 Special Topics in French (3 credits)**

The purpose of this course is to explore specific topics within the literatures and/or cultures of the French-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Restrictions: Enrollment is limited to Graduate level students.

Gender Studies (GEN)

GEN 200 Feminist Theories (3 credits)

This course provides a survey of feminist frameworks for thinking about sex, gender and oppression. The course begins with a consideration of whether the distinction between gender and sex is tenable, what it means to say that a category is socially constructed and how socially constructed categories can be oppressive. Given women's diversity, the latter part of the course considers critiques of attempts to provide a single systematic feminist framework. This will lead us to rethink the project of feminist theory and consider its possible new directions.

Attributes: Diversity Course, Gender Studies Course, Undergraduate

GEN 201 Seminar In Feminist Studies (3 credits)**GEN 470 Independent Study (3 credits)**

An independent study course, typically undertaken in the Senior year, in which the student develops and presents a research project in her or his major field of study which incorporates gender perspectives and feminist theories. Student must have the approval of an independent study director in the student's major and the approval of the Director of Gender Studies.

Genomics (GNM)

GNM 701 Introduction to Genomics (3 credits)

This course explores the history of genetics and genomics. Family history is discussed as a vital part of a genetic risk assessment and tool for the evaluation of inheritance patterns and penetrance of the disease. The course concludes with a review of the epigenetic influences on health and epidemiologic approaches to evaluate health and disease and applications in genomics.

Restrictions: Enrollment is limited to Graduate level students.

GNM 702 Genetic Concepts Testing (3 credits)

The course will serve as the basis for the health care professional to integrate genetics and genomics into personalized healthcare. The course provides a review of sources of information available to you and clinicians in genomic health care for clinical management and therapeutic applications.

Restrictions: Enrollment is limited to Graduate level students.

GNM 703 Issues in Genomics & Pharma (3 credits)

This course exposes students to the ethical, legal, and social issues surrounding genetic testing and available direct-to-consumer genetic testing. This course will explore approaches for engaging individuals as partners in their healthcare, as well as the expanding applications of pharmacogenomics.

Restrictions: Enrollment is limited to Graduate level students.

GNM 704 Cancer Genomics & Applications (3 credits)

This course focuses on the role of genetics and genomics in cancer diagnosis, prognosis, and treatment. Future directions of genetics and genomics with comprehensive genome/exome/transcriptome sequencing in oncology, polygenic risk scores, cell-free DNA, and genome-wide and phenome-wide association studies are addressed. Genomic technologies and computational approaches that are driving advances to manage health and treat disease will be reviewed.

Restrictions: Enrollment is limited to Graduate level students.

GNM 710 Principles of Genetics (3 credits)

This course provides you with an introduction to genetics, with a focus on transmission and molecular genetics. The course makes use of bioinformatics to explore gene function and covers pertinent applications of bioinformatics and genetics to modern biological problems. Topics include chromosome structure and replication, variations and extensions of transmission genetics, genetic linkage and mapping, regulation of gene expression, epigenetics, genetic mutations, genetics of cancer, and the principles of genetic engineering.

Restrictions: Enrollment is limited to Graduate level students.

GNM 715 Chromosomes & Human Disease (3 credits)

This course introduces you to the role of chromosomes in human disease and seeks to familiarize you with the field of cytogenetics, the study of chromosomes, and the relationship between chromosomal abnormalities and human disease. Topics covered include cytogenetic methodology, aneuploidy, chromosome rearrangements, chromosomes and sex determination, and chromosomes and cancer.

Restrictions: Enrollment is limited to Graduate level students.

GNM 720 Molec Basis Inherited Disease (3 credits)

This course seeks to familiarize you with the molecular basis of diseases of human genetics and its applications to modern research. You will undertake a comprehensive examination of the principles of human inheritance in the context of both normal human variation and human disease. The course explores mechanisms of gene regulation and introduces you to current methods in genome analysis.

Restrictions: Enrollment is limited to Graduate level students.

GNM 725 Clinical App Genetics & Genomics (3 credits)

The course focuses on the genetic basis of disease and cytogenetic analysis for applications to clinical care. Diagnostic molecular approaches and the clinical translation of genetic and genomic health information in a personalized healthcare environment are explored.

Restrictions: Enrollment is limited to Graduate level students.

GNM 730 Evolutionary Analysis (3 credits)

This course introduces you to evolutionary science and population genetics, with a focus on the importance of four factors: selection, migration, mutation, and genetic drift. You will evaluate human evolution and its impact on health.

Restrictions: Enrollment is limited to Graduate level students.

GNM 735 Human Population Genetics (3 credits)

The sequencing of the human genome has led to the emergence of population genomics. This course covers the basics of population genomic analysis, from SNP data to the key analyses that may be required to successfully analyze a population genetic data set. Population genetics topics will also include computational methods and machine learning techniques.

Restrictions: Enrollment is limited to Graduate level students.

GNM 740 Public Health Genetics (3 credits)

Public health ensures the basic conditions required for individual and population health are present. The role of genetics is evolving, as is the understanding of genetic disease. This course provides students with advances in genetic knowledge and technology that could be used to prevent disease and improve public health.

Restrictions: Enrollment is limited to Graduate level students.

GNM 745 Genomic Statistics & Research (3 credits)

This course provides you with an introduction to the statistical approaches used in solving problems in genetic epidemiology. Methodological expositions and practical guidelines for software selection are included. Topics include molecular genetics and Mendelian description principles, genetic markers and map distances, model-based and model-free population and family-based and genome-wide association studies, and association analyses using haplotypes.

Restrictions: Enrollment is limited to Graduate level students.

Geographical Information Systems (GIS)

GIS 101 Introduction to GIS (3 credits)

This course is designed to acquaint students with an introductory examination of geographic information systems (GIS). GIS tools are used to analyze spatial information, manage spatial data, and create maps used to present and visualize data. This course focuses on ArcGIS and how to apply GIS skills to answer research questions. GIS technology is used in a variety of disciplines including humanities, engineering, economics, environmental studies, engineering, management, urban planning, agriculture, forestry, public health, and many others.

Attributes: Undergraduate

GIS 127 Religion & Race in Philadelphia (3 credits)

"Religion and Race in Philadelphia" is a religious studies course that examines the co-constitution of religious beliefs, racial identities, and regional cultures from an historical perspective. This course will look at how the meanings of both "race" and "religion" are produced through the intersections of individuals, institutions, and ideologies in Philly. Using this religious and racial lens, this course will examine how Philadelphians have come to define their city, themselves, their communities, and their relationships to their natural and cultural environments. This course will use various geographical information systems (GIS) to visualize and analyze various aspects of Philadelphia's cultural landscape. No prior experience in GIS is required.

Attributes: Diversity Course, Globalization Course, Non-Western Studies (GEP), Undergraduate, Writing Intensive Course- GEP

GIS 170 Special Topics in GIS (3 credits)

This course examines selected introductory topics and techniques in GIS. Examples include map making, geospatial thinking, web-mapping, cartography and visualization, and the use of applications for specific majors or fields. Course content reflects recent trends in GIS and the job market.

Prerequisites: ECN 101 or GIS 101

Attributes: Undergraduate

GIS 172 Urban Economics (3 credits)

Urban Economics is broadly defined as the economic study of urban areas. This course will teach you how to examine issues that typically occur in urban areas, such as crime, poverty, education, inequality, public transit, and the distribution of public goods and government resources, from an economic perspective. Throughout this course, we will not only examine urban issues theoretically, but also use real-world data and geographic information systems software (GIS) to apply economic theory to examine these issues in real-time.

Prerequisites: ECN 101 or GIS 101

Attributes: Diversity Course, Globalization Course, Non-Western Studies (GEP), Undergraduate

GIS 175 Environmental Economics (3 credits)

This course examines the interactions between people and the environment by addressing the challenge of meeting the increasing demand for goods and services while simultaneously conserving natural resources for future generations. This course will also look at several current environmental issues including the effects of climate change, land tenure, globalization and trade, natural resource management, food waste, eco-labelling, and environmental justice. Since human numbers are increasing more rapidly in poor countries than anywhere else, special attention is paid to population growth and the prospects for environmentally sound agricultural development in Africa, Asia, and Latin America. There is a writing component to this course that requires students to write a technical paper on a developing country of their choice. This course will also utilize geographic information systems (GIS) software to apply economic theory to examine global environmental issues; no prior experience with GIS is required.

Prerequisites: ECN 101 or GIS 101

Attributes: Globalization Course, Undergraduate

GIS 201 Intermediate GIS (3 credits)

A continuation of GIS 101, this course will prepare students for more advanced geographical analysis and use of geographical information systems (GIS). Students will learn intermediate techniques to analyze spatial information, manage spatial data, and create map layouts to present and visualize data. This course focuses on ArcGIS and other softwares as well as how students can integrate geographic concepts and GIS skills in their major and intended field.

Prerequisites: GIS 101 or INT 170

Attributes: Undergraduate

GIS 270 Special Topics in GIS (3 credits)

This course examines selected intermediate topics and techniques in GIS. Examples include map construction, geovisualization, spatial analysis, and the use of applications for specific majors or fields. Course content reflects recent trends in GIS and the job market.

Prerequisites: GIS 101 or INT 170

Attributes: Undergraduate

GIS 370 Special Topics in GIS (3 credits)

This course examines selected topics and innovative techniques in GIS. Examples include remote sensing, location analysis, web mapping, cartographical design, GIS programming, and the use of specialized applications for specific majors or fields. Course content reflects recent trends in GIS and the job market.

Prerequisites: (GIS 101 and GIS 102) or (INT 170 and INT 270)

Attributes: Undergraduate

GIS 601 Introduction to GIS (3 credits)

This course is designed to acquaint students with an introductory examination of geographic information systems (GIS). GIS tools are used to analyze spatial information, manage spatial data, and create maps used to present and visualize data. This course focuses on ArcGIS and how to apply GIS skills to answer research questions. GIS technology is used in a variety of disciplines including humanities, engineering, economics, environmental studies, engineering, management, urban planning, agriculture, forestry, public health, and many others.

Restrictions: Enrollment is limited to Graduate level students.

GIS 670 Special Topics in GIS (3 credits)

This course examines selected advanced graduate topics and techniques in GIS. Examples include remote sensing, location analysis, web-mapping, cartographical design, GIS programming, and the use of applications for specific majors or fields. Course content reflects needs and interests of graduate students, as well as recent trends in GIS and the job market.

Restrictions: Enrollment is limited to Graduate level students.

German (GRM)

GRM 101 Beginning German I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students who have limited experience with the German language. Fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of GR101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the German 102 Placement, German 201 Placement, German 202 Placement or German 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

GRM 102 Beginning German II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students who have limited experience with the German language. Fulfills the GEP non-native language requirement.

Prerequisites: GRM 101 or Language Placement with a score of GR102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the German 201 Placement, German 202 Placement or German 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

GRM 170 Special Topics in German (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRM 201 Intermediate German I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. A review of grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high/intermediate low level according to ACTFL - American Council on the Teaching of Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: GRM 102 or Language Placement with a score of GR201

Restrictions: Students with the German 202 Placement or German 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

GRM 202 Intermediate German II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. A review of grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the intermediate low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. Prerequisite: Fulfills the GEP non-native language requirement.

Prerequisites: GRM 201 or Language Placement with a score of GR202

Restrictions: Students with the German 301 Placement attribute may **not** enroll.

Attributes: Undergraduate

GRM 270 Special Topics in German (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRM 301 German Conversation (3 credits)

This course is designed to help students improve their oral communication skills in German through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions, and tailoring the discourse to the audience and context. Fulfills the GEP non-native language requirement.

Prerequisites: GRM 202 or Language Placement with a score of GR301

Attributes: Undergraduate

GRM 303 From Bismark to Hitler (3 credits)

The period spanning 1871 to 1945 in Germany is a tumultuous period of transition in the country's history. This course is intended to deepen the students' knowledge of German history, literature, culture and politics. Readings, discussions and analysis both of a series of literary texts, as well as background readings on the time period. This course is taught in German.

Prerequisites: GRM 301 or Language Placement with a score of GR303

Attributes: GEP Art/Literature, Undergraduate

GRM 306 Advanced German Conv & Comp (3 credits)

The purpose of this course is to improve the student's oral and written command of German by further developing the four linguistic skills on an advanced level.

Restrictions: Enrollment is limited to students with a minor in German.

Attributes: Undergraduate

GRM 309 German Civilization & Culture (3 credits)

A survey of the culture and civilization of Germany and other German-speaking countries, their history, politics, economic and social aspects, art, and folklore through the reading of literary texts. Emphasis is placed on modern trends. Fulfills the GEP Art/Literature requirement.

Attributes: GEP Art/Literature, Undergraduate

GRM 310 Selections in German Lit I (3 credits)

An introduction to German literature with selected readings from the works of principal writers from various periods.

Prerequisites: GRM 301

Attributes: GEP Art/Literature, Undergraduate

GRM 320 Contemporary German Cinema (3 credits)

German Cinema as a mode of present-day artistic expression. Viewing and analysis of contemporary German movies by outstanding directors dealing with key issues in modern Germany.

Prerequisites: GRM 301

Attributes: GEP Art/Literature, Undergraduate

GRM 321 Getting to Know the Germ Media (3 credits)

The course will strengthen oral and written communication in German through discussion and analysis of the press, Deutsche Welle (German direct news broadcasts) using a variety of online news sources as well as German TV culture. The focus will be on contemporary culture and current events.

Prerequisites: GRM 301 or Language Placement with a score of GR321

Attributes: Undergraduate

GRM 330 German Business I (3 credits)

It is true that the world is increasingly more globalized, particularly with respect to business and economic issues. Therefore, it is essential, even for those not directly involved in the business world, to be familiar with its workings and language. Yet it is equally true, despite globalization, that linguistic, cultural and economic differences persist and play an important role in the business world. It is the aim of this course to offer students insights into Business German from a micro point of view.

Initially, we will have a general overview of the German economy, before embarking on a more detailed exploration of German business writing (cover letter, resumes, business correspondences), as well as common German business practices. Particular emphasis will be placed on vocabulary building. *Prerequisite:* GRM 301 or departmental approval.

Attributes: Undergraduate

GRM 370 Topics in German Culture (3 credits)

The course will survey the most significant aspects of German culture through time. It is designed to give a broad overview of important cultural movements and personalities. We will discuss the highlights of selected areas in the culture of the German-speaking countries: in art, architecture, literature, music, history, politics and science. In particular, we will study representative figures of these areas, especially those who have had an impact on European and world culture.

Attributes: Undergraduate

GRM 493 Independent Research (3 credits)

Greek (GRK)

GRK 101 Beginning Ancient Greek I (3 credits)

In an interactive environment, students will learn basic Attic Greek vocabulary, grammar, and syntax, with special attention to English and modern language derivatives. Students will develop reading ability through sentences and short passages adapted from Greek authors such as Menander, Aeschylus, Sophocles, Euripides, Solon, and Theognis. They will also discuss aspects of Greek culture and civilization illuminated in these texts.

Prerequisites: Language Placement with a score of GK101

Attributes: Ancient Studies Course, Undergraduate

GRK 102 Beginning Ancient Greek II (3 credits)

In an interactive environment, students will learn basic Attic Greek vocabulary, grammar, and syntax, with special attention to English and modern language derivatives. Students will develop reading ability through sentences and short passages adapted from Greek authors such as Menander, Aeschylus, Sophocles, Euripides, Solon, and Theognis. They will also discuss aspects of Greek culture and civilization illuminated in these texts.

Prerequisites: GRK 101 or Language Placement with a score of GK102

Attributes: Ancient Studies Course, Undergraduate

GRK 170 Special Topics in Greek (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRK 201 Intermediate Ancient Greek I (3 credits)

In an interactive environment, students will learn Attic Greek vocabulary, grammar, and syntax. They will achieve greater understanding and mastery of ancient Greek morphology and syntax. Students will develop reading ability through original selections from Plato's Apology, which deals with the trial of Socrates. Students will learn about the political, philosophical, religious, and literary dimensions of Plato's account of the trial of Socrates and Socratic thought.

Prerequisites: GRK 102 or Language Placement with a score of GK201

Attributes: Ancient Studies Course, Undergraduate

GRK 202 Intermediate Ancient Greek II (3 credits)

In an interactive environment, students will learn Attic Greek vocabulary, grammar, and syntax. They will achieve greater understanding and mastery of ancient Greek morphology and syntax. Students will develop reading ability through original selections from Plato's Apology, which deals with the trial of Socrates. Students will learn about the political, philosophical, religious, and literary dimensions of Plato's account of the trial of Socrates and Socratic thought.

Prerequisites: GRK 201 or Language Placement with a score of GK202

Attributes: Ancient Studies Course, Undergraduate

GRK 270 Special Topics in Greek (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRK 370 Special Topics in Greek (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

GRK 470 Special Topics in Greek (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

Health Administration (HAD)

HAD 120 Fin Mgt Hlth Care Organization (3 credits)

An advanced application of the current issues and techniques affecting financial management in the health care system. Topics include cost accounting, cost benefit analysis, accountability in not-for-profit/non-profit institutions, prospective and third party payments, management information systems for operational and fiscal control, and cost containment.

Prerequisites: HAD 100 or HAD 101

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

HAD 200 Healthcare Law and Ethics (3 credits)

An overview of the legal and ethical issues central to the health care delivery system and their impact on individual institutions and professionals. The relationships among biomedical and research technology, societal changes, court rulings, and governmental legislation within the context of the health care system will be examined.

Prerequisites: HAD 100 or HAD 101

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

HAD 201 Intro to Healthcare Admin (3 credits)

An introduction to the exciting field of healthcare services leadership, focusing on current components, practices, issues and trends in healthcare delivery. Emphasis will be placed on leadership in this extraordinarily complex, social, political, economic, legal and technological system that impacts our communities and nation's health.

Attributes: Undergraduate

HAD 300 Plan & Market Health Care Orgs (3 credits)

An introduction to general strategic planning and marketing for health care systems with particular emphasis on the evolution from a provider-controlled environment to a consumer market. Review of key factors such as rising costs, increasing competition, legislation/regulation, technological advancements, and increased consumer sophistication.

Prerequisites: HAD 201

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

HAD 301 Health Info Mgmt Systems (3 credits)

A critical skill for health administrators is to be able to gather, organize, analyze and safely store important health information. This course provides an overview of healthcare information management and applications within healthcare organizations.

Attributes: Undergraduate

HAD 302 Financial Mgmt of Health Orgs (3 credits)

An advanced exploration of current issues and techniques affecting financial management and healthcare systems. Topics will include cost accounting, cost benefit, analysis, accountability, and not-for-profit/nonprofit institutions. Also covered will be prospective and third-party payments, management information, system for operational and physical control, and cost containment.

Prerequisites: HAD 201

Attributes: Undergraduate

HAD 310 Seminar in Hlth Administration (3 credits)

Taken with the Practicum, this course is the capstone for integration between theory and practice of health administration. Each student will be responsible for the preparation of a research paper on a topic in health administration. Topics of emphasis will include health services research, administration in health settings, organizational development, human resource development, and current issues relevant to student field practicums. Students must have permission before enrolling.

Prerequisites: (HAD 101 and (HAD 110 and (HAD 200 and (HAD 120 or HAD 210 or HAD 220

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

HAD 320 Healthcare Law and Ethics (3 credits)

An overview of the legal and ethical issues central to healthcare delivery and their impact on individual institutions and professionals. A review of the important cases impacting healthcare, and the relationships between biomedical research, technology, societal changes, and government legislation within the context of healthcare delivery.

Prerequisites: HAD 201

Attributes: Undergraduate

HAD 330 Public Health Epidemiology (3 credits)

The introduction of basic principles and methods in the field of epidemiology. Topics include historical perspectives of epidemiology, measures of disease occur in disease occurrence and association, clinical epidemiology, disease screening, causal, inference, and study designs. Students will apply epidemiological principles to public health practice using critical thinking, and analytical skills.

Prerequisites: HAD 201

Attributes: Undergraduate

HAD 340 Research Methods in HAD (3 credits)

Health Services Research explores the history of health research, basic principles and types of research in order that health administrators will be able to critically evaluate research in healthcare. This course is a combination of lecture, discussion and experiential learning designed to instill a critical understanding of the research process for application to professional practice.

Prerequisites: HAD 201

Attributes: Undergraduate

HAD 370 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: HAD 201 and HAD 320 and HAD 340

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

HAD 400 Healthcare Policy (3 credits)

A history of healthcare policy in the United States, and how it has evolved over decades. A comparative analysis with other countries, the positives and negatives of the American healthcare delivery system as shaped by policy and discussion about how to enter the debate.

Prerequisites: HAD 201 and HAD 320 and HAD 340

Attributes: Undergraduate

HAD 450 Seminar in Health Admin (3 credits)

Taken with the Practicum, this course is the capstone for integration between theory and practice of health administration. Each student will be responsible for the preparation of a research paper on a topic in health administration. Topics of emphasis will include health services research, administration in health settings, organizational development, human resource development, and current issues relevant to student field practicums. Students must have permission before enrolling.

Prerequisites: HAD 201 and HAD 320 and HAD 340

Attributes: Undergraduate

HAD 470 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: HAD 201 and HAD 320 and HAD 340

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

HAD 552 Health Administration (3 credits)

An introduction to the principles of administration within health and human services organizations and the basic concepts of leadership and organizational theories relevant to effective administration of healthcare institutions. Organizations are viewed as open systems requiring constant interactions with the environment. Considerable emphasis is placed on quality improvement and organizational change.

Restrictions: Enrollment is limited to Graduate level students.

HAD 553 Health Care Organization (3 credits)

An overview of the organization, structure, and financing of the healthcare delivery system in the United States. The various elements comprising the system will be presented, along with an exploration of the basic concepts and measures of health, disease, needs, quality, and utilization. Issues in healthcare resourcing, institutions, and system organization will be examined.

Restrictions: Enrollment is limited to Graduate level students.

HAD 554 Health Care Law (3 credits)

An examination of the major legal issues encountered in the health care field by administrators and practitioners. Among the topics to be included are principles of liability, legal aspects of medical ethics, and legislative and regulatory factors in health care delivery.

Restrictions: Enrollment is limited to Graduate level students.

HAD 555 Acc for Health Care Organiztns (3 credits)

An introduction to basic accounting techniques used in the healthcare industry.

Restrictions: Enrollment is limited to Graduate level students.

HAD 556 Fin Manag of Health Care Org. (3 credits)

An introduction to the basic theories and practices of financial management as they relate to healthcare organizations. Course includes budgeting principles.

Prerequisites: HAD 555

Restrictions: Enrollment is limited to Graduate level students.

HAD 557 Health Care Strat Plan & Mktg (3 credits)

An introductory course that examines the foundations, principles, and basic applications of this field. Internal and external forces that shape marketing policies and planning are explored. Topics include the development of marketing strategies and programs, as well as marketing mix variables and general healthcare planning.

Restrictions: Enrollment is limited to Graduate level students.

HAD 558 Mgt of Healthcare Org (3 credits)

In depth study of hospital operations with emphasis on not-for-profit/nonprofit settings; focus on departmental operations, role of administration, the board, and medical staff. Includes legal and reform trends affecting hospitals, financial mechanisms, budgeting, labor relations and corporate restructuring.

Restrictions: Enrollment is limited to Graduate level students.

HAD 559 Health Policy (3 credits)

The formulation and analysis of health policy at federal, state, local, and corporate levels. This course presents an overview of the legislative, regulatory, and political processes and their effect on the health care system. This course will provide a conceptual and analytic framework for bioethical policy analysis regarding policy formulation, adoption, implementation, operation, evaluation, and termination. Pragmatic application of policy analysis tools is included.

Restrictions: Enrollment is limited to Graduate level students.

HAD 600 Ethics of Health Care (3 credits)

A critical examination of the central ethical issues in the healthcare field. Issues to be treated include euthanasia, life-prolonging medical technologies, abortion, screening for genetic defects, experimentation and informed consent, distribution of scarce medical resources, the right to healthcare, and its implications for the healthcare delivery system. Necessary background in moral philosophy will be provided.

Restrictions: Enrollment is limited to Graduate level students.

HAD 601 Fieldwork in Health Admin (3 credits)

Students who have a GPA of 3.5 or higher may pursue experiential learning through fieldwork or internship in an approved healthcare facility or nonprofit organization.

Prerequisites: HAD 552 and HAD 553 and HAD 554 and HAD 555 and HAD 556 and (HAD 560 or MHI 560) and HAD 600 and HSV 550 and HSV 551

Restrictions: Enrollment is limited to Graduate level students.

HAD 602 Directed Resrch in Health Serv (3 credits)

The Health Services Department provides opportunities for selected students to conduct independent research under the supervision of department faculty. Students desiring to participate in Directed Research must identify and meet with a faculty mentor, submit a formal research proposal with proposed timeline for completion, and obtain approval for the project from the faculty mentor, program director, department chair and associate dean.

Restrictions: Enrollment is limited to Graduate level students.

HAD 700 Health Administration Capstone (3 credits)

An integrative capstone course in which the student is expected to integrate and synthesize prior course work and to demonstrate competence in health administration through the analysis of complex cases in health services delivery and management and the development of a case of his/her own based on experience and observation. Integrative Capstone should be taken as the final course in the curriculum.

Prerequisites: HAD 552 and HAD 553 and HAD 555 and HAD 556 and HAD 560 and HAD 600 and HSV 550 and HSV 551

Restrictions: Enrollment is limited to Graduate level students.

Health Care Ethics (HCE)

HCE 400 Fieldwork: Clinical Bioethics (3 credits)

The purpose of this course is to give students practical experience in clinical bioethics from various perspectives-medical, ethical, legal, financial, etc. The students will attend Interdisciplinary Ethics Teaching Rounds with the Medical Interns/Residents at the Mercy Catholic Medical Center one day a week. During these rounds they will examine cases from the general floors, the Intensive Care Units (ICUs) and the Surgical Intensive Care Units (SICUs). They will also be given the opportunity to attend Institutional Ethics Committee Meetings, Institutional Review Board (IRB) meetings and to participate in clinical ethics consults as they arise during the course.

HCE 490 Internship Health Care Ethics (3 credits)**HCE 493 Health Care Ethics Research (3 credits)**

This course would examine specific clinical issues in medicine in cooperation with a faculty member of the Institute of Clinical Bioethics. Normally requires three hours of work per week for each unit of credit. Students need to complete the application form for independent study and have the approval of the department chair and Associate Dean.

Attributes: Undergraduate

HCE 494 Health Care Ethics Research (3 credits)

This course would examine specific clinical issues in medicine in cooperation with a faculty member of the Institute of Clinical Bioethics. Normally requires three hours of work per week for each unit of credit. Students need to complete the application form for independent study and have the approval of the department chair and Associate Dean.

Health Education (HED)

HED 550 Hist & Phil Med & Pub Health (3 credits)

History and Philosophy of Medicine and Public Health traces the evolution of health promotion efforts from early civilizations, the Greco-Roman period, Middle Ages, and the Renaissance to current times. Course content covers infectious and chronic diseases, occupational health, maternal and child health, and the development of healthcare professions and institutions throughout history. Students will explore local treasures, such as the Philadelphia Museum of Art, the Mütter Museum, the Penn Museum, and the African American Museum in Philadelphia, as conditions allow.

Restrictions: Enrollment is limited to Graduate level students.

HED 551 Map Hlth Res, Pln, Pol Dev&Mkt (3 credits)

Based on the ARCVIEW Geographic Information Systems (GIS), this course is a practical introduction to the use of computer mapping and spatial analysis. The course uses the most current GIS technology to understand the environment and how it impacts public health. There is a large computer lab component to the course.

Restrictions: Enrollment is limited to Graduate level students.

HED 552 Epidemiology and Com Health (3 credits)

An introductory course exploring the basic concepts of epidemiology as a public health science, including rates and ratios, risk and association, causation and investigation of outbreak.

Restrictions: Enrollment is limited to Graduate level students.

HED 553 Program Planning for Wellness (3 credits)

A foundation course in the development of health education programs for hospitals, work sites, community, and schools. Discusses models for health behavior, assessment of health education needs, design and implementation of interventions, program marketing, and evaluation of efficacy.

Restrictions: Enrollment is limited to Graduate level students.

HED 554 Curric Strat for Hlth Educats (3 credits)

Techniques combining the cognitive, affective, and psychomotor domains in individual and group learning are discussed. Leading models for curriculum development and implementation are emphasized. Mechanics for construction of goals, curriculum design, objective writing, and learning behaviors are stressed. Models for evaluation and needs analysis are examined. The role of the trainer in the organization is also explored, along with strategies for maximizing one's position in the organization. Ethical, legal, and moral questions arising in the health education arena are examined.

Restrictions: Enrollment is limited to Graduate level students.

HED 555 Essentials: Population Health (3 credits)

This comprehensive course focuses on preparing health professionals with the foundational skills needed to work in teams to effectively collaborate and coordinate care in population health management. Special emphasis will be on identification and stratification of populations at risk; evidence-based care, care coordination, patient and community engagement, and data analytics and reporting of outcomes. Key themes of multidisciplinary communication, collaboration, leadership, and professionalism will be ingrained throughout content. National standards and initiatives form the foundation to the course.

HED 556 Foundations of Global Health (3 credits)

This course will introduce students to the main concepts of the public health field and the critical links between global health and social and economic development. Students will get an overview of the determinants of health and how health status is measured. Students will also review the burden of disease, risk factors, and key measures to address the burden of disease in cost-effective ways. The course will cover key concepts and frameworks but be very practical in orientation. The course will be global in coverage with a focus on low-and middle-income countries and on the health of the poor domestically and abroad.

HED 557 Determinants: Health-Behavior (3 credits)

The focus of the program is on the interaction of biological, behavioral, sociocultural, and environmental variables in the etiology and prevention of health problems and in the promotion of healthy human development. The program is designed to cultivate competence in basic and applied research, in the evaluation of bio-behavioral health intervention strategies, and in university teaching. Graduates are prepared for research, teaching, or policy roles in health care settings, private and public research laboratories, government agencies, and universities including medical schools.

HED 558 Mental Illness and Addictions (3 credits)

This course provides an overview of a range of theories/models of mental health/addiction treatment, with an emphasis placed on psychotherapeutic approaches. The theory of pathology, theory of change, practice of therapy and common therapeutic strategies arising from each approach will be highlighted. The benefits, limitations, efficacy outcomes and contraindications of each approach will also be explored. The course also includes a brief overview of critical assessments of common approaches to addictions/mental health treatment and an introduction to Recovery-oriented practice in mental health treatment.

HED 559 Human Aging and Dying (3 credits)

This course focuses on the field of human aging. The course of study will include a multidisciplinary examination of the way in which human aging is viewed - how we perceive the process of growing older and how society responds to the issues of aging. The course will look at aging from multiple perspectives that include the social, political and biological sciences, arts and humanities, care giving and social services. Particular emphasis will be placed on how these issues will become prominent with the advent of the Baby Boomers.

HED 561 Human Sexuality (3 credits)

Content provides sexual awareness and personal growth in the area of interpersonal sexuality. Through participation in a variety of class activities, students increase comfort level in communicating about sexual attitudes, feelings, and behaviors. Sexually transmitted infections, reproductive inefficiencies, and cultural issues are discussed.

Restrictions: Enrollment is limited to Graduate level students.

HED 562 Hlth Care of Childrn in Commun (3 credits)**HED 564 Health Communications (3 credits)**

This course focuses on the development of effective health communications. Topics include identifying the health needs and communication channels of the target audience, creating SMART communication objectives, creating messages using communication theories or models, use of current and emerging technologies, message delivery and impact or outcome evaluation. Students will apply their knowledge to a health communication message and pilot the message to one or more small groups.

Restrictions: Enrollment is limited to Graduate level students.

HED 571 Employee Asst & Occup Health (3 credits)

An overview course designed to provide the knowledge and skills necessary to help organize, develop, manage, and evaluate employee assistance programs. Emphasis is placed on the positive role of health promotion as a preventive tool. Course explores the role of addictions, family, financial, and legal issues in the life of the impaired employee or student and codependent.

Restrictions: Enrollment is limited to Graduate level students.

HED 573 Women and Health Care (3 credits)

Inquiry into the health needs of women and their treatment by the health care system. Study includes history, role of women as healers, epidemiology, access to and utilization of health care services, health research, and legislation affecting women's health issues.

Restrictions: Enrollment is limited to Graduate level students.

HED 574 Concepts of Nutrition & Health (3 credits)

A comprehensive examination of the principles of good nutrition during the life cycle. Emphasis is placed on practical applications, including the use of food composition theory to evaluate food intakes, regional, cultural, and religious influences on food habits, fads, preventive health promotion, and health restoration through health education.

Restrictions: Enrollment is limited to Graduate level students.

HED 575 Stress and Crisis Management (3 credits)

Study of health problems related to stress and exploration of methods to reduce the impact of stressors to improve bio-psychosocial health. Demonstrates how to identify, isolate, and manage a crisis and how to foresee future crises, as well as how to develop contingency plans. Physiology of stress, relaxation, biofeedback, fear control, and cognitive reacting are skills studied in relation to stress management.

Restrictions: Enrollment is limited to Graduate level students.

HED 577 Health Education in HIV/AIDS (3 credits)

The retrovirus of AIDS, the people, and the society it infects are the center upon which this course is based. Current public health policy, ethics, and politics of AIDS are examined. Emphasis is placed on skill-building in health education, counseling, and referrals for persons with AIDS, their families, and those individuals who test positive. The school and corporate sectors are explored, as well as high risk groups and global AIDS.

Restrictions: Enrollment is limited to Graduate level students.

HED 600 Dir Research in Hlth Ed (3 credits)

An opportunity to conduct a research project under the supervision of a faculty member. Note: students may register for a directed research study only after (a) submitting a research proposal to the program director; (b) arranging for a faculty member to serve as mentor; and (c) receiving explicit approval from the department chair.

HED 601 Fieldwork in Health Education (3 credits)

Individually arranged fieldwork in approved health education environment. Students need permission of the program director before registering. The program is designed to meet individual professional goals and may only be taken once during a student's completions of this degree program. All five core courses must be taken prior to enrolling in this course.

HED 700 Health Education Capstone (3 credits)

Health Education Capstone is the final course in Health Education program. Course content covers professional standards of practice, Certified Health Education Specialist Examination preparation, connection with Saint Joseph's University Career Development Center services, and completion of a health education program in the community.

Prerequisites: HED 551 and HED 552 and HED 553 and HED 557

Restrictions: Enrollment is limited to Graduate level students.

HED 770 Special Topics in Hlth Educatn (3 credits)

The learning objectives of this course will be geared toward a specific topic of current interest in the field of health education. The specific topics and perquisites will be announced in the course schedule.

Restrictions: Enrollment is limited to Graduate level students.

Health Science (HSC)

HSC 110 Intro Health Prof Practice (3 credits)

This course introduces students to the use of models and theories in the health professions as they apply to evidence-based programs and practices. Students select and explore an acute or chronic health issue, investigate the problem from an epidemiological perspective, apply a relevant health behavior model or theory, and develop suggestions for practice. Course content includes the medical and public health models, Health Belief Model, Stages of Change, Diffusion of Innovations, Social Cognitive Theory, Health Communications, and ecological theories of health behavior. Staff from the Career Development Center present information on career exploration and internships.

Attributes: Undergraduate

HSC 111 Health Sci Orientation II (1 credit)

Overview of interprofessional healthcare professions with specific emphasis on the disciplines of PT, OT, HS and EXP. Topics will include IPE team building, ethical issues, the healthcare team concept, current healthcare issues, professional behaviors, confidentiality, communication, and department/profession specific information.

Prerequisites: HS 110 or HSC 110

Attributes: Undergraduate

HSC 150 First Year Seminar (3 credits)

Seminar subjects vary.

Restrictions: Enrollment is limited to students with a major in Health Science or Undecided Health.

Attributes: First-Year Seminar, Undergraduate

HSC 190 CPR & First Aid Certification (3 credits)

This course will train students to act in emergency situations, to recognize and care for life-threatening cardiac and respiratory emergencies in adults, children, and infants. Students will also learn how to protect themselves and others from disease transmission through preventative measures from blood-borne pathogens, utilize two-rescuer cardiopulmonary resuscitation, and handle oxygen delivery, bag valve mask resuscitation, asthma inhalers, and epinephrine auto-injection. This course will satisfy the requirements for American Red Cross Professional Rescuer Adult, Child, and Infant Cardiopulmonary Resuscitation/Automated External Defibrillation/First Aid Certification.

Attributes: Undergraduate

HSC 211 Health Care Systems (3 credits)

An introduction to public health and the organization and structure of the health care delivery system in the United States. This course will focus upon the various types of health care services, where these services are provided, ways to assess and keep track of diseases and public health care needs, health policies, and administration of these services. Also included will be a discussion of how legal, economic, psychological, cultural, political, ethical, and technological forces affect health care and the people who provide it. An introduction to managed care including current and evolving models, terminology, and differences among insurers and payer types will be included. Staff from the Career Development present information on resume writing, internships, and other experiential learning opportunities.

Attributes: Undergraduate

HSC 216 Alcohol, Drugs and Society (3 credits)

This course explores substance use from the neurological, biological, and social perspectives. Content covers individual and social factors related to substance abuse and evidence-based policies and programs to treat and prevent the disorder. Examples of topics discussed include opioid addiction, adolescent substance abuse, and binge drinking.

Attributes: Undergraduate

HSC 217 Soc Determinants Mental Health (3 credits)

This course examines the connections between mental health and society. What are the major forms of mental and behavioral health and illness? How widespread are mental disorders and what predicts their occurrence? What impact do they have on society and institutions such as health care and criminal justice? How does mental illness relate to social norms? What roles do psychiatric diagnoses play in society and how do diagnoses affect individuals relative to society?

Attributes: Undergraduate

HSC 220 Disability & Social Participat (3 credits)

This course will provide students with an opportunity to learn about the lived experience of persons with disabilities and their participation in society. In addition, students will study the role of the social, cultural, and physical environment in providing opportunities and/or barriers to participation of all persons. Students will participate in service-learning experiences to enhance their knowledge through interactions with people with disabilities during sports and leisure activities.

Attributes: Undergraduate

HSC 240 Stress Management & Resilience (3 credits)

The goal of this course is to discuss stress and its effect on health and wellness and explore stress management and resilience-enhancing strategies from physical, cognitive, emotional, social, and spiritual perspectives. Students will define stress and explore theories of stress adaptation, understand the empirical basis of stress management interventions, experiment with physical, cognitive, emotional, social, and spiritual stress management strategies, and explore responses to failure and trauma.

Attributes: Undergraduate

HSC 244 Health Information Technology (3 credits)

Health care increasingly engages in the use of information technology to collect, maintain, and analyze clinically relevant health data. This course is designed to present students with several real life scenarios with a focus on practical and applied uses of health information technology. Students will utilize a simulated electronic health record (EHR) to enter data, recall clinically relevant information for the purpose of analyzing data, and gain an understanding of how health care is transitioning to a focus on quality and outcomes utilizing information technology. Upon completion of the course, students should understand terminology related to technology commonly used in the health care setting, analyze and evaluate health data to draw conclusions, and apply technology focused solutions to support outcomes focused patient care.

Attributes: Undergraduate

HSC 248 Health of School Aged Children (3 credits)

This course explores the specific health needs of children and opportunities for health promotion and disease prevention in schools and communities. Course content covers the health issues of infectious diseases, chronic illnesses, injuries, and adverse childhood experiences and the use of evidence-based programs and practices in improving children's health.

Attributes: Undergraduate

HSC 251 Healthcare Law and Ethics (3 credits)

This course provides an overview of legal and ethical issues central to the health care delivery system and their impact on individual institutions and professionals. The relationships among biomedical and technology, societal changes, court rulings, and governmental legislation within the context of the healthcare system will be examined. During the regular fall and spring semesters, this course fulfills the overlay requirement of an ethics intensive course.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

HSC 252 Health Policy (3 credits)

This course will explore health care policy issues (such as Medicare, Social Security, Medicaid, Long-Term Care, AIDS/HIV programs) and lead to a general understanding of the health care policy process. Focus will be placed on examining the various factors that lead to health care policy at the state and national level, and how health care policy impacts health care professionals' ability to deliver care and consumers' ability to utilize care in an ever-changing environment. The role of the political process to address issues revolving around cost of health care, access to and quality of that care will be addressed.

Attributes: Undergraduate

HSC 253 Nutrition: Health & Disease (3 credits)

Nutrition: Health & Disease introduces the basic concepts of nutrition, the functions of carbohydrates, fats, proteins, vitamins, minerals, and water in the body, and the role of diet in health and disease. Health topics include heart disease, obesity, hypertension, diabetes, protein energy malnutrition, disordered eating and food safety. The content material of HSC 253 Nutrition: Health and Disease overlaps with the content of CHM 110 Food Chemistry I, CHM 111 Food Chemistry II and CHM 112/112L, EPH 360 and BIO 219 Basic Nutrition (USCI Legacy BS 219).

Restrictions: Students cannot enroll who have a major in Food Marketing.

Attributes: Undergraduate

HSC 256 HIV/AIDS (3 credits)

The HIV/AIDS course offers students the opportunity to explore one of the most critical public health issues facing the world today. Topics include epidemiology of HIV/AIDS, pathogenesis, the social and political history of the disease, modes of transmission, opportunistic infections, ethical issues, and global responses. This class will include site visits to local agencies in the Philadelphia area as well.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

HSC 276 Health of the Aging Adult (3 credits)

This course will focus on the demographic, political, economic and biopsychosocial issues of aging adults from community-based services to home care, hospice, hospital and nursing home settings. The course will focus on the interventions that health providers can use to maximize safety, function and social stability in the community, deferring or delaying institutionalization. Specific topics include fall prevention, medication safety, telemedicine applications, HIV prevention, cognitive function, nutrition, quality of life and the quality of care.

Attributes: Undergraduate

HSC 285 Med Terminology & Health Comm (3 credits)

Ongoing advancement in the allied health professions dictates the need for students to understand proper medical and anatomical terminology to include its source language, evolution and application in the field of medicine and allied health. The need to understand proper medical and anatomical terminology is imperative as this language provides proficient communication between members of the same profession, minimizing the potential for misinterpretation in such a highly critical field. This course will introduce and educate students to a substantial medical vocabulary comprised of prefixes (location of an organ, the number of parts, or time involved), word roots (body part) and suffixes (condition, disease process, or procedure) which are utilized by health care practitioners as a devoted language. This course will describe the human body, coupled components, conditions, processes and medical treatments; providing the proper medical vocabulary for each.

Attributes: Undergraduate

HSC 310 Ethics in Sports (3 credits)

This course will provide students with the opportunity to examine personally held ethical beliefs as well as the ethical dilemmas in past and current sporting events including legal repercussions of participant actions. This course will assist students in defining and understanding legal, ethical, and professional judgment in sport. Students will study and apply the various theories and models of sportsmanship and ethics in sports.

Attributes: Undergraduate

HSC 323 Health and Society (3 credits)

Health and health care are of central concern in a post-industrial society. This course examines sociological issues in health and health care, with special focus on the contemporary United States. This course will examine key social factors (known as the social determinants of health) that influence physical and mental health including race, gender, and social class. Also examined are ways in which health and health care become major social problems, and what are the prospects for major social change in society's response to health issues? During the regular fall and spring semesters, this course fulfills the overlay requirement of a diversity, non-western or globalization course.

Attributes: Diversity Course, Undergraduate

HSC 331 Health Sciences Research (3 credits)

This course teaches critical thinking and writing skills by introducing students to research methods in health and medicine. The course covers human participant protections, research designs, instrumentation, quantitative and qualitative data analyses, and communication of study findings. Students are responsible for selecting a health problem of interest, gathering and critiquing current research, writing a literature review and developing a research proposal. Throughout the course, students will review research articles investigating health disparities and other social justice issues. This course fulfills the overlay requirement of a writing intensive course. Students are taught to write in the technical report format.

Prerequisites: ENG 101 and PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Undergraduate, Writing Intensive Course- GEP

HSC 345 DyingWell:The Hospice Movement (3 credits)

This course examines how people across cultures and throughout history have responded to the challenge of dying. It will examine cultural practices relating to treatment of the death and to care of the dying, as well as the process of confronting one's own death from a psychological perspective. After describing the limitations of the traditional medical (curative) model's approach to death, the course will study the hospice movement: its history, philosophy, and practices of caring. In addition to specific models and essential components of hospice care, administrative issues (legal, reimbursement, human resources) will be addressed. This course will include presentations by and interviews with hospice workers, as well as a survey of hospices in the metropolitan area. This course includes a weekly service-learning requirement.

Attributes: Faith Justice Course, Undergraduate

HSC 348 Foundations of Kinesiology (3 credits)

Foundations of Kinesiology introduces students to the basic physiological, psychological, sociological, and mechanical principles of human movement. Students will explore careers that involve kinesiology, which include physical education, physical therapy, nursing, athletic training, and sports nutrition.

Attributes: Undergraduate

HSC 354 Diversity Ldrship in Hlth Care (3 credits)

The impact of valuing diversity and multiculturalism is profound in the healthcare field. Research has long suggested that health outcomes and health services delivery are improved when caregivers and managers integrate genuine valuing of diversity in their operations. This course offers students the means to develop effective awareness, knowledge and sensitivity concerning diversity and multiculturalism. It provides strategies and insights allowing students to build their leadership skills in this critical area and then apply such knowledge and competencies in the field itself.

Attributes: Undergraduate

HSC 359 Health Program Planning (3 credits)

Community health education programs are a cost effective way to prevent injuries and diseases. This course takes students through the process of health promotion planning including theoretical foundations, needs assessment, program development, and evaluation. Development and implementation of a health promotion project is a core component of the course. Emphasis is placed on evidence-based programs and practices.

Attributes: Undergraduate

HSC 360 Animal Therapy (3 credits)

This course is designed to give students an understanding of animals in formal roles of support within society. Various levels of animal-assisted interventions and their legal implications, including Emotional Support Animals, Animal-Assisted Activities, Animal-Assisted Therapy, and Service Animals will be reviewed. The role of animals providing services to people with autism spectrum disorders, children with cancer, individuals with psychiatric disorders, the elderly, and individuals with physical disabilities will be discussed. The history of Animal-Assisted interventions leading up to their current status will be addressed.

Prerequisites: PSY 208 or SOC 217

Attributes: Undergraduate

HSC 368 Just Hlth Care Dev Nations (3 credits)

An investigation of adequate health care as a fundamental human right. The course will proceed from the premise that socially induced needs are a result of historical development of material and social conditions, coupled with a social consensus that some things are necessary for happiness, social life, or some other goal. It will consider the inability of many societies to supply adequate health care as an issue of basic personal dignity, a claim against society, and as a matter of justice. The course will examine the issue of just health care for all peoples from both public health and ethical perspectives.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Globalization Course, Health Care Ethics Course, Justice Ethics and the Law, Latin American Studies Course, Undergraduate

HSC 370 Special Topics Health Sciences (3 credits)

Special Topics in Health Services explores a specialized area of health care or an emerging or re-emerging health issue. The topic for a given semester will be announced prior to registration. This course may be taken more than once with permission of the Health Studies Chair.

Attributes: Undergraduate

HSC 390 Medical Terminology (2 credits)

This course is designed to teach medical terminology to all majors to assist students in the transition to the professional program or graduate school. This course will explore terminology and abbreviations by body systems to enable students to recognize, interpret and utilize medical terminology and abbreviations when reading medical literature, documenting in patient/client charts and working in the healthcare environment.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

HSC 410 Fieldwork (3 credits)

Fieldwork provides current or prospective health care students a chance to observe healthcare professionals in a workplace setting. The shadowing experience is designed to be an observation only experience lasting 45 hours. Students will contact their chosen organization(s) to shadow a professional in their chosen career field(s). Students are NOT placed in a specific location. Students responsible for contact, organization, and documentation of their shadowing hours. Students may choose to shadow one or more professionals at one or more locations.

Restrictions: Enrollment is limited to students with a major in Exercise Physiology or Health Science. Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

HSC 441 Complementary & Alt Med (3 credits)

This course introduces students to the history and practice of complementary medicine and non-traditional therapies. Included will be an overview of the debate between eastern and western societal approaches to medicine, the relationship between mind and body in health and illness, how cultural issues affect the way individuals feel about and comply with their medical treatment, some of the non-traditional therapies used in the treatment of physical and psychological illness such as art and music therapy, and the overall emphasis on wellness promotion.

Attributes: Globalization Course, Non-Western Studies (GEP), Undergraduate

HSC 458 Public Health & Epidemiology (3 credits)

This course introduces the basic principles and methods of epidemiology. Topics include historical perspectives of epidemiology, measures of disease occurrence and association, clinical epidemiology, disease screening, causal inference, and study designs. Students will apply epidemiological principles to public health practice using critical thinking and analytical skills.

Attributes: Undergraduate

HSC 490 Internship in Health Sciences (3 credits)

Internship in Interdisciplinary Health Studies permits students to focus on a particular area of interest within the Health Studies Department. Students choose from a range of interesting topics and interests to provide a deeper level of understanding. This course requires 112 hours of work at the internship site, regular journal reporting, clear learning objectives, and completion of a final project. Students benefit from both the academic side as well as the practical side by gaining hands-on experience for future employment.

Restrictions: Enrollment limited to students with a class of Junior or Senior. Enrollment is limited to students with a major in Health Science or Inter. Health Studies.

Attributes: Undergraduate

HSC 493 Independent Study (3 credits)

Students who have completed four regular semesters with an overall grade point average of 3.0 (or cumulative average of 3.4 or higher for courses in the major field) may, with the prior approval of the chairs and Dean's office concerned, register each semester for one upper division course in the major field (or a closely related field) to be taken in the Independent Study/Directed Readings or Research/Tutorial format. Such courses are offered to enrich the student's major program and not as a special arrangement to facilitate a student's fulfillment of course or credit requirements. Additional conditions are described in Guidelines for Directed Readings, Independent Study, and Similar Courses issued by the appropriate Dean's Office.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Health Science or Inter. Health Studies.

Attributes: Undergraduate

HSC 494 Independent Study (3 credits)

Students who have completed four regular semesters with an overall grade point average of 3.0 (or cumulative average of 3.4 or higher for courses in the major field) may, with the prior approval of the chairs and Dean's office concerned, register each semester for one upper division course in the major field (or a closely related field) to be taken in the Independent Study/Directed Readings or Research/Tutorial format. Such courses are offered to enrich the student's major program and not as a special arrangement to facilitate a student's fulfillment of course or credit requirements. Additional conditions are described in Guidelines for Directed Readings, Independent Study, and Similar Courses issued by the appropriate Dean's Office.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Health Science or Inter. Health Studies.

Attributes: Undergraduate

HSC 495 Seminar in Health Sciences (3 credits)

This course is offered as one of the final courses in the Health Sciences major to provide students with a solid platform in leadership, professionalism, career development, and community outreach. Course content is based upon two overarching educational goals. The first major goal is to synthesize key themes and information that constitute the Health Sciences curriculum, allowing students to review critical concepts and material. The second major goal is to help students transition from their undergraduate environment to the world of professional careers in health care; professional education in various clinical fields; or graduate education in health administration, public health, or health education. This course partners with Career Development Center staff to offer best practices in resume writing and a panel presentation of alumnae. All students are expected to develop a community-based service/research project for presentation.

Prerequisites: (IHS 110 or HSC 110) and (IHS 211 or HSC 211) and (IHS 323 or HSC 323 or SOC 323)

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Health Science or Inter. Health Studies.

Attributes: Undergraduate

Health Services (HSV)

HSV 550 Health Services Research (3 credits)

Explores the history of health research, basic principles and types of research in order that health professionals will be able to critically evaluate research in their respective fields. This course is a combination of lecture, discussion and experiential learning designed to instill a critical understanding of the research process for application to clinical practice.

Restrictions: Enrollment is limited to Graduate level students.

HSV 551 Managed Health Care (3 credits)

This course is an introduction to managed care including current and evolving models, terminology, and differences among insurers and payer types. The course will focus on the use of financial incentives to restrain healthcare costs and the role of utilization review, peer review, provider.

Restrictions: Enrollment is limited to Graduate level students.

HSV 700 Integ Capstone Crs in Hlth Serv (3 credits)

An integrative capstone course in which the student is expected to integrate and synthesize prior course work and to demonstrate competence in health services through the analysis of complex cases in health services delivery and management and the development of a case of his/her own based on experience and observation. Integrative Capstone should be the final course in the curriculum.

Prerequisites: HAD 552 and HAD 553 and HAD 555 and HAD 556 and HAD 560 and HAD 600 and HSV 550 and HSV 551

Restrictions: Enrollment is limited to Graduate level students.

History (HIS)

HIS 150 First Year Seminar (3 credits)

First-Year seminar course in History.

Attributes: First-Year Seminar, Undergraduate

HIS 154 Forging the Modern World (3 credits)

Students will analyze primary and secondary sources to understand the predominant structures and relationships that have transformed our world from the early modern era to the twentieth century. Topics will include the development of political and economic ideas and systems (e.g., democracy, liberalism, conservatism, nationalism, fascism, colonialism, capitalism, socialism), changing conceptions of culture and identity (e.g. race, gender, ethnicity, art), and the conflicts and opportunities born of this transformation (e.g., anti-colonial movements, social revolutions, world wars, international organizations, globalization, religious and cultural conflicts). Readings and discussions will emphasize understanding how modern systems of political, economic and social meaning and exchange, including Western dominance, emerged.

Attributes: Signature Course, Undergraduate

HIS 170 Special Topics in History (3 credits)

Topics of interest in History that are not covered in a regularly offered course. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 191 Washington Leadership Seminar (3 credits)

Students who attend The Washington Center (TWC) take a leadership seminar through TWC. This course is an elective; it does not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 192 Washington Internship (3 credits)

Students who attend The Washington Center (TWC) for a normal academic semester (fall or spring) perform a 30-35 hour a week internship. The Department grants students two upper division courses (6 credits) for the internship (see HIS 411-412 below) and also this third elective course for these internship hours. This course is an elective; it does not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 193 Washington Center Elective (3 credits)

Students who attend The Washington Center (TWC) take one evening course at the Center in addition to performing their internship and participating in the leadership seminar. This course is an elective; it does not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 195 AP World History Credit (3 credits)

Students who receive a 4 or 5 on the AP World History exam will receive credit for this course.

Attributes: Undergraduate

HIS 196 AP World History Credit (3 credits)**HIS 201 U.S. History to 1877 (3 credits)**

This course will survey the history of what would become the United States from the pre-Columbian era through Reconstruction. We will examine significant developments in politics, society, economy, and culture, paying equal attention to individuals, institutions, and ideas. We will also study the practice of history, looking at the ways in which historians use primary and secondary sources to develop scholarly arguments. HIS 201 and 202 may be taken in any order.

Attributes: American Studies Course, Undergraduate

HIS 202 U.S. History since 1865 (3 credits)

This course will survey the history of the United States from Reconstruction through the present. We will examine significant developments in politics, society, economy, and culture, paying equal attention to individuals, institutions, and ideas. We will also study the practice of history, looking at the ways in which historians use primary and secondary sources to develop scholarly arguments. HIS 201 and 202 may be taken in any order.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 203 Historical Intro to Latin Am (3 credits)

A survey of the development of Latin American society, emphasizing the era from the independence movements of the nineteenth century to the present day. The course will focus on the changing social, economic and political structures of the region.

Attributes: International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

HIS 204 Latin American-U.S. Migration (3 credits)

This course will provide students with a deeper understanding of the processes that led migrants from Latin America and the Caribbean to the United States, and their experiences after arrival. The course focuses on three interdisciplinary topics: community formation; the variety of individual and group experiences; and current policy questions for the hemisphere.

Prerequisites: PHL 154

Attributes: Diversity Course, Ethics Intensive, Faith Justice Course, International Relations Course, Justice Ethics and the Law, Latin American Studies Course, Undergraduate

HIS 208 Historical Intro to Asian Civs (3 credits)

This course will introduce students to the culture, politics, geography, art, and religious traditions of the major countries of East and South Asia. It will also give a historical overview from earliest times to the present. The course will focus primarily on the Indian subcontinent, China and Japan, with some attention also to Korea and Southeast Asia. Throughout the course students will also learn how questions of history and culture shape identities and animate public life in contemporary Asia.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 209 AP European History Credit (3 credits)

Students who receive a 4 or 5 on the AP European History exam, or the IB equivalent, will receive credit for this course.

Attributes: International Relations Course, Undergraduate

HIS 210 History of Modern Africa (3 credits)

This course is designed to introduce key themes of the history of Modern Africa. These themes included African Imperialism, European Colonialism, Gender, Education, Development, and political and mental Decolonization. This class is intentional about its source base and includes only sources by Africans and those in African the Diaspora. It also has diverse readings that include, Poetry, Psychology, Literature, and Graphic novels. The culminating assignment is where students will be following a newspaper story in African Newspapers.

Attributes: Africana Studies Course, Diversity Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 270 Special Topics in History (3 credits)

Content and structure of the course are determined by the course supervisor. The special topic for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 296 Transfer History Credit (3 credits)**HIS 301 Latin America and the U.S. (3 credits)**

The complex relationship between the United States and the Latin American nations in the nineteenth and twentieth centuries.

Attributes: International Relations Course, Latin American Studies Course, Undergraduate

HIS 303 History of Modern Mexico (3 credits)

The major social, political, and economic factors that have shaped Mexico in the twentieth century.

Attributes: International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

HIS 304 Social Protest in Latin Am His (3 credits)

An examination of upheaval in Latin American history, from village riots to social revolutions. Students will analyze relevant theoretical and historiographical literature on social protest and explore case studies that will test the explanatory strength of these different models.

Attributes: International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

HIS 306 Sports & Spectacle Greece/Rome (3 credits)

The course draws on historical sources and material culture to investigate the genesis, evolution, and social importance of athletics (track and field events, combat sports, and equestrian competitions) and public spectacles (gladiatorial combats, chariot races, and reenactments of battles) in ancient Greece and Rome, respectively. Topics explored include: the history of the ancient Olympics and other Crown Games; the importance of religion, socio-economic status, and gender in ancient sports; the relation between politics and spectacles in ancient Rome; the ethical protocols of Greek athletics; and the role of ancient sports in the history of the modern Olympic Games.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Classical Studies or History.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

HIS 307 Ancient Greece & Rome Cinema (3 credits)

The course examines a variety of films set in the ancient Greek and Roman world and compares them to the textual and visual sources on which they are based, in an attempt to assess their faithfulness and departures. The course aims to investigate the uses and abuses of the classical past in the medium: how (in)accurately historical figures and events are portrayed on the big screen and how modern ideologies and concerns (about politics, ethnicity, morality, religion, gender, sexuality, race, and cinema itself) are dressed into an ancient costume.

Prerequisites: ENG 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Classical Studies or History.

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course-GEP

HIS 308 Race & Ethnicity Greece/Rome (3 credits)

The course examines how the concepts of race and ethnic diversity are presented and debated in various Greek and Roman sources (literary as well as visual) and to what extent ancient thinking remains influential nowadays. The course explores a series of important ideas, including nation formation, ethnic superiority, and the use of anatomical, linguistic, and religious characteristics as criteria for ethnic and racial differentiation in the ancient Mediterranean world. The course also investigates the nexus between ancient racism and the social institutions and processes related to it, such as enslavement, colonization, migration, imperialism, assimilation, native revolts, and genocide.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Classical Studies or History.

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

HIS 313 The Crusades (3 credits)

In 1095, Pope Urban II gave a speech that launched the First Crusade, a speech that ushered in a new and violent age of relations among Christians, Muslims, and Jews. The actual gains of that Crusade and many others were minimal, but their legacy of intolerance and mistrust among the three monotheistic religions that claim common ancestry from Abraham persists to the present. This course will emphasize the Crusades of the eleventh through fifteenth centuries, and will conclude by examining the modern inheritance of these medieval campaigns.

Prerequisites: (THE 153 or THE 154 or THE 155) and HIS 154

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

HIS 315 The Glory that was Greece (3 credits)

From Homer to Alexander, the Greeks of antiquity made their mark on the world both of their own time and of the present. While many know the names of great philosophers and artists, such as Plato and Sophocles, few are acquainted with the historical circumstances that often served to inspire these founders of Western civilization. Through original historical and literary texts, this course will help students better to understand the complex context of military prowess, intellectual curiosity, and artistic inspiration that created the glory that was Greece.

Attributes: Ancient Studies Course, Ethics Intensive, GEP Art/Literature, Undergraduate

HIS 316 The Grandeur that Was Rome (3 credits)

From its beginnings as a muddy village, Rome grew to create the largest empire and greatest uniformity the Western world has ever known. This course will: trace the course of Rome's development in the areas of military, political, social and legal history; examine the effects of Christianity and endless expansion upon the empire; and critically assess various theories explaining its demise.

Prerequisites: ENG 101

Attributes: Ancient Studies Course, Undergraduate, Writing Intensive Course-GEP

HIS 317 The Rise of the West: 400-1000 (3 credits)

In recent years, scholarly debate has raged over the effects of "The Fall of Rome"; what was once viewed as a catastrophe faces re-evaluation from historians, archeologists, and sociologists. The slow merger of Roman, barbarian, and Christian cultures created a unique civilization, focused intently on survival in this world and salvation in the next. The course will examine the mental and physical constructs of this civilization, with the goal of appreciating the extraordinary creativity of a society with few hard and fast rules or institutions to guide it.

Prerequisites: ENG 101

Attributes: Ancient Studies Course, Medieval, Ren & Reform Studies, Undergraduate

HIS 318 Italian Renaissance 1100-1600 (3 credits)

Extraordinary creativity in all arenas flourished in Italy during the Renaissance. New forms of political theory and organization, finance, art, literature and views about human nature itself all drew on Roman and medieval traditions, and bloomed against a backdrop of constant warfare. The course will examine the formation and evolution of the northern Italian city-states and the culture they created.

Prerequisites: ENG 101

Attributes: Medieval, Ren & Reform Studies, Undergraduate

HIS 319 Reform/Rev in Europe 1500-1650 (3 credits)

Examines the Protestant Reformation, its impact on the religious practice of regular people during the sixteenth and seventeenth centuries, and the various responses to reformed thought offered by the Catholic Church. The course pays particular attention to the interaction of faith and reason during the Reformation conflicts.

Prerequisites: PHL 154 and ENG 101 and (THE 153 or THE 154 or THE 155)

Attributes: Faith-Reason Course, Justice Ethics and the Law, Medieval, Ren & Reform Studies, Undergraduate

HIS 324 Vietnam War in Film & History (3 credits)

This course examines two differently ways of constructing the past, one by historians, the other by filmmakers. We will examine the origins of American involvement in Vietnam, and the course of the conflict from the late 1950s through disengagement in 1973. At the same time, we will watch films that illustrate the evolving way that the war has been represented between 1968 and 1989.

Attributes: Undergraduate

HIS 327 Early Modern Europe 1400-1800 (3 credits)

Examines some of the key transformations in European history between the years 1400-1800. Topics include the Renaissance, the Reformation, the Dutch Revolt, the English Civil War, European encounters with the "New World," Absolutism and the rise of the nation state, the Scientific Revolution, and the French Revolution.

Attributes: Justice Ethics and the Law, Medieval, Ren & Reform Studies, Undergraduate

HIS 329 Crime & Punishment in Europe (3 credits)

Examines the development of European crime and punishment from 1200-1840. Focuses in detail on the social role of legal proceedings, judicial torture, physical punishment, and public execution in European society. As part of the course, students reenact a series of trials from the Spanish Inquisition. Concludes by studying the shift toward punishment by prison in the eighteenth and nineteenth centuries through the lens of Philadelphia's own, Eastern State Penitentiary.

Attributes: Justice Ethics and the Law , Medieval, Ren & Reform Studies, Undergraduate

HIS 330 Eng: Danes to Tudors, 700-1485 (3 credits)

The ways in which official decrees-royal, noble, and ecclesiastical-affected people in all walks of life, and will furthermore explore the various roles English men and women constructed for themselves. In so doing, students will gain insight into the ways inhabitants of this island thought of themselves and the world around them.

Attributes: Medieval, Ren & Reform Studies, Undergraduate

HIS 337 War & Peace in Imperial Russia (3 credits)

A survey of the major political, social, economic, and cultural developments in Russia from 980 to 1881. The course covers Kievan Rus, the Golden Horde, Muscovy, the consolidation of the Romanov autocracy, the expansion of the Russian Empire, the Napoleonic Wars, and the Great Reforms that emancipated the serfs. Students will read primary and secondary sources, as well as a memoir of their choosing.

Attributes: International Relations Course, Undergraduate

HIS 338 Russia & USSR, 1881-1991 (3 credits)

A survey of the major political, social, economic, and cultural events of Russia and the Soviet Union from 1881 to 1991. During this time, the lands of the Russian Empire and its successor, the Soviet Union, changed from a "backward" agricultural country to a technologically advanced superpower to fifteen new countries with diverse political and economic systems. The course will examine these developments through the decline of tsarism and the fall of the Romanov dynasty, the Russian revolutions and the foundation of the Soviet Union, Stalinism, World War II, the Cold War, and the reforms under Gorbachev that contributed to the collapse of the Soviet Union.

Attributes: International Relations Course, Undergraduate

HIS 339 The Mongol Empire (3 credits)

In the thirteenth century, the Mongols built the largest contiguous land empire that the world has ever known. This course will cover the rise, running, and fall of this enormous Eurasian empire. It will explore the society and culture of the Mongols, as well as how the Mongol Empire impacted the many peoples whom they conquered. Students will read and analyze primary sources written by those who experienced the Mongol Empire.

Attributes: Asian Studies Course, Medieval, Ren & Reform Studies, Non-Western Studies (GEP), Undergraduate

HIS 340 Stalinism in the USSR (3 credits)

An examination of the Soviet Union under the leadership of Joseph Stalin from 1928 to 1953. Course readings will focus on the experiences of ordinary people to demonstrate how Stalin's rule brought both opportunity and great tragedy. Stalinism, historians argue, was more than a political ideology such as Marxism and Leninism, but a way of life and civilization distinct from anything the modern world had yet experienced.

Attributes: International Relations Course, Undergraduate

HIS 341 Genocide & Human Rights (3 credits)

Through an examination of four twentieth-century genocides (the Armenian Genocide from 1915 to 1917, the Holocaust from 1933 to 1945, the genocide in Cambodia from 1976 to 1979, and the genocide in Rwanda in 1994), the course will explore the concept of genocide and the development of national and global laws to prevent it, promote human rights, and prosecute abusers. Students will read primary and secondary sources and study genocidal violence as a particularly vicious form of state policy, as well as a human and personal experience of terror and murder.

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Justice Ethics and the Law , Undergraduate

HIS 343 African Ethnicities (3 credits)

Scholars have noted that one of the worst words in any language is the word for brother because it informs one to treat their brothers one way and all others differently. This course has two major themes: learning the various ways that identities are constructed and used and, two, the multiple ways in which these identities have impacted morality. This class begins with introductions to different ethnic schools of thought and African moralities. It continues with case studies on the Akan, Yoruba, Afrikaner, Hutu, and Tutsi ethnic identities and ethics.

Prerequisites: ENG 101 and PHL 154

Attributes: Africana Studies Course, Ethics Intensive, International Relations Course, Non-Western Studies (GEP), Writing Intensive Course-GEP

HIS 346 Religion & Philosophy: Africa (3 credits)

Examines the role of religious thought and cultural philosophies in conflict and peace in Africa. The class will begin as a survey of the history, cultures and religions of Africa. After which, several case studies will be presented that put specific North-African interpretations of Judaism, Islam, Christianity or traditionalist beliefs at the center of either conflict or consensus in this region. A final extended case study will examine the Somali, where one has a unity of language, culture and religion, but due to decades of civil wars, no functional state. These case studies will focus on the specific religious beliefs or practices that either endeared religious groups to each other or transcended religious denominations to provide concrete examples for the ways in which the proponents of faiths and secularity coexist or cause conflict in Africa.

Prerequisites: THE 153 or THE 154 or THE 155

Attributes: Faith-Reason Course, International Relations Course, Undergraduate

HIS 348 Witches in Early Modern Europe (3 credits)

Examines popular and educated belief in the supernatural in early modern Europe, 1400-1800. Focuses especially on the "witch-craze" that occurred across Europe and its American colonies during the sixteenth and seventeenth centuries, as well as attitudes towards supernatural entities such as ghosts and werewolves.

Attributes: Gender Studies Course, Justice Ethics and the Law , Medieval, Ren & Reform Studies, Undergraduate

HIS 350 Exchnng & Conq in Mod E. Asia (3 credits)

An analysis of East Asian history from 1500 to the present, emphasizing the reciprocal influences of East Asia and the West. The primary focus will be on China and Japan, with attention also to Korea and Vietnam. Major topics will include the Jesuits in East Asia; approaches to modernization in China and Japan; the decline of China and the rise of Japan in the nineteenth century; colonialism and anti-colonial movements; the challenges of global culture; and debates over human rights in the late twentieth century.

Attributes: Asian Studies Course, International Relations Course, Undergraduate

HIS 351 Gndr, Ideolgy & Rev in E. Asia (3 credits)

This course will examine the institutional and ideological connections between gender roles and social unrest in East Asia since 1900. Questions central to the class will be: changing notions of the ideal man and woman, and how changes in society and politics have been reflected in gender roles for men and women. Topics may include traditional East Asian societies; foot binding; revolutionary movements including communism, nationalism and feminism; family-planning; the Japanese samurai ideal; and gender roles in film and fiction.

Attributes: Asian Studies Course, Gender Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 352 Late Imperial China (3 credits)

A survey of Chinese social, political, intellectual, and cultural history during the Ming and Qing dynasties. Major topics will include Ming voyages of discovery, Ming art and literature, the Manchu conquest, War of the Three Feudatories, Taiping Rebellion, and the advent of Western imperialism.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 353 Modern China (3 credits)

A survey of Chinese social, political, intellectual, and cultural history from 1900 to the present. Major topics will include the Opium Wars, emergence of Chinese nationalism, the Boxer Rebellion, collapse and fall of the Qing dynasty, the May Fourth Movement in literature and politics, competing strands of Chinese communism, warlords, the anti-Japanese war, the founding of the People's Republic, the Great Leap Forward, Cultural Revolution, Deng Xiaoping's Reforms, social protest of the 1980s, and the challenges of rapid economic development.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 354 Japan Since 1600 (3 credits)

A survey of Japanese history since 1600. Major topics include traditional Japanese social structure, bushido and samurai culture, Perry and the opening of Japan, the Meiji Restoration, militarism and modernization, expansion onto the Asian continent, Showa democracy, the Pacific War, the American Occupation, political and economic reconstruction, cinema and literature of post-war Japan.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 356 Modern South Asia (3 credits)

The nation-states of India, Pakistan, Bangladesh, Sri Lanka, Bhutan, Nepal and the Maldives Islands (and sometimes Afghanistan)-comprise incredible diversity of language, culture, religion, art, dress, architecture, and cuisine. This course places the region into historical, political and socioeconomic context. It offers a thematic and chronological study of modern South Asia with thorough examinations of the transition from the late Mughal to the British colonial period, the movements for independence and the social activism that grew out of them. Includes: gender, caste/casteism, minorities, territorial/sovereignty conflicts, pop culture and film, development economies, and the South Asian diaspora.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 357 History of Islam in Asia (3 credits)

The early history of Islam, and the ways it grew beyond the Arabian Peninsula and ultimately took hold in Central, South, Southeast Asia and East Asia. The course examines the expansion of Islam throughout Asia, its relationship with existing systems and geo-politics, the relationship between Islam and statecraft, and questions of gender, identity, belonging as well as the pressures of globalization, including the most current events affecting Asian Muslims.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 358 Contemporary China (3 credits)

History, politics, and China since 1976. Major topics covered will be the death of Mao and the end of the Cultural Revolution; the opening of relations with the United States; Deng Xiaoping's rise; opening and reform; China's "economic miracle"; the one-child policy; the 1989 democracy movement and its aftermath; China's rise as a global economic and political power; the environmental challenge accompanying China's economic development; and the Communist Party's strategies and tactics to maintain power.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 359 India & Pak: Colony to Nation (3 credits)

This course will examine the emergence of anti-colonial leaders in the Indian subcontinent and the evolution and interaction of their thinking; the politics of Indian nationalism; the history of the 1947 partition and its reverberations; the challenges of state building after independence from Britain and the movement for the independence of East Pakistan, that became Bangladesh in 1971. This course includes the Reacting to the Past role-playing game "Defining a Nation: India on the Eve of Independence."

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

HIS 360 Colonial America (3 credits)

A survey of the social, economic, cultural, and political developments in colonial America with special emphasis on the origins and evolution of the plantation system, slavery, religious diversity, cities, and scientific inquiry.

Attributes: American Studies Course, Diversity Course, Undergraduate

HIS 361 America in Age of Revolutions (3 credits)

A survey of American history from the era of the American Revolution through the mid-nineteenth century with special emphasis on independence, the 1800 revolution in politics, the transportation, agricultural, and industrial revolutions, and the social revolution accompanying modernization in the nineteenth century.

Attributes: American Studies Course, Undergraduate

HIS 362 The American Civil War (3 credits)

A history of the American Civil War and Reconstruction. The course will cover the causes, management, and consequences of the war in society, economics, politics, and culture.

Prerequisites: PHL 154

Attributes: Africana Studies Course, American Studies Course, Ethics Intensive, Undergraduate

HIS 363 American Medicine Since 1865 (3 credits)

This course will explore the history of American medicine and medical treatment beginning with the Civil War. It will continue by exploring the introduction of new scientific approaches and technologies, the enhancement of fields like surgery and psychiatry, the influence of growing professionalization, pharmaceutical discoveries, and public health concerns, including sanitization, and the people who shaped these changes and their institutions: doctors, nurses, hospitals, and insurance companies. Throughout, we will consider as well the ways in which medicine has been affected by wars, epidemics, and other crises, as well as attitudes about race, class, and gender.

Attributes: American Studies Course, Undergraduate

HIS 366 Reform and Reaction in the US (3 credits)

Reform affected all levels of U.S. politics, culture, and society in the first half of the twentieth century, linking the first Roosevelt administration to the last. Progressives and New Dealers tried to save the world abroad and preserve health and "normalcy" at home, as women, immigrants, and African-Americans pressed for greater opportunities. Two world wars complicated and deepened these trends. This course will examine the nature, contradictions, and social and political consequences of these important decades of reform, reaction, and transition.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 370 Special Topics in History (3 credits)

Topics of interest in History that are not covered in a regularly offered course. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 379 Black History Since Civil War (3 credits)

The history of Black Americans from Reconstruction to the present day. Students will examine the unity and diversity of the Black experience, including the myriad social, cultural, political, and economic conditions that created this experience. They will also explore the ways in which African-Americans have shaped American history and culture, and their efforts, in concert with other Americans, to subvert, transcend, and otherwise reform a discriminatory landscape and reassert the founding principles of the American republic.

Prerequisites: HIS 154

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Justice Ethics and the Law, Undergraduate

HIS 381 US in the World since WWI (3 credits)

Examines the role of the United States in the world from 1917 until the end of the Cold War. The course explores the nation's transformation from a hesitant embrace of international commitments to an expansive vision of global involvement.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 382 American Foreign Policy (3 credits)

This course offers an interdisciplinary perspective on the U.S.'s role in global events emphasizing both historical understanding and theoretical approaches. Beginning with World War I, the course will develop major themes and challenges for U.S. foreign policy in the 20th century and beyond: isolationism vs. internationalism, hegemony vs. empire, citizens' rights vs. state interests, and the extent to which the pursuit of national security (national power and prosperity) should recognize ethical limits.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 383 Food in American History (3 credits)

An examination of how food and foodways have historically shaped and reflected American culture, society, economy, and politics. Major topics include agriculture and labor; technology and industrial food processing; ethnic cuisines and traditions; restaurants and supermarkets; food, family, and gender; and the impact of government policies and regulations.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 385 Women in America (3 credits)

The history of American women from the antebellum period to present. This course will focus on the evolution of women's family and work roles, as well as their involvement in social reform and political movements. It will emphasize both the unity and the diversity of women's historical experiences, based upon factors such as race, ethnicity, class, and region.

Attributes: American Studies Course, Diversity Course, Gender Studies Course, Undergraduate

HIS 386 American Environmental History (3 credits)

A study of our historical place in the natural landscape through the methods of "environmental history," examining ecological relationships between humans and nature, political and economic influences on the environment, and cultural conceptions of the natural world. Drawing on methods from the natural sciences, the social sciences, and the humanities, the course will survey over 500 years of North American environmental history, with topics ranging from urban pollution and suburban sprawl to agricultural practices and wilderness protection.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 387 Popular Culture in the US (3 credits)

A survey of the production and consumption of commercialized leisure in the United States from the early nineteenth century to the present day. Throughout the nation's history, American popular culture has both reflected and shaped society's values, often serving as an arena of conflict among classes, races, and genders. By investigating selected sites on this contested terrain—from novels, stage shows, and movies to radio, television, and popular music—students will learn to think seriously, critically, and historically about the mass-produced culture that surrounds them every day.

Attributes: American Studies Course, Undergraduate

HIS 388 Reacting to the Past (3 credits)

Immerses students in moments of historical controversy through a series of extended role-playing games. By reading primary sources, conducting additional research, and participating in first-person debates, students will develop a more active, engaged, and empathetic understanding of both historic events and historical practice. Students will also participate in the playtesting of new "Reacting" games, thereby contributing to the development of an innovative interactive pedagogy.

Attributes: Undergraduate

HIS 391 American Military History (3 credits)

This course explores the development of the American military and its roles in America's wars from the period of the Spanish-American War to the present. Emphasis will be placed on growth and change in the military within a broader social, political, and economic context.

Attributes: American Studies Course, International Relations Course, Undergraduate

HIS 392 Museums, Monuments, and Media (3 credits)

"Public history" is history as it is practiced outside of the classroom for a general audience: at museums, monuments, and historic sites; in film, television, and digital media. In this course, students will examine the history, methods, and impact of public history in the United States. Through case studies, debates, site visits, and hands-on projects, students will learn how to consume, critique, and create public history, and to assess how the past is used (and abused) for present purposes.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, Undergraduate

HIS 396 Transfer History Credit (3 credits)**HIS 411 Washington Internship I (3 credits)**

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 412 Washington Internship II (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for HIS major or minor credit.

Attributes: Undergraduate

HIS 470 Special Topics in History (3 credits)

Topics of interest in History that are not covered in a regularly offered course. Content and structure of the course are determined by the course supervisor. The special topic(s) for a given semester will be announced prior to registration.

Attributes: Undergraduate

HIS 471 Seminar in American History (3 credits)

Lectures, readings, and discussions focusing on an announced theme in United States history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101 and HIS 154

Attributes: American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 472 Seminar in European History (3 credits)

Lectures, readings, and discussion focusing on an announced theme in European history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101 and PHL 154

Attributes: Ethics Intensive, Undergraduate, Writing Intensive Course- GEP

HIS 473 Seminar in Eurasian History (3 credits)

Lectures, readings, and discussion focusing on an announced theme in Eurasian history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101 and HIS 154

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

HIS 474 Seminar in Latin Am His (3 credits)

Lectures, readings, and discussion focusing on an announced theme in Latin American history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: Latin American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 476 Seminar in Asian History (3 credits)

Lecture, readings, and discussion focusing on an announced theme in Asian history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: Asian Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 477 Seminar in African History (3 credits)

Lectures, readings, and discussion focusing on an announced theme in African history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: Africana Studies Course, Diversity Course, Undergraduate, Writing Intensive Course- GEP

HIS 478 Seminar Global Comparative His (3 credits)

Lectures, readings, and discussion focusing on an announced theme in global and comparative history. Each student undertakes a major research project associated with the selected theme.

Prerequisites: ENG 101

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

HIS 480 Readings in Latin Amer Hist (3 credits)

A study of significant themes and periods in Latin American history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Latin American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 481 Readings in Asian Hist (3 credits)

A study of significant themes and periods in Asian history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Asian Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 482 Readings in European Hist (3 credits)

A study of significant themes and periods in European history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 483 Readings in American Hist (3 credits)

A study of significant themes and periods in American history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: American Studies Course, Undergraduate, Writing Intensive Course- GEP

HIS 484 Readings in African History (3 credits)

A study of significant themes and periods in African history under the direction of an instructor. Frequent consultations and written reports are required. Prior approval from the chair is required.

Prerequisites: ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 491 Philadelphia Area Internship (3 credits)

The Philadelphia Area Internship course supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations.

Attributes: International Relations Course, Undergraduate

HIS 493 Honors Research & Ind Study I (3 credits)

Independent research leading to the successful completion and defense of an Honors Thesis.

Prerequisites: ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 494 Honors Research & Ind Study II (3 credits)

Independent research leading to the successful completion and defense of an Honors Thesis.

Prerequisites: ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

HIS 496 Transfer History Credit (3 credits)

Honors (HON)

HON 150 Epic Tradition in Literature (3 credits)

This course explores the way in which literature seeks to define values in the real world. Beginning with a brief introduction to the world of epic for the Greeks and the Romans, we will trace themes and conflicts emerging from ancient epic and informing subsequent epics of the English Renaissance. Students will be exposed to the ongoing search for God in the fractured religious contexts of sixteenth- and seventeenth-century England.

Attributes: First-Year Seminar, Honors Course, Undergraduate

HON 201 Shakespeare in Short (1 credit)

This Honors course involves three Shakespeare plays and a mandatory trip to see one of them, *The Tempest*, performed at Quintessence Theatre in March. The course will involve videos, quizzes, discussions and questions on Canvas, as well as one essay and/or exam, due during finals week.

Attributes: Honors Course, Undergraduate

HON 221 Rebels&Revolutionaries:Art&Lit (3 credits)

In this course we will explore the works of 20th- and 21st-century visual artists and writers who have rebelled against the status quo and revolutionized the course of visual art and literature. We will delve into their texts and images through readings, discussions, and field trips, and consider what they teach us about our own time and our role in it.

Attributes: English Area 4- British/Irish, GEP Art/Literature, Honors Course, Irish Studies Course, Undergraduate

HON 222 Leadership: Ancient&Mod Views (3 credits)

The Greco-Roman world produced some of history's most celebrated leaders. Through its presidents and entrepreneurs, the U.S. has dominated the global political and economic scene since the early 20th century. The course examines ancient and modern examples of leadership to deepen students' understanding and prepare them for future positions. Topics include: What motivates people to become leaders? What are the qualities associated with a successful leader? What flaws and weaknesses characterize a bad leader? How do leaders inspire others to share their vision? To what extent is the ability to lead determined, or undermined, by one's gender, race, or socioeconomic status? How does one overcome such obstacles?

Attributes: GEP Art/Literature, Honors Course, Undergraduate

HON 270 Honors Special Topics (3 credits)

Topics will vary by instructor each semester in which the class is offered.

Attributes: Honors Course, Undergraduate

HON 300 Community Engaged Scholarship (3 credits)

In this course, students will work with a community-based organization to design and conduct research on an issue related to homelessness or affordable housing. Throughout the semester, students will learn about research methods, research ethics, and the particular urban context within which they will be working. More importantly, students will gain experience working alongside staff of a community-based organization to solve problems or assess needs and strengths. This is a service-learning course.

Attributes: Diversity Course, GEP Social Science, Honors Course, Undergraduate

HON 301 Modern Mosaic I (3 credits)

An interdisciplinary study in Western European civilization from 1832 to 1939, analyzing developments in history, philosophy, science, music, the arts and literature.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 302 Modern Mosaic II (3 credits)

An interdisciplinary study in Western European civilization from 1832 to 1939, analyzing developments in history, philosophy, science, music, the arts and literature.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 303 Reason Revolution Reaction I (3 credits)

An interdisciplinary study in Western European civilization from 1500 to 1832 analyzing developments in history, philosophy, science, music, the arts, and literature.

Prerequisites: ENG 101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: English Area 4- British/Irish, GER Art/Literature, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 304 Reason Revolution Reaction II (3 credits)

An interdisciplinary study in Western European civilization from 1500 to 1832 analyzing developments in history, philosophy, science, music, the arts, and literature.

Prerequisites: ENG 101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: English Area 4- British/Irish, GER Art/Literature, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 305 America:Myth/Images/Real I (3 credits)

An interdisciplinary study of American culture from the early settlement years to the present, juxtaposing novels, films, historical documents, paintings, poems, legislation, and photographs.

Attributes: GEP Art/Literature, Honors Course, Undergraduate

HON 306 America:Myth/Images/Real II (3 credits)

A continued interdisciplinary study of American culture from the early settlement years to the present, juxtaposing novels, films, historical documents, paintings, poems, legislation, and photographs.

Attributes: GEP Art/Literature, Honors Course, Undergraduate

HON 309 Pens/Guns:Litr Road Am Civ War (3 credits)

An interdisciplinary study of the links between literature and politics leading up to and occurring during the American Civil War, with emphasis on the ways American writers used fiction, poetry, and other literary forms to react to and to comment publicly upon slavery and the sectional crisis that threatened the nation from the 1840s to the 1860s. Satisfies upper-level requirement for history majors, the American literature requirement for English majors, and the elective requirement for American Studies minors.

Prerequisites: PHL 154 and ENG 101

Attributes: Ethics Intensive, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 310 Womens Writing as Emancipation (3 credits)

This course explores how British and American women of the late seventeenth to early twentieth centuries used writing as a means of emancipation. Drawing on a wide variety of women's texts- narrative fictions, poetry, political polemics, conduct books, letters, autobiographies, social theories, sermons, etc.-we will examine both the historical circumstances in which women found themselves and the literary production that resulted.

Prerequisites: ENG 101

Attributes: American Studies Course, Diversity Course, English Area 4- British/Irish, English Area 5 - American Lit, English Early Lit, English Diversity, Gender Studies Course, GEP Art/Literature, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 311 Paradoxes, Prob & Proofs (3 credits)

Can a sentence be both true and false at the same time? Can a theorem be true if it has no proof? Can there be different sizes of infinity? Can a single solid ball be decomposed and reassembled to create two balls each with the same volume as the original? These questions all lie at the juncture of philosophy and the foundations of mathematics. This course examines the questions that have emerged in the 20th century about the nature of mathematical truth and the status of our mathematical knowledge. This is an interdisciplinary course that considers questions from both mathematical and philosophical perspectives.

Prerequisites: PHL 154

Attributes: Honors Course, Math Beauty, Undergraduate

HON 315 An Understanding of Suffering (3 credits)

The template through which this class will be offered is the Bio-Pscho-Social-Spiritual model. In so many words such a model is designed to help one arrive at an "Ecology of the Spirit" whereby one is led to respond to the question, What are the conditions through which a person is more open to be alert to the movements and workings of God's Spirit (whatever one's belief)? In effect, this "Ecology of the Spirit" may serve as a useful way of conceptualizing theologically suffering, trauma and evil, that is to say, a theodicy. This particular class is designed to accentuate the philosophical, psychological and theological meanings surrounding suffering and trauma. Using the faith and reason principle of *gratia perfecta natura* (grace perfects nature), I will suggest how God comes to a person in and through suffering, even in trauma. Various religious understandings of suffering and trauma will be offered with special emphasis given to the Catholic tradition. Through an appropriation of these understandings, the student will learn to become even more skilled in encountering suffering, one's own and that of others, and be a source and a resource for healing and hope. In this respect the student will become a competent and compassionate man/woman for others.

Prerequisites: PHL 154 and (THE 154 or THE 221) and ENG 101

Attributes: Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 316 Tragedy in Lit & Philosophy (3 credits)

This course, focused on classical, Shakespearean, and modern examples of tragedy, will seek to answer the following questions: Why do we enjoy seeing representations of tragic suffering? What does this tell us about human nature and our societies? Would a life without tragedy be fully human? What is the relationship between tragedy and trauma?

Attributes: English Area 3 - Shakespeare, English Area 4- British/Irish, English Early Lit, GEP Art/Literature, Honors Course, Philosoph Anthropol

HON 318 Society, Democracy, Republic (3 credits)

This Honors team-taught course will focus on the intellectual heritage of thinking and writing about collective human life, with particular reference to governance, decision-making, mores, social codes and conventional relationships of power (including both explicit power-sharing arrangements and customary divergences in status, authority, autonomy or control for various classes of persons). Despite an avowed focus on governance and the exercise of power, the course is devoted neither to the history of governments nor to political analysis. It will, instead, deal with principles, ethical frameworks and broadly humanistic values that we will illuminate through a large and varied sample of readings from the Ancient World and from the modern West. The intellectual content of the course will be rooted in social commentary and in literary and philosophical texts. Ethical considerations lie at its core.

Prerequisites: PHL 154

Attributes: Ethics Intensive, GEP Art/Literature, Honors Course, Undergraduate

HON 320 The Elections (3 credits)

This course coincides with the Federal Election cycle, and provides an analysis of the presidential, congressional, and gubernatorial races. Students will develop a basis for understanding the election cycle, especially drawing upon the changes that have taken place in American politics since the 1980s and the history of electioneering in America, especially in the modern era. This will include discussion of partisan realignment, the growing importance of personality and interest group politics, and the role of issues in influencing electoral choice. Particular attention will be devoted to understanding the tactics and strategies of the two major parties as they position themselves and then engage in the campaign process.

Prerequisites: ENG 101

Attributes: GEP Social Science, Honors Course, Undergraduate, Writing Intensive Course- GEP

HON 324 Russia as a Global Power (3 credits)

This course will examine Russia's rise and role as a global power in the 20th and 21st centuries. After suffering a devastating defeat in World War I, Russia, as the Soviet Union, remade its economic, cultural, and military power to be central to the defeat of the Axis states and then challenged the U.S. throughout the Cold War. The breakup of the Soviet Union set Russia's position back again, but since 2007, Putin has been increasingly assertive around the world. Combining the disciplines of History and Political Science, students will study the ebb and flow of Russian power using the tools of both disciplines. By examining secondary and primary sources, as well as theories of empire, war, state formation, and authoritarianism, students will achieve a strong understanding of Soviet and Russian foreign policy and the conceptual tools for better understanding post-Soviet Russia in the global arena.

Attributes: Honors Course, International Relations Course

HON 328 Anthro & Philo of the Body HON (3 credits)

This multidisciplinary course examines critical questions raised by the human body and our lived experience. We ask how our natures as complex human persons with rational, biological, and spiritual elements are both formed in response to bodily experience and how, in turn, these elements impact our experience and sense of the possible. This leads us to inquire into the ethical norms and responsibilities that have been fashioned around the body, as they pertain both to oneself and others. Specific topics may include: cultural relativism; the sources of normativity; the ethics of suffering and enduring; the ethics of pleasure; duties and possibilities of kindness; ordinary and transformative lived experiences; the corporeality of inequality and injustice.

Attributes: GEP Social Science, Honors Course, Philosoph Anthropol, Undergraduate

HON 370 Honors Special Topics (3 credits)

Topics will vary by instructor each semester in which the class is offered.

Attributes: Honors Course, Undergraduate

HON 384 Jew/Chr. Theologies Compared (3 credits)

The course studies fundamental religious questions as understood from various Jewish and Christian perspectives. Christian and Jewish students will gain an understanding of the other religious community while also deepening their understanding of their own. Other students will encounter the two traditions through a comparative lens. Topics to be discussed include the experience of God; the Bible; how Christians and Jews understand their relationship to God and the world; worship and prayer; and the destiny of the created universe.

Attributes: Honors Course, Religious Difference Course, Undergraduate

HON 388 Jews&Chr. Bible Interpretation (3 credits)

Although Jews and Christians share many of the same scriptural books, their respective collections are differently organized and named. Christians refer to their collection as the "Old Testament," while Jews call their texts the "Tanakh" (an acronym for the Hebrew words for Teaching, Prophets, and Writings). Despite, or because of this commonality, Christians and Jews have often battled over these scriptures' meanings. This course explores the ways that Jews and Christians have interpreted key texts, separately and together, over two millennia of learning from and disputing with each other. It also examines why the Bible has been a source of conflict between the two groups, with a focus on certain key passages, and why that is currently changing - as evidenced in recent official Catholic instructions.

Attributes: Honors Course, Religious Difference Course, Undergraduate

HON 390 Descending Tower: Commty Rsrch (3 credits)

Engaged scholarship can take several forms. Broadly defined, it means connecting the rich resources of the university to our most pressing social, civic, and ethical problems. One key way of sharing these resources is through research—not "on" the community, but "with" the community. This type of research model is one in which projects are developed collaboratively by community organization staff, faculty, and students, building on the unique strengths of those involved. In this course, students will work with a community-based organizations to design and conduct research. Throughout the semester, students will learn about research methods and ethics, and the particular urban context in which they will be working. More importantly, students will gain experience working alongside staff of a community-based organization to solve problems or assess needs and strengths.

Attributes: Honors Course, Undergraduate

HON 493 Independent Research I (6 credits)

Independent research, either for an Honors Independent Study, a College Honors Thesis, or a Research Concept Form

Attributes: Honors Course, Undergraduate

HON 494 Independent Research II (6 credits)

Independent research, either for an Honors Independent Study, a College Honors Thesis, or a Research Concept Form

Attributes: Honors Course, Undergraduate

HON 495 Capstone (6 credits)

Honors capstone research

Attributes: Honors Course, Undergraduate

Interdisciplinary (INT)

INT 101 Seminar in Learning Strategies (1 credit)

Adult students face many challenges while completing their degree. This course helps students develop both critical self-management and study skills to be successful in school and balance the needs of school, work and home.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

INT 151 Inequality in American Society (1 credit)

This one-credit course is attached to specific First-Year Seminars, similar to a lab requirement. Students will engage in discussions about issues related to racism and equity. This course will raise awareness of inequality in the U.S. and assist students to become thoughtful citizens committed to making the world more equal. This is a wonderful opportunity for students to recognize and understand the causes of inequality in America.

Attributes: Undergraduate

INT 170 Special Topics (1-3 credits)

This course will focus on a special topic of interest to an interdisciplinary audience that is not covered in a regularly offered course. The specific topic/content of this course will vary by instructor. This course is designed as an introductory level course or as a course primarily for but not limited to first-year students.

Attributes: Undergraduate

INT 190 Stem Squared Seminar (0 credits)**INT 270 Special Topics (1-3 credits)**

This course will focus on a special topic of interest to an interdisciplinary audience that is not covered in a regularly offered course. The specific topic/content of this course will vary by instructor. This course is designed primarily for but not limited to sophomores.

Attributes: Undergraduate

INT 354 Psychology and Religion (3 credits)

This course enters into the ongoing dialogue between psychology and religion, focusing first upon what psychologists have to say about the phenomenon of religion as it relates to culture, society, and the individual; then also considering ways in which religious people have articulated (from "non-psychological" perspectives) viable "psychologies" as well. The course surveys psychological thinking about religion in the works of James, Freud, Maslow, Jung, Allport, and more contemporary psychologists of religion. In addition, it focuses upon specific issues and problems related to religious experience and behavior, exploring what both psychologists and "religionists" have to say about such phenomena as cults, conversion, prayer and ritual behavior, shamanism, meditation, religious intolerance, and altruism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155)

Attributes: Faith Justice Course, Faith-Reason Course, Undergraduate

INT 370 Special Topics (1-3 credits)

This course will focus on a special topic of interest to an interdisciplinary audience that is not covered in a regularly offered course. The specific topic/content of this course will vary by instructor. This course is designed primarily for but not limited to juniors.

Attributes: Undergraduate

INT 380 Opioid Ed & Prevention Seminar (0 credits)

The Opioid Prevention and Education seminar is an undergraduate-level course designed to create future career leaders who are equipped with the knowledge and experience to face the current opioid epidemic. The curriculum consists of Training, Academic, and Experiential components to expose students to a wide range of educational modalities on this topic. Throughout the academic year, various speakers, training programs, and experiential opportunities will be offered that challenge students to consider all dimensions of this complex crisis and think critically about future solutions.

Attributes: Undergraduate

INT 390 McNulty Seminar I (0 credits)

Topics and agenda may include outside speakers, local speakers, and discussion of special topics in science, mathematics and computer science, especially as they relate to women in these and associated areas. McNulty Program Scholars, Associates, and Fellows are required to attend each semester. Graded on a P/NP basis.

Attributes: Undergraduate

INT 391 McNulty Seminar II (0 credits)**INT 470 Special Topics (1-3 credits)**

This course will focus on a special topic of interest to an interdisciplinary audience that is not covered in a regularly offered course. The specific topic/content of this course will vary by instructor. This course is designed primarily for but not limited to seniors.

Attributes: Undergraduate

INT 494 Independent Research I (3 credits)

Faculty directed directed independent reading and research. May stand alone or precede INT 495.

Attributes: Undergraduate

INT 495 Independent Research II (3 credits)

Second semester of a yearlong faculty directed independent reading and research project.

Attributes: Undergraduate

International Business (IBU)

IBU 150 Cultr Divers & Interntnl Bus (3 credits)

The course develops the understanding that cultural diversity is a crucial component of sustained and productive cross-border interactions in general and international business in particular. It discusses the power of diversity whereby the whole can be made greater than the sum of the parts. Through in-class exercises and out-of-class assignments, the course leads students to accept that their framework for looking at the world around them, i.e., their worldview, may be very different from that of other cultures. The course encourages students to explore their comfort level with different views of the world through experiential exercises and through investigation of some causes for differences across cultures. It introduces and develops critical thinking regarding the role of business and its obligations to all stakeholders while developing the notion of corporate social responsibility.

Attributes: Diversity Course, First-Year Seminar, Globalization Course, Undergraduate

IBU 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

IBU 210 Intro Internat. Business (3 credits)

This course is designed to introduce students to the basic concepts of international business by examining the following: 1) Country differences in political economy and culture; 2) Theories and politics of international trade, foreign direct investment and regional economic integration; 3) International operations from a functional perspective (i.e. Marketing, Operations, and Human Resources).

Attributes: Globalization Course, Undergraduate

IBU 270 International Bus Spec Topics (3 credits)

Topics will vary according to the semester in which the class is offered. CAS Students may take with permission of the Chair.

IBU 310 Global & Multinational Firms (3 credits)

This course is designed to provide students with a deeper understanding of international business by examining the following: 1) Theories of foreign direct investment (FDI) and international trade; 2) types of multinational corporations (MNCs) and MNCs' global strategies; 3) managing entry-, operation-, and exit-level managerial issues, including exchange rates and risk. This course is primarily geared towards juniors who are interested in majoring or minoring in International Business.

Prerequisites: MGT 110 or MGT 120 or MGT 121

Restrictions: Enrollment limited to students with a class of Junior, Sophomore or Senior.

Attributes: Globalization Course, Irish Studies Course, Undergraduate

IBU 370 Intern'l Topics & Study Tour (3 credits)

The objective of this course is to participate in a study tour or similar experience offering numerous corporate and institutional visits to allow first hand exploration of business issues. Emphasis will be placed on accounting, economic, finance, management, and marketing issues for various firms. A secondary objective is to expose students to different national cultures and cultural issues related to business. A third objective is to focus on one or more current business topics affecting at least two functional areas. Students will be expected to analyze the impact of the topic (s) on the various areas of business, particularly on the operation of multinational corporations.

Attributes: Undergraduate

IBU 470 Spec Topics in Internat Busine (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

IBU 471 Intl Business Practicum (1 credit)

This course is meant for students with opportunities working over the course of the semester/summer whose employers require a credit as condition of employment. To apply, the student submits a letter to the chair explaining why the practical training is required and includes a letter from the employer. The student submits to the department chair an 8-10 page paper at the end of the practical training describing their work responsibilities and what skills s/he acquired by participating. Does not satisfy any major, minor, general education or elective requirement. Grade is Pass/Fail. May be repeated once. Permission of Chair required.

Attributes: Undergraduate

IBU 472 International Busine Practicum (1 credit)

This course is meant for students with opportunities working over the course of the semester/summer whose employers require a credit as condition of employment. To apply, the student submits a letter to the chair explaining why the practical training is required and includes a letter from the employer. The student submits to the department chair an 8-10 page paper at the end of the practical training describing their work responsibilities and what skills s/he acquired by participating. Does not satisfy any major, minor, general education or elective requirement. Grade is Pass/Fail. May be repeated once. Permission of Chair required.

IBU 490 International Bus Internship (3 credits)

Permission of Chair required.

Attributes: Undergraduate

IBU 493 Internatnl Business Research I (3 credits)

Working under the guidance of a faculty member, students engage in a semester-long research project in the domain of International Business. Permission of Chair required.

IBU 494 Interntl Business Research II (3 credits)

Working under the guidance of a faculty member, students engage in a semester-long research project in the domain of International Business. This is the second independent research course; it may be a continuation of a previous research project or the initiation of a new project. Permission of Chair required.

IBU 495 Global Strategic Planning (3 credits)

This course is the capstone class of the International Business program and focuses on the management of corporations operating internationally. The international environment implies greater opportunities as companies have access to a wider variety of markets and resources. However, this environment also implies greater managerial challenges. The aim of this course is to investigate how this greater complexity affects the management of companies that are international.

Prerequisites: IBU 210 and PHL 154 and (MGT 110 or MGT 120 or MGT 121)

Restrictions: Enrollment limited to students with a class of Senior.

Attributes: Ethics Intensive, Undergraduate

IBU 600 Global Revolutions & Business (3 credits)

Global Revolutions and Business examines the global trends and forces that are shaping our world and the impact of those trends and forces on business organizations. In particular, we will focus on the global forces driving revolutionary changes such as Population, Resources, Information, Technology, Economic Integration, and Governance. Focusing on the future, this course seeks to develop and hone your strategic thinking skills, in considering the near-term and long-term impact of the global changes on organizations.

Restrictions: Enrollment is limited to Graduate level students.

IBU 661 International Management (3 credits)

This course examines the international business environment, management practices outside the United States, and the interpersonal, organizational and institutional, issues facing managers conducting business in more than one cultural context.

Restrictions: Enrollment is limited to Graduate level students.

IBU 662 International Business Law (3 credits)

The purpose of this course is to acquaint the student with the international legal environment in which businesses operate. It will introduce the students to international business law as it has evolved over the centuries. It will also introduce students to national, regional and international organizations that regulate foreign commerce, including how international disputes are resolved. International sales, credits, and commercial transactions will be examined, as well as international and U.S. trade law.

Restrictions: Enrollment is limited to Graduate level students.

IBU 663 Manage Intl Strategic Alliance (3 credits)

This course examines formation, management, and evolution of international strategic alliances (including international joint ventures) as the most frequently used and uniquely characterized mode of entry into foreign markets.

IBU 770 International Bus Study Tour (3 credits)

A specially designed international tour to varying countries which offers students a unique opportunity to study international management-its dimensions, participants, trends, and opportunities. Students will also experience the heritage, ambience and excitement of the world's great countries and cities.

IBU 771 Topics: International Business (3 credits)

This course covers topics of current interest in the field of leadership. The specific subjects and prerequisites will be announced in the course schedule.

Italian (ITA)

ITA 101 Beginning Italian I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students with no experience with the Italian language.

Prerequisites: Language Placement with a score of IT101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Italian 102 Placement, Italian 201 Placement, Italian 202 Placement or Italian 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

ITA 102 Beginning Italian II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid/high level according to ACTFL - American Council on the Teaching of Foreign Languages.

Prerequisites: ITA 101 or Language Placement with a score of IT102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Italian 201 Placement, Italian 202 Placement or Italian 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

ITA 170 Special Topics in Italian (3 credits)

Topics will vary according to the semester in which the class is offered. Check the semester listing for current topic.

Attributes: Undergraduate

ITA 201 Intermediate Italian I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high/intermediate low level according to ACTFL - American Council on the Teaching of Foreign Languages.

Prerequisites: ITA 102 or Language Placement with a score of IT201

Restrictions: Students with the Italian 202 Placement or Italian 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

ITA 202 Intermediate Italian II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar, pronunciation, and writing will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the intermediate low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages.

Prerequisites: ITA 201 or Language Placement with a score of IT202

Restrictions: Students with the Italian 301 Placement attribute may **not** enroll.

Attributes: Undergraduate

ITA 206 The Roman Experience (3 credits)

This month-long, full-immersion course will improve students' command of Italian as it provides an enriching cultural experience. Students will discover what it means to live amidst ancient ruins, baroque basilicas, and artistic treasures as they navigate the eternal city. Through daily excursions and task-based activities students will acquire practical skills as they are immersed in Roman art, cuisine, culture and history. In particular, we will examine forces that have shaped the world we have inherited through units on the Jesuits in Rome. This course counts toward the minor and major in Italian, and for the major in Italian Studies.

Prerequisites: ITA 102

Attributes: GEP Art/Literature, Undergraduate

ITA 270 Special Topics in Italian (3 credits)

Topics will vary according to the semester in which the class is offered. Check the semester listing for current topic.

Attributes: Undergraduate

ITA 301 Italian Conversation (3 credits)

This course is designed to help students improve their oral communication skills in Italian through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions, and tailoring the discourse to the audience and context.

Prerequisites: ITA 202 or Language Placement with a score of IT301

Attributes: GEP Art/Literature, Undergraduate

ITA 302 Italian Composition (3 credits)

This course is designed to improve students' ability to communicate in written Italian and to develop the writing skills they will need to succeed in advanced Italian courses. Skills are developed through a process-oriented approach to writing, including steps related to vocabulary generation, organizing an outline, writing a draft, editing and revising, and writing a final version.

Prerequisites: (ITA 301 or Language Placement with a score of IT302) and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

ITA 303 Advanced Italian Conversation (3 credits)

The purpose of this course is to improve students' oral command of the language by means of an intensive practical presentation of the structures and stylistics of the language. We shall read both literary texts and short newspaper articles. Conducted in Italian.

Prerequisites: ITA 301

Attributes: Undergraduate

ITA 304 Advanced Italian Composition (3 credits)

The purpose of this course is to improve students' written command of the language by means of an intensive practical presentation of the structures and stylistics of the language. We shall read both literary texts and short newspaper articles. The course will be organized thematically around two main areas: issues in contemporary society and Roman literary and historical landscapes. Conducted in Italian. *Prerequisite:* ITA 301 or permission of the instructor.

Attributes: Undergraduate

ITA 306 The Roman Experience (3 credits)

The purpose of this course is to improve students' oral and written command of Italian through an intensive full-immersion presentation of the structures and stylistics of the language. The course is organized thematically around two main areas: issues in contemporary society and Roman literary, artistic and social landscapes. Students will read twentieth-century writers' appreciation of Rome, and newspaper articles on local cultural and social issues. While visiting sites described in the readings, interviewing the denizens on local issues, and observing the art and architecture that has left its imprint on western civilization as we know it, students will be asked to comment on their observations both in writing and in group conversation. They will acquire a very personal appreciation of the meraviglie di Roma and will formulate oral and written analyses on social, historical and artistic subjects. Conducted in Italian.

Prerequisites: ITA 301

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

ITA 309 I giovani e l'Italia di oggi (3 credits)

This course offers a unique perspective on contemporary Italy by placing the young generation at the center of study. Students will to improve their communication skills while exploring a variety of narratives - songs, short stories, film, music, poems and newspaper articles-written by, for, or about Italian culture; the course will therefore introduce the analytical tools necessary for literary and film analysis. Political engagement, school life, adolescence, and generational conflicts are among the themes we will discuss. Class activities will provide students the opportunity to express and debate their personal views, which will guide the development and refinement of oral and written proficiency. The expansion of vocabulary and the study of grammar will be incorporated in the discussion of the trends and habits of the young Italian generation. Requirements include a variety of presentations, role-play dialogues, and creative and collaborative projects. Conducted in Italian.

Prerequisites: ITA 301 and ITA 302

Attributes: GEP Art/Literature, Undergraduate

ITA 310 Italian Stylistics (3 credits)

This course introduces the fundamental principles and techniques of literary analysis in each of the major genres (lyric poetry, short story, theatre, epic poetry, novel), while presenting a sampling of masterpieces and authors from across the Italian literary tradition. By introducing students to the major writers and movements of Italian literature from the thirteenth through the twentieth centuries, we will examine the work of different styles and themes, with specific attention to historical and cultural frameworks. We will pay close attention to the vocabulary used in literary study, as well as to linguistic and stylistic difficulties in textual analysis.

Attributes: GEP Art/Literature, Undergraduate

ITA 315 Italy Through Art (3 credits)

In this language and culture course students refine their skills while learning about Italy through the medium of art. The approach encourages the development of a critical understanding of individual works by introducing students to the visual language of art. As a survey course, the subject content is chronologically wide ranging, extending from Magna Grecia to the Novecento, and includes a variety of media, including painting, sculpture and architecture. Among the artists covered are Cimabue, Giotto, Donatello, Masaccio, Piero della Francesca, Botticelli, Leonardo, Raffaello, Michelangelo, Cellini, Giorgione, Tiziano, Tintoretto, Caravaggio, Canaletto, Guardi, Canova, Modigliani, and De Chirico. By analyzing a variety of cultural artifacts, students will build vocabulary and use advanced grammatical structures. We will also read critical articles on art history and study the University's Art collection, which includes replicas of Michelangelo's most famous sculptures. The course is complemented visits to the Barnes Foundation and the Philadelphia Museum of Art. Conducted in Italian.

Prerequisites: ITA 202

Attributes: GEP Art/Literature, Undergraduate

ITA 320 Italian Through Film (3 credits)

Course aims to improve students' speaking and listening skills and their understanding of Italian culture by viewing and discussing Italian film. Conducted in Italian.

Attributes: Undergraduate

ITA 330 The Ita Bus Wrld & its Lang (3 credits)

This course explores the language and culture of the Italian business world at an intermediate-high to advanced level. Besides developing writing and speaking skills-such as writing c.v., business letters and job descriptions; practicing job interviews, business meetings and presentations-the course analyzes socio-economic issues such as the position of women in the work force, the globalization of the markets of the European Union, and business etiquette through the analysis of Italian articles, the internet and visual materials (TV and movies). Conducted in Italian.

Attributes: Diversity Course, Undergraduate

ITA 340 Italian Culture & Civilization (3 credits)

A survey of the culture of Italy, its geography, history, politics, outstanding personalities, arts, literature, economic and social problems, sciences, and education. Conducted in Italian.

Prerequisites: ITA 301

Attributes: GEP Art/Literature, Undergraduate

ITA 345 Art Fashion: la moda italiana (3 credits)

The goal of this course is to facilitate future educators in the teaching of foreign language and to allow those students, who are Education Majors and Minors, to fully comprehend how the multi-dimensional world of bilingualism plays and will continue to play a very important role in the future of this country. This course will examine the intricacies of acquiring a second language through the pedagogical years and into adulthood and will be taught in Italian. It will also examine the communication skills of Italian students learning English and of American students learning Italian. Emphasis shall be placed on the characteristics of interaction within the contexts that facilitate second language acquisition. Students will explore social, environmental and cultural differences and the roles they play in promoting or impeding L2 fluency and pronunciation. Theories and methodologies will be discussed, language classes observed and, eventually, students may have the possibility to teach specific grammar points in first year classrooms. Conducted in Italian.

Prerequisites: (ITA 301 and ITA 302) or (Language Placement with a score of IT345)

Attributes: GEP Art/Literature

ITA 350 Topics & Meth for Teaching Ita (3 credits)

The goal of this course is to facilitate future educators in the teaching of foreign language and to allow those students, who are Education Majors and Minors, to fully comprehend how the multi-dimensional world of bilingualism plays and will continue to play a very important role in the future of this country. This course will examine the intricacies of acquiring a second language through the pedagogical years and into adulthood and will be taught in Italian. It will also examine the communication skills of Italian students learning English and of American students learning Italian. Emphasis shall be placed on the characteristics of interaction within the contexts that facilitate second language acquisition. Students will explore social, environmental and cultural differences and the roles they play in promoting or impeding L2 fluency and pronunciation. Theories and methodologies will be discussed, language classes observed and, eventually, students may have the possibility to teach specific grammar points in first year classrooms. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT350

Attributes: Undergraduate

ITA 355 In Viaggio: Medioevo-Barocco (3 credits)

This interdisciplinary course focuses on the cultures of Medieval and Renaissance Italy and their enduring influence on contemporary Italian culture. As we examine the ways in which power and gender are reflected in cultural artifacts, we will study a variety of texts (including painting, sculpture, poetry and letters exchanged between friends and family members). These works allow us to trace the evolution of the concepts of sacred and profane love from the thirteenth to the sixteenth centuries. At the center of our inquiry are two issues central to early modern Italy: the self-fashioning of the subject and the structures and practices of power. Weekly themes—patronage and propaganda, the family, love and marriage, and women's roles in early modern society—will provide a frame for class discussion. Conducted in Italian.

Prerequisites: ITA 202

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ITA 356 In Viaggio: Barocco-Novecento (3 credits)

This language and culture course provides the tools to “travel” to the rich world of modern Italy and is designed to help students gain familiarity with Italian figures, art objects, cinematic texts, and literary works while developing and improving communication skills. The course focuses on interpretation and intercultural communication and showcases a sampling of culturally significant works. As we focus on the cultures of Baroque, Enlightenment, Risorgimento and Contemporary Italy, we will examine the ways in which power and gender are reflected in cultural artifacts and we will study the way in which art works and literary works have influenced Italian culture and western civilization.

Prerequisites: ITA 202

Attributes: GEP Art/Literature, Undergraduate

ITA 360 Modern Italian Culture (3 credits)

The purpose of this course is to study some of the principal characteristics of contemporary Italian culture. The course explores such topics as regionalism, the formation of a national language, the question of national identity, terrorism, the separatist movements, gender relations, feminism, and popular culture. It studies Italian cultural trends in Italy today, outlines their history over the last one hundred years, and explores the future of Italian culture and society. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT360

Attributes: GEP Art/Literature, Undergraduate

ITA 365 Italian Society and the Media (3 credits)

The goal of this course is to develop advanced-level oral/aural and reading/writing skills while addressing key aspects of contemporary Italian culture through the consideration of exclusively authentic materials, such as Italian newspaper and magazine articles, Italian TV broadcasting, and Italian internet sites. We shall also learn how to critique the written and visual Italian media, as well as how to navigate Italian websites. Students will choose readings and topics initially within a given list of categories and, later, among a virtually endless variety of internet sources. Among the topics we may address are: style, fashion and design; geography, art and tourism; the environment; immigration and racism; the position of young people and women in Italian society; current Italian and international events from an Italian perspective. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT365

Attributes: GEP Art/Literature, Undergraduate

ITA 370 Topics in Italian (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Italian-speaking world. Topics will vary according to the semester in which the class is offered. Check the semester listing for current topic.

Prerequisites: ITA 301 or Language Placement with a score of IT370

Attributes: Undergraduate

ITA 380 Ita Journeys from Marco Polo (3 credits)

This interdisciplinary course investigates Italy's dual role as the home of legendary travelers and the destination for tourists over the centuries.

Through a variety of texts-travel diaries, letters to kings and queens, maps, travel guides and film-we will explore the reality and metaphor of travel in the lives and works of pilgrims, poets, explorers and artists. We will consider three historical periods: the age of discovery (ca. 1300-1600), the grand tour (ca. 1600-1800) and the age of global tourism (ca. 1800- present). The course concludes with a virtual tour of various regions of contemporary Italy. As a final project, students will author their own travel guide to the Italian city (or cities) of their choice. Recommended for students who wish to further their cultural and linguistic preparation before studying abroad, this content-based language course emphasizes the vocabulary and idiomatic expressions necessary for travel in Italy. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT380

Attributes: GEP Art/Literature, Undergraduate

ITA 401 Early Ita Cinema-Stage to Scrn (3 credits)

This course traces the birth and development of silent film, the transition to sound, and film under fascism, with emphasis on film's relationship to theatre, literature and social and cultural history. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT401

Attributes: Undergraduate

ITA 402 L'italiano al Cinema (3 credits)

This course investigates major films as both aesthetic and cultural objects. It will introduce major directors, movements, and genres in Italian cinema from World War II to the present. We will study both "film d'autore" (Visconti, De Sica, Fellini, Scola, Risi, Monicelli) and "nuovi registi" (Bellocchio, Giordana, Muccino). We will analyze typically Italian historical drama, "commedia all' italiana" and postmodern pastiche and explore contemporary social issues such as regional, ethnic and gender diversity. We will read literary sources, screenplays and film criticism. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT402

Attributes: GEP Art/Literature, Undergraduate

ITA 420 From Novel to Film (3 credits)

This course studies representations of Italian society from unification (1860) to the present in literary works and films. We shall consider films by contemporary Italian filmmakers (Visconti, Damiani, Rosi, Fratelli, Taviani), and the literary works on which they are based, including works by D'Annunzio, Pirandello, Levi, and Sciascia. While comparing cinematographic and literary techniques, we shall explore ideological and cultural currents, such as Romanticism, Risorgimento, Realism and Neo-realism. Topics discussed will include: the problems of unification; regionalism and separatism between industrial north and rural south; solitude and marginalization; the search for an identity. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT420

Attributes: GEP Art/Literature, Undergraduate

ITA 425 Art&Madman:Renaissance&Reform (3 credits)

What separates genius from madness? Is creativity inspiration or insanity? This interdisciplinary course examines tales of psychosis, violence and the making of artistic masterpieces. We will explore the lives and works of artists and poets, such as Sandro Botticelli, Leonardo Da Vinci, Michelangelo Buonarroti, Vittoria Colonna, Benvenuto Cellini, Galileo Galilei, Caravaggio and Artemisia Gentileschi. A variety of works [poetry, prose, painting and sculpture] will be studied against the backdrop of the crisis of the Italian Renaissance. We will look closely at Counterreformation intellectual debates, religious dissent and persecution. At the center of our inquiry is the figure of the artist-genius, madman, or both? This course will be complemented by guest speakers and a trip to the Philadelphia Museum of Art. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT425

Attributes: GEP Art/Literature

ITA 430 Imges of Rome:Papl Rome - Pres (3 credits)

This course will interpret the symbolic and political importance of Rome in literary works and film. The course is organized historically: from the struggle over Rome within the Risorgimento movement to fascist and war-torn Rome; from the 50's Rome of reconstruction to the economic boom of the 1960's, to the socio-political problems of a new multicultural city in the 80's and 90's. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT430

Attributes: GEP Art/Literature, Undergraduate

ITA 435 Rebels and Revolutionaries (3 credits)

The course aspires to provide an understanding of the culture of Baroque, Enlightenment and Risorgimento Italy and of its influence on contemporary Italian culture (especially as regards definition of concepts of gender, language and national identity). It considers a variety of genres-novels, poems, essays and plays-in the context of ideological and cultural currents. Audio-visual materials (videos, movies, cd roms) will be used and a variety of subtexts and interdisciplinary relationships will be explored, especially with history, art and philosophy. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT435

Attributes: GEP Art/Literature, Undergraduate

ITA 440 Profane and Sacred Love (3 credits)

The course aspires to provide an understanding of the culture of Medieval and Renaissance Italy and of its influence on contemporary Italian culture. It focuses on how power and gender relationships are reflected in the literature-canzoni, sonetti, ballate, novelle. The works studied belong to the tradition of Courtly Love, Neo- Platonic love and the literature of the Renaissance courtesans and follows the evolution of concepts of sacred and profane love in Italian literature from the thirteenth to the sixteenth centuries. The course considers a variety of subtexts and interdisciplinary relationships especially with history and art history. Audio-visual materials (videos, movies, cd roms) will be used to bring home to the students the sights and sounds of this vibrant age. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT440

Attributes: GEP Art/Literature, Undergraduate

ITA 445 The Medici Court (3 credits)

For the Medici, art and propaganda went hand in hand. This interdisciplinary course investigates the city and family that nurtured artists and humanists [including Brunelleschi, Fra Angelico, Donatello, Botticelli, Poliziano and Michelangelo]. Tracing the rise and fall of the dynasty, we will consider how the Medici fashioned an enduring image of princely power through architecture and music. We will study a variety of texts, including painting, sculpture, poetry and intimate letters exchanged between family members. This course will be complemented by visiting the Medici Collection at the Philadelphia Museum of Art. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT445

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

ITA 450 Italy in Age of Grand Tour (3 credits)

This course focuses on travel through Italy as an educational experience and cultural initiation and aims to improve students' reading, writing and speaking skills in Italian, while familiarizing them with culturally important sites and encouraging them to think critically about the notion of the Grand Tour. Conducted in Italian

Prerequisites: ITA 301 or Language Placement with a score of IT450

Attributes: Undergraduate

ITA 455 Women's Voices (3 credits)

We will investigate the relation between the emergence of a self-professed woman novelist and the changing ideologies concerning the moral and intellectual nature of women and their role in society. We will not only study the way prominent women intellectuals helped shape the debate on women's condition and on women's writing, but also their original contribution to the interpretation of twentieth century history (e.g. Fascism, the Resistance, the Second World War and the Holocaust). Among the literary theoretical issues we will encounter: the relationship of genre to gender, of gender to writing, and the role of gender values in historiographical representation. We shall read autobiographical and historical novels, as well as essays and non-fictional prose. The course will be complemented by a film and a lecture series. Conducted in Italian.

Prerequisites: ITA 301 or Language Placement with a score of IT455

Attributes: GEP Art/Literature, Undergraduate

ITA 460 Dante, Petrarch, Boccaccio (3 credits)

This course explores intersections between the lives and the major works of the three "crowns" of Italian literature: Dante Alighieri [1265-1321], Francesco Petrarca [1304-1374] and Giovanni Boccaccio [1313-1375]. By reading selections from Dante's *Commedia*, Petrarch's *Canzoniere* and Boccaccio's *Decameron*, the course aims to contextualize and interpret the literary masterpieces that marked the end of the Middle Ages and the beginning of the Renaissance. We will touch on the social world in which the three crowns lived, highlighting the authors' conceptions of politics, theology, philosophy and the visual arts. Throughout the course, particular attention will be granted to the rivalries, friendships and collaborations that unite the three crowns of Florence. Conducted in Italian.

Prerequisites: ITA 301

Attributes: GEP Art/Literature, Undergraduate

ITA 465 Birth of a Nation: Risorgimento (3 credits)

This course encourages a critical approach to the study of Italian unification in its aesthetic, cultural, and political dimensions as well as their repercussions on present-day Italian society and culture. The making of Italians, as Massimo D'Azeglio famously put it, would engage the best Italian minds for the following 150 years. The divisions between North and South, between Church and State, between the government and the people were created or compounded by the making of Italy. The course studies the debate on Italian Unification and the development of an Italian identity in a variety of historical artistic and literary sources, including diaries, letters, treatises, paintings, sculptures, poems and short stories.

Prerequisites: ITA 301

Attributes: Undergraduate

ITA 470 Topics in Italian (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Italian-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic. Fulfills the GEP Art/Lit requirement..

Attributes: Undergraduate

ITA 490 Internship (3 credits)**ITA 491 Internship (3 credits)****ITA 493 Independent Research in ITA (3 credits)**

Concentrated focus on a selected topic in Italian. Topic and content vary from semester to semester.

Attributes: Undergraduate

Italian Studies (IST)

IST 115 Italy Through Art (3 credits)

Taught in English. Conducted in Rome, this course introduces students to the visual language of art, while providing an enriching cultural experience. The eternal city is an expansive, open-air museum where ancient and modern meet. Students will learn about Rome's artistic heritage while living amidst ancient ruins, baroque basilicas and contemporary monuments. As we view art objects first-hand, we will explore the making and meaning of Italian art, by addressing methodological issues including form and function, style, materials and technique. We begin with a consideration of ancient Rome, through direct experience with monuments that have survived centuries. Next, we explore the early developments of Christianity by visiting Roman basilicas and churches. Our excursion to Tuscany focuses on Renaissance humanism and Medici patronage. Upon return to Rome we examine Baroque masterpieces adorning Roman piazzas and churches. We conclude with art and architecture of the period after 1870, when Rome became the capital of Italy. The course is complemented by guest lectures and site visits to Roman museums, churches and palaces, as well as excursions to Assisi, Florence, Pompeii and Sorrento. Counts toward the major and minor in art history, the Italian Studies major, the major and minor in Classical Studies, and the minor in Medieval, Renaissance, Reformation Studies.

Attributes: GEP Art/Literature, Medieval, Ren & Reform Studies, Undergraduate

IST 150 Ital Cinema-Neoreal to Present (3 credits)

This course investigates major Italian films as both aesthetic and cultural objects. It offers an introduction to Italian cinema from the 1940's to the Present, and also to Italian social and cultural history of that time. It introduces major directors, movements, and genres in Italian cinema, focusing on movies that not only are influential masterpieces, but also offer incisive interpretations of their cultural and social milieus, including regional, ethnic and religious diversity; gender diversity; social tensions and class issues. Visconti, De Sica, Fellini, Scola, Bellocchio, Giordana are among the directors we study.

Attributes: First-Year Seminar, GEP Art/Literature, Undergraduate

IST 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

IST 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

IST 350 Mangia! Flavors of Italy (3 credits)

The expression "Mangia, mangia!" is commonly associated with American stereotypes of Italians. But is the perceived Italian love of food the same in the United States and in Italy? Is it an issue of quantity or quality? Of socio-economics, politics, or education? Is it global, local or both? In this interdisciplinary course, we will explore the role of food in Italian culture and in the shaping of Italian identity, in Italy and abroad. We will trace its evolution through a variety of texts: literature, works of art, music, and film, as well as family recipes. Guest lectures made by Italian chefs in Philadelphia, food tastings, and a visit to the Italian Market, will enrich the course.

IST 360 Italian Identities (3 credits)

In this course, taught in English, we will explore the complex nature of Italian Identities, focusing on race, sex and gender roles, religion, food, art and science. Does not count toward a minor in Italian. Counts towards a major in Italian Studies and it may count toward the major in Italian, with permission of the Chair of Modern and Classical Languages.

Attributes: GEP Art/Literature, Undergraduate

IST 370 Topics in Italian Studies (3 credits)

The purpose of this course is to explore specific topics within the Italian-Speaking World. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic. Classes are taught in English.

Attributes: GEP Art/Literature, Undergraduate

IST 375 Shadow State: Mafia in Italy (3 credits)

This course explores the nature of organized crime in Italy, its origins, its economic aspects, its connection with politics, its reality beyond stereotypes, and finally, the way it is portrayed in Italian Arts and literature. No pre-requisites required. Does not count toward a minor in Italian. May count toward the major, with permission of the Chair of Modern and Classical Languages.

Attributes: GEP Art/Literature, Undergraduate

IST 420 Italian Cinema and the Sacred (3 credits)

Italian culture has been widely influenced by the sacred and many intellectuals have used the Bible as source of inspiration. In this course, we will analyze how Italian filmmakers have approached the dimension of the sacred and how they have depicted it in their movies. We will explore a range of directors from 1940's Neorealism to the present in order to understand how the relationship with the sacred has evolved over time. Throughout our analyses, we will engage in dialogue with selected Italian writers in order to see how they have approached the sacred. The course also considers the role of Jesuits in Italian society through the study of a film set in a Jesuit monastery in contemporary Venice.

Attributes: GEP Art/Literature, Undergraduate

IST 460 The Art of Dante's Inferno (3 credits)

This course offers an interdisciplinary reading of Dante's Inferno from the perspectives of the history of art, music and cinema. Primary sources from across the arts span seven centuries of reception, and include a variety of interpretations. As we examine the interaction between Dante's poem and other forms of art, we will consider the ways in which those works shape interpretations of one of the greatest works of world culture. Throughout the course students will connect the poem's ethics to contemporary society. We will study the moral philosophy underpinning the Inferno and examine Dante's understanding of the 'Seven Deadly Sins' and the law of contrapasso. In considering Dante's ethics of punishment we will reflect upon the ways in which artists have depicted judgment and retribution in their interpretations and responses. Guest lectures and site visits will complement the course. Counts toward the major/minor in Art History.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

Japanese (JPN)

JPN 101 Beginning Japanese I (4 credits)

Proficiency-based instruction will encourage the development of speaking and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/mid-level according to ACTFL - American Council on the Teaching of Foreign Languages. This course is reserved for beginning students with no experience with the Japanese language.

Prerequisites: Language Placement with a score of JP101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Asian Studies Course, Undergraduate

JPN 102 Beginning Japanese II (4 credits)

Proficiency-based instruction will encourage the development of speaking and listening comprehension, with some focus on understanding Japanese characters. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid level according to ACTFL - American Council on the Teaching of Foreign Languages.

Prerequisites: JPN 101 or Language Placement with a score of JP102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Asian Studies Course, Undergraduate

JPN 170 Special Topics in Japanese (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

JPN 201 Intermediate Japanese I (3 credits)

Latin (LAT)

LAT 101 Beginning Latin I (4 credits)

In an interactive environment, students will learn basic Latin vocabulary, grammar, and syntax, with special attention to English and modern language derivatives. Students will develop reading ability through carefully selected Latin prose and verse texts, and they will discuss aspects of Roman culture illuminated in these texts.

Prerequisites: Language Placement with a score of LA101

Attributes: Undergraduate

LAT 102 Beginning Latin II (4 credits)

In an interactive environment, students will learn basic Latin vocabulary, grammar, and syntax, with special attention to English and modern language derivatives. Students will develop reading ability through carefully selected Latin prose and verse texts, and they will discuss aspects of Roman culture illuminated in these texts.

Prerequisites: LAT 101 or Language Placement with a score of LA102

Attributes: Undergraduate

LAT 170 Special Topics in Latin (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LAT 201 Intermediate Latin I (3 credits)

Students will engage in translation, discussion, and analysis of selected passages from the works of Cicero, Livy, Catullus, Virgil, and Ovid. Each author's particular style and intent will be evaluated by examining his grammar, diction, and use of literary and rhetorical figures. Students will discuss aspects of Roman political and social history that are illuminated in our readings.

Prerequisites: LAT 102 or Language Placement with a score of LA201

Attributes: Undergraduate

LAT 202 Intermediate Latin II (3 credits)

Students will engage in translation, discussion, and analysis of selected passages from the works of Cicero, Livy, Catullus, Virgil, and Ovid. Each author's particular style and intent will be evaluated by examining his grammar, diction, and use of literary and rhetorical figures. Students will discuss aspects of Roman political and social history that are illuminated in our readings.

Prerequisites: LAT 201 or Language Placement with a score of LA202

Attributes: Undergraduate

LAT 270 Special Topics in Latin (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LAT 301 Oratory (3 credits)

We will engage in translation, discussion, and analysis of selected passages of Cicero's Pro Caelio. We will explore Cicero's rhetorical style and tactics, including his personal conflict with Clodius and his attack on the character of Clodius' sister Clodia Metelli, who has been identified with Catullus' "Lesbia". We will also examine the political charges against Caelius within the complex political and social systems of late Republican Rome.

Prerequisites: LAT 202 or Language Placement with a score of LA301

Attributes: Undergraduate

LAT 302 Republican Prose (3 credits)

We will engage in reading and discussion of selections from Sallust's Bellum Catilinae and Julius Caesar's De Bello Civili. Among the topics we will explore are Sallust's Latin style and his reputation as a historian, his political stance and his connections to Julius Caesar, the conspiracy of Catiline and its significance within the context of Roman political history, Catiline's aims and associates, Sallust's depiction of the famous debate in the Senate about the fate of the captured Catilinarian conspirators (in which Cato and Caesar take opposing viewpoints), the questions surrounding the legality of the decision to execute the conspirators, and Cicero's responsibility for this decision.

Prerequisites: Language Placement with a score of LA302

Attributes: GEP Art/Literature, Undergraduate

LAT 303 Historiography (3 credits)

We will engage in translation, discussion, and literary/historical analysis of selected passages from Livy's *Ab Urbe Condita* I. We will consider Livy's use of sources and his approach to historiography, with particular attention to his stress on the didactic purpose of history. We will also examine how Livy's own background promoted his concern with the development of the Roman national character and with the importance of moral values as a factor in history. Evaluation will be made of Livy's designation as an "Augustan" and a "literary" historian. We will also discuss Livy's treatment of religion and the significant themes of fratricide and the rape of women in Rome's early political and social development.

Attributes: GEP Art/Literature, Undergraduate

LAT 304 Drama (3 credits)

The class will engage in daily translation, discussion, literary and metrical analysis of Plautus' *Menaechmi*. We will explore the following topics: the development of comedy at Rome and its debt to Greek "New Comedy," its staging and performance, and its conventional themes and stock characters. We will also develop an appreciation for the principal features of Plautus' language, including colloquialisms, Grecisms, puns, and double entendres.

Prerequisites: Language Placement with a score of LA304

Attributes: GEP Art/Literature, Undergraduate

LAT 305 Lyric Poetry (3 credits)

This course in Latin lyric poetry will engage us in translation, discussion, and literary and historical analysis of selected passages from the poems of Catullus and the Odes of Horace. We will consider poems within the "Lesbia" cycle, exploring the principal themes and images of these poems. We will also consider how Catullus exploits these themes and images in the rest of the corpus. Exploration will also be made of the historical background of Catullus by examining the clues which the poems provide for our understanding of the poet's social environment. Does the evidence contained in these poems, along with Cicero's testimony in the *Pro Caelio*, form a coherent and reliable "history" of the Catullus/"Lesbia" affair? We will also read selected Odes of Horace, exploring Horace's indebtedness to his Greek models in lyric, Sappho and Alcaeus. We will also consider topics such as literary patronage in Rome, Augustan social and political policy, Alexandrian poetics, generic composition, and metrical and structural principles of Latin poetry.

Prerequisites: Language Placement with a score of LA305

Attributes: GEP Art/Literature, Undergraduate

LAT 306 Roman Elegy (3 credits)

This course in Roman elegy focuses on the erotic poetry of the neoteric poet Catullus, and the elegies of the Augustan poets Propertius, Tibullus, Sulpicia, and Ovid. The course places emphasis upon both text (grammar, translation, and meter) and context.

Attributes: GEP Art/Literature, Undergraduate

LAT 370 Special Topics in Latin (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LAT 396 Latin AP Course (3 credits)**LAT 401 Silver Age Latin (3 credits)**

The class will engage in daily translation, discussion, literary and metrical analysis of selections from Silver Age authors Juvenal (*Satires*), Martial (*Epigrams*), Petronius (*Satyricon*), and Apuleius (*Metamorphoses*). We will explore the following topics: literary patronage; the social and financial status of poets; the identity of the poet's friends and patrons; questions of historical accuracy in depicting elements of everyday life in imperial Rome; the social divide between rich and poor; the generic conventions of satire, epigram, and novel; the use of allegory in Latin poetry; Platonic philosophy, myth, and religion as reflected in Roman novel.

Attributes: GEP Art/Literature, Undergraduate

LAT 402 Golden Age Latin (3 credits)

The class will engage in daily translation, discussion, literary and metrical analysis of selections from Golden Age authors Virgil (*Eclogues* and *Aeneid*), Horace (*Odes* and *Satires*), and Ovid (*Metamorphoses* and *Amores*). We will explore the following topics: literary patronage, Augustan social and political policy reflected (both approved and critiqued) in the literature of the Augustan period, Alexandrian poetics, generic composition, and structural principles of Latin poetry.

Prerequisites: Language Placement with a score of LA402

Attributes: GEP Art/Literature, Undergraduate

LAT 403 Epic Poetry (3 credits)

Translation, discussion, literary and historical and metrical analysis of selected passages from Vergil's *Aeneid*. Highlighted passages will include Aeneas' arrival in Carthage and encounters with Venus and Dido (*Aeneid* book 1), Aeneas' narration of Troy's final hours (*Aeneid* book 2), the tragedy of Dido and Aeneas (*Aeneid* book 4), and the pageant of future Roman heroes (*Aeneid* book 6). We will explore the following topics: the development of Roman epic, Vergil's indebtedness to Homer, Augustan policy as viewed in the *Aeneid*, the quality of *pietas* as embodied in Vergil's hero Aeneas, the role of women in epic and Augustan Rome as exemplified in Aeneas' treatment of Creusa and Dido, and Vergil's focus on human suffering and personal sacrifice.

Prerequisites: Language Placement with a score of LA403

Attributes: GEP Art/Literature, Undergraduate

LAT 404 Horace (3 credits)

This course in the poetry of Horace will engage us in translation, discussion, and literary and historical analysis of selections from the *Satires* and *Odes*. We will explore topics such as the development of satire as a genre at Rome, Horace's debt to Lucilius, his use of autobiographical material and creation of the Horatian persona in his poems, his introduction into the circle of Maecenas and his defense against accusations about his social and political ambitions, his indebtedness to his Greek models in lyric (chiefly Sappho and Alcaeus), and his literary and aesthetic principles and ideals. We will also consider topics such as literary patronage in Rome, Augustan social and political policy (both approved and critiqued) in the literature of the Augustan period, Alexandrian poetics, generic composition, and metrical and structural principles of Latin poetry.

Prerequisites: Language Placement with a score of LA404

Attributes: GEP Art/Literature, Undergraduate

LAT 410 Research Materials & Methods (3 credits)

This course is a seminar-style exploration of primary and secondary source materials for research principally in Latin literary and cultural studies. A full range of research materials in print and online formats will be examined and evaluated, and research methods for teaching and publishing will be studied and practiced.

Attributes: Undergraduate

LAT 411 Advanced Latin Grammar (3 credits)

This course will provide a detailed review of Latin vocabulary, morphology, grammar, and syntax, analyzed on both theoretical and applied levels. Lexical, grammatical, and syntactic topics related to the Latin language that are usually problematic for advanced level learners of Latin will be discussed and explored. This course is designed to help students deepen and improve their knowledge about and understanding of the complexities of Latin grammar and syntax. This course will benefit majors in Latin who are considering teaching and research careers in Latin and Classical studies. Emphasis will be placed on the role of proficiency in Latin vocabulary, morphology, grammar, and syntax in language teacher education. Translation and composition in Latin poetry and prose will highlight complex grammatical principles and structures and will sharpen students' awareness of the complexities of Latin language and literature.

Prerequisites: Language Placement with a score of LA411

Attributes: Undergraduate

LIN 200 Introduction to Linguistics (3 credits)

This course is an introduction to the study of language and areas of linguistics. It focuses on how language works, where it comes from, how it is used in society, how it changes over time and how it is learned. We will also explore commonly-held beliefs about the nature of language and language use in real-life contexts.

Attributes: American Studies Course, Communication Studies ILC Crs, GEP Social Science, Undergraduate

LIN 203 English Grammar (3 credits)

To prepare current and future English language teachers, this course focuses on various aspects of English grammar, especially those are particularly challenging for ESL/EFL learners. It provides useful background knowledge for English language teachers and preparation that strengthens applications for teaching positions, fellowships, and scholarships. This course is beneficial to Linguistics and TESOL majors/minors who plan to teach English in any context and at any level as well as to students in ENG, COM, EDU, and other academic areas where a solid grasp on the linguistic structure of English would be useful. This course counts toward an English elective.

LIN 210 Speech Science (3 credits)

In this course, we will investigate the physiological, acoustical, and perceptual bases of speech and basic audiological science. We will discuss these topics from both theoretical and practical perspectives. As students interested in the field of communication sciences and disorders, you will gain a solid background in speech perception and production as well as understand how speakers process certain sounds in their audiological system. This will require a comprehension of the anatomical and physiological processes we use in our speech and hearing mechanisms. We will also discuss the fields of Speech-Language Pathology (SLP) and Audiology and explore how scientific content applies to the diagnosis and treatment of people with communication disorders. This course is open to all students, assumes no prior knowledge of SLP.

LIN 211 Speech Development & Disorders (3 credits)

This course investigates speech sound development and speech sound disorders (SSDs) by addressing the biological bases of speech sound production, acoustic aspects of speech sound production, the development and progression of speech sound production, linguistic factors that influence communication, and cultural factors that influence speech sound production. Students will gain a solid background in speech development, production, and the different types of SSDs. We will implement applied transcription using IPA symbols, gain an understanding of the anatomy and physiology related to speech sound production, and demonstrate how to treat specific speech disorders. We will also explore how scientific content applies to the diagnosis and treatment of people with SSDs. This course is open to all students, assumes no prior knowledge, and has no prerequisites.

LIN 220 Logic (3 credits)

A study of the logic of ordinary language; the function of language, forms of argument, fallacies, definition; analysis of propositions and deductive reasoning, analogy and scientific hypothesis testing. See PHL 220.

Attributes: Justice Ethics and the Law, Undergraduate

LIN 240 Symbolic Logic (3 credits)

The study of a method for translating arguments from ordinary language into a symbolic notation which reveals logical structure, procedures for establishing the validity or invalidity of deductive arguments so symbolized, and properties of formal deductive systems-independence of axioms, expressive and deductive completeness, and consistency. See PHL 240.

Attributes: Undergraduate

LIN 250 Social Media Discourse (3 credits)

The focus of this course is on understanding and investigating linguistic aspects of electronic social media such as email, texting, Twitter, Facebook, etc. This course has two goals: (1) to analyze everyday social media discourse from a linguistic perspective and (2) to learn how to conduct linguistic research in the context of a student-designed investigation on some type of social media discourse. To that end, we will examine previous research in related areas and students will conduct an original research project based on a selected context of social media discourse. This course will be taught as a seminar in which students are expected to come to class prepared to discuss and/or lead the majority of discussions about course readings. This course is open to students from all academic majors.

Attributes: American Studies Course, Communication Stds Maj Choices, Undergraduate

LIN 260 Language and the Law (3 credits)

This course is an introduction to linguistic issues that influence interaction in a variety of legal contexts. It explores the role of language used in court cases and police investigations while paying special attention to particular discourse contexts such as courtroom talk, interpreter interactions and police interrogations/ interviews. Particular emphasis will be placed on recognizing and understanding ethical issues related to linguistic sources of disadvantage before the law for both educated and uneducated native speakers, minority speakers and non-native speakers of a given language. This course will help prepare students for careers in which a particular sensitivity to, and understanding of, the use of language is vital. By looking closely at areas studied by linguists, we will seek to uncover the role and the ethical nature of oral and written interactions that take place in the legal field. These linguistic issues affect the concept of justice as well as its application in the legal system and also influence how humans are perceived and, in turn, treated by those who apply the law (police officers, lawyers, judges, etc.). This course fulfills the GEP Ethics-Intensive overlay requirement; it also fulfills a requirement in the Sociology and Criminal Justice majors/minors. This course is open to students from all academic majors.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

LIN 270 Topics in Linguistics (3 credits)

This course is an introduction to the study of how language is represented in the human mind and what processes are involved in language use, including producing, comprehending, and storing both spoken and written language. Together, we will explore questions such as the following: How do humans store and recognize words? How do we analyze speech? What processes are involved when we speak and read? We will study spontaneously-occurring speech errors and misperceptions and carry out experimental investigations on language production and comprehension. This course is open to students from all academic majors.

Attributes: Undergraduate

LIN 280 Second Lang Acquis & Lrning (3 credits)

This course focuses on the study of existing approaches to describing second language acquisition and learning. Drawing on current research in the field of linguistics, we will explore various aspects of language (e.g., negation, questions, references to the past) as well as particular factors (e.g., age, motivation, personality, learner beliefs) that affect the acquisition and learning of specific languages. Paying particular attention to English language learning, we will devote significant course time to understanding L2 developmental sequences as they relate to theories of acquisition and learning based on social, psychological and educational frameworks. Students will also be challenged to consider the relationship between their understanding of and experiences with language acquisition and learning as well as the relationship between language learning theories and language teaching. This course will be beneficial to students who are majoring or minoring in Linguistics and/or TESOL or who plan to teach language (English, Spanish, Italian, French, German, etc.) at any level; it will also be of interest to students who are studying a second language and want to understand the adult language learning process more fully.

Attributes: Undergraduate

LIN 281 First Language Acquisition (3 credits)

Starting before they are even born, most children acquire language with tremendous ease in a very short period of time. It is a remarkable achievement, usually taken for granted unless something goes awry. This course focuses on the acquisition of a first language in infancy and childhood by highlighting issues in various areas of linguistic analysis: sounds, word and sentence meaning, word order and language use in various communicative contexts. We will also focus on different theories that try to account for the cognitive and linguistic processes that together result in first language acquisition as well as atypical language development from which much is learned about the process of first language acquisition. Of benefit and interest to all academic majors, this course is particularly relevant to students in the areas of linguistics, education, autism studies, psychology and health-related areas including speech therapy/speech language pathology.

Attributes: Undergraduate

LIN 301 Teaching Lang at Home/Abroad (3 credits)

Teaching Language at Home and Abroad is an introduction to language teaching and is designed for students interested in teaching a second or foreign language for professional, academic or personal reasons. It will help prepare students to tutor or teach English as a second language (ESL), English as a foreign language (EFL), or other languages such as French, German, Italian, or Spanish in a variety of educational settings at home and abroad. In addition to a career in language teaching, other future opportunities might include teaching positions in community service ESL classes, the Peace Corps, or through grants/fellowships including Fulbrights, among others. In this course, we will explore topics such as language acquisition, teaching methods, materials preparation and assessment. This course is open to students from all academic majors

Attributes: Undergraduate

LIN 310 Hearing Science (3 credits)

In this course, we will investigate the physiological, acoustical, and perceptual bases of audiological science. We will discuss these topics from both theoretical and practical perspectives. As students interested in the field of communication sciences and disorders, you will learn how speakers process certain sounds in their audiological system. This will require a comprehension of the anatomical and physiological processes we use in our hearing mechanism. We will also discuss the field of Audiology and explore how scientific content applies to the diagnosis and treatment of people with communication disorders. This course is open to all students, assumes no prior knowledge of SLP, and has no prerequisites.

Attributes: Undergraduate

LIN 317 Sociolinguistics (3 credits)

This course focuses on the use of language within its social context. In this course, we will gain an appreciation for the diversity that exists in human language and for the communicative values inherent in every language variety; scrutinize assumptions about linguistic identity and difference; examine issues of subordination and privilege in our own and others' lives as related to issues of language; explore the relevance of social categories (e.g., class, age, gender, ethnicity, other social groups) as related to language variation; explore how sociolinguistic research informs policy decisions in classrooms and government legislation; and become familiar with data-collection and research methodologies used to investigate specific topics within the field of sociolinguistics. This course counts for a Sociology major/minor. See SOC 317. This course is open to students from all academic majors.

Attributes: Communication Studies ILC Crs, Diversity Course, GEP Social Science, Undergraduate

LIN 318 Psycholinguistics (3 credits)

This course is an introduction to the study of how language is represented in the human mind and what processes are involved in language use, including producing, comprehending, and storing both spoken and written language. Together, we will explore questions such as the following: How do humans store and recognize words? How do we analyze speech? What processes are involved when we speak and read? We will study spontaneously-occurring speech errors and misperceptions and carry out experimental investigations on language production and comprehension. This course is open to students from all academic majors.

Attributes: Communication Studies ILC Crs, Undergraduate

LIN 320 Phonetics (3 credits)

This course explores the repertory of sounds found in human language. As a field of study, phonetics includes three areas: (a) articulatory phonetics (how humans create speech sounds); (b) acoustic phonetics (how sounds are transmitted through the air); and (c) perceptual phonetics (how humans perceive sounds based on changes in air pressure). In this class we will focus primarily on the first area, along with an introduction to the second. To this end we will examine the anatomy of the human vocal tract to understand how speech sounds are created. We will also study the International Phonetic Association (IPA) transcription alphabet, create broad and narrow transcriptions, and practice producing and classifying sounds of various world languages. Time will also be spent on prosodic characteristics of human speech, including pitch, stress, tempo, and loudness. Finally, we will discuss how the study of phonetics is applied within fields such as Speech-Language Pathology (SLP), Teaching English to Speakers of Other Languages (TESOL), or teaching languages (e.g., Mandarin, French, Japanese, etc.). This course is open to student from all academic majors. This course counts for a major elective course toward the Autism Behavior Studies major, the Autism Studies minor, and IHS Area Studies.

Attributes: Undergraduate

LIN 321 Intro: Communication Disorders (3 credits)

This course will serve as an introduction to communication disorders, providing students interested in pursuing graduate-level coursework with the foundation necessary to do so. Basic anatomy and physiology of mechanisms that pertain to these systems will be discussed, and relevant neuroanatomy will be covered. We will also examine the professional roles and responsibilities of Speech-Language Pathologists and Audiologists. This course covers prerequisite content required for students planning to pursue higher-level study in the speech and hearing sciences, including speech-language pathology and audiology. This course counts towards the Linguistics Major/Minor.

Attributes: Undergraduate

LIN 322 Intro to Audiology (3 credits)

This course will serve as an introduction to the modern practice of audiology, and will address the profession and practice through an overview of the anatomy (structure) and physiology (function) of the auditory system, the physical properties of sound relevant to hearing assessment, techniques for hearing assessment, common pathologies of the auditory system, and the impact of hearing loss. This course covers prerequisite content required for students planning to pursue a higher level degree in communication disorders, including speech-language pathology and/or audiology. Subject matter assumes no prior knowledge of audiology.

Attributes: Undergraduate

LIN 323 Anatomy&Phys of Speech&Hearing (3 credits)

This course will serve as an introduction to the anatomy and physiology of speech, hearing, and swallowing mechanisms, including anatomy and physiology of respiration, phonation, resonance, hearing, mastication, deglutition, neuroanatomy, and neurophysiology. This course covers prerequisite content required for students planning to pursue a higher-level degree in communication disorders, including speech-language pathology and/or audiology. Subject matter assumes no prior knowledge of anatomy and physiology. This course is of interest to students pursuing specializations in Linguistics, Autism Studies, IHS and Special Education.

Attributes: Undergraduate

LIN 330 Discourse, Style & Presupp (3 credits)

This course builds on Sociolinguistics. Here we examine issues of register, variety (dialect), discourse structure, style, presupposition. The student will be invited to (1) examine discourse samples to analyze presupposition, implications, and fallacies. The insights of argument structure will organize this approach.

Attributes: Undergraduate

LIN 340 Communication in Soc Contexts (3 credits)

Communication in Social Contexts analyzes how people communicate with each another in various social contexts. We will focus on recent research topics in discourse analysis and explore particular contexts of discourse such as that which takes place in the legal field (police interrogations; naturalization interviews); family interactions (homecoming routines; ventriloquizing); childhood settings (apologies, sporting events), the workplace (medicine, business, media) and the classroom (teacher-student, student-student, teacher-teacher interactions). Special attention will be given to classroom discourse, the area of applied linguistics research that investigates empirical linguistic data from classroom interaction. This course is open to student from all academic majors. This course counts for the American Studies minor.

Attributes: American Studies Course, Communication Studies ILC Crs, GEP Social Science, Undergraduate

LIN 370 Special Topics in Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics. Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LIN 381 History of the Eng Language (3 credits)

A survey of the outer and inner history of the English language, from its Indo-European origins to its present American and world-wide use. The course will be based on modern linguistic methods and information. See ENG 381.

Attributes: Undergraduate

LIN 401 Bilingualism & Lang Diversity (3 credits)

This course is an exploration of bilingualism and linguistic diversity both within the U.S. and beyond its borders. Bilingualism is examined from both sociolinguistic and psycholinguistic perspectives, as we identify historical, geographical and socio-political issues that shape the identity of bilinguals in the U.S. who come from languages and cultures other than our own. In addition to examining the theoretical and methodological issues in bilingualism research, students will also engage this reality through community observations and interviews with representatives of the bilingual communities. This course is open to students from all academic majors.

Attributes: Diversity Course, Undergraduate

LIN 420 SLP/AuD Research Methods (3 credits)

In this course, we will learn about conducting clinical research and its application to evidence-based practice and demands for accountability in the fields of speech-language pathology and audiology. The course will include a general orientation to research design and statistical analysis, followed by specific discussions of various types of research methods and conclude with attention to the acquisition of research grants. This course is writing intensive and therefore will review issues such as the development of clear research questions, support of ideas, organization, style and writing conventions.

Attributes: Undergraduate, Writing Intensive Course- GEP

LIN 470 Topics in Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Attributes: Undergraduate

LIN 474 Language and Thought (3 credits)

Rene Descartes held a view called "mind-body dualism", according to which human persons are fundamentally thinking substances that are somehow causally linked to particular physical substances: bodies. One of his reasons for holding this view was that he believed that the human faculty of language could never, even in principle, be adequately explained by any purely physical description of things. Language, as he saw it, is evidence of mind, and indeed he believed that where language is absent, mind is also absent. Creatures without language are, in Descartes' view, mindless organic automata. Few today would defend Descartes' view in all details, but the general sense that language is an important "mark of the mental" has not gone away. Instead, it has given rise to a cluster of narrower but interesting and important questions: Are certain kinds of mental states impossible without language? Does the specific language that we speak influence our thoughts in some way? Do our innate tendencies of thought force our languages to take certain forms? We could restate these questions in a somewhat different way. Does language hold thought on a leash? Does thought hold language on a leash? See PHL 474.

Attributes: Undergraduate

LIN 475 Language and Meaning (3 credits)

This course examines the core issues in the philosophy of language, including the nature of meaning, problems of reference, and the relation between language and thought. Further issues include the status of propositions, the problem of whether linguistic competence implies innate knowledge of some sort, the nature of metaphor, the private language problem, the indeterminacy of translation and language as symbolic capital. See PHL 475.

Attributes: Undergraduate

LIN 490 TESOL Internship (3 credits)

This course is a practicum in which the student applies their knowledge of Linguistics in a professional work environment. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon their experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on their internship experience. This course is intended as an advanced course for Linguistics majors or TESOL minors who have completed the other course requirements.

Attributes: Undergraduate

LIN 491 Linguistics Internship (3 credits)

This course is a practicum in which the student applies his/her knowledge of Linguistics in a professional work environment. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon his/her experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on his/her internship experience. This course is intended as an advanced course for Linguistics majors/minors who have completed the other course requirements.

Attributes: Undergraduate

LIN 492 Speech Language Pathology (3 credits)

This course is a practicum in which the student applies their knowledge of Speech Language Pathology in a professional work environment. The majority of the work for this course is performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon their experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a journal and a final project or paper related to the student's internship experience. This course is intended as an advanced course for Linguistics majors with a concentration in Speech Language Pathology who have completed other introductory course requirements.

Prerequisites: LIN 210 or LIN 320

Attributes: Undergraduate

LIN 493 Ind Research in Linguistics (3 credits)

This will allow the student to round out the major/minor with a supervised research project that will help expand the student's interests and development.

Attributes: Undergraduate

LIN 494 Ind Research in Linguistics (3 credits)

This will allow the student to round out the major/minor with a supervised research project that will help expand the student's interests and development.

Attributes: Undergraduate

LIN 496 Special Topics Transfer Course (3 credits)**LIN 497 Special Topics Transfer Course (3 credits)**

Literature in Translation (LTT)

LTT 150 First Year Seminar (3 credits)

First-Year seminar course in Literature in Translation.

Attributes: First-Year Seminar, Undergraduate

LTT 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LTT 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

LTT 310 The French Story (3 credits)

A study of representative French short stories from Voltaire to Albert Camus that will emphasize how a good short story functions as a work of art, the various elements of the genre and its French cultural context.

LTT 320 Lit Culture & the Nobel Prize (3 credits)

Every year the Nobel Prize for Literature is awarded in recognition of outstanding literary accomplishment by men and women from all corners of the globe. In this course we will explore the rich, diverse cultures reflected in literature that has been translated into English by examining the work of acclaimed writers who have been awarded the Nobel Prize.

Attributes: Undergraduate

LTT 330 Society in World Literature (3 credits)

This course offers students the opportunity to read and analyze twenty and twenty-first literature from around the globe. Students will explore prose from a variety of regions and develop an understanding of diverse traditions and cultures and the political, social and historical landscape that provides context for this work. Students will examine the literary devices and theoretical frameworks utilized by writers as a form of cultural expression.

Attributes: GEP Art/Literature, Undergraduate

LTT 342 Women in World Literature (3 credits)

The goal of this course is to explore world culture through literature, focusing on female characters and writers, the treatment of women and their place in society as depicted in novels and short stories. We will explore the rich, diverse history and background that shaped these individuals, their characters and their work. No knowledge of a foreign language is necessary.

Attributes: GEP Art/Literature, Undergraduate

LTT 350 The European Scene (3 credits)

Selected plays of modern Europe with emphasis on the portrayal of women in dramatic literature. No knowledge of a European language is necessary.

Attributes: Undergraduate

LTT 360 Non-Western Lit in Translation (3 credits)

In this course we read literature from around the world, exploring different cultures and the social, political and artistic landscape that provides background and context for this writing. We will read and review literature by writers from Peru, Morocco, Egypt, the Caribbean and Japan and gain a broad and rich variety of perspectives.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: GEP Art/Literature, Undergraduate

LTT 361 French-Carib. Lit [in English] (3 credits)

This course will teach students to read and appreciate contemporary Francophone literature of Martinique, Guadeloupe and Haiti, in translation, by familiarizing them with the colonial and post-colonial history of the region, its cultural richness and its literary modes. As background, students will learn about the colonization of Amerindian lands by Europeans, the history of slavery in the Caribbean and the development of Creole dialects and culture. The primary focus of the course will be on recent cultural and intellectual history, particularly the development of two twentieth-century literary movements that have profound social, psychological and political implications, Négritude and Créolité. Students will read entire works or substantive excerpts of works by major authors of the French Caribbean. The course is appropriate for students pursuing minors in Faith-Justice or Africana Studies.

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

LTT 362 Stories from the Middle East (3 credits)

This course offers students the opportunity to explore the rich, diverse culture and literature from the farthest corners of the Middle East. In doing so, students develop an understanding of the social, literary, and historical landscape that provides context for this work. We will read novels, short stories, and excerpts by writers from countries such as Egypt, Morocco, Persia and Turkey.

Attributes: GEP Art/Literature, Undergraduate

LTT 370 Special Topics (3 credits)

Rotating topics in Literature and Translation.

LTT 461 Franco-Afro-Caribbean Story (3 credits)

This course is intended to provide an English-language introduction to the history of the French-speaking Antilles and its complex mix of cultures. It will also allow students to read selected writers from Haiti, Martinique and Guadeloupe (in translation). The fundamental characteristics of the course are: 1) A primary focus on historical events, literary modes and the cultures of the francophone Antilles, including the Atlantic slave trade and its aftermath, race and racism, communal relationships, persistent social injustices and forgotten or silenced histories; 2) paying attention to marginalized voices and modalities, in literature and in historiography; 3) emphasizing the rich cultural traditions and intellectual movements arising from (or resonating in) the French Caribbean, including storytelling and orality, creoles, vaudou, opposition to Duvalierism, *négritude*, *antillanité* and *créolité*; 4) critically viewing the relationships between this region and the francophone world at large. Course content includes historical and theoretical readings that will focus on the exercise of power and on persistent forms of injustice and resistance. The course is appropriate for students pursuing minors in Faith- Justice or Africana Studies.

Prerequisites: PHL 154 and ENG 101

Attributes: Africana Studies Course, Diversity Course, Ethics Intensive, GEP Art/Literature, Undergraduate, Writing Intensive Course- GEP

LTT 470 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

Management (MGT)

MGT 110 Essentials of Organizational Beh (3 credits)

This course surveys the basic principles, concepts, and theories concerning organizations and groups and individuals within those organizations. The concepts and theories in this course concern individual behavior (e.g., perceptions, attitudes, and motivation), group and interpersonal processes (e.g., leadership, power, and conflict), and essential organizational theories. Students CAN take either MGT 110 or MGT 120 or MGT 121 to satisfy the HSB core Management requirement. Students who take MGT 110 cannot take MGT 120 or MGT 121 for credit.

Attributes: Undergraduate

MGT 120 Essentials of Management (3 credits)

This course surveys the basic principles, concepts, and theories concerning organizations and groups and individuals within those organizations. The concepts and theories in this course include the organizational environment, management functions (planning, organizing, leading, and controlling), and essential individual and interpersonal theories. Students CAN take either MGT 110 or MGT 120 or MGT 121 to satisfy the HSB core Management requirement. Students who take MGT 120 cannot take MGT 110 or MGT 121 for credit.

Attributes: Undergraduate

MGT 121 Organizations in Perspc Honors (3 credits)

This course explores the nature of the firm and the development of the employer-employee relationship in work organizations since the turn of the 20th century in the U.S. We will investigate and integrate the perspectives of various stakeholders (e.g., government, unions, community) as they relate to the manager- employee relationship, and demonstrate the effects of these stakeholders on individual and organizational well-being. University Honors students only. Students who take MGT 121 cannot take MGT 110 or MGT 120 for credit.

Restrictions: Enrollment limited to students with the Honors Program Student attribute.

Attributes: Honors Course, Undergraduate

MGT 140 Navigating the Road Ahead (3 credits)

This course focuses on positioning students for academic, career and personal excellence within the context of fostering an understanding of the adult student's role in the learning/teaching process at Saint Joseph's University. Its purpose is to enhance learning skills such as understanding material as it applies to oneself and others, applying concepts and ideas to real issues, thinking critically, analyzing text and ideas, and assessing progress. A key strength of this course is that it gives students the freedom to select and apply their own interests and academic pursuits to all of the assignments, thus making the course meaningful-as well as interesting and valuable-from both skill-building and content perspectives.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Adult Learning Seminar

MGT 150 First Year Seminar (3 credits)

First-Year seminar course in Management

Attributes: First-Year Seminar, Undergraduate

MGT 200 Intro to Project Management (3 credits)

Project Management is the application of knowledge and techniques to project activities in order to meet stakeholder needs. A project is an endeavor having a definite beginning and a definite end, undertaken to create a unique product or service. Key elements of Project Management will be introduced in this course: scope, schedule, budget, quality, human resources, communications, risk, and procurement. Through lectures, exercises and case studies, we will see how these elements fit into a project management plan, as well as how the plan is executed and controlled. Guidelines presented will be consistent with The Project Management Body of Knowledge (PMBOK) and be a step towards a possible Project Management Professional (PMP) certification.

MGT 210 Business Stakeholders & Ethics (3 credits)

This course analyzes the question, "Does business have a social responsibility?" through the examination of various internal and external stakeholders of the contemporary business organization. Students will be introduced to frameworks and theoretical principles in ethics that may be used as foundations to the analysis of the question above. Students then will learn how stakeholder management relates to an organization's triple bottom line of people, planet, and profits. The course includes theoretical concepts and practical analysis, exposing students to some of the ethical dilemmas confronted by employees in the workplace, and serves to help students enhance their skills in resolving these types of dilemmas. CAS Students may take with Permission of Chair.

Prerequisites: PHL 154 and (MGT 110 or MGT 120 or MGT 121)

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

MGT 211 Perspectives on Leadership (3 credits)

This course aims to increase students' knowledge and skills concerning effective leadership. Through a seminar format we will employ a historical perspective to investigate different approaches, models and contexts to leadership. We will then explore the contemporary role of leadership in work organizations. Through workshops, we will develop skill competencies critical to effective leadership. Students will have an opportunity to apply their knowledge and skills to a leadership experience they design and implement themselves. CAS Students may take with permission of Chair.

Prerequisites: MGT 110 or MGT 120 or MGT 121

Attributes: Undergraduate

MGT 212 Organizational Sustainability (3 credits)

This course is an introduction to Organizational Sustainability in its broader sense and is primarily designed for the Leadership, Ethics, and Organizational Sustainability major and minor and those students interested in this area. For the organization, sustainability means the capacity to survive (to sustain itself) while contributing to the survival (the sustenance) of the various environments in which it finds itself, be these social, biological, economic, ecological, or other. The course offers a framework for understanding sustainability and introduces the concept of the triple-bottom line whereby corporate social responsibility and environmental protection are necessary conditions for business success in addition to profitability. It is not enough to fulfill only one or two of these three necessary conditions: organizations should be structured so all three are mutually reinforcing. The main objective of the course is to provide students with a broad context enabling them to develop the capacity for critical thinking and the skills necessary to understand the importance of sustainability. CAS students may take with permission of Chair.

Prerequisites: PHL 154 and (MGT 110 or MGT 120 or MGT 121)

Attributes: Ethics Intensive, Globalization Course, Undergraduate

MGT 220 Intro Human Resource Management (3 credits)

A survey of the functional areas of human resource management including: planning, staffing, training, compensation, performance appraisal, and labor relations. This course explores the growing importance of human resource management, emerging topics in the field, and techniques for effective management of human resources.

Attributes: Undergraduate

MGT 221 Diversity in the Workplace (3 credits)

This course will increase students' awareness of workforce diversity as both a challenge and opportunity for contemporary managers. Topics to be covered include demographic trends in the U.S., various models for understanding the importance of managing diversity, the differences between affirmative action and managing diversity, identity issues, real cultural differences vs. stereotyping, individual responses to diversity, organizational strategies for managing diversity and promoting positive organizational change, challenges inherent in managing diversity, and potential outcomes of successful diversity management.

Attributes: Diversity Course, Faith Justice Course, Undergraduate

MGT 222 Influence, Negotiation & Conflict (3 credits)

This course focuses on developing students' interpersonal and communication skills in order to increase influence, negotiation, and conflict resolution abilities in a fair and principled fashion. Students should obtain a theoretical understanding of influence and negotiation, and improve their ability to engage in negotiations and address conflict in an effective and ethical manner in a wide range of situations. CAS students may take with permission of the Chair.

Prerequisites: MGT 110 or MGT 120 or MGT 121

Attributes: Justice Ethics and the Law, Undergraduate

MGT 230 Intro: Entrepreneur/New Venture (3 credits)

This course explores the fundamental processes of entrepreneurship and new venture creation including: the development of innovative thinking, opportunity recognition, venture exploration which would ultimately lead to a new venture, and the skills that are necessary for successfully building a new venture team that possesses the appropriate attributes. The primary purpose of the course is to develop an innovative perspective, as well as an understanding of the integration of people in the entrepreneurial process. CAS Students may take this class with Permission of the Chair.

Prerequisites: MGT 110 or MGT 120 or MGT 121

Attributes: Undergraduate

MGT 231 Family Business (3 credits)

This course explores the unique interpersonal and business issues associated with a family-owned and managed firm. Thus, the course is designed for those students who will be entering or establishing a family-owned business. The course will focus upon: the competitive strengths and weaknesses of a family firm; the dynamics of family interactions and the family business culture; conflict resolutions; estate planning; and planning for succession. The primary purpose of the course is to provide the tools and techniques that will provide an entrepreneur with the greatest opportunity for success within a family business framework.

Attributes: Undergraduate

MGT 240 Career & Personal Development (3 credits)

This course takes the student through a systematic and integrative process of examining eight research-supported "critical factors for success" as they apply to oneself and one's career. This course will be partially didactic, while being primarily small group oriented, experiential and self-reflective.

Attributes: Undergraduate

MGT 260 Legal & Ethical Issues in Supply Chain (3 credits)

The primary objective of this course is to give the student an overall understanding of the legal and ethical issues in supply chain management (assessed via cases and tests). The course is designed to provide a background on the legal and ethical issues affecting the supply chain management function within businesses and government and delve deeply into those issues throughout the course (assessed via Discussion posts, cases and tests). In so doing, the course will identify key legal and ethical issues in the supply chain management profession with an emphasis on navigating those legal and ethical issues in the performance of supply chain management duties.

Attributes: Undergraduate

MGT 310 Breaking News in Bus. Ethics (3 credits)

Everyday business ethics uses real-time reporting of current events by credible media as the vehicle to help students connect the language of moral reasoning and business ethics to emerging ethical issues in the world of business, organizations, and leadership. The course will review the major theoretical basis for moral reasoning, e.g., deontological ethics, utilitarian ethics, and ethical relativism. A discussion of source credibility will also precede the second (main) portion of the course. Students will keep abreast of current events via daily reading of various media outlets. Students will be expected to (a) identify ethical issues, controversial decisions, and unethical conduct reported by journalists; (b) analyze the stakeholders and ethical issues identified in news reporting, and (c) identify potential resolutions or recommendations for action that might be taken by individuals involved in the decisions. The course will culminate in a research paper by each member of the class on a current business ethics issue of interest. CAS students may take with permission of Chair.

Prerequisites: PHL 154 and ENG 101

Attributes: Ethics Intensive, Justice Ethics and the Law, Undergraduate, Writing Intensive Course- GEP

MGT 311 Leading Teams (3 credits)

This course aims to increase students' understanding and skills required for effective team leadership. Through participating in experiential exercises, simulation, and team projects the course arms the students with an opportunity to develop skills and apply course material in building productive and happy teams. As leading teams involves learning about oneself, and understanding others, we will explore both in detail. Peculiarities of managing and leading diverse and virtual teams will also be addressed. The overarching course objective is to lead the students from identifying relevant group and leadership theories to integrating them into their team work.

Prerequisites: MGT 110 or MGT 120 or MGT 121

Attributes: Undergraduate

MGT 320 Career Management (3 credits)

This course provides students with the knowledge and skills to understand and manage careers in organizations. Students will learn to help others manage their careers while also learning how to manage their own careers. Topics will include, but will not be limited to motivation theory, professional skill-development, career ladders, career coaching, labor market/occupational trends, market research, job search techniques, resume writing, interviewing skills, negotiating, and networking. CAS students may take with permission of Chair.

Prerequisites: MGT 110 or MGT 120 or MGT 121

Attributes: Undergraduate

MGT 321 International Talent Mgt (3 credits)

The purpose of this course is to develop knowledge for managing a global workforce, and to prepare students to encounter international business from an interpersonal standpoint. While expertise in international human capital and talent management is an important pathway to competitive advantage for organizations, the goal of this course is also to develop thoughtful managers and workers who will be cognizant of the challenges of an international career, and respectful of cross-cultural differences. CAS students may take with permission of Chair.

Attributes: Globalization Course, Undergraduate

MGT 322 Decision Making w/ Analytics (3 credits)

This course introduces students to the metrics that are essential to the strategic management of human capital. Human capital leaders help drive business performance by delivering competitive advantage through people. Performance relies on measures, so future leaders need to be adept at planning and interpreting those measures. The emphasis of this course will be on logical and strategic decision making through planning which measures to use, and using the resulting analytics to facilitate effective talent acquisition and retention, maximize the productivity and effectiveness of organizational human capital, and allocate limited resources effectively.

Prerequisites: MHC 220 or MGT 220

Attributes: Undergraduate

MGT 330 Social Enterprise & Soc Change (3 credits)

This course introduces students to the concepts of social enterprising as a means to promote social change. The course begins with a look at the ethical foundations inherent in the initiation of social change, namely moral rights and the justice perspectives on moral reasoning. The course then turns to an exploration into how social enterprising can be used as a vehicle to address injustice and promote social change. Topics in this section include recognizing opportunities for social change, planning and organizing the social venture, funding and scaling the social enterprise, and measuring social impact. Students will have the opportunity to interact with management of a social venture and apply the skills learned. CAS Students may take this class with Permission of the Chair.

Prerequisites: PHL 154 and (MGT 110 or MGT 120 or MGT 121)

Attributes: Ethics Intensive, Undergraduate

MGT 340 Organization Development (3 credits)

A behavioral science perspective on the causes and outcomes of individual and group behavior in organizations, and of the behavior of organizations. Topics will include motivation, attitudes, interpersonal processes, leadership, and macro-organizational behavior.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MGT 341 Group & Team Dynamics (3 credits)

Almost all of our behavior takes place in the presence of other people. A number of small group practitioners and researchers have presented explanations for the why and how of individual behavior in group and team settings. Through the vehicle of the class as laboratory students will experientially examine a number of theories and concepts about individual behavior in group/team settings. Students through class discussions will learn to observe, understand, examine and influence team and group development.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MGT 342 Leadership & Development (3 credits)

In this course, participants will review and discuss current applicable social science literature in an attempt to answer some of the following questions: Who is a leader? What is leadership? Does effective leadership originate in a person or in a set of actions or behaviors? What do we know about developing leaders? How do the constraints of organizations inhibit or facilitate leadership development? What is your current leadership style? These and related questions will be examined by class members through lectures, case studies, self-assessments, and experiential activities.

Prerequisites: PSY 100

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MGT 343 Issues in OD (3 credits)

Selected issues in the field such as change agency, emotional intelligence, assessment, group and interpersonal processes, job enrichment, selection, and placement will be discussed. Small groups, role-playing, and other experiential exercises will clarify important concepts in the field.

Prerequisites: ODL 300 or MGT 340

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MGT 344 Coaching & Consulting (3 credits)

Roles, functions, tools and settings that define a consulting psychologist will be explored with an emphasis on the corporate world. Small groups, role-playing, videos and other experiential exercises will clarify and supplement readings, research and discussion.

Prerequisites: (ODL 300 or MGT 340) and (ODL 320 or MGT 342)

Attributes: Undergraduate

MGT 350 Organizational Research (3 credits)

Working under the guidance of a faculty member, students engage in a semester-long research project in the domain of Management. Permission of Chair required.

Attributes: Undergraduate

MGT 360 Legal Environment of Business (3 credits)

This course introduces students to the study of law, particularly as it affects business organizations. Comprehensive in scope, it covers the court system and the judicial process, as well as areas of substantive law including torts, contracts, constitutional, administrative, employment, agency and international law. Various forms of business organizations are examined, and the interplay between law and ethics is addressed throughout.

Attributes: Justice Ethics and the Law , Undergraduate

MGT 361 Introduction to Law Honors (3 credits)

This course is an introduction to the legal system and some of the areas of the law that have a significant impact on our lives are presented. The structure of the legal system and how it operates is described. Areas of torts, contract, criminal, constitutional, family, employment and others are examined. Current legal issues will receive particular attention. A Moot Court exercise is included. This course is highly recommended for students who plan to attend law school. Satisfies MGT 360 for Business Majors.

Restrictions: Enrollment limited to students with the Honors Program Student attribute.

Attributes: Honors Course, Justice Ethics and the Law , Undergraduate

MGT 362 Legal Environ't of Business II (3 credits)

This course builds upon the students' knowledge of law attained in the Legal Environment of Business I course. Areas of law such as product liability, sales, intellectual property, environmental, consumer, labor, securities and antitrust are examined. Accountants' liability is also covered. Highly recommended for students desiring to sit for the C.P.A. Exam or attend law school.

Prerequisites: MGT 360 or MGT 361

Attributes: Justice Ethics and the Law , Undergraduate

MGT 363 International Business Law (3 credits)

The purpose of this course is to acquaint the student with the international legal environment in which businesses operate. It will introduce the students to international business, international law and organizations, and how international disputes are resolved. International sales, credits, commercial transactions will also be covered, as well as international and U.S. trade law.

Attributes: Globalization Course, Justice Ethics and the Law , Undergraduate

MGT 364 Bus Law-Entrepreneurial Firms (3 credits)

This course surveys and analyzes the legal issues faced by new entrepreneurs and entrepreneurial firms. The course covers issues facing the entrepreneur including: leaving your current employer, structuring the ownership of the new company, and obtaining appropriate legal, accounting and insurance advice. A number of issues facing entrepreneurial firms are covered, including: liabilities and insurance, raising capital, contracts and leases, licensing, intellectual property, human resource matters, e-commerce and the sale of goods and services, outsourcing, global entrepreneurship, changing between private and public ownership, and other relevant topics.

Attributes: Justice Ethics and the Law , Undergraduate

MGT 365 Employment and Labor Law (3 credits)

The purpose of this course is to acquaint the student with the legal aspects of human resource management. It will describe the sources of employment law and how those laws govern the hiring, promotion, evaluation and termination of employees, as well as the terms and conditions of employment in 21st century America. Attention will be given to current legal and ethical issues, including the challenges of managing an increasingly diverse workforce.

Attributes: Undergraduate

MGT 370 Special Topics I (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MGT 398 Neurodiversity at Work Interns (3 credits)

The purpose of this internship is to provide the student with an opportunity to utilize the managing neurodiversity knowledge and skills acquired in previous coursework in a "real world" setting under the tutelage of the course instructor and/or workplace supervisors. The student will provide peer support and job coaching, and will play an active role in managing the performance, integration, and experience of an individual on the autism spectrum in the workplace. The student will interact with the administration and staff at the internship site to accomplish these goals and associated tasks, as assigned by the internship coordinator.

Prerequisites: ABA 100 and (MHC 220 or MGT 220)

Attributes: Undergraduate

MGT 400 Capstone Project - OD (3 credits)

This course serves as a senior-level, research-based capstone in which organizational development students complete a research project typically developed in the Issues in Organizational Development course. Students will present and orally defend their research project to the Organizational Development and Leadership faculty.

Prerequisites: ODL 330 or MGT 343

Restrictions: PLS/HDC level students may **not** enroll.

Attributes: Undergraduate

MGT 415 Applied Ldrshp & Sustain Capst (3 credits)

This course is an integrative course in which students (either individually or in teams) undertake an action- learning project in an organization under the direction of a faculty member with the objective of applying leadership and sustainability concepts developed throughout the program. Students will work with live clients (e.g., non-profit organizations or for-profit businesses) to help them improve their triple bottom-line performance along the people, planet, and profits dimensions and test their leadership skills as they do so. Senior standing.

Prerequisites: (LEO 210 or MGT 210) and (LEO 211 or MGT 211) and (LEO 212 or MGT 212) and (MGT 110 or MGT 120 or MGT 121)

Attributes: Undergraduate

MGT 425 Managing HR: Resrch/Appl (3 credits)

This course focuses on critical thinking skills, research skills, and applied human capital issues. Students will learn and work on HR metrics (assessing, measuring, and valuing employee behaviors and attitudes). Substantive topics will be of interest to both people-oriented future managers and those who aspire to a career in human resources. This offering focuses on critical thinking, research and metrics relating to motivation (the OB side) and compensation (the HR side). There will also be a strong emphasis on the strategic importance of human capital in all organizations. Senior standing.

Prerequisites: (MHC 220 or MGT 220) and (MHC 221 or MGT 221) and (MGT 110 or MGT 120 or MGT 121)

Attributes: Undergraduate

MGT 435 Family Bus &Entrepren Capstone (3 credits)

This is a capstone course that integrates the various concepts of the core Family Business and Entrepreneurship courses to develop a comprehensive business plan to either create a new venture or to grow an existing family business. Students are responsible for assessing opportunities, collecting and interpreting relevant data to exploit the identified opportunity, and to craft a plan that supports the market need, identifies the target market, and is financially viable.

Prerequisites: (ACC 101 and ACC 102) and (FBE 230 or MGT 230) and (FBE 231 or MGT 231) and (FBE 360 (may be taken concurrently) or MGT 364 (may be taken concurrently)) and FIN 200 and MKT 201 and (MGT 110 or MGT 120 or MGT 121)

Attributes: Undergraduate

MGT 470 Special Topics II (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MGT 471 Practicum in Management (1 credit)

This course is meant for students with opportunities working over the course of the semester/summer whose employers require a credit as condition of employment. To apply, the student submits a letter to the chair explaining why the practical training is required and includes a letter from the employer. The student submits to the department chair an 8-10 page paper at the end of the practical training describing their work responsibilities and what skills s/he acquired by participating. Does not satisfy any major, minor, general education or elective requirement. Grade is Pass/Fail. May be repeated once. Permission of Chair required.

Attributes: Undergraduate

MGT 490 Internship I (3 credits)**MGT 491 Internship II (3 credits)****MGT 493 Research I (3 credits)****MGT 494 Research II (3 credits)****MGT 496 Management Honors Capstone (3 credits)**

This course is the second semester of the senior year Honors strategy capstone experience. The learning objectives of this course include leveraging the case method of investigation to evaluate strategic management concepts and theories, finding solutions to complex, real-world business problems, and enhancing critical thinking skills by engaging in real-time debate and by engaging in detailed case study research.

Prerequisites: BUS 495

Restrictions: Enrollment limited to students with a class of Senior.

Attributes: Honors Course, Undergraduate

MGT 499 Business Strategy Simulation (3 credits)

This course can be substituted for BUS 495. This is the capstone course for the undergraduate curriculum in the Haub Degree Completion Program. It is designed to integrate previous learning across business disciplines. The course will focus on applying knowledge in a dynamic global setting. It utilizes a strategy simulation software-based game within which teams create virtual firms and compete in a simulated industry.

Prerequisites: ACC 101 and ACC 102 and ECN 101 and FIN 200 and MKT 201 and (MGT 110 or MGT 120 or MGT 121)

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MGT 509 Curricular Practical Training (1 credit)**MGT 550 Leadership and Ethics (3 credits)**

This course focuses on the responsibilities of effective, ethical leaders to others, their organizations, their communities, and the natural environment in which their organization operates. Focusing on leadership at the intrapersonal, interpersonal, organizational, and societal levels, this course equips students with the skills and knowledge to address contemporary management and leadership issues in a critical and sustainable manner. Topics include ethical frameworks, stakeholders, individual value systems, decision-making, power, leadership, motivation, and organizational culture. This course exposes students to types of ethical issues that arise in the workplace and serves to enhance students' skills in addressing those issues.

Prerequisites: HSB Foundation with a score of MG500

Restrictions: Enrollment is limited to Graduate level students.

MGT 552 Stakeholder Theory & Soc Resp (3 credits)

This course addresses corporate social responsibility through a stakeholder theory of business. The course will center on the question, "Which interests of which stakeholders impose obligations on business?" The internal and external stakeholders addressed include investors, employees, customers, and the natural environment, among others. Some issues will be analyzed by exploring international differences in the treatment of stakeholders. The course exposes students to some of the ethical dilemmas confronted by employees in the workplace, and serves to enhance student skills in resolving these dilemmas.

Restrictions: Students cannot enroll who have a major in Executive MBA Program (1-year), Executive MBA Program, Food Marketing or Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MGT 554 Ethical Practices in Business (3 credits)

This online course will consider the ethical responsibilities of managers and corporations. It is designed to raise ethical consciousness and sensitivity to the ethical dimensions of business decisions, on an individual, institution and systematic level. It will be highly interactive, introducing the student to factors which incentivize ethical and unethical behavior, and to dilemmas which arise in business. It will provide plausible decision procedures and frameworks for dealing with ethical matters and methods for rationally adjudicating ethical disputes. It is also designed to reveal common patterns of success and failure in managing ethical conflicts. It will attempt to engage students in a critical evaluation of managerial and corporate ethics and encourage each student to develop a justifiable perspective on the role of ethics in business and their responsibility to various stakeholders.

Prerequisites: MHC 667 or MGT 556

Restrictions: Enrollment is limited to Graduate level students.

MGT 555 Equity in Organizations (3 credits)

Ensuring equity in organizations is becoming increasingly important as the population and workforce become even more heterogeneous. More importantly, it is a moral imperative. This course is designed to help students become aware of the multiple dimensions of diversity such as race, class, gender, gender identity, physical ability, sexual orientation, age, and nationality, and how they intersect. In order to identify and understand the role of organizations in advancing equity, students will first need to deepen their understanding of how organizations have historically impeded equity. Then students will consider possible solutions to advancing diversity, equity, and inclusion in contemporary workplaces.

Restrictions: Enrollment is limited to Graduate level students.

MGT 556 Human Resource Fundamentals (3 credits)

This course will provide the student with the fundamental knowledge essential to all practicing HR professionals. Critical HR functions will be explored in depth to provide a solid understanding of the many issues confronting the HR professional. Topic areas will include (but not be limited to) Strategic Management, Workforce Planning and Employment, Human Resource Development, Total Rewards, Employee and Labor Relations, and Risk Management. In all topic areas, the legal impact of human resources decision making will be considered. This course is appropriate for early HR careerists, those interested in entering the HR field, and students interested in how HR practices further organizational performance.

Restrictions: Enrollment is limited to Graduate level students.

MGT 561 HR & People Research, Meas&Met (3 credits)

This course is designed to introduce students to the processes involved in measuring the effectiveness of human resource programs and OD interventions through the scientific method. Students will learn the fundamentals of applied research, from developing questions and deciding on a research design to measurement and analysis. The course will provide a thorough grounding in survey methodology, and will focus on evaluating HR & People ideas through a critical thinking framework. Students will be required to propose a research study during which they will act as project managers/lead researchers responsible for envisioning, executing, analyzing, interpreting, and reporting the results of the study to an external client. The overarching goal of the course is to prepare professionals to effectively evaluate research conducted by others and to plan/initiate their own research.

Restrictions: Enrollment is limited to Graduate level students.

MGT 562 Employment & Labor Law (3 credits)

This course will provide an overview of the major laws that govern employer/employee relations in both union and non-union workplaces. Labor topics include, inter alia, the historical development of labor law, union organizing, unfair labor practices, concerted activities by unions and dispute settlement. Employment law topics include, inter alia, employment discrimination, testing, evaluation and privacy, and laws that govern wage and salary, health and safety, income security, benefits continuation, and family and medical emergencies.

Prerequisites: MHC 667 or MGT 556

Restrictions: Enrollment is limited to Graduate level students.

MGT 563 Human Resource Technology (3 credits)

The course examines how technology has enabled and transformed the modern human resource function within large enterprises. A variety of HR applications will be covered including Employee and Manager Self Service, Talent Acquisition, Performance Management, e-Learning, Compensation Planning and HR Analytics. The processes required justify, select, deliver and support HR technology solutions will be analyzed. Finally, special topics such as HR data privacy, HR Shared Service Centers, HR Outsourcing and the evolution and future of HR Technology will be covered.

Prerequisites: MHC 667 or MGT 556

Restrictions: Enrollment is limited to Graduate level students.

MGT 564 Fin & Acc for Managers (3 credits)

This course develops students' practical skills in the interpretation and use of financial and accounting information for managerial decision-making. Students will learn how to (1) understand and analyze financial statements, (2) evaluate relevant costs for decision-making, (3) perform present value analyses, and (4) make sound capital budget decisions.

Prerequisites: MHC 667 or MGT 556

Restrictions: Enrollment limited to students in the MSHRM program. Enrollment is limited to Graduate level students.

MGT 565 Leading Change in Organ (3 credits)

This course focuses on the knowledge and skills necessary for leading, planning, and implementing organizational change. Students will examine their own leadership skills and abilities, and will have the opportunity to develop skills critical to achieving effective change, including communication, leadership, and team development.

Restrictions: Enrollment is limited to Graduate level students.

MGT 575 Teams & INC (2 credits)

This course explores and challenges the use of influence, effective negotiation, conflict resolution, and decision-making in organizational settings. Focus is on basic principles, concepts, and theories. The course goal is for students to obtain a theoretical understanding of influence, negotiation, and improve their ability to engage a wide range of situations. Moreover, the course is highly interactive, involves a series of negotiation, and conflict resolution exercises. These exercises are framed, and analyzed in terms of readings, and in-class discussions.

Restrictions: Enrollment is limited to students with a major in Executive MBA Program (1-year) or Executive MBA Program. Enrollment limited to students in the MBAEX program. Enrollment is limited to Graduate level students.

MGT 585 Support Neurodiv Workplace (3 credits)

Over the next decade and beyond, hundreds of thousands of neurodivergent individuals on the autism spectrum will be entering the workplace. Is the workplace and are managers ready for them? While experts in Education have made great advances in creating inclusive education spaces and supportive learning environments for neurodiverse individuals, 21st century managers have only recently acknowledged the presence and value of this community in our workplaces. This course will explore ways that neurotypical workplaces and leaders can create inclusive environments to support members of neurominorities, not only for individuals on the autism spectrum, but also for individuals with ADHD, Dyslexia, and other forms of neurodiversity.

Restrictions: Enrollment is limited to Graduate level students.

MGT 595 Managing Well-Being (3 credits)

This course focuses on leadership and management issues within the area of scholar athlete well-being, and will provide students in the course with skills to manage complicated well-being issues. Students will learn about interacting with stakeholders from various professions such as athletic training, strength and conditioning, sports nutrition, sport psychology, and team physicians. Students will also learn about the NCAA Sports Science Institute and its impact on sport teams, sport coaches, athletes, staff, and athletic departments. Course outcomes include learning how to best support athletes on and off the field; manage conversations with multiple stakeholders; handle sensitive health information; utilize sport technology in an ethical manner; and build a culture of empathy, sympathy, and perspective when various well-being scenarios arise within a sports team. Each student will partake in independent research and review of governing body policies, procedures, and best practices outside of weekly sessions.

Restrictions: Enrollment is limited to Graduate level students.

MGT 600 Adult Learning (3 credits)

Course introduces students to adult education theory that focuses on how adults learn, application of adult education theory, skills required in the delivery of adult learning programs and an introduction to group process. Students have an opportunity to develop a professional learning theory and model. Students also discover their learning style and how style impacts their ability to use their theory and model. Use of feedback as a tool for learning allows students to realize how to improve their facilitation approach.

Restrictions: Enrollment is limited to Graduate level students.

MGT 602 Organizational Culture (3 credits)

Understanding an organization's culture is essential to successful change efforts. Students will learn to understand organizational culture, systems thinking, and the impact of culture on change. Students will also learn about initiatives intended to change an organization's culture.

Restrictions: Enrollment is limited to Graduate level students.

MGT 605 Consulting Skills (3 credits)

This course focuses on the development of consulting skills and proficiency in the range of skills necessary to be an effective consultant and agent of positive change. The consulting process provides a framework to guide engagements by both internal and external consultants. Topics covered include contracting, data collection, diagnosis, feedback, resistance, action planning, and managing commitment and accountability.

Restrictions: Enrollment is limited to Graduate level students.

MGT 610 Social Identity Theories (3 credits)

This course will introduce models and theories of social identity and the experience of belonging on the individual, organizational and group level of systems. Students will focus on the importance of identity theory in DEI work, assess the complexity of difference and belonging in workplace and experiment with the competency of self as change agent.

Restrictions: Enrollment is limited to Graduate level students.

MGT 615 Learning Design (3 credits)

Major steps in creating and designing adult education learning programs are discussed. Students develop a program that demonstrates their understanding of the key components of instructional design. Specific topics include collaborative relationships with customers/management, needs assessment, analyzing data, writing learning objectives, cost effectiveness of programs, selecting and sequencing content, developing learning materials and constructing evaluative instruments.

Restrictions: Enrollment is limited to Graduate level students.

MGT 620 Psychological Assessments (3 credits)

The psychological theories and practices underlying a wide variety of instruments used in assessing individual and group behavior in organizations will be examined. Issues and topics will include employee selection, performance, ability, attitude and development. Participants learn how to critically evaluate measures to answer organizational issues.

Restrictions: Enrollment is limited to Graduate level students.

MGT 625 Executive Coaching (3 credits)

Executive Coaching has become a staple within many organizations. Executive Coaching is essentially a purposeful, relational intervention based in psychosocial concepts that leads to new and more complex level of functioning in one party. This course primarily assists the student in further development of their coaching skills and models while also examining coaching models, underlying constructs, skills and relevant coaching research.

Restrictions: Enrollment is limited to Graduate level students.

MGT 630 Leadership & Team Development (3 credits)

This course focuses on theories and practices required in leading and developing teams. Issues of leadership behavior, interpersonal relations, group roles and stages of development are examined in an experiential laboratory.

Restrictions: Enrollment is limited to Graduate level students.

MGT 635 Positive Psychology (3 credits)

This course will provide you with a grounding in the theories and applications of positive organizational psychology. The core premise of this course is that leadership and personal scholarship excellence are fundamentally tied to creating/enabling organizational contexts that build human strengths as well as unlock the positive and generative dynamics of vibrant human communities. This course will help you to create, foster, and develop organizations where people learn to thrive and perform at their best.

Restrictions: Enrollment is limited to Graduate level students.

MGT 645 Mindful & Ignatian Leadership (3 credits)

Mindful and Ignatian Leadership explores the complex multidimensional nature of leadership effectiveness through the lens of mindfulness at work strategies and Ignatian discernment principles. Using premier assessment instruments, this course will awaken your potential as an aware, thoughtful and effective leader. Students will deepen their understanding of mindful and Ignatian leadership theories and practices and develop skills to increase leadership effectiveness. Students will learn through integrating their own experiences with readings, lectures, small group interactions, and guided mindfulness practices.

Restrictions: Enrollment is limited to Graduate level students.

MGT 646 Career Dev Theory & Practice (3 credits)

This course provides students with an experiential understanding of the process of career development. Through a primarily experiential approach, where students craft their own career vision, students have an opportunity to engage key concepts in the field of career development. In addition, topics such as assessment, gender, choice, interventions and career management are experienced and discussed.

Restrictions: Enrollment is limited to Graduate level students.

MGT 647 Appreciative Inquiry (3 credits)

This course focuses on Appreciative Inquiry (AI), a method and theory for rethinking organizational change. Instead of deficit-based and problem-oriented approaches to change, AI focuses on positive organizational change, starting with what works best within an organization as the basis of initiating stakeholders' desired future for the organization. This course will cover the theory and practice of positive organization change through Appreciative Inquiry.

Restrictions: Enrollment is limited to Graduate level students.

MGT 648 Conflict & Negotiation (3 credits)

Whether conflict is healthy or unhealthy for an organization is a function of an individual's ability to surface, work with, and resolve differences that inevitably arise in organization life between individuals and within and between groups and departments. This course examines the psychological and social dynamics which are connected to conflict, including power, leadership, personal needs, roles, communication. It also provides practical tools and skills development for dealing with conflict in a range of organizational settings.

Restrictions: Enrollment is limited to Graduate level students.

MGT 650 Organizational Leadership (3 credits)

This course provides a foundation for leadership competencies and characteristics necessary for guiding organizations. Students will use self-awareness tools and will deepen their understanding of leadership research, theories and practices. Students will also explore the organizational contexts where work, management, and leadership happen. Furthermore, students will examine the responsibility that comes with leadership through readings, lectures, small group interactions, and a self-development process.

Restrictions: Enrollment is limited to Graduate level students.

MGT 651 Leading for Career Success (3 credits)

This course examines the basics of career development and how it fits into the organizational structure. It includes theory and practice of career/adult development, its delivery systems, and its target populations.

Restrictions: Enrollment is limited to Graduate level students.

MGT 653 Lead in Modern Organization (3 credits)

This course will explore what it means to provide leadership to others in modern organizations. Topics will include enhancing one's leadership capability, crisis periods of leadership, conflicts between the organization's leadership and one's personal leadership, and strategies for success in leadership positions. Additional themes of power, authority, and control will be examined in terms of the organization and the individual.

Restrictions: Enrollment is limited to Graduate level students.

MGT 654 Leading Global & Virtual Teams (3 credits)

This course surveys the basic principles, concepts, and theories concerning group dynamics and team leadership. Leading modern teams involves not only managing different personalities, but also different cultures, and, frequently, doing so from a distance. In the course, the student will enhance learning in how to be an effective team member and a leader of global and virtual teams. Through participating in experiential exercises, simulations, and team projects the course provides the student with an opportunity to develop skills in managing highly diverse groups and building effective and efficient teams in a global and virtual world.

Restrictions: Enrollment is limited to Graduate level students.

MGT 655 Org Culture Beyond Diversity (3 credits)

While the concept of diversity and inclusion has been idealized as the way to achieve equity in organizations, the reality is that public and private corporations have fallen woefully short of achieving that goal. Whereas changing "hearts and minds" may have been how we previously framed how we thought to achieve equality, today's efforts require a committed approach to assessing organizational structure, policies, and practices that drive concrete and sustainable actions. Students will have the opportunity to consider individual implicit bias and unconscious prejudice, and then move their assessment from personal ideology to organizational policies and practices that serve to reinforce structural oppression and disparate treatment of non-white, cis-gendered employees. Students will reflect on the current state of diversity, equity, and belonging in public and private organizational settings. Through self-reflection, dialogue, and an organizational assessment project, students will develop a critical analysis of their own leadership practices and roles in their workplace.

Restrictions: Enrollment is limited to Graduate level students.

MGT 656 Nonprofit Leadership (3 credits)

This course focuses on the best practices of creating and leading effective nonprofit organizations. Topics include board governance and accountability, motivation, resource management, decision making, communication, and executive leadership in the nonprofit context. Through discussions, lectures, case studies, experiential activities, and personal reflection, students will acquire a set of tools and strategies that will allow them to enhance stakeholder engagement, individual and organizational performance, and collective impact. Using local and global examples, and their own projects, they will explore how nonprofit leaders collaborate with key stakeholders to understand the environment, identify opportunities, and co-develop new ideas. Students will learn how to define and achieve intended impact and find sustainable solutions to social problems.

Restrictions: Enrollment is limited to Graduate level students.

MGT 657 Leading Projects (3 credits)

The Leading Projects course explores what it means to bear prime leadership responsibility in the role of project manager. Project Management is the application of knowledge and techniques to project activities in order to meet stakeholder needs by creating a unique product or service. This course should not only help you learn valuable conceptual material, but it should also enhance your effectiveness across many organizations in which projects are planned and executed. Skills acquired by the student are critically important in a business or non-profit environment. Through lectures, exercises and case studies, the student will see how a project management plan is developed, executed and controlled. Application to a real project will follow. Guidelines presented will be consistent with The Project Management Body of Knowledge (PMBOK) and be a step towards a possible Project Management Professional (PMP) certification.

Restrictions: Enrollment is limited to Graduate level students.

MGT 660 Strategic Leadership (3 credits)

Consulting, advising, educating and coaching leaders necessitates a knowledge and understanding of the learning process and how that translates into strategy for changing any human social environment. In Strategic Leadership you will get a chance to broaden your knowledge and expand your leadership development toolkit as a leader and an educator of leaders. Specific strategies are considered and students begin to explore new ways of looking at leadership and their own behaviors in order to successfully implement strategies. Students have will have the opportunity to engage with a group of other students in an action research project and participate in a skill weekend where they reflect on the assumptions underlying their leadership actions.

Restrictions: Enrollment is limited to Graduate level students.

MGT 662 Total Rewards (3 credits)

The focus of this course is on strategic compensation systems needed in a dynamic business environment. Both basic and advanced concepts are reviewed, including job evaluation, wage and salary structures, gain-sharing, and other pay-for-performance systems.

Prerequisites: (MHC 667 or MGT 556)

Restrictions: Enrollment is limited to Graduate level students.

MGT 663 Talent-Selection & Retention (3 credits)

An examination of traditional staffing functions (recruitment, selection, orientation) is undertaken so that the process by which organizations and individuals are matched may be better understood. Always mindful of the legal issues that permeate these processes, this unique course will examine the staffing function at an advanced level. Issues such as labor supply and demand, HR strategy and planning, the regulatory environment, validity and reliability, job analysis, realistic job previews, assessment centers, honesty and ability testing, and state of the art recruitment and selection techniques will be explored in depth.

Prerequisites: (MHC 667 or MGT 556)

Restrictions: Enrollment is limited to Graduate level students.

MGT 664 Create New&Enhance Exist Firms (3 credits)

In an ever changing world, entrepreneurs and managers need to be able to quickly adapt and capitalize on emerging opportunities. This course focuses on creating an entrepreneurial mindset that is based on idea generation, creativity, and opportunity recognition. Utilizing an iterative process of build, measure, and learn, this mindset is then applied to creating new firms and to aiding existing firms to act more entrepreneurially.

Restrictions: Enrollment is limited to Graduate level students.

MGT 665 Facilitating Groups & Teams (3 credits)

Effective workgroups are essential to successful organizations. This course focuses on theories and research on group functioning, group development, and decision-making processes. The course approaches groups from the perspective of facilitation skills, whether the individual is a member of the team or an external facilitator.

Restrictions: Enrollment is limited to Graduate level students.

MGT 668 Leading for Sustainability (3 credits)

The Leading for Sustainability course positions your role as business leader as one that connects with sustainability at multiple levels - self, others, the organization and society. The course analyzes the definitions and development of Corporate Sustainability and its relationship with environmental management, the Triple Bottom Line and Corporate Social Responsibility (CSR). The course then focuses on leadership of self. Leadership is about "making a difference" and hence it is important to consider deeply the nature and type of difference that you intend to make in this world. In particular, this course aims to increase awareness of your values, ethics, beliefs, attitudes, etc. and how these might relate to issues of sustainability. The course then looks at organizational values and sustainability. Lastly, the course integrates the material through a value/sustainability gap analysis.

Restrictions: Enrollment is limited to Graduate level students.

MGT 670 Special Topics I (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to Graduate level students.

MGT 671 Strategic Leader Ethics&Values (3 credits)

Thinking strategically about your own development and the development of others is critical to your personal development and your ability to develop others. Leading at the next level requires knowledge and understanding of organizational vision, mission, values, ethics and communication. You will explore the impact of ethics and values on decision-making and organizational effectiveness. Students have the opportunity to focus on a particular area of organizational life and explore the impact of communications, perceptions, behaviors, culture, and current events on the outcomes of projects and initiatives.

Prerequisites: (ODL 650 or MGT 650)

Restrictions: Enrollment is limited to Graduate level students.

MGT 675 Implementing Change (3 credits)

This course focuses on the implementation of change with emphases on designing change initiatives and facilitation of change. Students will draw upon the research literature to plan and design change initiatives and develop their skills partnering with formal leaders of change efforts.

Restrictions: Enrollment is limited to Graduate level students.

MGT 680 Coaching Leader (3 credits)

This interactive course provides students with the opportunity to learn coaching skills. Specific topic areas include giving and receiving feedback, identifying and understanding communication style preferences, learning how to listen for the "real issues." This course is aligned with the competencies of the International Coach Federation (ICF) and can be applied to professional coaching portfolio hours.

Restrictions: Enrollment is limited to Graduate level students.

MGT 685 Global Organizations Seminar (3 credits)

Learning to work across the boundaries of culture, opinions, language, ideas and time zones takes practice, experience, empathy and a sense of adventure. This seminar is offered in that spirit to provide graduate students exposure to multinational organizations such as the United Nations, NGOs, schools, corporations, and health systems. Students will study and gain first-hand exposure to what it takes to manage, facilitate, and develop positive human development strategies from a multinational perspective. We will look at global learning and leadership at the individual, organizational, national, regional, and global levels.

Restrictions: Enrollment is limited to Graduate level students.

MGT 686 Global Leadership (3 credits)

There is no better way to learn about cultural diversity and working in a multinational society than to actually travel to another country. This study tour course includes approximately 9 days in another country, pre-work to prepare for the trip, and post-tour projects. This is a deeply experiential program with a focus on cultural diversity in a variety of education, business and social justice settings. The students will get a chance to network with and learn from professionals in other countries.

Restrictions: Enrollment is limited to Graduate level students.

MGT 688 Social Media & Learning (3 credits)

The course will examine the relationship between learning and social media. Current trends and use of social media in training, education, marketing, product development, data collection, customer service, and networking are some of the topics that will be covered. Students will discuss and evaluate uses of social media in informal social networking and formal knowledge management learning settings. Students will critique their own organization's culture and values around learning and social media and the challenges and opportunities they pose.

Restrictions: Enrollment is limited to Graduate level students.

MGT 690 Creative Problem Solving (3 credits)

Creative problem solving is an essential skill for people working in complex organizations. Creative thinkers reflect on the assumptions underlying actions and consider new ways of looking at and living in the world. They use methods to identify new alternatives. This course is a comprehensive guide for making worthwhile, influential and creative contributions at work. Students have an opportunity to identify and overcome personal and organizational barriers to develop breakthrough thinking.

Restrictions: Enrollment is limited to Graduate level students.

MGT 695 Applying Gestalt Theory in OD (3 credits)

This course will focus on the use of Gestalt theory in organizational change consulting. Students will learn a powerful new perspective that recognizes behavior and interactions of systems, rather than individuals, creating new and dynamic possibilities for intervention. A theoretical and practical framework will be taught for high-impact consulting in organizations, exploring critical dilemmas and offering opportunities to practice new skills. This course will benefit students who wish to understand and develop process consultation skills while learning a new framework for managing change. Approved by International Coaching Federation (ICF) for coach accreditation hours.

Restrictions: Enrollment is limited to Graduate level students.

MGT 700 Organization Development (3 credits)

This course covers the theoretical and historical foundations of organizational development (OD). The course will explore practical OD skills and approaches, change techniques, and managing relationships with sponsors. In addition, the course discusses OD values, ethics, and the role of the organizational development practitioner.

Restrictions: Enrollment is limited to Graduate level students.

MGT 705 Facilitation Skills (3 credits)

This course includes an overview of how skilled facilitation helps individuals and groups learn and change within organizations. Students have an opportunity to practice facilitation skills and learn new methods in helping individuals and groups learn to change. Participants learn to effectively use their own behaviors to influence others in creating work environments that foster collaborative, open problem solving, dealing with differences and participative decision making.

Restrictions: Enrollment is limited to Graduate level students.

MGT 710 Intervention Skills (3 credits)

Students have an opportunity to complete a project demonstrating action research methodology. Course centers on understanding how to use interventions and the impact that interventions can have within an organizational setting. Students have an opportunity to design and facilitate interventions both in class and in their organization to assure the successful implementation of change and/or that individual learning takes place within their project.

Restrictions: Enrollment is limited to Graduate level students.

MGT 760 Inclusive Convers: DEI (3 credits)

We live and work in an increasingly diverse and complex world. Leaders are challenged to address declining levels of productivity, employee engagement, and psychological safety and the issue is not falling strictly to HR professionals; it is as much the responsibility of individual managers as well as members of any team. This course addresses diversity, equity, and inclusion in today's climate. It will provide participants with a forum to learn about the psychology of unconscious bias and discrimination, and we will utilize tools to facilitate productive conversations and explore our personal, professional and social responsibilities in co creating safe inclusive teams, learning environments, and communities in the workplace. Students will participate in experiential learning sessions, a small group project, as well as real-life case scenario discussions. Online work will complement and enhance the classroom experience. This course is of value to managers, leaders, practitioners, and those who have a vested interest in expanding their everyday understanding of diversity and inclusion.

Restrictions: Enrollment is limited to Graduate level students.

MGT 770 Management Study Tour (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to Graduate level students.

MGT 771 Special Topics II (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: MGT 5015 or MGT 560

Restrictions: Students cannot enroll who have a major in Executive MBA Program (1-year), Executive MBA Program, Food Marketing or Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MGT 775 Strategic HR & Talent Mgt (3 credits)

This course examines the integration of human resource management strategy within the broader context of an organization's business strategy. Students will gain an understanding of major approaches to business strategy, and the corresponding implications for human resource management in varied strategic circumstances. Implications of a firm's strategy for functional areas within human resource management will also be examined. The course will introduce emerging trends in theory, research, and the practice of human resource management.

Prerequisites: MHC 667 or MGT 556

Restrictions: Enrollment is limited to Graduate level students.

MGT 780 Research Design & Evaluation (3 credits)

The course helps students design and evaluate research in their respective organization or field of study. Methods are presented for application to work situations. Topics include: the similarities and differences between theoretical and applied research, use of data-gathering techniques, writing of research reports and evaluation methods for change, learning, and research projects.

Prerequisites: (ODL 650 or MGT 650) and (ODL 700 or MGT 700) and (MHC 561 or MGT 561)

Restrictions: Enrollment is limited to Graduate level students.

MGT 781 Applied ODL Project (Capstone) (3 credits)

As the capstone course in the Master's in Organization Development and Leadership, this course provides an opportunity for students to apply lessons learned in the program to address real-world challenges. Through this full-semester course, students will identify an organizational problem, craft a theory-informed intervention, engage in the intervention, and then capture and share lessons learned through the process. This course should be taken in one of the final two semesters in the MODL program.

Prerequisites: (ODL 650 or MGT 650) and (ODL 700 or MGT 700) and (MHC 561 or MGT 561)

Restrictions: Enrollment limited to students in the MSODLBU program.

Enrollment is limited to Graduate level students.

MGT 785 Advanced Seminar (3 credits)

A capstone course and the last course taken in the Organization Development and Leadership Graduate Program. Course provides students the opportunity to complete a professional paper on a topic/issue of their choice utilizing research methods and statistics. Students also complete an independent/group project leading to the design and facilitation of a learning or change project.

Prerequisites: (ODL 780 or MGT 780)

Restrictions: Enrollment is limited to Graduate level students.

MGT 789 Business Strategy & Purpose (3 credits)

This course deals with the strategic management of firms that operate in a global environment with multiple stakeholders who possess competing objectives. It is the capstone class of the professional MBA and allows you to integrate your previous learning across business disciplines, and perhaps to learn about yourself. The course will focus on applying knowledge in a dynamic global setting while considering how to manage a firm from a "triple bottom line" perspective – creating value for people, profit, and the planet. It utilizes a strategy simulation software-based game within which teams create virtual firms and compete in a simulated industry.

Prerequisites: ACC 550 and DSS 610 and FIN 550 and MGT 550 and MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MGT 795 Global Business Strategy (3 credits)

The capstone course is designed to provide the student with knowledge of the strategic management and organizational policy processes. This course provides the opportunity to apply this knowledge by practicing strategic decision-making and by formulating policy through the use of cases with a focus on globalized firms. This course is usually taken in the last semester of study. Permission of the Program Director.

Prerequisites: ACC 550 and DSS 610 and FIN 550 and MGT 550 and MKT 550

Restrictions: Students cannot enroll who have a major in Executive MBA Program (1-year), Executive MBA Program, Food Marketing or Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MGT 796 Strat Man of Hlth Care Organ (3 credits)

This course is the capstone experience for students selecting the health and medical administration specialization. This course provides the healthcare students with knowledge regarding the formulation and implementation of organizational strategy and business policy processes focused on the healthcare system/industry. Students will be required to apply strategic management principles through the analysis of cases and the health care industry environment. This course is usually taken in the last semester of study.

Prerequisites: PMK 600

Restrictions: Students cannot enroll who have a major in Executive MBA Program (1-year), Executive MBA Program, Food Marketing or Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MGT 798 Capstone (3 credits)

This course is the capstone class of the executive MBA program. Through a computer simulation, students will experience the complexities of managing a global firm operating across different countries and the pressures of competition. The simulation involves 8 to 12 rounds of decision-making equivalent to two to three years in compressed time when students experience the managerial challenges of operating internationally.

Restrictions: Enrollment is limited to students with a major in Executive MBA Program (1-year) or Executive MBA Program. Enrollment is limited to Graduate level students.

Managing Human Capital (MHC)

MHC 150 Gender Issues in the Workplace (3 credits)

This course will approach workplace issues involving gender from both a psychological and management perspective. Specific issues discussed will include gender and leadership, occupational segregation of the workforce by gender, the effects of gender on manager-subordinate relationships, gender and sexual harassment in the workplace, pay equity, and "family friendly" workplace policies. Wherever appropriate, comparisons to other countries and cultures will be made.

Attributes: Diversity Course, First-Year Seminar, Gender Studies Course, Undergraduate

MHC 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MHC 270 Manage Hum Capital Spec Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

CAS Students may take with permission of Chair.

Attributes: Undergraduate

MHC 370 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

CAS students may take with permission of Chair.

Attributes: Undergraduate

MHC 470 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

CAS students may take with permission of Chair.

Attributes: Undergraduate

MHC 471 Practicum in Human Capital I (1 credit)

This course is meant for students with opportunities working over the course of the semester/summer whose employers require a credit as condition of employment. To apply, the student submits a letter to the chair explaining why the practical training is required and includes a letter from the employer. The student submits to the department chair an 8-10 page paper at the end of the practical training describing their work responsibilities and what skills s/he acquired by participating. Does not satisfy any major, minor, general education or elective requirement. Grade is Pass/Fail. May be repeated once. Permission of Chair required.

MHC 472 Practicum in Human Capital II (1 credit)

This course is meant for students with opportunities working over the course of the semester/summer whose employers require a credit as condition of employment. To apply, the student submits a letter to the chair explaining why the practical training is required and includes a letter from the employer. The student submits to the department chair an 8-10 page paper at the end of the practical training describing their work responsibilities and what skills s/he acquired by participating. Does not satisfy any major, minor, general education or elective requirement. Grade is Pass/Fail. May be repeated once. Permission of Chair required.

MHC 490 Manage Human Cap Internshp I (3 credits)

Permission of Chair.

MHC 491 Manage Human Cap Internshp II (3 credits)

Permission of Chair.

MHC 493 ManageHuman Capital Research I (3 credits)

Permission of Chair.

MHC 494 ManageHuman Capital ResearchII (3 credits)

Permission of Chair.

MHC 565 Managing Workforce Flow (3 credits)

This course focuses on efficient and effective flow of the workforce through an organization. Particular attention will be given to the relationship between business strategy and workforce planning, including the influence of internal and external labor markets, demographic trends and diversity, and the challenges of technological changes. The course will provide an in-depth look at the theories, principles and legal issues surrounding organizational workforce planning in a global economy.

Prerequisites: MGT 551 or MGT 553 or MHC 560

Restrictions: Enrollment is limited to Graduate level students.

MHC 670 MHC Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

MHC 797 Manage Hum Cap:Strategy&App (3 credits)

This course requires the student to apply their knowledge of business strategy and human resource management in the development of a Strategic Human Resource Management Project. This project will build on previous course work in the MSHRM Program and allow students to choose a particular area of interest in which to further enhance their knowledge and expertise. Students may choose either a field-based project or choose to conduct an in-depth exploration into a particular HR discipline. Throughout this course, each student will demonstrate their ability to fulfill the four strategic human resource management roles serving as a strategic business partner, a change agent, an employee advocate, and an efficient administrator.

Prerequisites: MHC 560

Restrictions: Enrollment is limited to students with a major in Human Resource Management. Enrollment limited to students in the MSHRM program. Enrollment is limited to Graduate level students.

Marketing (MKT)

MKT 150 First Year Seminar (3 credits)

First-Year Seminar, rotating topics.

Attributes: First-Year Seminar, Undergraduate

MKT 201 Principles of Marketing (3 credits)

Brands, sports teams, charities, politicians and entertainers all depend on Marketing to stand out from the crowd. An introduction to the theory and practice of Marketing-the process of building strong relationships with customers by meeting or exceeding their needs. In this course, you will review the core Marketing concepts from "STP" (Segmenting, Targeting & Positioning) to the "4 Ps" (Product, Promotion, Price & Place). The broad social, cultural, political and economic issues that impact Marketing are also examined.

Attributes: Haub Co-op Program, Undergraduate

MKT 202 Marketing Research (3 credits)

In today's Marketing environment, information is power. An in-depth study of the various steps of the market research process from problem definition to data analysis. Focus on the use of market research techniques and technology as applied to marketing planning, product development, performance monitoring and marketing communications.

Prerequisites: MKT 201

Attributes: Haub Co-op Program, Undergraduate

MKT 211 Honors Principles of Marketing (3 credits)

Brands, sports teams, charities, politicians and entertainers all depend on Marketing to stand out from the crowd. An introduction to the theory and practice of Marketing-the process of building strong relationships with customers by meeting or exceeding their needs. In this course, you will review the core Marketing concepts from "STP" (Segmenting, Targeting & Positioning) to the "4 Ps" (Product, Promotion, Price & Place). The broad social, cultural, political and economic issues that impact Marketing are also examined.

Restrictions: Students with a class of Freshman may **not** enroll.

Attributes: Undergraduate

MKT 301 Integrated Mktg Communications (3 credits)

Breaking through the "clutter" to gain the customer's attention is a never-ending challenge. An inclusive review of the various elements of Integrated Marketing Communications and how they are used to successfully engage the target audience. Topics such as advertising, digital/alternative media, social media, public relations and sales promotion are addressed from creative development to media selection to execution with the goal of communicating to constituents with one clear voice.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 302 Consumer & Buyer Behavior (3 credits)

Understanding what makes customers "tick" is the foundation of successful Marketing. A study of how consumer and business needs and wants are converted into satisfactions, with primary emphasis on the core processes that underlie customer decision making. The course highlights major consumer behavior models, current research on consumer behavior, and the socio-cultural issues that influence consumers.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 303 MKT Communications (3 credits)

Topics such as advertising, digital/alternative media, social media, public relations and sales promotion are addressed from creative development to media selection to execution with the goal of communicating to constituents with one clear voice. This course is for Communications Studies students who will not take Principles of Marketing (MKT 201).

Restrictions: Students cannot enroll who have a major, minor, or concentration in Marketing.

Attributes: Undergraduate

MKT 304 Principles of Selling (3 credits)

This course offers students an overview of sales careers and the selling process. Students will learn about the art and science of selling including current sales theories, effective selling techniques and practices, as well as the legal regulations and business ethical issues which affect salespeople.

Prerequisites: MKT 201

Restrictions: Enrollment limited to students in the Haub School of Business college.

Attributes: Undergraduate

MKT 308 Marketing Analytics (3 credits)

This course is designed to provide students with a comprehensive, applied approach to understanding consumer behavior and evaluating the effectiveness of marketing activities. Students will learn to analyze and interpret customer and market data to drive decision-making via best practices. This course may use interactive or digital software, including Tableau, Microsoft Excel, qualitative and quantitative analysis platforms, presentations, and infographic design tools.

Prerequisites: MKT 201 and DSS 220

Attributes: Undergraduate

MKT 312 Selling and Sales Management (3 credits)

Behavioral and systems approaches to selling will be covered, along with the role of selling in the Marketing mix and the importance of selling in customer service. Discussion of sales force management including the tools and techniques of effective sales presentations, the role of technology, sales training and motivation.

Prerequisites: (MKT 201 and MKT 304)

Attributes: Undergraduate

MKT 313 Ethics in Marketing (3 credits)

Discussion and analysis of the behavior and interaction of companies, consumers and customers across various topics such as personal privacy, sales responsibility, intellectual property, pricing, image and issue presentation, and Marketing channels. Students will develop multiple methods for evaluating ethical issues in terms of actions and consequences from the perspective of shareholders, employees, consumers, society-at-large and the environment.

Prerequisites: MKT 201

Attributes: Ethics Intensive, Undergraduate

MKT 314 Social Media Marketing (3 credits)

Social media has changed the way we learn, communicate, forge relationships, and shop. In this course, we explore how customers use social media to express their identity, maintain, personal relationships, collaborate with others, and as a creative outlet. We also examine how companies can use popular social media platforms to further their business goals.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 315 Mkt in a Multicultural World (3 credits)

The American demographic landscape is shifting dramatically and Marketing must strive to keep up. Discussion of the challenges and opportunities for marketers wishing to target various diverse groups in the United States. Topics include how to develop Marketing strategies and refine the Marketing mix to best serve and research these different and changing groups.

Prerequisites: MKT 201

Attributes: Diversity Course, Undergraduate

MKT 316 Digital Marketing (3 credits)

In this course, students will learn how to use various online tools to develop successful campaigns. Topics covered include search engine marketing (SEM), search engine optimization (SEO), internet and mobile advertising, social media and web analytics.

Prerequisites: MKT 201 and (MKT 301 or MKT 303 or FMK 303 or PMK 351)

Attributes: Undergraduate

MKT 317 Fashion Marketing (3 credits)

How fashion has evolved in today's world of social media, influencers, and the changing retail landscape.

Prerequisites: MKT 302

Attributes: Undergraduate

MKT 321 Advertising (3 credits)

Advertising has come a long way from the days of "Mad Men", yet it is still the most prominent and glamorous component of the communications mix. An effective ad should inspire us to buy, click, donate or even vote. This course will examine the elements of successful Advertising from strategy and development to execution and evaluation.

Prerequisites: MKT 201 and (MKT 301 or PMK 351 or FMK 303 or MKT 303)

Attributes: Undergraduate

MKT 324 Public Relations and Publicity (3 credits)

Is all PR really good PR? The concepts, history, theory, social responsibility and management of Public Relations and its role in the communications mix. This course will survey PR problems and practices in corporations, government agencies, associations and not-for-profit organizations.

Prerequisites: MKT 201 and (MKT 301 or MKT 303 or PMK 351 or FMK 303)

Attributes: Undergraduate

MKT 325 Fundamentals of Graphic Design (3 credits)

A "hands on" course where you will learn graphic skills that are the technical foundation for transforming concepts into effective visual communications. Extensive use of current online graphics programs.

Prerequisites: MKT 201

MKT 327 Global Mkt Communications (3 credits)

This course uses writing to help students understand the various problems and opportunities of globalization as applied to marketing communications. The fundamental principle is that knowledge of cultural specifics or value paradoxes is the basis of effective global marketing communications strategies.

Prerequisites: MKT 201 and (MKT 301 or MKT 303 or PMK 351 or FMK 303)

Attributes: Diversity Course, Undergraduate, Writing Intensive Course- GEP

MKT 331 International Marketing (3 credits)

Multi-faceted study of the concepts, methods and challenges of conducting business in international markets. The economic, political, cultural and geographical factors affecting multinational marketers are addressed from the perspective of various stakeholders including customers, exporters and local businesses.

Prerequisites: MKT 201

Attributes: Globalization Course, Undergraduate

MKT 341 Music Marketing (3 credits)

A course for individuals considering a career in Music Marketing or the Music Industry minor. Examines the use of music in marketing often called audio branding. Using popular press and case studies, this course looks at the integration of music in advertising, television, sports, film and other media.

Restrictions: Students with a class of Freshman may **not** enroll.

Attributes: Music Industry Course, Undergraduate

MKT 342 Music and Entertainment Law (3 credits)

A discussion of the legal issues in the entertainment industry from the perspective of various stakeholders including artists, writers, agents, producers and distributors. Using a legal framework, students will examine a variety of entertainment scenarios including concerts, shows, radio and TV.

Prerequisites: MKT 201 and (MKT 341 or MKT 343)

Attributes: Music Industry Course, Undergraduate

MKT 343 Entertainment Marketing (3 credits)

Entertainment can be viewed as both a 'product' and as a promotional tool. Learn about entertainment industry Marketing practices as well as the organizations and people who conceive of, create and distribute entertainment properties including television, film, music, gaming and theater.

Prerequisites: MKT 201

Attributes: Diversity Course, Undergraduate

MKT 344 Business of Recorded Music (3 credits)

This course focuses on the structure and function of the recording industry and the role of various participants. It examines past, present and future business models employed by recording companies as they relate to recorded music's value chain.

Restrictions: Students with a class of Freshman may **not** enroll.

Attributes: Music Industry Course, Undergraduate

MKT 350 Event Marketing (3 credits)

The use of Event Marketing as a strategy to reach consumers beyond traditional, cluttered advertising mediums. You will learn how to plan and execute events, and use events to effectively engage prospective consumers, build brand awareness, and market a company's products and services.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 351 Business of Sports (3 credits)

A look at professional and college sports as big business including league structure; ownership and franchise values; sources of revenue; sports media; labor issues; competitive balance; and the economic and financial aspects of college athletic departments. This course will also examine the impact that diversity and social issues have on leading sport organizations in the 21st century.

Prerequisites: MKT 201

Attributes: Diversity Course, Undergraduate

MKT 352 Sports Law (3 credits)

Many of today's sports headlines have little to do with wins and losses. A discussion of the legal issues related to sports, from managing sports-related businesses to working as a sports agent or a university athletic director. Students will delve into existing sports business lawsuits and collective bargaining agreements to stimulate discussion and formulate answers to practical sports business problems.

Restrictions: Enrollment limited to students with a class of Junior or Senior.

Attributes: Justice Ethics and the Law , Undergraduate

MKT 353 Sports Marketing (3 credits)

Sports Marketing has become increasingly sophisticated over the last decade as teams compete for the entertainment dollar. A study of marketing, promotion, sales and sponsorship strategies utilized in the sports industry by both sports properties and brand partners.

Prerequisites: MKT 201 and MKT 351

Attributes: Undergraduate

MKT 354 The Business of Baseball (3 credits)

An examination of how MLB and its franchises operate as business entities, starting with baseball's antitrust exemption and reserve clause. The course covers league operations, labor relations, financial issues, marketing, baseball and the media, and ballparks. Must be Sophomore or above.

Restrictions: Students with a class of Freshman may **not** enroll.

Attributes: Undergraduate

MKT 355 Sports, Selling, & Sales (3 credits)

Learn how to develop the skills essential to effectively building sales and revenue within a sports business and leverage the various revenue producing opportunities within a sports franchise or organization. The course will explore critical factors in successfully renewing and growing sales with both consumers and corporate partners.

Prerequisites: MKT 201 and MKT 351 and MKT 353 (may be taken concurrently)

Attributes: Undergraduate

MKT 362 Digital Media in Sports (3 credits)

This course will review the sports digital landscape including current issues, best practices, branding, mobile sports, ticketing, fantasy sports and e-commerce.

Prerequisites: MKT 351 and MKT 201 and MKT 353 (may be taken concurrently)

Attributes: Undergraduate

MKT 363 Sports Analytics (3 credits)

The use of data and quantitative methods to measure performance and make decisions in the competitive sports arena. The analytical skills learned in this course can be applied to various industries beyond sports.

Prerequisites: MKT 201 and (MKT 351 or MKT 202)

Attributes: Undergraduate

MKT 364 Sports Marketing Communication (3 credits)

A review of the various elements of Sports Marketing Communications and how they are used to successfully engage the target audience. Highlighting current issues and best practices, topics such as traditional advertising, digital/social media, direct marketing, public relations and sales promotions are addressed.

Prerequisites: MKT 201 and MKT 351 and MKT 353 (may be taken concurrently)

Attributes: Undergraduate

MKT 365 eSports (3 credits)

This course will provide an overview of the Esports industry including history, current status and future. Course will focus on sales and marketing as well as event management.

Prerequisites: MKT 201

Restrictions: Students with a class of Freshman may **not** enroll.

Attributes: Undergraduate

MKT 370 Spec Topics:Sports Marketing (3 credits)

This course will be offered periodically on a topic of interest in the field of Marketing as chosen by the instructor.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 401 Marketing Strategy (3 credits)

In this capstone course, students apply the Marketing knowledge acquired from previous courses to the development of a comprehensive strategy that addresses all aspects of the Marketing mix. Students will conduct in-depth analysis of consumer, industrial and not-for-profit Marketing issues. Cases dealing with product innovation and development, demand, pricing, distribution, and promotion will also be explored, giving students an opportunity to address real-world business problems.

Prerequisites: MKT 201 and MKT 202 and MKT 302 and (MKT 301 or MKT 303)

Restrictions: Enrollment limited to students with a class of Senior.

Attributes: Undergraduate

MKT 450 Marketing Study Tour (3 credits)

A specially designed international tour to varying countries which offers students a unique opportunity to study international business and develop a better understanding of the global marketing environment-its dimensions, participants, trends and opportunities. Students will also experience the heritage, ambiance, and excitement of the world's great countries and cities.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 470 Special Topics in Marketing (3 credits)

This course will be offered periodically on a topic of interest in the field of Marketing as chosen by the instructor.

Attributes: Undergraduate

MKT 490 Internship in Marketing I (3 credits)

An on-the-job experience whereby students spend a minimum of fifteen hours a week applying Marketing principles for an approved employer. Course requires approval of Marketing Department Internship Coordinator prior to registration.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 491 Internship in Marketing II (1,3 credits)

This course is meant for students with an internship opportunity, for which the prospective employer requires university credits, and who have already completed a three-credit internship. The course is limited to General and Sports Marketing majors who have completed a three-credit internship. Course requires approval of Marketing Department Internship Coordinator prior to registration. This practicum does not satisfy any major or minor requirements. Grade will be Pass/Fail.

Prerequisites: MKT 201

Attributes: Undergraduate

MKT 493 Indep Study in Marketing (3 credits)**MKT 497 Sports Marketing Internship (3 credits)****MKT 499 Research Practicum (3 credits)**

Take your research skills to the next level while developing the insights needed to make effective marketing decisions.

Prerequisites: MKT 201 and MKT 202

Attributes: Undergraduate

MKT 509 Curricular Practical Training (1 credit)**MKT 521 Marketing Concepts (2 credits)**

This course provides an overview of the philosophy and organization of marketing, the concepts of marketing planning and strategy, the impact of the macro and task environments on the marketing function, the process of managing marketing information flows, and the major elements of marketing programs. The concepts of positioning, segmentation and targeting will be highlighted, along with discussion of product planning and development, and the elements of the marketing mix.

MKT 530 Marketing Foundation (2 credits)

An introduction to customer-driven marketing strategy by taking students through the marketing fundamentals beginning with strategy, target marketing and opportunity analysis, then developing the product, price, distribution and promotion marketing mix.

MKT 531 Integrated Mktg Communications (1 credit)

This course is designed to introduce the important elements of effective and integrated Marketing Communications (IMC) including advertising, sales promotion, personal selling, publicity, public relations, interactive marketing, and direct marketing. The roles of traditional, digital and social channels are reviewed.

Restrictions: Enrollment limited to students in the MBAEX program.

Enrollment is limited to Graduate level students.

MKT 545 Graduate Marketing Gateway (3 credits)

The issue of environmental sustainability is no longer a "fringe" issue. Instead, the issue of environmental sustainability requires a paradigm shift in the way managers think about their own role within the broader scope of the global community. Businesses that are more sustainable are more competitive, more innovative, have lower costs, and attract better talent.

Restrictions: Enrollment is limited to Graduate level students.

Attributes: Gateway Course (Grad HSB)

MKT 550 Marketing Management (3 credits)

This course will prepare students to guide the management, development, application, and assessment of ethical business strategy from a customer-focused, market-sensing, and competitor-driven perspective. Learn how the fundamental of strategic thought--such as the resource-based view and market orientation-- can inform decisions to enter new markets, be market-driven, drive markets, position brands, and create and measure customer value.

Prerequisites: HSB Foundation with a score of MK500

Restrictions: Enrollment is limited to Graduate level students.

MKT 602 Promotional Strategy (3 credits)

Breaking through the "clutter" to gain the customer's attention is a never-ending challenge. An inclusive review of the various elements of Integrated Marketing Communications and how they are used to successfully engage the target audience. Special emphasis is placed on media selection, the creative process, promotional planning and the allocation of resources as promotional tools.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 604 International Marketing (3 credits)

A multi-faceted study of the concepts, methods and challenges of conducting business in international markets. The economic, political, cultural and geographical factors affecting multinational marketers are addressed from the perspective of various stakeholders including customers, exporters and local businesses.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 605 Research in Marketing (3 credits)

A multi-faceted study of the concepts, methods and challenges of conducting business in international markets. The economic, political, cultural and geographical factors affecting multinational marketers are addressed from the perspective of various stakeholders including customers, exporters and local businesses.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 606 Consumer Behavior (3 credits)

Marketing begins and ends with the customer, from determining customers' needs and wants to providing customer satisfaction and maintaining customer relationships. This course highlights major consumer behavior models, current research on consumer behavior, and the socio-cultural issues that influence consumers and how they are used to improve marketing decision-making.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 608 Marketing and Social Media (3 credits)

Technology has changed the way we learn, communicate, forge relationships and shop. In this class, you will learn how to build a great brand using digital tools such as social networking, blogging, virtual worlds, podcasting and mobile applications.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 609 Marketing Analytics (3 credits)

This application-oriented course introduces quantitative analytic concepts that can inform marketing decisions, assess marketing performance, and detail return on marketing investment using spreadsheets, data mining and computer-based models, students will learn how to determine market size and share, identify segments and positioning characteristics, interpret surveys, understand cost and pricing, and optimize distribution.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 610 Digital Mkt & Web Analytics (3 credits)

In this course students will learn how to use various online tools to develop successful digital campaigns. Topics covered include search engine marketing (SEM), search engine optimization (SEO), internet and mobile advertising, social media and web analytics.

Prerequisites: MKT 550 and (MKT 605 or MKT 614)

Restrictions: Enrollment is limited to Graduate level students.

MKT 612 Global Cultures and Consumers (3 credits)

This course examines the basic concepts and principles of consumer behavior with the goal of understanding how they can be used in successful marketing decision making. It approaches these phenomena within a global framework that emphasizes the importance of the cultural dynamics that influence the meaning of consumption and of consumer behavior around the world.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 613 International Channel Mgmt (3 credits)

An introduction to cycle of goods (the Channels) from the starting point of sourcing through to payment by the end-user, with a strong focus on the international aspects of moving goods. These core processes encompass information management; inventory flow scheduling and control; logistics-production coordination; international transportation systems operation and infrastructure; and customer service, order fulfillment, and distribution facilities management.

Prerequisites: MKT 550 or HSB Foundation with a score of MK550

Restrictions: Enrollment is limited to Graduate level students.

MKT 614 International Mktg Research (3 credits)

This course exposes the student to research methodology, and qualitative and quantitative data analytic methods that can be applied to marketing decisions. It addresses general and contemporary issues in consumer behavior, product development, pricing, promotion and channels in the international marketing context.

Prerequisites: MKT 550 or HSB Foundation with a score of MK550

Restrictions: Enrollment is limited to Graduate level students.

MKT 616 Global Mktg Communications (3 credits)

An inclusive review of the various elements of Integrated Marketing Communications and how they are used to successfully engage customers including advertising, public relations, sales promotion, direct marketing, e-commerce, event planning, and sponsorships. Students will also explore the role of cultural differences, social-political issues, and global communications institutions in helping multinational organizations communicate with target audiences.

Prerequisites: MKT 550 or HSB Foundation with a score of MK550

Restrictions: Enrollment is limited to Graduate level students.

MKT 618 Int'l Prod Develop & Brand Mgt (3 credits)

Students will be exposed to a variety of planning concepts and tools that are available to managers to assist with the creation and management of products and services for the international market. In addition, this course examines brand equity and brand management from a global perspective.

Prerequisites: MKT 550 or HSB Foundation with a score of MK550

Restrictions: Enrollment is limited to Graduate level students.

MKT 621 Qualitative Marketing Research (3 credits)

This course helps develop knowledge and skills in the application and use of qualitative research techniques to develop customer insights. A survey of qualitative research methods are paired with relevant examples in various marketing domains. Students will learn best practices for data collection and analysis as well as presentation and application of findings.

Prerequisites: MKT 550 and (MKT 605 or MKT 614)

Restrictions: Enrollment is limited to Graduate level students.

MKT 622 Advertising & Consumer Insight (3 credits)

This course introduces students to advertising theory and techniques related to the strategic engagement of consumers via print, electronic, and other media. Students will be exposed to a variety of advertising metrics, key performance indicators, data sources, and analytical tools utilized in the advertising field.

Prerequisites: MKT 550 and (MKT 605 or MKT 614)

Restrictions: Enrollment is limited to Graduate level students.

MKT 623 Predictive Analytics for Mkt (3 credits)

This course covers predictive analytics with an emphasis on applications for business, marketing and consumer behavior. The course focuses on the choice of a predictive method, the procedure of predictive analysis, the validation of a predictive analysis, the important issues involved in evaluating the quality of a predictive data analysis and interpretation of the results.

Prerequisites: MKT 550 and (MKT 605 or MKT 614)

Restrictions: Enrollment is limited to Graduate level students.

MKT 650 Marketing Study Tour (3 credits)

A specially designed international tour to varying countries which offers students a unique opportunity to study international business and develop a better understanding of the global marketing environment-its dimensions, participants, trends and opportunities. Students will also experience the heritage, ambiance, and excitement of the world's great countries and cities.

Prerequisites: MKT 550

Restrictions: Enrollment is limited to Graduate level students.

MKT 770 Marketing Special Topics (3 credits)

The topics course covers subjects of current interest in the field of Marketing. Specific topics will be announced in the course schedule. The prerequisites and topics selected are at the discretion of the instructor.

Prerequisites: MKT 550 or HSB Foundation with a score of MK550

Restrictions: Enrollment is limited to Graduate level students.

MKT 772 ST: Advanced Research & Stats (3 credits)

This course covers basic multivariate data analysis with an emphasis on applications for business, marketing research and consumer behavior. Emphasis on applications of multivariate analysis from a conceptual viewpoint as well as research design.

Prerequisites: MKT 550 or MKT 560 and (MKT 614 or MKT 605)

MKT 790 Marketing Capstone (3 credits)

This capstone course helps prepare students to execute the development, application and assessment of Marketing strategy from a customer-focused, market-sensing and competitor-driven perspective. Supported by Market Research and Analytics, students will create a strategic Marketing plan that includes branding, product and market development, promotion, channels of distribution, ethics and other contemporary issues. Completion of all core MKT courses and four or more 600 and above level elective courses required.

Prerequisites: (MKT 606 and MKT 550 and MKT 605 and MKT 609)

MKT 792 Marketing Internship (1,3 credits)**MKT 795 Seminar in International Mktg (3 credits)**

This capstone course builds upon the lessons and skills acquired in previous international marketing courses to prepare students to actively lead and/or support decision-making processes for international marketing operations. Bringing together marketing strategy and policy, the course reviews topics such as branding, product and market development, channels of distribution, intellectual property, ethics, and other contemporary issues.

Prerequisites: MKT 550 or HSB Foundation with a score of MK550

Restrictions: Enrollment limited to students in the MSMKT program.

Enrollment is limited to Graduate level students.

Marketing Pharmaceutical Ex (MPE)

MPE 530 Marketing Foundation (2 credits)

The course sets the stage for future study by taking students through the marketing fundamentals beginning with strategy, target marketing and opportunity analysis, then developing product, price, distribution and promotion, and an introduction to customer driven marketing strategy, all in a managed care context.

Restrictions: Enrollment is limited to students with a major in Food Marketing or Pharm. Healthcare Business. Enrollment is limited to Graduate level students. Enrollment limited to students in a Master of Bus Administration degree.

MPE 610 Drug, Device Regulations (2 credits)

With the plethora of new communications vehicles, including direct-to-consumer advertising and the Internet, the goal of achieving marketing objectives and remaining in adherence with FDA regulations/guidelines has become increasingly difficult. This course will provide a working knowledge of the federal regulation of prescription drug promotion and associated marketing practices and will provide insight into drug promotion issues currently of interest to FDA and the pharmaceutical industry. The course will also consider the impact of products liability and anti-kickback concerns on developing marketing programs for prescription drugs.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 620 Supply Chain Management (2 credits)

This course presents the key issues and concepts needed by the pharmaceutical industry to develop an effective way to design, build, manage and evaluate the performance of strategic partnerships among channel partners such as suppliers, wholesalers, marketing research firms, pharmacies, integrated health systems, managed care organizations, etc. Based on relationship marketing concepts, the key subjects include benchmarking channel relationships, selection criteria for identifying successful partners, new channel design, and role of technology in implementing channel partnerships, contract negotiations among others. Key subjects include: information systems and technology; benchmarking your distribution system; implementing quick response programs such as EDI, Flow-through and Partnerships.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 625 Creating Effective R & D (2 credits)

Traditionally the scientific and commercialization activities within pharmaceutical companies have existed as separate entities with varying relationships related to information sharing and integration of business strategy into the drug development and approval process. Enhanced linkage/collaboration between these two functions can lead to a competitive advantage as it relates to attainment of the overall corporate research and commercial strategic objectives necessary for improving the business, marketing planning and commercialization.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 630 Marketing Research (2 credits)

In this course you will be taught the fundamental steps involved in the pharmaceutical marketing research process. The course will expose you to the pharmaceutical marketing research process using both primary and secondary data sources. Special attention will be provided to syndicate data sources from IMS and Scott Levin. The course will also cover topics like research design, data analysis and interpretation of results. This course can be beneficial to beginners in marketing research and to the users of marketing research information for decision-making.

Prerequisites: DSS 592

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 640 Pharmacoeconomics (2 credits)

This course reviews the principal elements and concepts in economics, history and development of health economics, and the applied uses of the discipline of economics made possible since the quantification of studies has been developed and perfected. These introductory sections are presented by lecture and discussion group. In addition, the need for uses of and value of health economics studies is reviewed and pharmaceutical-related examples are presented.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 650 Competitive Analysis (2 credits)

Examination of various strategies and strategic frameworks are examined with a discussion of the advantages and shortcomings of each. The explicit purpose of the course lies in developing a strategic perspective to solving marketing problems rather than a tactical approach.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 660 Sales Management (2 credits)

This course covers the concepts and applies the theories associated with managing a sales force. Specifically, the course is designed to help students learn sales management concepts and how to apply them to solve business problems in the pharmaceutical industry. We will focus on the activities of first-line field sales managers. To function effectively as managers, students must know how salespeople perform their jobs. With this in mind, we will cover personal selling, account relationships, territory management, and sales ethics with special emphasis on current issues of managing strategic account relationships, team development, and diversity in the work force, sales force automation and ethical issues.

Prerequisites: MGT 520 or HSB Foundation with a score of MG520

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 670 Pricing (2 credits)

Pricing is one of the most important marketing mix decisions that a firm makes, and it affects all other elements of the marketing mix. This course examines the theories and strategies that firms use to set and change prices. Firms are required to anticipate and respond to changes in competitors' activities and in areas of the external environment, such as, political, social, regulatory and technological. Some of the issues that will be covered include: Why is pricing often ineffective? How should a firm's costs affect its pricing decisions? What is customer price sensitivity?

How do you anticipate and influence the price-setting behavior of competitors? How does pricing change over the product life cycle? How does pricing relate to market segmentation? How do you strive to price strategically consistent with the other elements of the marketing mix?

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 700 Strategies for Managed Markets (2 credits)

The objectives of this course are to understand the dynamics and trends of the evolving healthcare system, to review managed care's impact on pharmaceutical marketing and to develop strategies for success with the managed care customer. Students will learn to assess managed healthcare market segments, to determine the needs of this customer and to identify the potential business opportunities for their company's brands.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 710 Product Management (2 credits)

This course will (1) focus on product decisions of the firm, requiring an occasional shift in focus from that of corporate management to that of operating managers of new product activities or established brands; (2) recognize the importance of marketing research as input to product decisions; (3) take a managerial orientation; (4) recognize the need to tailor product policy approaches to the characteristics of the decision-maker and the firm.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 711 Pharmaceutical Strategy (2 credits)

The course provides an understanding of the way strategy is crafted for pharmaceutical, medical device and diagnostic companies to coincide with the needs of other stakeholders in healthcare delivery. Coding, coverage and reimbursement strategies to support market access are put in the context of clinical product development timelines with an emphasis to have coverage determinations and specific product coding coincide with product approvals to support successful product launches.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 715 New Product Launch (2 credits)**MPE 720 Global Corporate Strategy (2 credits)**

This course focuses on the management of multinational corporations (MNCs) with particular emphasis on Pharmaceutical and/or medical device companies operating across different nations. The international environment implies greater opportunities as MNCs have access to a wider variety of markets and resources but this environment also implies greater organizational and managerial challenges. The aim of this course is to investigate whether these challenges are worth it and how they can contribute to a company's "double" bottom line.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 770 Independent Study (2 credits)

This course is designed to accommodate those students who have an interest in a research-worthy topic that can be examined on an independent research basis. The student will work closely with a professor on a research area that will require the identification of a topic, a literature review, appropriate methodology, and analysis.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 780 Future Issues (2 credits)**MPE 781 Health Policy (2 credits)**

This course is an introduction to various components of the U.S. health care system. It examines the multiple facets of the healthcare system including key stakeholders (Payers, Providers, and Patients), private and public financing mechanisms for medical care, and the effects of both market competition and government regulation. The main objective of the course is for students to learn to be able to critically examine how to assess policy and coverage decisions and the tradeoffs (cost, quality, access) associated with various health care decisions or treatment alternatives. Another focus of the course is for students to gain knowledge of the U.S. health care system relevant to the pharmaceutical industry, and the process for bridging these new medical and drug technologies into the private and public sector. A major example will include a debate related to the Medicare Modernization Act. As such, we will examine how collective interests shape the design of health policies.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

MPE 795 Capstone (2 credits)

This course is a simulation experience that drives home the four P's of marketing. The simulation is played from the point of view of a marketing manager in the pharmaceutical market. Over the course of the simulated years, the participant will have the opportunity to reformulate leading products, introduce line extensions, and enter new market segments.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business. Enrollment is limited to Graduate level students.

Mathematics (MAT)

MAT 101 Mathematical Explorations I (3 credits)

For humanities majors, the course covers set theory and a number of its applications, topics from logic including propositions, truth tables, number systems, and elementary geometry. Other topics may be covered at instructor's discretion.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MAT 102 Mathematical Explorations II (3 credits)

This is a second course for humanities majors. The course covers elementary probability, including independent and dependent events, conditional probability, binomial probability, and certain applications in a wide variety of situations. MAT 101 is not required for MAT 102.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MAT 103 Quantitative Appl in Business (3 credits)

Topics in finite mathematics: matrices, solving linear systems, optimization using linear programming, simplex algorithm. Pre-calculus topics: linear, quadratic, exponential, and logarithmic functions and their graphs, mathematical models, and certain applications.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

MAT 107 Contemporary Topics in Math (3 credits)

This course is designed to enable the student to recognize, understand and apply various mathematical concepts and principles that are the foundation for many things that we take for granted in our everyday lives, such as Voting, Traveling, Finances, Government and the wonders of Nature.

Attributes: Undergraduate

MAT 110 Fundamental Math for Educators (3 credits)

This course is designed to ensure that pre-service educators have a deep understanding of the essential mathematical core standards and competencies required to enter the teaching profession. Students will develop basic mathematical skills, will be able to employ problem solving strategies, will be able to communicate mathematical concepts, and will be able to construct and evaluate mathematical arguments.

Attributes: Undergraduate

MAT 111 The Mathematics of Patterns (3 credits)

This course focuses on mathematics as the science of identifying, understanding and describing patterns. Patterns that occur in nature and empirical studies can be identified and modeled using fundamental ideas such as functions (mathematical rules), probability (long term behavior), exploratory data analysis (statistics) and geometry. Through a series of guided investigations students will master the reasoning used to identify the patterns, the mathematical model used to describe the pattern and the computational techniques necessary to further explore and apply the pattern in new situations. This course is designed specifically for students intending to become elementary or middle school teachers.

Attributes: Undergraduate

MAT 118 Introduction to Statistics (3 credits)

Introduction to statistics and probability: measures of central tendency, variability, correlation, regression, chance and randomness, random variables, probability distributions, law of large numbers, central limit theorem. Students will be required to use a computer software package to solve various statistical problems. Designed for Social Science majors. Students may NOT receive credit for this course and for MAT 128.

Attributes: Undergraduate

MAT 120 The Mathematics of Modeling (3 credits)

This course focuses on functions, graphs, and algebraic techniques.

Topics include an introduction to functions and graphs, linear, exponential, logarithmic, and trigonometric functions. Functions are used for solving multidisciplinary application problems.

Prerequisites: Math Placement with a score of MA120

Attributes: Undergraduate

MAT 121 Math Modeling for MS Teachers (3 credits)

Designed for students who will become middle school teachers, this course will explore mathematical topics in the context of building of building models to solve problems. The emphasis will be on using multiple representations to develop mathematical models that describe some phenomena and learning the mathematical techniques necessary for working with the model in order to effectively answer questions about the situation being modeled. Students will interpret results given the context of the model and develop their communication skills for explaining mathematics.

MAT 122 Trigonometry (3 credits)

Topics include Angle Measurements; Triangles; Trigonometric and Inverse Trigonometric Functions and Graphs; Solving Trigonometric Equations; Essential Trigonometric Identities; Laws of Sine, Cosine, and Tangent; Vectors; Parametric Equations; Polar Coordinates. This course will emphasize application and modeling problems related to the topics.

MAT 123 Differential Calculus (3 credits)

Review of mathematical models using polynomial, rational, exponential and logarithmic functions with business applications. Introduction to differential calculus including limits, rates of change and the derivative, optimization using the derivative. Students may NOT receive credit for both this course and for any of the following courses: MAT 155 or MAT 161.

Attributes: Undergraduate

MAT 128 Applied Statistics (3 credits)

Introduction to statistics and probability: design of a study, measures of central tendency, variability, correlation, regression; probability, random variables, probability distributions, central limit theorem; inferential statistics, hypothesis testing, etc. Students will be required to use a computer software package to solve various statistical problems. Data analysis projects will be assigned. Students may NOT receive credit for both this course and for MAT 118.

Attributes: Undergraduate

MAT 130 Whole Truth about Whole Number (3 credits)

This course involves studying properties of natural numbers and integers. Topics include divisibility, prime numbers, the Euclidean Algorithm and cryptography for putting messages into code.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 131 Linear Methods (3 credits)

This course studies basic properties and applications of matrices and vectors. Then, matrices and vectors will be used in a variety of applications, including vector geometry, elementary graph theory, solving word problems involving systems of linear equations, least-squares functions, and geometric transformations. The course also covers some topics in basic logic, including logical operators, the conditional, truth tables, quantifiers, and syllogisms. Students in this course will be required to have a graphing calculator that can perform standard matrix operations.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 132 Math of Games & Politics (3 credits)

This course will focus on both computational and theoretical aspects of probability theory, game theory and social choice theory. Topics include expected value, counting methods and conditional probability, dominant strategies, combinatorial games, Nash equilibria, social dilemmas and, for zero sum games, saddle points and the Minimax theorem. Social choice theory topics include voting methods, weighted voting, fairness criteria and impossibility theorems.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 134 Math of Uncertainty: Rules/Prob (3 credits)

This course provides students with an in-depth introduction to probability and its many real-life applications. Students will study counting techniques including permutations, combinations, binomial coefficients, occupancy problems and runs within random orderings and will prove combinatorial identities. Students will study topics in probability including sample spaces, DeMorgan's Laws, conditional probability, independent events, Bayes Theorem, random variables and expected value. Students will examine many of the classical problems in probability theory including Prisoner's Dilemma, Gambler's Ruin and the Birthday Problem as well as lotteries, card games and random walks.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 135 Sounding Number: Music & Math (3 credits)

Music has many connections to mathematics. The ancient Greeks discovered that chords with pleasing sounds are related to simple ratios of integers. Other connections include equations describing the sounds of musical instruments, the mathematics of digital recording, the use of symmetry in composition, and the systematic exploration of patterns by African and Indian drummers. This course introduces basic concepts in trigonometry, set and group theory, and combinatorics and investigates their applications in the analysis, recording, and composition of music. Along the way, we consider the role of creativity in mathematics and the ways in which mathematics has inspired musicians. The course will involve hands-on laboratory work in audio engineering and music composition.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 138 Symmetry (3 credits)

"Symmetry" is a ubiquitous concept in modern mathematics and science. Certain shapes and images seem more symmetric than others, yet is not immediately obvious how to best measure and understand an object's symmetry. In fact, the quest to more precisely quantify the concept of symmetry has been a driving force in science and mathematics, and will form the central theme of this course.

Prerequisites: Math Placement with a score of BEAUT or Math Placement with a score of MA155 or Math Placement with a score of MA161 or Math Placement with a score of MA162

Attributes: Math Beauty, Undergraduate

MAT 150 First Year Seminar (3 credits)

This course investigates several beautiful topics within mathematics. Depending on the instructor, these topics might include: prime numbers, the different sizes of infinity, the Platonic solids, the fourth dimension, fractals, chaos, probability, and the math of voting.

Attributes: First-Year Seminar, Undergraduate

MAT 155 Fundamentals of Calculus (3 credits)

This course covers differential calculus and the beginning of integral calculus. Topics include limits, continuity, differentiation, applications of derivatives, indefinite and definite integrals, and the fundamental theorem of calculus.

Prerequisites: MAT 120 or Math Placement with a score of MA162 or Math Placement with a score of MA161 or Math Placement with a score of MA155 or MA 107

Restrictions: Students cannot enroll who have a major in Actuarial Science, Chemistry, Mathematics or Physics.

Attributes: Math Beauty, Undergraduate

MAT 161 Calculus I (4 credits)

Limits; slopes, rates of change and the derivative; techniques of differentiation; implicit differentiation; derivatives of transcendental functions; related rates; linear approximation; L'Hospital's Rule; the Mean Value Theorem; applications of differentiation (including curve sketching and optimization); introduction to integration; the Fundamental Theorem of Calculus. Students may NOT receive credit for both this course and for any of the following courses: MAT 123 or MAT 155.

Prerequisites: MAT 120 or Math Placement with a score of MA162 or Math Placement with a score of MA161

Attributes: Math Beauty, Undergraduate

MAT 162 Calculus II (4 credits)

Areas between curves, volumes, average value of a function, integration by parts, improper integrals, approximate integration, arc length, area of a surface of revolution, differential equations and applications, parametric curves, polar coordinates, and Taylor polynomials.

Prerequisites: MAT 161 or MAT 155 or Math Placement with a score of MA162 or MA 110 or MA 122

Attributes: Math Beauty, Undergraduate

MAT 170 Special Topics in Mathematics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 210 Theory of Numbers (3 credits)

Division Algorithm; Mathematical induction; Euclidean algorithm; fundamental theorem of arithmetic; linear Diophantine equations; modular arithmetic; number theoretic functions; prime numbers; Fermat's last theorem; quadratic residues, primitive roots, Chinese Remainder theorem. This course fulfills the GEP Mathematics requirement but is at a slightly more advanced level than courses in the range of MAT 130 - MAT 139.

Attributes: Math Beauty, Undergraduate

MAT 213 Calculus III (4 credits)

Study of vectors, curves, functions of several variables, partial derivatives, tangent planes, maximum and minimum values, Lagrange multipliers, double integrals, triple integrals, spherical and cylindrical coordinates, vector fields, line integrals, sequences, series, convergence tests, power series, and Taylor series.

Prerequisites: MAT 162 or MA 221

Attributes: Math Beauty, Undergraduate

MAT 226 Introduction to Linear Algebra (3 credits)

Linear systems, matrices, linear transformations, determinants, vector spaces, dimension, orthogonality, eigenvalues, eigenvectors, and diagonalization.

Prerequisites: MAT 155 or MAT 161

Attributes: Math Beauty, Undergraduate

MAT 232 Chaos, Fractals & Dynamic Syst (3 credits)

Introduction to dynamical systems: one dimensional dynamics; attracting, repelling, periodic and chaotic orbits; bifurcation; dynamics in the complex plane, Julia sets, the Mandelbrot set; two dimensional dynamics. Introduction to fractals: self-similarity, iterated function systems, fractal dimension.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 233 History of Mathematics (3 credits)

Development of mathematical ideas over 2500 years, beginning with Greek geometry and including Euclid, Archimedes, Newton, Euler, Gauss, and Poincare.

Prerequisites: MAT 161 or MAT 155

Attributes: Math Beauty, Undergraduate

MAT 238 Differential Equations (3 credits)

Solution of ordinary differential equations using analytic, numerical, and qualitative techniques. Modeling via differential equations, systems of differential equations. Laplace transforms; discrete dynamical systems. Use of a computer software package is required.

Prerequisites: MAT 162 or MA 221

Attributes: Math Beauty, Undergraduate

MAT 250 Fundamentals of Mathematics (3 credits)

The course consists of the following elements. Fundamentals of Logic: propositional logic, predicate logic, rules of inference and proofs; Fundamentals of Algebra: sets, functions, and relations; Fundamentals of Counting and Set Theory: natural numbers, mathematical induction, cardinality of sets, infinity; Fundamentals of Analysis: building number systems, basics of epsilon-delta calculus, continuity, convergence, and uniform convergence.

Prerequisites: MAT 161 or MAT 155

Attributes: Math Beauty, Undergraduate

MAT 270 Special Topics in Mathematics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 290 Career Prep Seminar (1 credit)

What will YOU do with your degree in Mathematics, Computer Science, Information Technology, or Actuarial Science? Learn how to explore the variety of professional options open to you based on your major and on your unique personality and individual traits. This professional development seminar will help you build practical skills through a series of hands on assignments, a detailed self-assessment, goal-planning for a successful future, and multiple points of engagement with alumni. This one-credit course meets once a week to provide instruction and support in topics including internship search and application, resume/cover letter prep, post-grad options, professional communication and networking/ interviewing . Is an internship right for you? Do you know the best way to search for one? Why do I need to network - how will that help me? Register now to get the answers to these and many other questions and invest in your future!

Attributes: Undergraduate

MAT 311 Numerical Analysis (3 credits)

An introduction to numerical methods for solving a variety of problems. Included will be root finding, numerical integration and differentiation, polynomial approximation, ordinary differential equations, discussion of convergence issues, error analysis and machine arithmetic, introduction to Python programming.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 313 Mathematical Optimization (3 credits)

The course covers basic ideas in optimization beginning with linear programming, the simplex method and duality and finishes with non-linear optimization and algorithms and conditions leading to a solution of non-linear problems.

Prerequisites: MAT 226

Attributes: Math Beauty, Undergraduate

MAT 316 Operations Research (3 credits)

The course will cover some of the basic models and techniques used in operations research. Topics include: linear programming, the simplex method, duality, network problems, transportation problems, and time permitting, game theory.

Prerequisites: MAT 226

Attributes: Math Beauty, Undergraduate

MAT 321 Probability (3 credits)

The first part of a two-semester sequence, this course includes discrete probability and counting methods, conditional probability and independence, Bayes' Theorem, discrete and continuous random variables, expectation, variance, moment-generating functions, special probability distributions, joint distributions, marginal and conditional distributions, independent random variables, covariance and correlation, conditional expectations, and distributions of functions of random variables.

Prerequisites: MAT 213 (may be taken concurrently)

Attributes: Math Beauty, Undergraduate

MAT 322 Mathematical Statistics (3 credits)

Random samples, sample size, statistics and sampling distributions, the Central Limit Theorem, methods of point estimation including moment matching, percentile matching, maximum likelihood estimation, main properties of point estimators, asymptotic properties of MLE, evaluation of goodness of a point estimator, Rao-Blackwell theorem, UMVUE, interval estimation, hypothesis testing, power of tests, the Neyman-Pearson lemma, regression analysis, analysis of variance, categorical data analysis (Chi-square test). Data analysis projects will be assigned.

Prerequisites: MAT 321

Attributes: Undergraduate

MAT 328 Design of Experiments (3 credits)

In this course we discuss proper design and analysis of experiments, including the role of randomization, selecting sample sizes, and allocating treatments to experimental units. Designs covered include completely randomized designs, designs with factorial treatment structure, random and mixed effects designs, complete and incomplete blocked designs, Latin squares, confounding, split plots, fractional factorials, and response surfaces. Examples and exercises are taken from a broad range of subject areas. Appropriate computer programs are used for analysis of real data sets.

Prerequisites: MAT 118 or MAT 128 or MAT 213 or DSS 210

Attributes: Undergraduate

MAT 332 Geometry (3 credits)

An axiomatic treatment of the foundations of geometry. Axioms of incidence, order, congruence, Bolyai- Lobachevsky parallel axiom, angle of parallelism. A rigorous development of selected topics in non-Euclidean geometry.

Prerequisites: MAT 155 or MAT 161

Attributes: Math Beauty, Undergraduate

MAT 334 Combinatorics & Graph Theory (3 credits)

Introduction to combinatorics and graph theory and to methods by which each theory is applied to the other. Topics include basic counting formulas; generating functions; the principle of inclusion-exclusion; counting labeled trees (Cayley's Theorem, Kirchhoff's Theorem, Prüfer's Theorem); directed Euler circuits; Pólya-deBruijn theory; Möbius inversion.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 336 Logic & Foundations (3 credits)

Cantor's set theory and the crisis in foundations (Cantor's paradox, Russell's paradox); the intuitionist challenge and the formalist response; formal logic and meta mathematics (Propositional Calculus, Predicate Calculus, formal number theory); Goedel's incompleteness theorems of 1931.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 340 Math Methods Phys Sci (3 credits)

The course condenses the material of several full-semester mathematics courses, such as complex analysis, Fourier analysis, and group theory, with the focus on mathematical methods used in the physical and related sciences.

Prerequisites: MAT 213

Attributes: Math Beauty, Undergraduate

MAT 370 Special Topics in Mathematics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 403 Abstract Algebra (3 credits)

Group theory, including finite groups, subgroups, cyclic groups, permutation groups, group isomorphisms, and cosets; introduction to rings and fields, including integral domains, polynomial rings, unique factorization domains and Euclidean domains.

Prerequisites: MAT 250

Attributes: Undergraduate

MAT 404 Abstract Algebra II (3 credits)

A more in-depth treatment of rings and fields including integral domains, fields, field extensions, homomorphisms, and the insolubility of the quintic by radicals. Galois theory.

Prerequisites: MAT 403

Attributes: Math Beauty, Undergraduate

MAT 409 Real Analysis (3 credits)

Elementary topology of Euclidean spaces, including open, closed and compact sets; convergence of sequences and series; least upper bound axiom and its equivalents; sequences of functions, pointwise and uniform convergence, continuity, differentiation and integration of sequences.

Prerequisites: MAT 250

Attributes: Math Beauty, Undergraduate

MAT 410 Complex Analysis (3 credits)

Analytic functions; complex integration; singularities.

Prerequisites: MAT 213

Attributes: Math Beauty, Undergraduate

MAT 415 Differential Geometry (3 credits)

The local and global theory of curves and surfaces in Euclidean space. Topics include Frenet frames, orientation, geodesics, the second fundamental form, and Gauss curvature.

Prerequisites: MAT 213 and MAT 226

Attributes: Math Beauty, Undergraduate

MAT 418 Topology of Point Sets (3 credits)

Open and closed sets, closure and interior, continuity, metric spaces, connectivity, compactness; the Heine-Borel and Bolzano-Weierstrass Theorems. The Classification of Surfaces may also be covered.

Prerequisites: MAT 409

Attributes: Undergraduate

MAT 420 Convex Analysis (3 credits)

This course covers the algebraic properties of affine sets, convex sets, cones, affine and convex functions, quasi-convex and pseudo-convex functions, topological properties of convex sets and functions, separation theorems, duality correspondences, Caratheodory's Theorem, extreme points and faces of convex sets, polyhedral convex sets and functions, systems of linear inequalities, and related topics.

Prerequisites: MAT 226 and MAT 409

Attributes: Math Beauty, Undergraduate

MAT 423 Applied Statistical Methods (3 credits)

Statistical models, design and analysis of experiments, regression, Monte Carlo methods, and other advanced topics in statistics.

Prerequisites: MAT 162

Attributes: Math Beauty, Undergraduate

MAT 424 Regression and Time Series (3 credits)

The first part of the course covers Generalized Linear Models (GLMs). Topics include exponential family, important link functions, estimations (maximum likelihood estimation, generalized moment matching), diagnostic tests for model validations (graphical methods, chi-square statistics, t and F tests, AIC and BIC, likelihood ratio test), applications of GLMs on real data, prediction and confidence intervals. It also includes penalized regression (ridge and lasso regression, k-nearest neighbors algorithm). The second part of the course covers Time Series Analysis. Topics include an introduction to discrete stochastic processes, random walks, stationary processes, autocorrelation functions, and partial autocorrelation functions, various time series models (exponential smoothing, autoregressive (AR) model, moving average (MA) model, ARMA model), autoregressive conditional heteroskedastic (ARCH) model, generalized ARCH (GARCH) model, variants of GARCH, predictions and their confidence intervals using time series models.

Prerequisites: MAT 322

Attributes: Math Beauty, Undergraduate

MAT 470 Topics in Mathematics (1-3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

MAT 471 Independent Study (3 credits)**MAT 472 Independent Study (3 credits)****MAT 481 Data Science Capstone (3 credits)**

The capstone course provides students with a comprehensive learning experience that integrates ideas and experiences gained from the three core disciplines of mathematics, statistics and computer science, and applies them to their chosen application domain. Working with a family advisor, students will engage in the process of solving a real-world data science problem.

MAT 491 Mathematics Internship I (3 credits)

The course goals are: to gain first-hand experience of the daily activities of professionals in mathematics and related fields, to verify an interest in a particular area of mathematics, to develop and hone skills required for mathematical professions, to establish contacts outside the academic community who will facilitate a career in mathematics. An internship journal and an academic paper are also required.

MAT 492 Mathematics Internship II (3 credits)

The course goals are: to gain first-hand experience of the daily activities of professionals in mathematics and related fields, to verify an interest in a particular area of mathematics, to develop and hone skills required for mathematical professions, to establish contacts outside the academic community who will facilitate a career in mathematics. An internship journal and an academic paper are also required.

MAT 493 Independent Research (3 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research (6 credits) must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register. Honors Students must complete this sequence.

Attributes: Math Beauty, Undergraduate

MAT 494 Independent Research (3 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research (6 credits) must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register. Honors Students must complete this sequence.

Attributes: Math Beauty, Undergraduate

MAT 704 Statistics for Research (3 credits)

This class covers statistical inference on two samples, design of experiments, repeated measures, analysis of covariance, multiple regression, categorical data analysis, and factor analysis.

Medical Health Informatics (MHI)

MHI 301 Health Info Management Systems (3 credits)

A critical skill for health professionals is to be able to gather, organize, analyze and safely store important health information. This course provides an overview of healthcare information management and applications and technologies within healthcare organizations like the electronic health record (EHR).

Attributes: Undergraduate

MHI 550 Research Methods (3 credits)

Explores the history of health research, basic principles and types of research in order that health professionals will be able to critically evaluate research in their respective fields. This course is a combination of lecture, discussion and experiential learning designed to instill a critical understanding of the research process for application to clinical practice.

Restrictions: Enrollment is limited to Graduate level students.

MHI 560 Health Informatics (3 credits)

A survey of the current use of information technology in the clinical and management practice for the healthcare delivery enterprise. Students will become familiar with the basic terminology, strategies, and utilization of IT as a key component in the delivery of patient care in a simulated environment.

Restrictions: Enrollment is limited to Graduate level students.

MHI 561 Digital and Connected Health (3 credits)

A review of how patient centric technologies play a role in health and wellness. Students will become familiar with emerging trends in remote patient monitoring, telehealth, mobile applications (apps) and other novel technologies.

Restrictions: Enrollment is limited to Graduate level students.

MHI 562 Database for Health Care (3 credits)

This course provides hands on use of database management tools and structured query language (SQL). Specific applications will be explored with an emphasis placed on the practice of organizing, identifying, and uniting disparate sources of health care data.

Prerequisites: MHI 560 or HAD 560

Restrictions: Enrollment is limited to Graduate level students.

MHI 563 Data Analysis for Health Care (3 credits)

Health care systems increasingly create and capture data necessitating a focus on data analysis for quality improvement. This course builds on data organization skills with an emphasis on analyzing process, outcomes, and relations captured in the health record and across other health related data elements. Students will use data visualization tools paired with quantitative data driven techniques which aid in addressing challenges associated with the Triple Aim in healthcare.

Prerequisites: (MHI 560 or HAD 560) and (MHI 562 (may be taken concurrently) or HAD 562 or DSS 625 (may be taken concurrently) or DSS 630 (may be taken concurrently))

Restrictions: Enrollment is limited to Graduate level students.

MHI 564 Privacy&Security: Health Care (3 credits)

Regulatory and ethical condensations require healthcare practitioners to protect patient information. This course presents both the regulatory framework, technical requirements, and administrative responsibilities to adhere to established laws governing the collection and use of protected health information (PHI).

Restrictions: Enrollment is limited to Graduate level students.

MHI 565 Health Data Standards (3 credits)

Health information requires an understanding of various data standards to allow for the structure and exchange of health data. This course explores the approach and need for standards in the areas of eXtensible Markup Language (XML), laboratory information systems, radiology information systems, and electronic health records. There is a strong focus on the development and implementation of widely recognized clinical documentation formats using HL7 and FHIR based standards.

Prerequisites: MHI 560 or HAD 560

Restrictions: Enrollment is limited to Graduate level students.

MHI 670 Special Topics in MHI (3 credits)

Content varies for ongoing developments in the field of health informatics. The instructor will provide the course description.

Prerequisites: MHI 560 or DSS 610

Restrictions: Enrollment is limited to Graduate level students.

MHI 700 Health Informatics Capstone (3 credits)

The capstone course is the final class for students with an interest in the field of health informatics. Students will utilize skills and competencies gained across the curriculum to design strategies and approaches which help to leverage technology to deliver healthcare. Students will evaluate systems and work in coordinated groups based on the persona of senior healthcare executives

Prerequisites: (MHI 560 or HAD 560) and (MHI 561 or HAD 561) and (MHI 550 or HSV 550) and (MHI 562 or DSS 625 or DSS 630 or CSC 621 or MHI 564 or HAD 564)

Medical Lab Science (MLS)

MLS 102 MLS Orientation II (1 credit)**MLS 201 Med Lab Science Seminar (1 credit)**

Emphasis is on reading and discussion of current journal articles in medical laboratory science and student preparation of a research paper. Review of application for internship positions, including resume preparation and interviewing skills.

Prerequisites: (MLS 102 or MT 102)

Attributes: Undergraduate

Modern and Classical Cultures (MCC)

MCC 150 First Year Seminar (3 credits)

The focus of this first year seminar varies by section. Please refer to the course text to determine the focus of a particular section.

Attributes: First-Year Seminar, Latin American Studies Course, Undergraduate

MCC 360 Space & Place in Col Latin Am (3 credits)

The overarching goal of this course is that students deepen their understanding of Spanish American cultures - and cultures in general - by relating physical space, places and their representations to the diverse human values, experiences and worldviews that shaped them during the colonial period. Examples include sacred and mythical places, places of labor such as silver mines and sugar mills, urban design and plazas, Jesuit reductions (missions), as well as the representation of place through toponyms and maps. We consider multiple perspectives (i.e. Amerindian, Spanish and Afro-American) on the same space or place, and we engage in reflective discussion about the diverse value systems, beliefs, social dynamics and physical conditions that shaped such places over time. These analyses lead to discussions about how colonial legacies and colonial places have been experienced in recent decades through visual art, film and especially tourism. In these discussions we contemplate how we, personally, want to see the colonial past and what this helps us to understand about ourselves. This course is taught in English and all required materials are available in English or with English sub-titles. This course counts toward the minor in Latin American Studies. No pre-requisite though 'Forging the Modern World' and ENG 102 are recommended.

Restrictions: Enrollment limited to students with the Honors Program Student attribute.

Attributes: GEP Art/Literature, Honors Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

MCC 370 Special Topics (3 credits)

The focus of this course varies by section. Please refer to the course text to determine the focus of a particular section.

Attributes: Undergraduate

Modern Languages (MLA)

MLA 103 Beginning Irish (Gaelic) I (4 credits)

Groundwork in Irish (Gaelic), including oral proficiency, aural comprehension, and reading knowledge; for students with no prior knowledge of Irish. Supplementary language laboratory work and oral drills.

Attributes: Irish Studies Course, Undergraduate

MLA 104 Beginning Irish (Gaelic) II (4 credits)

Groundwork in Irish (Gaelic), including oral proficiency, aural comprehension and reading knowledge; for students with one semester of Irish study completed. Supplementary language laboratory work and oral drills. Students should have completed MLA 103 or permission of the instructor.

Prerequisites: MLA 103

Attributes: Irish Studies Course, Undergraduate

Music, Theatre & Film (MTF)

MTF 141 Guitar Class for Beginners (1 credit)

This class is intended as an introduction to acoustic and classical guitar techniques employed in contemporary guitar styles. The focus of this course will involve learning basic open chords, learning to read and play music on the guitar, bar chords, and basic fingerstyle technique. The course will also cover the fundamental music theory necessary for playing songs and basic fret board knowledge.

MTF 142 History of Rock and Pop (3 credits)

This course examines the history of popular music in the English-speaking world from the mid twentieth century to the present day. Genres examined include swing, doo-wop, rock and roll, soul, funk, disco, heavy metal, and punk.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 143 Music in Film (3 credits)

This course focuses on the ways music functions in narrative film. In the first weeks, students will develop analytical skills to describe the ways music can enhance, comment on, undermine, and direct a viewer's interpretation. The remainder of the semester will follow a generally chronological structure, focusing on influential composers and directors, theoretical writings, and the wide variety of twentieth-century and twenty-first musical styles used in soundtracks. Class discussions and writing assignments will guide students in the study of the interlocking histories of music, film, politics, and culture. This course is designed for all students. Previous musical training is not required.

Attributes: GEP Art/Literature, Undergraduate

MTF 144 Introduction to Music Therapy (3 credits)

This course is an introduction to the field of music therapy. Students will study the history, theory, practice, and applications of music therapy for a variety of clinical populations. They will learn about ongoing research in the field, acquiring a broad understanding of the current state of practice and research. The course is open to all students who are interested in learning more about the field of music therapy.

Attributes: GEP Art/Literature, Undergraduate

MTF 150 First Year Seminar (3 credits)

The First-Year Seminar is designed to introduce students to learning in a college context. First-Year Seminars focus in depth on a question or topic of disciplinary or interdisciplinary interest. By means of its specific focus, the seminar will explore the thinking, research, and writing practices in a particular field. Topics vary according to individual instructors.

Attributes: First-Year Seminar, Undergraduate

MTF 151 Music Fundamentals (3 credits)

A study of elements of music including notation, rhythm, scales, intervals, melody, harmony, and form. To facilitate reading skills, class exercises in ear training are included. Previous musical training unnecessary.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 152 Music Appreciation (3 credits)

This course is a survey of music from the Middle Ages to the Twentieth Century. Emphasis is placed on the elements of music, styles of major historical periods, and the lives and works of representative composers.

Attributes: Undergraduate

MTF 153 Vocal Performance (1 credit)

In this course you will learn to professionally train your singing voice through breath management, phrasing, diction, performance practice, and accurate musicianship. Students will receive one individual sixty minute lesson each week. This course may be repeated for credit. Students should be able to read music. An audition and permission of the instructor is required.

MTF 154 Piano Performance (1 credit)

Students will receive one individual piano lesson each week, between 30 and 60 minutes in length. This course may be repeated for credit. Students must be able to read music. An audition and permission of the instructor are required.

Attributes: Undergraduate

MTF 155 Instrumental Performance (1 credit)

Students will receive one individual instrumental lesson each week, between 30 and 60 minutes in length. This course may be repeated for credit. Students must be able to read music. An audition and permission of the instructor are required.

Attributes: Undergraduate

MTF 156 Intro to World Music (3 credits)

This course introduces students to the traditional music of cultures around the world, including music of India, Indonesia, Latin America, Africa, and the Middle East. Students will learn to listen critically and to articulate their observations about the music of numerous regions and societies.

Attributes: Diversity Course, GEP Art/Literature, Irish Studies Course, Undergraduate

MTF 157 Western Music Hist: MidAge-1750 (3 credits)

This course considers the history of Western music from the Middle Ages to the end of the Baroque Period, focusing on the relationship between historical, social, and cultural currents and the development of music. Students will acquire a framework for thinking critically about music and articulating their observations, and they will learn to recognize the musical characteristics of important styles, genres, and historical periods.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate, Writing Intensive Course- GEP

MTF 158 Western Music Hist: 1750-Pres (3 credits)

This course considers the history of Western Music from the second half of the eighteenth century to the present day, focusing on the relationship between historical, social, and cultural currents and the development of music. Students will acquire a framework for thinking critically about music and articulating their observations and learn to recognize the musical characteristics of important styles, genres, and historical periods. This course welcomes students who have not taken MTF 157, Western Music History: The Middle Ages to 1750.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 159 Contemporary Music (3 credits)

An investigation of the chief developments in the concept and style of music which have occurred in the Twentieth century.

MTF 161 Introduction to Theatre (3 credits)

This course examines major traditional and modern plays with emphasis upon the styles and conventions which govern the relationship between drama and its audience; relevance of these styles to the work of actors, directors, and designers.

Attributes: GEP Art/Literature, Undergraduate

MTF 162 History of Broadway Musical (3 credits)

This course provides a basic overview of the historical developments of musical theatre as an uniquely American art form, and the study of the structures and genres from early Twentieth Century influences through the "Golden Age" of musicals to contemporary musical theatre.

Attributes: Undergraduate

MTF 170 Special Topics & Indep Study (3 credits)

Student majors may pursue investigation of topics beyond those listed in the catalog. Major GPA of 3.0 required, as is prior approval by the chair and faculty mentor. Course number dependent on relevant level of coursework.

MTF 181 Filmmaking Methods (3 credits)

An introduction and overview to the complete production cycle. Each class session is dedicated to a different department - writing, producing, directing, design, cinematography, grip and electrical, location sound, editing, digital post, audio post, marketing and distribution - designed to both introduce and involve students in the breadth of the production experience.

Attributes: GEP Art/Literature

MTF 186 Acting for the Camera (3 credits)

This course provides on-camera experience for students in order to develop their technique for on - camera acting for film, television and commercials. Special emphasis on audition techniques for on-camera auditions and creating an individual reel for audition purposes.

Attributes: GEP Art/Literature, Undergraduate

MTF 191 Introduction to Film (3 credits)

This course is an introduction to the study of cinematic form and style, taking cinema to be located at the confluence of art, industry and technology. This course examines the cultural meanings of cinema as well as its aesthetic construction, including such elements as narrative structure, cinematography, design, editing and sound. Selections from historical and contemporary films will be viewed and analyzed.

Attributes: GEP Art/Literature, Undergraduate

MTF 192 History of Narrative Film (3 credits)

Providing an overview of significant works that exemplify film as visual media, this course is a survey of movements and makers that helped shape the evolution of screen narrative. Storytelling techniques and trends will be explored from early, spectacle-driven serial films through the postmodern, CGI-driven productions of today.

Attributes: GEP Art/Literature, Undergraduate

MTF 193 History of Television (3 credits)

This course is designed to give students a comprehensive understanding of television in the United States. It will provide deep examinations of its origins, development, design, purpose of programming, and the variety of genres and their role in the formation of our ideas about history, nation, and cultures.

Attributes: GEP Art/Literature, Undergraduate

MTF 194 Black American Cinema (3 credits)

This course will provide an analytical and critical examination of the films created by and starring influential Black American entertainers in film's 100+ year history. Possible areas of study include the films of selected directors and performers, Black American filmmaker movements, Black horror, Black American women, 1970s Black American social realism films, Blaxploitation, 1980s Black star power comedies, 1990s urban dramas, and Black folklore drama. May be repeated for credit under rotating iterations.

Attributes: Diversity Course, GEP Art/Literature, Undergraduate

MTF 195 Genre Film Studies (3 credits)

A critical and analytical examination of the work of selected film genres that have shaped cinema and cinematic culture from the silent era to the present day. Example course topics include horror, sci-fi, thriller, teen films, Westerns, documentary, and melodrama. May be repeated for credit under rotating iterations.

Attributes: GEP Art/Literature, Undergraduate

MTF 241 Basic Conducting (3 credits)

This course will focus on the basic technical aspects of conducting a musical ensemble. Emphasis will be placed on learning how to communicate musical ideas to an ensemble using traditional conducting gestures. Included in the course will be the study of patterns, phrasing, and rehearsal techniques.

Prerequisites: MTF 251

MTF 251 Music Theory I (3 credits)

This course introduces the student to the practice of tonal harmony. Students will learn the principles of chord construction and voice leading, examine the ways in which chords function in tonal music, and be able to compose effective progressions in four-part vocal style. Students must demonstrate to the instructor a familiarity with treble and bass clef notation and basic rhythmic notation.

Prerequisites: MTF 151

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 252 Music Composition I (3 credits)

In this course students will complete structured projects in instrumental composition. Contemporary and traditional approaches to melody, harmony, rhythm, form and timbre will be explored.

Prerequisites: MTF 351

Attributes: GEP Art/Literature, Undergraduate

MTF 253 Choral Music (3 credits)

A study and performance of choral music with emphasis on vocal development and performing technique. Prior choral experience unnecessary. Participation in concerts and a term paper required. Prerequisite: Participation for one semester in University Singers prior to enrollment.

MTF 254 Jazz in Performance (3 credits)

A study and performance of the repertoire of the contemporary jazz ensemble with emphasis on the history of contemporary "BIG BAND" jazz and the mastery of its performance technique and stylistic interpretation. Participation in the fall and spring concert series and several short papers required. Participation in the Jazz Band in the fall semester prior to enrollment.

Attributes: GEP Art/Literature, Undergraduate

MTF 255 Ensemble Performance (1 credit)

Students are placed in ensembles with other instrumentalists (making duos, trios, etc). Their ensemble learns at least one substantial musical work, practicing independently and as a group, and receives weekly in-depth coachings from the professor. The ensemble performs in a recital at the end of the semester.

Attributes: Undergraduate

MTF 256 Intro to Music Technology (3 credits)

An introductory course leading to an understanding and creative application of the elements of music technology, including MIDI, digital audio recording and editing, notation software, and sound design.

Prerequisites: MTF 251

Attributes: Undergraduate

MTF 257 American Music (3 credits)

This course examines music produced in the United States from the early Colonial period to the present day. Students will consider a variety of styles, with an emphasis on folk, art, and African-American music.

Attributes: American Studies Course, GEP Art/Literature, Music Industry Course, Undergraduate

MTF 258 Major Composers (3 credits)

Major composers courses are semester-long studies of a single composer and his or her contributions to music history. Students read a biography of the composer and study several of his or her pieces in detail. Examples of courses in the Major Composers series include Ludwig van Beethoven and Johann Sebastian Bach.

Attributes: GEP Art/Literature, Undergraduate

MTF 261 Theatre Performance Practicum (3 credits)

Rehearsal and performance of a campus theatre production (produced by SJU Theatre Company and directed by a faculty director) with the student in the role of actor or stage manager. Comprehensive study of both the rehearsal and performance processes. In order to register for the course, the production must be the third campus production in which the student has served as cast member or stage manager. Departmental approval is required in order for the student to register for the course.

Attributes: GEP Art/Literature, Undergraduate

MTF 262 Theatre Production Practicum (3 credits)

A practical application of theatre production studies where the student works as a stage manager or run crew chief on a production produced by the Department of Music, Theatre & Film under the guidance of a faculty Director.

Attributes: Undergraduate

MTF 263 Acting I (3 credits)

Study of the fundamentals of the acting process based upon Stanislavsky's system of acting. Course culminates in scene study preparation and performance of contemporary scenes.

Attributes: GEP Art/Literature, Undergraduate

MTF 264 Acting II (3 credits)

Exploration of various methods and styles of acting; further development of techniques of voice, movement, characterization, script analysis, emotion memory, comic timing, and monologues. Extensive laboratory work in scene performance.

Prerequisites: MTF 263

Attributes: GEP Art/Literature

MTF 265 Directing for the Stage (3 credits)

Study of the basic techniques of play direction, including composition, picturization, play selection, auditions and casting, blocking and staging, including historic perspectives on notable directors. This course culminates in student-directed scenes from modern and contemporary plays.

Attributes: GEP Art/Literature, Undergraduate

MTF 266 Theatre History (3 credits)

This course examines the history of theatre from the Ancient Greek period through contemporary theatrical forms of the 21st century, focusing on major periods of theatre development including the Italian Renaissance, the Elizabethan age, Restoration Drama as well as the modern European and American theatre movements.

Prerequisites: MTF 161

Attributes: Undergraduate

MTF 267 Prod Design: Theatre & Film (3 credits)

Students study the basic elements of theatrical/ film production in scenery and lighting. An intensive hands-on lab is required as part of completion of the course.

Attributes: GEP Art/Literature

MTF 268 Musical Theatre Performance (3 credits)

Practice in performance techniques used in musical theatre auditions as well as practice in scene study from the musical theatre repertoire.

Attributes: GEP Art/Literature, Undergraduate

MTF 269 Musical Theatre Dance Styles (3 credits)

A performance/studio course in dance in which a variety of basic technique in musical theatre dance styles are examined including basic jazz as well as stylistic interpretations of select prominent music theatre choreographers (Jerome Robbins, Bob Fosse, Michael Bennett, etc.).

Attributes: GEP Art/Literature

MTF 270 Special Topics & Indep Study (3 credits)

Student majors may pursue investigation of topics beyond those listed in the catalog. Major GPA of 3.0 required, as is prior approval by the chair and faculty mentor. Course number dependent on relevant level of coursework.

MTF 281 Producing & Business of Film (3 credits)

This hands-on course addresses the inner workings of creative producing: business structures, project origination, building a team, acquiring production resources, budgeting and scheduling, managing day-to-day production and incorporating marketing tools. Additionally, the course will address how different business models may affect films' content, style, themes and inclusiveness.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Art/Literature

MTF 282 Screenwriting (3 credits)

An intensive workshop in writing for the screen, focusing primarily on the short form. Through the study of character and conflict, structure and setting, and rudimentary rehearsal and performance of draft scene-work, students will develop their own short pieces, culminating in a revised script and a visualized shooting plan ready to move into production.

Prerequisites: ENG 101

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course-GEP

MTF 283 Series Screenwriting (3 credits)

Each student will first develop their own series concept, show bible, and pilot. Students will then work in groups to script episodes for selected shows. Top work will be selected for production in MTF 381 Episodic TV/ Web Series Production.

Attributes: GEP Art/Literature, Undergraduate, Writing Intensive Course-GEP

MTF 284 Digital Filmmaking (3 credits)

An introductory creative film production workshop that focuses upon visual storytelling, camera operation, digital editing and sound. Students will develop their personal creativity as they complete film projects in narrative and documentary modes, incorporating elements and techniques from music and theatre. Students will also view relevant selections from historical and contemporary films.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Art/Literature, Undergraduate

MTF 285 Short Film Production (3 credits)

Building on the skills developed in Digital Filmmaking (MTF 284), this course is an intermediate-level collaborative workshop in producing the short film. There is a particular emphasis upon theoretical and technical lighting and camera operation, shot structure, and production design.

Prerequisites: MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 286 Documentary Film (3 credits)

A hybrid course in the study and making of documentary film, students will explore the ethical issues of representation, identity, truth, argument, and advocacy through the examination of historically significant work, consideration of contemporary practice, and the execution of their own documentary project. No prerequisite, however, MTF 284 Digital Filmmaking is recommended.

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

MTF 287 Commercial Production (3 credits)

This course is a workshop focusing on the production of commercial and industrial projects. Working in small groups, students will create advertisements, PSAs and other client-based media.

Attributes: GEP Art/Literature, Undergraduate

MTF 288 Genre Film Workshop (3 credits)

This course focuses upon the conventions, styles, makers, themes, and social commentary within such popular film genres as sci-fi, fantasy, thriller, horror, samurai, film noir, and Westerns. After conducting analytical studies, students will apply their knowledge to completing creative projects.

Attributes: GEP Art/Literature, Undergraduate

MTF 291 American Film (3 credits)

This course is a selected study of the intersection of American culture and the cinema. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: American Studies Course, GEP Art/Literature, Undergraduate

MTF 292 European Cinemas (3 credits)

A selected study of cinematic movements and filmmakers from European nations, specifically in how they both reflect and exemplify the culture in which they are produced. Possible areas of study include German Expressionism, Russian Formalism, the French New Wave, Italian Neo-Realism, New German Cinema and British Social Realism. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: GEP Art/Literature, Undergraduate

MTF 293 Five Films (3 credits)

From films ignored at their inception to widely-regarded masterpieces to movies of unique personal and cultural influence, this course examines cinema through the unique lens of five films, providing a deep dive into the historical context, development & production, popular & critical reception, and influence & legacy of movies that have had a lasting impact. No Prerequisites, MTF 191 Introduction to Film and/or MTF 192 History of Narrative Film recommended, may be repeated for credit.

Attributes: GEP Art/Literature, Undergraduate

MTF 294 Non-Western World Cinemas (3 credits)

A selected study of emerging cinematic movements and filmmakers from around the globe, that have pushed beyond the boundaries of established cinematic norms and innovated what film can be in its relation to culture and society. Possible areas of study include the cinemas of the Middle East, Africa, Asia, and Latin America. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: Diversity Course, GEP Art/Literature, Non-Western Studies (GEP), Undergraduate

MTF 295 Major Figures in Film (3 credits)

A critical and analytical examination of the work of selected directors and producers who have had a profound impact on the evolution of contemporary cinema. No prerequisites, MTF 191 Introduction to Film recommended. May be repeated for credit under rotating iterations.

Attributes: Gender Studies Course, GEP Art/Literature

MTF 351 Music Theory II (3 credits)

This course serves as a continuation of MTF 251 Music Theory I. Topics include diatonic harmony, formal design, and an introduction to chromatic harmony. Students will further develop their skills in both written theory and ear-training.

Prerequisites: MTF 251

Attributes: GEP Art/Literature, Undergraduate

MTF 352 Music Composition II (3 credits)

In this course students will complete structured projects in both vocal and instrumental composition. Students will engage in analysis of selected works as well as the study of instrumental resources.

Prerequisites: MTF 252 and MTF 351

Attributes: GEP Art/Literature, Undergraduate

MTF 353 Advanced Vocal Performance (3 credits)

In this course, advanced vocalists take weekly lessons with a member of the studio faculty, learning four-six solo works from three different historical periods, including the twentieth or twenty-first century. They also participate in University Singers. In addition to their lessons, individual practice, and choir, students are required to give an outreach performance in a community venue, such as a nursing home or hospital. MTF 359 is open only to advanced singers who have already completed three semesters of studio lessons at SJU and who have the permission of the instructor to enroll.

Attributes: GEP Art/Literature

MTF 354 Advanced Piano Performance (3 credits)

In this course, which is open to advanced pianists who have already completed three semesters of lessons in a piano studio at SJU, students dedicate themselves to concentrated piano study. They study works from at least three historical periods, which they present formally at their end-of-semester jury, and take one or more private lessons each week, practicing an average of fourteen hours per week. Students perform in the studio recital at the end of the semester and give one off-campus, outreach performance in a hospital, nursing home, local school, or similar community venue. Prerequisites: Enrollment in MTF 154 Piano Performance for 3 semesters and permission of the instructor are required.

Attributes: GEP Art/Literature

MTF 355 Adv Ensemble Performance (3 credits)

In this course, advanced instrumentalists or vocalists participate in three chamber groups, coached by member(s) of the music faculty. They learn three different musical works, including at least one from the twentieth or twenty-first century, and participate in the studio recital. In addition, students are required to give an outreach performance in a community venue, such as a nursing home or hospital. Prerequisites: Advanced performers who have already completed 3 semesters of Ensemble Performance at SJU and who have the permission of the instructor to enroll.

Attributes: GEP Art/Literature, Undergraduate

MTF 357 Music Theory III (3 credits)

This course serves as a continuation of MTF 351 Music Theory II. Topics include borrowed chords, modulation to distant keys, enharmonic relationships, and chromatic harmony. Emphasis on part-writing, composition, and analysis.

Prerequisites: MTF 351

Attributes: GEP Art/Literature

MTF 359 Adv Instrumental Performance (3 credits)

In this course, advanced instrumentalists take weekly lessons with a member of the studio faculty, learning three solo works from three different historical periods, including the twentieth or twenty-first century. They also participate in a collaborative ensemble with another student musician. In addition to their lessons and individual practice, students are required to give an outreach performance in a community venue, such as a nursing home or hospital. Prerequisites: Advanced instrumentalists who have already completed 3 semesters of studio lessons at SJU and who have the permission of the instructor to enroll.

MTF 363 Styles of Acting (3 credits)

An advanced acting course that explores scene study performance of complex scenes including classic works (Shakespeare, Moliere) and plays from the modern period (August Strindberg, Tennessee Williams and Sam Shepard).

Prerequisites: (MTF 263 or MTF 264)

Attributes: GEP Art/Literature, Undergraduate

MTF 370 Special Topics (3 credits)

Special Topics courses are upper-level classes on a variety of subjects in Music History. These courses synthesize score analysis, close reading of musicological literature, critical listening, and discussion in a stimulating seminar environment.

Prerequisites: MTF 251 and MTF 351 and MTF 157 and MTF 158

Attributes: GEP Art/Literature, Writing Intensive Course- GEP

MTF 381 Episodic Series Production (3 credits)

Building on the skills developed in MTF 284 Digital Filmmaking and working from a show developed in MTF 283 Series Screenwriting, this course is a collaborative workshop in producing an episodic series. Students will rotate crew positions on each episode of the show, producing installments suitable for campus and public broadcast.

Prerequisites: MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 382 Advanced Screenwriting (3 credits)

Building on the work of MTF 282 Screenwriting and/or MTF 283 Series Screenwriting, students will develop and write either a feature film script or a long-form series bible, pilot, and tv spec script. May be repeated for credit. May be taken as an Independent Study.

Prerequisites: MTF 282 or MTF 283 or ENG 344

Attributes: GEP Art/Literature

MTF 383 Directing for Film/TV (3 credits)

An advanced workshop in the practices and techniques of screen directing. Students will explore script breakdown, visualization and storyboarding, casting and working with actors, blocking and set-direction through the analysis, direction and production of class projects. Course may be taken as an Independent Study.

Prerequisites: MTF 282 and MTF 284

Attributes: GEP Art/Literature

MTF 384 Advanced Light, Camera, Design (3 credits)

An advanced workshop in shaping the aesthetics of the image. Considering the image as a confluence of both production design and cinematography, students will explore how what is in front of the camera creates meaning as much as how it is lit and captured. Alongside the theoretical and technical skill of lighting and camera operation, students will perform script analysis for aesthetic direction and design, as well as working beyond illumination toward the art of cinematography.

Prerequisites: MTF 284 or ART 173

Attributes: GEP Art/Literature

MTF 385 Sound Design (3 credits)

An advanced workshop in the skills of film sound recording, editing and mixing. This course examines the fundamentals of sound gear and technology, location and soundstage recording techniques, and the creation of film soundtracks, including dialogue editing, sound effects, automated dialogue replacement (ADR), music editing and mixing to picture.

Prerequisites: MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 386 Editing & Post-Production (3 credits)

An advanced workshop in the necessary skills of post-production and the required workflow of moving a project toward delivery. Topics include advanced techniques in non-linear editing, the demands of various video formats, digital video effects, compositing, color correction and delivery across multiple platforms. Course may be taken as an Independent Study.

Prerequisites: MTF 284

Attributes: GEP Art/Literature

MTF 388 Documentary Workshop (3 credits)

An advanced workshop in the planning and production of documentary film. Students will conceive and execute a project of their own design while exploring such issues as collaborative design and production, cross-cultural investigation, documentary ethics and empowerment, and community and individual representation.

Prerequisites: MTF 284

Attributes: GEP Art/Literature

MTF 389 Professional Production Studio (3 credits)

A participatory workshop in the production of a professional media project. Projects will be selected by merit or university need, produced and directed by the instructor, and funded through the department and university. Students will have the opportunity to work on a live set and participate according to their ambition, ability and experience. May be taken as an Independent Study.

Prerequisites: MTF 181 or MTF 282 or MTF 284

Attributes: GEP Art/Literature, Undergraduate

MTF 391 Film Theory & Criticism (3 credits)

An advanced course in the study of the critical trends and theoretical positions that have influenced, enlightened and framed the creation and critique of cinema throughout its first century.

Prerequisites: MTF 191

MTF 392 Special Topics in Film (3 credits)

A study of film/tv in either production or studies beyond those listed in the catalog.

Attributes: GEP Art/Literature, Undergraduate

MTF 470 Special Topics & Indept Study (3 credits)

Student majors may pursue investigation of topics beyond those listed in the catalog. Major GPA of 3.0 required, as is prior approval by the chair and faculty mentor. Course number dependent on relevant level of coursework.

MTF 491 Internship (3 credits)

Junior and Senior MTF majors may broaden their perspective by completing an approved internship in Music, Theatre, or Film/TV. Students are expected to spend six to eight hours per week on site, and to maintain a weekly journal of their experiences and to secure a report by their immediate supervisor at mid semester and upon completion of the work. Prior approval by the chair is required.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 492 Internship: Music/Theatre/Film (3 credits)

Junior and Senior MTF majors may broaden their perspective by completing an approved internship in Music, Theatre, or Film/TV. Students are expected to spend six to eight hours per week on site, and to maintain a weekly journal of their experiences and to secure a report by their immediate supervisor at mid semester and upon completion of the work. Prior approval by the chair is required.

MTF 493 Indep Prj: Mus, Theat, Film I (3 credits)

Students pursuing advanced independent projects, especially those in connection with departmental or university honors, may register for these courses under the direct mentorship of department faculty. Prior approval of both faculty mentor and chair required.

Attributes: GEP Art/Literature, Music Industry Course, Undergraduate

MTF 494 Indep Prj: Mus, Theat, Film II (3 credits)**MTF 495 Senior Project Development (3 credits)**

A student majoring in either Music or Theatre & Film must execute a supervised senior project with acts as a capstone experience on their work in the department. Working closely with their faculty mentor, the student will prepare a major piece of creative or critical work (composition, performance, film, screenplay, or thesis) inclusive of a public presentation in an appropriate venue. Depending on the scope and nature of the project, students will complete the work in either one or two semesters decided in consultation with the faculty mentor and with permission of the chair.

Attributes: GEP Art/Literature, Undergraduate

MTF 496 Senior Project (3 credits)

A student majoring in either Music or Theatre & Film, must execute a supervised senior project which acts as a capstone experience on their work in the department. Working closely with their faculty mentor, the student will prepare a major piece of creative or critical work (composition, performance, film, screenplay, or thesis) inclusive of a public presentation in an appropriate venue. Depending on the scope and nature of the project, students will complete the work in either one or two semesters decided in consultation with the faculty mentor and with permission of the chair.

Attributes: GEP Art/Literature, Undergraduate

Neuroscience (NSC)

NSC 170 Special Topics in Neuroscience (3 credits)

Concentrated focus on a selected topic in Neuroscience. Topic and content vary from semester to semester.

Attributes: Undergraduate

NSC 190 Neuroscience Orientation (0 credits)

Introduction to the neuroscience program, including current developments and future prospects. Designed to prepare students for current studies and future careers. Required for all first-year neuroscience students; open to all interested students.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

NSC 205 Introduction to Neuroscience (3 credits)

Introduction to neuron structure and function, synaptic transmission, organization of the nervous system, brain-behavior relationships, and current neuroscience methods.

Prerequisites: BIO 102 or BIO 119 or BIO 133 or PSY 201

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

NSC 206 Intro. to Neuroscience II (3 credits)

This course focuses on the biological foundations of behavior and cognition. Fundamental methods and processes of the behavioral neuroscience will be emphasized including motivation, emotion, language, attention, memory, and mental illness.

Prerequisites: (NSC 205 or BS 260 or PS 260 or NS 260) and (PSY 100 (may be taken concurrently) or PSY 101 (may be taken concurrently) or PS 101 or PS 111)

Attributes: Undergraduate

NSC 270 Special Topics in Neuroscience (3 credits)

Concentrated focus on a selected topic in Neuroscience. Topic and content vary from semester to semester.

Attributes: Undergraduate

NSC 290 Neuroscience Colloquium (1 credit)

This course will introduce students to Neuroscience faculty, research, and career options. Students will read primary literature in the field, attend related seminars, and submit reflections or reports based on these activities.

Restrictions: Enrollment is limited to students with a major in Neuroscience.

Attributes: Undergraduate

NSC 340 Intro: Neuropsychopharmacology (3 credits)

This course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in neurologic and psychiatric disorders.

Prerequisites: NSC 205 or PSY 205 or PSY 201 or BIO 205 or BS 260 or BS 206 or BS 311 or NS 260 or PC 303

Attributes: Undergraduate

NSC 370 Special Topics in Neuroscience (3 credits)

Concentrated focus on a selected topic in Neuroscience. Topic and content vary from semester to semester.

Attributes: Undergraduate

NSC 422 Neurodevelopment Disorders (3 credits)

An introduction of Neurodevelopmental Disorders, with an emphasis on autism spectrum disorder and attention deficit-hyperactivity disorder. This course aims to expose students to clinical and scientific thinking about atypical child development. This course will include material on clinical diagnosis and treatment, as well as brain-behavior relationships.

Prerequisites: PS 101

Attributes: Undergraduate

NSC 424 Developmental Cognitive Neuros (3 credits)

This course examines the relations between neural and cognitive development from birth through adolescence. Topics will include: principles of brain development, developmental elasticity, neurocognitive development in various domains (e.g., attention, memory, language), neurodevelopmental disorders, and implications for education.

Prerequisites: (NS 261 or PS 261) and (PS 200 or PS 329)

Attributes: Undergraduate

NSC 425 Biophysics of the Brain (3 credits)

This course introduces biophysical models of the brain and the nervous system functioning. In particular the physics of the neocortex is presented through the analysis of EEG studies. Simulations with software packages are employed to illustrate with various examples the models and their results. Linear electrical analogs and some basics of neural network theory are part of the course content. Elements of Biophysics of consciousness are also presented and a set of case studies is analyzed and discussed.

Prerequisites: PY 202 or PY 212

Attributes: Undergraduate

NSC 428 Neuropsychology (3 credits)

This course is designed to introduce upper-level students interested in careers in medicine, clinical psychology, and related health science disciplines to the structure-function relationships of the human brain. The course emphasizes adult brain anatomy and function. The behavioral effects of brain damage (e.g., agnosia, neglect, aphasia, apraxia, amnesia) will be related to neuropsychological theories of brain function and examined in depth through readings, case material, and presentations.

Prerequisites: (PSY 100 or PSY 101 or PS 101 or PS 111) and (BIO 102 or BS 119 or BS 133 or PSY 201)

Attributes: Undergraduate

NSC 432 Genes and Brains (3 credits)

Advances in the fields of neuroscience and genetics have begun to unravel complex ways in which our genes control proper functioning and dysfunctioning of our brains. In this course-based undergraduate research experience (CURE), students investigate emerging ideas in neurogenetics through rigorous and collaborative laboratory-based research. Students apply the scientific method to test hypotheses, collect and interpret data, and examine broader relevance of their experiments through analysis of primary literature.

Prerequisites: BS 260 or NS 260

Attributes: Undergraduate

NSC 455 Molec Basis Neuro Disorders (3 credits)

In this course, students will practice reading and interpreting primary scientific literature focused on the molecular basis of neurological disorders and neurodevelopmental disorders. Students will be challenged to draw connections between known and proposed molecular bases for these varied conditions, propose models and techniques for studying them, and to identify potential targets for treatments. and draw connections between studies and mechanisms and to propose novel experiments, treatments, and avenues of research.

Prerequisites: BS 260 or NS 260 or PS 260 or NSC 205

Attributes: Undergraduate

NSC 460 Neurobiology (3 credits)

In-depth study of the molecular and cellular components of neurons and neural networks. Neuronal functions including synaptic transmission, neurotransmitter release, signaling pathways, and gene expression will be covered. Primary literature will be used to analyze the cellular mechanisms and components regulating neural systems including sensation, integration, sleep, learning, and memory.

Prerequisites: BS 260 or NS 260 or PS 260 or NSC 205

Attributes: Undergraduate

NSC 470 Special Topics in Neuroscience (3 credits)

Topics will vary according to the semester in which the class is offered.

NSC 490 Seminar in Neuroscience (1 credit)

This course focuses on current research and techniques in the field of Neuroscience through primary literature review, discussion, and analysis. Topics will be chosen based on current discoveries and advancements in the field.

Prerequisites: BS 260 or NS 260 or PS 260 or NSC 205

Attributes: Undergraduate

NSC 491 Neuroscience Capstone (1 credit)

This course is the culmination of student directed research or independent study. Students will present and discuss research with the class. Students will justify research predictions and design, explain primary findings, and defend conclusions in the field of neuroscience.

Prerequisites: NS 495 or NSC 490

Restrictions: Enrollment is limited to students with a major in Neuroscience.

Attributes: Undergraduate

NSC 492 Neuroscience Internship (3 credits)

Internships enable the student to gain first-hand experience working in some field of neuroscience. Interns should work a minimum of 10 hours weekly for 12 weeks to earn credit for a single course. Permission to take an internship for course credit must be obtained prior to beginning the internship.

Prerequisites: (NS 260 and NS 261) or (NSC 205 and NSC 206)

Attributes: Undergraduate

NSC 493 Neuroscience Internship II (3 credits)

Internships enable the student to gain first-hand experience working in some field of neuroscience. Interns should work a minimum of 10 hours weekly for 12 weeks to earn credit for a single course. Permission to take an internship for course credit must be obtained prior to beginning the internship. Permission of the Neuroscience program is required.

Prerequisites: NSC 492

Attributes: Undergraduate

NSC 494 Undergraduate Research (1-6 credits)

Laboratory or field work in neuroscience on a specific problem in cooperation with a faculty member of the department. Normally requires three hours of work per week for each unit of credit. This course may be taken for credit multiple semesters but only one semester counts as a neuroscience elective. In subsequent semesters this course will count as a general elective. Students need to complete the application form for independent study and have the approval of the program and Associate Dean.

Prerequisites: (NS 260 and NS 261) or (NSC 205 and NSC 206)

Attributes: Undergraduate

NSC 495 Undergraduate Research II (1-6 credits)

Laboratory or field work in neuroscience on a specific problem in cooperation with a faculty member of the department. Normally requires three hours of work per week for each unit of credit. This course may be taken for credit multiple semesters but only one semester counts as a neuroscience elective. In subsequent semesters this course will count as a general elective. Students need to complete the application form for independent study and have the approval of the program and Associate Dean.

Prerequisites: NSC 494

Attributes: Undergraduate

Occupational Therapy (OTH)

OTH 105 Overview of O.T. Practice (2 credits)

Overview of occupational therapy practice includes practice arenas, roles of therapists, populations treated, values of practitioners, relations with other professional and non-professionals, introduction to the history of the profession and theoretical concepts.

OTH 112 Overview of OT Practice I (1 credit)

Overview of the value of occupational therapy in society. An examination of professional terminology, historical and contemporary concepts of occupation, and the use of activities as a therapeutic and healing experience.

Prerequisites: HS 111 or HSC 110 (may be taken concurrently)

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

OTH 115 Overview of OT Practice II (1 credit)

An overview of the importance of activity, contextual influences, and social participation in the lives of individuals and communities, and the diversity of occupational therapy practices. Basic professional development concepts and skills are introduced.

Prerequisites: OT 112 or OTH 112 (may be taken concurrently)

OTH 405 Overview of O.T. Practice (2 credits)

Overview of occupational therapy practice includes practice arenas, roles of therapists, populations treated, values of practitioners, relations with other professional and non-professionals, introduction to the history of the profession and theoretical concepts.

OTH 500 Level I Experiences Sem (1 credit)

This course is an introduction to fieldwork for the students in the OT program. Students will be introduced to this topic through the study of professional behaviors and review of skills necessary to be successful in both Level I and Level II fieldworks.

Prerequisites: OT 405 or OTH 405 (may be taken concurrently)

OTH 501 Doctoral Seminar I (1 credit)

This is the first in a series of 3 doctoral seminars which introduces the student to the concept and scope of practice of the doctorally prepared occupational therapist. Through literature exploration, the student develops a knowledge of the evolution of the doctorally prepared practitioner, not only in occupational therapy but in other healthcare fields. There will be readings, discussions, and lectures based not only on the history of health care and public health but also current practice and future needs.

Prerequisites: OT 405 or OTH 405 (may be taken concurrently)

OTH 502 Human Development & Perform (3 credits)

This course provides foundational knowledge of theories of human development and the developmental changes that occur throughout the lifespan. The course is designed to provide an overview of typical and atypical physical, cognitive, social, emotional aspects of human development. Contextual factors (environmental and personal) will be explored. Introduction to the analysis of developmental changes during human occupational performance will be covered.

Prerequisites: OT 510 or OTH 510 (may be taken concurrently)

OTH 502L Human Dev & Perform Lab (0 credits)

This course provides foundational knowledge of theories of human development and the developmental changes that occur throughout the lifespan. The course is designed to provide an overview of typical and atypical physical, cognitive, social, emotional aspects of human development. Contextual factors (environmental and personal) will be explored. Introduction to the analysis of developmental changes during human occupational performance will be covered.

OTH 508 Movement Analysis (3 credits)

Osteology, surface anatomy, and kinesiology with emphasis on peripheral and cranial nerves, upper extremities, head and neck. Regional approach will emphasize movement, performance, observation, and analysis. Lab will feature tutorial groups, focusing on clinical problems and application of movement principles, kinesiology and anatomy. Techniques for evaluating movement will be learned as a method of analysis.

OTH 508L Movement Analysis Lab (0 credits)

Osteology, surface anatomy, and kinesiology with emphasis on peripheral and cranial nerves, upper extremities, head and neck. Regional approach will emphasize movement, performance, observation, and analysis. Lab will feature tutorial groups, focusing on clinical problems and application of movement principles, kinesiology and anatomy. Techniques for evaluating movement will be learned as a method of analysis.

OTH 510 Neuroscience (4 credits)

An introduction to the function and components of the major structures of the normal and abnormal nervous systems including the study of the neurobiological substrates for behavior, learning and human activity. Laboratory includes an examination of brain specimens.

OTH 510L Neuroscience Lab (0 credits)

An introduction to the function and components of the major structures of the normal and abnormal nervous systems including the study of the neurobiological substrates for behavior, learning and human activity. Laboratory includes an examination of brain specimens.

OTH 519 Intro to Clinical Skills (3 credits)

This course is an introduction to basic occupational therapy clinical skills required for work in a variety of clinical settings. Students will be required to demonstrate competencies in, but not limited to, obtaining vital signs, employing safe infection control, and standard precautions. Students will develop basic interviewing, communication, and observation skills. Students will learn client positioning, functional mobility (bed mobility, transfers, and ambulation), ADL and IADL retraining skills using strategies and or compensatory adaptive equipment. Students will begin to develop skills in clinical reasoning, adaptation, teaching, and skills of writing for documenting goals and treatment notes as components of a medical record.

Prerequisites: OT 405 or OTH 405 (may be taken concurrently)

OTH 519L Intro to Clinical Skills Lab (0 credits)

This course is an introduction to basic occupational therapy clinical skills required for work in a variety of clinical settings. Students will be required to demonstrate competencies including, but not limited to, obtaining vital signs, employing safe infection control, and standard precautions. Students will develop basic interviewing, communication, and observation skills. Students will learn client positioning, functional mobility (bed mobility, transfers, and ambulation), ADL and IADL retraining skills using strategies and or compensatory adaptive equipment. Students will begin to develop skills in clinical reasoning, adaptation, teaching, and skills of writing for documenting goals and treatment notes as components of a medical record.

OTH 531 Clinical Medicine (3 credits)

Study of clinical conditions and disease processes that affect functional performance in individuals from birth through old age.

Prerequisites: OT 510 or OTH 510 (may be taken concurrently)

OTH 551 Human Occ: Cncpts & Prctice (3 credits)

This course explores the meaning and purpose of human occupation and its relationship to the promotion of health and the prevention of disease, illness, and dysfunction for persons, groups, and populations. This includes analysis and examination of occupations, activities, habits, and roles for persons, groups, and populations. Laboratory will emphasize engagement in occupations within one's contextual factors (environmental and personal).

Prerequisites: OT 405 or OTH 405 (may be taken concurrently)

OTH 551L Human Occ: Cncpts & Prctce Lab (0 credits)

This course explores the meaning and purpose of human occupation and its relationship to the promotion of health and the prevention of disease, illness, and dysfunction for persons, groups, and populations. This includes analysis and examination of occupations, activities, habits, and roles for persons, groups, and populations. Laboratory will emphasize engagement in occupations within one's contextual factors (environmental and personal).

OTH 555 Evaluation & Assessment: OT (3 credits)

Course covers the selection and use of appropriate standardized and non-standardized assessment tools for the comprehensive evaluation of patients/clients. Data are used to establish goals, write reports, communicate findings, supervise staff, and refine interdisciplinary collaboration and home follow-up. Includes an examination of validity and reliability of assessment tools.

Prerequisites: (OT 562 or OTH 562 (may be taken concurrently)) and (OT 519 or OTH 519 (may be taken concurrently)) and (OT 502 or OTH 502 (may be taken concurrently))

OTH 555L Evaluation & Assessment: OTLab (0 credits)

Course covers the selection and use of appropriate standardized and non-standardized assessment tools for the comprehensive evaluation of patients/clients. Data are used to establish goals, write reports, communicate findings, supervise staff, and refine interdisciplinary collaboration and home follow-up. Includes an examination of validity and reliability of assessment tools.

OTH 562 Theories of OT (3 credits)

Study of the theoretical humanistic foundations of occupational therapy practice. Focus will be on major theoretical perspectives, models for practice, and frames of references as a base for practice. Beginning links between theory, practice, and research will be made.

Prerequisites: OT 510 or OTH 510 (may be taken concurrently)

OTH 572 Clinical Mgmt & Supervision (3 credits)

General principles of administration, management and leadership. Program design, funding and implementation will be presented. Staffing patterns, quality assurance, reimbursement, contractual issues, program development and reimbursement issues are discussed as they relate to management in healthcare. Effects of systems, legislative and social issues on practice will be explored.

Prerequisites: OT 405 or OTH 405 (may be taken concurrently)

OTH 590 Fieldwork Level I: Clinical Exp (1 credit)

Students will participate in on-site and off-site, faculty led clinical experiences. They will be applying concepts learned in courses concurrent in this same semester.

Prerequisites: OT 551

OTH 599 Independent Study (1-3 credits)

This independent study course is designed to support students who may need/want concentration in a particular topic area. Learning refinement and expanse of skills, reasoning, and professional practice are highlighted and work toward entry-level practitioner status. These topics may change from term to term.

OTH 600 Advanced Seminar & Comp Exm (3 credits)

Students will engage in a seminar analyzing scholarly works and current critical issues in occupational therapy. This will culminate in a comprehensive examination.

Prerequisites: OTH 694 and OTH 696

OTH 602 Doctoral Seminar II (1 credit)

This seminar is second in a series of 3 seminars which introduces students to the capstone process. Thorough review of the accreditation standards that guide the capstone experiential and project, students will explore their interests, the role of the capstone coordinator, advisor and the student for successful completion.

Prerequisites: OT 501 or OTH 501

OTH 610 Case-Based Reasoning (3 credits)

Critical evaluation of evidence-based practice patterns, professional reasoning, and clinical case reviews. The student will demonstrate the ability to translate and advance contemporary concepts in occupational therapy theory, research, and practice.

Prerequisites: OT 668 or OTH 668 (may be taken concurrently)

OTH 611 Evidence-Based Decision Making (1 credit)

This online course will focus on the application of evidence-based decision-making (EBDM) principles to the practice environment. Students will develop clinical questions based upon the fieldwork environment, conduct database searches to obtain evidence to support practice, and explore methods to facilitate the use of EBDM in clinical practice. This course reinforces the general education skill of information literacy.

OTH 612 Clin Reasoning & Prof Devel (3 credits)

This online course will examine both the clinical reasoning process that guides occupational therapy practice and professional development as a responsibility of professional practice. Clinical experiences from Level II fieldwork will be analyzed as the context for exploring these issues. The student is encouraged to critically explore their own practice while integrating didactic material, concepts of occupation based practice, clinical reasoning, reflection, and evidence-based decision-making. This course is taken concurrently with Level II fieldwork or with instructor permission. This course reinforces general education skill areas of reasoning and problem solving and the general education values/attitudes area of reflective and purposeful learning.

Prerequisites: OTH 694

OTH 615 Therapeutic Groups (3 credits)

This course offers didactic and experiential components designed to prepare students for care delivery in therapeutic groups in all areas of occupational therapy practice. Students will learn to integrate knowledge of group process, group dynamics, and implementation of occupation-based approaches to therapy through lectures and laboratories that allow them to use clinical reasoning and creative critical thinking throughout the semester. This course reinforces the general education skill area of oral communications and the general education values/attitudes area of leadership and teamwork.

Prerequisites: OT 562 or OTH 562 (may be taken concurrently)

OTH 615L Therapeutic Groups Lab (0 credits)

This course offers didactic and experiential components designed to prepare students for care delivery in therapeutic groups in all areas of occupational therapy practice. Students will learn to integrate knowledge of group process, group dynamics, and implementation of occupation-based approaches to therapy through lectures and laboratories that allow them to use clinical reasoning and creative critical thinking throughout the semester. This course reinforces the general education skill area of oral communications and the general education values/attitudes area of leadership and teamwork.

OTH 620 Fieldwork Level I: Clinical (1 credit)

Students will engage in various experiential learning experiences on or off campus throughout the course of the semester to develop clinical skills and professional behaviors in preparation for level II fieldwork. Students will have the opportunity to interact with and understand the needs of clients with various diagnoses, actively engage in the OT Process under guidance, and explore acute care, acute rehab, and/or sub-acute settings through on-site visits.

Prerequisites: OT 682 or OTH 682 (may be taken concurrently)

OTH 623 FWK1:Comm Service Learning (1 credit)

Students are assigned to community sites under the supervision of a professional who is not an Occupational Therapist. Students are expected to participate in the daily activities of the site, engaging with both staff and clients. The focus of this level I experience is on psychosocial behaviors of clients and their environments.

Prerequisites: OT 644 or OTH 644 (may be taken concurrently)

OTH 624 Interventions I: Contextual Ap (4 credits)

The influence of context on occupational performance will be explored from a variety of perspectives and layers including the physical environment and personal factors. The course explores how an individual's, group's, and/or population's goals, values, and interests both influence and are influenced by context. Contextual interventions such as environmental modification, adaptive equipment, cultural consideration, and social determinants of health will be examined to improve or enhance occupational performance.

Prerequisites: OTH 551 and OTH 531

OTH 624L Interventions I: Cntxtl Ap Lab (0 credits)

The influence of context on occupational performance will be explored from a variety of perspectives and layers including the physical environment and personal factors. The course explores how an individual's, group's, and/or population's goals, values, and interests both influence and are influenced by context. Contextual interventions such as environmental modification, adaptive equipment, cultural consideration, and social determinants of health will be examined to improve or enhance occupational performance.

OTH 630 Community Based OT (3 credits)

This course will develop advanced skills for community-based occupational therapy. Consultative and population-based practices in a variety of contexts including therapy process, funding, and resource development. The student will explain how to assess community needs, propose and design appropriate community programs for individuals and groups, implement a community program and design an outcomes assessment measure. Students will develop a program proposal using community based concepts.

Prerequisites: OT 660 or OTH 660 (may be taken concurrently)

OTH 634 Interventions II: Developmenta (4 credits)

The course aims to introduce students to the use of evaluation data to design and implement meaningful occupation-based interventions to promote development through the life span. The course includes assessment, goal formation, treatment planning, use of intervention techniques, discharge planning, and termination of occupational therapy services. Interventions that will be considered include those that promote health, wellness, and occupational performance across the life span.

Prerequisites: OTH 624 and OTH 502

OTH 634L Interventions II: Develop Lab (0 credits)

The course aims to introduce students to the use of evaluation data to design and implement meaningful occupation-based interventions to promote development through the life span. The course includes assessment, goal formation, treatment planning, use of intervention techniques, discharge planning, and termination of occupational therapy services. Interventions that will be considered include those that promote health, wellness, and occupational performance across the life span.

OTH 636 Clin Ldrshp, Mgmt,&Supervision (3 credits)

Students will review principles of administration, management, and leadership for clinical program design, funding, implementation, and outcomes. Students will develop an understanding of staffing patterns, quality assurance, contractual issues, program development, and reimbursement issues as they relate to healthcare management; analyze the impact of legislative and social issues on clinical practice, systems of care, and delivery of services; and understand healthcare system cultures as they relate to occupational therapist, professional, and client perspectives.

Prerequisites: OTH 405

OTH 644 Interventions III: Psychosocia (4 credits)

This interventions course introduces students to the design and implementation of occupation-based interventions in various behavioral health settings to allow the client to engage in meaningful occupations throughout the lifespan. The course includes assessment, goals formation, treatment planning, use of intervention techniques, discharge planning, and termination of treatment.

Prerequisites: OTH 624 and OTH 682

OTH 644L Interventions III: Psychosoc L (0 credits)

This interventions course introduces students to the design and implementation of occupation-based interventions in various behavioral health settings to allow the client to engage in meaningful occupations throughout the lifespan. The course includes assessment, goals formation, treatment planning, use of intervention techniques, discharge planning, and termination of treatment.

OTH 650 Applied Research Methods (3 credits)

Students will obtain a basic understanding of theory-based research, methodological considerations in the design of research, ways of evaluating practice, and approaches to analyzing data. Examples of qualitative and quantitative designs will be analyzed, and techniques of data analysis examined. Knowledge gained through this course can be used in the evaluation of OT services and in designing and implementing beginning-level research projects. The basic concepts of evidence-based practice will be presented.

OTH 652 OT Interventions IV: Cognitive (3 credits)

This course emphasizes the identification of appropriate theoretical frameworks, goal setting, treatment planning, the use of a variety of intervention techniques to allow the client to engage in meaningful occupations, discharge planning, and termination of treatment. The focus will be on the cognitive components, including, but not limited to, level of arousal, orientation, recognition, attention span, initiation of activity, termination of activity, memory, sequencing, categorization, concept formation, spatial operations, problem solving, learning, and generalization, as they are manifested across the lifespan.

Prerequisites: OTH 634 and OTH 644

OTH 652L OT Interventions IV: Cogni Lab (0 credits)

This course emphasizes the identification of appropriate theoretical frameworks, goal setting, treatment planning, the use of a variety of intervention techniques to allow the client to engage in meaningful occupations, discharge planning, and termination of treatment. The focus will be on the cognitive components, including, but not limited to, level of arousal, orientation, recognition, attention span, initiation of activity, termination of activity, memory, sequencing, categorization, concept formation, spatial operations, problem solving, learning, and generalization, as they are manifested across the lifespan.

OTH 660 Applied Research II (3 credits)

This course is the second of three courses required in the Occupational Therapy research sequence. Building on the first research course and using experiences from Level I fieldwork, students are required to develop a research proposal. This activity will provide students with the ability to translate clinical problems into research protocols by incorporating published research and class learning with clinical cases from their fieldwork experience. Learning will occur through lectures, class activities, class discussions, readings, and assignments. Knowledge gained through this course can be used in the evaluation of OT services and in designing and implementing beginning level research projects. Basic statistics is included.

Prerequisites: OT 650 or OTH 650 (may be taken concurrently)

OTH 664 Interventions V: Rehab Approac (4 credits)

The use of evaluation data to design and implement interventions with clients who are at risk for or who have disabilities due to disease, trauma, medical condition or other impairment. The OT process will include evaluation, goal setting, treatment planning, implementation of intervention techniques, and discharge planning all to allow the client to engage in meaningful occupations and client-centered outcomes.

Prerequisites: OTH 519 and OTH 634

OTH 664L Interventions V: Rehab App Lab (0 credits)

The use of evaluation data to design and implement interventions with clients who are at risk for or who have disabilities due to disease, trauma, medical condition or other impairment. The OT process will include evaluation, goal setting, treatment planning, implementation of intervention techniques, and discharge planning all to allow the client to engage in meaningful occupations and client-centered outcomes.

OTH 665 Applied Research III (3 credits)

This seminar provides an in-depth examination of research and its relationship to practice. Students will obtain an advanced understanding of theory-based research, methodological considerations in the design of research, ways of evaluating practice, and approaches to analyzing data. Learning will occur through class discussions, readings and assignments, including the implementation of the proposal developed in the prior courses.

Prerequisites: OT 660 or OTH 655 (may be taken concurrently)

OTH 668 Evidence-Based Practice (3 credits)

Students will develop their ability to locate, evaluate and incorporate research evidence into the practice of occupational therapy. Students will build upon research analysis and information literacy skills from prior coursework as they develop clinical questions, conduct database searches to obtain evidence, critically analyze available evidence, and determine relevance to clinical practice.

Prerequisites: OT 660 or OTH 650 (may be taken concurrently)

OTH 670 OT Ldrship Managing Change (3 credits)

Learning will focus on general principles of healthcare and practice context trends, professional responses to change, current organizational dynamics & leadership theories/applications, and managing change today. The course highlights the manner in which occupational therapists can leverage this knowledge to meet today's demands while maintaining professional integrity. Students will reflect on personal professional development while contributing to the development of the profession.

Prerequisites: OTH 636 and OTH 680

OTH 672 OT Interventions VI:Technology (3 credits)

Assistive technology devices and services have the potential to impact the lives of persons with disabilities, resulting in increased independence and participation in their daily activities. This course will focus on learning about the various types of assistive technology devices and services including, but not limited to, evaluation and assessment, selection and training, procurement, legislation, and funding. Students will gain an understanding of these applications as they pertain to the communication, learning, and environmental issues encountered by persons with disabilities.

Prerequisites: OT 555 or OTH 555 (may be taken concurrently)

OTH 672L OT Interventions V: Tech Lab (0 credits)

Assistive technology devices and services have the potential to impact the lives of persons with disabilities, resulting in increased independence and participation in their daily activities. This course will focus on learning about the various types of assistive technology devices and services including but not limited to, evaluation and assessment, selection and training, procurement, legislation, and funding. Students will gain an understanding of these applications as they pertain to the communication, learning and environmental issues encountered by persons with disabilities.

OTH 674 Independent Project in OT (6 credits)

The student will work collaboratively with a faculty member to develop and carry out an independent project of mutual interest. This project will result in a submission to a juried conference or publication. Student(s) can elect to participate in an ongoing project within the Department of Occupational Therapy.

Prerequisites: OTH 665 or OTH 694 or OTH 696

OTH 675 Research Independent Study (6 credits)

The course is designed to refine research skills for self-directed students who have an interest in OT research. The student will work collaboratively with a faculty mentor to develop and carry forth a research project of mutual interest. This course should result in a poster, platform presentation, or paper that can be submitted for peer review. Student(s) can elect to participate in one of many ongoing research projects within the Department of Occupational Therapy. The student(s) will gain insights into the research process through faculty mentoring and active involvement in all levels of the research process.

Prerequisites: OTH 665 or OTH 694 or OTH 696

OTH 676 Adv Concepts Community OT (3 credits)

This course is a capstone course to evaluate current issues in and design program development for community based practice. Professional development planning for advancing community based occupational therapy in the future will occur. Analysis of social policies impacting community based occupational therapy will be emphasized.

Prerequisites: OTH 694 or OTH 696 or OTH 630

OTH 678 Hand Therapy Interventions (3 credits)

This is a comprehensive elective course specializing in hand therapy, focusing on the occupational therapy process. It will include evaluation, intervention, and outcomes for clients with common upper extremity conditions. Evidence based assessments and interventions will be examined through scholarly journals and research articles to determine appropriate use in treatment planning for clients. Class will include lectures, hands on activities, selected readings, discussions and case studies. Knowledge will prepare students to develop skills of an entry level therapist in preparation for a Level II fieldwork in the specialized area of hand therapy.

Prerequisites: OT 508 or OTH 508 (may be taken concurrently)

OTH 681 OT: Past, Present, & Future (2 credits)

This course will review the history of the profession of OT and put it in perspective in relation to the development of other health professions and society at that time. The impact of the past on the present practice of OT will be explored. Current critical issues will be discussed in terms of the potential influences from the past.

OTH 682 Fieldwork I: Community Client (1 credit)

The student will create adaptations and competence promoting strategies for human and non-human elements of the environment. This will be explored in a collaborative relationship with an individual living in the community. Throughout the course, needs assessments, safety evaluations, community resource finding and construction of low technology devices will be completed by the students, who will be supervised by an OT in the lab.

Prerequisites: OT 624 or OTH 624 (may be taken concurrently)

OTH 685 Family & Client Centered Care (3 credits)

The focus of this course will be to understand and critically analyze both the client-centered and family-centered perspectives for occupational therapy intervention. Students will research various articles written about both perspectives and discuss the effects that these approaches have on intervention. Emphasis will be placed on the critical analysis of each approach from a literature and experiential perspective.

Prerequisites: OT 624 or OTH 624 (may be taken concurrently) or OT 664 or OTH 664 (may be taken concurrently)

OTH 686 Adv Concepts Leadership (3 credits)

Based on their personal strengths, students will develop leadership skills for use in a variety of contexts. Students will analyze and synthesize occupational therapy's unique perspective and responsibility in healthcare leadership. Students will interact with professional leaders to integrate application of leadership concepts. Students will engage in tasks in preparation for their capstone project.

Prerequisites: (OTH 670 or OT 670) and (OTH 636 or OT 636)

OTH 687 FW 1f: Program Development (2 credits)

Students will engage in a fieldwork experience under the supervision of a professional, who may or may not be an occupational therapist, at a site that does not currently have an occupational therapy program. Students will engage in a needs assessment and, based on the outcome, develop a plan for an occupational therapy program. Fieldwork experience will be 1 day per week, 12 visits during the semester. In addition, students will meet weekly in a precepting group led by an occupational therapist to process the experience.

Prerequisites: OTH 694 and OTH 96

OTH 691 Fieldwork Level IIb (9 credits)

This is a full-time three-month clinical experience under the supervision of an occupational therapist. Students will achieve competence in basic entry-level occupational therapy skills including evaluation, goal setting, treatment planning and implementation, discharge planning, and termination of services. This may take place in a variety of clinical or community settings.

Prerequisites: OTH 694

OTH 692 Current Issues Gerontology (3 credits)

Students will explore selected current topics in area of gerontology and the impact of the aging process on health and participation in occupations. Specific topics to be addressed in the course will be selected by students in collaboration with the course instructor. Students will integrate and apply knowledge from previous and current courses and field experiences.

OTH 694 Fieldwork Level IIa (9 credits)

This is a full-time three-month clinical experience under the supervision of an occupational therapist. Students will achieve competence in basic entry-level occupational therapy skills including evaluation, goal setting, treatment planning and implementation, discharge planning, and termination of services. This may take place in a variety of clinical or community settings.

OTH 696 Fieldwork Level IIb (6 credits)

This is a full-time three-month clinical experience under the supervision of an occupational therapist. Students will achieve competence in basic entry-level occupational therapy skills including evaluation, goal setting, treatment planning and implementation, discharge planning, and termination of services. This may take place in a variety of clinical or community settings.

OTH 697 Doctoral Experience Component (12 credits)

Students will engage in a fieldwork experience relative to their chosen content area under the supervision of an appropriate professional. The specific nature of the fieldwork will be defined by the student in collaboration with a faculty member and will entail a 16-week full-time experience.

Prerequisites: OT 600 or OTH 600 (may be taken concurrently)

OTH 698 Fieldwork Level IIb (9 credits)

This is a full-time three-month clinical experience under the supervision of an occupational therapist. Students will achieve competence in basic entry-level occupational therapy skills including evaluation, goal setting, treatment planning and implementation, discharge planning, and termination of services. This may take place in a variety of clinical or community settings.

OTH 699 Special Topics in OT (3 credits)

A special topics course highlights areas of the Occupational Therapy profession as practice and service contexts develop and change over time. These are for advanced learning and the refinement of abilities for the entry-level practitioner. These topics may change from term to term.

OTH 703 Doctoral Seminar III (1 credit)

This seminar is third in a series of 3 seminars which introduce the students to the professional role of the occupational therapist and a doctorally prepared practitioner. There will be an emphasis on occupational therapy professional writing with a focus on scholarship, and clinical and professional reasoning.

Prerequisites: OT 602 or OTH 602 (may be taken concurrently)

OTH 705 OT Education Practicum (3 credits)

Students will synthesize and evaluate current theories regarding teaching and learning in occupational therapy education, and design classroom learning experiences for occupational therapy students. This course will require integration of previously acquired content knowledge and skills with both prior and new teaching and learning theories. Teaching experience will occur within select courses.

OTH 711 Doctoral Capstone Project (3 credits)

In this course which is part of a series of three related courses pertaining to the doctoral capstone process, the students complete and disseminate their capstone projects. This individual, mentored, capstone project synthesizes knowledge gained throughout the curriculum, relates directly to the capstone experience and focuses on one or more of the following areas of study: clinical practice skills, research skills, administration, leadership, program and policy development, advocacy, education, and theory development. Students complete a journal manuscript or written project report, and disseminate the project to the University community and their experiential site and plan for wider professional dissemination.

Prerequisites: OT 675 or OTH 675 (may be taken concurrently)

OTH 737 Community Based OT (3 credits)

This course will develop advanced skills for community-based occupational therapy. Consultative and population based practices in a variety of contexts including therapy process, funding and resource development. The student will explain how to assess community needs, propose and design appropriate community programs for individuals and groups, implement a community program, and design an outcomes assessment measure. Students will develop a program proposal using community based concepts.

Prerequisites: OT 660 or OTH 660 (may be taken concurrently)

Org Development & Leadership (ODL)

ODL 170 Special Topics in ODL (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ODL 270 Special Topics in ODL (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ODL 370 Special Topics in ODL (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ODL 470 Special Topics in ODL (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

ODL 509 Curricular Practical Training (1 credit)

Pharmaceutical Marketing (PMK)

PMK 150 Smart Healthcare Consumer (3 credits)

By virtue of our birth, we are all consumers of healthcare. Becoming a smart healthcare consumer requires us to understand what having healthcare means as a patient as well as how the system of care works (or sometimes fails.) Additionally, it requires insights from the perspectives of various stakeholders, who either provide direct care (doctors, nurses or hospitals), or who indirectly participate by influencing, regulating, and/or paying for healthcare. The course will examine the doctor visit as a transaction and will evaluate the motivation of the various stakeholders. The course will also consider how disruptive technology and medical innovation influence the future of medicine.

Attributes: First-Year Seminar, Undergraduate

PMK 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PMK 180 Patient Access to Healthcare (3 credits)

This service-learning course that will provide an understanding of healthcare delivery in the U.S. and familiarity with the components of healthcare delivery to include: patients, providers, products, payers and policy makers/regulators. Students will also have the opportunity to assist patients with various interactions with healthcare delivery ranging from interpreting their healthcare coverage options to post-operative recovery. This course fulfills the requirement for the Minor in Healthcare Ethics. Elective.

Attributes: Undergraduate

PMK 190 Healthcare Delivery Alternative (3 credits)

This service-learning ethics intensive course focuses on the medical, cultural, social and spiritual need of short and long-term residents at a local nursing home. Projects involve direct patient encounters and are popular with marketing, science, and IHS majors. Projects also involve working in departments of nursing, pastoral care, dietary, human resources, finance, social services, development, activities, and volunteer services. The course fulfills the Ethics Intensive Requirement and the Requirement for the Minor in Healthcare Ethics.

Prerequisites: PHL 154

Attributes: Ethics Intensive

PMK 211 Pharmaceutical Mkt Environment (3 credits)

An introduction to the pharmaceutical industry and to the theory of marketing, as well as an overview of the dynamics of the healthcare industry with an emphasis on managed care, cost containment, disease management and accountable care organizations (ACO's). Additionally, students will learn a basic understanding of pharmacology. Prerequisite to all major concentration requirements. Open to all students.

Attributes: Undergraduate

PMK 221 Pharmaceutical Mkt Research (3 credits)

Covers the process that involves systematic gathering of quantitative and qualitative information that will help identify and resolve issues concerning patients, physicians and payers. Areas covered include problem recognition, research design, data collection, data analysis, results, and recommendations.

Prerequisites: PMK 211

Attributes: Undergraduate

PMK 243 Healthcare Systems II (3 credits)

This course will deepen the students' understanding of the various healthcare system components as they relate to the pharmaceutical industry. This semester's work will focus on health economics, economics of firms in the pharmaceutical industry, managed care, political and governmental issues, lobbying and advocacy, and international health systems.

Attributes: Undergraduate

PMK 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PMK 331 Pharm Sales Management (3 credits)

Have you wanted to land your dream job, find your perfect mate, and achieve what you desire out of life? Learn the secrets and basic concepts of selling and persuasion to achieve your sales and life goals. Understand the concepts of applying science (clinical reprints) to communicate important information about your product, service, or your personal brand as it relates to sales, territory management, and pharmaceutical ethics. The course focuses on building relationships through role-play and improv exercises. Students will develop listening skills and learn how to handle objections while thinking on their feet.

Prerequisites: PMK 211

Attributes: Undergraduate

PMK 335 Mktg Apps Clin Use of Drugs I (3 credits)

Part one of a two-semester course sequence includes major concepts of rational drug therapy such as basic pathophysiology, pharmacology, and outcomes assessment for major drug classes and common disease states. Decision criteria as they apply to drug product selection are emphasized.

Attributes: Undergraduate

PMK 336 Mktg Apps Clin Use of Drugs II (4 credits)

Part two of a two-semester course sequence includes major concepts of rational drug therapy such as basic pathophysiology, pharmacology, and outcomes assessment for major drug classes and common disease states. Decision criteria as they apply to drug product selection are emphasized.

Attributes: Undergraduate

PMK 341 Pharm Channels & Pricing (3 credits)

The first half of the course describes the distribution process of pharmaceuticals, with concepts specific to designing and managing effective strategic channel relationships. The second half examines how firms set prices and the legal and policy ramifications of pricing.

Prerequisites: PMK 211

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business.

Attributes: Undergraduate

PMK 351 Pharm Promotions Management (3 credits)

Covers advertising, direct marketing, promotions, e-marketing, ethical, legal and regulatory concerns associated with the promotion of pharmaceutical products.

Prerequisites: PMK 211

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Pharm. Healthcare Business.

Attributes: Undergraduate

PMK 370 Special Topics (2-3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PMK 430 Brand Management (3 credits)

This course focuses on the essential principles, practices and leading-edge concepts of brand management to prepare students to lead a brand-centered, cross-functional marketing team. The course is designed to introduce the critical analytical, decision making, and planning frameworks and tools effective brand managers need at all stages of the product lifecycle. The emphasis in the course is to explore what every brand manager needs to know to operate successfully in any organization.

Attributes: Undergraduate

PMK 452 Legal Aspects Drug Dev & Mktg (2 credits)

This course provides a critique and analysis of the various laws and regulatory bodies affecting the pharmaceutical industry. The interaction of regulatory affairs with other departments in a pharmaceutical company will be considered, with a special emphasis on research and development and marketing.

Attributes: Undergraduate

PMK 461 Pharm Mkt Strat & Plan I (3 credits)

The course focuses on strategy and planning development for a specific pharmaceutical product. This course focuses on teamwork and expands students' ability to synthesize critical functions in product management.

Prerequisites: PMK 211 and ENG 101 and PMK 221 and PMK 331 and PMK 341 and PMK 351

Attributes: Undergraduate, Writing Intensive Course- GEP

PMK 465 Advanced Marketing Research (3 credits)

The pharmaceutical and biotech business is rapidly changing and requires marketing researchers and brand managers to appreciate the decision-making contexts in which marketing research is conducted.

Prerequisites: (PMK 211 and PMK 221 and PMK 351)

Attributes: Undergraduate

PMK 470 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PMK 471 Pharm Mkt Strat & Plan II (3 credits)

Drawing on the broad range of content covered in the first six courses, this capstone course integrates and builds on the foundations laid previously. This course addresses pharmaceutical corporate strategies including health policy issues with practical application through a number of formats: cases; exercises; simulations.

Prerequisites: (PMK 211 and PMK 221 and PMK 351 and PMK 341 and PMK 461)

Attributes: Undergraduate

PMK 490 Senior Thesis Methodology (2 credits)

The senior thesis is an undergraduate capstone project which includes independent, original data collection for the pharmaceutical and healthcare business (PHB) major. It is a self-directed course in which the student produces a body of work which demonstrates an integration of knowledge and skills from the courses taken while in the PHB program. In Senior Thesis Methodology, the student will select a topic area of interest to the student based on knowledge of current events and issues, analyze related literature from scholarly publications, plan and conduct data collection to support a hypothesis.

Attributes: Undergraduate

PMK 491 Pharmaceutical Internship (1-3 credits)

The Pharmaceutical Internship/Independent Study enables students who have declared Pharmaceutical Marketing as their major to earn one (1) credit and enhance their knowledge in the sponsoring firm by working in the pharmaceutical or related industries as an intern. Students can earn up to three (3) credits by combining an internship with independent study. Credit is based on a review by the sponsoring faculty member of the student's circumstance, needs of the firm where the student is doing their internship and academic requirements of the sponsoring faculty member. The internship/independent study credits are counted as free electives and can only be applied to the semester during which the internship/independent study was taken. Prerequisite - completed at least 4 courses in the major.

Prerequisites: PMK 331 (may be taken concurrently) and PMK 351 (may be taken concurrently)

Attributes: Undergraduate

PMK 492 Sr. Thesis (3 credits)

The senior thesis is an undergraduate capstone project which includes independent, original data collection for the pharmaceutical and healthcare business (PHB) major. It is a self-directed course in which the student produces a body of work which demonstrates an integration of knowledge and skills from the courses taken while in the PHB program. In Senior Thesis, the student will analyze their data collection and secondary research in support of the hypothesis they selected in PB 490. The student will develop a written thesis and explain and defend their project in the senior thesis class which will include a thorough evaluation of relevant literature pertaining to the selected topic.

Attributes: Undergraduate

PMK 545 Pharm Marketing Gateway Crs (3 credits)

This is a policy course that provides a broad perspective with specific focus on aspects of healthcare systems. Given the spiraling costs around the globe along with the recent introduction of Obamacare in the U.S, healthcare has the potential to bankrupt national budgets. Classes will include assessment of healthcare infrastructure from advertising agencies that have evolved into consulting firms to healthcare distributors and all the stakeholders involved with healthcare delivery: hospitals, doctors, pharmacists, nurses, and "alphabet soup" like Accountable Care Organizations (ACOs). The class will also combine contemporary evaluations of healthcare delivery, e.g., Sicko, and is anchored by a semester-long research project that will enable students to gain in-depth insights about healthcare delivery.

Restrictions: Enrollment is limited to Graduate level students. Enrollment limited to students in the Haub School of Business college.

Attributes: Gateway Course (Grad HSB)

PMK 564 Clinical Pharmacoeconomics (2 credits)

An applied clinical introduction to pharmacy economics in healthcare delivery, with focus on the selection and monitoring of drug therapy and formulary management in the healthcare system. Various quantitative techniques will be covered.

Restrictions: Enrollment is limited to Graduate level students.

PMK 600 Health Care Marketing (3 credits)

This course covers identifying market opportunities and different segments of the health care delivery system. It will also incorporate strategies and the application of the "4Ps": price, product, place, and promotion. The environment for the course will be managed care. MBA students should enroll in MKT 550.

Restrictions: Enrollment limited to students in the MBAPHMK program. Enrollment is limited to Graduate level students.

PMK 610 Business of Healthcare (3 credits)

The course provides an understanding of structure, conduct and performance of the healthcare industry in the U.S. it will provide a working knowledge of federal regulations and examine various strategies and strategic frameworks while discussing details about how the system operates. It will also review management concepts and how to apply them to solve business problems in the dynamic and evolving U.S. healthcare system.

Prerequisites: PMK 600 or MKT 550

Restrictions: Enrollment is limited to Graduate level students.

PMK 620 Supply Chain Mgt in Healthcare (3 credits)

This course describes the distribution process of pharmaceuticals, medical devices, diagnostics and biologics with concepts specific to designing and managing strategic channel relationships.

Prerequisites: MKT 501 and (MKT 550 or PMK 600)

Restrictions: Enrollment is limited to Graduate level students.

PMK 625 Pharmaceutical R&D (3 credits)

Traditionally the scientific and commercialization activities within pharmaceutical companies have existed as separate entities with varying relationships related to information sharing and integration of business strategy into the drug development and approval process. Enhanced linkage/collaboration between these two functions can lead to a competitive advantage as it relates to the attainment of the overall corporate research and commercial strategic objectives necessary for improving the business, marketing planning, and commercialization.

Restrictions: Enrollment is limited to Graduate level students.

PMK 630 Healthcare Marketing Analytics (3 credits)

In this course you will be taught the fundamental steps involved in the healthcare marketing research process. The course will expose you to the healthcare marketing research process using both primary and secondary data sources. Short case studies will be analyzed from the pharmaceutical, medical device, diagnostics and healthcare delivery industries. Special attention will be provided to several syndicate data sources. The course will also cover topics including problem definition, research objectives, research design, data analysis, interpretation of results and report development. Several advanced analytical techniques will be introduced as part of the course. This course can be beneficial to beginners in healthcare marketing research and to the users of marketing research information for decision-making.

PMK 640 Pharmacoeconomics (3 credits)

This course reviews the principal concepts of economics and the history and development of health economics. Additionally, it emphasizes the application and value of health economic studies through the use of examples from the pharmaceutical, biologic, medical device and diagnostic industries.

Prerequisites: MKT 501 and (MKT 550 or PMK 600)

Restrictions: Enrollment is limited to Graduate level students.

PMK 651 Life Sciences Promotion (3 credits)

This course provides students with a comprehensive framework and tools to understand the modern-day promotional process and the ever-changing digital media landscape. The students will learn about current industry trends, the role of brand manager, understanding the agency-client relationships, uncovering insights, utilizing data and technology, brand positioning, creative strategy, developing big ideas, social media, integrated production, and communications planning. Classes will be a combination real-world examples from the life sciences industry (pharma, biotech, MedTech etc.) Coursework involves a comprehensive group project that fosters learning in all functional areas of promotions, while simulating the development of an integrated marketing communication plan.

Restrictions: Enrollment is limited to Graduate level students.

PMK 660 Coding Coverage Reimbursement (3 credits)

The course provides information to help a healthcare professional understand how to run their practice as a business in the U.S. Background of coding systems to include ICD-10 and CPT, will be introduced along with case scenarios that reveal how a coding system links a procedure or product to the different reimbursement systems, such as Medicare and Medicaid, to get payment.

Prerequisites: MKT 550 or PMK 600

Restrictions: Enrollment is limited to Graduate level students.

PMK 665 Sales Management (3 credits)

This course covers the concepts and applies the theories associated with managing a sales force. Specifically, the course is designed to help students learn sales management concepts and how to apply them to solve business problems in the pharmaceutical industry. We will focus on the activities of first-line field sales managers. To function effectively as managers, students must know how salespeople perform their jobs. With this in mind, we will cover personal selling, account relationships, territory management, and sales ethics with special emphasis on current issues of managing strategic account relationships, team development, and diversity in the work force, sales force automation and ethical issues.

Restrictions: Enrollment is limited to Graduate level students.

PMK 670 Pricing in Healthcare Industry (3 credits)

This course examines how manufacturers of pharmaceuticals, medical devices, diagnostic and biologics set prices for their products as well as investigates the legal and policy ramifications of pricing.

Prerequisites: MKT 550 or PMK 600

Restrictions: Enrollment is limited to Graduate level students.

PMK 680 Healthcare Strategic Management (3 credits)

This course focuses on product/service decisions by an organization from the perspective of managers for healthcare services and new and established products and established brands. The course will also provide the framework for conducting strategic planning and execution based on marketing intelligence derived from market research. The strategic choices across different stages of the product of service life cycle will also be reviewed.

Prerequisites: PMK 600 or MKT 550

PMK 700 Managed Market Access (3 credits)

The objectives of this course are to understand the dynamics and trends of the evolving healthcare system, to review managed care's impact on pharmaceutical marketing and to develop strategies for success with the managed care customer. Students will learn to assess managed healthcare market segments, to determine the needs of this customer, and to identify the potential business opportunities for their company's brands.

Restrictions: Enrollment is limited to Graduate level students.

PMK 720 Global Healthcare Markets (3 credits)

This course focuses on the management of multinational corporations (MNCs) with particular emphasis on Pharmaceutical and/or medical device companies operating across different nations. The international environment implies greater opportunities as MNCs have access to a wider variety of markets and resources but this environment also implies greater organizational and managerial challenges. The aim of this course is to investigate whether these challenges are worth it and how they can contribute to a company's "double" bottom line.

Restrictions: Enrollment is limited to Graduate level students.

PMK 770 Independent Study (3 credits)

This course is designed to accommodate those students who have an interest in a research-worthy topic that can be examined on an independent research basis. The student will work closely with a professor on a research area that will require the identification of a topic, a literature review, appropriate methodology, and analysis.

Restrictions: Enrollment is limited to Graduate level students.

PMK 780 Future Issues (3 credits)

This course will be periodically offered to cover a variety of different topics that are timely, significant or contemporary. Each time the course is offered it will focus on a different topic specific to healthcare, biotechnology or pharmaceutical marketing. Examples of course topics include Obesity, New Product Launch, and the impact of Healthcare Reform on industry stakeholders.

Restrictions: Enrollment is limited to Graduate level students.

PMK 795 Capstone (3 credits)

This integrative course is designed to permit students, near the end of the course of study, to integrate the knowledge from their previous courses. Also, this capstone course is intended to give students the opportunity to demonstrate the application of the concepts learned during their tenure in the program.

Restrictions: Enrollment is limited to Graduate level students.

Pharmaceutical Sciences (PHS)

PHS 150 First Year Seminar (3 credits)

This first year Pharmaceutical Sciences seminar course will allow students to explore the history of medication and pharmacy (from "poisons" to drugs) and learn about pharmaceutical companies and rapid advances in the field. Through fun and engaging debates around ethical and social issues attached to a rapidly evolving field of biomedical research and healthcare, students will engage and communicate effectively through written and oral modes of expression and learn to apply principles of cooperative and efficient teamwork while learning to develop academic success strategies to become successful scientist in the Pharmaceutical Industry and beyond. Students will also attend presentations by experts from pharmaceutical industries or biomedical professions and by our own program faculty on their research programs.

Attributes: First-Year Seminar, Undergraduate

PHS 151 Science Talk Seminar (0 credits)

This course is a seminar that engages students with faculty and experts in the field of Pharmaceutical Sciences by allowing the students to research the field of research of their faculty or scientist match and give a detailed presentation on the subject and person. The result will be seminar presentations driven by students and will introduce the importance of networking in the field of Pharmaceutical Sciences which is build to advance quickly through these important communications amongst scientists.

Attributes: Undergraduate

PHS 203 Pharm Sciences Orientation II (1 credit)

"The course introduces students to the different steps in the new drug development process and familiarizes them with FDA regulations pertaining to each of these steps."

PHS 303 Pharma & Biopharmaceutics I (3 credits)

Provides the physicochemical and pharmaceutical principles for understanding the development, behavior, preparation, and stability of pharmaceutical dosage forms and drug delivery systems.

PHS 303L Pharmaceutics Laboratory (1 credit)

PHS 304 Intro Drug Discovery & Dev (3 credits)

This course will allow students to gain insight into the process of drug discovery and development. By interacting with different experts in the field of drug discovery and development, students will learn about the steps to drug discovery including new target identification, selection and validation, screening of potential candidates, us virtual reality technology (VR) to experience receptor-ligand interactions in 3 dimensional space, understanding the formulation process, packaging and delivery of new drugs and finally being exposed to to the important regulatory aspects of the drug discovery process and how it applies to taking novel discoveries to clinic and patients.

Attributes: Undergraduate

PHS 306 Research Techniques in PHS (3 credits)

The course will familiarize students with research techniques including chromatography, dissolution, electrophoresis, protein assays, and cell culture as it applies to the field of Pharmaceutical Sciences

Attributes: Undergraduate

PHS 309 Pharm-Biopharmaceutics II (3 credits)

Study of the fundamental principles of rate processes and their application to predicting and computing the rate of drugdissolution, absorption, distribution, metabolism, elimination, and pharmacological action.

Attributes: Undergraduate

PHS 317 Pharm-Biopharmaceutics II (4 credits)

Study of the fundamental principles of rate processes and their application to predicting and computing the rate of drugdissolution, absorption, distribution, metabolism, elimination, and pharmacological action.

Attributes: Undergraduate

PHS 391 Pharm Sciences Seminar I (1 credit)

PHS 400 Cosmetic Science (2 credits)

PHS 400L Cosmetics Laboratory (2 credits)

PHS 402 Controlled-Release Dosage Form (2 credits)

PHS 404 Pharm Sciences Seminar II (1 credit)

PHS 414 Advanced Pharma Analysis (1 credit)

This course explores in depth of all major analytical instruments utilized in Pharmaceutical Industry, especially those that can be utilized for specialized and precise characterization during drug discovery and development. This course will help prepare students to be trained on these instruments in the lab.

Attributes: Undergraduate

PHS 414L Advanced Pharma Analysis Lab (2 credits)

This course provides hands on training on all major analytical instruments in the laboratory utilized in pharmaceutical industry, especially those that provide specialized and precise characterization during drug discovery and development processes.

Attributes: Undergraduate

PHS 450 Manufacturing Pharmacy (2 credits)

PHS 450L Manufacturing Pharmacy Lab (1 credit)

PHS 495 Analysis of Current Literature (1-3 credits)

PHS 702 Controlled-Release Dosage Form (2 credits)

PHS 703 Pharma & Biopharmaceutics I (3 credits)

Provides the physicochemical and pharmaceutical principles for understanding the development, behavior, preparation, and stability of pharmaceutical dosage forms and drug delivery systems.

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

PHS 703L Pharmaceutics Laboratory (1 credit)

PHS 704 Intro Drug Discovery & Dev (3 credits)

This course will allow students to gain insight into the process of drug discovery and development. By interacting with different experts in the field of drug discovery and development, students will learn about the steps to drug discovery including new target identification, selection and validation, screening of potential candidates, us virtual reality technology (VR) to experience receptor-ligand interactions in 3 dimensional space, understanding the formulation process, packaging and delivery of new drugs and finally being exposed to to the important regulatory aspects of the drug discovery process and how it applies to taking novel discoveries to clinic and patients.

Attributes: Doctoral

PHS 709 Pharm-Biopharmaceutics II (3 credits)

Study of the fundamental principles of rate processes and their application to predicting and computing the rate of drugdissolution, absorption, distribution, metabolism, elimination, and pharmacological action.

Attributes: Doctoral

PHS 714 Advanced Pharma Analysis (1 credit)

This course explores in depth of all major analytical instruments utilized in Pharmaceutical Industry, especially those that can be utilized for specialized and precise characterization during drug discovery and development in the Pharmaceutical Industry. This course is the pre-lab that will help prepare students to be trained on these instruments in the lab.

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

Attributes: Doctoral

PHS 714L Advanced Pharma Analysis Lab (2 credits)

This course provides hands on training on all major analytical instruments in the laboratory utilized in pharmaceutical industry, especially those that provide specialized and precise characterization during drug discovery and development processes. This course is a lab.

Attributes: Doctoral

PHS 717 Pharm-Biopharmaceutics II (4 credits)

Study of the fundamental principles of rate processes and their application to predicting and computing the rate of drug dissolution, absorption, distribution, metabolism, elimination, and pharmacological action.

PHS 750 Advanced Pharmaceutics (4 credits)**PHS 751 Advanced Pharmaceutics (3 credits)**

This course presents the areas of pharmaceutical sciences and drug delivery at an advanced level. The topics include physical properties of drugs, ionic equilibria, solubility and related phenomena, drug diffusion and permeability, drug stability, interfacial phenomena, colloids, micromeritics, drug dissolution, and biomaterials.

PHS 760 Reg Issues in Pharma (2 credits)

This course covers in depth the various steps in the process of filing drug approval applications.

Restrictions: Enrollment is limited to Graduate level students.

PHS 761 Pharmaceutical Product Dev (3 credits)

This course focuses on the process of drug development from laboratory to scale-up.

Prerequisites: PHS 703

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

PHS 762 Pre-formulation and Phys Pharm (3 credits)

This is an introductory course in the study of pharmaceutical materials for their physico-chemical properties as they pertain to the development of formulations.

Prerequisites: PHS 703

PHS 763 Res Proj in Drug Dev & Ind Pha (3 credits)

An advanced level research project in a selected area of drug delivery systems.

Prerequisites: PHS 761

PHS 799 Master's Research (1-10 credits)**PHS 811 Drug Diffusion and Controlled (2 credits)****PHS 813 Design of Experiments (2 credits)****PHS 851 Advanced Pharmaceutics (3 credits)**

This course presents the areas of pharmaceutical sciences and drug delivery at an advanced level. The topics include physical properties of drugs, ionic equilibria, solubility and related phenomena, drug diffusion and permeability, drug stability, interfacial phenomena, colloids, micromeritics, drug dissolution, and biomaterials.

Attributes: Doctoral

PHS 860 Reg Issues in Pharma (2 credits)

This course covers in depth the various steps in the process of filing drug approval applications.

Restrictions: Enrollment is limited to Doctoral level students.

PHS 875 Drug Dynamics (3 credits)**PHS 880 Pharmaceutical Polymers (3 credits)****PHS 890 Pharmaceutics Seminar (1 credit)****PHS 895 Analysis of Current Literature (2 credits)****PHS 897 Research in Pharmaceutics (3 credits)****PHS 899 Doctoral Research (10 credits)**

Pharmacology (PHT)

PHT 282 Pharmacology/Toxicology Orient (1 credit)

Introduction to research literature in pharmacology/toxicology.

PHT 305 Fundamentals of Pharmacology (3 credits)

Basic principles and therapeutic approaches to the treatment of diseases. Students will be introduced to the role and actions of drugs and their classes as they relate to biological receptors, disease, health, and body systems.

PHT 306 Biomethods in Pharmac & Tox (3 credits)

Survey of biological methods employed in pharmacology and toxicology to assess efficacy and safety of drugs and chemicals. Experiments are designed to illustrate pharmacological principles and to detect and evaluate potential local and systemic toxicities.

PHT 307 Introduction to Toxicology (2 credits)

"his course introduces the basic principles of the effects of toxic substances on biological systems, including consideration of the history, scope, and applications of toxicology, toxicant exposure, the mechanisms of toxic action, some major types of toxicants, and fundamental methods of toxicology studies. Students will apply the basic principles of toxicology to evaluate the safety risks in preclinical, environmental, and forensic studies and practices

PHT 320 Techniques in Pharmacol & Tox (2 credits)

A laboratory course designed to familiarize students with standard methodology used to assess drug and chemical safety.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

PHT 324 Pharmacology & Toxicology Sem (1 credit)

Presentation by students and discussion of primary scientific literature in pharmacology and toxicology by students and faculty.

PHT 340 Intro Neuropsychopharmacology (3 credits)

This course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in neurologic and psychiatric disorders.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

PHT 350 Toxicology of Drug Abuse (2 credits)

This course will consider the toxicity of deliberately ingested, inhaled, injected materials that are used to alter the psychological state. The course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in Addiction. No prior courses in pharmacology are required.

PHT 395 Research Experience (1-4 credits)

this course is a research opportunity for students to work with a faculty mentor (or faculty's lab team members) to gain insight and skills in research literature interpretation, hypothesis testing, laboratory measures, and data analysis. The course is pass/fail, with specific objectives and expectations agreed upon by mentor and students, and can be taken multiple times.

PHT 403 Advanced Toxicology (3 credits)

This course introduces the biochemical, genetic, cellular basis of cytotoxicity. Based on this knowledge, the course will study the toxic effects and their underlying mechanisms in different organ systems (e.g., liver, kidney, lung, eye, immunity, endocrine, and reproductive system). *Restrictions:* Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

PHT 404 Pharmacology&Toxicology Sem II (1 credit)

Formal science-based presentations by students using primary scientific literature.

PHT 407 Applied Toxicology (3 credits)

This course considers topics related to organ-specific pathology and applications of clinical toxicology. Applied topics will mostly focus on substance use disorders-related toxicity, which is impacting lives worldwide. This course focuses on the toxicity of deliberately ingested, inhaled, injected materials that are used to alter the psychological state. The course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in Addiction. The course will provide a working knowledge of toxicology principles that impact specific disease states and therapy. No prior courses in pharmacology are required.

Attributes: Undergraduate

PHT 421 Advanced Medicinal Chem/Pharm (4 credits)

This course will introduce concepts involved in drug actions in the body. Principles of medicinal chemistry, pharmacokinetics, pharmacodynamics and pharmacogenomics will be explored from a theoretical standpoint with integration of chemical and biological principles.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

PHT 440 Drug Disc Neurodegenerative (3 credits)**PHT 450 Analysis of Publications (1-3 credits)**

The purpose of this course is to use the information learned from retracted scientific papers in the medical/pharmaceutical field to teach many aspects of scientific publication. The class will discuss the specific reasons for the retractions, for example, errors in data, plagiarism, or fraudulent data including manipulated photo images. Using data from subsequent publications that led to the particular retraction, we will analyze the original data in terms of the rigor of statistics, reproducibility, and hints of data manipulation. We will also analyze the impact of the retracted papers on the scientific concepts and to public health. A retracted paper means that the particular data no longer exist in the literature; therefore in this course, we will discuss the ethics and responsibility of authorship, including coauthors. We will also discuss the process of scientific publication and the peer review process that varies widely among journals. Examples of the adverse consequences of retracted papers to medical science, to the biomedical community, and to the public at large will be given in class and discussed in terms of the responsibility of scientists and the ethics in scientific publications. For students electing to receive a letter grade in the course, two written assignments will be required.

Attributes: Undergraduate

PHT 460 Toxicology of Drug Abuse (3 credits)

This course will consider the toxicity of deliberately ingested, inhaled, injected materials that are used to alter the psychological state. The course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in Addiction.

Attributes: Undergraduate

PHT 470 Special Topics Pharmacology (4 credits)

This course will describe pharmacological classes of therapeutic agents with emphasis on mechanisms of actions at the cellular and organ levels. Students will also participate in interactive learning related to special topics in pharmacology.

Attributes: Undergraduate

PHT 471 Special Topics in Toxicology (3 credits)

This course considers special topics related to organ-specific pathology and applications of clinical toxicology. Special topics may include substance use disorders, cancer therapeutics, immunotherapy, nanotherapy, and the toxicology of medical devices. The course will provide a working knowledge of toxicology principles that impact specific disease states and therapy.

PHT 495 Independent Research Project (1-4 credits)

"This course is a research opportunity for students to work with a faculty mentor (or faculty's lab team members) to gain insight and skills in research literature interpretation, hypothesis testing, laboratory measures, and data analysis, as well as research summarization and conclusion generation, with poster preparation and data presentation to a broad audience. Faculty mentor and student should agree upon the specific objectives and expectations for the course at the beginning of the course; usually the course will follow one or more PC 395 courses, with the added course requirement here for preparation and presentation of data at a local or regional science meeting. This course can be taken multiple times."

PHT 703 Advanced Toxicology (3 credits)

This course introduces the biochemical, genetic, cellular basis of cytotoxicity. Based on this knowledge, the course will study the toxic effects and their underlying mechanisms in different organ systems (e.g., liver, kidney, lung, eye, immunity, endocrine, and reproductive system).

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

PHT 707 Applied Toxicology (3 credits)

This course considers topics related to organ-specific pathology and applications of clinical toxicology. Applied topics will mostly focus on substance use disorders-related toxicity, which is impacting lives worldwide. This course focuses on the toxicity of deliberately ingested, inhaled, injected materials that are used to alter the psychological state. The course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in Addiction. The course will provide a working knowledge of toxicology principles that impact specific disease states and therapy.

Restrictions: Enrollment is limited to Graduate level students.

PHT 721 Advanced Medicinal Chem/Pharm (4 credits)

This course will introduce concepts involved in drug actions in the body. Principles of medicinal chemistry, pharmacokinetics, pharmacodynamics and pharmacogenomics will be explored from a theoretical standpoint with integration of chemical and biological principles.

Restrictions: Enrollment is limited to Graduate level students.

PHT 740 Drug Disc Neurodegenerative (3 credits)

The goal of this course is to examine the drug discovery process with focus on neurodegenerative disorders. Using Alzheimer's disease for illustration, we will examine diagnosis, epidemiology, current therapeutics, strategies for drug discovery (amyloid hypothesis, tau, apo E, insulin, and various receptors) in vitro and in vivo disease models. We will examine the in vivo models to see how well they simulate the disease and thus how reliable they may be in translational studies. Although the focus of the course is on preclinical studies, we will examine how some of the compounds that have done well in preclinical studies have fared in clinical studies thus illustrating challenges in this field.

Restrictions: Enrollment is limited to Graduate level students.

PHT 750 Research Ethics and Conduct (3 credits)

"This course discusses research ethics and publication ethics and delves into data manipulations, including image manipulation, statistical manipulation such as p-hacking. The course uses retracted literature that are known to contain errors or manipulated data, and failed to be reproduced by other scientists. This course discusses the adverse consequences of retracted papers to medical science, to the biomedical community and to the public at large and focuses on the responsibility of scientists and the ethics in scientific publications as an author or co-author. The course is entirely online. There will be 5 modules of different topics."

PHT 752 Intro Scientific Data Analysis (1 credit)

The course is designed to give an introduction to the important maxim of "truth" in science. The foundation of science is the data that form the basis of hypothesis must be verifiable. Errors in science do occur and can lead to retraction, that leads to the concept of science being a self-correcting process. In this introductory course, we use retracted literature (from both basic research and clinical research) to teach students how to analyze data. Retracted literature are known to be due to errors or manipulated data, many are highly cited papers and published in high impact journals. In this course we will discuss the source of errors, for example in image manipulation, interpretation of statistical p-value. We will also discuss the ethics in conducting research. As an introductory course, this course can be taken as a "stand alone" course as well as in conjunction with the existing PHT750 courses to satisfy students who need 3-credit electives.

Restrictions: Enrollment is limited to Doctoral level students.

PHT 770 Special Topics in Pharmacology (4 credits)

This course will describe pharmacological classes of therapeutic agents with emphasis on mechanisms of actions at the cellular and organ levels. Students will also participate in interactive learning related to special topics in pharmacology.

Restrictions: Enrollment is limited to Doctoral level students.

PHT 799 Master's Research (1-10 credits)

"Candidates for the master of science degree complete an independent research project, equivalent to at least 10 research credits, under the direction of an Advisory Committee of graduate faculty."

PHT 801 Research Lit in Pharm/Tox (1 credit)

"Weekly presentations by graduate students and faculty on current research papers from journals relevant to the fields of pharmacology and toxicology, followed by group discussion. Attendance and active participation are required during fall and spring semesters."

PHT 807 Applied Toxicology (3 credits)

This course considers topics related to organ-specific pathology and applications of clinical toxicology. Applied topics will mostly focus on substance use disorders-related toxicity, which is impacting lives worldwide. This course focuses on the toxicity of deliberately ingested, inhaled, injected materials that are used to alter the psychological state. The course will provide a working knowledge of the neurobiological and neurochemical basis of behavior and the mechanism by which drugs influence synaptic neurotransmission to alter behavior and function in Addiction. The course will provide a working knowledge of toxicology principles that impact specific disease states and therapy.

Restrictions: Enrollment is limited to Doctoral level students.

PHT 810 Research in Pharm and Tox (3 credits)**PHT 811 Research Techniques Laboratory (1-3 credits)**

"During the first year of enrollment, each student satisfactorily completes an experiential rotation through the research laboratories of at least two departmental graduate faculty and selects a primary research topic."

PHT 821 Molecular Pharmacology (3 credits)

"This is an advanced pharmacology course with a focus on cell signal transduction. Major mammalian signaling pathways will be reviewed and how therapeutics, especially anticancer therapeutics, perturb these signaling pathways for therapeutic purposes will be discussed. Instructors will provide appropriate recent review and research papers to the class. Students are required to read these papers and actively participate in class discussion. Students are also required to write a mock research proposal and present it in class."

PHT 840 Drug Disc Neurodegenerative (3 credits)

The goal of this course is to examine the drug discovery process with focus on neurodegenerative disorders. Using Alzheimer's disease for illustration, we will examine diagnosis, epidemiology, current therapeutics, strategies for drug discovery (amyloid hypothesis, tau, apo E, insulin, and various receptors) in vitro and in vivo disease models. We will examine the in vivo models to see how well they simulate the disease and thus how reliable they may be in translational studies. Although the focus of the course is on preclinical studies, we will examine how some of the compounds that have done well in preclinical studies have fared in clinical studies thus illustrating challenges in this field.

Restrictions: Enrollment is limited to Doctoral level students.

Attributes: Doctoral

PHT 851 Drug Discovery & Development (3 credits)

"This is an advanced 3-credit course of pharmacology & toxicology focusing on drug discovery & development. The primary objective of this course is to provide students with an in-depth knowledge about the major steps involved in drug discovery and development with real examples. The course will cover all major stages for advancing a molecule from the pre-clinical space into clinical FIH (First in Human) trials. These include target identification and validation, screening and selection of appropriate targeting molecules, non-clinical safety assessment, PK/PD modeling, clinical trial design, FIH dose calculation and efficacy assessment, et al. In addition to the didactic teaching, students will be assigned with a group project to use the knowledge they have learned to solve problems in drug discovery and development. After completing the course, students will have a deep understanding and practical knowledge of how pharmaceutical industry develops small molecule chemicals and biological macromolecules to become life-saving medicines."

PHT 880 Pharm Tox Seminar (1 credit)

"Reports on current research topics by guest scientists, departmental faculty, and graduate students, followed by group discussion. Attendance and participation are required during fall and spring semesters."

PHT 899 Doctoral Research (10 credits)

"Candidates for the doctor of philosophy degree fulfill their thesis-directed research requirement, equivalent to at least 20 research credits, under the supervision of an Advisory Committee of graduate faculty."

Pharmacy (PRX)

PRX 301 Extrinsic Summative AR I (1 credit)

Extrinsic Summative Assessment and Reassessments (ESAR) are authentic assessments which provide relevance and purpose to learning. Activities and assessments are designed to reveal information to students about how well they retain, transfer, and apply knowledge and skills learned in the first professional year with the goal of competence in real world settings. Students are provided the opportunity for individualized learning support and reassessment if necessary.

PRX 302 Professional Orientation (2 credits)

This course module provides an introduction to the goals and expectations for student pharmacists entering the professional phase of the PharmD program. Health-related pre-requisites and anatomy/physiology knowledge will be assessed, and the personal and professional development expectations for success will be introduced, including emotional intelligence, team building, professional attire/attitudes/behaviors, relationship building, and professionalism.

PRX 305 Foundations of Clinical Immuno (3 credits)

This module provides a foundation in human immune system components as applied to vaccine design, immunotherapies and biologies. Discussion will emphasize combating infectious disease, cancer, autoimmunity, and allergic responses.

PRX 316 Practice Skills/Prof Behavior1 (4 credits)

This module introduces the skills necessary for patient engagement and interaction, emphasis is on the role of the pharmacist, Pharmacists' Patient Care Process, communication (verbal and written), professionalism and ethics.

PRX 325 Medication Use Systems 1 (3 credits)

This module provides an introduction to the principles and processes involved in medication acquisition/procurement, storage, prescribing/ordering, dispensing, including handling of controlled substances, utilization of medication safety information, documentation, health insurance payments systems and health informatics. The overall goal is for student pharmacist to demonstrate knowledge of these processes and to be able to process a non-complicated prescription for payment in both community and institutional pharmacy environments.

PRX 330 Foundations of Biomedical Sci (4 credits)

A foundation in the structure, properties, biological functions, bioenergetics, and metabolic fate of macromolecules essential to life (i.e. proteins, lipids, carbohydrates, and nucleic acids), the impact of molecular genetics on these processes; also, application of these concepts to human disease, drug therapy and rational drug design strategies.

PRX 340 Foundations of Pharm Sci 1 (3 credits)

This module provides an introduction to medicinal chemistry, pharmaceuticals, compounding and pharmaceutical calculations. Medicinal chemistry focuses on the in vitro and in vivo chemical basis of drug action including their physico-chemical properties, structure activity relationships and receptor binding and metabolism. Pharmaceuticals focuses on the principles and applications of dosage forms. Mathematical skills to accurately prepare prescriptions, including extemporaneously compounded dosage forms are included.

PRX 345 Foundations of Pharm Sci 2 (3 credits)

This module continues with an understanding of the principles and applications of physico-chemical properties of drugs for safe and effective drug delivery. Pharmacodynamics and basic pharmacokinetics with calculations are emphasized in order to provide a thorough understanding of the mechanisms (absorption, distribution, metabolism and elimination) involved in therapeutic and adverse drug actions. Selection of appropriate dosage forms that minimize adverse effects/toxicity are covered.

PRX 350 iPSDT 1:DiseasePrev & SelfCare (3 credits)

This module is the first of the 14 iPSDT modules which integrate the application of the pharmacy sciences, including medicinal chemistry, pharmacology, and pharmaceuticals specific disease states and therapeutic decision-making. This module focuses on the principles that underlie disease pathogenesis and self-care pharmacotherapy.

PRX 355 iPSDT 2: Cardiovascular 1 (3 credits)

The Cardiovascular 1 module is first of two modules focused on the cardiovascular system. It focuses on the application of the pharmacy sciences, including medicinal chemistry, pharmacology and pharmaceuticals to cardiovascular diseases and therapeutic decision-making. The module encompasses the epidemiology, etiology, pathophysiology, prevention, pharmacologic and nonpharmacologic treatment and self-care of cardiovascular medical conditions. Included are complementary and alternative therapies.

PRX 365 iPSDT 3: Pulmonary (3 credits)

The Pulmonary module focuses on the application of the pharmacy sciences, including medicinal chemistry, pharmacology, and pharmaceuticals to pulmonary diseases and therapeutic decision-making. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and nonpharmacologic treatment, and self-care of pulmonary medical conditions. Included are complementary and alternative therapies.

PRX 380 IPPE-1: Service Learning 1 (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. The focus of this course is a preceptor-directed experience in service learning and community pharmacy practice. Students will be assigned a service learning and community pharmacy site. Students will observe and be engaged in the following foundational components under preceptor supervision: medication use system, patient and healthcare practitioner communications, patient counseling, self-care triage, and patient care activities. Students will also be involved in professional pharmacy organizations, community service, and advocacy.

PRX 390 IPPE-2: Service Learning 2 (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. This course is a continuation of PRX380 and is a preceptor-directed experience in service learning and community pharmacy practice. Students will be assigned a service learning and community pharmacy site. Students will demonstrate competency in the following components under preceptor supervision: medication use system, patient and healthcare practitioner communications, patient counseling, self-care triage, and patient care activities. Students will also be involved in professional pharmacy organizations, community service, and advocacy.

PRX 401 Extrinsic Summative AR 2 (1 credit)

Extrinsic Summative Assessment and Reassessments (ESAR) are authentic assessments which provide relevance and purpose to learning. Activities and assessments are designed to reveal information to students about how well they retain, transfer, and apply knowledge and skills learned through the first and second professional years with the goal of competence in real world settings. Students are provided the opportunity for individualized learning support and reassessment if necessary.

PRX 415 Fndtns Healthcare Policy/Law (3 credits)

This module provides an introduction to the principles of pharmacy law and ethics, healthcare policies, medication payer functions, economic theories and their application to pharmacoeconomics, drug selection, and health coverage laws.

Attributes: Ethics Intensive, Undergraduate

PRX 420 Practice Skills/Prof Behavior2 (3 credits)

This module enhances the skills necessary for patient engagement and interactions. Emphasis is on the role of the pharmacist, Pharmacist's Patient Care Process, communication (verbal and written), and professionalism and ethics.

PRX 425 Medication Use Systems 2 (3 credits)

This modular course provides thorough coverage of medication acquisition/procurement, storage, prescribing/ordering, and dispensing processes in addition to applications of non-sterile and sterile compounding techniques, inventory control, adverse drug events, and hazardous waste handling and disposal processes. The overall goal is for student pharmacists to demonstrate appropriate utilization and documentation of medication procurement, distribution and dispensing in both community and institutional pharmacy environments.

PRX 430 Health Info Retrieval & Eval (3 credits)

This module provides the foundational knowledge and skills related to identifying types of literature and health information sources and determining the appropriateness of the source and the content for purposes of providing information to healthcare providers and a lay audience. An understanding of the hierarchy of health information sources and literature will allow the selection of appropriate sources and the development of written and verbal health information sources.

PRX 435 Lit Eval & Evidence-Based Med (3 credits)

This module builds upon the foundations established in RX430, and focuses on primary literature and its application to populations as well as to specific patient situations or questions. The main emphasis is the selection and comprehensive critical evaluation of clinical trials and the appropriate use of available results to develop recommendations for population-based scenarios or patient-specific scenarios. In addition, the literature will be utilized to develop professional oral presentations with written deliverables.

Prerequisites: ENG 101 or WR 101

Attributes: Undergraduate, Writing Intensive Course- GEP

PRX 440 Foundations of Pharm Sci 3 (3 credits)

This module further elaborates the application of physico-chemical properties of drugs to ensure safe, effective and targeted drug delivery. The impact of cutting edge biotechnology, pharmacogenic/ pharmacogenomic parameters, (and manufacturing, specialized compounding) to personalized medication delivery and minimize adverse effects/toxicity will be covered.

PRX 452 iPSDT 4: Cardiovascular 2 (3 credits)

The Cardiovascular 2 module is the second of two modules focused on the cardiovascular system. It focuses on the application of the pharmacy sciences, including medicinal chemistry, pharmacology and pharmaceuticals to cardiovascular diseases and therapeutic decision-making. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and nonpharmacologic treatment, and self-care of medical conditions over the life cycle. Included are complementary and alternative therapies.

PRX 454 iPSDT 5: Renal/Hepatic (3 credits)

The renal/hepatic module of the iPSDT series focuses on the application of pharmacy sciences, including medicinal chemistry, pharmacology, and pharmaceuticals, to disease states and therapeutic decision-making in relation to renal and hepatic function. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and nonpharmacologic treatment, and self care.

PRX 455 iPSDT 6: Endocrine/Reproductiv (3 credits)

The endocrine and reproductive systems module of the iPSDT series focuses on the application of the pharmacy sciences, including medicinal chemistry, pharmacology, and pharmaceuticals to disease states and therapeutic decision-making. This series encompasses the prevention and management of uncomplicated to complex medical conditions over the life cycle. Included are self-care pharmacotherapy, as well as natural products, dietary supplements, and alternative and complementary therapies. As part of this course, students will complete a training certificate program, such as American Pharmacists Association's The Pharmacist and Patient-Centered Diabetes Care Certificate.

PRX 457 iPSDT 7: Infectious Disease 1 (3 credits)

This is the first of three modules focusing on infectious diseases. The overarching objectives are to associate proper antibiotics (type and dosage) to bacterial infections and to identify main side effects and drug-drug interactions. This module will also allow the student to apply and integrate their knowledge by associating therapeutic dosages, side effects and resistance to antibiotics and mechanisms of actions at the pharmacological level.

PRX 480 IPPE 3: Adv Comm/Ambul Care (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. The focus of this course is a preceptor directed experience in advanced community pharmacy practice and ambulatory care. Students will observe and be engaged in the following components under an assigned community/ambulatory preceptor: operations, patient and healthcare practitioner communications, patient counseling, self-care triage, and patient care activities including medication therapy management and immunizations.

PRX 490 IPPE 4: Institutional Pharmacy (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. The focus of this course is directed student exposure to pharmacist practice roles in the institutional pharmacy practice setting. Students will observe and be engaged in the following components under the supervision of an assigned institutional pharmacist preceptor: the medication use system, operations, patient and/or healthcare practitioner communications.

PRX 501 Extrinsic Summative AR 3 (1 credit)

Extrinsic Summative Assessment and Reassessments (ESAR) are authentic assessments which provide relevance and purpose to learning. Activities and assessments are designed to reveal information to students about how well they retain, transfer, and apply knowledge and skills learned through the first, second, and third professional years with the goal of competence in real world settings. Students are provided the opportunity for individualized learning support and reassessment if necessary.

PRX 510 Applied Prof Behavior & Comm (2 credits)

This module focuses on complex communications with patients/caregivers and health care providers through both written and verbal skills using both formal and informal methods. Emphasis will be placed on professionalism, ethics, and leadership.

PRX 520 Entrepreneurship (1 credit)

This course is designed for student pharmacists to gain business acumen and pursue potential entrepreneurial endeavors. Additionally, this course will motivate student pharmacists to explore entrepreneurial opportunities and innovations in their profession.

PRX 530 iPSDT 8: Infectious Disease 2 (3 credits)

This is the second of three modules focusing on infectious diseases. The overarching objectives are to associate proper antimicrobial uses for various infections. Similar to module 1, this module will also focus on medication side effects and drug-drug interactions. Students will apply and integrate their knowledge by associating therapeutic dosages, side effects, pharmacokinetic and pharmacodynamic principles, and resistance to antimicrobial mechanisms of actions at the pharmacological level.

PRX 534 iPSDT 9: Central Nervous Sys 1 (3 credits)

This the first of two modules focused on the central nervous system. It emphasizes the application of the pharmacy sciences, including medicinal chemistry, pharmacology and pharmaceuticals to central nervous system diseases and therapeutic decision-making. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and non-pharmacologic treatment, and self-care of medical conditions over the life cycle. Included are complementary and alternative therapies.

PRX 538 iPSDT 10: Central Nervous Sys2 (3 credits)

This module focuses on the epidemiology, pathophysiology, and clinical presentation of selected mood disorders, anxiety disorders, thought/psychotic disorders, neurodevelopment disorders, sleep-wake disorders, and substance-related/addictive disorders. The pharmacology and relevant pharmacokinetics, indications, dosage and administration, and adverse effects of the available drugs and drug classes used in the treatment of these disorders will also be addressed. Students will also design evidence-based treatment and monitoring plans based on current treatment guidelines and literature.

PRX 543 iPSDT 11: GI/Nutrition (3 credits)

The Gastrointestinal/Nutrition module of the iPDST series focuses on the application of pharmacy sciences, including medicinal chemistry, pharmacology, and pharmaceuticals, to disease states and therapeutic decision-making in relation to gastrointestinal and nutritional disorders. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and non-pharmacologic treatment, and self care.

PRX 545 iPSDT 12: Imm/Musculoskel/Skin (3 credits)

The immune/musculoskeletal/skin module of the iPSDT series focuses on the application of pharmacy sciences, including medicinal chemistry, pharmacology, and pharmaceuticals, to disease states and therapeutic decision-making in relation to diseases involving the immune system, musculoskeletal system and the skin. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and non-pharmacologic treatment, and self care.

PRX 553 iPSDT 13: Hematology/Oncology (3 credits)

This module focuses on the hematologic and oncologic processes with application of the pharmacy sciences, including medicinal chemistry, pharmacology and pharmaceuticals to specific diseases and therapeutic decision-making. The module encompasses the etiology, pathophysiology, prevention, pharmacologic and nonpharmacologic treatment, and self-care of medical conditions over the life cycle. Included are complementary, and alternative therapies as well as supportive care treatment options.

PRX 555 iPSDT 14: Infectious Disease 3 (3 credits)

This is the third of three modules focusing on infectious diseases. The overarching objectives are to associate proper antimicrobial use for various infections. Similar to modules 1 and 2, this module will also focus on medication side effects and drug-drug interactions. Students will apply and integrate their knowledge by associating therapeutic dosages, side effects, pharmacokinetic and pharmacodynamic principles, and resistance to antimicrobials to mechanisms of actions at the pharmacological level.

PRX 570 Integrated Practice 1 (3 credits)

This is the first of two modules designed to simulate real life patient scenarios with multiple disease states and patient care settings. This module will also focus on the various skills including, but not limited to, professionalism, communication, health information retrieval, physical assessment, calculation, application of pharmacy sciences, diseases and therapeutic knowledge, and intra-and inter-professional team dynamics. Additionally, various pharmacy practice management consideration, such as regulatory, public health, formulary management, and ethics will be integrated throughout the course activities. Students will serve as peer educators through a series of seminar presentations.

PRX 575 Integrated Practice 2 (3 credits)

This is the second of two modules designed to simulate real life patient scenarios with multiple disease states and patient care settings. This module will also focus on the various skills including, but not limited to, professionalism, communication, health information retrieval, physical assessment, calculation, application of pharmacy sciences, diseases and therapeutic knowledge, and intra- and interprofessional team dynamics. Additionally, various pharmacy practice management considerations, such as regulatory, public health, formulary management, and ethics will be integrated throughout the course activities. Students will serve as peer educators through a series of seminar presentations.

PRX 580 IPPE 5: Adv Institutional Pharm (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. The focus of this course is directed student exposure to patient care responsibilities of institutional pharmacists. Students will be assigned an institutional pharmacist preceptor and will observe and be engaged in the following components under their supervision: direct patient care, interprofessional collaboration, applying drug knowledge, the medication use system, patient and/or healthcare practitioner communications.

PRX 590 IPPE 6: Patient Care Elective (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. The focus of this course is directed student exposure to patient care responsibilities of institutional, community, or ambulatory care pharmacists. Students will be assigned a pharmacist preceptor and will observe and be engaged in the following components under their supervision: direct patient care, applying drug knowledge, the medication use system, and patient and/or healthcare practitioner communities.

PRX 595 IPPE Patient Care Elective 2 (1 credit)

Introductory Pharmacy Practice Experiences (IPPEs) provides experiences that enhance and support didactic knowledge and skills. The focus of this course is directed student exposure to patient care responsibilities of institutional, community, or ambulatory care pharmacists. Students will be assigned a pharmacist preceptor and will observe and be engaged in the following components under their supervision: direct patient care, applying drug knowledge, the medication use system, and patient and/or healthcare practitioner communities.
Restrictions: Enrollment is limited to students with a major in Pharmacy.

PRX 610 APPE: Community Pharmacy (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance the knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Community Pharmacy Rotation, student pharmacists are engaged in patient-focused provision of pharmacy services in a community pharmacy. Students will provide patient counseling, OTC triage, medication therapy management, etc. under pharmacist supervision as part of an integrated community pharmacy service model.

PRX 618 Pharm Prof Dev & Enrichment (1 credit)

This course is intended to enrich student development and achievement during their APPE year and prepare students to successfully transition from their professional education to practice.

PRX 620 APPE: Ambulatory Care Pharm (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance the knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Ambulatory Care Rotation, student pharmacists are engaged in provision of patient care and acute/chronic drug therapy management in an outpatient practice setting.

PRX 630 APPE: Institutional Pharmacy (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance the knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Institutional Rotation, student pharmacists gain experience in how medications are managed in the institutional setting and how institution-based pharmacists oversee the approximate and safe use of medications including oversight of medication ordering, dispensing and administration, use of technology and information, and the development and use of formularies, drug policies, procedures and protocols.

PRX 640 APPE: Acute Patient Care (5 credits)

Advanced Pharmacy Practice Experience integrate, apply, reinforce, and advance the knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Acute Patient Care Rotation, student pharmacists are engaged in provision of patient care and medication management as part of an interprofessional in-patient based medical team under the supervision of a pharmacist preceptor. Examples of patient focus may include general medicine, critical care, oncology, cardiology, or infectious diseases.

PRX 650 APPE: Indir Patient Care Elec (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance the knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Indirect Patient Care Elective Rotation, student pharmacists are able to gain additional knowledge, skills, and experience in businesses, organizations, and pharmacist practices that do not directly engage patients. Common rotations include pharmaceutical industry, managed care, medical communications, management rotations in community and hospital pharmacy, professional organizations, nuclear pharmacy, law offices, and investigations drug services.

PRX 660 APPE: Patient Care Elective (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance the knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Patient Care Elective Rotation, student pharmacists are able to gain additional knowledge, skills, and experience in patient care/ pharmacy practice settings such as compounding pharmacy, long term care pharmacy, anticoagulation services, poison control centers, home IV infusion, etc.

PRX 670 APPE: Academic Elective (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Academia Elective Rotation, student pharmacists are able to gain additional knowledge, skills, and experience in academic pharmacy. Common experiences during this rotation may include: development of a teaching philosophy statement, creation of course learning activities and assessments, small/large group facilitation, exam proctoring, attending institutional meetings, and observation of various courses, among others.

PRX 680 APPE Research Elective (5 credits)

Advanced Pharmacy Practice Experiences integrate, apply, reinforce, and advance knowledge, skills, attitudes, abilities, and behaviors developed in the Pre-APPE curriculum and in co-curricular activities. During the APPE Research Elective Rotation, student pharmacists are able to gain additional knowledge, skills and experience in research methodology. Experiences may include any or all of the following: exposure to research study design, protocol development, preparation of material for submission to institutional review board (IRB), data collection, data analysis, and publication, among other research-related activities.

Pharmacy Practice (PHP)

PHP 309 Clinical Reasoning (2 credits)

Students are introduced to the concept and application of clinical reasoning. Clinical reasoning skills are developed through application of the clinical reasoning process during in-class case-based team activities.

PHP 310 Research Design (2 credits)

The appropriate design and application of major study types (surveys, interviews, experimental, naturalistic and participant observational, archival, and combined designs) and ethical issues and legal regulations for animal and human research are addressed. Students learn the knowledge and skills necessary to identify and select a suitable research question and develop an appropriate research protocol including data analysis techniques and budgeting.

PHP 321 Immunotherapies (1 credit)

The immunotherapies elective course focuses on mechanism of action, indications, drug administration and adverse effects of select new immunotherapies including immune checkpoint inhibitors, adoptive cellular therapy, dendritic cell vaccines, and non-cancer therapy monoclonal antibodies.

PHP 322 Labs & Diagnostic Tests (1 credit)

Students learn to assess, interpret, and apply common laboratory and diagnostic tests. Laboratory tests include complete blood count, the basic metabolic panel, arterial blood gas, and tests for cardiac and hepatic damage. Diagnostic tests include the electrocardiogram and chest imaging (chest X-ray, MRI, and CT).

PHP 327 Global Health Determinants (2 credits)

This elective course will introduce and discuss important topics in global health, focusing specifically on care of the underserved in a global context. Topics discussed will include health policy and economics, determinants of health, essential medicines, community-oriented primary care, refugee health, women's health, and climate change. In addition to readings and weekly discussion groups, students enrolled in this course will have the opportunity to gain valuable practice-based skills by working with partner agencies. These opportunities are designed to focus on current and future contributions of pharmacists to global health and the role of global health in pharmaceuticals and pharmacy practice.

PHP 339 Herbals, Supps & Nat Prods (1 credit)

Herbals, supplements, and natural products are commonly used by patients for a variety of health reasons, often alongside conventional medicine. Due to easy access, patients are often using these products without guidance on safety or efficacy. This course will prepare future pharmacists to critically evaluate available evidence on herbals, supplements, and natural products, and to use this information to counsel patients on their safe and effective use.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

PHP 340 Cultures & Therapeutics (2 credits)

Students are introduced to the cultural differences between the U.S. healthcare (Western) system and non-Western cultures. The course explores characteristics of non-Western cultures and potential strategies for managing pharmacotherapeutic issues with patients who have healthcare belief systems that differ from the U.S. healthcare cultural system.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

PHP 359 Intro to Pharma Industry (2 credits)

This course is designed for Doctor of Pharmacy students to provide an overview of the pharmaceutical industry, with a focus on the career options available to pharmacists. At the end of this course, the student will demonstrate skills that would be used in retrieving & evaluating medical literature to develop medical information documents that are geared for a global audience of healthcare professionals. In addition, the student will learn aspects of adverse event reporting, drug development and approval process, FDA regulations on product labeling and promotional advertising, and sales marketing.

PHP 422 Medication Therapy Mgmt Cert (1 credit)

This advanced MTM (Medication Therapy Management) certificate course will prepare student pharmacists to improve medication use through the delivery of MTM services in a variety of practice settings. At the conclusion of this course, students will have the opportunity to receive the "APhA Delivering Medication Therapy Management Services" certificate.

PHP 451 Adv Asthma Pharmacotherapy (3 credits)

This course is designed to provide an in-depth understanding of the pathophysiology of asthma and evidence-based asthma therapeutics, including the drug-delivery devices, patient assessment skills, and patient education skills.

PHP 495 Project in Pharmacy Practice (1-3 credits)

Opportunity for qualified students to carry out a project in pharmacy practice application or research under the direction of a pharmacy practice faculty member. Each student is required to prepare a report summarizing his/her objectives, progress, and conclusions.

PHP 508 Hospice & Palliative Care (2 credits)

Hospice is one of the fastest growing areas in healthcare today. Increasingly, healthcare professionals are relying on pharmacists to provide recommendations for the management of complicated symptoms at the end of life. The goal of this course is to prepare the pharmacy student to take an active role in the medical management of chronically and terminally ill patients. Students will gain an appreciation for various ethical, social, and legal issues that can impact healthcare provision at the end of life. Furthermore, students will discover the role of the pharmacist as it relates to the interdisciplinary setting of hospice and palliative care.

PHP 514 Psychiatric Illness Approaches (2 credits)

The purpose of the course is to provide an advanced lecture series on the major psychiatric disorders and related special topics with emphasis on psychopharmacologic treatment.

PHP 521 Adv Pulmonary Therapeutics (2 credits)

This course focuses on comprehensive evidence-based therapeutics of pulmonary medical diseases and/or conditions. Using team-based learning, students will gain knowledge of drug-induced lung disease, obstructive lung disease, interstitial and inflammatory lung disease, alveolar lung disease, disorders of the pulmonary circulation, disorders of the pleural space, lung neoplasms, and lung infections.

PHP 523 Ambulatory Care Pharm Practice (2 credits)

This advanced ambulatory care pharmacy practice course will prepare students for providing pharmacy services in primary care settings. Students will build knowledge of practice models and complex therapeutic disease states, improve verbal and written communication skills with patients and providers, and gain experience with utilizing an electronic medical record.

PHP 524 Care of the Geriatric Patient (2 credits)

Students are introduced to the interprofessional nature of geriatric patient care. Focus is placed on the care of geriatric patients from a variety of different health care perspectives using simulated patient cases to continue development of students' abilities in therapeutics, problem solving, and communication.

PHP 525 Cardiovasc Disease Risk Mgmt (2 credits)

The course will provide an in-depth understanding of the pathophysiology of cardiovascular disease, cardiovascular risk assessment, therapeutic lifestyle changes, and evidence based pharmacotherapy. This course will assist students to further develop their critical thinking, clinical decision-making, and patient/healthcare professional communication skills for managing patients with or at risk for cardiovascular disease. At the conclusion of this course, students will receive the APhA Pharmacy-Based CVD Risk Management Certificate.

PHP 529 Intro to Pediatric Pharm Pract (2 credits)

This course is designed to develop skills for the management of neonatal and pediatric drug-related challenges. Basic principles governing optimal drug therapy, such as drug delivery, pharmacokinetics, pharmacodynamics, and assessment of neonatal and pediatric patients will be reviewed. Selected pediatric dilemmas will be discussed with emphasis on medication safety and administration, pediatric resources, and dosing. Problem-solving and decision-making skills will be fostered through patient case presentations and discussions utilizing primary and tertiary resources.

PHP 541 Pharmacogenomics (2 credits)

Basic science of pharmacogenomics with an emphasis of the applications of pharmacogenomic principles to improve drug therapy outcomes.

PHP 547 Critical Care Therapeutics (2 credits)

The course will offer an introduction to the pharmacotherapeutic management of the critically ill patient. The pathophysiology and drug therapy of selected problems in the critically ill population will be covered. Students in the course will discuss these topics with a number of activities throughout the semester. The course will strengthen the student's ability to evaluate and apply primary literature as well as verbal presentation skills. Active participation will allow the student to hone their clinical skills in real-life situations.

PHP 559 Acute Care Medicine (2 credits)

Students will focus on guidelines and evidence-based medicine to further develop the skills and knowledge base in therapeutics in order to provide optimal drug therapy to internal medicine patients who are hospitalized. Faculty will utilize a problem-based learning format in the course to facilitate critical thinking development and student-centered learning.

Philosophy (PHL)

PHL 101 Human Person (3 credits)

An inquiry into the concept of personhood distinctive of the Jesuit, Catholic tradition through an understanding of a philosophical problem concerning human beings as rational, social, biological, historical, aesthetic, or spiritual beings.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

PHL 150 First Year Seminar (3 credits)

Various first-year seminars are offered each year by philosophy faculty.

Attributes: First-Year Seminar, Undergraduate

PHL 154 Moral Foundations (3 credits)

A critical study of the various ways in which agents, actions, and social practices are evaluated from the moral point of view, as this has been articulated in major Western ethical theories. Tools for this study include an introduction to philosophical reasoning and concepts basic to the moral point of view, such as rights, duties, virtue and character. Theories studied include but are not limited to Consequentialism, Deontology, and Natural Law. Satisfies the GEP Jesuit tradition course requirement.

Attributes: Signature Course, Undergraduate

PHL 170 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHL 201 Knowledge and Existence (3 credits)

Three basic problems concerning reality and the quest to know reality: 1) the origin, validity, and limits of human knowledge; 2) Graeco-Christian, modern, and contemporary approaches to being and causality; and 3) the problem of God. Does not satisfy the GEP variable course requirement in the Philosophical Anthropology area.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 210 Logic and the Law (3 credits)

The course is designed to develop reasoning skills that are useful for law school preparation, law school itself, and the legal profession. It will begin by introducing fundamental concepts in informal logic-included will be a review of validity and soundness and a variety of deductive forms. We will then discuss strategies for evidential reasoning and fundamental concepts in formal propositional and predicate logic. After establishing this background, we will apply it to the sorts of reasoning questions that appear on the Law School Admissions Test (LSAT). At the end of the course, we will examine Supreme Court or other prominent legal cases and issues in the philosophy of law, analyzing the arguments involved using the skills that have been honed throughout the semester.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Undergraduate

PHL 220 Logic (3 credits)

A study of the logic of ordinary language: the functions of language, forms of argument, fallacies, definition; analysis of propositions and deductive reasoning; inductive reasoning, analogy and scientific hypothesis testing. An introduction to symbolic logic is provided. Techniques are developed for translating arguments in ordinary language into a canonical language that highlights their logical form. The predicate and propositional calculi are used to establish the validity of simple arguments. Does not fulfill the philosophy GEP.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Undergraduate

PHL 240 Symbolic Logic (3 credits)

The study of the semantic and syntactic properties of propositional and predicate logics- natural deduction systems of the first order. Some results in meta-logic (such as the soundness and completeness proofs for particular systems) may be addressed, and attention may also be paid to the properties of axiomatic deductive systems in contrast to systems of natural deduction. The usefulness of formal systems for studying the property of validity in natural language arguments will also be addressed, in part by learning techniques for "translating" arguments from one language to the other. Does not fulfill the philosophy GEP.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Undergraduate

PHL 250 Philosophy of Death (3 credits)

A study of the reality of death as the boundary of human experience. The course explores the meaning of death and its relationship to the meaning of life, examines evidence for and against the thesis that death is the end of human existence, and considers implications for selected contemporary issues (e.g., death with dignity, medical definition of death).

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 252 Philosophy of Karl Marx (3 credits)

This course focuses on the thought and philosophical legacy of the influential but easily misunderstood nineteenth-century German philosopher, economist, and political theorist Karl Marx. Essential themes and ideas include: alienation, species-being, dialectic, historical materialism, class struggle, exploitation, ideology critique, and capitalism and its alternatives. Students will read and critically engage Marx's own writings, but attention may also be paid to philosophers working in the Marxist tradition (e.g., analytic Marxism and Frankfurt School critical theory) as well as to critics of Marx and Marxism.

Prerequisites: PHL 154

Attributes: Diversity Course, Faith Justice Course, Philosoph Anthropol, Undergraduate

PHL 256 Freedom and Determinism (3 credits)

A metaphysical and epistemological analysis and evaluation of the various philosophical positions on the determinism-free will issue. Various kinds of determinism (hard, soft, theological, etc.) will be critically examined, and various ways of arguing in support of free-will (from choice, deliberation, remorse, etc.) will be assessed.

Prerequisites: PHL 154

Attributes: Justice Ethics and the Law , Philosoph Anthropol, Undergraduate

PHL 258 The Authentic Self (3 credits)

This course will center on careful textual study of primary sources in philosophy that deal with these questions "What is the human being? What does it mean to be a Self?, Who am I?, and What is personal identity?" These questions about anthropology outline the original field of philosophy because they also include metaphysics, morals, and religion. A key element that will emerge is the role of rationality, of will, and of desire. This is related to the question of freedom, not just the theoretical freedom of the will, but the necessity to make a specific act of the will, namely to will to be one's authentic Self. Focus on works of Plato, Augustine, Descartes, Locke, Kant, Hegel, Husserl, and Charles Taylor.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 260 Philosophy of Human Nature (3 credits)

In this course we shall inquire into the nature of human beings by reading and discussing major philosophical texts from the western intellectual tradition along with essays written by contemporary philosophers. In particular we shall explore such topics as the nature of human rationality, knowledge and belief, immortality, virtue, free will, self-deception, the mind-body problem, and physicalism vs. dualism with respect to human persons.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 262 Freedom, Citizenship, Culture (3 credits)

This course will survey recent trends in political philosophy with special attention to competing conceptions of political freedom, civic identity and responsibility, and the political significance of community and cultural diversity. Does our political freedom depend primarily upon securing the negative liberties celebrated in the classical liberal tradition? Does it also require adequate social rights, democratic self-determination and/or active and ongoing participation in the political process? How should claims of freedom be balanced alongside the need to promote the common good, political solidarity and unity, and a sense of common belonging? How should the demands of citizenship be weighed against commitments arising from membership in sub-state cultural groups and other forms of human community?

Prerequisites: PHL 154

Attributes: Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 264 Topics in Moral Psychology (3 credits)

This course will explore human moral judgment, decision making, and behavior. Included are examinations of issues about whether the psychological processes involved in human moral practice are innate, about the respective roles of emotion and reasoning in moral judgment, and about the extent to which cultural forces shape our moral beliefs. Following the lead of much of the field in recent years, our focus will be primarily on working out the philosophical implications of recent scientific investigation on the topics.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 266 Rel & Phil in Amer Identity (3 credits)

From the founding of the American nation under the influence of Puritanism to the rise of Transcendentalism in the nineteenth century, philosophic and religious propositions have decisively shaped the American character. This course examines several important episodes in American thought in order to determine what makes Americans different from other sorts of people, what habits of thought inform their decisions, and what principles govern their understanding of the relation between religion and public life. This course typically involves making two off-campus visits to historical sites in Philadelphia.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 268 The Self: East and West (3 credits)

Philosophers East and West, ancient and modern, have struggled with the question: What does it mean to be a Self? What does it mean to be genuinely myself in the world in which I find myself? And what are important erroneous as well as "accurate" ideas that have practical consequences in the experience of myself? The course is intended to be an introduction to, and survey of, four philosophical notions of the Self, from East and West, from antiquity to recent times: Buddhism, Confucianism, Stoicism and Existentialism.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 270 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHL 274 From Athens to Philadelphia (3 credits)

This course investigates how a city like Philadelphia was built and considers how a city can be built justly. This involves inquiring into the nature of cities and city life in the United States and attempting to formulate criteria for a just city. Attention will be given to topics of urban planning, to philosophical theories of justice, and to the Great Migration, the movement in the 20th century of African-Americans from the rural south into cities of the northern states. Students will be required to make several trips into Center City in Philadelphia as part of this course.

Prerequisites: PHL 154

Attributes: Diversity Course, Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 284 Philosophy & Personal Relation (3 credits)

This course is a philosophical exploration of relationships between individuals, particularly friendship and love, but including sex, marriage, and family, as well as any other ways in which individuals relate. Building on theories of philosophers and other thinkers, this course may consider, for example, what makes personal relationships valuable, how personal life relates to social context, how personal relationships like love and friendship have changed over time, how gender, race, age and other differences figure in personal relationships.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 285 Philosophy of Medicine (3 credits)

This course examines critical philosophical questions that arise from the nature and practice of medicine and medical research. Emphasizing how human persons define, understand, experience, and negotiate such states as health, illness, suffering, and death, the course also asks questions such as what does it mean to receive a medical diagnosis, what is the proper aim of medical therapies, what role should medical research and inquiry play in the practice of medicine, how should medical resources be distributed? Specific relevant topics may include: disease ontology, causation, and classification; the roles of informed consent and confidentiality in medicine; the phenomenology of illness and suffering; historical conceptions of medicine; reproductive and end-of-life issues.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 286 Philosophy of Mental Illness (3 credits)

This course will explore philosophical questions at the heart of the fields of psychiatry, clinical psychology, and other mental health professions. Broadly, we will identify and critically evaluate assumptions that underlie labeling and treating certain individuals as "insane"/"mentally ill"/"mentally disordered." We will use conceptual tools within the philosophy of mind, philosophy of science, philosophy of medicine, and moral philosophy to consider questions such as: What is insanity? Is it a disease or illness, "just like diabetes"? What is a disease in the first place? How do we define a "good" or "healthy" human life? What are the ethical implications of labeling people as mentally disordered? Might so-called mental disorders be better described as forms of "neurodiversity," to be celebrated instead of cured?

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 288 Minds & Souls (3 credits)

This course surveys both the main issues and theories in contemporary philosophy of mind as well as traditional and contemporary conceptions of the soul. It philosophically examines the difference between these distinct approaches, and will inquire: Why have soul theories been largely eclipsed by other approaches until relatively recently? Why are a few philosophers taking another look at soul theories? How do broader worldview considerations inform the debates? The topic of "singularity" will also be covered.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 294 Reproducing Persons (3 credits)

This course examines how race, class, sex, gender identity, sexual orientation, queer and trans identity, nationality affects how we, as human persons, reproduce ourselves. It begins with a criticism of the ways in which white supremacy has established the dominant ideology of 'reproductive choice' (which centers the experiences of white middle-class women and reinforces social and political institutions that harm marginalized peoples) and contrasts this with the inclusive but revolutionary theoretical framework of Reproductive Justice, as developed by African American feminists. Drawing on the work of leading philosophers and women's studies scholars, the course seeks to not only address ethical and legal questions as they relate to women's reproductive lives but also to examine the material circumstances in which the reproduction of persons is realized.

Prerequisites: PHL 154

Attributes: Diversity Course, Gender Studies Course, Philosoph Anthropol, Undergraduate

PHL 295 Philosophy of the Environment (3 credits)

This course examines philosophical problems and questions that arise when we consider our place as human persons embedded in the natural world. We ask how our natures as complex human persons with rational, biological, and spiritual elements are both formed by and, in turn, form the natural world. As creatures bound by norms, we can also interrogate our ethical responsibilities as they pertain to the environment and one another. Specific topics covered may include global warming, responsibilities to future generations, population and consumption, wilderness preservation and restoration, the extinction crisis, environmental disobedience.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 302 Philosophy of Race (3 credits)

Race has long played a prominent role in our social existence, and continues to do so even in what some have called a "post-racial society." In this course, we will take a philosophical approach to understanding a set of related questions about race. What is the origin and basis for racial concepts? Is race socially constructed? Does it have a biological basis? Does racial discourse serve to further entrench racial divisions? How does racial oppression relate to other forms of oppression such as class- and gender-based oppression? What is "privilege"? What could it mean to say that a person has moral obligations deriving from harms which s/he has not personally brought about, and do persons ever have such obligations? We will also investigate issues such as affirmative action, racial solidarity, and the ways in which racial oppression differentially affects men and women.

Prerequisites: PHL 154

Attributes: Africana Studies Course, Diversity Course, Philosoph Anthropol, Undergraduate

PHL 303 Phil of Race Class & Gender (3 credits)

This course introduces the student to the role of identity in contemporary life and prepares students to live, work, and interact with others in situations defined not by the similarity of those involved, but their differences. The course proceeds in three ways. First, in order to see how racial, ethnic, class, sexual, gendered, intersectional, and other identities have been understood, we study basic modern theories of human identity, of what it means to be a person. Then we turn to experiences and theories of the specific identities that are the focus of our class. Many of our readings introduce the student to oppressive experiences of race, ethnicity, class, sex and gender identities and the diverse responses that people have elaborated in an effort to overcome their marginalization and dehumanization. Third, we examine, in particular, different ways in which oppressed people have theorized race, class, and gender identities in an effort to develop emancipatory identities.

Prerequisites: PHL 154

Attributes: Diversity Course, Philosoph Anthropol, Undergraduate

PHL 304 African Philosophy (3 credits)

Introduction to African philosophical approaches to: the problems of God, causality and chance, freedom, fate and destiny, the concepts of spirit, the philosophical wisdom of the African proverbs and the implications of Africa's history for philosophy, with applications to Western thought. Selected Readings from modern African novels, essays in anthropology, traditional philosophical, religious and literary texts, and essays by contemporary African philosophers.

Prerequisites: PHL 154

Attributes: Africana Studies Course, Undergraduate

PHL 308 Asian Philosophies (3 credits)

This course will examine the concepts of self, nature, and society in the Asian philosophical paradigms as they have been articulated by contemporary Asian philosophers in one or more historical traditions, including Indian philosophy, Chinese philosophy, and Japanese philosophy.

Prerequisites: PHL 154

Attributes: Asian Studies Course, Non-Western Studies (GEP), Philosoph Anthropol, Undergraduate

PHL 309 Personhood in Islamic Phil (3 credits)

Reflection on personhood in Arab-Islamic philosophy is informed, broadly, by two different sources: the Quran, and Quranic Islam more generally, in which personhood is approached via legal, moral, and religious concepts; and falsafa, or Greek (and, in particular, Platonic, Aristotelian, and neo-Platonic) philosophy, where the operative concepts are rather scientific: metaphysical, epistemological, and psychological. This course examines the many ways in which thinkers in the Arab-Islamic tradition, informed by these sources, have considered the existence and nature of persons, both divine and human. Much of the course will focus on the high classical period (9th to 12th c. CE), though we will also cover some significant post-classical, modern, and contemporary thought. Broad topics to be addressed include the existence and attributes of God, the order of the cosmos and the place of human persons within it, human nature, as well as the proper ethical ordering of human life and of the political state. We will discuss these ideas as they operate within the Islamic world and also how they interact with the broader Western philosophical tradition.

Prerequisites: PHL 154

Attributes: Non-Western Studies (GEP), Philosoph Anthropol, Undergraduate

PHL 310 Philosophy of Art (3 credits)

An examination of the philosophical questions arising from the human activity of creating and appreciating art (of all kinds: visual, musical, literary, etc.). Questions can include: the relation of perception and aesthetic appreciation to knowledge; the relation between emotion and belief; the relation between artist/creator, audience/spectator, and art work. How is art distinguished from nature as possible object of aesthetic appreciation? Must art even be aesthetic? If not, how is the category 'art' defined, and by whom?

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 311 Philosophy of Law (3 credits)

Philosophy of Law examines some of the philosophical questions raised by law and legal systems, such as the nature and limits of law, the relation between law and morality, the challenges in applying the principles of constitutional, contract, criminal and tort law, and specific issues such as civil disobedience, equality and liberty, rights and responsibility, and punishment and excuses.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law, Philosoph Anthropol, Undergraduate

PHL 312 Animal Ethics (3 credits)

Animal ethics refers to the moral and legal obligations of humans to nonhuman animals. To determine these obligations, we will give the first few weeks of the course to considering the shared mental faculties of humans and animals. Traditionally obligations in ethics and law are owed in ethics to persons, and so it is necessary to find out whether any nonhuman animals qualify as persons. Related to the issue of nonhuman animals qualifying as persons, we will examine several moral theories in modern Western philosophy: Kant's theory of duty, the original and contemporary versions of utilitarianism, the social contract theory of John Rawls, and Martha Nussbaum's capabilities theory. In addition we will investigate the current situation in law for the permitted treatment of animals.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

PHL 320 Business, Society and Ethics (3 credits)

This course will discuss ethical issues in the practice of business. Topics will typically include ethical issues in marketing, finance, human resources, the environment, product liability, global sales and labor practices, etc. The course will address these issues in business practice through the lenses of traditional ethical theories.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 322 Philosophy of Science (3 credits)

Scientific values, theories, and practices play a central role in the ways modern human beings live, act, and interact. Increasingly, science affects how we understand our very natures as rational, biological, and social beings. This course examines the nature, role, and meaning of scientific inquiry and knowledge. It addresses topics such as scientific realism and anti-realism, the nature of observation, the structure of scientific theories, philosophical problems in the history of science, the role of values in science, the role of science in human affairs.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 324 Philosophy of Social Sciences (3 credits)

This course will involve an analysis of the metaphysical conceptions of the human person presupposed by various theories of the social sciences. The course will also examine the relation of various criteria for knowing to the theories which issue from them. Other topics may include materialism, positivism, historicism, cultural relativism, and various epistemological questions.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 326 Philosophy of Sports (3 credits)

This course will investigate a variety of philosophical issues surrounding sports. The main focus will be on ethical topics such as the use of performance enhancing drugs, the appropriateness of institutions surrounding college athletics, and the use of government funds to subsidize stadiums and arenas for professional sports franchises. These issues will be investigated by employing common methods in moral philosophy, informed by empirical research in economics and a variety of other scientific disciplines.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

PHL 330 Social and Political Phil (3 credits)

This course serves as an introduction to major works in the history of social and political philosophy. With a survey of important figures and texts from pre-modern, modern and contemporary periods, the course will address basic philosophical questions about the individual, society and the political order, such as: What is justice? In what sense is the political order a kind of community? What is the philosophical basis and justification of law and political authority? What are the social and political implications of a commitment to human freedom and equality? What are the necessary social conditions for realizing freedom, justice and human flourishing? Major authors might include Plato, Aristotle, Augustine, Aquinas, Hobbes, Locke, Rousseau, Hume, Smith, Kant, Marx, Mill, Arendt, and Rawls.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Philosoph Anthropol, Undergraduate

PHL 331 Inequality: A Phil Exploration (3 credits)

This course explores the problem of inequality from a philosophical perspective. To that end, we reconstruct and critically evaluate arguments for and against inequality in ancient, modern, and contemporary political philosophy. When, if ever, are social, political, and economic inequalities justified? Is inequality simply a reflection of human nature, or is it the product of society's major institutions? Who has a moral responsibility to combat unjust forms of inequality that already exist? To answer these questions, we survey the works of major figures such as Plato, Aristotle, Locke, Rousseau, Wollstonecraft, Marx, DuBois, Rawls, and MacKinnon.

Prerequisites: PHL 154

Attributes: Diversity Course, Ethics Intensive, Philosoph Anthropol, Undergraduate

PHL 332 Economic and Social Philosophy (3 credits)

This course will investigate the idea of social justice from several philosophical perspectives and/or traditions. Issues to be addressed may include: distributive justice, private property, the working poor, economic globalization, and capitalism and its alternatives.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 334 Ethics and Criminal Justice (3 credits)

This course will address ethical issues in the criminal justice system at both the theoretical and applied levels. Typical theoretical issues addressed might include the following: the relationship between law and morality; theories of punishment; conditions for the moral and/or legal responsibility of individuals; notions of procedural justice. Typical applied ethics issues might include the following: limits on the police use of deception and of deadly force; search and seizure rules; plea bargaining; mitigation and excuse defenses (e.g. insanity); mandatory sentencing, especially life without parole; capital punishment.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 336 Violence and Non-Violence (3 credits)

This course will focus on two levels: philosophical reflection on the moral dimensions of violence and nonviolence in general, and analysis of some specific moral issues concerning the resort to violence. Issues include the morality of war, especially under current conditions, and criminal punishment. Theories of nonviolence, and practical alternatives to violence, will be examined.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate

PHL 338 Vio & Reconciliation in N. Ireland (3 credits)

The course will examine violence and reconciliation in Northern Ireland from both a philosophical and empirical perspective. Special attention will be paid to both the socio-historical roots of "The Troubles" and the moral context of discourses of retribution and forgiveness. During the stay in Northern Ireland, SJU students are guests of Corrymeela, an ecumenical community committed to the work of reconciliation by providing a "safe and shared space" where people can meet as Protestants and Catholics, British and Irish, rich and poor, and through open dialogue and interaction grow in trust with one another. Students will also visit selected sites in Derry and Belfast.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Justice Ethics and the Law, Undergraduate

PHL 340 Topics in Political Philosophy (3 credits)

This course will examine recent developments and debates in social and political philosophy. The emphasis of the course will be on contemporary discussions of a problem or set of problems, though some attention may be paid to the treatment of these problems in the history of philosophy. Topics to be examined might include political legitimacy, human rights, private property and distributive justice, just and unjust war, cosmopolitanism and patriotism, global justice, social unity and solidarity, toleration, multiculturalism, and the role of religion in politics.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

PHL 342 Dimensions of Freedom (3 credits)

Political philosopher Hannah Arendt claims that the ability to forgive and the ability to make and keep promises are at the center of human freedom, the capacity to interrupt automatic processes and begin something new. The experience of imprisonment will be an important focus of class discussion, and a starting point to examine multiple dimensions of human freedom. These include: negative vs. positive freedom; freedom of action vs. inner freedom (thought, imagination, will); political freedom vs. political oppression; the extent to which freedom in any of these senses is a good, worthy of the value we tend to give it. For each dimension, we will also ask what inner and/or external conditions limit or even preclude its exercise.

Prerequisites: PHL 154

Attributes: Philosophical Anthropology, Undergraduate

PHL 344 A Good Life (3 credits)

The course will begin with an examination of Plato's classical account of a good life, grounded in the health of the body and soul and in active participation in a just community. We will then turn to the modern German philosophical tradition that further specifies this conception of a good life in terms of the reflective, yet concrete self-realization of the person grounded in right relations to oneself, other persons, nature, the institutions in which one's life is embedded, and to the future. Key topics will include human freedom and responsibility, the need for mutual recognition among human beings, and the notion of common sense. We will also spend time on the difficult human problems of rampant consumerism, commodification, and the instrumentalizing of human reason. In Germany we will explore specific ways in which the now philosophically grounded themes of health, sustainability, and community are manifest in institutions and cultural practices. We will spend the majority of our time in the award winning "Green City" of Freiburg, a socially innovative and historic university town, and capital of the Black Forest. We will then travel to the idyllic, medieval city of Tübingen and finally to Frankfurt, a major urban center well-known for its sustainable practices and innovative ideas.

Prerequisites: PHL 154

Attributes: Philosophical Anthropology, Study Tour, Undergraduate

PHL 350 God in Recent Philosophy (3 credits)

The course examines three different conceptions of God: [1] Popular Theism: God conceived as similar to a human person - though incorporeal, unobservable, and possessed with superhuman attributes. This is the view of God held by most traditional theists. [2] Perfect Existence Theism: in which God is not a being of any kind, not even a personal being, even though personal language can be used in speaking of God. This is the view of God espoused by Thomas Aquinas; and [3] Panentheism: God conceived as inclusive of rather than independent of the world; the relation between God and the world being like the relation between the mind and its body. This view has been defended by Charles Hartshorne. In the case of each form of theism, questions arise as to how it deals with the problem of evil: how its view of God squares with the fact that the world contains vast amounts of moral and physical evil.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 351 Reason, Faith, and Relativism (3 credits)

Intelligent, sincere, and equally well-informed people often strongly disagree. This seems especially true when it comes to religious beliefs. In that context, people will often appeal to "faith," which some construe as belief without good reason. It is therefore important to ask what counts as good reason for holding a belief, and whether all beliefs are subject to the same standard. If two individuals hold contradictory beliefs, then certainly one of them is wrong, but might both be justified in holding those beliefs? If so, does this imply that truth is relative? This course deals with the general topic of rational belief formation in a world that is religiously, ideologically, and culturally diverse.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 352 Kierkegaard, Nietzsche, Dostoevsky (3 credits)

Against the backdrop of classical metaphysics and human rationality, the sources and early development of existential themes are developed. Selected readings from Kierkegaard (Either/Or, Fear and Trembling), Nietzsche, (Thus Spoke Zarathustra, Beyond Good and Evil), and Dostoevsky (Notes from the Underground).

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 353 Philosophy, Science & Religion (3 credits)

A consideration of important issues in philosophy and philosophy of religion within the historicizing context of the scientific world-view of the times. Simultaneously, the course will consider the implications of the current (and changing) scientific world-view (genetics, astronomy, physics) for philosophical and religious reflection, including the idea of God. Philosophically as well as scientifically, the course will take its point of departure in Darwin and come back to consider the radical implications for philosophy and religion prophetically seen by his contemporary Nietzsche. Satisfies Signature core course requirement in Faith and Reason

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 354 Philosophy of Religion (3 credits)

Philosophical analysis of some of the following topics: religious experience, testimony, belief, human destiny, evil, knowledge of and language and arguments about God. Readings from classical and contemporary sources.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 355 Phil Iss in Christian Doctrine (3 credits)

This course will investigate the coherence and plausibility of some of the most central teachings of Christianity. A sampling of potential topics includes: heaven and hell, the Trinity, Original Sin, the Atonement, and the Incarnation. There will also be a discussion of different methods of deciding when a teaching is essential to Christianity, and an exploration of various alternative interpretations of the doctrines.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 356 Religious Diversity (3 credits)

Religious diversity is an inescapable fact. It is hard to imagine anyone is thinking their religion (should they have one) to be the only one that exists or the only one capable of evincing commitment and devotion.

The diversity of religions raises questions that are practical as well as theoretical. The fact of religious diversity has elicited various philosophical reactions, ranging from exclusivism to relativism to inclusivism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Honors Course, Undergraduate

PHL 358 Atheism & Prob of God (3 credits)

After a study of the classical arguments concerning God's existence, the course examines examples of 19th century atheism (Feuerbach, Marx, Nietzsche) and belief (Kierkegaard, Dostoevsky), and 20th century atheism (Sartre, Camus) and belief (Rahner, Marcel).

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 359 Existence of God (3 credits)

This course will focus on arguments for and against the existence of God. It will begin by examining the ontological, cosmological, and design arguments for the existence of God. Included will be a discussion of purported evidence for the existence of God from modern biology and cosmology. It will then examine arguments against the existence of God based on human and animal suffering, followed by arguments against the existence of God arising from the scarcity of credible miracle claims.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 360 Philosophy of God in Aquinas (3 credits)

This course will examine the philosophical writings of Thomas Aquinas on the existence and nature of God. Topics include the procedure of philosophical theology, the methodological problem of attaining true knowledge of God, Aquinas's "five ways" of demonstrating the existence of God, and arguments for the various "attributes" of God: simplicity, perfection, goodness, infinity, ubiquity, unchangeableness, eternity, and oneness. Aquinas's innovative method of analogical predication will be employed to offer a philosophical interpretation of core theistic assertions that God has life and knowledge that God wills and loves, that God exercises providence both justly and mercifully, that God is all-powerful and perfect happiness. This course may be taken to satisfy the major requirement for a course in the ancient or medieval period.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

PHL 361 Vision, Experience Faith (3 credits)

This course engages students with the puzzle of whether religious faith is strengthened or weakened by reflection on human perceptual experience, in particular visual experience. The status of religious experience as a possible support for justified religious belief will be examined. Contemporary scientific accounts of visual experience will be considered.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155)

Attributes: Faith-Reason Course, Undergraduate

PHL 362 Faith & Reason in Kantian Phil (3 credits)

This course begins with an examination of two types of traditional arguments for the existence of God: those based on putative grounds of reason and those based on putative grounds of experience. The questionable success of such proofs will raise several questions: what is the nature of human reason, what is the nature of faith as a distinct epistemic attitude, and how should we think about the relation between them? We shall then pursue Kant's systematic answers to these questions with the hope that they will give us a workable and empowering alternative to the arguments studied earlier in the course. Possible further topics for the course include (1) the possibility of understanding the history of arguments for God's existence as a progressive development of reason's awareness and articulation of its needs, and (2) the application of Kant's analysis of reason to some fundamental claims and themes of the Christian religion in order to show how they can be understood as having a basis in reason.

Prerequisites: (PHL 154 and ENG 101) and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 364 God, Evil, and Hiddenness (3 credits)

This course will examine recent arguments against the existence of God based on the problem of evil and the problem of divine hiddenness. (The problem of evil is the problem of reconciling God's existence with the presence and severity of suffering in the world, and the problem of divine hiddenness is the issue of understanding why God would provide so few clear and dramatic signs of his presence.) Although no prior mathematical knowledge will be presupposed, as part of the process of understanding the arguments students will also be expected to master some basics of probability theory.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 365 Christianity and Evidence (3 credits)

This course will investigate several topics surrounding Christianity and evidence. The course is divided into two sections. The first is an exploration of the question of whether we have good evidence for Christianity. Included in this first unit will be a discussion of both scriptural evidence and the evidence provided by purported miracles in the modern world. The second section will examine the relationship between belief and evidence, in an attempt to understand whether Christian belief (and religious belief more generally) should be based on evidence in the same way as many other kinds of beliefs.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

PHL 370 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHL 377 Inside-Out (3 credits)

This class offers a unique opportunity to have meaningful discussions about a range of topics from inside a correctional facility. Inside-Out classes bring together students from Saint Joseph's University and adult students who are incarcerated to learn about and discuss topics such as the causes of crime, racism, literature, philosophy, and restorative justice. Through the readings and dialogue, inside and outside students will be able to integrate their theoretical knowledge with lived experiences. It is through this exchange that we hope to critically analyze and challenge the current system in the U.S. that has resulted in a higher incarceration rate than other similar countries.

Attributes: Faith Justice Course, Justice Ethics and the Law, Service Learning Course, Undergraduate

PHL 395 Junior Seminar (3 credits)

Readings, research, and discussion concerning a common theme. Junior majors, minors with chair's permission.

Prerequisites: PHL 154

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Philosophy.

Attributes: Undergraduate

PHL 401 Ancient Philosophy (3 credits)

What is the nature of ultimate reality? What standards must our beliefs meet if they are to qualify as knowledge? Is the soul distinct from the body, and what sort of trait is virtue? These are among the most basic questions of philosophy, and they took shape originally in the ancient world of Greece and Rome. This class provides a critical survey of the questions and possible answers provided by the founders of the western philosophical tradition. Philosophers discussed include the Presocratics, Socrates, Plato, Aristotle, the Stoics.

Prerequisites: PHL 154

Attributes: Ancient Studies Course, Undergraduate

PHL 402 Plato and Aristotle (3 credits)

A focused examination of the major ethical, metaphysical, and political theories of Plato and Aristotle. The class will cover the ideas of these two philosophers on such topics as the nature of virtue, the soul, change in the physical world, substance, the best political regime, and the relation between political activity and philosophy.

Prerequisites: PHL 154

Attributes: Ancient Studies Course, Undergraduate

PHL 404 Love, Friendship, Ancient World (3 credits)

This course explores a number of descriptions of love and friendship found in works of literature and philosophy from ancient Greece and Rome. Two topics in particular will be studied in these works on love and friendship. The first is the connection between friendship, justice, and politics that is asserted in a number of ancient works. The second is the presentation of erotic love as a form of divine madness that can be both dangerous and beneficial. Some authors to be read include Sophocles, Euripides, Plato, Aristotle, Cicero, and Catullus.

Prerequisites: PHL 154 and ENG 101

Attributes: Ancient Studies Course, Philosoph Anthropol, Undergraduate

PHL 409 Philosophy of St. Augustine (3 credits)

This course examines the philosophical thought of Augustine of Hippo through three of his most important works. The course will engage with a number of themes that are central to Augustine's thought-for example, sin and free choice, evil, the human condition, human flourishing, desire, cognition, memory, time, as well as creation and its relationship to God, and the nature of God Itself.

Prerequisites: PHL 154

Attributes: Medieval, Ren & Reform Studies, Philosoph Anthropol, Undergraduate

PHL 410 Medieval Philosophy (3 credits)

An introduction to medieval philosophy through a study of its most important thinkers (e.g., Augustine, Boethius, Anselm, Aquinas) and its central questions (e.g., the existence and nature of God, the problem of evil, the compatibility of human freedom and divine foreknowledge, the limitations of human reason, the immortality of the soul, happiness, virtue, natural law).

Prerequisites: PHL 154

Attributes: Medieval, Ren & Reform Studies, Undergraduate

PHL 412 The Philosophy of Aquinas (3 credits)

A close examination of Thomas Aquinas's writings on topics such as proofs for the existence of God, the nature of God, creation, providence, the relation of body and soul, immortality of the soul, human knowing, happiness, virtue, natural law

Prerequisites: PHL 154

Attributes: Medieval, Ren & Reform Studies, Philosoph Anthropol, Undergraduate

PHL 420 Early Modern Philosophy (3 credits)

A critical analysis of the rationalist and empiricist movements of the 17th and 18th centuries. Emphasis will be placed on the epistemological and metaphysical theories of the following thinkers: Descartes, Spinoza, Leibniz, Locke, Berkeley, and Hume.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 428 The Enlightenment & Its Critics (3 credits)

This course provides a survey of the "critical tradition" in philosophy - a tradition seeking to ascertain the nature and limits of human reason in the hopes of moving toward social and cultural progress. The course will begin with the critical tradition's roots in the thinkers of the French and German Enlightenments of the 18th century, continue with three of the Enlightenment's major critics - Marx, Nietzsche, and Freud - and culminate in the critical social theories of the Frankfurt School and Michel Foucault in the 20th century. In the end, the course will consider the tenability of the Enlightenment project and its hopes for the future as well as the status of critical social theory today.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 430 Kant's Critique of Pure Reason (3 credits)

In this course we shall pursue a close study and critical assessment of Kant's highly original theory of transcendental idealism as it is presented in his seminal work, the Critique of Pure Reason. Specific topics will include, but are not limited to, the nature of human reason, the nature of experience, the possibility of synthetic a priori knowledge, the relation between mind and world, the limits of human knowledge, transcendental idealism vs. transcendental realism, varieties of skepticism and responses to them, self-knowledge, the problem of free will, and philosophical method. We shall begin the course by sketching some of the problems that Kant inherited from early modern philosophy and to which he is responding.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 432 German Idealism (3 credits)

In this course we shall explore the views of the major thinkers of the German idealist period-namely, Kant, Fichte, Schelling, and Hegel-with respect to such topics as the nature of human reason, knowledge and the self, the relation between mind and world, the unconditioned, freedom and morality, the nature and role of art, God and religion, and reason in history. We shall begin the course by sketching the philosophical context and a set of problems that helped motivate the movement as a whole. Some attention may also be paid to some of the lesser-known figures of the period, such as Reinhold, Jacobi, and Maimon.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 434 Existentialism (3 credits)

A study of the Existentialist movement, from its 19th century origins in Kierkegaard and Nietzsche and the Phenomenology of Husserl to its most prominent 20th century representatives, including Heidegger, Jaspers, Sartre and Camus.

Prerequisites: PHL 154

Attributes: Philosoph Anthropol, Undergraduate

PHL 440 Phenomenology (3 credits)

A study of the philosophical background, methods, and results of the phenomenological movement in 20th century European thought. After examining a cluster of philosophical problems that gave rise to the movement, we shall focus mainly, though not exclusively, on the work of Husserl, Heidegger, and Sartre. In addition to our study of philosophical method, we shall explore phenomenological accounts of various matters such as consciousness, perception, hermeneutics, the existential nature of human beings, transcendence, self-deception, and otherness.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 446 Feminist Epistemology (3 credits)

Feminist challenges to traditional ways of thinking in epistemology, philosophy of science, metaphysics and ethics. Examination of feminist criticisms regarding: the nature and justification of knowledge; dominant conceptions of rationality and objectivity; various dualistic ontologies; and prevailing conceptions of the self. Consideration of possible gender-bias in traditional philosophical methods.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 450 American Philosophy (3 credits)

Philosophy in the American context: the "American experience", historical and contemporary; philosophical concerns that arise in that context; the classical American philosophers-Edwards, Peirce, James, Royce, Dewey, and Whitehead. Central concerns: the meaning of experience; scientific inquiry as a model of knowing; the meaning of religion and religious experience; the problems of value (moral and aesthetic); the problem of community.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: American Studies Course, Faith-Reason Course, Undergraduate

PHL 461 Contemporary Thomism (3 credits)

St. Thomas Aquinas, one of the greatest philosopher-theologians of the Middle Ages, employed both faith and reason to conceive a remarkably comprehensive and nuanced understanding of reality. Recently, some philosophers have been returning to the works of Aquinas and attempting to transpose his vision to meet the distinctive intellectual challenges of our own quite different age. After providing an introduction to Aquinas' thought, this course will examine in depth the writings of one or more contemporary Thomists (e.g., Bernard Lonergan, Jacques Maritain, Etienne Gilson, Karl Rahner, Pierre Rousselot, Joseph Marechal, Josef Pieper).

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 470 Special Topics in Philosophy (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 471 Problems in the Theory of Know (3 credits)

A critical examination of key problems in contemporary epistemology. Problems relating to the analysis of knowledge and justification will be examined. Topics may include: knowledge and warrant; knowledge closure; skepticism of various forms; foundationalism, coherentism, reliabilism, contextualism; virtue epistemology; internalism and externalism; the role of formal (probabilistic) models in epistemology.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 473 Philosophy of Mind (3 credits)

A critical examination of metaphysical and epistemological issues in the contemporary philosophy of mind. These issues include the problem of reductionism, the problems of intentionality and mental representation, personal identity, conceptual foundations of psychology, and the possibility of artificial minds.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 474 Language and Thought (3 credits)

Rene Descartes held a view called "mind-body dualism," according to which human persons are fundamentally thinking substances that are somehow causally linked to particular physical substances: bodies. One of his reasons for holding this view was that he believed that the human faculty of language could never, even in principle, be adequately explained by any purely physical description of things. Language, as he saw it, is evidence of mind, and indeed he believed that where language is absent, mind is also absent. Creatures without language are, in Descartes' view, mindless organic automata. Few today would defend Descartes' view in all details, but the general sense that language is an important "mark of the mental" has not gone away. Instead, it has given rise to a cluster of narrower but interesting and important questions: Are certain kinds of mental states impossible without language? Does the specific language that we speak influence our thoughts in some way? Do our innate tendencies of thought force our languages to take certain forms?

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 475 Language and Meaning (3 credits)

This course examines the core issues in the philosophy of language, focusing on the nature of linguistic meaning. What is linguistic meaning? Are meanings things in the world, ideas in our minds, or something else? How does the meaning of a sentence depend on the meaning of the words that compose it? In what ways does the content we communicate go beyond the words we use? How is meaning related to grammar? In what ways does meaning depend on context? We will examine how philosophers and linguists have answered these questions.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 481 History of Analytic Philosophy (3 credits)

This course will explore important figures and themes from the history of analytic philosophy. We will start with the birth of modern logic in the seminal works of Gottlob Frege and Bertrand Russell. As time permits, we will also discuss the project of philosophical analysis in the works of G.E. Moore, Russell and the early Ludwig Wittgenstein, the rise of logical positivism and emotivism (Rudolph Carnap, Susan Stebbing, A. J. Ayer, C. L. Stevenson), W. V. Quine's critique of Logical Positivism (in particular, his critique of the analytic-synthetic distinction), and the rise of ordinary language philosophy in the works of J. L. Austin, Peter Strawson, and the later Wittgenstein.

Prerequisites: PHL 154

Attributes: Undergraduate

PHL 493 Independent Research in Phil (3 credits)**PHL 494 Independent Research in Phil (3 credits)****PHL 495 Senior Seminar (3 credits)**

Readings, research, and discussion concerning a common theme; a paper is required. Senior majors; minors with chair's permission.

Prerequisites: PHL 154

Attributes: Undergraduate

Physical Therapy (DPT)

DPT 501 Anatomy I (3 credits)

This is the first part of a regional study of the structure, function, and development of the human body with emphasis on the musculoskeletal, vascular and peripheral nervous systems of the lower extremity and back. Select pathologies will be used to explore the clinical relevance of anatomic relationships to human movement and function.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

DPT 501L Anatomy I Lab (0 credits)**DPT 502 Anatomy II (3 credits)**

This course is the second part of a regional study of the structure, function, and development of the human body with emphasis on the musculoskeletal, vascular, and peripheral nervous systems of the upper limb, head and neck. Students will explore the viscera of the thorax and abdominopelvic cavities. Select pathologies will be used to explore the clinical relevance of anatomic relationships to human movement and function.

Prerequisites: (DPT 501 and (DPT 511 and (DPT 521 and (DPT 541 and (DPT 531

DPT 502L Anatomy II Lab (0 credits)**DPT 511 Biomechanics/Kinesiology I (2 credits)**

This is the first course, in a two-course sequence, studying the principles of kinesiology and biomechanics in relationship to movement disorders of the lumbar spine and lower extremity. Participants will develop the ability to analyze normal and abnormal functional movement, determine pathomechanics of movement dysfunctions, and incorporate kinesiological and biomechanical principles for solving movement dysfunctions.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

DPT 511L Biomechanics/Kinesiology Lab (0 credits)**DPT 512 Biomechanics/Kinesiology II (2 credits)**

This is the second course, in a two-course sequence, studying the principles of kinesiology and biomechanics, in relationship to movement disorders of the upper extremity, cervical and thoracic spine. Participants will develop the ability to analyze normal and abnormal functional movement, determine pathomechanics of movement dysfunctions, and incorporate kinesiological and biomechanical principles for solving movement dysfunctions.

Prerequisites: (DPT 501 and (DPT 511 and (DPT 521 and (DPT 541 and (DPT 531

DPT 512L Biomechanics/Kinesiology II Lab (0 credits)**DPT 521 PT Exam/Interventions I (2 credits)**

An introduction to basic examination procedures, movement assessment, and intervention techniques in physical therapy of the lower quarter across the lifespan consistent with PT patient management model and International Classification of Functioning, Disability, and Health (ICF).

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

DPT 522 PT Exam/Interventions II (2 credits)

An introduction to basic examination procedures, movement assessment, and intervention techniques in physical therapy of the upper quarter across the lifespan consistent with PT patient management model and International Classification of Functioning, Disability, and Health (ICF).

Prerequisites: (DPT 501 and (DPT 511 and (DPT 521 and (DPT 541 and (DPT 531

DPT 531 Clinical Practice I (2 credits)

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this first course of the series will introduce patient communication and mobility skills.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

DPT 531L Clinical practice I Lab (0 credits)**DPT 532 Clinical practice II (2 credits)**

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this second course of the series will focus on patient history, documentation skills, and patient teaching.

Prerequisites: (DPT 501 and (DPT 511 and (DPT 521 and (DPT 541 and (DPT 531

DPT 532L Clinical Practice II Lab (0 credits)**DPT 533 Clinical Practice III (2 credits)**

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this third course of the series will focus on teamwork as a means to facilitate professional relationships and expand services to meet the needs of patients. Students will also be introduced to health insurance as it relates to access and payment for physical therapy services.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 532 and (DPT 542 and (DPT 550 and (DPT 560

DPT 541 Exercise Physiology (3 credits)

Concepts learned in this class will include the acute and chronic physiological changes that occur with exercise in the healthy population. You will develop an understanding of the scientific basis for aerobic and anaerobic training, exercise testing principles, fundamentals of exercise prescription, nutrition and recognize when appropriate to refer to appropriate health care professionals.

Restrictions: Enrollment limited to students with the University Sciences Legacy attribute.

DPT 541L Exercise Physiology Lab (0 credits)**DPT 542 Functional Neuroscience (3 credits)**

A study of the basic principles and concepts related to the nervous system, including neuroanatomy, neurophysiology, neuropathology and motor learning and control theories. Brain and behavior relationships are explored with an emphasis on how changes in the nervous system and sensorimotor behaviors interact and linked to clinical reasoning for managing individuals with neuropathology.

DPT 542L Functional Neuroscience Lab (0 credits)**DPT 550 Research I (2 credits)**

The course provides an introduction to the research process and its relationship to evidence-based practice. Students will obtain a basic understanding of theory-based research, methodological considerations in the design of quantitative and qualitative research, ways of evaluating practice, and approaches to analyzing data.

DPT 551 Research II (2 credits)

In this course students will use clinical questions/scenarios to explore, critically appraise, and apply findings in the literature to inform and direct physical therapy practice. This course will emphasize the application of evidence-based practice to optimize patient outcomes.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 532 and (DPT 542 and (DPT 550 and (DPT 560

DPT 560 Psychosoc Issues Health/Well (3 credits)

This course provides an in-depth understanding of psychosocial determinants of health. It explores the ways psychological factors interact with social, cultural, economic, and environmental contexts of health. The course will apply relevant theories, concepts and models to understand, modify and promote health and wellness. A variety of topics will be presented through readings, lectures, discussions and experiential activities.

DPT 561 Ethics in Healthcare (2 credits)

This course provides an overview of common ethical frameworks and theories. The focus is on identifying and analyzing ethical issues and dilemmas facing the individual therapist and on the application of ethical principles and the APTA Code of Ethics to these dilemmas. The APTA Core Values will also be explored in the context of professional behavior and in relationship to the APTA Code of Ethics. This course includes aspects of federal, state, and case law as they apply to the individual therapist, as well as how they fit with ethical principles.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 532 and (DPT 542 and (DPT 550 and (DPT 560

DPT 571 Mvmnt Science Across Lifespan (2 credits)

This course explores typical age-related changes in human movement across the lifespan, with an emphasis on infants and older adults. Task-specific examples are used as the framework to integrate information from multiple diverse fields such as movement science, gerontology, developmental science, and biomechanics to provide the student with an understanding of the evolution of movement with age.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 542 and (DPT 550 and (DPT 560 and (DPT 532

DPT 581 Medical Management I (3 credits)

This is the first part of a two-course sequence that will present an overview of the pathophysiology and medical management of disorders frequently encountered by physical therapists, pain science, and the application of therapeutic modalities. Specific pathologies covered include diseases of the immune, endocrine, and musculoskeletal systems as well as other major clinical medicine disorders. Medical management includes modalities and basic pharmacologic and radiologic principles, relevant to physical therapists. A problem-solving approach with a focus on clinical decision making will be emphasized for the selection and application of appropriate procedures to manage pain, edema, limitations in motion, muscle weakness, and wound healing.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 532 and (DPT 542 and (DPT 550 and (DPT 560

DPT 601 Musculoskeletal Rehab I (5 credits)

This is the first course within a two-course sequence. This course will introduce the student to physical therapy examination and intervention for musculoskeletal dysfunction of the lower quarter from disease, disuse, trauma, surgery, and the aging process. The course will use musculoskeletal conditions with primarily inflammatory, degenerative, traumatic, and post-surgical etiologies as the basis for formulating a fundamental musculoskeletal exam and treatment plan. Students will develop skills and decision making to recognize when physical therapy is indicated, contraindicated, and when a referral to other health care personnel is needed.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 532 and (DPT 542 and (DPT 550 and (DPT 560

DPT 601L Musculoskeletal Rehab I Lab (0 credits)**DPT 602 Musculoskeletal Rehab II (4 credits)**

This is the second course within a two-course sequence. This course will introduce the student to physical therapy examination and intervention for musculoskeletal dysfunction of the upper quarter from disease, disuse, trauma, surgery, and the aging process. The course will use musculoskeletal conditions with primarily inflammatory, degenerative, traumatic, and post-surgical etiologies as the basis for formulating a fundamental musculoskeletal exam and treatment plan. Students will develop skills and decision making to recognize when physical therapy is indicated, contraindicated, and when a referral to other health care personnel is needed.

Prerequisites: (DPT 551 and (DPT 561 and (DPT 571 and (DPT 581 and (DPT 601 and (DPT 611

DPT 602L Musculoskeletal Rehab II Lab (0 credits)**DPT 611 Cardiovascular Rehabilitation (2 credits)**

This course will examine the impact of cardiovascular diseases on the movement system. Students will develop clinical skills inclusive of decision making for the physical therapy management of those with primary and secondary cardiovascular disorders across the lifespan in order to optimize movement, promote health and wellness, to mitigate the progression of impairments, and to prevent the development of, or the progression of, disability.

Prerequisites: (DPT 502 and (DPT 512 and (DPT 522 and (DPT 532 and (DPT 542 and (DPT 550 and (DPT 560

DPT 611L Cardiovascular Rehab Lab (0 credits)**DPT 612 Pulmonary Rehabilitation (2 credits)**

This course will examine the impact of pulmonary diseases on the movement system. Students will develop skills and decision making for the physical therapy management of those with primary and secondary pulmonary disorders across the lifespan in order to optimize movement, promote health and wellness, to mitigate the progression of impairments, and to prevent the development of, or the progression of, disability.

Prerequisites: (DPT 551 and (DPT 561 and (DPT 601 and (DPT 611 and (DPT 571 and (DPT 581

DPT 612L Pulmonary Rehabilitation Lab (0 credits)**DPT 620 Leadership (2 credits)**

This course will explore the concept of leadership and the traits, values, and actions of effective leaders. Students will analyze the implementation and effectiveness of different leadership styles and management principles within the context of current health care systems, practices, and other professional arenas. Students will formulate a plan for their own continued professional growth as they create a portfolio of evidence of leadership activities.

Prerequisites: (DPT 673

DPT 621 Neurorehabilitation I (4 credits)

This is the first course within a two-course series which focus on identifying and performing optimal examination and treatment techniques with individuals with neuromuscular dysfunction using valid and reliable outcome measures to comprehensively understand the impact of deficits on all levels of the International Classification of Functioning, Disability and Health model. Students will begin to develop clinical decision making skills utilizing evidence based practice to manage individuals with neuromuscular pathology from the start of care and through the continuum of care. Students will begin to develop competence in performing examination and treatment of individuals with neurologic dysfunction across the lifespan with a focus on those with acquired brain injury.

Prerequisites: (DPT 551 and (DPT 561 and (DPT 571 and (DPT 581 and (DPT 601 and (DPT 611

DPT 621L Neurorehabilitation I Lab (0 credits)**DPT 622 Neurorehabilitation II (5 credits)**

This is the second course within a two-course sequence which focuses on the human movement system and the development of proficiency in the examination and treatment of individuals with neuromuscular dysfunction using valid and reliable outcome measures to comprehensively understand the impact of deficits on all levels of the International Classification of Functioning, Disability and Health model. In this course students will develop clinical decision making skills utilizing evidence based practice to manage individuals with neuromuscular pathology from the start of care and through the continuum of care with attention to contextual, personal, environmental factors, and psychosocial issues surrounding patients and their support system. Students will develop competence in performing examination and treatment of individuals with neurologic dysfunction across the lifespan with a focus on those with acquired and progressive conditions.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 622L Neurorehabilitation II Lab (0 credits)**DPT 631 Clinical Practice IV (1 credit)**

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this fourth course of the series will focus on clinical reasoning and focused exam procedures.

Prerequisites: (DPT 551 and (DPT 561 and (DPT 571 and (DPT 581 and (DPT 601 and (DPT 611

DPT 632 Clinical Practice V (2 credits)

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this fifth course of the series will focus on billing and financial considerations as well as interprofessional education.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 632L Clinical Practice V Lab (0 credits)**DPT 633 Clinical Practice VI (1 credit)**

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this sixth course of the series will focus on mentorship and peer teaching.

Prerequisites: (DPT 622 and (DPT 641 and (DPT 661 and (DPT 671 and (DPT 681 and (DPT 651

DPT 634 Clinical Practice VII (1 credit)

The Clinical Practice course series gives students a variety of exposures to clinical situations and experiences to integrate classroom learning with real and simulated patient encounters from the first- through the third-professional year. These encounters are designed in stepwise fashion to guide the development of interpersonal, communication, and decision-making skills while affording the student an opportunity to practice select clinical skills. Didactic sessions in this seventh and final course of the series will focus on coordination of care and complex decision making.

Prerequisites: (DPT 652 and (DPT 672

DPT 641 Integumentary PT (3 credits)

This course will examine the impact of the integument and its related disorders on the movement system. Students will develop skills and decision making for the physical therapy management of those with primary and secondary integumentary disorders in order to optimize movement, promote health and wellness, to mitigate the progression of impairments, and to prevent the development of, or the progression of, disability.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 650 Research III (1 credit)

The student will participate in the development and implementation of a research related capstone project. The student will gain insights into working with peers while engaging in faculty mentored capstone project. This capstone practicum is intended to provide a learning opportunity for the student(s) to integrate didactic knowledge and clinical experience into critical inquiry related to administration, clinical practice, research or teaching.

Prerequisites: (DPT 551 and (DPT 561 and (DPT 571 and (DPT 581 and (DPT 601 and (DPT 611

DPT 651 Research IV (1 credit)

The student will continue to implement and progress in a research related capstone project while engaging with peers and faculty mentors. The capstone project provides opportunity for students to integrate their didactic and experiential education into a capstone project within the context of administration, clinical practice, research or teaching.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 652 Research V (1 credit)

This course is the final research related capstone course in the DPT curriculum, which provides opportunity for students to integrate their didactic and experiential education into a capstone critical inquiry project within the context of administration, clinical practice, research or teaching. The students complete the capstone critical inquiry process by developing several avenues of disseminating project results and analyses.

Prerequisites: (DPT 622 and (DPT 641 and (DPT 661 and (DPT 671 and (DPT 681 and (DPT 651

DPT 661 Acute Care PT (2 credits)

In this course students will further develop clinical decision-making skills for the management of a person in the acute care setting across the lifespan. Students will develop and refine technical and professional behavior skills for the physical therapy management of patients in the acute care setting. This course will focus on diagnoses commonly seen, as well as contraindications and precautions needed to competently evaluate and treat in this setting. Students will be able to interpret commonly used diagnostic tools including radiology, lab values, vital sign response, and medications to modify their physical therapy interventions. Students will learn to work collaboratively with the interprofessional team to communicate patient needs and determine appropriate discharge disposition.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 671 Rehab across the lifespan (2 credits)

This course is designed to provide the student with an understanding of the biological, pathological, psychological and social aspects of development and aging from birth through end of life. Examination and intervention techniques will be presented focusing on the overall management of pediatric and geriatric patients/clients. Discussion will emphasize the use of current literature to promote evidence-based practice.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 671L Rehab Across the Life Lab (0 credits)**DPT 672 Integrative Management I (2 credits)**

This is the first of two case-based courses designed to give students the skills to make advanced clinical decisions, identifying needs across multiple body systems and integrating these with the resources and challenges patients encounter in the healthcare system and within their own social support systems. In this first course, students will draw and expand on their knowledge of select pediatric conditions to create comprehensive treatment plans that are relevant to settings across the continuum of care. Lab sessions will give students practice adapting evidence-based exam and intervention skills to younger populations.

Prerequisites: (DPT 622 and (DPT 641 and (DPT 661 and (DPT 671 and (DPT 681 and (DPT 651

DPT 673 Integrative Management II (3 credits)

This is the second of two case-based courses designed to give students the skills to make advanced clinical decisions, identifying needs across multiple body systems and integrating these with the resources and challenges patients encounter in the healthcare system and within their own social support systems. In this second course, students will draw and expand on their knowledge of select geriatric conditions to create comprehensive treatment plans that are relevant to settings across the continuum of care. Lab sessions will give students practice adapting evidence-based exam and intervention skills to older populations.

Prerequisites: (DPT 652 and (DPT 672

DPT 681 Medical Management II (2 credits)

Medical Management II is the second of a two-course sequence that will present an overview of the pathophysiology of disorders frequently encountered by physical therapists, particularly those affecting the gastrointestinal, integumentary, and neuromuscular systems, as well as other major clinical medicine disorders such as infectious disease. Disease processes across the life span are presented. Basic pharmacological intervention is discussed. The course will emphasize the relationships of pathological processes to patient symptoms and function throughout the lifespan.

Prerequisites: (DPT 602 and (DPT 612 and (DPT 621 and (DPT 650

DPT 690 Clinical Educa. Experience I (12 credits)

This course is the first full-time clinical education experience occurring under the direct supervision of a licensed physical therapist. The purpose of this experience is to practice technical and professional behavior skills, and develop efficiency in the areas of patient examination, evaluation, clinical reasoning, goal setting, program planning, and intervention implementation. Through interactions with patients and other healthcare disciplines, students will have the opportunity to integrate academic coursework into this patient setting. This rotation may be completed in an acute care hospital, post-acute rehabilitation unit, outpatient center, early intervention/school setting, home care, specialty care, or combination of above.

Prerequisites: (DPT 622 and (DPT 641 and (DPT 651 and (DPT 661 and (DPT 671 and (DPT 681

DPT 691 Clinical Educ. Experience II (12 credits)

This course is the first of two terminal full-time clinical education experiences occurring under the direct supervision of a licensed physical therapist. The purpose of this experience is to refine professional behavior, as well as skill and efficiency in the areas of patient examination, evaluation, goal setting, program planning, intervention implementation, and clinical decision-making in a setting that will meet the educational needs of each student individually. Through interactions with patients and other healthcare disciplines, students will have the opportunity to integrate academic coursework into a variety of patient settings. This rotation may be completed in an acute care hospital, post-acute rehabilitation unit, skilled nursing facility, outpatient center, early intervention/school setting, home care, specialty care, or a combination of above.

Prerequisites: (DPT 652 and (DPT 672

DPT 692 Clinical Educ. Experience III (12 credits)

This course is the second of two terminal full-time clinical education experiences occurring under the direct supervision of a licensed physical therapist. The purpose of this experience is to promote professional behavior, as well as independence and proficiency in the areas of patient examination, evaluation, goal setting, program planning, intervention implementation, and clinical decision-making in a setting that will meet the educational needs of each student individually. Through interactions with patients and other healthcare disciplines, students will have the opportunity to integrate academic coursework into a variety of patient settings. This rotation may be completed in an acute care hospital, post-acute rehabilitation unit, skilled nursing facility, outpatient center, early intervention/school setting, home care, specialty care, or a combination of above.

Prerequisites: (DPT 673

Physician Assistant Studies (PHA)

PHA 501 Human Anatomy (4 credits)

This is a one-semester course with a focus on the study of functional and applied human anatomy. Each topic will utilize lecture and lab experiences using the latest technology. When appropriate, clinical and surgical correlations are made from diagnostic and operative points of view. Instruction is primarily in lecture and laboratory format. Computer software programs, virtual anatomy dissection tables, and other visual aids are available for study. Applied learning based on clinically relevant examples will be emphasized. Faculty presentations in lectures will be correlated with laboratory experiences.

PHA 502 Human Physiology (3 credits)

This course will provide students with a detailed overview of the fundamental aspects of human physiology, including the normal function of the human body and its major organ systems for patients across the life span, from pediatrics to adults and through to geriatrics. Understanding the normal physiologic processes will serve as a foundation for understanding altered health states and their potential therapeutic interventions.

PHA 503 History/Physical I (3 credits)

This is the first of two sequential courses designed to provide students with the fundamental grounding and cognitive knowledge to prepare them for their clinical role in patient-centered care. The course will serve as an introduction to physical examination techniques, patient counseling, documentation, and communication skills used to conduct age-appropriate, culturally sensitive histories. The course will progress to acquiring the skills, knowledge, and sensitivity needed to communicate and intervene effectively in diverse patient encounters. This is a combined lecture and lab course using teaching methods to include small group demonstrations and practice sessions. This course will instruct the students on the normal history and physical exam and prepare them for the problem-focused techniques they will learn in later clinical medicine courses. Students will also be involved in active learning with simulation lab experiences. At the completion of this course, students will have obtained the necessary skills to elicit a comprehensive history and perform a comprehensive physical exam, as well as complete the associated documentation.

PHA 504 Pharmacology I (3 credits)

This is the first of two courses designed to provide a solid foundation in pharmacokinetics, pharmacodynamics, pharmacotherapeutics, and the physiology associated with drug action and interaction. Drugs will be discussed by class with attention given to specific drugs, indications, contraindications, dosage, mechanism of action, side effects, similarities, and differences. Emphasis will be placed on the more common drugs in the treatment of common diseases including ophthalmologic diseases, disorders of the ears, nose, and throat, infectious diseases to include antibiotics and antivirals, and respiratory, cardiovascular, and hematologic diseases. Additionally, students will learn about prescribing medications across the lifespan, including dosing and dose considerations for infants, children, adolescents, adults, the elderly, and patients with both acute and chronic diseases. Learning to prescribe will include instruction on reducing error, mandatory reporting, prescription databases, and facilitating adherence to a treatment plan. Students will learn the impact of pharmacology on preventive medicine with instruction on travel medicine and safety, and the legal, political, social, and preventive implications of vaccinations.

PHA 505 PA History (1 credit)

This course will give the new PA student the history, roots, and models of the Physician Assistant profession in medicine and look at the expected future role of the PA in medicine both in the United States and globally. Students will then explore the physician-PA relationship and the role of the PA within the medical team today. Students will also receive instruction on intellectual honesty, professionalism, successful student behaviors, and stress management. Students will also be introduced to the state and national professional organizations and the resources they offer and learn about the certification and continuing medical education process. Public health, epidemiology, associated disparities, and the importance of preventive medicine are all addressed in this course.

PHA 506 Genetics for PAs (1 credit)

This one-credit course will provide PA students with a review of the structure & function of the human genome, genes, chromosomes, DNA, inheritance patterns, and genes associated with human disease. Genetics of common complex disorders and pharmacogenetics will also be covered. Additionally, students will explore social, legal, and ethical considerations of genetics.

PHA 507 Psychosocial Medicine (2 credits)

This course will examine the factors that influence a patient's development and identify factors that aid in integrating psychosocial and behavioral perspectives into the practice of medicine. PA students will explore aspects of their own personalities and biases and evaluate how these aspects may affect interaction with their patients. Students will develop sensitivity for working with culturally diverse patient populations and outline health care disparities among minority groups. Students will also learn the psychosocial factors of illness and aging and the importance of end-of-life care. Students will learn to elicit medical information with sensitivity, accuracy, and in challenging situations. Students will also examine human sexuality, gender identity, and associated medical issues. Students will also learn how to identify risk factors, and screen for intimate partner violence, sexual assault, and other types of domestic abuse and violence.

PHA 521 Pathophysiology (3 credits)

This course is designed to provide students with an overview of the principles of pathophysiology as it relates to the various organ systems of the human body. This course will concentrate on the basic pathophysiologic understanding of disease and its clinical manifestations but will not emphasize areas of diagnosis or treatment. An understanding of the pathophysiology of disease and disease states is necessary for the students to be able to apply this basic science knowledge to a host of clinical medicine situations.

Prerequisites: PHA 501 and PHA 502 and PHA 503 and PHA 504 and PHA 505 and PHA 506 and PHA 507

PHA 522 Hist/Phys II & Clinical Skills (3 credits)

This is the second of two sequential courses and is designed to move the student from the normal history and physical exam to a problem-focused history and physical exam, in concert with abnormal findings and pathologies found in various organ systems. In addition, students will learn advanced skills required in clinical practice. This course incorporates knowledge from PHA 503 (the History and Physical I course), and the concurrent second-semester courses, including Clinical Medicine I and Diagnostics I. Building on this, the goals of this course are to have students gain the necessary skills to develop a problem-oriented, clinical approach to the evaluation, diagnosis, and management of common clinical conditions. Students will also be involved in active learning through simulation lab experiences with standardized patients, high-fidelity manikins, medical task trainers, and simulators. Students will review the indications, contraindications, procedural steps, potential complications, and post-procedural care of the outlined clinical skills. All students will actively participate in skills sessions to learn clinical skills.

Prerequisites: PHA 501 and PHA 502 and PHA 503 and PHA 504 and PHA 505 and PHA 506 and PHA 507

PHA 523 Clinical Medicine I (4 credits)

This course is the first of two designed to educate the student about diseases encountered in primary care medicine. The course will cover the risk factors, etiology, epidemiology, pathophysiology, clinical signs and symptoms, diagnostic studies, pharmacologic and non-pharmacologic treatment/management plans, prognosis, and potential complications for each disease, disorder, and condition within each topic area. The topics covered include: Eye Ear Nose Throat (EENT), Dermatological, Infectious, Hematological, Pulmonary, and Cardiovascular. Additionally, students will be expected to integrate knowledge from prior basic science courses along with concurrent semester courses as they relate to each module and topic area. Instruction includes clinical applications and considerations relating to patients throughout the lifespan, with a focus on the adult patient, as well as the diagnosis and management of acute, chronic, and emergent patient conditions within each topic. The course will be primarily in lecture format. Pharmacology review sessions will be integrated into each module to reinforce the material covered from the previous semester. Disease screening, patient education, and patient counseling strategies are integrated within each module and topic covered.

Prerequisites: PHA 501 and PHA 502 and PHA 503 and PHA 504 and PHA 505 and PHA 506 and PHA 507

PHA 524 Pharmacology II (3 credits)

This is the second of two courses designed to provide a solid foundation in pharmacokinetics, pharmacodynamics, pharmacotherapeutics, and the physiology associated with drug action and interaction. Drugs will be discussed by class with attention given to specific drugs, indications, contraindications, dosage, mechanism of action, side effects, similarities, and differences. Emphasis will be placed on the more common drugs in the treatment of common diseases including dermatologic, gastrointestinal, musculoskeletal, genitourinary, reproductive, endocrine, neurological, psychiatric, and behavioral. Students will learn about pain management, including opioids, controlled substances, and non-opioid agents. In addition, students will begin discussions surrounding the opioid epidemic, and other associated management issues of opiates. This will include instruction on the history of the opioid epidemic, underlying addiction pathophysiology, alternative pain management methods for acute and chronic pain, interprofessional management of patients with substance abuse disorder, Medication Assisted Therapy (MAT), and barriers to care including socioeconomic factors and regulation of controlled substances.

Prerequisites: PHA 501 and PHA 502 and PHA 503 and PHA 504 and PHA 505 and PHA 506 and PHA 507

PHA 525 Diagnostics I (2 credits)

This 2-credit course is the first of two courses providing students with insight into the use of laboratory and radiographic studies that aid clinicians in the diagnosis, treatment, and management of both acute and chronic diseases across the lifespan. Diagnostic studies utilized in acute, chronic, urgent, and emergent clinical scenarios are discussed. Students will also learn the appropriate preventive medicine settings where diagnostic testing would be appropriate, along with current screening recommendations. Students will be instructed in the selection, indication, and interpretation of laboratory tests and radiographic studies. Emphasis will be placed on the importance of provider-patient communication when discussing the risks and benefits of diagnostic testing, as well as discussing the results through shared medical decision-making with the patient and other members of the healthcare team. Students will also be provided with corresponding patient safety information, where applicable.

Prerequisites: PHA 501 and PHA 502 and PHA 503 and PHA 504 and PHA 505 and PHA 506 and PHA 507

PHA 526 Intro Rsrch/Evidence-Based Med (2 credits)

This course is the first of two required courses in the Physician Assistant research sequence. The course introduces the basics of the scientific method and prepares the students to search for, evaluate, and interpret evidence-based medicine. Students will obtain an understanding of basic biostatistical research as well as the limits and ethical considerations in medical research design and sampling methods. Students will learn how to frame and design a research question or hypothesis that will provide a foundation for their Capstone Project. Finally, students will utilize the more common medical literature databases to critically analyze current medical research as it relates to evidence-based practice.

Prerequisites: PHA 501 and PHA 502 and PHA 503 and PHA 504 and PHA 505 and PHA 506 and PHA 507

PHA 541 Clinical Medicine II (4 credits)

This 4-credit course is the second of two designed to educate the student with diseases encountered in primary care medicine and other settings. The course will cover the risk factors, etiology, epidemiology, pathophysiology, clinical signs and symptoms, diagnostic studies, pharmacologic and non-pharmacologic treatment/management plans, prognosis, and potential complications for each disease. The topics covered include: Gastrointestinal & Nutritional, Nephrology & Genitourinary, Musculoskeletal, Endocrine, Neurological, and Psychiatric/Behavioral diseases and disorders. Additionally, students will be expected to integrate knowledge from prior basic science and other courses along with concurrent semester courses as they relate to each module and topic. Instruction includes clinical applications and considerations relating to patients throughout the lifespan, with a focus on the adult patient, as well as the diagnosis and management of acute, chronic, and emergent patient conditions within each topic. The course will be primarily in lecture format. Pharmacology review sessions will be integrated into each module to reinforce the material covered from the previous semester. Disease screening, patient education, and patient counseling strategies are integrated within each module and topic covered.

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 542 Diagnostics II (2 credits)

This 2-credit course is the second of two courses providing students with insight into the use of laboratory and radiographic studies that aid clinicians in the diagnosis, treatment, and management of both acute and chronic diseases across the lifespan. Diagnostic studies utilized in acute, chronic, urgent, and emergent clinical scenarios are discussed. Students will also learn the appropriate preventive medicine settings where diagnostic testing would be appropriate, along with current screening recommendations. Students will be instructed in the selection, indication, and interpretation of laboratory tests and radiographic studies. Emphasis will be placed on the importance of provider-patient communication when discussing the risks and benefits of diagnostic testing, as well as discussing the results through shared medical decision-making with the patient and other members of the healthcare team. Students will also be provided with corresponding patient safety information, where applicable.

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 543 Research Methods, Design & Imp (3 credits)

This course is the second of two required courses in the Physician Assistant research sequence. This course continues and builds upon concepts learned and projects started during Introduction to Research and Evidence-Based Medicine (PHA 526). Students will continue developing and refining skills to critically analyze clinical research papers and evidence-based medicine. Students will utilize advanced literature search strategies and begin drafting their rapid literature review capstone project. At the conclusion of the course, students will be required to develop a critical analysis of scientific literature, and to produce a draft of the introduction and methods sections of their rapid literature review that will be culminated in their final written capstone project as part of the Capstone course (PHA 604).

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 544 Pediatrics (2 credits)

This course introduces students to the fundamentals of pediatric medicine to include newborns, infants, children, and adolescents. Students will review the physiology and pathophysiology, as well as learn the risk factors, etiologies, epidemiology, clinical signs and symptoms, diagnostic evaluation, pharmacological and non-pharmacological therapeutic management, prognosis, and potential complications of pediatric-related diseases, disorders, syndromes, and conditions. Students will also learn about normal growth and development, preventive care and anticipatory guidance, immunizations, common pediatric issues, special considerations for pediatric patients, and review other diseases limited to the pediatric population.

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 545 Emergency Medicine (2 credits)

This course focuses on the specialty of emergency medicine and patients across the lifespan (neonates, infants, toddlers, children, adolescents, adults, elderly, geriatrics) who may present to the emergency room setting. Emphasis is placed on the diagnosis, evaluation, and therapeutic approach of acutely ill patients, conditions, and diseases in the emergency room setting. BLS & ACLS certification will be required for the successful completion of this course. Students will learn comprehensive encounter management from initial triage, intradepartmental management, referrals, admission, and discharge. Students will participate in clinical reasoning conferences and simulation lab experiences of common acute care emergency complaints in order to work through a differential diagnosis and develop a therapeutic treatment plan in a team-based manner. Social and community aspects of emergency medicine are also reviewed, as well as considerations for special populations.

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 546 Surgery (2 credits)

This course is designed to provide students with an overview of the surgical patient, with an emphasis on adult surgical conditions. The focus of this course will be on the medical management of surgical patients from pre-operative, operative, and post-operative care settings. Students will learn to identify the risk factors, etiologies, signs and symptoms, diagnostics, therapeutics, prognoses, potential complications, and screening tools/recommendations for common surgical conditions. Students will be responsible for reviewing prior pertinent course work, such as anatomy, physiology, pathophysiology, and pharmacology. Students will participate in clinical reasoning conferences and simulation lab experiences in order to work through a differential diagnosis and develop a therapeutic treatment plan in a team-based manner. Students will also participate in clinical surgical skills training.

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 547 Women's Health (2 credits)

This 2-credit course provides an introduction to women's health, obstetrics, gynecological, reproductive, and genitourinary issues, conditions, diseases, and disorders across the life span. This course will focus on identifying the risk factors, etiologies, physiology, pathophysiology, signs and symptoms, diagnostic evaluation, therapeutic approach, prognosis, and potential complications of diseases, disorders, and conditions primarily affecting the female patient. Students will participate in clinical reasoning conferences and simulation lab experiences in order to work through a differential diagnosis and develop a therapeutic treatment plan in a team-based manner. Students will also learn and perform a genitourinary exam on both male and female standardized patients.

Prerequisites: PHA 521 and PHA 522 and PHA 523 and PHA 524 and PHA 525 and PHA 526

PHA 601 Professional Practice Issues I (1 credit)

The first of a series of three professional practice courses will introduce the PA student to the electronic health record, medical coding and billing, patient disposition, substance use disorder, and the impaired medical provider. This course will teach students about tips and tribulations of electronic medical records and the importance of patient safety and privacy as it pertains to electronic medical record keeping. Students will also learn proper and ethical billing, coding, and reimbursement practices. Patient disposition, with a focus on admission, discharge, and education, will be presented to the student. An overview of SBIRT and motivational interviewing will be included in this course. Students will complete the MAT waiver training to prepare them to recognize and treat substance use disorders. Finally, the student will be able to appreciate the impairment of medical providers and acknowledge the necessary referral for treatment.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 602 Issues in Geriatrics I (1 credit)

The Issues in Geriatrics I course is the first of two courses in which students are learning the physiological, pathophysiological, social, and clinical sciences of elderly patient care. This course will work to apply previously learned basic science, ethical, and clinical concepts to the elderly population, with a specific focus on common clinical presentations in elderly patients, elderly patient management, preventive medicine, and patient safety. Topics include aging, patient evaluation, polypharmacy, medical decision-making, varied presentations of disease in the elderly, acute illness management, chronic illness management, emergent illness management, palliative care, adherence to treatment, preventive medicine, and communication skills for elderly patient encounters and their families.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 603 Prof Practice Issues II (1 credit)

The second of three sequential courses related to professional practice will focus on the business of health care to include coding and billing, insurance coverage, health care delivery systems, and health policy. This course also includes policy issues that affect practice and laws and regulations regarding professional practice and conduct, to include palliative, end-of-life care, and mandated reporting. Students will also learn to identify and prevent violence involving children. Communication skills regarding death, dying, and loss are explored. Principles of professional conduct and principles and practice of medical ethics are applied throughout these modules. Students also take a deeper dive into optimal team-based care and explore the PA relationship with the physician and other health care providers. Lastly, students will learn professional skills including credentialing, licensure and certification, patient and PA advocacy, and further exploring the roles of the professional organizations that oversee the profession.

Prerequisites: PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 604 Capstone (2 credits)

This 2-credit course encompasses four integrative elements. The first element outlines study skills and board preparation that aid the student in preparing for the PANCE Exam, culminating in a summative written End-of-Curriculum exam. The second element includes a summative two-station OSCE, with note-writing and oral presentation skills evaluated. The third element includes the summative demonstration of clinical skills, previously learned in the didactic year and practiced throughout the clinical year. The fourth integrative element will provide the student with the opportunity to complete and share their capstone research projects with colleagues, faculty, and the University at large.

Prerequisites: PHA 526 and PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 605 Issues in Geriatrics II (1 credit)

The Issues in Geriatrics II course is the second of two courses in which students are learning the physiological, pathophysiological, social, and clinical sciences of elderly patient care. This course will work to apply previously learned basic science, ethical, and clinical concepts to the elderly population, with a specific focus on common clinical presentations in elderly patients, elderly patient management, preventive medicine, and patient safety. Topics include aging, patient evaluation, polypharmacy, medical decision-making, care settings, rehabilitation, acute illness management, chronic illness management, pain management, medication misuse, elder abuse, nutrition, emergent illness management, special care needs, socioeconomic impacts, ethical considerations, and preventive medicine.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 606 Prof Practice Issues III (1 credit)

The third of three sequential courses related to professional practice will focus on the principles and practice of clinical ethics, professional conduct, social determinants of health, health inequities, public health, and patient safety. Students will explore and apply principles of clinical ethics. Students will explore social determinants of health, health inequities, and providing health care with consideration for geographic location, disability status, special health care needs, ethnicity, race, religion, and spirituality. Students learn communication techniques and appropriate professional conduct for patients suffering from substance use disorder. Students will revisit components of acute and chronic care plans. Students will work on motivational interviewing, basic counseling skills, and providing patient education that is focused on helping patients adhere to treatment plans, modify their behaviors to more healthful patterns, and develop coping mechanisms. Students will explore patient response to illness or injury and patient response to stress. Students will learn the principles of public health and the public health system to include maintenance of population health, disease prevention, public health intervention, patient advocacy, disease surveillance, and reporting. Lastly, students will explore principles of quality improvement, prevention of medical errors, patient safety, risk management, and malpractice.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 651 Family Medicine Rotation I (5 credits)

This course is the first of two 5-week rotations in an outpatient setting at a family medicine office. The goal of this rotation is to educate the PA student in the diagnosis, management and treatment of both preventative, acute, and chronic illness for the patient in the primary care setting. Experience is provided at the level of a primary care PA and will include becoming familiar with the primary care provider's role in overall patient health, prevention of disease and screenings, health and wellness counseling, and coordination of care within the healthcare system for all patients across the lifespan to include adolescents, adults, and the elderly.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 652 Family Medicine Rotation II (5 credits)

This course is the second of two 5-week rotations in an outpatient setting at a family medicine office. The goal of this rotation is to educate the PA student in the diagnosis, management and treatment of both preventative, emergent, acute, and chronic illness for the patient in the primary care setting. Experience is provided at the level of a primary care PA and will include becoming familiar with the primary care provider's role in overall patient health, prevention of disease and screenings, health and wellness counseling, and coordination of care within the health-care system for all patients across the lifespan to include adolescents, adults, and the elderly.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 653 Internal Med Clinical Rotation (5 credits)

This 5-week rotation provides the PA student with the practical experience to develop their clinical reasoning skills in the management of preventative, emergent, acute, and chronic medicine in adults and elderly patients in an in-patient setting. Students will gain the skills necessary to interpret and integrate information obtained through the comprehensive history and physical examination, and laboratory and other diagnostics, to formulate differential diagnoses; to develop effective treatment plans; and to provide patient management and counseling throughout the hospital course of treatment. In addition, the students will learn the indications, limitations, and methodology of inpatient diagnostic procedures and therapeutic regimes common to internal medicine. Students are expected to see both adults and elderly adults, in an in-patient or out-patient setting during this rotation.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 654 Pediatrics Clinical Rotation (5 credits)

This five-week rotation provides the PA student with clinical experience in diagnosis, evaluation and management of infants, children, and adolescent patients, in an out-patient setting. Emphasis is placed on the recognition of normal as well as abnormal findings, diagnosis and management of common acute, emergent, and chronic childhood illnesses, assessment of developmental milestones, and preventative medicine such as immunizations and well-child care from birth through adolescence. Students should also gain familiarity with the clinical skills necessary to manage behavioral and mental health conditions in the pediatric population. Students should also focus on communication with parents, particularly with anticipatory guidance, preventive medicine, counseling, and communicating the management plan.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 655 Women's Health Rotation (5 credits)

This 5-week rotation provides the PA student with practical clinical experience in diagnosis, evaluation, and management of normal and abnormal conditions in women's health, including prenatal and gynecological care. In addition, students will learn to provide pre-natal, peri-partum and postpartum care, family planning, preventative medicine, health education, and counseling in the out-patient setting. Students will learn to provide care for women presenting with emergent, acute, and chronic gynecological and obstetrical conditions, including those conditions surrounding prenatal care.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 656 Behav/Mental Health Rotation (5 credits)

This 5-week rotation provides the PA student with practical clinical experience in diagnosis, evaluation, and management of psychiatric, behavioral, and mental health conditions and disorders in an outpatient setting. The student will be provided with practical clinical experience in the identification, evaluation, management, and referral of patients presenting with emergent, acute, and chronic psychiatric, behavioral, and mental health conditions. Students will engage with their patients by providing preventative medicine, including health counseling. Students will learn to recognize and treat behavioral and mental health disorders, throughout the lifespan (specifically: adolescent, adult, and elderly) patients.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 657 Surgery Rotation (5 credits)

This 5-week rotation provides the PA student with practical clinical experience in diagnosis, evaluation, and management of pre-operative, operative, and post-operative adult surgical patients. Students participate in the medical and surgical management of surgical inpatients during the pre-operative phase, intra-operative phase in the operating room, and post-operative phase while the patient remains admitted as an inpatient. Students are to gain practical clinical experience with surgical patients experiencing emergent, acute, and chronic surgical conditions. Students will engage with their patients by providing preventative medicine guidance, including health counseling in the preoperative and postoperative phases.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 658 Emergency Medicine Rotation (5 credits)

This 5-week rotation provides the Physician Assistant student with practical clinical experience working in an Emergency Department setting. This enables the student to develop focused and systematic approaches to the diagnosis and treatment of common medical and surgical emergencies. This rotation teaches the student to recognize the acuity level of presenting patients by prioritizing care and management in collaboration with their emergency medicine preceptor and the interprofessional emergency department team. Students will develop the necessary skills when considering the social and/or physical determinants of health, and other patient safety considerations when determining patient dispositions and treatment plans. Students will recognize the indications, limitations, and methodology of emergency room diagnostic procedures and therapeutic regimens. In addition, this rotation provides students with the opportunity to formulate organized and complete emergency room care for patients of all ages (child, adolescent, adult, and elderly) with a host of conditions presenting as acute, emergent, or chronic. Students will engage with their patients by providing preventative medicine guidance, including health counseling for patients presenting to the emergency department for care.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

PHA 660 Elective Rotation (5 credits)

This five-week rotation provides the PA student with practical clinical experience by working in a medical setting of their choice. This enables the student to develop a focused and systematic approach to the diagnosis and treatment of common medical issues in that specialty. In addition, this rotation provides students with the opportunity to formulate organized and complete medical records, problem lists, and management plans. Each student will research and present a medically interesting case that they were directly involved in, via the evaluation and management of the patient.

Prerequisites: PHA 541 and PHA 542 and PHA 543 and PHA 544 and PHA 545 and PHA 546 and PHA 547

Physics (PHY)

PHY 100 Physics Orientation (1 credit)

In this orientation course students are presented with an overview of all aspects of physics, including current topics, career opportunities in the field, academic standards, and integrity, as well as general information about the University and services that help students achieve academic success.

Attributes: Undergraduate

PHY 101 General Physics I (3 credits)

This two-semester sequence is an algebra-based physics course intended primarily for students majoring in biological and health sciences. Emphasis is on understanding fundamental principles and applying them to the analysis of physical phenomena, with several applications that arise in biology. Topics include classical kinematics and dynamics, fluids, waves, optics, electricity and magnetism and optics.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 101L General Physics Laboratory I (1 credit)

A two-semester laboratory sequence to accompany PHY 101-102.

Attributes: GEP Natural Science, Undergraduate

PHY 102 General Physics II (3 credits)

This two-semester sequence is an algebra-based physics course intended primarily for students majoring in biological and health sciences. Emphasis is on understanding fundamental principles and applying them to the analysis of physical phenomena, with several applications that arise in biology. Topics include classical kinematics and dynamics, fluids, waves, optics, electricity and magnetism and optics.

Prerequisites: PHY 101

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 102L General Physics Laboratory II (1 credit)

A two-semester laboratory sequence to accompany PHY 101-102.

Attributes: Undergraduate

PHY 105 University Physics I (3 credits)

This two-semester sequence is a calculus-based physics course intended primarily for students majoring in physics, chemistry, mathematics, or computer science. Emphasis is on developing both qualitative and quantitative understanding of fundamental physical principles, and the ability to apply those principles to analyze physical phenomena. Topics include classical kinematics and dynamics, electricity and magnetism, waves, and optics.

Prerequisites: MAT 161 (may be taken concurrently)

Restrictions: Enrollment is limited to students with a major in Actuarial Science, Chemistry, Computer Science, Mathematics, Mathematics - Secondary Educat or Physics.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 105L University Physics Lab I (1 credit)

A two-semester laboratory sequence to accompany PHY 105-106.

Attributes: GEP Natural Science, Undergraduate

PHY 106 University Physics II (3 credits)

This two-semester sequence is a calculus-based physics course intended primarily for students majoring in physics, chemistry, mathematics, or computer science. Emphasis is on developing both qualitative and quantitative understanding of fundamental physical principles, and the ability to apply those principles to analyze physical phenomena. Topics include classical kinematics and dynamics, electricity and magnetism, waves, and optics.

Prerequisites: PHY 105

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 106L University Physics Lab II (1 credit)

A two-semester laboratory sequence to accompany PHY 105-106.

Attributes: Undergraduate

PHY 110 Understanding Natural World (3 credits)

This course offers the non-science major an opportunity to explore how physics impacts everyday life. Topics will vary depending upon the interests of the class, but may include: the physics of sports, why musical instruments sound different from each other, rainbows and other optical phenomena, the physics of toys, Einstein's theory of relativity, and how a laser works. Although mathematics will not be the focus of the course, a working knowledge of algebra, geometry, and simple trigonometry is necessary. Emphasis is placed on developing critical thinking and scientific observation skills.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science, Undergraduate

PHY 111 The Astronomical Universe (3 credits)

In this course designed for the non-science major, the student is introduced to modern astronomical knowledge and theories. The planets, stars, and galaxies are investigated. Space exploration is discussed. Minimal mathematics is used and no previous science is required.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science

PHY 112 Energy: Problems & Promises (3 credits)

The goal of this course is to teach the student how to read, analyze, and intelligently comment on news articles about energy and the environment. The physics is straightforward and requires no more than basic business mathematics. Topics include: fossil fuels, large scale renewables, small scale renewables, nuclear power, megawatt accounting for conservation, transportation, and emissions control. The course emphasizes how real data shapes economics and policy, so the exact content will vary with current events.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science, Undergraduate

PHY 113 Physics by Experiment (4 credits)

In this course, students build up the basic principles of geometrical optics, electricity, thermodynamics, and/or classical mechanics by carrying out guided experiments and interpreting their results. Mathematics, at the level of geometry and simple algebra, is introduced when and as it is needed. This course is a Laboratory /Lecture combination.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 114 Tech Breakthroughs of 20th Cen (3 credits)

This course will explore a smorgasbord of major technological advances that occurred during the 20th century. Many of these developments occurred as a result of the historical, political, and economic factors that shaped much of the landscape of the previous century. The scientific achievements will be discussed in the historical context upon which they occurred paying particular emphasis on the interesting personalities that were responsible for many of the discoveries.

Attributes: GEP Natural Science

PHY 115 Investigations in Astronomy (4 credits)

This course, designed for the non-science major, provides an introduction to the science of astronomy. Topics include the roles of observation, theory, philosophy, and technology in the development of the modern conception of the Universe. The Copernican Revolution, the birth and death of stars, our Milky Way galaxy, time, and our ancestral heritage in the cosmos will be discussed and explored. No previous science, nor mathematics beyond the level of high school algebra, is required.

Restrictions: Students cannot enroll who have a major in Biology, Chemistry, Chemical Biology, Environmental Science or Physics.

Attributes: GEP Natural Science, Science Course w/Lab (Sci Maj), Undergraduate

PHY 115L Investigations in Astro Lab (0 credits)**PHY 150 First Year Seminar (3 credits)**

First year seminar course in Physics.

Attributes: First-Year Seminar, Undergraduate

PHY 170 Special Topics in Physics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHY 200 Survey of Physics (3 credits)

Covers the basic concepts in physics, including biological and medical applications of pressures and fluids, bioelectricity, biodynamics, and kinesiology.

Prerequisites: (MAT 120 (may be taken concurrently) or MA 107) or (MAT 155 (may be taken concurrently) or MA 110) or (MAT 161 (may be taken concurrently) or MA 122)

PHY 200L Survey of Physics Laboratory (1 credit)

A laboratory course to accompany PHY 200.

Attributes: Undergraduate

PHY 201 Introductory Physics I (3 credits)

Algebra- and trigonometry-based general physics course covering principles of mechanics and heat with applications to the health sciences. First course in a two-semester course sequence. This course is not interchangeable with one-semester physics courses such as PHY 200.

Prerequisites: (MAT 120 (may be taken concurrently) or MA 107) or (MAT 155 (may be taken concurrently) or MA 110) or (MAT 161 (may be taken concurrently) or MA 122)

Attributes: Undergraduate

PHY 201L Intro. Physics I Laboratory (1 credit)

A laboratory course to accompany PHY 201.

Attributes: Undergraduate

PHY 202 Introductory Physics II (3 credits)

Algebra- and trigonometry-based general physics course covering principles of wave motion, electricity and magnetism, optics, and modern physics with applications to the health sciences. Second course in a two-semester course sequence. This course is not interchangeable with one-semester physics courses such as PHY 200.

Prerequisites: PHY 201 or PHY 101

Attributes: Undergraduate

PHY 202L Intro. Physics II Laboratory (1 credit)

A laboratory course to accompany PHY 202.

Attributes: Undergraduate

PHY 211 Physics I (3 credits)

First semester of a three-semester, calculus-based general physics course sequence. It covers principles of mechanics and heat with applications to the health sciences. The course may involve the use of physics web resources, computer-controlled laboratory experiments, and spreadsheets for data analysis.

Prerequisites: (MAT 161 (may be taken concurrently) or MA 122 (may be taken concurrently))

Attributes: Undergraduate

PHY 211L Physics I Laboratory (1 credit)

A laboratory course to accompany PHY 211.

Attributes: Undergraduate

PHY 212 Physics II (3 credits)

Second semester of a three-semester, calculus-based general physics course sequence. It covers principles of waves, electricity, magnetism, optics, and modern physics with applications. The course may involve the use of physics web resources, computer-controlled laboratory experiments, and spreadsheets for data analysis. This course meets the PHY 202 prerequisite for all physics elective courses where applicable.

Prerequisites: PHY 211 or PHY 105

Attributes: Undergraduate

PHY 212L Physics II Laboratory (1 credit)

A laboratory course to accompany PHY 212.

Attributes: Undergraduate

PHY 213 Physics III (3 credits)

Third semester of a three-semester, calculus-based general physics course sequence. It is an introduction to the physics of waves, geometrical optics, fluids, and classical thermodynamics. The course may involve the use of physics web resources.

Prerequisites: (PHY 212 or PHY 106) and (PHY 202 or PHY 102) and (MAT 162 or MA 221)

Attributes: Undergraduate

PHY 213L Intro. Physics III Laboratory (1 credit)

A laboratory course to accompany PHY 213.

Prerequisites: PHY 212 and PHY 212L

Attributes: Undergraduate

PHY 235 Views of the Cosmos (3 credits)

An introduction to the study of the universe from scientific, religious, and philosophical standpoints. Surveys mankind's efforts to understand the nature of the cosmos, including its origins, evolution, and eventual demise. Viewpoints of many religious groups, cultures, and scientific thinkers will be discussed and compared. Contemporary debates in cosmology will be fully explored without mathematics.

Attributes: GEP Natural Science, Undergraduate

PHY 235L Views of the Cosmos Laboratory (1 credit)**PHY 251 Modern Physics I (3 credits)**

An analytical survey of the experiments, theories, and principles that led to the modern view of physical reality. Topics include: an introduction to special relativity theory, the dual nature of waves and particles, uncertainty relations, Bohr theory of hydrogen, fundamental aspects of quantum mechanics, the quantum theory of the hydrogen atom, and, if time permits, many-electron atoms.

Prerequisites: PHY 106

Attributes: Undergraduate

PHY 252 Modern Physics II (4 credits)

An extension of PHY 251 to include specific applications of the quantum theory. Topics include: structure and spectra of many-electron atoms and molecules, classical and quantum statistics, theory of solids, nuclear structure and dynamics, and an introduction to elementary particles.

Prerequisites: PHY 251

Attributes: Undergraduate

PHY 253 Survey of Nanotechnology (3 credits)

Nanotechnology embraces the disciplines of applied physics, materials science, supramolecular chemistry, and biological engineering to name a few. An overview of this highly interdisciplinary field will be given with a focus on the role of physics principles that guides this technology and on the new and exotic materials used.

Prerequisites: PHY 106

Attributes: Undergraduate

PHY 257 Math Methods in Physics (3 credits)

Advanced mathematical methods for physics: includes linear vector spaces, orthogonal functions, partial differential equations, complex variables, and transform techniques. Emphasis is on application of these mathematical techniques in solving problems in physics.

Prerequisites: PHY 106 or PY 212

Attributes: Undergraduate

PHY 270 Special Topics in Physics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHY 301 Classical Mechanics (3 credits)

Newtonian particle dynamics is presented with special emphasis on damped and forced simple harmonic motion and central-force motion. Generalized coordinates are introduced, and both Lagrange's formulation and Hamilton's formulation of classical mechanics are developed.

Prerequisites: PHY 106

Attributes: Undergraduate

PHY 303 Thermal Physics (3 credits)

The laws of thermodynamics are introduced and studied in the classical manner and the statistical mechanical foundations of thermodynamics are developed, including quantum statistics.

Prerequisites: PHY 251

Attributes: Undergraduate

PHY 307 Electricity and Magnetism (3 credits)

The classical (non-quantum) theory of electric and magnetic fields and charge interactions is presented. The appropriate tools of vector analysis are developed as they are needed. The Maxwell equations in both differential and integral form are introduced.

Prerequisites: PHY 106 and PHY 257

Attributes: Undergraduate

PHY 308 Waves and Optics (3 credits)

The study of electromagnetic waves and their associated boundary-value problems. Other topics include a brief analysis of geometrical optics, and detailed study of interference, diffraction, and polarization phenomena associated with electromagnetic waves.

Prerequisites: PHY 106 and PHY 257

Attributes: Undergraduate

PHY 311 Experimental Methods of Phy I (3 credits)

Laboratory intensive with some lecture. Provides the theory of operation and laboratory experiences for both analog and digital circuitry. Emphasis placed on written and oral communication skills and team work.

Prerequisites: (PHY 106 or PY 212) and (PHY 106L or PY 212L)

Attributes: Undergraduate

PHY 312 Experimental Methods in Phy II (3 credits)

Laboratory intensive. Focus on modern physics experiments.

Prerequisites: PHY 106 and PHY 106L

Attributes: Undergraduate

PHY 315 Einstein, Bohr, & Modern Phys (3 credits)

An examination of the lives and achievements of the great physicists of the first half of the twentieth century, including Albert Einstein, Niels Bohr, Werner Heisenberg, Wolfgang Pauli, and others, as they developed the basis of special relativity, general relativity, quantum physics, and nuclear physics. Considers the personal and philosophical dilemmas they faced, through an analysis of historical source materials such as letters, papers, and interview transcripts, and delves into the cultural impact of their work.

Prerequisites: PHY 200 or PHY 202 or PHY 212 or PHY 102 or PHY 106

Attributes: Undergraduate

PHY 321 Quantum Mechanics I (3 credits)

The Schrodinger formulation of quantum theory is developed with its constructs of wave packets, differential operators, and eigenvalue equations. Special emphasis is given to the quantum theory of measurement. Applications include various one-dimensional problems, central potentials and angular momenta. The transition to the matrix formulation of quantum theory is developed.

Prerequisites: PHY 251 and (MAT 213 or MA 222)

Attributes: Undergraduate

PHY 330 Descriptive Astronomy (3 credits)

Covers basic concepts of astronomy, its historical development, and theories of the origin of the universe. The search for life in the universe, the colonization of outer space, and the social and moral issues of the space program are also covered.

Attributes: Undergraduate

PHY 331 Nonlinear Dynamics and Chaos (3 credits)

This course introduces the theoretical foundations of nonlinear dynamics and chaos. Phase space analysis, bifurcations, routes to chaos, renormalization and universality, fractals and strange attractors are presented for a variety of nonlinear systems including maps and flows. Several examples are used to illustrate the theory, from physics, chemistry, biology, neuroscience, economics and social science.

Simulations are used throughout the course either by numerical computations with Matlab, Mathematica, or specific software packages.

Prerequisites: MAT 161 or MAT 155

Attributes: GEP Natural Science, Undergraduate

PHY 332 Intro. to Network Science (3 credits)

Basics of networks theory is introduced. Different network architectures are studied and analyzed. These include random and scale-free networks. Their properties and evolution are presented. In each component of the course a variety of examples of how these networks can model real processes and systems in various fields (data science, social science, mathematics, physics, environmental science, epidemiology, computer science, biology and chemistry, business analytics) will be analyzed. In particular the application of network science in Physics will be included for example for topics such as aggregation phenomena, lattices, neuro physics, critical phenomena, percolation to name few. Also the application of these physics topics to other fields will be presented. This course can be taken only by students in their third year or above.

Prerequisites: (MAT 161 or MA 122 or MA 110)

Attributes: GEP Natural Science, Undergraduate

PHY 357 Mathematical Methods (3 credits)

This course is an introduction to mathematical methods used in physics, chemistry, and related sciences: vector calculus, functions of complex variable, Fourier series, Fourier transform, series solutions of ordinary differential equations, and introduction to group theory. These topics are introduced in the context of specific problems in various areas of physics and physical science such as fluid dynamics, electricity and magnetism, quantum mechanics, thermodynamics, biophysics, and mechanics.

Prerequisites: (PHY 212 or PHY 106) and MAT 123

Attributes: Undergraduate

PHY 370 Special Topics in Physics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PHY 390 Physics Seminar (0 credits)

Topics and agenda may include outside speakers, local speakers, and discussion of special topics in physics and related areas. Physics majors are required to attend each semester. Physics minors are also encouraged to attend. Graded on a P/NP basis.

Attributes: Undergraduate

PHY 401 Advanced Mechanics (3 credits)

This course will further develop the Lagrangian and Hamiltonian formulations of classical mechanics. Additional emphasis will be given to such topics as: collision theory, noninertial reference frames, nonlinear mechanics and chaos, continuum mechanics, and topics in special relativity.

Prerequisites: PHY 301

Attributes: Undergraduate

PHY 403 Quantum Mechanics II (3 credits)

A continuation of the development of quantum theory started in PHY 321. Topics to include: identical particles including fundamental molecular quantum theory, time-independent and time dependent perturbation theory, the WKB and adiabatic approximations, scattering, and an introduction to field theory.

Prerequisites: PHY 321

Attributes: Undergraduate

PHY 405 Solid State Physics (3 credits)

A study of matter in its solid state. Topics include crystal structure, electrical conduction in metals and semiconductors, dielectrics, magnetic materials, and superconductivity. Includes applications to solid-state devices.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 407 Soft Condensed Matter Physics (3 credits)

This course will study the physics of materials such as fluids, liquid crystal, polymers (including biological polymers such as proteins and DNA), colloids, emulsions, foams, gels, and granular materials.

Prerequisites: PHY 251 and PHY 252 and PHY 257

Attributes: Undergraduate

PHY 408 Advanced Electromagnetism (3 credits)

A selection of advanced topics in electromagnetism such as electrostatics, boundary-value problems, fields, and wave propagation in material media. Other topics include propagation in waveguides and transmission lines, gauge transformations, relativistic theory of electromagnetic fields, and numerical techniques in electromagnetism.

Prerequisites: PHY 307 and MAT 238

Attributes: Undergraduate

PHY 409 Statistical Mechanics (3 credits)

Topics include ensembles and distribution functions, quantum statistics, Bose-Einstein and Fermi-Dirac statistics, and partition functions.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 411 Nuclear Physics (3 credits)

The phenomena of natural and artificial radioactivity are investigated. Various models of nuclear structure are introduced and examined.

Nuclear reactions are studied with emphasis upon fission and fusion.

Some of the apparatus of nuclear physics, such as particle accelerators and radiation detection devices, are analyzed.

Prerequisites: PHY 251 and MAT 213

Attributes: Undergraduate

PHY 412 Physics of Radiation Therapy (3 credits)

An introduction to the basics of radiation physics, radiation therapy, and dosimetry.

Prerequisites: PHY 102 or PHY 106 or PHY 202 or PHY 212

Attributes: Undergraduate

PHY 413 Materials of Electronics (3 credits)

This course will focus on the materials used to conduct electrical charge and spin and hence information from one region in space and time to another. Conduction processes in metals, traditional semiconductors, and in organic conducting and semi-conducting materials will be explored with a particular emphasis on the underlying physics principles employed.

Prerequisites: PHY 251 and PHY 252 and PHY 257

Attributes: Undergraduate

PHY 415 Computational Physics (3 credits)

Introduction to problem solving in physics using mathematical modeling, numerical methods, computer simulations and the fundamentals of programming. Topics may include: numerical solutions of Laplace and Poisson equations for electrostatic boundary-value problems, Monte Carlo simulation techniques, chaos theory.

Prerequisites: PHY 106 and MAT 213

Attributes: Undergraduate

PHY 417 Astrophysics (3 credits)

Application of the principles of classical and modern physics to astronomical phenomena. Topics include the acquisition and analysis of primary astronomical data; stellar energy production, structure, and evolution, including red giants, white dwarfs, neutron stars, and black holes; galactic structure and evolution; and cosmology.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 419 Biophysics (3 credits)

Application of physics to biological systems. Topics include: molecular biomechanics, fluids, interaction of photons and charged particles with matter, transport phenomena, electrical properties of membranes and nerves, Fourier techniques and signal analysis, image reconstruction, fundamentals of radiology, and health physics issues.

Prerequisites: PHY 251 and PHY 257

Attributes: Undergraduate

PHY 421 Physics of Fluids (3 credits)

The mechanics of continuous media, including balance laws for mass and momentum. Hydrostatic equilibrium, compressible and incompressible flow, vorticity and circulation. Pressure and shear, viscosity, and an introduction to Newtonian and non-Newtonian fluids. Applications may include geophysical flows.

Prerequisites: PHY 106 and PHY 257

Attributes: Undergraduate

PHY 423 Biomechanics (4 credits)

The role played by physical forces in shaping our natural world can be seen in the morphology, behavior, material composition, and spatial distribution of every organism, whether aquatic or terrestrial, plant or animal. This course exposes students to the role of physics in biological systems at the organismic and super-organismic level. Each week the course will focus on a different sub-discipline of Biomechanics presenting the underlying physical principles and the biological ramifications of those principles. In addition, laboratory exercises will present techniques and experimental approaches available to measure forces relevant to biological systems, as well as the quantitative and analytical skills necessary to work in this field.

Prerequisites: PHY 101 or PHY 105

Attributes: Undergraduate

PHY 423L BioMechanics Lab (0 credits)**PHY 425 Biophysics of the Brain (3 credits)**

This course introduces biophysical models of the brain and the nervous system functioning. In particular the physics of the neocortex is presented through the analysis of EEG studies. Simulations with software packages are employed to illustrate with various examples the models and their results. Linear electrical analogs and some basics of neural network theory are part of the course content. Elements of Biophysics of consciousness are also presented and a set of case studies is analyzed and discussed.

Prerequisites: (PHY 102 or PY 202) or (PHY 106 or PY 212) or (MAT 161 or MA 122 or MA 110)

Attributes: Undergraduate

PHY 435 General Relativity (3 credits)

An introduction to the general theory of relativity. Topics include special relativity, tensor analysis, curved manifolds, the equivalence principle, Einstein's field equations, spherical static solutions, black holes, and cosmology.

Prerequisites: PHY 251 (may be taken concurrently)

Attributes: Undergraduate

PHY 440 Introduction to Nanoscience (3 credits)

Introduction to broad topics of nanoscience and technology, including micro- and nanofabrication methods, small scale surface modification and characterization, physical and chemical properties of nanomaterials, and quantum phenomena, and their application in natural and engineering sciences. Up-to-date novel experimental and theoretical methods via research-based studies.

Prerequisites: PHY 321

Attributes: Undergraduate

PHY 463 Physics of Stars & Black Holes (3 credits)

An introduction to the physics and astrophysics of stellar evolution, including stellar birth, nucleosynthesis, main sequence stars, binary systems, white dwarfs, neutron stars, and black holes.

Prerequisites: PHY 251 and PHY 301

Attributes: Undergraduate

PHY 465 Introduction to Cosmology (3 credits)

An introduction to the physical properties and evolution of the universe, including its age, content, dynamics, and fate.

Prerequisites: PHY 251 and PHY 301

Attributes: Undergraduate

PHY 470 Adv Special Topics in Physics (3 credits)

The topics to be discussed are decided upon by agreement between students and teacher. This sequence is designed for Honors and other qualified students.

Attributes: Undergraduate

PHY 480 Intro to Materials Sci & Eng (3 credits)

General introduction to different types of materials: metals, ceramics, polymers, and composite materials. The relationship between structure and properties of materials are studied, along with the illustration of their fundamental differences and their applications.

Prerequisites: (CHM 125 or CHM 126) and (PHY 303 or PHY 409)

Attributes: Undergraduate

PHY 492 Internship in Physics (3 credits)**PHY 493 Research Project in Physics (1-4 credits)**

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research Project (6 credits) Must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register.

Attributes: Undergraduate

PHY 494 Research Project in Physics (1-4 credits)

Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair and Associate Dean in order to register. Honors Research Project (6 credits) Must be elected in junior year to allow adequate research time. Students need to complete the application form for independent study (available in the Dean's Office) and have the approval of the department chair, Associate Dean and the Honors Program Director in order to register.

Attributes: Undergraduate

PHY 495 Undergrad Research in Physics (2 credits)

Students will engage in a supervised research project related to physics or biophysics.

Attributes: Undergraduate

PHY 496 Advanced Research in Physics (3 credits)

Students will engage in an advanced research project related to physics or biophysics under the close supervision of a faculty member.

Attributes: Undergraduate

PHY 498 Directed Research in Physics (3 credits)

Students will engage in research of an experimental, computational, or theoretical nature in either physics or biophysics under the close supervision of a faculty member.

Attributes: Undergraduate

PHY 700 Graduate Physics Seminar (1 credit)

Reports and seminars on topics of current physics interest presented by students. Depending on the instructor, topic may be one of student's or instructor's choice.

Restrictions: Enrollment is limited to Graduate level students.

PHY 701 Medical Physics (3 credits)

Biomedical applications of physics are covered with emphasis on diagnostic and treatment implications. Problem-solving opportunities and detailed literature review in the areas of physics pertinent to orthopedic and/or neurologic physical therapy practice are included.

Restrictions: Enrollment is limited to Graduate level students.

PHY 703 Entrepreneurship & Physics (2 credits)

This course provides an overview of the tasks performed by physicists working in the private sector and industry. This includes an introduction of entrepreneurship basics. Students are also involved in projects which may include design, testing, cost feasibility and market analysis of simple products. Professional industrial physicists from the private, public, and government sectors are invited to give presentations and interact with the students.

Restrictions: Enrollment is limited to Graduate level students.

PHY 710 Advanced Mechanics (3 credits)

Advanced methods for analyzing classical physical systems, making use of Lagrangian, Hamiltonian, and Newtonian techniques. Includes single and multiple particle systems, rigid bodies, symmetry and conservation principles, normal modes of oscillation, continuous systems, and modifications needed for special relativity.

Restrictions: Enrollment is limited to Graduate level students.

PHY 721 Quantum Mechanics (3 credits)

The course covers the essential theoretical formulation of quantum mechanics and its formal structure. It analyzes kinematics and dynamics of a set of quantum systems in various representations. The course also introduces the path integral formulation of quantum mechanics and quantum mechanics in phase space. Several examples and applications will be used to illustrate the concepts. These include addition of angular momenta, and charged particle in a magnetic field.

Restrictions: Enrollment is limited to Graduate level students.

PHY 730 Advanced Nonlinear Dynamics (3 credits)

The course covers advanced topics in chaos and nonlinear dynamics including center manifolds, homoclinic and heteroclinic tangles and chaotic transport, topology of chaos-branched manifolds, invariant sets, and universality. Also, the symmetry of chaos, chaos in Hamiltonian and conservative systems, KAM theorem, stochastic layers and diffusion, and chaos in quantum systems. Theory will be applied to various systems in physics, chemistry, biology, and other fields. Numerical and computational techniques will be presented and used in the applications.

Restrictions: Enrollment is limited to Graduate level students.

PHY 757 Mathematical Methods (3 credits)

Advanced mathematical methods to model systems in physics, physical science and engineering. Integral transforms. Series solutions of ordinary differential equations. Special functions. Solution of partial differential equations, with boundary and initial conditions and their applications. Complex variables, complex integration and their applications. Calculus of variations.

Restrictions: Enrollment is limited to Graduate level students.

PHY 799 Graduate Research in Physics (3-5 credits)

A research project in the student's chosen track under the direction of a faculty advisor.

Restrictions: Enrollment is limited to Graduate level students.

PHY 807 Advanced Electromagnetism (3 credits)

Advanced methods to study boundary-value in electrostatics. Electrostatics of macroscopic media. Magnetostatics, Faraday's Law, and quasi-static fields. Maxwell Equations, macroscopic electromagnetism and conservation laws. Electromagnetic waves and wave propagation in different media. The course will cover some applications such as wave guides, resonant cavities, optical fibers, scattering and diffraction.

Restrictions: Enrollment is limited to Graduate level students.

PHY 809 Statistical Mechanics (3 credits)

Foundations of classical statistical mechanics with applications. Phase transitions, critical phenomena, and renormalization group theory. Quantum statistics such as Bose-Einstein and Fermi-Dirac distributions and their applications. Advanced topics in non-equilibrium statistical mechanics such as classical and quantum theory of linear response, Langevin and Fokker-Planck equations and their applications.

Restrictions: Enrollment is limited to Graduate level students.

PHY 817 Quantum Information (3 credits)

Provides a broad survey of the fundamentals and physical implementation of the rapidly-evolving field of quantum information and computation. It discusses the concept of qubits, quantum entanglement, quantum coherence, and quantum gates and algorithms, with a focus on superconductor-based approaches.

Restrictions: Enrollment is limited to Graduate level students.

PHY 832 Network Theory & Applications (3 credits)

Different types of networks are analyzed. These include random and scale-free networks. Their properties and evolution are studied. Examples of how these networks can model real processes and systems are introduced.

Restrictions: Enrollment is limited to Graduate level students.

PHY 833 Pattern Formation (3 credits)

This course covers different techniques to explore mechanisms of macroscopic pattern formation in a variety of physical systems such as fluids, materials, chemical and biophysical systems. The course introduces both time- and space-patterns. The concept of self-organization and formation of coherent structures is discussed in depth. The course also introduces basic techniques for digital pattern recognition.

Restrictions: Enrollment is limited to Graduate level students.

PHY 840 Biophysics Exptl Techniques (3 credits)

Presentation of the available technologies for the research in biophysics, with emphasis on lab-on-a-chip and its interfaces with the atomic force microscopy (AFM) and mass spectrometry. It covers microfluidics techniques, including channel microfluidics and digital microfluidics. The concept of lab-on-a-chip technology is introduced, showing the possibilities for faster and accurate bio-analytical applications when compared to conventional methods.

Restrictions: Enrollment is limited to Graduate level students.

PHY 841 Physical Approach to Life Sci. (3 credits)

The course applies physics and mathematics to obtain quantitative information that sheds light on biological processes, particularly at the cellular and molecular level. It includes microfluidics (with lab-on-chip technologies), random walks, diffusion with drift, statistical mechanics and rate equations, with applications to enzyme kinetics, molecular motors, biological electricity, and protein folding. Throughout the course, the student is guided in up-to-date discussion on selected papers and presentations on current platforms in the discipline.

Restrictions: Enrollment is limited to Graduate level students.

PHY 850 Materials Sci Exptl Techniques (3 credits)

Introduces students to the principles and applications of state-of-the-art experimental techniques for the measurement and analysis of the structure and properties of materials. The course will involve a mixture of lectures, demonstrations and hands-on laboratory exercises. Topics are selected from advanced microscopy, electronic, optical, and thermodynamic methods of probing materials.

Restrictions: Enrollment is limited to Graduate level students.

PHY 851 Quantum Materials (3 credits)

Introduces students to quantum effects in materials. Topics include superconductivity, magnetism, graphene and nanomaterials, topological insulators, charge and spin density waves, classical and quantum phase transitions, and interfaces.

Restrictions: Enrollment is limited to Graduate level students.

PHY 890 Graduate Special Topics (3 credits)

This course is designed to allow in-depth exploration of one of a variety of topics of current interest in physics. The topic will be designated by the instructor.

Restrictions: Enrollment is limited to Graduate level students.

Political Science (POL)

POL 111 Intro to American Politics (3 credits)

This course is an introduction to American political processes and institutions. The goal of this course is to acquaint the student with the theory and practice of American government. Students will learn about the basic structure, function, and dynamics of American government and the political system within the context of the major political issues of our time. Beyond studying the institutional structures and activities of government, we will also evaluate the relationships between individuals, groups, and institutions in terms of influence, process, and outputs in various domains.

Attributes: American Studies Course, GEP Social Science, Undergraduate

POL 113 Intro to Comparative Politics (3 credits)

An introduction to the study of comparative political systems, this course focuses attention on the institutions and political cultures of select countries from different world regions. While exploring the varieties of democracy and authoritarianisms, as well as the complexity of democratizing today, this course also introduces students to the comparative method.

Attributes: GEP Social Science, Globalization Course, International Relations Course, Undergraduate

POL 115 Intro to Global Politics (3 credits)

This course is an introductory survey of the major approaches (Realism, Liberalism, and Constructivism), interpretations and problems in the field of Global Politics, with a heavy emphasis on current events. Topics include security (war, peace, terrorism), international political economy (hegemony, development, globalization), and trans boundary issues (migration, human rights).

Attributes: GEP Social Science, Globalization Course, International Relations Course, Undergraduate

POL 117 Intro to Political Thought (3 credits)

When is it justified to overthrow a tyrant? Do men and women have different virtues? Are markets just? Political theorists ask questions about justice, equality, law, property, community, and duty. This course examines questions that affect today's political world by examining the foundations of political thought - Plato, Aristotle, Aquinas, Machiavelli, Hobbes, Locke, Adam Smith, Madison, Rousseau, Marx - as well as contemporary theorists such as Foucault, and feminist Wendy Brown.

Attributes: Undergraduate

POL 150 First Year Seminar (3 credits)

Depending on the instructor, the First-Year Seminar courses focus on particular topics of interest in Political Science and Politics (e.g., Ethics in International Relations; Diversity and Inequality; Gender and Global Politics; Student Liberties and the Supreme Court). Does not count for major credit.

Attributes: First-Year Seminar, Undergraduate

POL 170 Special Topics: Political Sci (3 credits)

Depending on the instructor, these courses will focus on a particular topic of interest in Political Science and Politics (e.g., The Presidential Election, The Arab Spring, Guns and the Supreme Court). Does not count for major credit.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

POL 190 Strategies for Success (1 credit)

Our class is designed to provide students with the tools needed to thrive and succeed at SJU and in your major. We will focus on the development and application of college-level study skills, personal success strategies, and the use of campus resources that enhance individual student achievement. Topics discussed will include: learning styles, study techniques, note-taking, test-taking, effective writing and reading, time management, career and educational planning, personal wellness and finance, and interpersonal skill development. We will investigate the variety of offices and resources available to students across campus, as well as how to use some of the more common software systems (Canvas, Starfish, Google Applications, etc). Successfully completing POL 190 is required of all incoming Freshmen students majoring in Political Science or International Relations, and grading is based on P/NP.

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Undergraduate

POL 191 Washington Leadership Seminar (3 credits)

Students who attend The Washington Center (TWC) take a leadership seminar through TWC. This course is an elective; it does not count for POL major or minor credit.

POL 192 Washington Internship (3 credits)

Students who attend The Washington Center (TWC) for a normal academic semester (fall or spring) perform a 30-35 hour a week internship. The Department grants students two upper division courses (6 credits) for the internship (see POL 411-412 below) and also this third elective course for these internship hours. This course is an elective; it does not count for POL major or minor credit.

POL 193 Washington Center Elective (3 credits)

Students who attend The Washington Center (TWC) take one evening course at the Center in addition to performing their internship and participating in the leadership seminar. If this course is in Political Science, we transfer it back as POL 193. This course is an elective; it does not count for POL major or minor credit.

POL 195 IDEAL Learning (1 credit)

This course is for students interested in pursuing the IDEAL Learning sequence and who want to explore applying for the IDEAL Scholars program. We will take the skills acquired from POL 190 to the next level by examining various ways for understanding leadership, strengthening our ability to navigate the college environment, exploring multi-level mentoring networks, and developing affinity-based community learning. Chair/Instructor approval required.

Prerequisites: POL 190 (may be taken concurrently)

Attributes: International Relations Course, Undergraduate

POL 196 POL AP (3 credits)**POL 270 Special Topics (3 credits)**

Depending on the instructor, these courses will focus on a particular topic of interest in Political Science and Politics (e.g., The Presidential Election, The Arab Spring, Guns and the Supreme Court). Students may count only two POLs 270 and/or 370 courses for major or minor credit.

Attributes: Undergraduate

POL 290 Career Prep Seminar (1 credit)

What will YOU do with your Political Science or International Relations degree? Learn how to explore the variety of professional options open to you based on your major and on your unique personality and individual traits. This professional development seminar will help you build practical skills through a series of hands on assignments, a detailed self-assessment, goal-planning for a successful future, and multiple points of engagement with alumni. This course meets once a week to provide instruction and support in topics including internship search and application, resume/cover letter prep, post-grad options, professional communication and networking/interviewing. Is an internship right for you? Do you know the best way to search for one? Why do I need to network - how will that help me? Get the answers to these and many other questions and invest in your future! All majors are required to complete this seminar in the Fall semester of their Sophomore year; graded on a P/NP basis. Political Science and International Relations minors are also encouraged to register.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in International Relations or Political Science.

Attributes: Undergraduate

POL 291 IDEAL Scholars (1 credit)

This course is for students who have been accepted into the IDEAL Learning program and will further develop mentoring, leadership, and community-building skills. Students will have the opportunity to practice and share the knowledge they have gained by engaging in hands-on projects, activities, and faculty/student interactions. Chair/Instructor approval required.

Prerequisites: POL 190 (may be taken concurrently) or POL 195 (may be taken concurrently)

Attributes: International Relations Course, Undergraduate

POL 292 IDEAL Leaders (1 credit)

This course is for students who have been accepted into the IDEAL Learning program and who want to take on a leadership role within the initiative. IDEAL Leaders will directly apply the skills they have acquired by mentoring, leading, and building community within the program. Chair/Instructor approval required.

Prerequisites: POL 291 (may be taken concurrently)

Attributes: International Relations Course, Undergraduate

POL 301 Law and Social Change (3 credits)

Brown v. Board of Education is heralded as a great success. A disenfranchised minority turned to the courts when the legislature and executive failed to respond. To what extent has this approach been successful? Since Brown, other groups have turned to the courts as an authority when they believe they are disadvantaged by the larger political system. Should the courts play a role in social change? What should it look like? Case studies will include: school integration in the 1960s, birth control and abortion, gun rights, capital punishment or juvenile life without parole, and marriage equality.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 303 Political Ideology in America (3 credits)

Why did Ben Franklin say that the Swedes were "blackening" the colonies? Why did Lincoln change his mind about slavery? The course examines classic texts (for example, the American Revolution, the constitutional convention, Lincoln-Douglas debates) by linking them to other important intellectual and political movements in American thought (for example, white -women's suffrage, the 20th century civil rights movements). The course examines the changing political vocabulary in American politics - and the expansion of rights to men, laborers, women, racial minorities, and LGBT people.

Attributes: American Studies Course, Undergraduate

POL 304 Engaging Communities (3 credits)

How do communities identify and solve problems in partnership with other stakeholders in their local environment? Engaging Communities is an examination of how institutions develop trust and reciprocal partnerships within their neighborhoods and surrounding communities. The class will study the theory and practice of constructing mutually beneficial relationships among and between hospitals, higher education institutions, non-profit organizations, local government, community groups, and residents to improve the quality of life locally in Philadelphia and the surrounding counties. Students will learn about multiple ways to elicit and increase community participation and civic engagement, utilize the fundamentals of project management, and create models for assessment.

Prerequisites: POL 111 or POL 113

Attributes: Undergraduate

POL 305 Politics, Ideology, & Film (3 credits)

How do ideologies – bodies of thought – affect individuals, social movements, nations, institutions, and groups? This course examines ideologies like fascism, communism, racism, colonialism, capitalism. We use films and primary documents from Europe, Asia, Latin America, Russia, and the United States to place each ideology in historical, political, and/or economic context. Students are expected to master the complexities of the ideologies in historical context as well as evaluate ideologies that have shaped national and international politics in the twentieth and twenty-first centuries. Classic articles in the social sciences and humanities help students explore popular responsibility for the actions of a leader (are the German people responsible for Hitler's atrocities?), torture (is it ever ethical to torture someone for information?), and capital punishment (are there conditions when it is acceptable for the state to end a life?).

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Undergraduate

POL 306 Political Participation in US (3 credits)

Why do people participate in American politics and civic life? Why don't they? Why should they? This course emphasizes the political science literature on political participation and civic engagement. We will begin by examining the factors that make participation more or less likely including socialization, partisanship, networks, and geography. Demographic and social identities can shape how easily and how often we wish to involve ourselves in democratic processes. From there, we will focus on forms of political participation. Who votes? Who donates money? Who protests? Throughout we will acknowledge the constraints that make forms of participation easier from some than others. Finally, we will address the consequences for political life if individuals opt out of politics. What does isolation and decline in civic life mean for the rise of political and economic inequality, efficacy, and social connectedness?

Attributes: Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 307 Reproduction and the Court (3 credits)

In the 1970s, Latinx women were coerced into being sterilized - but courts did not see a violation of their rights. Is there a constitutional right to reproduce? Buy birth control? End a pregnancy? This course considers the changing opinions of the U.S. Supreme Court (SCOTUS) with an emphasis on race and gender. It includes a SCOTUS simulation (moot court) in which students act as justices and attorneys.

Attributes: American Studies Course, Gender Studies Course, Justice Ethics and the Law , Undergraduate

POL 309 Advising and Advocacy (3 credits)

How do citizens and groups advocate for interests? How do they advise leaders to make changes? And, when are they more likely to influence the policy direction of the nation? This course offers an analysis of modern American "advising and advocacy" styles and models, with a focus on the politics of domestic policymaking. Students will study the use of power and authority, the importance of strategic opportunities, the nature of decision-making in a separated system, and the role that government, interest groups, and public opinion play in those decisions. Based on these perspectives, we will bring our informed insights to address an important question within our current circumstances: how to represent those who were/are marginalized in the political landscape. Thus, students in this class will serve as advocates for those who may not have the strongest voices in political discussions and advise elected officials on how to construct a policy agenda that attends to underserved citizens and historically marginalized communities. Indeed, a primary goal of the class is to study and critically analyze how systems of inequality and disadvantage inform politics and policy from a social justice perspective.

Attributes: American Studies Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 310 Constitutional Politics (3 credits)

From the time the Constitution was ratified, the three branches of American government (legislative, executive, and judiciary) have competed for control over American policy and law. The Supreme Court is - on the one hand - extremely powerful because it can declare an act of either the legislature or executive unconstitutional (judicial review). Yet the Court lacks any power to enforce its decisions and it relies on the other branches to enforce its decisions (for example, President Eisenhower bringing in the military to uphold the desegregation of schools). Through the reading of cases and the viewing of documentaries, this course explores how the Supreme Court has shaped American politics for over two centuries. Topics include free speech in wartime, internment of Japanese-Americans during WWII, desegregation, abortion rights, and same-sex marriage.

Attributes: Justice Ethics and the Law , Undergraduate

POL 311 Const Law: Rights & Civil Lib (3 credits)

A study of contemporary issues of civil rights and liberties in the United States through classic Supreme Court decisions. Issues addressed include freedom of speech, press, and association, racial and gender discrimination and the issue of fundamental rights, including the right of privacy. Students read cases and learn to brief cases. The course highlight is a simulation of two Supreme Court cases. Students read and research to portray justices and attorneys in the two moot court simulations.

Prerequisites: ENG 101

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 312 Social Controv & Supreme Court (3 credits)

Americans look to the Supreme Court to rule on moral and social issues like capital punishment and abortion. Why do citizens rely on nine unelected judges to define their rights in a democracy? This class analyzes how the Supreme Court has, over time, changed American law in two controversial rights: gun ownership and marriage equality. The class begins by considering the judiciary in our constitutional democracy then turns to the two case studies. The Supreme Court decided four marriage cases in June of 2015 and the course integrates these new rulings. Students will examine documents from the Founding (e.g. the Federalist Papers), read modern accounts of both gun and marriage cases, and learn to read and brief Supreme Court decisions.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate

POL 313 Public Policy (3 credits)

This course investigates public policymaking within the United States with an emphasis on the social construction of public policy. Students will assess the significance of social, economic, and political factors that influence policymaking and implementation; how problems become a part of the political agenda; and the major political ideological perspectives in the U.S. that impact policy process and content. The course is a study of policy in practice, as students will evaluate current social problems along with empirical social science research to determine the strengths and weaknesses as well as the intended and unintended effects of a particular social policy at the state and/or national level.

Attributes: American Studies Course, Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 316 State and Local Government (3 credits)

This upper division course focuses on understanding variation across America's federal system. How can we move from thinking about one American government, to 51 governments (all the states plus the national), or to the significantly larger number of local and municipal governments? What role do the states and localities play in shaping American democracy? In what ways are states hindering democracy or helping it flourish? In this course we will focus on three broad themes in the state politics literature: structural power, interest group activism, and individual political behavior. Throughout we will acknowledge that variation at the subnational level matters for engagement, equality, and the presence of a functioning democracy.

Attributes: American Studies Course, Undergraduate

POL 318 Pennsylvania Politics (3 credits)

This course is a study of the Commonwealth of Pennsylvania, its recent history, its politics, and the way its government is conducted. The course will have distinct, but overlapping emphases: The Political Environment: What are the political forces driving the agenda in this state? The issues: What are the issues that actually matter in this state? The Structure: How do the Governor's Office, the General Assembly, other statewide offices, and other departments of state government actually work? To assist in learning about these matters, several experienced and knowledgeable guest speakers will address the class. In addition, at various points in the semester, the class will be formed into a focus group to discuss various issues confronting the state.

Attributes: American Studies Course, Undergraduate

POL 319 Public Opinion & Media (3 credits)

This course is a brief overview of the role of public opinion and media in American democracy. We hold attitudes about relevant political and social groups, many of which shape our thoughts and actions. Further, if government is to be "by the people," understanding what "the people" want is of major importance to legislators, organized groups, and interested political scientists. The media, a critical source of political information, can inform the public, provide a mirror of public perception, but also shape ideas. In this course, we examine several complex questions: What is public opinion? Where does it come from? How and when does it change? Does everyone's opinion matter equally?

Attributes: American Studies Course, Undergraduate

POL 320 Injustice & the Law (3 credits)

Fifty years after the passage of the Civil Rights Act of 1964, which eliminated most forms of de jure discrimination, we are still witnessing the lingering effects of de facto inequality within American society. To be sure, the CRA of 1964 and its subsequent amendments eliminated the use of discriminatory practices in housing, employment, business, and education. But overcoming de facto inequality has been harder to accomplish. What explains the gap between established legal doctrine and the reality of many Americans of color? The goal of the course is for students to study the potential and limits of law as a tool for social justice, as well as the role of law in the creation and maintenance of systems of racial injustice. Primarily through the lens of race, students will examine the empirical realities of laws and policies that were ostensibly passed to overcome injustice, broadly defined, as well as the sociopolitical causes and consequences of de facto racial segregation in American society.

Attributes: American Studies Course, Justice Ethics and the Law, Undergraduate

POL 322 Campaigns & Elections (3 credits)

The Campaigns and Elections course is an examination of modern American political campaigns, with a focus on the dramatic changes that have occurred in electoral politics in recent years. The course will have three distinct, but overlapping emphases: 1. The Strategic Campaign: How are campaigns carried on and managed? How should they be? What are the new technologies that have so drastically changed the nature of political campaigns? 2. Voting Behavior: what are the deep and fundamental changes that have occurred in voting behaviors and attitudes in recent years? What are the implications of these changes for the electoral process? 3. The Media and Campaigns: How do the media influence campaigns and electoral outcomes? What are the implications of the pervasive relationship between politics and the mass media? To assist in learning about the real world of politics, several guest speakers with considerable experience in political campaigns will address the class. In addition, at various points during the semester, the class will be formed into a focus group to discuss various campaign-related issues.

Attributes: American Studies Course, Undergraduate

POL 323 Women and American Politics (3 credits)

This course is designed to provide students with a critical examination of women as political actors in the United States. We will analyze various forms of women's political participation, both in the traditional spheres of what is considered politics – women as voters and politicians – and also in more "non-traditional" spheres of political activism. We will examine how women are mobilized to participate in politics, focusing keenly on the differences among women in their political activism in an effort to understand how the intersection of gender, race, class, sexuality, age, and ability influence women's political activism. The primary goal of this course is to familiarize students with key issues, questions, and debates in the women and politics scholarship, mainly from a U.S. perspective. Students will become acquainted with many of the critical questions and concepts scholars have developed as tools for thinking about the gendered political experience. In this course you will learn to "read" and analyze gender politically, exploring how it impacts our understanding of the political world.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 324 Race & Ethnic Politics in U.S. (3 credits)

From its first days, the United States has faced the dilemma of how to incorporate populations different from the majority population into the polity. This dilemma continues today and appears in discussions of such issues as affirmative action, immigration and naturalization, language policy, and social welfare policy. In this course, we will examine the major theories that attempt to explain the roles of race and ethnicity in U.S. politics and the ways in which individuals use race and ethnicity as resources for political organization. We will examine the phenomenon of ethnicity and race in the political development of the United States. Finally, we will look at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Among the topics to be covered include the meaning of race and ethnicity, the history of racial and immigration politics, prejudice, group participation and mobilization, political representation, and public opinion.

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Faith Justice Course, Undergraduate

POL 325 Intersectionality (3 credits)

Our course is designed to provide students with a critical examination of intersectionality, a term "coined" by Kimberlé Crenshaw to theorize the experiences of Black women in the U.S. Indeed, the intersectionality work we "know" today arose from, and was rooted in, Black women's activism, oppositional knowledge and resistance, and collective action. Yet, as some have recently outlined, the field of intersectional studies has developed in ways that mask that origin, neutralize, and limit the potential of intersectional action. Therefore, to truly understand intersectionality, we must emphasize the canonical works produced and practiced by Black women and women of color activists, academics, and practitioners, and we will center their work in our class. Our study is grounded in the understanding that intersectionality is a political intervention as much as a theoretical lens lived within the tradition(s) of social justice. Throughout, we will study how theory informs practice (a key feminist expectation) and also how both guide what we know our political world. Thus, students will learn to read and analyze intersectionality politically, through the lens of power, and from a social justice perspective.

Attributes: American Studies Course, Faith Justice Course, Gender Studies Course, Undergraduate

POL 326 Protesting Inequality (3 credits)

Through the lens of political science, this course examines the political causes and consequences of inequality in the United States and how citizens have responded to the empirical realities of unequal circumstances. While inequality is an economically, politically, socially, and morally complex phenomenon, this course emphasizes that inequality does not "just happen" but rather is a result of the way our society is structured. Nevertheless, citizens-agents-have protested inequality on various occasions and in many different ways. It is on these citizen protest movements that we will focus most of our attention, including, but not limited to, the "Poor People's Movements" of the 1960s, the Welfare Rights Movement in the 1990s, and the Occupy Movement of the 2010s.

Attributes: American Studies Course, Faith Justice Course, Justice Ethics and the Law , Undergraduate

POL 328 U.S. Immigration (3 credits)

In this course, students will critically engage with the politics of immigration in the United States. While the national narrative broadly celebrates the arrival and incorporation of newcomers, these processes have been highly contested and problematic both in popular discourse and public policy since the country's founding. The question of 'who immigrates' has been, and continues to be, shaped by decisions on how to manage geopolitical and geoeconomic forces, domestic political, economic and social preferences, popular sentiment and humanitarian considerations. Furthermore, understanding how immigrants integrate in society necessarily involves examining 'difference' on a number of axes, including race and ethnicity, language and culture, religion, gender, socioeconomic and educational levels, and legal status. This course provides students with the opportunity to explore key aspects of the discourse and reality of immigration to the U.S., including the American Dream, assimilation, ethnic neighborhoods, transnationalism, borders and security by considering the values, interests and roles of actors at all levels, including civil society organizations, national and sub-national governments, communities, households and individuals in the continuous re-making of the U.S. as a nation of immigrants.

Attributes: American Studies Course, Faith Justice Course, Irish Studies Course, Justice Ethics and the Law , Latin American Studies Course, Undergraduate

POL 331 Latin American Politics (3 credits)

This course addresses the political, economic and social development of modern Latin America. It examines the transformation of traditional authority structures, efforts to promote economic development, and concerns for the consolidation of democracy, adjustment to globalization, and U.S.-Latin American relations.

Attributes: Faith Justice Course, International Relations Course, Justice Ethics and the Law , Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

POL 333 Asian Democ at the Crossroads (3 credits)

This course will examine and discuss the political dynamics and policy behaviors of three successful democracies in Northeast Asia: Japan, South Korea, and Taiwan. While all three countries are successful democracies with economic power, each country also faces a series of critical challenges in their politics, economy, and society. The global implications of their struggles are never trivial and the examination of three countries will provide us with the better grasp of contemporary global issues. The thematic focus of the course lies in the comparative analysis of each country in terms of political system, political economy, state-society relations, and foreign relations. To this end, the course will also explore the intricacies of the cultural, historical, and psychological contexts in which behavioral and policy motivations may be explained.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 334 Russian Politics (3 credits)

In 1917, the USSR was born out of the ashes of the Russian empire, and in 1991, it died. Since the Soviet Union disintegrated, Russia has struggled to develop a new national identity, a healthy economy, a well-functioning polity, an efficacious state, and a new orientation in world affairs. This course investigates the significance of the Soviet legacy for the contemporary political situation in Russia and evaluates the impact of new forces unleashed since the end of the communist era. In learning about the USSR and developments in today's Russia, the class applies some of comparative politics' "big concepts": revolution, the state, the nation, federalism, totalitarianism, authoritarianism, and democracy.

Attributes: International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 336 The EU and European Politics (3 credits)

This course will provide students with a hands-on opportunity for learning about the politics of the European Union and its member states. As an organization that is both supranational and intergovernmental in nature, the EU's actions are subject to the actions within its institutions and the decisions of its members. Therefore European politics has a great impact on what the Union does. The key and (unique) learning tools in this course are three simulations of EU institutions -the EU Parliament, the Councils of the EU, and the European Council. Students will take on roles of actual EU politicians and engage in policy making. The simulations will require students to perform extensive outside research to prepare to play their roles and will give participants an excellent understanding of these institutions and how they work. Class members will also become expert in the politics of "their" countries (the countries from which their alter egos are from) as well as on the issue under consideration (which will vary depending on pressing European and world events).

Attributes: Globalization Course, International Relations Course, Irish Studies Course, Undergraduate

POL 337 Contemp Cuban Pol & Society (3 credits)

The Cuban revolution is one of the seminal events of Latin American twentieth century history. This course provides the tools to understand the forces that gave rise to the revolution, how 'the Revolution' has evolved over the more than five and a half decades since the Castro government has been in power, and how Cuban society has transformed - politically, economically, socially and culturally. Particular focus is placed on Cuba since the demise of the Soviet Union, the so called "Special Period," in which Cuba transitioned from a 2nd World client state into an isolated underdeveloped country. Political reforms since then have contributed to an aperture toward the outside world, as well as to steps towards greater economic freedom for Cubans. Many other topics, including race, gender, the arts, Cuba's foreign relations with the U.S. and the rest of the world, citizenship, religion, health care and Cuba's future, will be discussed as well.

Attributes: Africana Studies Course, American Studies Course, International Relations Course, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

POL 339 Asian Dictators (3 credits)

This course will examine and discuss the political dynamics and policy behaviors of two authoritarian communist regimes in East Asia: China and North Korea. What are the natures of Chinese and North Korean societies? What are the guiding principles and norms in their political systems? What are the historical as well as contemporary implications of their economic systems? To this end, this course will explore the intricacies of the cultural, historical, and psychological contexts in which behavioral and policy motivations could be explained. Along with the comparative analysis of each country (political system, political economy, state-society relations, and foreign relations), major contemporary issues and challenges will be also examined. Can Chinese Communist Party keep its authoritarian grip on its people forever? Will China ever be democratized? Has China's long economic boom ended? What are the mechanisms behind North Korea's tight and cruel control of its citizens and their devotion to the Kim dynasty? Can North Korea enter and survive the global economy? More fundamentally, where is China heading? What does North Korea want?

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 340 Political Geography (3 credits)

Political Geography is a course of political and spatial inquiry; it helps students compare and contrast people, places, and processes around the world. This course explores how spatial phenomena including physical geography, borders, and nation-states affect social and political phenomena including domestic, regional and global governance, differences and dynamics of power, and identity, and vice versa. Furthermore, Political Geography focuses on 'scale' - personal, local, regional, national, and global - to understand and explain patterns and processes, as well as conflict and cooperation in international affairs.

Attributes: International Relations Course, Irish Studies Course, Undergraduate

POL 350 Haunted by the Past (3 credits)

War apologies abound. Since the end of the Cold War, what we have been witnessing is a world-wide surge in memory. We are living in the era where collective apologies have become more and more common, and, as in Nigerian writer Wole Soyinka, to reconcile with the past has become critical part of contemporary politics of memory and regret. More concretely, this course will explore the following questions: Can a state apologize? Can the current generations apologize for the past wrongs and /or feel responsible? Or, should they? How do individuals articulate the link between identification with the state (and national pride) and sense of individual responsibility? How do individuals get their information about past wrongs? How much confidence do they have in the various sources (textbooks, mass media, internet, friends and family, etc.) at their disposal? Is reconciliation possible? Can memories go beyond national borders? Can it be something universal? The course will start with the introduction and examination of the role of history and memory in the (re-) formation of communal identity and explores for the possibility of communal reconciliation with past wrongs. Along with the examination of conceptual frameworks such as engagement and denial/avoidance, the ethical dimensions of political reconciliation will be discussed in terms of (1) retributive justice and (2) restorative justice.

Prerequisites: PHL 154

Attributes: Asian Studies Course, Ethics Intensive, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 352 Global Political Economy (3 credits)

Global economic relations are international, political and complex; they involve cross border flows of goods, money, services and people, and they reflect and create power. This course focuses on the nature and impact of the movement of goods (trade), capital (money, foreign direct investment, bailouts), services (call centers), people (migration), and even "bads" (pollution and disease) to understand the challenges of and opportunities for development, globalization and international cooperation in today's world. It emphasizes the analysis of historic booms and busts in various national economies as well as current global events and trends.

Prerequisites: POL 115

Attributes: Globalization Course, International Relations Course, Latin American Studies Course, Undergraduate

POL 354 Superpower ColdWar Foreign Pol (3 credits)

For about 45 years after World War II, the United States and the USSR were locked in a multi-pronged battle for dominance in the international system. Although some have called this era "the Long Peace," the superpower competition resulted in massive, global direct and structural violence. This course will examine and explain American and Soviet interactions and behaviors during the period with special emphasis on the nuclear arms race and arms control and the battle for influence in the Middle East. As a final product for the course, students will write and present a literature review and argument or hypothesis in response to a self-generated, course-related research question.

Attributes: American Studies Course, Faith Justice Course, Globalization Course, International Relations Course, Undergraduate

POL 356 American Foreign Policy (3 credits)

This course explores US foreign policy since the end of World War II. After a conceptual introduction (Part I) which explores the utility of interests, institutions, and ideas for accounting for American policy, the course examines the US-Soviet competition and the ways that that "cold" conflict affected U.S. behavior not only toward the USSR, but also toward other regions (Part II). Part III investigates the early post-Cold War period and the attempts and failures in constructing some kind of "New World Order," and Part IV explores how the US has been responding to the twin challenges of terrorism and globalization.

Attributes: American Studies Course, International Relations Course, Undergraduate

POL 364 IR of East Asia: War and Peace (3 credits)

The course will examine and discuss the most intriguing dynamics of international relations in East Asia. Along with the historical analysis of international relation in the region since the mid-19th century, the course will engage in the discussion of pressing issues that characterize contemporary international politics in the region, including (1) regional economic development and interactions, (2) Sino-Taiwanese tension and the U.S. involvement, (3) North Korean nuclear crisis, (4) Japan and its post-Cold War security profile, and (5) regional tension over Japan's militaristic past.

Attributes: Asian Studies Course, International Relations Course, Non-Western Studies (GEP), Undergraduate

POL 367 Ethics in International Affairs (3 credits)

What is morality in international politics? Is ethical reasoning and action possible in international affairs? If possible, when and how? Proponents of Realism often claim that there is virtually no room for morality in international affairs, and states and state actors are rational thinkers interacting in anarchy. For them, ethics are simply luxury and irrelevant. On the other hand, thinkers under the tradition of IR liberalism/idealism emphasize the ethical dimension of state decision making and state behaviors. On what moral ground or ethical reasoning, are the moral behaviors taking place and observed/unobserved? The primary objective of the course is to help students enhance their analytical ability for the study of international ethics. To this end, the course will explore the main traditions and theories of international ethics with a focus on such topical areas as just war and use of force, universal human rights and humanitarian intervention, and national collective memory and post-conflict reconciliation.

Prerequisites: PHL 154

Attributes: Ethics Intensive, International Relations Course, Justice Ethics and the Law, Undergraduate

POL 368 Women, Gender & World Politics (3 credits)

This course explores the political power of women (and with less focus, LGBTQ+ people) as domestic and global actors around the world. After a brief introduction to selected feminist writings from authors from various parts of the world, we will investigate the conditions under and extent to which women are empowered in various domestic political settings. We will then examine the ways that women act in and are acted upon by the global system. Our goal is to identify the ways that gender and intersections affect women and societies throughout the world. As a final product for the course, students will write and present a literature review and argument or hypothesis in response to a self-generated, course-related research question.

Attributes: Faith Justice Course, Gender Studies Course, Globalization Course, International Relations Course, Undergraduate

POL 370 Special Topics (3 credits)

Depending on the instructor, these courses will focus on a particular topic of interest in Political Science and Politics (e.g., The Presidential Election, The Arab Spring, Guns and the Supreme Court). Students may count only two POLs 270 and/or 370 courses for major or minor credit.

Attributes: Undergraduate

POL 390 Internship 1 (1 credit)

These supervised mini-internships provide students an opportunity to intern in offices, initiatives, projects across the SJU campus that are related to skill-building within Political Science and International Relations. Students will: (1) develop writing, communication, and interpersonal skills; (2) examine various venues through which they can apply their knowledge and skills; and (3) integrate academic learning into professional life. Credit for 390, 391, and 392 can be combined to meet the 3-credit experiential learning requirement for Political Science and International Relations. Registration and placement require the permission of the instructor and/or department chair. Chair/Instructor approval required.

Attributes: International Relations Course, Undergraduate

POL 391 Internship 2 (1 credit)

These supervised mini-internships provide students an opportunity to intern in offices, initiatives, projects across the SJU campus that are related to skill-building within Political Science and International Relations. Students will: (1) develop writing, communication, and interpersonal skills; (2) examine various venues through which they can apply their knowledge and skills; and (3) integrate academic learning into professional life. Credit for 390, 391, and 392 can be combined to meet the 3-credit experiential learning requirement for Political Science and International Relations. Registration and placement require the permission of the instructor and/or department chair. Chair/Instructor approval required.

Attributes: International Relations Course, Undergraduate

POL 392 Internship 3 (1 credit)

These supervised mini-internships provide students an opportunity to intern in offices, initiatives, projects across the SJU campus that are related to skill-building within Political Science and International Relations. Students will: (1) develop writing, communication, and interpersonal skills; (2) examine various venues through which they can apply their knowledge and skills; and (3) integrate academic learning into professional life. Credit for 390, 391, and 392 can be combined to meet the 3-credit experiential learning requirement for Political Science and International Relations. Registration and placement require the permission of the instructor and/or department chair. Chair/Instructor approval required.

Attributes: International Relations Course, Undergraduate

POL 402 Capstone: Contentious Pol in US (3 credits)

Contentious politics consists of many "non-traditional" forms of political action, including social movements, protests, riots, and even political violence. This capstone political science seminar examines contentious politics in the U.S. through the lens of 1960/70s radical social movements, a key moment in U.S. politics in which the New Left imagined, theorized, negotiated, and contested the meaning of democracy and power. Students will examine and analyze the origins, ideologies, claims/grievances, goals, and strategies of radical political groups that roughly fall under the banner of the New Left: anti-war, feminism, black liberation, American Indian Movement, Chicano Movement, and Gay Liberation. We will study the politics of the struggle over rights, democracy, power, and the use/nonuse of violence within the New Left through a careful study of the primary texts (statements, agendas, etc.) produced by these groups. Students will investigate what the New Left helps us understand about power, politics, and violence in a modern democracy and evaluate the effectiveness of protest as a means to forward a political agenda, broadly defined.

Prerequisites: POL 111 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 403 Capstone: Nations&Nationalism (3 credits)

The primary objective of this seminar is to help students enhance their analytical abilities for the study of contemporary national problematique. In the rapidly changing contemporary global world, why are people still attracted, swayed, and annoyed by what is national? What is so important about being a part of nation? What drives people to develop specific allegiance toward a nation? And, how? More fundamentally, what is a nation?

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: International Relations Course, Undergraduate, Writing Intensive Course- GEP

POL 404 Capstone: Revolts&Revolutions (3 credits)

Why do revolts against governments deemed illegitimate occur and when do they become full-fledged revolutions? This course explores both the causes of uprisings and the conditions under which they succeed in bringing about new political and social orders by examining (1) what happened in the "great" revolutions, (2) how scholars have accounted for them, and (3) examining more recent instances of revolts which have sometimes failed and others succeeded. In this study, students will develop their writing and research skills, having the opportunity to find various types of information, write different forms of essays, and appropriately cite and present their materials.

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Globalization Course, International Relations Course, Undergraduate, Writing Intensive Course- GEP

POL 405 Capstone: Pol of Labor & Work (3 credits)

Our capstone in political science extends our understanding of democracy by looking within one of the most common political institutions we will experience in our lifetimes: the workplace. Many of you are currently holding jobs, some part-time and others full-, some well-paid and others less well paid, some free (interning), some with inconsistent or too few hours, some with a terrible manager, some within the home (nannying/care work). You may be working in different organizations, or in different geographies. After graduation, the process only continues. This semester we will focus on the politics of work. What avenues do workers have to improve their autonomy, workplace conditions, and compensation? What barriers (employer, legal, political) challenge this process? What roles does organized labor serve? Though our focus is primarily the United States, we will acknowledge that worker conditions are shaped by different legal, geographic, and industrial contexts: country, state, law, industry, and time period. The policies regulating the workplace are political decisions. State repression of labor organizations has not been unusual historically, though what that might look like has shifted over time.

Prerequisites: POL 111

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Undergraduate

POL 407 Capstone: Theories of Justice (3 credits)

What is political justice? We begin with an in-depth reading of the work that has defined justice in the 20th and 21st centuries: John Rawls' A Theory of Justice. We will also read selections from Rawls' Political Liberalism and his work on international justice, The Law of Peoples. In order to consider alternative theories of justice and criticisms of Rawls, we will read classic critical commentaries in the form of articles and book chapters from Michael Walzer, Michael Sandel, Alistair MacIntyre, Ronald Dworkin, Susan Okin, Robert Nozick, Brian Barry, Amartya Sen, and James Fishkin. Course requires in-depth reading of major political theorists of justice and encourages a sophisticated understanding of political justice through the weekly writing of critical, interpretive, and comparative essays. Students are encouraged to compare and contrast theories in order to develop a vocabulary of political ideology (liberalism, communitarianism, conservatism, feminism, legalism, utilitarianism, and post-modernism) as well as an understanding of different types of justice (e.g., distributive v. restorative).

Prerequisites: PHL 154 and POL 111 and POL 117 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Ethics Intensive, Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 408 Capstone: The Armed Citizen? (3 credits)

What is the role of firearms in a constitutional democracy? Do guns pose a threat, prevent tyranny, or secure rights? This seminar interrogates (1) the meaning of the Second Amendment in the context of the creation of the Constitution and current controversies over the relationship between firearms and violence in the U.S. (2) the interpretations of the U.S. Supreme Court in *Heller v. District of Columbia* (2008) and (3) the theoretical issues raised by guns in a constitutional democracy (including *Stand Your Ground* laws). The course demands reading primary and secondary texts in political theory, public law, and history.

Prerequisites: POL 111 and POL 117 and ENG 101

Restrictions: Enrollment is limited to students with a major in Political Science.

Attributes: Justice Ethics and the Law , Undergraduate, Writing Intensive Course- GEP

POL 409 Global Migration (3 credits)

Migration has become a topic of increasing focus and concern in the 21st century, with some arguing that it will be one of the defining issues of our time. This is certainly the case for those tens of millions of individuals who are currently on the move, for the sending communities and societies from which they emigrate and the destinations that receive them, and the nation-states that control their entrance and exit. In this seminar, we will cover the "big" issues of migration in a comparative format through engagement with some of the most important examples of the extensive body of literature in Migration Studies. Concretely, we will critically examine: the demographics of migration in key regions of the world; theories that explain mobility; host-immigrant relations and integration; the role of gender, race, and ethnicity in migration; the growth of transnational ties as an aspect of globalization; security; and the analysis of immigration policies and citizenship. Throughout the course of the semester, we will question continually challenge ourselves to question the approach to migration as a problem to be solved versus as a process to manage. As a capstone seminar, Global Migration as Problem and Process includes reading requirements that are extensive and challenging and approaches learning through a collective approach as we share our individual insights and understandings. We will learn from each other. Students must come to class having read the assignment materials critically so that we can grapple with ideas and engage in debate. Avid participation is required. There will be minimal formal lecturing and most seminar time will consist of open discussion. Furthermore, this capstone will draw upon the knowledge students have gained from many of their other Political Science classes. The course materials will draw heavily from empirical evidence (qualitative and quantitative) to explore the topics discussed above, while applying major theoretical concepts in Political Science. Students should come prepared to integrate the knowledge they have gained over the past four years.

Prerequisites: POL 113 and POL 115 and ENG 101

Restrictions: Enrollment is limited to students with a major in International Relations or Political Science.

Attributes: Faith Justice Course, Globalization Course, International Relations Course, Justice Ethics and the Law, Undergraduate, Writing Intensive Course- GEP

POL 411 Washington Internship I (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for POL major or minor credit.

Attributes: Undergraduate

POL 412 Washington Internship II (3 credits)

At The Washington Center (see Special Academic Programs and Services for more information), students are placed in an internship where they work 30-35 hours in an office making substantive contributions to its work in politics, public policy, law, advocacy, or other related fields. For these activities, students earn two courses worth of upper division credit. Please note: the other courses at the Washington Center do not count for POL major or minor credit.

Attributes: Undergraduate

POL 413 International Internship I (3 credits)

Some study abroad programs offer internship credit for one or two classes. Please note: subject to administrative approval, students may earn two courses of UD POL credit if their internship is in the 32-hour/week range.

Attributes: International Relations Course, Undergraduate

POL 414 International Internship II (3 credits)

Some study abroad programs offer internship credit for one or two classes. Please note: subject to administrative approval, students may earn two courses of UD POL credit if their internship is in the 32-hour/week range.

Attributes: International Relations Course, Undergraduate

POL 415 Applied Research Mixed Methods (3 credits)

Public policy scholars and practitioners have a wide variety of methodological tools at their disposal. Yet, it can be challenging to determine which techniques are best equipped to answer particular research questions, as well as how to fruitfully combine distinct methods. Gaining a familiarity with the discipline's vast methodological "toolkit" is essential to building the knowledge and skills necessary to engage in political and social research—for scholars, policymakers, and practitioners. In this course, students will explore the principle methodological approaches employed in political inquiry—encompassing experimental, quantitative-statistical, and qualitative techniques—and examine how these tools may be productively "mixed" to make descriptive and causal inferences about political phenomena. In addition to learning to evaluate and critique distinct methodological approaches, students will "learn by doing" and gain experience applying various techniques to answer specific research questions. To provide the necessary technical skills for applied research, the course will introduce students to software programs that are commonly used for quantitative and qualitative research. Students will apply the skills and techniques in the context of a semester-long research project, which will include formulating a research question, developing a research design, and engaging in original empirical research (including data collection and data analysis). The project could form the basis of a graduate-level thesis or article manuscript prepared for submission to a peer-reviewed publication.

Prerequisites: POL 111 or POL 113

Restrictions: Enrollment is limited to students with a major, minor, or concentration in International Relations, Political Science or Public Policy.

Attributes: International Relations Course, Undergraduate

POL 470 Research in the Discipline (3 credits)

This course is designated for an independent study project in consultation with and approval from a specific faculty member. Depending on the faculty member, the project will focus on a particular topic of interest in Political Science or International Relations.

Attributes: Undergraduate

POL 490 Global Smarts Internship (3 credits)

The Global Smarts Internship allows students to intern with the prestigious World Affairs Council of Philadelphia while making a commitment to social justice. Mentors travel to under-resourced middle schools in Philadelphia to prepare 8th graders for a city-wide Model United Nations event in May in which the middle-schoolers compete with students from elite private and well-funded suburban schools. As Global Smarts mentors help their middle-school students with skills and content, they develop their own academic skills (e.g. oral presentation, research, and writing) and their work experience. During this semester, mentors help their students understand two important issues of justice (previous topics have included ending forced labor, women's education, and providing clean and affordable energy). Throughout the semester, students reflect critically and consciously about their service and the systemic injustice in Philadelphia's public education system. This opportunity for community-engaged learning requires an interview in Fall (several weeks before Spring registration).

Attributes: International Relations Course, Service Learning Course, Undergraduate

POL 491 Philadelphia-Area Internship (3 credits)

The Philadelphia Area Internship Program supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample cover letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations. Course is open to ALL majors.

Attributes: International Relations Course, Undergraduate

POL 493 Honors Research in Pol Sci I (3 credits)

Majors with a minimum GPA of 3.5 in Political Science courses may apply to the Honors Program to earn College Honors. Applications are due in Spring of the junior year for the right to perform a year-long research project under the supervision of a Political Science Department member. To succeed in the application, the student should be in conversation with that faculty member early on in the junior year. Then, the student works closely with her/his mentor over the course of the senior year to prepare and present a thesis that passes the scrutiny of the mentor, an outside faculty reader with complementary expertise, and a member of the Honors Committee. Specific requirements for the College Honors thesis may be found under "Honors Program". Prior approval from the Honors Program and Department is necessary. Students who complete Departmental Honors are not required to take a POL Capstone Course. One semester of HON research counts for the Capstone Course and the other for an upper division POL course.

Attributes: Undergraduate, Writing Intensive Course- GEP

POL 494 Honors Research in Pol Sci II (3 credits)

Majors with a minimum GPA of 3.5 in Political Science courses may apply to the Honors Program to earn College Honors. Applications are due in Spring of the junior year for the right to perform a year-long research project under the supervision of a Political Science Department member. To succeed in the application, the student should be in conversation with that faculty member early on in the junior year. Then, the student works closely with her/his mentor over the course of the senior year to prepare and present a thesis that passes the scrutiny of the mentor, an outside faculty reader with complementary expertise, and a member of the Honors Committee. Specific requirements for the College Honors thesis may be found under "Honors Program". Prior approval from the Honors Program and Department is necessary. Students who complete Departmental Honors are not required to take a POL Capstone Course. One semester of HON research counts for the Capstone Course and the other for an upper division POL course.

Attributes: Undergraduate

Psychology (PSY)

PSY 100 Introductory Psychology (3 credits)

This course introduces the student to the research problems, methods, findings, and basic theory that constitute the scientific investigation of human and animal behavior.

Attributes: GEP Social Science, Undergraduate

PSY 101 Intro Psychology Seminar (3 credits)

This course introduces the student to the research problems, methods, findings, and basic theory that constitute the scientific investigation of human and animal behavior.

Restrictions: Students cannot enroll who have a major in Psychology.

Attributes: GEP Social Science, Undergraduate

PSY 120 Lifespan Development (3 credits)

This course looks at the changes that take place in our lives: in our bodies, our personalities, our ways of thinking, our feelings, our behavior, our relationships, and the roles we play during different periods of our lives. In this course we seek to describe these changes through the scientific research that has observed, measured, recorded and interpreted objective data on growth and development. Additionally we will seek to explain these changes in so far as possible, attempting answers to why they have occurred and what influential roles heredity and environment play. NOTE: This course counts toward the Psychology minor, but not the Psychology major. This course is not open to students who have already completed PSY 231. This course is only open to students who are not and do not plan to be Psychology majors. Psychology majors should take PSY 231 instead.

Restrictions: Students cannot enroll who have a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 121 Child Development (3 credits)

An attempt will be made to understand the development of children as it occurs in biological, psychosocial, and cultural contexts. Emphasis will be given to contemporary psychological research on children and its implications for the understanding of the everyday behavior of the child. Notes: This course is only open to students who are not and do not plan to be Psychology majors. This course is not open to students who have taken PSY 231.

Restrictions: Students cannot enroll who have a major in Psychology.

Attributes: Undergraduate

PSY 122 Psychological Disorders (3 credits)

How do we define what behaviors are abnormal? This course will provide an overview to the study of psychopathology, more commonly known as abnormal psychology. As an introductory course to abnormal psychology, it will focus primarily on the description of various psychological disorders, their clinical course, and the current understanding of the causes of these disorders. Notes: This course counts toward the Psychology minor, but not the Psychology major. This course is not open to students who have already completed PSY 232. This course is only open to students who are not and do not plan to be Psychology majors. Psychology majors should instead take PSY 232.

Restrictions: Students cannot enroll who have a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 123 Psychology of Men and Women (3 credits)

Stop being part of the problem and try becoming part of the solution!! Find out what the battle between the sexes, sometimes referred to as "The Longest War," is really about. Explore the nature of the psychological experiences unique to growing up male and female in contemporary society and its effects on behavior and relationships. Current non-technical readings drawn from diverse disciplines (Biology, Sociology, History, as well as Psychology) will serve as the basis of classroom discussions. These will be supplemented by lectures summarizing the latest psychological research on gender similarities and differences. Note: This course does not count toward Psychology major.

Attributes: Undergraduate

PSY 124 Human Sexuality (3 credits)

The human sexual experience will be examined openly and objectively from physical, social, and psychological perspectives. Issues of current concern such as pornography, homosexuality, and sexuality and the handicapped will be explored in depth. Lectures and discussions may be supplemented by audio-visual materials and guest speakers.

Attributes: Gender Studies Course, Undergraduate

PSY 125 Forensic Psychology (3 credits)

This course will provide a broad overview of the field of forensic psychology and the numerous ways that the discipline of psychology may be applied to the practice of the law. Forensic psychology focuses on the application of psychological research, methods, and expertise to issues that come before the legal system. The mental disorders that are encountered in forensic evaluations will be considered, along with the manner in which forensic psychologists assist judges and juries in determining criminal responsibility and punishment. Students will learn about the psychological underpinnings of crime; issues around competency to stand trial; issues around the insanity defense, capital murder and the death penalty; issues around child custody matters; jury selection; and interrogation procedures. Note: May be used for Psychology minor. Does not count for Psychology major. For majors, counts as free elective only.

PSY 126 Psychology of Culture (3 credits)

How does culture affect human behavior? The aim of this course is to use psychological theory and research to examine culture's effects on people cross-culturally. This course will examine how people are influenced by their culture and how people consider culture in the way they think about and treat others. This course will also focus on facets of cultures, including gender, race, ethnicity, and poverty. In addition, the course will examine how interactions among these facets influence people across-cultures.

Attributes: Undergraduate

PSY 127 Behavioral Economics (3 credits)

This course will explore recent discoveries in human psychology that have transformed our understanding of economics and created the influential new field of behavioral economics. Classical economics assumed that people make rational decisions based on all available information to optimize their well-being. However, beginning in the 1970s, psychologists proved that people take mental shortcuts that lead to predictable errors, such as always expected a new war to be quickly won, or becoming swept up in speculative bubbles for houses or stocks. This class will provide examples of how social scientists are applying this new understanding of human decision making to improve outcomes in a broad array of fields, including personal finance, artificial intelligence, government regulation, emergency medicine, commercial aviation and even the selection of NFL and NBA draft picks. Note: This course does not count toward the Psychology major. It may be counted toward the Psychology minor.

Attributes: Undergraduate

PSY 128 Psychology and Architecture (3 credits)

This course explores the relationships between psychology, architecture, and urban planning. A primary focus will be how the intersection of these disciplines can influence the future of communities and the communities of the future. Students will gain an understanding of how psychological theory can inform the development of successful spaces, buildings, and cities, and thriving and sustainable communities. Current research topics and theories to be covered include environmental psychology, psychology of architecture, and urban anthropology. Note: This course does not count toward the Psychology major. It may be counted toward the Psychology minor.

PSY 129 Industrial/Organizational Psyc (3 credits)

Industrial/Organizational Psychology is the scientific study of human behavior in organizations and workplaces. The focus of I/O Psychology is both individual and group performance, satisfaction, safety, health and well-being through a variety of quantitative and qualitative methods. By studying worker attitudes and behaviors, I/O psychologists are able to recommend or create improved hiring practices, training programs, feedback systems and management techniques to boost company performance.

Attributes: Undergraduate

PSY 130 Art Therapy (3 credits)

Art therapy uses different forms of creative expression to help people explore and transform feelings, thoughts, and ideas. It can help to process and cope with emotional issues, as well as facilitate self-awareness, understanding, healing, and well-being. Art therapy can be especially useful for people who find it difficult to talk about their thoughts and emotions. In this course, students will examine theories and models of art therapy. Through discussion of readings, sharing of experiences, group work, and art therapy activities, students will increase their understanding of the history, theory, practice, and applications of art therapy in various settings.

Attributes: ARTS Major ILC Courses, GEP Art/Literature, Undergraduate

PSY 131 Controversies in Psychology (3 credits)

This course will examine major controversial issues throughout the history of psychology. From ancient Greeks arguing about where the mind is to 20th century disputes about how the brain works and beyond, we will address the many philosophical, historical, and biological inputs leading to modern psychology. Colorful characters include: Frankenstein, Mesmer, Darwin, Pavlov, Freud, James, Watson, Binet, Piaget, Skinner, Maslow, and many more. Controversies about eugenics and the treatment of women and minorities in psychology will be addressed as well.

Attributes: Undergraduate

PSY 132 Professional Development (3 credits)

This course is intended to give students a comprehensive understanding of the similarities and differences among the various mental health professions; for example, the similarities and differences among social work, counseling, and clinical psychology. The course will examine differences in theoretical orientation and areas of specialization in the various disciplines that make up the modern field of mental health professions. Students will gain an in-depth understanding of the various career paths in the mental health professions and will be able to consider and explore their interests among the various paths. The course will also cover multicultural and ethical issues in practice. Guidance and support for the application process for various Master-level programs will be offered to students. This PLS course is required for the post-baccalaureate certificate program. Students not enrolled in the post-baccalaureate program will need permission to take the course from the program director.

Attributes: Undergraduate

PSY 150 Gender Matters (3 credits)

This course provides an overview of research and theories on the biological, psychological, and the social aspects of gender. Areas of similarities as well as differences between men and women will be discussed. Significant attention will be given to the impact gender has on the everyday lives of women and men in contemporary American society today. Does not count toward Psychology major or minor.

Attributes: Diversity Course, First-Year Seminar, Gender Studies Course, Undergraduate

PSY 170 Special Topics in Psychology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PSY 190 Intro Research Method Soc Sci (3 credits)

This introductory course in research methods prepares students to understand and apply the techniques and methods of descriptive and inferential research as they are applied to the social sciences. Topics include the scientific method, ethical issues in research, survey design, research design, and basic analysis of data. This foundational course of study will take the student through the various steps of a traditional research design.

Prerequisites: (PSY 100 or PSY 101 or SOC 101) and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

PSY 191 Applied Stats for Social Sci (3 credits)

This course is an introduction to the basic principles of statistical analyses. Topics will include basic probability theory, types of data, and statistical reasoning. Students will learn common statistical analyses involving differences between means, correlation, and regression.

Prerequisites: PSY 100 or PSY 101

PSY 200 Personality Psychology (3 credits)

What are the forces that make us who we are, and uniquely different from all others? Is it our unique genetic make-up, our familial environment, our neighborhoods and peers, our culture? This course examines and strives to integrate human personality from several levels of analysis: trait level, biological level, motivational level, environmental level including microenvironments (family) as well as macro environments (neighborhoods, culture), and cognitive level. Important psychological questions are built into this analysis, including the nature/nurture debate, conscious/unconscious processes, and free-will/determinism.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 201 Biological Bases of Behavior (3 credits)

This is an introductory-level course exploring the relationship between human behavior and the functioning of the brain. Topics to be covered include research techniques in neuroscience, the structure and function of the peripheral and central nervous systems, the structure and function of nerve cells, the chemistry of the nervous system, and drug effects in the nervous system.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Attributes: Undergraduate

PSY 205 Neuroscience Foundations (3 credits)

This course will introduce students to the diverse disciplines of the neurosciences, with an emphasis on methodologies and historical research and perspectives. Students will obtain an understanding of the anatomy of the central and peripheral nervous systems, with a specific focus on electrical and chemical cellular transmission, and the pharmacology of synaptic transmission. Note: This course is an elective that can also be used to satisfy the requirements of the Behavioral Neuroscience minor.

Prerequisites: (BIO 102 or BIO 119 or BIO 133 or BS 110 or BS 134 or BS 136 or PSY 201)

Attributes: Undergraduate

PSY 206 Behavioral Neuroscience (3 credits)

In this advanced course, students will explore the neural and hormonal regulation of social behavior. Topics to be covered will include: sleep and other biological rhythms, neurological and psychiatric disorders, emotion, learning and memory, behavioral endocrinology, ingestive behavior, and reproductive behavior. Note: This course is an elective that can also be used to satisfy the requirements of the Behavioral Neuroscience minor.

Prerequisites: PSY 205 or BIO 412

Restrictions: Enrollment is limited to students with a minor in Behavioral Neuroscience.

PSY 207 Cognitive Neuroscience (3 credits)

This course will introduce students to the emerging interdisciplinary field of cognitive neuroscience. Students will learn methodological and investigative techniques and strategies used in research in cognitive neuroscience. Students will be also exposed to current research in psychophysiology and neuroradiology that further understanding of behaviors such as attention, perception, learning and memory, language, reasoning, and consciousness. Note: This course is an elective that can also be used to satisfy the requirements of the Behavioral Neuroscience minor

Prerequisites: PSY 205 or BIO 412

PSY 208 Human/Animal Relations (3 credits)

Non-human animals play an integral part in lives of humans. This course will explore the important relationship between human and non-human animals. Topics to be covered include: the history of animal domestication, and the influence of animals on human culture and religion. Moreover, the ethical implications of human interactions with animals in the laboratory, in captivity, as livestock, and in the wild will be considered. Note: This course is an elective that can also be used to satisfy the requirements of the Animal Studies minor.

Prerequisites: PSY 100 or PSY 101

Attributes: Undergraduate

PSY 209 Autism:Co-Occurring Conditions (3 credits)

Autism Spectrum Disorder (ASD) is a developmental and psychiatric disorder characterized by significant difficulties with social interaction, communication, and repetitive behaviors, which is estimated to affect approximately 1 in 68 individuals. This course is designed to examine and review a range of medical, psychiatric, and other conditions which commonly co-occur with ASD. These include genetic disorders, seizure disorders, attention deficit hyperactivity disorder, anxiety disorders, depression, obsessive compulsive disorder, sleep disturbances, gastrointestinal problems, eating disorders, overweight and obesity, and lowered quality of life. We will review and discuss the nature, time-course, impact, assessment, and treatment for each co-occurring condition, as time permits. The ultimate goal of this course is to broaden understanding of the critical role that co-occurring conditions play in the lives of individuals with ASD and their families, as well as in helping us to better understand the causes and characteristics of ASD.

Prerequisites: PSY 100 or PSY 101

PSY 210 Research Methods (3 credits)

This course is an introduction to the techniques and methods of descriptive and inferential research as they are applied to psychological science. Topics include archival research, naturalistic observation, participant-observer research, clinical-case studies, correlational research, quasi-experimental designs, between- and within-subject experimental designs, and factorial-design research. Particular emphasis on ethical issues in psychological research is given.

Prerequisites: (PSY 101 or PSY 100) and ENG 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate, Writing Intensive Course- GEP

PSY 211 Stats for the Social Sciences (4 credits)

This course is an introduction to the basic principles of statistical analyses, descriptive and inferential, that are used in the social sciences. Topics include measures of central tendency, variability, correlational analyses, regression, estimation, hypothesis testing, and selected parametric and non-parametric tests. Laboratory work will include the use of computer-based statistical packages to aid in analysis and interpretation of discipline- appropriate research data.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 212 Multicultural Psychology (3 credits)

We live in a multicultural society that requires an appropriate understanding of cultural diversity. This course will provide students with a theoretical and practical understanding of the effects of culture on human thinking and behavior. The course considers current theories and research on culture, gender, race and ethnicity with the goal of better understanding the ways in which the multicultural context influences psychological processes. The aim of the course is to achieve a better appreciation of cultural groups and consideration of cultural issues in interpreting social experiences.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Diversity Course, Gender Studies Course, Undergraduate

PSY 220 Sensation and Perception (3 credits)

The world around us abounds with all manner of sensory stimuli-visual, olfactory, auditory, tactile, and gustatory. This course will explore the manner in which we internalize this information and use it as knowledge about what is going on around us. Each of the senses will be considered from biological and phenomenological perspectives, and the process by which we derive meaning from sensory activity will be examined. Topics to be covered include object perception, visual attention, music and speech perception, somatosensory processing, taste preferences, and smell recognition.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 221 Animal Learning and Memory (3 credits)

Other than that which is genetically coded, everything we know is derived from and reflects memory for information that we have learned in the past. This course introduces the student to the scientific investigation of the basic processes of learning and memory. Topics of discussion will include the traditional theories, methodologies, and empirical findings of habituation and sensitization, classical conditioning, and instrumental conditioning. In addition, mechanisms of retention, sources of forgetting, and the biological basis of learning and memory processes will be considered.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Animal Studies, Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 222 Neuropsychology (3 credits)

Neuropsychology will introduce students to understanding human brain/behavior relationships. Emphasis will be placed on commonly used approaches in assessing and measuring human behavior and how the human brain is responsible for cognition, language, memory, spatial processing, emotion, and personality. Students will gain an understanding of principles of brain organization, individual differences, and professional and clinical issues in neuropsychology.

Prerequisites: (PSY 100 or PSY 101 or PS 101 or PS 111) and (BIO 102 or BS 119 or BS 133 or PSY 201)

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 223 Health Psychology (3 credits)

Health psychology is a field that incorporates many sub-disciplines of psychology with modern medicine. This course seeks to provide the student with an understanding of how social, psychological, and biological variables combine to cause illness, and how behavior and environments can be changed to promote health. One important focus of the course concerns understanding the nature of stress and the impact stress has on health.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 224 Drugs, the Brain, & Behavior (3 credits)

How do drugs affect consciousness and behavior? This course will examine the action of many different drugs, both medicinal and illicit, from biological, behavioral, and social perspectives. The relationship between alterations in behavior produced by drug administration and the changes that the drug produces in the functioning of the nervous system will be emphasized. Topics to be covered include routes of drug administration, drug absorption, transport and elimination, mechanisms of drug action, the histories of miscellaneous drugs, and the behavioral and biological activity of alcohol, nicotine, caffeine, the opiates, the hallucinogens, the antipsychotics, amphetamines, and cocaine.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 225 Comparative Animal Behavior (3 credits)

This course examines the evolution and development of animal behavior. Students will gain an understanding of the behavioral diversity and commonalities among animal species. An emphasis will be placed on comparing the characteristics of human behavior with those of other species, with special attention given to the cognitive capabilities of non-human animals.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 226 Psychology of Emotion (3 credits)

This course will introduce students to major theories and topics of the psychology and biology of emotion. Areas explored include the role of the brain and peripheral physiology in emotion, how emotion is expressed, the role of cognition, cultural differences, social aspects of emotion, development of emotions, and the role of emotion in health and psychopathology.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 227 Cognitive Psychology (3 credits)

Cognitive psychology is the study of how the human mind processes information. Learning and organizing new information, remembering facts and events, recognizing objects, reading, using language, and problem solving are examples of cognitive tasks people perform every day. In this course you will learn about the mental processes underlying these tasks. Particular emphasis will be given to mental representations of information, computational models of mental processes, and applications of cognitive psychology.

Prerequisites: PS 111 or PS 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 228 Science of Creativity (3 credits)

This course introduces undergraduate students to the scientific exploration of what it means to "be creative." Students will evaluate the evidence that supports the definitions, approaches, assessments, models, and recommendations offered in support of cultivating creativity. The course will emphasize cognitive neuroscience approaches and include critical analysis of major domains of creativity, including musical, visual-artistic, and scientific.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 229 Psycholinguistics (3 credits)

This course is an introduction to the study of how language is represented in the human mind and what processes are involved in language use, including producing, comprehending, and storing both spoken and written language. Together, we will explore questions such as the following: How do humans store and recognize words? How do we analyze speech? What processes are involved when we speak and read? We will study spontaneously-occurring speech errors and misperceptions and carry out experimental investigations on language production and comprehension.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 230 Social Psychology (3 credits)

The discipline of social psychology can be described as the study of the "power of the situation." Although we like to think that our behavior and our attitudes are freely chosen by us, this course illuminates how powerful outside situational forces can be in shaping both. It involves the understanding of how people influence, and are influenced by, others around them; how we form impressions of others and of ourselves; what determines our attraction to others (or lack thereof); why we help one another, and why we hurt one another. In addition to a basic understanding of these phenomena, an equally important goal is to develop critical and integrative ways of thinking about theories and research in social psychology.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Attributes: Undergraduate

PSY 231 Developmental Psychology (3 credits)

This course examines the mechanisms that contribute to psychological growth and change throughout life. The goal of this course is to provide students with an understanding of the influence of biological, cognitive, emotional, social and cultural factors on development from infancy into adulthood. Theories of development and applications to real-world problems will provide a context for understanding how humans change during the life cycle. Lectures and discussions will interweave theory, methodology and research findings about how we develop and demonstrate our abilities to perceive, think, feel, remember, plan, and ultimately realize our potential as human beings. Note: This course is not open to students who have taken PSY 120 or PSY 121.

Prerequisites: PS 101 or PSY 100 or PS 111 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 232 Adv. Psychological Disorders (3 credits)

This course will provide an overview to the study of psychological disorders or abnormal behavior. Our current understanding of psychological disorders from biological, behavioral, cognitive, and psychodynamic perspectives will be presented. Attention will be given to the nature, causes, and course of various psychological disorders as well as treatment for specific disorders. Note: This course is restricted to Psychology majors. Others should instead take PSY 122, Abnormal Psychology. This course is not open to students who have already completed PSY 122. This course is a prerequisite for PSY 300 (Clinical Psychology) and PSY 301 (Psychological Assessment), both of which are required for the clinical concentration.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 233 Adulthood and Aging (3 credits)

Continuing demographic changes occurring globally as well as nationally have accelerated research in and theorizing about heretofore-neglected periods of human development. The 'graying' of the human population has accelerated interest in the topic of adulthood and aging at both the theoretical and empirical levels. This course will explore the adult experience using a life-span perspective and a contextual analysis including contributions from the fields of anthropology, biology, psychology, and sociology.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 234 Psychology of the Self (3 credits)

This course has been designed to provide in-depth considerations of both classic and current issues regarding the self. As a concept, the self is consistently referred to in many fields of psychology. But what is the self and how is it represented? This course will consider the self from a social psychological perspective. Special focus will be on defining the self and identifying the influences that various aspects of the self have on our perceptions, emotions, and behavior.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 235 Psychology of Gender (3 credits)

This course will examine a wide variety of psychological issues concerning gender. Topics will include gender bias in research, theories of gender, gender typing, cultural emphases on gender differences, gender and the self-concept, and psychological phenomena unique to women's and men's experiences.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 236 Ethics in Psychology (3 credits)

Ethics and professional issues in clinical psychology will be addressed in this course. The focus will be on ethical principles as applied to psychological assessment and diagnosis, psychotherapy and clinical judgment, clinical research, and client-patient and student-teacher relationships. Case studies will be used to illustrate ethical and professional issues, as well as examples from clinical practice and modern media.

Prerequisites: (PSY 100 or PSY 101 or PS 101) or PS 111 and PHL 154

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Ethics Intensive, Justice Ethics and the Law, Undergraduate

PSY 237 Child Psychological Disorders (3 credits)

This course will provide a comprehensive introduction to abnormal child psychology. Assessment, diagnosis, and treatment of children and adolescents will be discussed. Specific disorders covered will include attention-deficit/hyperactivity disorder, anxiety disorders of childhood, affective (mood) disorders, conduct disorder and other disruptive behavior disorders, learning disabilities, autism spectrum disorders, and sleep disorders.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 238 Social Development (3 credits)

Social development involves the ways that children grow and interact with others, including parents, peers, siblings and authority figures. This course will cover social development from infancy through adolescence. The course will cover the major theories of social development, as well as issues such as parenting styles, gender development, moral development, aggression and motivation.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

PSY 239 Psychology of Media (3 credits)

Every one of us is exposed to, and thus influenced by, some aspect of the media. This course will examine some of the major aspects of the media, including 1) media content, with emphasis upon depictions of gender, age, race, sexuality, violence, advertising, and news, 2) effects of exposure to that content, and 3) who owns and thus controls the content of what we see, hear, and play. As a laboratory course, students will also engage in the full research process, from reviewing the scholarly work of others, formulating an original research hypothesis, testing that hypothesis, and drawing logical conclusions from the data.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 240 Sports Psychology (3 credits)

This course examines the application of psychological theories and research to sports and exercise behaviors. It will provide students with knowledge about psychological factors that affect performance in sports such as motivation, concentration, focus, confidence, anxiety, and relaxation. Students will also be introduced to mental skills that will enhance performance, make athletic participation more enjoyable, and learn skills that can be transferred to other aspects of their lives. Skills to be covered in this class will include: how to set measurable goals and strategies to achieve them, visualization and imagery techniques, leadership, team-building, and how to best cope and recover from injuries.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 244 Psychology in Film (3 credits)

This course will develop students' understanding of foundational knowledge in Psychology through a consideration of classic and contemporary films. It will examine current issues and theories in Psychology through the process of film analysis. It will also explore the effects popular cinema has on the attitudes and perceptions of foundational concepts and theories in Psychology.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 250 Adolescent Development (3 credits)

This course emphasizes the physical, social, emotional, and cognitive developmental changes that occur during adolescence. Topics relevant to adolescent development in various contexts, including families and the parent-adolescent relationship, self and identity development, the increasingly important role of peers, school adjustment, and the nature and implications of psychosocial problems will be covered.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 260 Neurocognitive Development (3 credits)

This course will explore the relations between neural and cognitive development from birth through adolescence. We will examine how the brain changes and develops to support the basic building blocks of cognition (e.g., attention, object knowledge, social cognition, memory, language, executive function). We will review the major methods of developmental cognitive neuroscience, including techniques to assess brain structure and function (MRI/fMRI), electrophysiological recordings (EEG/ERPs), and behavioral marker tasks. The relation of developmental cognitive neuroscience to broader scientific issues (e.g., neuroplasticity, gene-environment interaction, critical/sensitive periods) and application to the study of atypical development and education will also be discussed.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 270 Special Topics in Psychology (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 290 Professional Prep Seminar (1 credit)

What can you do with a degree in Psychology Major? Do you know how to search for an internship or a job? Are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance your knowledge about internships and careers within your major and help you build practical skills through class instruction, assignments, and alumni exposure throughout the semester. This one-credit course meets once a week through the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication, and networking/interviewing.

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 300 Clinical Psychology (3 credits)

This is an advanced course that provides an overview of the field of clinical psychology. Students are expected to have taken Abnormal Psychology and are familiar with the various psychological disorders covered in that course. The primary goals of the Clinical Psychology course are to familiarize students with the history of clinical psychology as a field, including the roles in which clinical psychologists serve and settings in which they work, as well as current issues and debates in the field; provide a foundation in student's understanding of the various theoretical orientations that guide how clinical psychologists approach their work; orient the student to the various types of assessments that are employed to aid in the treatment conceptualization; and help students clarify their own interests and approaches in the mental health field and mapping them to the client populations and presenting problems of interests and the appropriate graduate programs to suit their goals.

Prerequisites: PSY 100 or PSY 101 and PSY 232

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology Clinical, Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 301 Psychological Assessment (3 credits)

This course covers the theory, construction, use, and interpretation of the wide range of available psychological, neuropsychological, and educational tests. Tests of intellectual ability, academic achievement, industrial aptitude, and personality and clinical variables will be reviewed. Specific emphasis will be placed on reliability, validity, ethics, the utility of test measures, test administration, and interpretation and communication of test results.

Prerequisites: PSY 232 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology Five Year or Psychology.

PSY 370 Advanced Topics: Nat Sci I (1-4 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled.

Prerequisites: PSY 100 or PSY 101

Restrictions: Enrollment is limited to students with a major in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 371 Advanced Topics: Nat Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology Five Year or Psychology.

Attributes: Undergraduate

PSY 372 Advanced Topics: Soc Sci I (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 373 Advanced Topics: Soc Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled.

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 374 Independent Study I (3 credits)

The content of the Independent Study is negotiated between student and faculty mentor. The content cannot be that of an existing course in the curriculum unless that course will not be offered during the time that the student completes his or her program of study. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 375 Independent Study II (3 credits)

The content of the Independent Study is negotiated between student and faculty mentor. The content cannot be that of an existing course in the curriculum unless that course will not be offered during the time that the student completes his or her program of study. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 390 Internship I (3 credits)

Internship entails spending eight hours each week (for a total of 112 hours) at a site in which students' work will be supervised and evaluated. Settings include clinical, clinical research, counseling, hospital, educational research, special education, correctional, and industrial facilities. Permission of instructor required.

Prerequisites: PSY 100 or PSY 101 or PS 101 or PS 111

Restrictions: Enrollment limited to students with a class of Junior or Senior. Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 391 Internship II (3 credits)

Internship entails spending eight hours each week (for a total of 112 hours) at a site in which students' work will be supervised and evaluated. Settings include clinical, clinical research, counseling, hospital, educational research, special education, correctional, and industrial facilities. Permission of instructor required.

Restrictions: Enrollment limited to students with a class of Junior or Senior. Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 392 Independent Research I (3 credits)

Students are responsible for designing and conducting an original research project under the direction of a faculty mentor. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 393 Independent Research II (3 credits)

Students are responsible for designing and conducting an original research project under the direction of a faculty mentor. Permission of instructor required.

Prerequisites: PSY 210

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 410 Neuroscience Practicum (3 credits)

Students will use a range of techniques including pharmacology, immunohistochemistry, enzyme-linked immunoassay, and behavioral tests to do applied work in the areas of neuroendocrinology, neuropharmacology and social neuroscience. Students spend 10 hours per week in the laboratory and attend class. The academic component of the experience includes readings related to the substance of the practice, discussions with the faculty supervisor, a professional presentation, and a written report appropriate to the discipline. Course grades are based on laboratory performance and academic work. Note: This course is restricted to sophomores, juniors, and seniors.

Prerequisites: PSY 201 or BIO 101 or CHM 120

PSY 470 Special Topics in Psychology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

PSY 491 Research Seminar: Nat Sci I (3 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format.

Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 492 Research Seminar: Nat Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the natural sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format.

Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

PSY 493 Research Seminar: Soc Sci I (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format. Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Psychology.

Attributes: Undergraduate

PSY 494 Research Seminar: Soc Sci II (3 credits)

This course will focus on a different topic in psychology from the perspective of the social sciences each semester that it is scheduled. The semester's topic will be treated in depth in a seminar format. Students will become familiar with research and theory in the area under study using primary source material. Students may also become involved in research projects in the area under study.

Prerequisites: PSY 210 and PSY 211

Restrictions: Enrollment is limited to students with a major in Psychology.

Attributes: Undergraduate

Public Policy (PUB)

PUB 601 Higher Education Policy (3 credits)

What should students gain from college? How should higher education be funded? How is college connected to inequalities along racial, gender, class, and other lines, and what role should individual campuses play in mitigating those inequalities? Policy decisions shape each of these questions and their potential answers. In this course we will examine contemporary higher education policy and connections to inequality. Topics will include financial aid, diversity, access to college, different types of college settings, and funding.

PUB 604 Engaging Communities (3 credits)

How do communities identify and solve problems in partnership with other stakeholders in their local environment? Engaging Communities is an examination of how institutions develop trust and reciprocal partnerships within their neighborhoods and surrounding communities. The class will study the theory and practice of constructing mutually beneficial relationships among and between hospitals, higher education institutions, non-profit organizations, local government, community groups, and residents to improve the quality of life locally in Philadelphia and the surrounding counties. Students will learn about multiple ways to elicit and increase community participation and civic engagement, utilize the fundamentals of project management, and create models for assessment.

PUB 609 Advising and Advocacy (3 credits)

What makes a president "great?" What is leadership? Why do some presidents succeed and others fail? This course offers an analysis of the contemporary American Presidency with emphasis on the use of power, the role of personality, the nature of decision-making, and the relationship with the media, interest groups, and public opinion. We will investigate how presidents decide their policy priorities; what factors affect presidents' public standing; what conditions shape the president's relationship with Congress; and so on. Having carefully studied the presidency from the above perspectives, we will bring our informed insights to bear on two important questions confronting current and future presidents: race and gender. While the topic of the course is the presidency in general, the secondary goal of the class is to introduce and critically analyze how race and gender shape the ideas we have about our nation's highest office.

PUB 610 Econometrics (3 credits)

Basic principles of econometrics beginning with the classical linear regression model and the method of least squares. Special problems arising from the violation of classical assumptions, and statistical procedures for dealing with them, are covered. Identification and estimation problems are also studied, as well as forecasting with single-equation regression and simultaneous system of equations. Modern time-series models are evaluated, with numerous forecasting illustrations from economics and business.

PUB 613 Public Policy (3 credits)

This course investigates public policymaking within the United States with an emphasis on the social construction of public policy. Students will assess the significance of social, economic, and political factors that influence policymaking and implementation; how problems become a part of the political agenda; and the major political ideological perspectives in the U.S. that impact policy process and content. The course is a study of policy in practice, as students will evaluate current social problems along with empirical social science research to determine the strengths and weaknesses as well as the intended and unintended effects of a particular social policy at the state and/or national level.

PUB 615 Applied Research: Mixed Method (3 credits)

Public policy scholars and practitioners have a wide variety of methodological tools at their disposal. Yet, it can be challenging to determine which techniques are best equipped to answer particular research questions, as well as how to fruitfully combine distinct methods. Gaining a familiarity with the discipline's vast methodological "toolkit" is essential to building the knowledge and skills necessary to engage in political and social research—for scholars, policymakers, and practitioners. In this course, students will explore the principle methodological approaches employed in political inquiry—encompassing experimental, quantitative-statistical, and qualitative techniques—and examine how these tools may be productively "mixed" to make descriptive and causal inferences about political phenomena. In addition to learning to evaluate and critique distinct methodological approaches, students will "learn by doing" and gain experience applying various techniques to answer specific research questions. To provide the necessary technical skills for applied research, the course will introduce students to software programs that are commonly used for quantitative and qualitative research. Students will apply the skills and techniques in the context of a semester-long research project, which will include formulating a research question, developing a research design, and engaging in original empirical research (including data collection and data analysis). The project could form the basis of a graduate-level thesis or article manuscript prepared for submission to a peer-reviewed publication.

PUB 616 State and Local Government (3 credits)

This graduate-level "advanced topics" course focuses on understanding variation across America's federal system. How can we move from thinking about one American government, to 51 governments (all the states plus the national), or to the significantly larger number of local and municipal governments? What role do the states and localities play in shaping American democracy? In what ways are states hindering democracy or helping it flourish? In this course we will focus on three broad themes in the state politics literature: structural power, interest group activism, and individual political behavior. Throughout we will acknowledge that variation at the subnational level matters for engagement, equality, and the presence of a functioning democracy.

PUB 623 Women and American Politics (3 credits)

This course is designed to provide students with a critical examination of women as political actors in the United States. We will analyze various forms of women's political participation, both in the traditional spheres of what is considered politics – women as voters and politicians – and also in more "non-traditional" spheres of political activism. We will examine how women are mobilized to participate in politics, focusing keenly on the differences among women in their political activism in an effort to understand how the intersection of gender, race, class, sexuality, age, and ability influence women's political activism. The primary goal of this course is to familiarize students with key issues, questions, and debates in the women and politics scholarship, mainly from a U.S. perspective. Students will become acquainted with many of the critical questions and concepts scholars have developed as tools for thinking about the gendered political experience. In this course you will learn to "read" and analyze gender politically, exploring how it impacts our understanding of the political world.

PUB 630 Economics of Labor (3 credits)

This course concentrates on the analysis of the major contemporary issues concerning labor relations and labor unions; in particular: unemployment, wage-price relations, the settlement of disputes, minimum-wage legislation, wage differentials and discrimination, and competition from imports. Discussion is not confined to the purely economic dimensions of these topics. The course includes descriptive material on the development and present structure of the labor union movement in this country and on the more interesting and significant features of labor-management relations in selected foreign countries. Note: Can count towards quantitative track with the completion of additional coursework and permission of the instructor.

Restrictions: Enrollment is limited to Graduate level students.

PUB 636 EU and European Politics (3 credits)

This course will provide students with a hands-on opportunity for learning about the politics of the European Union and its member states. As an organization that is both supranational and intergovernmental in nature, the EU's actions are subject to the actions within its institutions and the decisions of its members. Therefore European politics has a great impact on what the Union does. The key and (unique) learning tools in this course are three simulations of EU institutions -the EU Parliament, the Councils of the EU, and the European Council. Students will take on roles of actual EU politicians and engage in policy making. The simulations will require students to perform extensive outside research to prepare to play their roles and will give participants an excellent understanding of these institutions and how they work. Class members will also become expert in the politics of "their" countries (the countries from which their alter egos are from) as well as on the issue under consideration (which will vary depending on pressing European and world events).

PUB 640 Public Finance & Public Policy (3 credits)

This course examines the nature of government spending, the decision-making process, and trends. It describes and evaluates several kinds of taxation and proposals for reform. It utilizes microeconomics to investigate tax incidence and the welfare effects of taxation.

PUB 649 Poverty, Ethics, & Public Poli (3 credits)

This course offers an overview of poverty in the United States, explores the ethical principles surrounding poverty and our response to it, and examines social policies that seek to ameliorate poverty. Students will work on a semester-long academic assignment which will engage them in one aspect of poverty and social policy.

PUB 655 Race, Crime & CJ (3 credits)

This graduate-level course examines the topic of race and ethnicity in relation to crime and criminal justice processing. More specifically, we focus on several issues: 1) the role of privilege and marginalization in the context of race and ethnicity and the criminal justice system; 2) the impact of these factors on intergroup relationships generally and the responses of the criminal justice system to criminal behavior, victimization, and employment within the criminal justice field; 3) how the responses of the criminal justice system affect the lives of offenders, victims, and agents of the criminal justice system for various racial/ethnic groups; 4) the current patterns of crime and victimization in relation to race/ethnicity? In addressing these questions, it is important to note that this is an upper-level sociology/criminal justice course, so do not expect it to be lecture driven, although some lectures will be presented. Much of the course work will revolve around class discussions and written analysis of the readings.

PUB 656 American Foreign Policy (3 credits)

This graduate-level "advanced topics" course explores US foreign policy since the end of World War II. After a conceptual introduction (Part I) which explores the utility of interests, institutions, and ideas for accounting for American policy, the course examines the US-Soviet competition and the ways that that "cold" conflict affected U.S. behavior not only toward the USSR, but also toward other regions (Part II). Part III investigates the early post-Cold War period and the attempts and failures in constructing some kind of "New World Order," and Part IV explores how the US has been responding to the twin challenges of terrorism and globalization.

PUB 667 Ethics in IR (3 credits)

What is morality in international politics? Is ethical reasoning and action possible in international affairs? If possible, when and how? Proponents of Realism often claim that there is virtually no room for morality in international affairs, and states and state actors are rational thinkers interacting in anarchy. For them, ethics are simply luxury and irrelevant. On the other hand, thinkers under the tradition of IR liberalism/idealism emphasize the ethical dimension of state decision making and state behaviors. On what moral ground or ethical reasoning, are the moral behaviors taking place and observed/unobserved? The primary objective of the course is to help students enhance their analytical ability for the study of international ethics. To this end, the course will explore the main traditions and theories of international ethics with a focus on such topical areas as just war and use of force, universal human rights and humanitarian intervention, and national collective memory and post-conflict reconciliation.

Restrictions: Enrollment is limited to Graduate level students.

PUB 668 Women, Gender, & Global Polit (3 credits)

To some scholars and policy makers, the idea that conditions in which women and girls live is important to global politics is almost ridiculous, but others stress that until we understand how "gender makes the world go around" (Cynthia Enloe), we will fail to (1) see accurately the nature of power, (2) achieve just outcomes for all people, and (3) understand how masculinity and femininity affect the political and social world. This course exposes students to the development of feminism (a body of thought that advocates for female, and more recently, gender, equality) and examines the extent to which women have become empowered in politics in their own countries, as well as globally. Moreover, many feminist scholars and activists have become sensitive to the ways that elements of a person's identity (race, class, gender, national origin, ethnicity, etc.) intersect in complex ways to provide her with elements of privilege and/or disadvantage. A central contention of this course is that empowerment is more than simply achieving the vote or becoming an elected official, and traditionally, some people (based on identity) have had an easier time achieving access and opportunities than have others. Empowerment means that all persons, regardless of gender, have influence over decisions that matter to them, security (both at home and in the global arena), economic opportunities, and are treated justly (are believed to possess inalienable human rights that are not somehow forfeited because of their gender).

PUB 670 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Restrictions: Enrollment is limited to Graduate level students.

PUB 675 Environmental Economics (3 credits)

Introduces the environmental concerns facing optimal allocation of resources and factors of environmental policy. Topics include environmental policy analysis, externalities, public goods, criteria for evaluating environmental policies, the role of economic analysis in environmental policy decisions, discussion of pollution control planning, economic analysis of environmental policy in The United States, and international environmental issues.

PUB 682 Urban Economics (3 credits)

Urban Economics is broadly defined as the economic study of urban areas. This course will teach you how to examine issues that typically occur in urban areas, such as crime, poverty, inequality, and the distribution of public goods and government resources, from an economic perspective. Throughout this course, we will not only examine urban issues theoretically, but also use real-world data and geographic information systems software (GIS) to apply economic theory to examine these issues in real-time.

PUB 687 Research Methods (3 credits)

This graduate-level course provides students with an introduction into research methods. We will discuss current research in applied microeconomics and apply the methods learned to create original research. Throughout the course we will investigate multiple facets of research including literature review, data analysis, and analytic writing. Students will be given verbal and written feedback about their analysis and writing. Throughout this course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to writing a comprehensive research paper. In order to gain the most from these discussions, students are required to take on an active role in these discussions.

Restrictions: Enrollment is limited to Graduate level students.

PUB 688 Capstone Seminar (3 credits)

This graduate-level course provides students with an introduction into research methods. Students will learn the process of developing an original research project, including a literature review, research design, and analysis of findings. Throughout the course, there will be opportunities for reading about, writing about, and discussing current policies, problems, and events that are relevant to writing a comprehensive research paper.

Restrictions: Enrollment is limited to Graduate level students.

PUB 689 Healthcare Economics (3 credits)

This course examines major policy issues associated with the delivery of health care in the United States from an economic perspective. Particular emphasis will be placed on the challenges and trade-offs involved in containing health care costs, maintaining quality, and ensuring access. This course will provide students with a better understanding of the major health policy issues.

Restrictions: Enrollment is limited to Graduate level students.

PUB 690 Global Smarts Internship (3 credits)

The Global Smarts Internship allows students to intern with the prestigious World Affairs Council of Philadelphia while making a commitment to social justice. Mentors travel to under-resourced middle schools in Philadelphia to prepare 8th graders for a city-wide Model United Nations event in May in which the middle-schoolers compete with students from elite private and well-funded suburban schools. As Global Smarts mentors help their middle-school students with skills and content, they develop their own academic skills (e.g. oral presentation, research, and writing) and their work experience. During this semester, mentors help their students understand two important issues of justice (previous topics have included ending forced labor, women's education, and providing clean and affordable energy). Throughout the semester, students reflect critically and consciously about their service and the systemic injustice in Philadelphia's public education system. This opportunity for community-engaged learning requires an interview in Fall (several weeks before Spring registration).

PUB 691 Philly Area Internship (3 credits)

The Philadelphia Area Internship Program supports student internships in the public sector, private sector, or in a non-governmental organization (NGO) in the Philadelphia area. Students will complete a total of 130 hours of work, write a resume and sample cover letter, keep a journal, and attend and write about an SJU Career Development Center event. Students who complete the requirements will receive 3 credits for one upper-division course in History, Political Science, or International Relations.

PUB 692 Museums, Monuments, and Media (3 credits)

"Public history" is history as it is practiced outside of the classroom for a general audience: at museums, monuments, and historic sites; in film, television, and digital media. In this course, students will examine the history, methods, and impact of public history in the United States. Through case studies, debates, site visits, and hands-on projects, students will learn how to consume, critique, and create public history, and to assess how the past is used (and abused) for present purposes.

Restrictions: Enrollment is limited to Graduate level students.

PUB 701 Thesis Supervision I (3 credits)

An integrative course in which the student is expected to complete a research paper toward the completion of a Masters thesis, utilizing the research methods and subject matter competence obtained in previous courses. This is the first of two required courses for completing a Masters thesis.

Restrictions: Enrollment is limited to Graduate level students.

PUB 702 Thesis Supervision II (3 credits)

Master's Thesis supervision for students in the PUB 4+1 program.

Restrictions: Enrollment is limited to Graduate level students.

Real Estate Finance (REF)

REF 170 Special Topics Real Estate Fin (3 credits)

These courses are upper division courses designed to give in-depth coverage to real estate subjects that are not covered in great detail in other courses. The prerequisites and topics selected are at the discretion of the instructor.

Attributes: Undergraduate

REF 270 Special Topics Real Estate Fin (3 credits)

These courses are upper division courses designed to give in-depth coverage to real estate subjects that are not covered in great detail in other courses. The prerequisites and topics selected are at the discretion of the instructor.

Attributes: Undergraduate

REF 301 Commc Real Estate Valuation (3 credits)

This course is designed to allow students to apply their existing Finance skills to commercial real estate analysis and decision-making. Topics covered will include legal issues, appraisal techniques, and leasing. Students will develop and analyze the cash flows and economic returns of commercial real estate properties including office, industrial, retail, multifamily, hotel and land development. Students will also analyze forms of real estate finance ranging from fully amortized constant payment loans, to price-level adjusted mortgages, to bullet loans, to participating mortgages.

Prerequisites: FIN 200 or FIN 225

Attributes: Undergraduate

REF 303 Residential Loans& Investments (3 credits)

This course will allow students to understand the legal, regulatory and economic principles behind residential real estate financing, including its history and importance to the U.S. economy. The course will examine the spectrum of loan products and pricing, and will review the roles of different retail and wholesale originators including banks, mortgage bankers, brokers, and servicers. Students will also learn the roles of all of the parties to a residential real estate transaction. The course will examine the secondary markets, including the structuring, securitization, valuation, distribution, and investors of mortgage backed securities (MBS).

Prerequisites: FIN 200 or FIN 225

Attributes: Undergraduate

REF 370 Spec Topics: Real Estate Fin (3 credits)

These courses are designed to give in-depth coverage to real estate subjects that are not covered in great detail in other courses. The topics selected are at the discretion of the instructor.

Attributes: Undergraduate

REF 400 Commercial Real Estate Dev (3 credits)

This course introduces commercial real estate as an industry comprised of many sectors and property types. Developers are the unifying factor that bring these elements together to create facilities that contribute to their communities and local economies. The course presents the development process from concept, planning, financing, construction, completion, occupancy, management and exit strategy. Students will learn the analysis and critical thinking necessary for a developer to obtain financing, raise investment capital, secure government approvals to complete a successful project.

Prerequisites: REF 301

Attributes: Undergraduate

REF 470 Adv Topics: Real Estate Fin (3 credits)

These courses are upper division courses designed to give in-depth coverage to real estate subjects that are not covered in great detail in other courses. The topics selected are at the discretion of the instructor.

Prerequisites: REF 301

Attributes: Undergraduate

REF 605 Comm. Real Estate Valuation (3 credits)

This course introduces the basic concepts, methods, and tools used in the valuation of commercial real estate, and covers the full spectrum of real estate valuation methods, including appraisal, income capitalization, and discounted cash flow valuation. At the completion of this course, students will be able to apply their existing finance skills to a variety of real estate valuation problems. Students will become familiar with the most common forms of real estate finance including fully amortized constant payment loans, price-level adjusted mortgages, bullet loans, and participating mortgages. Students will also develop and analyze the cash flows and economic returns of commercial real estate properties. Finally, students will gain an understanding of the basic functions of the real estate capital markets.

Prerequisites: FIN 550 (may be taken concurrently)

REF 606 Real Estate Market Analysis (3 credits)

This course, which is organized into three modules, provides an overview of the Real Estate Market Analysis process. The first module focuses on identifying and understanding local, regional, and national commercial real estate market trends. The second module familiarizes students with the various databases and techniques that are used in commercial real estate market analysis. The final module provides students with an understanding of how competition across the various commercial real estate product types complicates Real Estate Market Analysis. The course identifies the common sources of data used in research studies analyzing trends in sales, lending, and leasing activity.

Prerequisites: FIN 550 (may be taken concurrently)

REF 610 Real Estate Appraisal (3 credits)

This course introduces three approaches appraisers use to value real property. The course is designed to familiarize students with basic real estate concepts such as property rights, the nature of value, market analysis, and highest and best use. A final project requires students to write an appraisal report for a real income-producing property.

Prerequisites: FIN 550 (may be taken concurrently)

REF 615 Real Estate Investment Finance (3 credits)

The primary objectives of this course are to: (1) conduct an income property investment analysis on an after tax basis; (2) develop the technical acumen necessary to structure and understand real estate transactions; (3) understand the financial assets securitized by real estate and their risks; and (4) to understand the basics of real estate portfolios and portfolio management. To accomplish these objectives, the course examines techniques for structuring real estate transactions such as lender participations, sale-leasebacks, joint ventures, and real estate syndications. The course also examines the secondary market for mortgages, single-family mortgage backed securities (MBSs), commercial property mortgage backed securities (CMBSs), and real estate investment trusts (REITs).

Prerequisites: REF 605

REF 770 Special Topics in Real Estate (3 credits)

This course covers issues and developments of current interest in the field of Real Estate. Specific topics will be announced in the course schedule.

Prerequisites: REF 605

Restrictions: Enrollment is limited to Graduate level students.

Religious Studies (REL)

REL 101 Comparative Religion (3 credits)

An Introduction to the comparative study of religion which examines the historical evolution of religions, nature and diversity of religious experience, the concept of a religious world and the diverse types of religious worldviews, the role of myth and ritual in the maintenance of religious worlds, the problem of religious change and the concept of transcendence.

Attributes: Religious Difference Course, Theology Level 2, Undergraduate

REL 102 What is Religion? (3 credits)

This course is an opportunity for students to be initiated into the critical study of religion. Best described as intensive and experimental, this class offers students an opportunity to analyze classical and contemporary theories of religion. We will challenge attempts to classify an experience as mythic, mystical, magical, functional, or numinous. All readings, evaluations, and discussions will address the contested question, what is religion?

Attributes: Religious Difference Course, Undergraduate

REL 150 First Year Seminar (3 credits)

Seminar subjects vary.

Attributes: First-Year Seminar, Undergraduate

REL 170 Special Topics (3 credits)

Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications differ by section.

Attributes: Undergraduate

REL 211 Hebrew Bible (3 credits)

This course will examine the biblical traditions and texts of the Hebrew Scriptures as products of particular historical and cultural communities, and as literary and theological documents.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 212 Israelite Religion (3 credits)

Combining the evidence of biblical texts and ancient Near Eastern texts, this course analyzes the historical and social context of religion in ancient Israel. Special topics include the worship of different deities; the priesthood and the system of sacrifices in the Temple; the relationship between politics and religion, and some specific religious practices maintained by kings David, Solomon and their successors (such as prophecy, holy war and child sacrifice); popular religious practices (such as devotion to the dead and magic); and the origins and development of monotheism, the concept of the messiah and other ideas central to the origins of Judaism and Christianity.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 221 Intro to the New Testament (3 credits)

This course will examine the biblical traditions and texts of the Christian Scriptures as products of particular historical and cultural communities, and as literary and theological documents.

Attributes: Ancient Studies Course, Undergraduate

REL 231 Judaism (3 credits)

A comprehensive survey of the development of Judaism from its pre-exilic roots to the present, to include the evolution of its theology, ethics, and traditions. The impact of the modern world upon traditional Judaism; major movements within Judaism today and their beliefs about God, Torah, and Israel.

Attributes: Religious Difference Course, Theology Level 2, Undergraduate

REL 241 Islam (3 credits)

An introduction to the historical development of Islam together with its basic beliefs and practices, from the time of Muhammad to the modern period. The prophet Muhammad, the Qur'an and Hadith, the Shari'ah, Kalam, Shiism, Sufism, and Islamic modernism will be examined.

Attributes: Asian Studies Course, Medieval, Ren & Reform Studies, Non-Western Studies (GEP), Religious Difference Course, Theology Level 2, Undergraduate

REL 261 Hinduism (3 credits)

A survey of the Hindu religious traditions on the Indian subcontinent with a focus on the period from the Epic (c. 200 BCE-200 CE) until modern times. The major forms of Hindu belief and practice will be covered: Vaishnavism, Shaivism, traditions of the Goddess, and popular village traditions.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 262 Modern Hinduism (3 credits)

This course explores the ideas, beliefs, and practices of lived Hinduism. We will compare and contrast diverse Hindu cultures that are found in rural and urban India, in the United States, and here on campus. Our study will include a variety of examples taken from the expressive arts and architecture, literature, rituals and festivals, fashion and film, current events, online communities and bloggers.

Attributes: Asian Studies Course, Religious Difference Course, Undergraduate

REL 265 Daoism (3 credits)

In an effort to see and experience Daoist thought and practice on its own terms, approximating the worldview of its practitioners, this course takes an interdisciplinary approach, examining three distinct kinds of religious phenomena: 1) ritual performance, 2) sacred scripture, and 3) art and material culture. Through this interdisciplinary approach, students will learn how to investigate these phenomena according to corresponding sets of methodologies, namely 1) ethnography; 2) translation and hermeneutics; and 3) art-historical and visual and material analyses. Because both scripture and art cannot be removed from liturgy in the Daoist tradition, students will also learn to engage with and employ frameworks from the field of ritual theory, specifically anthropological approaches to ritual practice.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 270 Special Topics in Relig Stud (3 credits)

Concentrated focus on a selected theme in theology or religion at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications differ by section.

Attributes: Undergraduate

REL 271 African & Caribbean Religions (3 credits)

An examination of selected indigenous African religious traditions in their native contexts and/or religious traditions of indigenous African origin that have developed in the Caribbean and related contexts outside of Africa. Topics may vary, but representative samples may include a focus on individual systems (such as Haitian Vodou) or phenomena found in a number of systems (such as rites of passage).

Attributes: Africana Studies Course, Non-Western Studies (GEP), Religious Difference Course, Theology Level 2, Undergraduate

REL 272 Religion/Global/Rights-Bolivia (3 credits)

This class will first examine central religious beliefs of indigenous Bolivian religions (e.g., cosmology, communal origin myths, spirits and divine figures, rituals and ritual spaces, and the relationship of natural and supernatural). Along the way, the class will wrestle with broader questions in the study of religion, such as interpreting the archaeological record, inducing religious experience, and the relationship between religious authority and social or political power. The class will then explore the moral implications of these beliefs alongside the principles of Catholic Social Teaching. The course will pay particular attention to the economic sphere, using case studies to explore how indigenous beliefs and practices are shaping distinctive economic forms that contrast those promoted by global capitalism.

Attributes: Diversity Course, Globalization Course, International Business Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 300 Religious Song and Poetry (3 credits)

How do we express love, loyalty, and devotion to people, saints, and God/gods? This class will explore poetry, hymns, pop music, and visual arts that praise various divine beings and religious figures. Our study will include diverse expressions and acts of devotion, the lives of the artists who created them, and their religious and historical contexts. Examples will be taken from Hinduism, Islam, Christianity, Sikhism, Buddhism, and American pop culture (be prepared to share your playlist!).

Attributes: Religious Difference Course, Undergraduate

REL 310 Welcoming the Stranger (3 credits)

This course will examine how ancient communities grappled with welcoming the stranger and how various communities negotiated interpersonal relations. In addition, the course will focus on how to articulate an ethical response to the issue of migration in light of the diverse theological and philosophical ethical perspectives on the topic. Key themes in the historical and religious traditions will include: the biblical representation of the ger (stranger); ancient comparative hospitality rituals; and legal discourse in rabbinic and contemporary Jewish sources. Key topics in the theological and philosophical ethical traditions will include: distinctions between forced migrants in theory and law— including internally displaced people, asylum seekers, refugees, economic migrants, and ecological/environmental migrants. These distinctions will be explored through both an empirical/legal lens as well as an ethical lens informed by the overlapping consensus of the post-war Universal Declaration of Human Rights tradition and Catholic Social Teaching.

Attributes: Ethics Intensive, Religious Difference Course, Undergraduate

REL 311 Comparative Religious Ethics (3 credits)

Comparative religious ethics is a field of study that explores what different religious traditions say (and have said) about important ethical and moral questions, past and present. This course aims to provide students with the tools and knowledge to understand, comparatively analyze, and evaluate the ethical teachings and moral prescriptions of the religious traditions of Judaism, Christianity, and Islam. Students will examine the similarities and differences between the ways in which each of these religious traditions form and inform the ethical and moral aspects of the lives of their adherents. Prior knowledge of Judaism, Christianity, and/or Islam is preferred but not required. Students with no knowledge of one or more of these traditions will be assigned extra readings for the first few weeks of class.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Religious Difference Course, Undergraduate

REL 312 Spirit Disc in Compar Perspect (3 credits)

Throughout the world's religious traditions we find a variety of spiritual disciplines pursued by individuals in the hope of transforming an existence experienced as sinful, delusory, fragmented or otherwise unsatisfactory into one that is graced, enlightened, whole. The specific methods employed vary widely, as do their specific goals. Nevertheless, when viewed from a comparative perspective many of these practices share elements in common. This course will examine a number of such spiritual disciplines, drawn from the traditions of Hinduism, Buddhism, Greco-Roman Hellenism, and Christianity. Attention will be given to issues of their historical development, diversity of form, points of similarity and contemporary relevance.

Attributes: Religious Difference Course, Undergraduate

REL 321 Religion&Law in the Anc World (3 credits)

This course looks at the world's earliest known law: the law of ancient Sumer, Babylon, Egypt, and other ancient Near Eastern societies. The course goes on to examine the relationship between these legal systems and the legal texts of ancient Israel and Judah found in the Hebrew Bible, as well as other issues related to the study of biblical law. Finally, the course considers the legacy of ancient Near Eastern law and its impact on the development of modern legal institutions and systems.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 322 Myth and History in the Bible (3 credits)

This course examines a range of narratives from the Bible and considers how they functioned in the ancient communities from which they come. It looks at the role of myth and the nature of history writing in the ancient world and explores ways to identify both genres in biblical texts. It also examines current debates over what should count as history in the Bible and the impact of archaeological and extra-biblical literary evidence on these debates. The course will focus primarily on narratives from the Hebrew Bible (e.g., creation myths, ancestral and royal legends, political-historical narratives), though some stories from the New Testament may be considered as well. Please note: This course can be used to satisfy the GEP Religious Difference requirement or the GEP Faith and Reason requirement, but not both.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Ancient Studies Course, Faith-Reason Course, Religious Difference Course, Undergraduate

REL 323 Psalms (3 credits)

The most influential of all Old Testament books for Christian spirituality, the Psalms offer a special glimpse into the religious life of ancient Israel. Placed within their larger historical background, psalms of various types (laments, hymns, royal and wisdom psalms, etc.) will be studied for their literary and religious character. The question of the Psalter's theology as a whole will be addressed as well.

Attributes: Ancient Studies Course, Undergraduate

REL 325 Synoptic Gospels (3 credits)

This course will progress in two movements. It first will investigate the historical background of the growth of the gospel tradition. It then will read the Gospels as viable literary texts, making use of the most recent advances in the literary critical study of Matthew, Mark, and Luke-Acts. In this way, the course will focus upon the theological uniqueness of each book, as well as tracing their interrelatedness.

Attributes: Ancient Studies Course, Undergraduate

REL 326 Letters of Paul (3 credits)

The aim of this course is to examine the main characteristics of Paul's faith as found in his epistles. The course will establish the broad argument of each of the letters, their historical setting, and their literary and rhetorical character, and demonstrate how these elements work together to express Paul's gospel.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Ancient Studies Course, Faith-Reason Course, Undergraduate

REL 327 Religion & Race in Phila (3 credits)

This course examines the co-constitution of religious beliefs, racial identities, and regional cultures from an historical perspective primarily in the urban Northeast. We will examine how transatlantic and transnational African and European religious traditions (real, imagined, historical, invented) shaped that history. Because this is a religious studies course, we will think about religions as institutions that profoundly influence individual's epistemologies and actions, as well as the communities, societies, and nations, in which they are located. We will understand race as a social construction that emerged in recent centuries in concert with religious (and scientific) ideas about human origins and anthropologies. Most importantly, we will see how these two constructs - "race" and "religion" - developed and evolved in a particular region of the United States to make visible place-based distinctions and geo-cultural histories. A complicated, multi-scalar picture will emerge of the varied ways in which beliefs, identities, and places influence and are implicated by one another.

Prerequisites: ENG 101

Attributes: Africana Studies Course, American Studies Course, Diversity Course, Undergraduate

REL 328 Global Christianities (3 credits)

Africa is home to the largest population of many Christian denominations in the world and home of the fastest growing concentration of Christians in the world. This course will examine the variety of Christianities in Africa in their global context and explore how Christianity there is influencing and being influenced by Christianity worldwide. Students will learn to problematize, to complicate, and to relentlessly question prevailing religious and cultural ideas about the other, where those ideas originate, how they are constructed and maintained, and who that maintenance and construction serves.

Attributes: Diversity Course, Undergraduate

REL 329 Indigenous Ecologies (3 credits)

This course offers case studies in the diversity of relationships between religion and indigenous ecology, which is the interaction between an indigenous culture and its environment. The approach is anthropological and historical. This includes attention to the evolutionary origins of religion, emic-etic tensions, and the use of archaeology to recover the stories of marginalized peoples. Sample topics are Traditional Ecological Knowledge, attributions of personhood, relations between herbalism and shamanism, and ways that environments shape rituals and beliefs. These reveal alternatives to western assumptions that distinguish "natural" from "supernatural" and "science" from "religion." They also suggest policies for addressing environmental challenges.

Attributes: Diversity Course, Globalization Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 331 Topics in Ancient Judaism (3 credits)

Study of a selected topic in Judaism in the Persian, Hellenistic, and Roman periods. Sample topics include collections of texts, such as the Dead Sea Scrolls or works of Josephus; regions or cities, such as Judaism in Egypt or Jerusalem; a series of events, such as the Maccabean Revolt; an individual or group, such as the Herodian dynasty; or a theme, such as Judean interactions with imperial powers. Course may be taken more than once for credit as topic changes.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 332 Past/Present in ISR and PLS (3 credits)

Digging at Tel Dor: This study tour combines excavating the archeological site of Tel Dor, Israel with travel in the country before, during, and after the excavation season. By participating on a dig, students gain first-hand knowledge of both historical and modern day Israel and the rich history that gives rise to the complexities of the modern Middle East. Digging brings the social, economic, political, intellectual, and religious history of the site "to life" through uncovering and then analyzing the ancient remains-the architecture with associated vestiges of daily life. Students will be part of every step of the archeological process from digging, processing, and analyzing to recording and storage. To witness the full range of historical periods presented in lectures, we will visit the archeological sites of Caesarea, Megiddo, Sepphoris, Beth Shean, Belvoir, Masada and Qumran, spanning the Canaanite through the Crusader periods (20th c. BC - 12th c. AD: the Early, Middle and Late Bronze and Iron Ages, and the Persoan Hellenistic, Roman, Byzantine, First Moslem, and Crusader Periods). Before, during and after the excavation season the group will tour the cities of Jerusalem, Tel Aviv, Haifa, and Nazareth, focusing on the historical interaction of Christians, Jews, and Muslims.

Attributes: Ancient Studies Course, Religious Difference Course, Study Tour, Undergraduate

REL 333 Jerusalem: History & Holiness (3 credits)

The city of Jerusalem has had a nearly unsurpassed historical and religious prominence for three millennia, right up through the present. In this course we will explore Jerusalem from multiple, complementary perspectives. We will consider the history of the city as well as religious developments within the Jewish, Christian, and Muslim traditions. We will begin with biblical Jerusalem and then move forward in time, highlighting periods, events, and ideas that have lasting influence through close studies and discussions of selected topics. We will draw on theoretical approaches to the study of sacred space using tools from the field of comparative religion.

Attributes: Religious Difference Course, Undergraduate

REL 334 Rise of Rab Judaism & Xianity (3 credits)

In the aftermath of the Nazi genocide of Jews in the 20th century, and with new discoveries such as the Dead Sea Scrolls, scholars from many disciplines have sought to better understand the origins of Rabbinic Judaism and Christianity. A growing consensus sees their emergence in the Roman period as the result of a complex series of responses to historical events, particularly the destruction of the Second Temple in Jerusalem in the year 70 C.E. Not only were defining features of each tradition established, but the basic dynamic of their interrelationship was set and would prevail for nearly two millennia. This course provides an in-depth study of religious differentiation by surveying the history, beliefs, and practices of biblical Israel, late Second Temple Judaism, the church as a Jewish eschatological movement, and ultimately Rabbinic Judaism and patristic Christianity in the post-Temple Roman world. Special attention is devoted to the construction of their distinctive and sometimes opposed religious identities.

Attributes: Religious Difference Course, Undergraduate

REL 335 Christian Origins (3 credits)

A study of the cultural and historical matrices of the early Jesus movement, its rise and early developments, and the emergence of institutionalized practices and belief systems that coalesced in the formation of Christianity. The course is organized chronologically and employs the standard tools and theoretical approaches of modern historical-critical methodology, such as those derived from anthropology, sociology, literary criticism, and classical archaeology.

Attributes: Ancient Studies Course, European Studies Course, Medieval, Ren & Reform Studies, Undergraduate

REL 336 Jewish Thought (3 credits)

This course will introduce students to Jewish theology from biblical to modern times. It will focus on selected topics such as God, revelation, ethics and human nature, chosenness, Jewish views of other religions, messianism, the afterlife, and suffering and evil (with special reference to the Holocaust).

Attributes: Religious Difference Course, Undergraduate

REL 337 Sabbath in Judaism&Christianity (3 credits)

In our modern lives, it is hard to imagine 'shutting off'. However, the observance of a Sabbath is valued in Judaism and Christianity. This course considers the Sabbath as not just abstention from work but entry into sacred time. It covers the biblical period through the present, and includes diverse forms of observance and claims for its significance. We will study the Sabbath primarily in the Jewish tradition, and explore the tensions between adherence to biblical models and adaptation to new circumstances. We will focus on biblical interpretation as context within which the Sabbath evolved and was (re)defined, and consider the Sabbath as mythological time, as a marker of social identity, and as a practice governed by religious law. We will also consider the Sabbath in the Christian tradition, especially where Christian observance diverges from Jewish observance, such as the shift from Saturday to Sunday.

Attributes: Religious Difference Course, Undergraduate

REL 338 Jew&Chr Responses to Holocaust (3 credits)

The Jewish Holocaust represents the classic negative event of our age, a manifestation of evil transcending the human imagination. This course will examine how Jews and Christians have responded to this event and why it caused changes in both Jewish and Christian self-understandings. The course will introduce students to the personages, issues and events of the Holocaust, before turning to religious and moral issues such as suffering and guilt.

Attributes: European Studies Course, Faith Justice Course, Religious Difference Course, Theology Level 3, Undergraduate

REL 341 The Quran and Its Interpreters (3 credits)

This course will explore a basic source of Islamic faith and practice, the Quran and its interpretation. We will examine compilation of the Quran, its major themes, and samples from its reception history, both classical and modern. We shall investigate how this 1400-years old text has been interpreted in many different ways, by analyzing legal, theological, mystical, existential, feminist and critical perspectives on it. We shall also make occasional comparisons with the bible and its interpretation. The course will enable the student to have better insight not only on the Quran, but also on the process of interpretation of sacred texts.

Attributes: Africana Studies Course, Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 342 Women in Muslim Tradition (3 credits)

This course will seek to comprehend and explain some of the major aspects of the life and culture of Muslim women. Women are and have always been an integral part of the Muslim society, contrary to what might be generally portrayed and perceived. Far from being a monolithic culture or society, the Muslim world comprises many diverse cultural tendencies, which makes it difficult to generalize. Thus in order to study Muslim women and their status, role and situation, we will touch upon the difference historical, political, and economic forces that have shaped the culture of the Muslim world as a whole. We will be exploring the religious and social issues that have been central during the modern transformation of Muslims societies and will touch upon how Muslim women are portrayed in the media and the ramification of such portrayal.

Attributes: Africana Studies Course, Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 343 Reason Science&Faith in Islam (3 credits)

This course has three major parts. In the first part, we shall look at primary sources of Islam tradition, that of Qur'an and hadith, which will give us a starting point as we turn to the ways in which miracles have been discussed in the tradition. In the second part, we shall look at two classical Muslim thinkers, Ghazali and Ibn Rushd, who differed on miracles as well as on the relation between reason and faith. Analyzing their disagreement will offer us critical insights about common sense, science, rationality and dynamics of Quranic interpretation. In the third part, we shall look at contemporary interpretation of miracles as well as the relation between faith and reason by looking at a crucial Muslim thinker, Bediuzzaman Said Nursi, as well as some of the other approaches to science in modern era. In this part we shall also engage with the epistemological and scientific implications of Islamic understandings of miracles with the help of two Western thinkers, David Hume and Charles S. Peirce. In the final portion of the course, students will present their research on the issue of the relation between reason, science and faith in Muslim context. Please note: This course can be used to satisfy the GEP Religious Difference requirement or the GEP Faith and Reason requirement, but not both.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Asian Studies Course, Faith-Reason Course, Medieval, Ren & Reform Studies, Religious Difference Course, Undergraduate

REL 351 Indian Buddhism (3 credits)

The development of the Buddhist religion from the time of its founder, Siddhartha Gautama, until its decline in India in the 12th century. The basic teachings of the Buddha, the early Buddhist community or Sangha, the elaboration of the Abhidharma, the rise of Mahayana Buddhism and the development of Tantra will be covered.

Attributes: Asian Studies Course, Religious Difference Course, Undergraduate

REL 352 East Asian Buddhism (3 credits)

The focus of this course will be on the form of Buddhism that has been dominant in East Asia, a form known as "Great Vehicle" or Mahayana Buddhism. After quickly examining the origin and development of Buddhism in India this course will examine its development in China in some depth, as well as its spread to Korea and Japan.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 355 Superhumans in Chinese Relig (3 credits)

Immortals, Ancestors, Ghosts and Gods: This course examines four religions of China—Confucianism, Daoism, Chinese "folk" or popular religion, and Buddhism—in their historical and contemporary contexts. As its title suggests, the class is built around an exploration of the important role that superhumans such as demons, dragons, buddhas, and ghosts play in each of these traditions. Taking as our starting point the Ming period (1368-1644) popular novel, *Monkey*, in this class we will examine a wide range of primary and secondary sources including paintings, websites, poetry, scripture, articles of clothing, miracle stories, newspapers, statuary, and ritual implements. By combining an historical overview of the topic with a hands-on exploration of the manner in which practices and 445 beliefs related to superhumans remains relevant in China today, the class aims to deepen students' appreciation of the ways religion continues to shape world events, national policy, daily life, and cultural production within and beyond the region.

Attributes: Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 356 Death & Afterlife Chinese Relig (3 credits)

Across regions and millennia, human beings have pondered the perennial question of what happens when we die. This class takes a close look at the fascinating ways this question has been answered in the part of the world now called China. From the very outset, we enter into a world of tombs and transcendence, exploring some of China's earliest burial sites. As the course progresses, we turn to the Daoist quest for immortality, the Buddhist conception of reincarnation, and the Confucian practice of ancestor worship. The class considers points where these worldviews diverge, but takes a more interested look at the places where they have harmonized throughout China's long history. Upon completion of the course, students will have a map of China's afterlife, and an introduction to the beings who preside there, from the Supreme Gods of its Heavens, to the Ten Kings of its Hells.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 357 Food Practices & Chinese Relig (3 credits)

This course examines the practices and beliefs surrounding food associated with Chinese religious traditions such as Buddhism, Confucianism, Daoism, Chinese "folk" or "popular" religion, and Islam. The topics we will cover include religious prescriptions and prohibitions related to food, connections between food-practices and hierarchy, and the roles that food plays in creating and sustaining relationships between, for instance, the living and dead or humans and nonhumans. In addition to studying a variety of texts and objects, we will learn about religious observances related to food cultivation, storage, distribution, preparation, and consumption from guest speakers and through field trips to Philadelphia area sites including a restaurant and a temple.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course

REL 358 Yoga: Ancient & Modern Paths to Freedom (3 credits)

In this course we will explore the fascinating world of yoga as it has evolved in South Asia (the Indian subcontinent), where it has for millennia been associated with a pronounced South Asian interest in both "world renunciation," and "Axial Age" value that has significantly shaped the worldviews of at least three religions of South Asian origin: Hinduism, Buddhism and Jainism, as well as in the acquisition of power, both "worldly" and "supernatural." We will also examine how yoga traditions were transformed by India's encounter with the West both during colonial times and during the second half of the 20th century. Issues of particular concern, as we trace these developments, will be the historical and cultural contexts of yoga in South Asia, the relationship between yoga practice and South Asian religious beliefs, in particular traditions of religious renunciation, the role of South Asian constructions of concepts of the role of "body" and "mind" in spiritual practice (and the relationships of health, spirituality and religion), the role of yoga as a symbol of the "spiritual East" in the contexts of colonialism and post-colonial nationalism in India as well as its commodification in the contemporary global environment. We will also be examining yoga's "journey to the West" and its status in contemporary American life by examining the genesis of "modern postural yoga," the form of yoga with which most people are familiar (the form of yoga that focuses on the performance of various yoga postures or asana, such as triangle pose, head stand, etc.) While the focus will be on the specific traditions labeled "yoga," the course will also serve as an introduction of the religious of South Asia, since historically yoga and all its varieties has been embedded in specific South Asian religious worldviews. While some attention will be given to Buddhist forms of yoga, the principal focus will be on the traditions associated with the Vedic and Hindu religious traditions, and their modern transformations.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 359 Meditation, Yoga, and the Dao (3 credits)

Asian Spiritual Practices and their Modern Concepts: What is the purpose of life, and how is this purpose to be realized? This course will examine four influential Asian spiritual traditions that offer a variety of answers to these questions, two of which originated in ancient India (Buddhism and that component of the Hindu religious traditions known as yoga) and two in China (Confucian and Daoist traditions of self-cultivation). Each of these traditions in its own way argues that the true potential of a human being is realized only through a process of transformation, which leads from a condition of deficiency (characterized variously as suffering, ignorance, lack of vitality, imbalance, and ultimately mortality) to a condition of true freedom and happiness. The course will examine these traditions both in their original Asian contexts and in the adaptations in Western culture, paying particular attention to research that provides scientific models for thinking about the value of such transformative practices.

Attributes: Religious Difference Course, Undergraduate

REL 360 Religion & Art in East Asia (3 credits)

Vision and Visualization: This class is about ways of seeing in East Asian religions, with an emphasis on the Buddhist and Daoist traditions. It investigates the visual arts of these religious traditions with special attention to how these materials function in the context of ritual practice. Specific topics include the production of mandalas (or sacred circles) and their uses in the visualization practices of China, Tibet, and Japan; the uses of maps, charts, diagrams, and talismans in the Daoist ritual traditions of China and Taiwan; the relationship between sacred texts and ritual visualizations in late imperial Daoism; the religious and ritual dimensions of Chinese landscape painting; and the practices surrounding sacred icons in the Buddhist and Shinto traditions of Japan. In addition to providing a comprehensive introduction to the visual culture of several East Asian religions, this class also asks students to consider the implications these diverse practices have for how we ourselves perceive, understand, and engage with the visual world around us.

Attributes: Asian Studies Course, Non-Western Studies (GEP), Religious Difference Course, Undergraduate

REL 365 Sacred Stuff Material Religion (3 credits)

Sacred Stuff approaches the study of religious experience through the material world, objects, feelings, and sensations. What does religion feel like? How does it taste or smell? We will explore varieties of religion through our senses and study sacred objects crafted by artists inspired by the divine.

Attributes: Asian Studies Course, Religious Difference Course, Undergraduate

REL 370 Spec Topics in Relig Studies (3 credits)

Concentrated focus on a selected theme in theology or religion at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications vary by section. Does not fulfill the GEP.

Attributes: Undergraduate

REL 380 Prophecy in the Ancient World (3 credits)

Who were the ancient prophets, both biblical and non-biblical? When do gods speak directly to humans via prophets, and when is a third-party human intermediary necessary to mediate between that prophet and the ruler? This course will probe the scope of political authority in Mesopotamia, Ancient Israel, and Ancient Greece with a particular focus on the role of prophets and diviners in society. Through critical analysis of a spectrum of ancient sources from Mari (modern-day Syria), Ancient Israel and Judah, and Delphi and Claros (Greece), we will investigate the system of mediation among prophets, intermediaries, and kings to undertake an interdisciplinary study of ancient prophecy.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 382 Women & Religion in Anc Wrld (3 credits)

An investigation of issues related to women and gender through case studies from the Ancient Near East and Ancient Israel through Late Antiquity. In addition to literary sources, students will also consider the importance of archaeology in the discussion of ancient religions and women's ritual practices. Primary sources will illustrate issues such as gender identity, difference, sameness, subordination, privilege, cultural dynamics, marginalization, oppression, resistance, and the role of women in historical and social change. Emphasis will be placed on developing epistemological theoretical, and methodological awareness and critical understanding of the implications for the broader study of religion, gender, and human diversity.

Attributes: Ancient Studies Course, Diversity Course, Gender Studies Course, Religious Difference Course, Theology Level 3, Undergraduate

REL 383 Ancient Greek Religions (3 credits)

This course will be an introduction to the world of thought and practice that contemporary scholars call ancient Greek religion. The main materials of the course will be drawn from the ancient Greeks themselves—from poets, artists, playwrights, and mythographers. Emphasis will be placed on the myths and festivals that formed the fabric of ancient Greek religious practice and outlook. Ancient perspectives on cosmos (universe), polis (city and its society), psyche (self) and theos (gods) will be explored.

Attributes: Ancient Studies Course, Religious Difference Course, Undergraduate

REL 392 Directed Readings in Religion (3 credits)

A study of significant themes or issues in Theology or Religious Studies under the direction of faculty in the department. Frequent consultations and written reports are required. Prior written permission of the instructor and approval from the chair is required. Does not fulfill the Theology/Religious Studies GEP.

Attributes: Undergraduate

REL 395 Approaches to Study of Religion (3 credits)

A selected survey of the variety of theories and methodological approaches employed in the modern academic study of religion. Approaches to be examined in class include the psychological, sociological, anthropological, archeological, theological, feminist, and socio-biological. Classic thinkers may be included, but most of the course will focus on authors who represent recent developments, such as the new evolutionary approaches to religion. Course work will emphasize direct engagement with the writings of the major theorists themselves (reading and analysis of primary texts).

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

REL 470 Spec Topics in Religs Studies (3 credits)

Concentrated focus on a selected theme in theology or religion at a highly-advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications vary by section. Does not fulfill the GEP.

Attributes: Undergraduate

REL 491 Intern in Religious Studies I (3 credits)

This course is an experiential learning experience in which students work 10 hours per week (total 130 hours) in an organization related to the Religious Studies. The internship is a way to see how different areas of religious studies are used "on the ground" in public, private, non-profit, community, and church-related organizations. In addition to their hours, students must keep a journal, meet regularly with their faculty adviser, and complete a final essay that connects their learning experience in the internship to their other coursework and the goals of the major. For the required application, please see the department chair.

Attributes: Undergraduate

REL 492 Intern in Religious Studies II (3 credits)

This course is an experiential learning experience in which students work 10 hours per week (total 130 hours) in an organization related to the Religious Studies. The internship is a way to see how different areas of religious studies are used "on the ground" in public, private, non-profit, community, and church-related organizations. In addition to their hours, students must keep a journal, meet regularly with their faculty adviser, and complete a final essay that connects their learning experience in the internship to their other coursework and the goals of the major. For the required application, please see the department chair.

Attributes: Undergraduate

REL 493 Ind Research in Religion (3 credits)

Directed independent reading and research supported by discussion with other students and instructors. Open to senior theology majors and minors and other senior students by permission of the Chair. Does not fulfill the Theology/Religious Studies GEP.

Attributes: Undergraduate

REL 494 Ind Research in Religion (3 credits)

Directed independent reading and research supported by discussion with other students and instructors. Open to senior theology majors and minors and other senior students by permission of the Chair. Does not fulfill the Theology/Religious Studies GEP.

Attributes: Undergraduate

REL 495 Theory & Method Study Religion (3 credits)

A survey of a wide array of theories and methods employed in the modern study of religion, such as psychological, sociological, anthropological, phenomenological, feminist, socio-biological, and other approaches. Both classic and recent theoretical models will be discussed, with special interest in current methodological developments in the academic study of religion. Emphasis will be placed on direct engagement with the writings of the major theorists themselves. Open to junior and senior theology majors and minors and other junior and senior students by permission of the Chair.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

Risk Management & Insurance (RMI)

RMI 150 Nat Disast & Com Recov (3 credits)

The goal of this course is to empower students to use primary and secondary sources to investigate community recovery from natural disasters. The research will highlight the economics and social impact of insurance. Specifically, students will compare and contrast community recovery from different types of natural disasters while evaluating the successes and/or struggle of insurance products in aiding community recovery from natural disasters. *May only fulfill the GEP First-Year Seminar requirement. Does not satisfy any major or minor Risk Management & Insurance requirement. Does not satisfy any free elective credit.

Attributes: First-Year Seminar, Undergraduate

RMI 170 Special Topics (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

RMI 200 Introduction to Insurance (3 credits)

This course is the introductory course of the risk management and insurance program. It also covers the insurance component of the financial planning track. The focus of the course is to introduce the students to the terminology of insurance. To understand insurance, students need to review contract law and agency relationships. Also provided is an overview of the financial services industry. Once these areas have been covered, the course will examine personal property and liability insurance, commercial property and general liability insurance. In addition, there will be a discussion of employee benefits, medical plans, and social insurance programs. This course is also approved under The Institutes Collegiate Studies for CPCU program for CPCU 500.

Attributes: Undergraduate

RMI 270 Special Topics (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

RMI 300 Property and Casualty (3 credits)

This course addresses the property and casualty insurance business, markets, and types of companies. The course provides a review of the commercial property and casualty insurance products with a particular focus on the underlying exposure to loss, insurance policy coverage, and exclusions. In addition this course analyzes the Property/Casualty market and explores current issues in the Property/Casualty insurance industry. This course is closely aligned with the industry designation exam, CPCU 557. This course is also approved under The Institutes Collegiate Studies for CPCU program.

Prerequisites: RMI 200 and PHL 154

Attributes: Ethics Intensive, Undergraduate

RMI 301 Corporate Risk Management (3 credits)

This course provides a survey of risk management theory and practice as it relates to corporate risk management. The course then takes a detailed examination of the value proposition for corporate risk management (for individuals as well as corporations). The course then has students apply the risk management process to a publicly-traded corporation. The course guides students through a risk financing simulation exercise, optimizing hedges given practical constraints for individual risks as well as for collections of risks. The course explores disaster recovery strategies by working through real-world examples. The course concludes with motivating the principles of enterprise risk management by examining both the advantages and potential pitfalls associated with developing portfolio models of the firm's risks. This course is aligned with the industry designation exam, ARM 54.

Prerequisites: (FIN 200 or FIN 225) and (DSS 210 or MAT 118 or MAT 128 or MAT 321 or MAT 322)

Attributes: Undergraduate

RMI 306 Intro to Probability in Insura (3 credits)

This course and RMI 307, Applied Probability and Statistics in Insurance, provide a two semester study of probability and statistics used in insurance and risk management. RMI 306 covers basic probability theory, Bayes Theorem and discrete random variables. Applications of Binomial, Hypergeometric, Poisson, Geometric, Negative Binomial, and Uniform distributions will be used to solve problems in insurance and risk management.

Prerequisites: MAT 161 and MAT 162 and DSS 210

Attributes: Undergraduate

RMI 307 Applied Prob & Stats in Insura (3 credits)

This is the second course covering probability and statistics used in insurance and risk management. RMI 307 covers continuous random variables, multivariate distributions and density functions representing an insurance loss. Students will be able to apply continuous distributions such as uniform, exponential, Gamma, Normal, and lognormal to generate expected frequency of loss and predict claim probability. Moment generating functions with continuous random variables, simulation of continuous distributions and mixed distributions will be used to solve problems in risk management and insurance.

Prerequisites: RMI 306

Attributes: Undergraduate

RMI 310 Insurance Company Operations (3 credits)

The course covers how property-casualty insurance functions work together to create and deliver products. The various functions covered include: Underwriting; Marketing and Distribution; Risk Control and Premium Auditing; Claims; Actuarial Operations; Information Technology; Reinsurance; and Regulation. This course is closely aligned with the industry designation exam, CPCU 520. This course is also approved under The Institutes Collegiate Studies for CPCU program.

Prerequisites: RMI 200

Attributes: Undergraduate

RMI 321 Insurance Law & Cyber Liability (3 credits)

This course will focus on Insurance Law and Managing Cyber Risk from an Enterprise Risk Management perspective. The goal is for students to understand the best practices embraced by leaders in handling Cyber Risk and understanding the legal obligations associated with Insurance Law.

Prerequisites: RMI 200 or (FIN 200 and DSS 210)

Attributes: Undergraduate

RMI 370 Topics in Risk Mgt & Insurance (3 credits)

This course is designed to give greater coverage to those risk management and insurance topics that are not covered in great detail in other courses. The topics selected are at the discretion of the instructor.

Prerequisites: RMI 200 or (FIN 200 and DSS 210)

Attributes: Undergraduate

RMI 400 Underwriting (3 credits)

This course covers property and casualty underwriting through the principles of underwriting; strategic underwriting techniques; the insurance production environment; and insurance agency management tools and processes. Students will learn to assess whether to accept insurance risks (or groups of risks) and at what price. Prerequisite may be taken concurrently.

Prerequisites: RMI 300 (may be taken concurrently)

Attributes: Undergraduate

RMI 401 Life and Health RM (3 credits)**RMI 406 Adv Insurance Financial Models (3 credits)**

This course covers advanced topics from finance (derivative securities and corporate financial models) from a quantitative perspective. RMI 406 covers the topics in actuarial exam IFM.

Prerequisites: (FIN 225 and RMI 307)

Attributes: Undergraduate

RMI 410 Enterprise Risk Management (3 credits)

This course will cover the latest methodologies in enterprise risk management (ERM) and how they are implemented in practice. Enterprise risk management (ERM) is a significant advancement in the field of risk management, addressing limitations with the traditional, "siloed" approach to risk management. ERM provides a better framework for fundamental risk-return decision-making at the highest levels of the organization. This course will address extracting information from risk experts; converting information from risk experts into quantitative ERM information; and quantifying risks using a value-based ERM model. RMI 301 prerequisite may be taken concurrently upon Instructor's or Department Chair's approval.

Prerequisites: RMI 301

Attributes: Undergraduate

RMI 420 Alternative Risk Financing (3 credits)

The course focuses on evaluating the value impact of risk financing options. The course covers developing risk financing strategies, evaluating risk financing options (after-tax, NPV), offshore financing, role of reinsurance, history of alternative risk financing, forecasting risk loss, capital market functions, forming captive insurance companies. The course's projects rely heavily on Excel as a tool to evaluate and model risk financing options - using both simulated and real-world data. This course is closely aligned with the risk management industry designation exam, ARM 56. This course is also approved under The Institutes Collegiate Studies for CPCU program.

Prerequisites: RMI 301

Attributes: Undergraduate

RMI 470 Adv Topics: Risk Mgmt & Insura (3 credits)

These courses are upper division courses designed to give greater coverage to those risk management and insurance topics that are not covered in great detail in other courses. The topics selected are at the discretion of the instructor.

Prerequisites: RMI 200 and FIN 200 and (DSS 210 or MAT 118 or MAT 128 or MAT 322)

Attributes: Undergraduate

RMI 493 Individual Research in RMI (3 credits)

Independent study may be approved to allow a student to pursue an in-depth study of an RMI topic. Acceptable Independent Study topics include traditional research/reading programs as well as rigorous pre-approved internship programs with an appropriate academic component, as defined by the Department chair.

Prerequisites: RMI 200 and FIN 200 and DSS 210

Restrictions: Enrollment limited to students with a class of Junior or Senior.

Attributes: Undergraduate

Russian (RUS)

RUS 101 Beginning Russian I (4 credits)

Proficiency based instruction will encourage the development of speaking and listening comprehension as well as reading and writing. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice low/middle level according to ACTFL - American Council on Teaching Foreign Languages. This course is reserved for students with no experience in the Russian language. Fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of RU101

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

RUS 102 Beginning Russian II (4 credits)

Proficiency based instruction will encourage the development of speaking and listening comprehension as well as reading and writing. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice mid level according to ACTFL - American Council on Teaching Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: RUS 101 or Language Placement with a score of RU102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

RUS 170 Special Topics in Russian (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

RUS 201 Intermediate Russian I (3 credits)

Proficiency based instruction will encourage the development of speaking and listening comprehension as well as reading and writing. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice high level according to ACTFL - American Council on Teaching Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: RUS 102 or Language Placement with a score of RU201

Attributes: Undergraduate

RUS 202 Intermediate Russian II (3 credits)

Proficiency based instruction will encourage the development of speaking and listening comprehension as well as reading and writing. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is aimed at developing the novice intermediate low/mid-level according to ACTFL - American Council on Teaching Foreign Languages. Fulfills the GEP non-native language requirement.

Prerequisites: RUS 201 or Language Placement with a score of RU202

Attributes: Undergraduate

RUS 270 Special Topics in Russian (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

RUS 301 Russian Conv & Comp I (3 credits)

This course is designed to give the student the necessary practice in spoken and written Russian with special emphasis on the more difficult modern Russian grammatical constructions and idioms. Fulfills the GEP non-native language requirement.

Prerequisites: RUS 202 or Language Placement with a score of RU301

Attributes: Undergraduate

RUS 302 Russian Conv & Comp II (3 credits)

This course is designed as a follow-up to RUS 301, to give the student additional practice in spoken and written Russian with increased emphasis on difficult modern Russian grammatical constructions and idioms. Pre-requisite: RUS 202 or equivalent.

Prerequisites: RUS 301 or Language Placement with a score of RU302

Attributes: Undergraduate

RUS 310 Selections in Russian Lit I (3 credits)

Introduction to Russian literature and its history. Selected readings of plays, essays, novels, short stories and poetry.

Prerequisites: RUS 302 or Language Placement with a score of RU310

Attributes: GEP Art/Literature, Undergraduate

RUS 311 Selections in Russian Lit II (3 credits)

A continuation of RUS 310.

Prerequisites: RUS 310

Attributes: GEP Art/Literature, Undergraduate

RUS 370 Topics in Russian (3 credits)

Topics will vary according to the semester in which the class is offered.

Prerequisites: Language Placement with a score of RU370

Attributes: Undergraduate

RUS 470 Special Topics in Russian (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

Social Work (SWK)

SWK 510 Human Behavior and Soc Envir (3 credits)

This course implements a generalist framework to prepare students for practice with individuals across the lifespan. Culturally-responsive theories explaining the influence of societal interactions and the impact of broader social systems will be discussed in relation to social work practice.

Restrictions: Enrollment is limited to Graduate level students.

SWK 540 Foundations of SW Practice (3 credits)

This course is designed to provide foundational knowledge and practice skills for generalist level social work practitioners. Legal and ethical issues will be discussed as guiding factors for practice with individuals, families, groups, communities, and organizations. Students will engage in self-reflective processes and gain insight about the importance of supervision and consultation to guide professional decision-making in on-site and virtual settings.

Restrictions: Enrollment is limited to Graduate level students.

SWK 541 Individual & Group SW Practice (3 credits)

This course will prepare students with culturally-responsive social work practice skills to support the well-being of individuals, families, and small groups. Students will learn cultural humility skills to manage biases such as critical reflection. Culturally-responsive engagement skills and acknowledging clients as experts in their own lived experiences will be emphasized.

Restrictions: Enrollment is limited to Graduate level students.

SWK 550 Foundation Clinical Assessment (3 credits)

This course is designed to introduce students to the purpose and development of clinical assessment and diagnostic tools in social service settings. The role of human behavior and person-in-environment theories, and strengths-based approaches will be discussed in relation to assessment tools. The concepts of bias, personal values and beliefs will be explored in relation to diagnostic processes.

Restrictions: Enrollment is limited to Graduate level students.

SWK 560 Human Rights in SW Practice (3 credits)

This course introduces students to social work practice and the intersections of diversity and forms of injustice in a global context. Intersections of diversity are discussed in relation to human rights, social justice, historical and contemporary forms of oppression. Theoretical perspectives and practice strategies for addressing factors including social, financial, and environmental justice and promoting human rights will be emphasized.

Restrictions: Enrollment is limited to Graduate level students.

SWK 561 Practice with Orgs & Community (3 credits)

This course highlights the processes and functions of communities and capacity building, organizational development, interprofessional conceptual frameworks, and culturally-responsive practice with organizations and communities. Concepts of bias, power, privilege, and professional self-reflection will be discussed.

Restrictions: Enrollment is limited to Graduate level students.

SWK 565 Culturally-Responsive Research (3 credits)

This course explores the role of social workers as consumers of research to inform practice decisions. Introductory research concepts pertaining to knowledge development and scientific methods will be discussed. Descriptive and inferential statistics concepts will be practiced and interpreted. Students will learn to critically examine research reports from an ethics-based and culturally-inclusive lens.

Restrictions: Enrollment is limited to Graduate level students.

SWK 570 Special Topics in Social Work (3 credits)

Topics will vary according to the semester in which the class is offered.
Restrictions: Enrollment is limited to Graduate level students.

SWK 580 Generalist Field Education I (3 credits)

Field education is defined as the signature pedagogy or primary method of teaching social work knowledge, skills, and abilities in social work education. The generalist field education integrates your theoretical and conceptual knowledge from courses and provides the opportunity for you to apply it within a community setting. The integration of theory, knowledge, and practice within a community setting exemplifies the competency-based framework designed for social work education. Graduate-level social work students are required to complete 400 structured field education hours across two semesters while successfully demonstrating generalist-level practice competencies. The field education experience includes 200 hours of experience in a community setting per semester (SWK 580 and SWK 581) and monthly 2-hour Field Advisement processing sessions. Field Advisement sessions are used to process field experiences, promote reflection and growth, apply ethical standards, and engage in consultation with your Field Advisor and MSW program peers in a group setting. The field education experience must take place in a community setting that meets the social work education standards and is coordinated by the MSW Program Field Coordinator.
Restrictions: Enrollment is limited to Graduate level students.

SWK 581 Generalist Field Education II (3 credits)

Field education is defined as the signature pedagogy or primary method of teaching social work knowledge, skills, and abilities in social work education. The generalist field education integrates your theoretical and conceptual knowledge from courses and provides the opportunity for you to apply it within a community setting. The integration of theory, knowledge, and practice within a community setting exemplifies the competency-based framework designed for social work education. Graduate-level social work students are required to complete 400 structured field education hours across two semesters while successfully demonstrating generalist-level practice competencies. The field education experience includes 200 hours of experience in a community setting per semester (SWK 580 and SWK 581) and monthly 2-hour Field Advisement processing sessions. Field Advisement sessions are used to process field experiences, promote reflection and growth, apply ethical standards, and engage in consultation with your Field Advisor and MSW program peers in a group setting. The field education experience must take place in a community setting that meets the social work education standards and is coordinated by the MSW Program Field Coordinator.
Prerequisites: SWK 580

Restrictions: Enrollment is limited to Graduate level students.

SWK 591 Social Welfare Policy & Change (3 credits)

This course provides an overview of the history, structure, functions, and impact of social programs and policies from a contemporary perspective. Students will examine the intricacies and influences of comparable policies across the global environment from a cultural lens. Issues of social justice are discussed in relation to social work practice, policy development and analysis, and social change.

Restrictions: Enrollment is limited to Graduate level students.

SWK 600 Advanced Integrative Seminar (3 credits)

This integrative seminar course is designed to prepare newly admitted Advanced Standing students for the advanced generalist year of study. This course synthesizes the generalist curriculum and presents it through the lens of evidence-based practice with culturally diverse populations. Students will critically examine research reports from an ethics-based and culturally-inclusive lens, connect them with biopsychosocial-spiritual assessments, and situate them within the client and practitioner's cultural, community, organizational, and policy context. Content including ethical standards, anti-racist and anti-oppressive frameworks in social work, and field education preparation for advanced generalist practice will be addressed.

Restrictions: Enrollment is limited to Graduate level students.

SWK 620 Advanced SW Interventions (3 credits)

This clinical course builds upon generalist human behavior and social environment theories and introductory group practice skills through the use of assessment and diagnostic screening procedures for therapy groups. Clinical intervention theories and strategies in group practice will be discussed and applied in relation to group stages, termination, and post-group maintenance. Diversity considerations will be emphasized in group screening, facilitation, and evaluation processes. Group evaluation procedures will be applied to improve group practice effectiveness in clinical settings.

Restrictions: Enrollment is limited to Graduate level students.

SWK 641 Leadership & Entrepreneurship (3 credits)

This course is designed to examine leadership strategies, clinical supervision theories, and entrepreneurship skills in the development of for-profit and nonprofit organizations. Key management functions and staff development strategies will be discussed. Core leadership skills for promoting diversity, equity, and inclusion in the work setting will be emphasized.

Restrictions: Enrollment is limited to Graduate level students.

SWK 642 Advanced Clinical Assessment (3 credits)

This clinical course builds upon the generalist curriculum through the integration of theory, assessment, diagnosis, and advanced practice skills. In-depth analysis of symptoms and etiology of mental health diagnoses through case analyses will take place. Students will learn the harmful impact of upcoding and downcoding in relation to diagnoses, the role of third party providers, and the various uses of clinical assessment beyond diagnostic procedures. Evidence-based and evidence-informed treatment procedures will be emphasized. Culturally-inclusive assessment methods, the role of spirituality in relation to human behavior, mental health and well-being will be discussed. Concepts including self-care, compassion fatigue, and vicarious trauma in relation to social worker well-being will be addressed.

Restrictions: Enrollment is limited to Graduate level students.

SWK 660 Advanced Practice: Well-Being (3 credits)

This clinical course builds upon and extends the generalist framework through the development of advanced knowledge and skills for intervening with individuals and families. Evidence-based and evidence-informed practice models are implemented from a culturally-responsive perspective. The fundamentals of trauma-informed practice, brief intervention approaches, and advanced clinical skills are emphasized.

Restrictions: Enrollment is limited to Graduate level students.

SWK 661 Advanced Practice: Community (3 credits)

This course is designed for skill development including grant writing, building community and organizational program sustainability strategies. Culturally responsive, evidence-informed interventions to achieve community and organizational goals will be addressed. Interprofessional strategies for advocacy on behalf of constituencies will be emphasized. *Restrictions:* Enrollment is limited to Graduate level students.

SWK 680 Advanced Field Education I (4 credits)

The advanced generalist field education is designed to build upon and extend the knowledge and skills learned during the generalist curriculum. Advanced year social work students are required to complete 500 structured field education hours across two semesters while successfully demonstrating advanced generalist-level practice behaviors. The field education experience includes 250 hours of experience in a community setting per semester (SWK 680 and SWK 681) and monthly 2-hour Field Advisement processing sessions. Field Advisement sessions are used to process field experiences, promote reflection and growth, apply ethical standards, and engage in consultation with your Field Advisor and MSW program peers in a group setting. The advanced field education experience must take place in a community setting that meets the social work education standards for advanced generalist practice and is coordinated by the MSW Program Field Coordinator. *Restrictions:* Enrollment is limited to Graduate level students.

SWK 681 Advanced Field Education II (4 credits)

The advanced generalist field education is designed to build upon and extend the knowledge and skills learned during the generalist curriculum. Advanced year social work students are required to complete 500 structured field education hours across two semesters while successfully demonstrating advanced generalist-level practice behaviors. The field education experience includes 250 hours of experience in a community setting per semester (SWK 680 and SWK 681) and monthly 2-hour Field Advisement processing sessions. Field Advisement sessions are used to process field experiences, promote reflection and growth, apply ethical standards, and engage in consultation with your Field Advisor and MSW program peers in a group setting. The advanced field education experience must take place in a community setting that meets the social work education standards for advanced generalist practice and is coordinated by the MSW Program Field Coordinator. *Restrictions:* Enrollment is limited to Graduate level students.

SWK 695 Program Evaluation in Practice (3 credits)

This course is designed to engage students in the application of research skills to inform and improve social work practice and programs. Program evaluation methods will be used to analyze practice and program outcomes to advance social work approaches and enhance organizational policies. Anti-racist and anti-oppressive practices in research procedures will be emphasized.

Prerequisites: SWK 680

Restrictions: Enrollment is limited to Graduate level students.

Sociology (SOC)

SOC 101 Intro to Sociology (3 credits)

Introduction to the scientific approach to the study of society, including the study of social structures; studies such topics as how we acquire self-identity, gender, our behavior in groups, bureaucracies, stereotyping, the role of the state, survey research, culture, and collective behavior.

Attributes: Diversity Course, GEP Social Science, Undergraduate

SOC 102 Social Problems (3 credits)

A sociological analysis of contemporary social issues including economic crises, concentration of wealth, poverty, crime, sexism, race and ethnic relations, mental illness, population growth, war and peace, and relations with other countries.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 103 Intro to Anthropology (3 credits)

This is an introductory course in anthropology, which can be defined as the holistic study of the human species. We will spend time examining the four fields of anthropology: archaeology, physical/biological anthropology, linguistic and cultural anthropology, and their various contributions to understanding the human condition.

Attributes: Undergraduate

SOC 150 Social Problems and Change (3 credits)

Freshman seminar courses examine a range of topics dealing with sociology and criminal justice. Please be advised that the "Social Problems and Social Change" seminar is part of a two-semester service-learning course for first-year students. This Social Problems section of SOC 150 includes attributes for service learning, faith justice, and gender studies. All other sections only fulfill the attributes below.

Attributes: First-Year Seminar, Undergraduate

SOC 170 Special Topics in Sociology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SOC 190 Strategies for Success (1-3 credits)

Our class is designed to provide students with the tools needed to thrive and succeed at SJU and in your major. We will focus on the development and application of college-level study skills, personal success strategies, and the use of campus resources that enhance individual student achievement. Topics discussed will include: learning styles, study techniques, note-taking, test-taking, effective writing and reading, time management, career and educational planning, personal wellness and finance, and interpersonal skill development. We will investigate the variety of offices and resources available to students across campus, as well as how to use some of the more common software systems (Canvas, Starfish, Google Applications, etc). Successfully completing SOC 190 is required of all incoming Freshmen students majoring in Sociology or Criminal Justice, and grading is based on P/NP.

Prerequisites: SOC 101 or SOC 102 or SOC 150 or SOC 202

Attributes: Undergraduate

SOC 202 Advanced Social Problems (3 credits)

This is the second course of a two-course sequence (with a designated section of FYS 150) that explores contemporary social problems in society—their inception, consequences, and methods of modification and eradication. In comprehending the social and philosophical background concerning contemporary social problems, students will acquire an appreciation of the complexity involved in defining social problems and a greater understanding of the social structure itself. Students will strive to understand how social problems are identified and the social systems which are involved. Some of the issues we will address include binge drinking, addiction, hate crimes, intimate partner violence, and “hooking up.” To obtain a full understanding of each issue, we will continually ask several questions: How was this identified as a social problem? What is the history of this issue? What are the structural causes of this problem? How can it be eradicated? Which social groups or institutions are affected by this problem? What groups benefit by the existence of this problem? What are the most popular arguments surrounding this issue? By answering these questions, we will develop a greater understanding of the social problems facing American society.

Attributes: American Studies Course, Diversity Course, Faith Justice Course, Gender Studies Course, Service Learning Course, Undergraduate

SOC 205 Ethnic & Minority Relations (3 credits)

This course provides an analysis of relationships between dominant and minority groups, with a particular focus on ethnic and racial stratification in the U.S. As part of this discussion, we focus on intersecting statuses that shape the outcomes of individuals and groups experiences, including their interactions with each other and social institutions. While the course largely focuses on issues of race/ethnicity, we will also address other forms of minority-dominant group relations, such as sexual orientation, social class, and gender, as the intersectionality of statuses is important in any attempt to gain a better understanding of all these types of relationships. We begin the course by addressing the issue of race as a social construct rather than a biological fact, but a construction that carries very real consequences. We then shift to a focus on prejudice, stereotypes, and discrimination, with particular attention on how they serve to create, sustain, and reproduce oppression and inequalities. We then examine how privileged statuses, particularly white privilege serve to marginalize nonwhites and the damaging paradox of this privilege for economically disenfranchised whites. We conclude the course by addressing the future of race and racism in the 21st century, such as colorblind racism, and the implications for coalition building across racial/ethnic lines.

Attributes: Africana Studies Course, Diversity Course, GEP Social Science, Undergraduate

SOC 206 Theories of Crime (3 credits)

The goal of this course is to examine the current state of criminological theory. It examines the efforts of criminologists in various academic disciplines to explain the cause of crime. Traditional theories will also be discussed.

Prerequisites: SOC 101 or SOC 102 or SOC 150

Attributes: Criminal Justice Course, Justice Ethics and the Law, Undergraduate

SOC 207 Juvenile Justice (3 credits)

A study of delinquency and its causes, with attention to both social-psychological and structural-theoretical frameworks.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Justice Ethics and the Law, Undergraduate

SOC 208 Sociology of Gender (3 credits)

The study of the learned patterns of behavior of males and females in the United States and cross-culturally; topics include hormonal and sex differences, gender socialization, the contemporary women's movement; special emphasis is placed upon the connection of sexism, racism, and class inequality.

Attributes: American Studies Course, Diversity Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 209 Sociology: Intimate Relations (3 credits)

Examines family life in the United States, its cross-cultural and historical antecedents; current changes and family process, including courtship and marriage in contemporary society.

Attributes: Gender Studies Course, GEP Social Science, Undergraduate

SOC 211 Classical Sociological Theory (3 credits)

This course examines the scholars who shaped the field of sociology. The class examines the background of classical sociological thinkers and the social forces that shaped their writing. It looks at how the industrial revolution, the decreasing power of religious organizations, the rise of science, and the growth of capitalism all influenced the founding of sociology. The class also examines the tensions between structures and agency that shape human behavior and will look at how cultural and economic forces increase, perpetuate, and challenge social inequalities.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Undergraduate

SOC 215 Gender, Race, and Justice (3 credits)

Using insights from the disciplines of anthropology, sociology, and history, this course will examine how race, class, and gender shape our lived experiences related to justice. The course will also explore the ways in which theoretical and academic knowledge can be integrated with personal and political action in our communities

SOC 216 Alcohol, Drugs & Society (3 credits)

This course explores a sociological approach to substance use and its impact on contemporary American society. What social factors such as gender, race, and class shape substance use? How do major social institutions such as criminal justice, education, and health care deal with substance use? What public policies and programs exist to regulate substance use, and how well do they work? Examples of topics discussed include women and substance use, college student binge drinking, substance use on the national agenda, and the community impact of crack cocaine.

Attributes: Criminal Justice Course, GEP Social Science, Undergraduate

SOC 217 Mental Health & Society (3 credits)

This course examines the connections between mental health and society. What are the major forms of mental and behavioral health and illness? How widespread are mental disorders and what predicts their occurrence? What impact do they have on society and institutions such as health care and criminal justice? What professions and organizations treat mental disorders?

Attributes: American Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 219 Social Deviance (3 credits)

This course examines examples of deviance, e.g., the Holocaust, state terror and torture, and mental illness. It explores how laypersons and experts conceptualize deviance, how definitions of deviance change, who labels behavior deviant, and the consequences for those labeled deviant.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Undergraduate

SOC 225 Intro to American CJ (3 credits)

This course provides an introduction to the criminal justice system in the U.S. The primary goal of this course is to foster a general understanding of the functions and impact of the 3 components of the criminal justice system: police, courts, and corrections. In addressing these components, we will examine each component from the due process and crime control perspectives of criminal justice. Due process stresses individual rights while crime control stresses the protection of the society at large. Some of the topics that we will cover include policing, the courts, incarceration and alternative sanctions, the War on Drugs, and the War on Terrorism. The course will conclude with a discussion of the future of criminal justice.

Attributes: American Studies Course, Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 232 Sociology of Human Sexuality (3 credits)

This course examines anthropological and sociological perspectives on human sexuality. Among the topics to be covered: reproductive ritual; deviant patterns of sexual behavior; ideologies of sexuality; legal shaping of sexual behavior; and the methods by which we obtain good information on sexual behavior.

Attributes: Gender Studies Course, Undergraduate

SOC 252 Media & Popular Culture (3 credits)

This course will examine the organization of contemporary media and popular culture from a variety of sociological perspectives. Particular attention will be paid to the production and consumption of popular music, talk shows, and sporting events. There will be discussion on how fads spread through society, how our identities are shaped by and mediated through popular culture, and why the media focuses so much attention on seemingly mundane events. This class will examine how recent technological changes influence how we consume popular culture. We will utilize discussions of Nike, Netflix, Starbucks, videogames, nightlife in Philadelphia, Shakespeare, and digital gambling to understand how popular culture is organized.

Attributes: GEP Social Science, Undergraduate

SOC 253 Race and Social Justice (3 credits)

In this course we will examine the issue of social justice as it pertains to race and ethnicity. The course will address the social and cultural constructions of race and ethnicity and their effects on social institutions, interpersonal relationships, and quality of life primarily in the U.S., but also abroad. Specifically, we will focus on how advantages and disadvantages are distributed among individuals and societies, why this process occurs, and how we can work to achieve balance and equality. As part of our discussions, we will focus on the contributions of racial and ethnic minorities in our changing social, economic, political, and legal institutions by examining controversial topics central to debates on racial justice and policy.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 254 Violence and Victims (3 credits)

This course is designed to explore the serious problem of violence in our society from a sociological perspective. We will address a variety of types of violence, its causes, consequences, and theories for prevention. Topics which will be discussed include wife abuse, rape, child abuse, gang warfare, and street violence. An emphasis will be placed on understanding the structural causes of violence such as gender, race, and social class inequality as well as the effect of pornography, the media, and drugs/alcohol on violence. Particular attention will be given to the consequences of violence for both individual victims and society as a whole. We will also focus on the practical reality of violence in this society by speaking with several practitioners and touring a local domestic violence shelter.

Attributes: Criminal Justice Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 260 Language and the Law (3 credits)

This course is an introduction to linguistic issues that influence interaction in a variety of legal contexts. It explores the role of language used in court cases and police investigations while paying special attention to particular discourse contexts such as courtroom talk, interpreter interactions and police interrogations/ interviews. Particular emphasis will be placed on recognizing and understanding ethical issues related to linguistic sources of disadvantage before the law for both educated and uneducated native speakers, minority speakers and non-native speakers of a given language. This course will help prepare students for careers in which a particular sensitivity to, and understanding of, the use of language is vital. By looking closely at areas studied by linguists, we will seek to uncover the role and the ethical nature of oral and written interactions that take place in the legal field. These linguistic issues affect the concept of justice as well as its application in the legal system and also influence how humans are perceived and, in turn, treated by those who apply the law (police officers, lawyers, judges, etc.). This course fulfills a requirement in the Sociology and Criminal Justice majors/minors

Prerequisites: PHL 154

Attributes: Criminal Justice Course, Ethics Intensive, Justice Ethics and the Law , Undergraduate

SOC 262 White Collar Crime (3 credits)

This course is designed to give the student an understanding of the meaning of white collar crime and the types of activities in which white collar criminals engage. Initially, the lectures focus on the development of a comprehensive definition of white collar crime and then, having established this foundation, turn to the variety of white collar crimes in the U.S. today.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Undergraduate

SOC 264 Criminal Courts & Procedures (3 credits)

An analysis of the legal and practice problems presented in the administration of criminal justice from investigation to post-conviction review. Subjects include right to counsel, law of arrest, search and seizure, police interrogation and confessions, prosecutorial discretion, plea bargaining, bail, and juries. Case method used. Suggested for pre-law students.

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 265 Sociology of Education (3 credits)

Schools are the center of major contemporary social questions: Who benefits come from going to college, and is it worth the high cost? Are standardized tests helpful for measuring accomplishment or potential? Are students from particular schools, states, or family backgrounds doing better than others? Sociology of education tackles these kinds of questions by examining the many roles that schools and school actors play, from socializing individuals to reproducing status over generations. This class provides an introduction to American education. Readings focus on primary and secondary education, with a focus on education's role in stratification, namely the way that schools provide advantages or disadvantages to individuals according to particular characteristics, most commonly race/ethnicity, class, and gender.

Attributes: Criminal Justice Course, Undergraduate

SOC 267 Introduction to Corrections (3 credits)

An analysis of the history and development of modern correctional systems. The focus will be on the corrections process as experienced by both offender and official. Special topics will include prisoner rights, litigation, women and corrections, and juveniles and the correctional process. Cross-cultural perspectives and recent correctional innovations will also be examined in order to give the student a comprehensive view.

Prerequisites: SOC 101 or SOC 102

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 270 Special Topics (3 credits)

Course content determined by instructor. This course number/title will be given to new courses being offered within the academic year that are not listed in the catalog. The course will explore some topic related to sociology or criminal justice, focusing on the role of institutions in explaining human behavior.

Attributes: American Studies Course, Undergraduate

SOC 285 Sociology of Medicine (3 credits)

This course is designed to give the student a general introduction to the myriad ways culture, society, and organizations impact medicine and health care. This course is designed to give the student a general introduction to the material and there are no prerequisites for the course. Students will cover topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the social science and policy implications for the field of medicine and encourage the application of such ideas and concepts to a variety of contemporary healthcare issues.

Attributes: Undergraduate

SOC 290 Professional Prep Seminar (1 credit)

What can you do with a degree in sociology or criminal justice? Do you know how to search for an internship or a job? Are you ready to apply for a position should the opportunity arise? This professional development seminar will enhance your knowledge about internships and careers within your major and help you build practical skills through class instruction, assignments, and alumni exposure throughout the semester. This one-credit course meets once a week throughout the semester to provide practical instruction and skills in areas that include internship search and application, resume/cover letter prep, professional communication, and networking/interviewing.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

SOC 300 Community Engaged Scholarship (3 credits)

Engaged scholarship can take several forms. Broadly defined, it "means connecting the rich resources of the university to our most pressing social, civic, and ethical problems" (Boyer, 1996, p. 19). One key way of sharing these resources is through research - not "on" the community, but "with" the community. This type of research model is one in which the research projects are developed with community organization staff, faculty, and students together, building on the unique strengths of those involved. In this course, students will work with a community-based organization to design and conduct research on an issue related to homelessness or affordable housing. Throughout the semester, students will learn about research methods, research ethics, and the particular urban context within which they will be working. More importantly, students will gain experience working alongside staff of a community-based organization to solve problems or assess needs and strengths.

Restrictions: Enrollment limited to students with the Honors Program Student attribute.

Attributes: GEP Social Science, Honors Course, Undergraduate

SOC 301 Community Organizing for Just. (3 credits)

How should one respond in the face of social injustice? What strategies should groups adopt in organizing to make positive social change? What kind of foundation is useful and prophetic for promoting justice? This course will consider the framework, methods, and practices of faith-based community organizing for responding to social injustice. Students will examine theological and sociological roots of faith-based community organizing as a response to injustice. Students will also integrate course learning with a community organizing action project.

Attributes: Faith Justice Course, Undergraduate

SOC 302 Criminal Law (3 credits)

This course addresses substantive criminal law with a focus on the origins and goals of this body of law, the various categories of crimes, including the elements required to prove individuals' culpability, the available defenses to criminal charges, and the applicable punishments for those who commit offenses.

Attributes: Criminal Justice Course, Justice Ethics and the Law , Undergraduate

SOC 305 Social Epidemiology (3 credits)

Social epidemiology examines the social determinants of health at the individual, community, and population levels. In this seminar, we will discuss the theories that explain how society influences individuals and the research studies that show social patterns in health outcomes. We will learn how research on social factors and health is done, primarily through observational data and statistical analyses. We will consider how social epidemiology can influence health services and health policies. Throughout the course, you will apply these tools and perspectives to current issues that are important to you.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Social Science

SOC 306 Medical Anthropology (3 credits)

The course surveys the field of medical anthropology, which is commonly viewed as a branch of socio-cultural anthropology that intersects with the concerns of biological (physical) anthropology, medicine, and public health. The course also explores how medical anthropology addresses social issues such as health disparities and culturally competent healthcare.

Prerequisites: (AN 103 or SO 101 or SO 111 or PS 101 or PS 111 or EC 101) or (SOC 101 and SOC 102)

Attributes: Undergraduate

SOC 307 Death and Dying (3 credits)

The study of the phases of death and dying, and the social reactions and social implications, to examine the dominant approach to death, dying, and loss in the United States today, and in Western cultures in general, in relation to approaches taken by people in other cultures, subcultures, and in other places or times.

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: GEP Social Science, Undergraduate

SOC 310 Policing in Black and Blue (3 credits)

The killing of Trayvon Martin and the rise of Black Lives Matter has thrust the nation's police departments into a state of crisis. The public's distrust of the police is at a 20 year high, despite the falling rates of crime nationally. In this course, students will look at the role of police in society and consider the social, economic, and cultural factors that have led to the current climate. We will take care to examine this crisis from multiple viewpoints, including: community residents, politicians, activists and the police themselves. In our study of the policing crisis, we will consider the sociological roots of the urban ghetto and how policing strategies were developed to "manage" racially segregated, high crime communities. Specifically we will consider how the police became the first-responders in dealing with a host of social problems (from poverty to addiction and mental illness), paying particular attention to the war on drugs, mass-incarceration, mandatory sentencing and zero tolerance. We will review stop and frisk, community policing, focused deterrence, stop snitching, de-escalation, and the use of force. Criminal Justice course

Attributes: American Studies Course, Justice Ethics and the Law , Undergraduate

SOC 312 Research Methods (3 credits)

Presents the main ways of gathering social scientific information, e.g., questionnaires, interviews, observation, experiments, content analysis, etc.; Specific emphasis placed on the ethical considerations when conducting social science research.

Prerequisites: SOC 101 or SOC 102

Restrictions: Enrollment is limited to Undergraduate Day Division level students.

Attributes: Undergraduate

SOC 313 Data Analysis (3 credits)

This course introduces students to the Statistical Package for the Social Sciences (SPSS) for conducting quantitative data analysis. Using the General Social Survey and other publicly available data sets, we will learn about transforming variables, conducting univariate and bivariate analysis, requesting descriptive and inferential statistics, and learning how to interpret these statistics. Emphasis is on doing the analysis and presenting the analysis for research projects. This course is a prerequisite for Seminar, SOC 495.

Prerequisites: SOC 312

Attributes: Undergraduate

SOC 316 Fair Trade Coffee: Study Tour (3 credits)

This course is designed to trace the path of fair trade coffee beans as they are grown in a cooperative in Nicaragua or Costa Rica until they reach a consumers' cup in the United States. In this class, we will examine the labor- intensive activities that go into producing a cup of coffee, the environmental impacts of producing shade grown and organic coffees, and the economic benefits that farmers receive for growing coffee in Central America. We will travel to Central America and live alongside coffee farmers who are growing fair trade coffee. We will learn about the "Coffee Crisis" that greatly affected Central American farmers in the early 2000s, and we will look at the limits and possibilities of producing coffee in a cooperative. Prior to attending the trip, we will read about the political and economic dynamics of Central America, the history of coffee and the fair trade movement, and what fair trade means in the minds of ethical consumers. In thinking about the stories behind their purchases, students will gain broader insight into the limits and possibilities of integrating their values into their everyday shopping patterns.

Attributes: GEP Social Science, Latin American Studies Course, Undergraduate

SOC 317 Sociolinguistics (3 credits)

(Please see LIN 317 for description)

Attributes: Communication Studies ILC Crs, Diversity Course, GEP Social Science, Undergraduate

SOC 322 Sociology of Motherhood (3 credits)

The course considers motherhood as a political and cultural issue in society. Topics will include the social construction of public debates about teenage mothers, single mothers, welfare mothers, and abortion. We will also review the work of scholars who examine how social class and privilege construct our notions of "good" mothers and appropriate childrearing.

Prerequisites: SOC 101 and SOC 102 or SOC 150

Attributes: Gender Studies Course, Undergraduate

SOC 323 Health and Society (3 credits)

An overview of health care in the United States with attention to its historical antecedents; definitions of illnesses; examines the effect of social factors on the occurrence of illness and its treatment; studies the organization of health facilities. Satisfies Gender Studies Minor requirement.

Attributes: Diversity Course, GEP Social Science, Undergraduate

SOC 325 Women and Health (3 credits)

This course will look at the health industry from a feminist perspective. We will examine the role of women in providing health care, gender differences in the care given to patients, and health care issues specific to women. The course will also consider race and class differences among women working in and served by the health care industry.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Undergraduate

SOC 327 Sociology of Religion (3 credits)

Examines major sociological attempts to interpret the role of religious belief systems in modern industrial society and culture with emphasis on: a historical and structural analysis of religious belief systems and politics in the United States; the role of religion in community formation, national, and ethnic identity; and contemporary religious movements as attempts to channel or cope with forces of change.

Prerequisites: SOC 101 or SOC 102

Attributes: Undergraduate

SOC 330 Urban Sociology (3 credits)

What makes some neighborhoods in cities great places to live? Why do other neighborhoods struggle? In this course, we will learn how sociologists study cities, what social policies have affected cities, how inequalities along the lines of race/ethnicity and social class have shaped cities, how cities might fit into a sustainable vision for the future, and what we can learn from cities in other countries. By the end of the course, students will understand what can be done to improve the quality of life for families in urban neighborhoods.

Prerequisites: SOC 101 or SOC 102 or SOC 150

Attributes: Africana Studies Course, Diversity Course, GEP Social Science, Undergraduate

SOC 331 Urban Ethnography (3 credits)

Though it is certainly useful to analyze cities with numbers and statistical analyses, one can perhaps best capture life within cities through ethnography. Ethnography allows the researcher to dig deep and analyze any number of social settings. Ethnography encompasses several different methods, but in this course we will concentrate on observation and writing field notes. Both sociologists and anthropologists use these methods in their research. In this course, you will not only learn to practice ethnography, but you will also read and critique several urban ethnographies.

Attributes: Criminal Justice Course, GEP Social Science, Undergraduate

SOC 334 Miscarriages of Justice (3 credits)

As a social institution created and staffed by humans, the legal system makes mistakes. From eyewitness misidentification to false confessions, prosecutorial misconduct to wrongful convictions, errors both large and small, intentional or not, happen with alarming frequency in the American legal system. This course will examine the breadth of the injustices across the system and what, if anything, can be done about them.

Attributes: Undergraduate

SOC 335 Classes and Power in US (3 credits)

Examines the social, economic, and political inequalities in the United States; analyzes causes of social stratification; studies social mobility and the existence of a power elite.

Attributes: Africana Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 338 Police and the Community (3 credits)

This course will examine factors contributing to cooperation or friction between law enforcement personnel and the community. Emphasis will be placed on political, social and economic forces which influence this. Policies addressing this problem will be reviewed.

Prerequisites: SOC 101 or SOC 102 or SOC 202 or SOC 150

Attributes: Criminal Justice Course, Undergraduate

SOC 340 The Ethical Consumer (3 credits)

The recent "ethical turn" in markets has led to a growing number of products that give proceeds to a charitable or altruistic cause. We see Pink Ribbons when we shop for a car, fair trade coffee at Wal-Mart, and product (RED) clothing at the GAP. Many of these products and brands are creating significant social change; others are "greenwashing" or "fairwashing" markets by making false promises. In this course we will read research from sociology, marketing, and psychology to understand the consumer behavior of individuals trying to change the world through shopping; we will examine the strengths and weaknesses of these "consumer-dependent" social movements; and we will examine the social forces that led "shopping for a cause" to become a modern means for creating social change. This course will conclude with an attempt to put our ideas into practice through group-projects designed to raise funds for local mission-driven businesses such as Cal's Cupcakes, Alex's Lemonade, or Fair Trade retailers.

Prerequisites: PHL 154

Attributes: American Studies Course, Ethics Intensive, GEP Social Science, Undergraduate

SOC 345 Law and Social Policy (3 credits)

An exploration of various dimensions of the relationship between law and social policy in contemporary U.S. society. In assessing how judicial opinions and legislative efforts affect social relations and institutional arrangements, inquiry is focused upon: (1) the ways in which social problems become defined as legal issues; (2) the forces which shape the initiation and ultimate formulation of legislative acts designed to affect public policy; (3) the role which cultural values and assumptions play in framing legal arguments and influencing judicial opinions and remedial programs; (4) the issue of compliance and the ways in which it is measured and enforced, and (5) the strengths and limitations of the law as a means of achieving specific social policy objectives.

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law, Undergraduate

SOC 349 Poverty Ethics & Social Policy (3 credits)

This course offers an overview of poverty in the United States, explores the ethical principles surrounding poverty and our response to it, and examines social policies that seek to ameliorate poverty. Students will work on a semester-long academic assignment which will engage them in one aspect of poverty and social policy.

Prerequisites: PHL 154 and (SOC 101 or SOC 102)

Attributes: Ethics Intensive, Undergraduate

SOC 353 Restorative Justice Practice (3 credits)

This course places restorative justice theory into practice. Students will learn and become proficient in several restorative practices including peacemaking circles, sentencing circles, restorative conferencing, reparative boards, youth aid panels and victim offender mediation. As an experiential course, students will participate in all of the practices throughout the semester. Some of these practices are hundreds of years old. Many criminal justice agencies see potential widespread application. The skills taught in this course can be used in any situation involving conflict.

Attributes: Criminal Justice Course, Undergraduate

SOC 355 Race, Crime & CJ (3 credits)

This course examines the topic of race and ethnicity in relation to crime and criminal justice processing. More specifically, we focus on several issues: 1) the role of privilege and marginalization in the context of race and ethnicity and the criminal justice system; 2) the impact of these factors on intergroup relationships generally and the responses of the criminal justice system to criminal behavior, victimization, and employment within the criminal justice field; 3) how the responses of the criminal justice system affect the lives of offenders, victims, and agents of the criminal justice system for various racial/ethnic groups; 4) the current patterns of crime and victimization in relation to race/ethnicity? In addressing these questions, it is important to note that this is an upper-level sociology/criminal justice course, so do not expect it to be lecture driven, although some lectures will be presented. Much of the course work will revolve around class discussions and written analysis of the readings.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 356 Gender, Crime & CJ (3 credits)

An examination of the gendered nature of criminal victimization, offending, and criminal justice processing from a feminist sociological perspective. Students will read and critically evaluate in a seminar format feminist criminologists' analyses of topics such as fear of crime, gangs, prostitution, corporate violence against women, policing, and corrections. Special emphasis will be given to the intersections of gender, racial/ethnic and social class inequalities.

Attributes: Criminal Justice Course, Diversity Course, Gender Studies Course, GEP Social Science, Undergraduate

SOC 360 Sociology of Law (3 credits)

An analysis of contemporary theories of law; examines the statements of the main exponents of the consensus, pluralist, elitist, and dialectical models of law creation; focus also on the tie between the models and the social context in which they emerged and developed.

Attributes: Criminal Justice Course, GEP Social Science, Justice Ethics and the Law , Undergraduate

SOC 363 Race Relations in Philadelphia (3 credits)

The purpose of this course is to explore the topic of race relations with reference to a case study of Philadelphia. It is a unique course insofar as it directly addresses the issue of race in a multidisciplinary way, and it offers a unique opportunity to explore a topic and a city that are only dealt with indirectly in other courses. This course will explore the impact of race on social, economic, and political life in Philadelphia. Utilizing a socio-historical approach, it will focus on the work of W.E.B. DuBois and other social scientists who have documented the effects of race on Philadelphians in such diverse areas as housing, health care, employment, and family life.

Attributes: Africana Studies Course, Criminal Justice Course, Diversity Course, GEP Social Science, Undergraduate

SOC 365 Crime & Urban Communities (3 credits)

From the beginning of the study of sociology in the United States, sociologists have studied life within a community context, documenting how space matters. The physical and social aspects of neighborhoods affect how likely crime is to occur in them and how residents can fight this crime. In addition to learning how space affects crime, we will learn key theories and concepts which sociologists use in studying urban crime, we will discuss current major issues in crime such as re-entry, and we will study crime-fighting strategies.

Attributes: Africana Studies Course, Undergraduate

SOC 368 Cults as Social Movements (3 credits)

This course looks at the social psychology and the social movement aspect of selected cults. Questions that the course examines: What is a cult? Who joins cults? Why do people stay in cults? What is daily life in a cult like? What should we as a society do about cults? How do we study cults?

Attributes: Criminal Justice Course, GEP Social Science, Undergraduate

SOC 370 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SOC 377 Inside-Out (3 credits)

This class offers a unique opportunity to have meaningful discussions about a range of topics from inside a correctional facility. Inside-Out classes bring together students from Saint Joseph's University and adult students who are incarcerated to learn about and discuss topics such as the causes of crime, racism, literature, philosophy, and restorative justice. Through the readings and dialogue, inside and outside students will be able to integrate their theoretical knowledge with lived experiences. It is through this exchange that we hope to critically analyze and challenge the current system in the U.S. that has resulted in a higher incarceration rate than other similar countries.

Attributes: Faith Justice Course, Justice Ethics and the Law , Service Learning Course, Undergraduate

SOC 378 Urban and Public Policy (3 credits)

This course will offer a foundation in how sociologists study cities and public policy. We will examine assets of cities and key areas of need that cities face (such as education, poverty, housing, and crime), and we will study policy options to improve cities and their larger metropolitan areas. These are broad policy areas of study, so we will hone in on specific policies. For example, we will explore how cities have formulated their initiatives to end homelessness, we will consider juvenile justice alternatives, and we will look at how cities can position themselves to be sustainable in the effort to reduce greenhouse gas emissions.

Attributes: Africana Studies Course, Criminal Justice Course, GEP Social Science, Undergraduate

SOC 386 Violence in Intimate Relations (3 credits)

Women and children have a higher probability of being seriously injured or killed by someone with whom they are intimately associated rather than by a stranger. This course will examine questions such as: What factors contribute to the prevalence of intimate violence in the U.S.? How does intimate violence differ across groups (e.g., by race/ethnicity, social class)? How are 456 various forms of intimate violence (i.e., partner abuse, child abuse, elder abuse) interrelated?

Attributes: Undergraduate

SOC 390 Special Topics (3 credits)

Course content determined by instructor. This course number/title will be given to new courses being offered within the academic year that are not listed in the catalog. The course will explore some topic related to sociology or criminal justice, focusing on the role of institutions in explaining human behavior.

Attributes: Undergraduate

SOC 401 Higher Education Policy (3 credits)

What should students gain from college? How should higher education be funded? How is college connected to inequalities along racial, gender, class, and other lines, and what role should individual campuses play in mitigating those inequalities? Policy decisions shape each of these questions and their potential answers. In this course, we will examine contemporary higher education policy and connections to inequality. Topics will include financial aid, diversity, access to college, different types of college settings, and funding.

Attributes: Undergraduate

SOC 470 Special Topics (3 credits)

Course content determined by instructor. Past topics include: Extremist Movements, The Ethical Consumer, Feeding Philadelphia, Family Violence, and Interrogation.

Restrictions: Enrollment limited to students with a class of Senior. Enrollment is limited to students with a major in Criminal Justice or Sociology.

Attributes: Undergraduate

SOC 490 Internship (3 credits)

The student is placed according to his/her interests in a criminal justice, social service, or health care setting for a semester. In this way, he/she may apply classroom-acquired skills and knowledge while gaining practical work experience. Permission of internship director required.

Attributes: Criminal Justice Course, Undergraduate

SOC 491 Internship (1-6 credits)

The student is placed according to his/her interests in a criminal justice, social service, or health care setting for a semester. In this way, he/she may apply classroom-acquired skills and knowledge while gaining practical work experience. Permission of internship director required.

Attributes: Undergraduate

SOC 494 Independent Research Sociology (3 credits)**SOC 495 Seminar I (3 credits)**

This course is where students complete the required senior thesis. An Honors section is available for those students completing College Honors.

Prerequisites: SOC 313 and ENG 101

Attributes: Undergraduate, Writing Intensive Course- GEP

SOC 497 College Hon. Independent Study (3 credits)

College Honors candidates in Sociology will complete a second honors course during the Spring of the senior year (SOC 497) which includes research, extending the senior capstone experience beyond what non-Honor students complete.

Spanish (SPA)

SPA 101 Beginning Spanish I (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is reserved for beginning students with no experience with the Spanish language. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: Language Placement with a score of SP101

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Spanish 102 Placement, Spanish 201 Placement, Spanish 202 Placement or Spanish 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

SPA 102 Beginning Spanish II (4 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 101 or Language Placement with a score of SP102

Restrictions: Enrollment is limited to Undergraduate Day Division level students. Students with the Spanish 201 Placement, Spanish 202 Placement or Spanish 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

SPA 111 Adult Learner Beginning SPA I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is reserved for PLS students with no experience with the Spanish language. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

SPA 112 Adult Learner Beginning SPA II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is reserved for PLS students with no experience with the Spanish language.. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 111 or SPA 101

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

SPA 170 Special Topics in Spanish (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

SPA 201 Intermediate Spanish I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in the classroom. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 102 or Language Placement with a score of SP201

Restrictions: Students with the Spanish 202 Placement or Spanish 301 Placement attributes may **not** enroll.

Attributes: Undergraduate

SPA 202 Intermediate Spanish II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar, pronunciation, and writing will accompany active student participation in task-oriented group work in the classroom. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement. With some limitations, this course may count toward the Latin American Studies minor.

Prerequisites: SPA 201 or Language Placement with a score of SP202

Restrictions: Students with the Spanish 301 Placement attribute may **not** enroll.

Attributes: Latin American Studies Course, Undergraduate

SPA 210 Intermediate Spanish I (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in classroom. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 102 or SPA 112

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

SPA 211 Intermediate Spanish II (3 credits)

Proficiency-based instruction will encourage the development of speaking, reading, writing and listening comprehension. Instruction of basic grammar and pronunciation will accompany active student participation in task-oriented group work in classroom. Fulfills the GEP non-native language requirement.

Prerequisites: SPA 201

Restrictions: Enrollment is limited to PLS/HDC level students.

Attributes: Undergraduate

SPA 270 Special Topics in Spanish (3 credits)

Topic and content varies from semester to semester.

Attributes: Undergraduate

SPA 301 Spanish Conversation (3 credits)

This course is designed to help students improve their oral communication skills in Spanish through participation in interactive tasks. Much attention will be paid to the practice of new vocabulary. Discussion of grammar and communicative strategies will be integrated as needed in order to facilitate students' attempts at various rhetorical functions, such as describing, narrating, explaining, defining, expressing and supporting opinions. This course is not open to native or heritage speakers of Spanish. Fulfills the GEP non-native language requirement. With some limitations, this course may count toward the Latin American Studies minor.

Prerequisites: SPA 202 or Language Placement with a score of SP301

Attributes: Latin American Studies Course, Undergraduate

SPA 302 Spanish Composition (3 credits)

This course is designed to improve students' ability to communicate in written Spanish and to develop the writing skills they will need to succeed in advanced Spanish courses. Skills are developed through a process-oriented approach to writing, including steps related to vocabulary generation, organizing an outline, writing a draft, editing and revising, and writing a final version. This course is not open to native or heritage speakers of Spanish. With some limitations, this course may count toward the Latin American Studies minor.

Prerequisites: (SPA 301 or Language Placement with a score of SP302) and ENG 101

Attributes: Latin American Studies Course, Undergraduate, Writing Intensive Course- GEP

SPA 303 Spanish for Heritage Speakers (3 credits)

This course is designed for students with familial connections to Spanish and therefore is open only to heritage speakers. The course aims to build vocabulary and will develop oral and writing skills through the study of culture and topics of current interest from the United States and throughout the Spanish-speaking world. This course may count toward the Latin American and Latinx Studies minor.

Prerequisites: Language Placement with a score of SP303

Attributes: Latin American Studies Course, Undergraduate

SPA 310 Intro to Latin American Lit (3 credits)

The purpose of this course is to introduce students to the reading and discussion of literature in Spanish. We will read selections in prose and verse from a variety of Spanish-speaking countries in Latin America. We will interpret works in terms of their literary attributes and in relation to the sociocultural and historical contexts in which they were created. Through these readings we will not only come to know others' cultures and experiences, but will also contemplate some of the universal themes and struggles that unite us. The language of instruction is Spanish. This course counts toward the major and minor in Spanish and the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP310

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 311 Intro to Spanish Literature (3 credits)

This course introduces students to major literary works and also "non-canonical" texts of Spain's literature. Through a representative sampling of short stories, poems, essays, and plays, students are introduced to the analysis of the principal literary movements from medieval times to contemporary Spain. The course also examines non-canonical genres like comic, graphic novel, and flash fiction.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 315 Animals in Literature (3 credits)

This course studies how animals are represented in twentieth-century Latin American literature. Students will analyze some of the works of the most representative Latin American authors, for instance, Horacio Quiroga, Leopoldo Lugones, Rubén Darío, and Luis Sepúlveda. The readings of these texts will focus on topics addressed by animal ethics, such as nonhuman sentience, idealization and objectification of animals, animal exploitation, relationships between human and nonhuman animals, and care for the animal species. Through the study of these topics, students will also analyze how these writers directly or indirectly have advocated animal conservation.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 320 Cur Evnts in the Sp-Lang Media (3 credits)

Students will develop communication skills in Spanish as they research and discuss current events and issues in Latin America as reported in Spanish-language news media. Students will research in a variety of online news outlets publishing in text, audio and video. The reading and discussion will be driven largely by students' areas of interest and may venture into a wide range of areas, such as health, ecology and the environment, social issues, international and domestic politics, culture, business, economics, science and/or technology. Students will also follow issues suggested by their classmates and instructor. Through class discussion and written and oral reflection, students will develop critical thinking skills: analyzing source material, comparing differing perspectives, and situating the issues discussed within a broader context. Students will also conduct research to deepen their understanding of a current issue of their choosing, as it relates to Latin America. The class will discuss vocabulary and language structures as they arise in daily readings and discussions, and students will keep glossaries of new vocabulary. The primary objective of this course is to help students advance their Spanish language proficiency while learning about the Spanish-speaking world. The language of instruction is Spanish. This course counts toward the major and minor in Spanish and the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303

Attributes: Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 321 Visions of the Nat Wld Lat Am (3 credits)

In this course students consider diverse perspectives on the natural environment in Latin America as expressed in a variety of genres including narrative fiction, poetry, myth, songs, visual art, film and news media. All source material is from Latin America and reflects a variety of perspectives from within the region. The primary goal of the course is to challenge ourselves to see the environment through multiple and diverse lenses so as to appreciate its complex significance for others and for ourselves. Students in this course will broaden their knowledge of the region's topography and natural resources, as well as Spanish vocabulary to describe nature, natural resources, and various economic and cultural activities related to them. They will conduct research and share their findings with the class. The language of instruction is Spanish. This course counts toward the major and minor in Spanish and the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 330 Spanish for Business (3 credits)

This course will acquaint the student with business terminology and phraseology used in Spain and Latin America. Business letters will be composed and answered in Spanish. Special information on such fields as advertising, foreign trade, transportation, money, banking, and finance will be presented and studied in Spanish. Problems of grammar and style will be studied as the need arises.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 331 Span for Internatnl Business (3 credits)

This course is principally for students who are majoring in the Haub School of Business. This class will assist students in a career in Business or International Relations. Comparisons will be made among the business practices of different Spanish speaking countries. All activities will be in Spanish.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 335 SPA for Medical Professions I (3 credits)

Spanish for Medical Professions is a course designed to help intermediate-level students gain Spanish language proficiency and cultural competencies that will facilitate their future interactions with Spanish speakers in situations related to health care. The course aims to increase students' healthcare-related vocabulary, communication skills, health literacy, and cultural competence. Students will practice oral communication through role-plays, presentations, and class discussions. They will read, write, and speak about a variety of healthcare-related topics.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 336 SPA for Medical Professions II (3 credits)

Spanish for Medical Professions II is a course designed to help mid-intermediate-level students continue developing Spanish language proficiency and cultural competencies to facilitate future interactions with Spanish-speakers in situations related to health care. Students will continue developing their knowledge of the human body and its afflictions (cardiovascular, endocrine, and nervous systems) as well as reproductive and mental health. In combination with these topics, this course will focus on current issues of public health such as an introduction to the linguistic policies in the US healthcare system and their effects on Latinx communities, access to healthcare for LGBTQ communities, and an overview of the evolutions of stigmas and taboos surrounding mental illnesses. The course aims to increase students' healthcare-related vocabulary, communication skills, health literacy, and cultural competence. Students will practice oral communication through role-plays, presentations, and class discussions. They will also read, write, and speak about a variety of healthcare-related topics. SPA 335 and 336 are two independent courses. Students do not need to complete SPA 335 in order to enroll and succeed in SPA 336.

Prerequisites: SPA 302 or SPA 303 or SPA 335

Attributes: Undergraduate

SPA 350 Intro to Latin Amer Cultures (3 credits)

The purpose of this course is to orient students to the diverse peoples and places of Latin America. Students will use Spanish to discuss the geography, history, politics and cultures of the region. Some attention will be paid to current issues in Latin America, as reported in online news sources from the region.

Prerequisites: SPA 302 (may be taken concurrently) or SPA 303 (may be taken concurrently) or Language Placement with a score of SP350

Attributes: Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 351 Introd to Spanish Cultures (3 credits)

The purpose of this course is to orient students to Spain's rich and diverse cultural heritage, varied terrain and dynamic history. Students will also discuss current issues and events, as reported in Spanish online news sources. Students may not count both 351 and 356 for credit toward a Spanish major or minor. Both may be taken but only one may count for major/minor credit. The other may count for elective credit, and SPA 356 can satisfy the GEP Art/Lit requirement.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP351

Attributes: Undergraduate

SPA 352 (Post)Modern City in Spain (3 credits)

Cities are the stage of social and political changes at the same time that events transform urban space. On occasion, alterations are sudden and traumatic, such as the devastation and reconstruction after a war. However, transformations are most often caused by economic and social factors that are subtle and happen over a long period of time. For these reasons, cities have captivated the imagination of writers and filmmakers alike. This course examines representations of Spanish cities from the nineteenth to the early twenty-first century. The course will focus on different periods of Spain's history in which cities underwent relevant transformation.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 353 Latin American Cinema (3 credits)

This course examines some of the historical debates, social issues and cultural currents of Latin America in the twentieth and twenty first centuries through some of its more relevant films. The course covers a variety of historical periods and nations to offer a general understanding of the region. This course counts toward the minor in Latin American and Latinx Studies.

Prerequisites: SPA 302 or SPA 303

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 356 Spain:Study Tour (3 credits)

Spain is one of the most dynamic countries in Europe today. It's a mixture of the old and new. Some of the major influences of the ancient and contemporary worlds will be studied through history, literature, film, art, architecture, regional languages, politics, economic development and music. The highlight of the course is the experience in Spain itself. Students may not count both 351 and 356 for credit toward a Spanish major or minor. Both may be taken but only one may count for major/minor credit. The other may count for elective credit.

Prerequisites: SPA 301 or SPA 303

Attributes: GEP Art/Literature, Undergraduate

SPA 357 Spain in the New Millenium (3 credits)

After several years of unprecedented economic expansion between 1995 and 2007, in which Spain became the seventh largest economy in the world, the 2008 economic crisis eroded that prosperity and changed the social structure of the country. While the economic growth and historic low unemployment drew a wave of immigrants who transformed Spain into a more multicultural society, the crisis truncated the future of an entire generation and initiated the rise of populism. Some questions that articulate the topics discussed are: What does it mean to be a Spaniard? Is there more than one Spanish identity? These questions will guide us to deepen our understanding of political and sociological issues in Spain during the last twenty years. Some of the topics discussed will deal with how soccer can construct a national identity; "peripheral" nationalism as in the case of Catalonia and the Basque Country bids for independence; the issue of immigration and how it has influenced Spanish society; and the rise of populism. These topics may change as the issues that affect Spain evolve.

Prerequisites: Language Placement with a score of SP357 or SPA 302 or SPA 303

Attributes: Undergraduate

SPA 358 Spanish for Medical Profession (3 credits)

Spanish for Medical Professions is a course designed to help intermediate-level students gain Spanish language proficiency and cultural competencies that will facilitate their future interactions with Spanish speakers in situations related to health care. The course aims to increase students' healthcare-related vocabulary, communication skills, health literacy, and cultural competence. Students will practice oral communication through role-plays, presentations, and class discussions. They will read, write, and speak about a variety of healthcare-related topics.

Prerequisites: SPA 301 or SPA 303

Attributes: Undergraduate

SPA 360 Spanish in the Community (3 credits)

This service-learning course focuses on cultural, social, historical, linguistic, and political issues relevant to Latin communities in Philadelphia. The course is designed to promote solidarity with Latinos, learn about cultural norms and values, reflect on issues of social justice prevalent in these communities, and develop oral and written proficiency in Spanish. Class materials include both written and community texts, presentations, film and news media. Active participation in both the community and the classroom are key components of the course. In addition to classes on campus, each student will carry out three hours per week of work at a designated service placement site in a Latin community in or near Philadelphia. This class focuses on learning how to "read the texts" of your service experience, how to read the texts of concepts and theories and how to make connections between the two.

Prerequisites: SPA 302 or SPA 303

Attributes: Faith Justice Course, Latin American Studies Course, Service Learning Course, Undergraduate

SPA 370 Topics in Spanish (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Spanish-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP370

Attributes: Undergraduate

SPA 375 Translation (3 credits)

This course aims to help students deepen their understanding of the Spanish language and to broaden their vocabulary through the practice of translation. We will consider a range of discursive, lexical and syntactic topics and will translate a variety of texts (fiction and non-fiction, of different registers and for various purposes). Students will translate from Spanish to English and from English to Spanish. Class discussions will be held in both languages, as determined by the task at hand. Open to non-native, native, and heritage speakers of Spanish. This course counts for the Linguistics major/minor.

Prerequisites: SPA 302 or SPA 303 or Language Placement with a score of SP375

Attributes: Undergraduate

SPA 380 Intro to Spanish Linguistics (3 credits)

This course is an introduction to the study of language and principles of Spanish linguistics including: the sound system (phonetics and phonology), the formation of words (morphology), sentence structure (syntax), as well as word and sentence meaning (semantics); in addition, we will discuss linguistic change throughout time (historical linguistics), linguistic variation in geographical space (dialectology) and within society (sociolinguistics), language use for communication (pragmatics), language learning (second language acquisition), and language teaching (pedagogy and applied linguistics). This course counts for the Linguistics major/minor.

Prerequisites: SPA 301 or SPA 303 or Language Placement with a score of SP380

Attributes: Undergraduate

SPA 381 Spanish Phonetics & Phonology (3 credits)

This course focuses on specific sounds of Spanish as well as the underlying sound system that determines how and where these sounds are distributed in the language. The course includes theoretical concepts related to phonetics and phonology, as well as a particular emphasis on phonetic aspects that are typically challenging for those who speak Spanish as a second language. Students will examine sounds spoken by both native and non-native speakers of Spanish, as well as an introduction to how sounds vary across dialects due to linguistic and extralinguistic factors.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 401 Topics in Latin Am Cultures (3 credits)

This course is a focused study of select aspects of Latin American cultures. It is designed to help students build a framework for understanding some of the geographical, historical, social, and political circumstances that have shaped Latin American realities and cultural manifestations. The course will take a thematic approach, and topics will vary. It would be helpful though not required that the student have some kind of introduction to Latin America prior to or concurrent with this course.

Prerequisites: SPA 302 or SPA 303

Attributes: Non-Western Studies (GEP), Undergraduate

SPA 402 Topics in Spanish Cultures (3 credits)

This course provides an in-depth look at select aspects of Spanish cultures and civilization. It also provides a framework for understanding these cultural manifestations within their geographical, historical, political and social contexts. The course will take a thematic approach, and topics will vary. It would be helpful though not required that the student have some kind of introduction to Spain prior to or concurrent with this course.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 415 Iconic Women of Latin America (3 credits)

In this course, we study representations of iconic women from various countries and historical periods in Latin America. We analyze salient aspects of literary, cinematic, and artistic works that have helped shape and nuance their evolving legends. We also describe the mutual relationships between these representations and their historical, political and cultural contexts: both those in which they emerged and those that they have helped shape. We discuss the ways in which these representations reflect and at times challenge gender norms and stereotypes. The primary objective of this course is for students to use increasingly advanced written and spoken Spanish to deepen their understanding of Latin American cultures. The language of instruction is Spanish. This course counts toward the major and minor in Spanish, the Latin American and Latinx Studies minor and the Gender Studies minor.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: Diversity Course, Gender Studies Course, Latin American Studies Course, Undergraduate

SPA 420 Major Latin American Authors (3 credits)

An in-depth study of selected texts by major authors in different genres, such as (poetry, fiction, essay, and/or theater,) with special emphasis on the interrelationship of genre, form, and content. This course counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) or Language Placement with a score of SP420

Attributes: GEP Art/Literature, Undergraduate

SPA 422 Culture and Dictatorship (3 credits)

In this course we approach the topic of dictatorships in Latin America through a variety of genres, including works of fiction and non-fiction, testimonies and memoir, film and visual art. We discuss the ways in which these cultural texts register and articulate social and ideological struggles in relation to the broader historical and cultural context. This course counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) or (Language Placement with a score of SP422)

Attributes: GEP Art/Literature, Latin American Studies Course, Undergraduate

SPA 423 Latin Am Short Story (3 credits)

In this course students conduct close readings of short stories and/or nouvelle by Latin American authors. We analyze the stories within their cultural, historical and ideological frameworks. Counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Undergraduate

SPA 425 Imagery of the Conquest (3 credits)

Most official histories of early contact between Europeans and Amerindians in Latin America will present a Eurocentric version of American reality. This course will explore Amerindian and mestizo perspectives as expressed through a variety of texts, such as narrative, poetry and song, illustrations and painting, maps, uprisings, and other forms of expression. The objective is to better understand pre-Colombian civilizations and the effects of European colonization on Amerindian cultures. The course will analyze how Amerindian and mestizo subjects authorize their voices, represent their own unique identities, and respond to the cultural changes brought about through conquest and colonization. It would be helpful though not required that the student have some kind of introduction to Latin America prior to or concurrent with this course.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 426 Culture in Revolution (3 credits)

In this course students will become familiar with three main milestones of Latin American history and culture in the 20th century: the Mexican, Cuban and Nicaraguan Revolutions. Beginning with a discussion of the concept of "revolution" and a brief historical introduction to these periods, we will discuss cultural policies of the new regimes, including the literacy campaigns derived from those policies. Students will also become familiar with the different cultural manifestations of those periods, including literature, visual arts, and popular music. Counts toward the minor in Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Undergraduate

SPA 428 Rainforest: A Literary Journey (3 credits)

This course explores Las narrativas de la selva, a set of Latin American texts written during the 20th century that deal with stories of failure by modern, urban, male subjects who escape the city to fulfill in the Amazon rainforest their dreams of freedom, self-realization, and financial independence. Over time, the rainforest has been represented in a variety of forms: from the image of a paradise to that of an inferno, to that of a benevolent shelter. Throughout those representations, Latin American writers have brought into question notions of national identity, sovereignty, economic development, care for the environment, among others. The primary goal of this course is to introduce students to referential and theoretical texts about Latin American narrativas de la selva. Through them, students will reflect on the following questions: What are the most recurrent representations of the rainforest in this narrative production? What environmental problems are problematized in these texts? What role do the indigenous people play in these narratives? What kind of relationships between human communities and the rainforest are represented in these stories?

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 431 Commonplaces of Colonial Exp (3 credits)

In this course students think about how various spaces became places through human experience in Colonial Spanish America. They engage in reflective discussion about the physical conditions, value systems, beliefs and politics that created such places and, in some cases, have changed their meaning over time. They explore the dynamics of spaces endowed with different values by different peoples at different times. Through these discussions students think about some commonplaces of colonial experience, as well as the experience of colonial legacies and colonial places in the 21st century. It would be helpful though not required that the student have some kind of introduction to Latin America prior to or concurrent with this course.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

SPA 451 Narrative & Film of Dem Spain (3 credits)

This course examines narrative and film in Spain from the demise of the Franco dictatorship (1975) until today. In doing so, the course focuses on cultural and aesthetic renovations such as the cinema of Pedro Almodovar in the "movida madrileña" and the new representations of Spanish youth in the 1990s with the "generación Kronen." This course also analyzes additional approaches for understanding Spanish culture through the social cinema of Fernando León de Aranoa, and the role of Franco's traumatic dictatorship in today's society. Finally, we will examine the current socioeconomic crisis in Spanish society and how it affects younger generations.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) and PHL 154

Attributes: Ethics Intensive, GEP Art/Literature, Undergraduate

SPA 452 History on the Big Screen (3 credits)

This course examines Spain's history and culture through the analysis of historical films. The course begins with a brief introduction to the concept of History and a definition of historical cinema. After this introduction, the class will focus on some key historical periods of Spanish history such as the Conquest of America; the rise and decay of the Spanish Empire; the Spanish Civil War, Franco dictatorship, and the transition to democracy. In addition to introducing students to key moments and aspects of Spanish history and culture, this course invites students to think critically about History's objectivity and how historical events are often shaped to satisfy current political projects. Other underlying issues will be reflecting on whether film may be considered History or not.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: GEP Art/Literature, Undergraduate

SPA 453 Comics and Graphic Novels (3 credits)

This course will examine the evolution of comics (usually referred to as "tebeos") in Spain from the Spanish Civil War (1936-1939) to the present. During Francisco Franco's dictatorship, this genre was heavily influenced by the Fascist ideology of the government. On the one hand, some editorials sympathized with the government and used their publications to spread an ultra-conservative ideology. On the other hand, some artists circumvented censorship by drawing harmless comical stories that, in fact, were a critical portrayal of the miseries of the post-war era. After Franco's death in 1975, comics were free of censorship and became a space of transgression to express the political, religious, and sexual liberation of the late 1970s and early 1980s. In the early 2000s, graphic novels became more accepted by the public and received deserved recognition by critics. In the second part of the semester, we will analyze graphic novels that deal with social and political issues within an ethical framework.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) and PHL 154

Attributes: Ethics Intensive, Undergraduate

SPA 460 Advanced Oral Communication (3 credits)

In this course, we will analyze communication from a linguistic perspective and also focus on the development of advanced oral communication skills. Drawing on current research in the field of linguistics (including discourse analysis, cross-cultural communication, semantics, pragmatics, etc.) we will explore various aspects of "communication" as well as study methods used to investigate oral communication. Significant class time will also be devoted to the continued development of students' own communicative competence and oral language proficiency. Students will engage in activities aimed at developing their interpersonal and presentational communicative skills. This course will be beneficial to students who are majoring or minoring in Spanish as well as those who plan to use Spanish for personal or professional reasons outside the classroom. Because of its emphasis on communication skills for non-native speakers, this course is not open to native speakers of Spanish. This course also counts for a Linguistics minor.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 461 Methods for Teaching Spanish (3 credits)

This course is designed for students who are potentially interested in teaching Spanish at the university, secondary or elementary levels. We will explore general aspects of Spanish phonology, morphology, syntax, and semantics as they bear upon teaching the Spanish language. Topics discussed include second language acquisition, pedagogical theory, materials preparation and language teaching methodology. This course also counts for a Linguistics minor.

Prerequisites: SPA 380 and (SPA 302 or SPA 303)

Attributes: Undergraduate

SPA 466 Spanish Dialectology (3 credits)

In this course, students will become familiar with the range of dialect features exhibited in the Spanish spoken in Spain, Latin America, and the United States. We will also discuss the relationship between language and dialect, examine the role of the standard language in both written and oral usage, and identify the factors that have contributed to the diversity of the Spanish language. This course also counts for the Linguistics major/minor and for Latin American and Latinx Studies.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380) or Language Placement with a score of SP466

Attributes: Undergraduate

SPA 467 Lang Contact & Pol in U.S. (3 credits)

This course is designed to engage students in a critical analysis of the history and politics of language contact within the context of the United States. Given the demographic shifts in population taking place currently in the U.S., the course will focus primarily on the contact between Spanish and English. We will discuss bilingualism and the characteristics of language contact, language ideologies, language planning and policy, Official English movements, and bilingual education. We will examine the language of hegemony used to maintain the dominance of English vis-a-vis Spanish (and other languages) present in our society. We will also do some comparative study connecting this reality to what is happening with Spanish in other situations of language contact. This course counts for the Linguistics major/minor.

Prerequisites: (SPA 302 or SPA 303) and (SPA 310 or SPA 311 or SPA 315 or SPA 320 or SPA 321 or SPA 330 or SPA 331 or SPA 335 or SPA 350 or SPA 351 or SPA 352 or SPA 353 or SPA 356 or SPA 357 or SPA 358 or SPA 360 or SPA 370 or SPA 375 or SPA 380)

Attributes: Diversity Course, Latin American Studies Course, Undergraduate

SPA 470 Topics in Spanish (3 credits)

The purpose of this course is to explore specific topics within the literatures and/or cultures of the Spanish-speaking world. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic.

Prerequisites: Language Placement with a score of SP470

Attributes: Undergraduate

SPA 480 Topics in Spanish Linguistics (3 credits)

The purpose of this course is to explore specific topics within the field of linguistics as they relate to the Spanish language. Topics will vary according to the semester in which the class is offered; check the semester listing for current topic. This course also counts for the Linguistics major/minor.

Prerequisites: SPA 302 or SPA 303

Attributes: Undergraduate

SPA 490 Spanish Internship I (3 credits)

This course is a practicum in which the student applies his/her communication skills in Spanish in a work environment related to his/her professional area. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon his/her experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on his/her internship experience. This course is intended as an advanced course for Spanish majors or minors who have completed the other course requirements for the major or minor.

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

SPA 491 Spanish Internship II (3 credits)

This course is a practicum in which the student applies his/her communication skills in Spanish in a work environment related to his/her professional area. The majority of the work for this course is that performed at the internship site. The student is responsible for securing the internship site and will meet with the professor prior to the semester in which the internship is to take place in order to discuss the course requirements and expectations. During the practicum, the student will reflect upon his/her experience at the internship site in written assignments and in regular meetings with the professor. At the end of the semester, the student will submit a final paper or will deliver a final presentation based on his/her internship experience. This course is intended as an advanced course for Spanish majors or minors who have completed the other course requirements for the major or minor.

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

SPA 493 Independent Research in Span I (3 credits)

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

SPA 494 Independent Research in Spn II (3 credits)

Prerequisites: (SPA 310 or SPA 311 or SPA 315) and (SPA 350 or SPA 351 or SPA 353 or SPA 356 or SPA 357 or SPA 358) and (SPA 380 or SPA 466)

Attributes: Undergraduate

Special Education (SPE)

SPE 160 Intro to Special Education (3 credits)

This introductory course introduces and explores supporting children with disabilities in schools. Students will be provided with an overview of Special Education with an emphasis on historical and emerging perspectives. Topics to be examined will include types and natures of exceptionalities; accessibility; legal and ethical responsibilities of teachers; least restrictive environment; and the inclusion of children with exceptionalities in schools and communities.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

SPE 170 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SPE 205 Inclusive Classrooms w/ Field (3 credits)

The focus of this course is on the developing of skills for effective inclusive classroom management and creating classroom climates conducive to student achievement in PreK-12 classrooms. It provides coverage of a variety of discipline models to aid candidates in building systems and conceptual models of classroom management based on their underlying theories. This course emphasizes: (a) activities promoting positive behavioral supports, including school wide, classroom, and individual supports, (b) increasing student motivation and academic engagement through effective pedagogical practices, (c) establishing cooperative classroom routines, procedures, and practices, (d) organizing the environment, (e) effective instructional planning, and (f) measuring and reporting progress.

Prerequisites: SPE 160

Attributes: Undergraduate

SPE 270 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SPE 320 Progress Monitoring w/ Field (3 credits)

This course will provide an in-depth presentation of the complex issues of assessment at all levels of educational settings. The content of this course will provide students with an in-depth review of informal evaluation procedures and classroom-based data collection strategies. Focus will include academic, affective, adaptive, functioning, fine motor, and environmental measures. Content coverage will consist of an overview of assessment models including traditional, informal, dynamic, performance, curriculum-based, and alternative techniques and include an examination of evaluation procedures in the area of transition planning.

Prerequisites: SPE 160

Attributes: Undergraduate

SPE 329 Educ Stds w/High Incid Disabil (3 credits)

This course is a comprehensive study of theoretical issues and research-based diagnosis, instructional planning and programmatic organization of instruction for children with learning problems. Content will cover curriculum design, development of programs of differential instruction involving evidence-based interventions that meet students' needs based on formative assessment, developmental and educational information; integrated learning experiences; specialized adaptations and resources; practices and procedures validated for specific characteristics of learners and settings; prevention and intervention strategies from multiple theoretical approaches for individuals at-risk for academic or behavioral failure; systematic implementation of instructional variables; and systems management necessary for effective instruction of children with disabilities. Focus will also be given to the development and implementation of differentiated curriculum and curricular enhancements, and concepts and teaching practices related to the development and implementation of effective instructional programs for students with high incidence disabilities. Candidates will develop effective, evidence-based instructional strategies for all levels of support (PK-8). These will include: lesson plans, unit plans, IEPs, IFSPs, 504 plans, and intervention strategies that employ Pennsylvania's Standards Aligned Systems (<http://www.pdesas.org>). Candidates will be able to modify and implement curriculum including appropriate adaptations and technology, using the appropriate Academic Standards, Alternate Academic Standards where necessary, Assessment Anchors, and eligible content. In addition, candidates will demonstrate the ability to collaborate and plan for student outcomes and transition at designated times throughout the student's education, including Age 3 transition for Pre K-8, secondary transition procedures (7-12), and transition to post school success. This course of study will include: applying the knowledge of transition-related legislation in fields of special and vocational education, rehabilitation, labor and civil rights; developing and implementing a transition plan that integrates functional, academic, and vocational data aligned to identified post school outcomes; and administering and interpreting formal and informal career and vocational assessment approaches.

Prerequisites: SPE 160

Restrictions: Students with the Education Basic Skills attribute may **not** enroll.

Attributes: Faith Justice Course, Undergraduate

SPE 339 Educ Stds w/Low Incid Disabil (3 credits)

This course addresses the definitions, characteristics, assessment and specific techniques for students needing adaptive and functional curricula. This includes research validated instructional strategies, adaptive and assistive technologies including augmentative communication systems, and communication and social interaction alternatives for non-speaking individuals. The course reviews behaviorally-based educational models for students with autism and other moderate and severe disabilities, and presents methods aimed at enhancing functional skill development in major life domains, with emphasis on community-based training and self-determination. In addition, candidates will demonstrate the ability to collaborate and plan for student outcomes across academic transitions. at designated times throughout the student's education, including Age 3 transition for Pre K-8, secondary transition procedures (7-12), and transition to post school success.

Prerequisites: SPE 160

Restrictions: Enrollment limited to students with the Education Basic Skills attribute.

Attributes: Undergraduate

SPE 349 Literacy & Intervention Strat (3 credits)

This course will focus on the development of competency in the implementation of explicit and systematic evidence-based instructional strategies designed to teach accuracy, fluency, comprehension, and monitoring strategies in literacy and content area reading to students with disabilities, including exceptional children in regular classroom, with emphasis on applying findings from research in reading to classroom practices, including children who are linguistically and culturally diverse. Content will include diagnostic-prescriptive techniques for remediation of reading and written language and associated learning disabilities. Candidates will develop lesson plans, unit plans, IEPs, IFSPs, 504 plans and intervention strategies that employ Pennsylvania's Standards Aligned System. By using <http://www.pdesas.org>, candidates will be able to modify and implement curriculum using the appropriate Academic Standards, including Alternate Academic Standards where necessary, Assessment Anchors, and eligible content.

Prerequisites: SPE 160

Restrictions: Enrollment limited to students with the Education Basic Skills attribute.

Attributes: Undergraduate

SPE 359 Math & Content Area Interv Str (3 credits)

This course is an intensive and comprehensive study of research practices for the instruction of Mathematics, Science, and Social Studies for students with high incidence disabilities. Content will cover diagnostic planning, curriculum design, progress monitoring, and the development of student-specific programs involving evidence-based interventions. This course centers around the Response to Intervention model and most of the strategies discussed are based on the research which supports multi-sensory instruction, integrated learning experiences, and the multiple intelligences. Focus will also be given to the development of appropriate goals and the implementation of research-based curriculum, concepts, and instructional strategies which are most effective for students with high incidence disabilities. Candidates will develop lesson plans, unit plans, IEPs, IFSPs, 504 plans and intervention strategies that employ Pennsylvania's Standards Aligned System. By using, candidates will be able to modify and implement curriculum using the appropriate Academic Standards, including Alternate Academic Standards where necessary, Assessment Anchors, and eligible content.

Prerequisites: SPE 160

Restrictions: Enrollment limited to students with the Education Basic Skills attribute.

Attributes: Undergraduate

SPE 369 Ed Stds w/Emot-Social Beh Disb (3 credits)

This course covers social, emotional, and behavioral disorders in an educational setting, as well as the most common types of mental illness that PreK-12 students may experience. In addition, the course covers possible causes, identification, assessment, behavioral data collection and recording, and effective instructional planning for these populations. Teacher candidates will develop skills in classroom management and crisis intervention, trauma-informed care, and creating a safe, inclusive, culturally responsive classroom climate conducive to learning and growth.

Prerequisites: SPE 160

Restrictions: Enrollment limited to students with the Education Basic Skills attribute.

Attributes: Faith Justice Course, Undergraduate

SPE 370 Special Topics (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

SPE 379 Fam School & Comm:Diverse Soc (3 credits)

This course focuses on the issues of family and professional collaboration, and methods of promoting adult communication and management strategies. It applies the knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts as they relate to the family, culture and society. It identifies the members of teams designed to support and optimize children's educational needs and social-emotional development and the network of community services and resources to individuals, families and groups affected by social, environmental, health and related problems.

Prerequisites: SPE 160

Restrictions: Enrollment is limited to students with a major, minor, or concentration in Educational Studies, Elementary Educ 4th - 8th Gr, Elementary Educ Pre K -4th Gr, Secondary Education or Special Education.

Attributes: Faith Justice Course, Undergraduate

SPE 495 Special Ed. Student Teaching (6 credits)

This experience is designed as the capstone professional course in the Special Education major. It is to be the final course in the sequence of Special Education courses for certification. The student teaching experience approximates a full time working experience for a fourteen week semester. It includes a supervised teaching experience as well as a weekly seminar class in which issues related to student teaching are studied. Evaluations are conducted by the seminar instructor, the cooperating teacher and a university supervisor

Restrictions: Enrollment is limited to students with a major in Elem - Special Education or Elementary Education.

Attributes: Undergraduate

SPE 498 SPE Studnt Teacher - Dual Prog (6 credits)

This field-based seminar is designed to provide teacher candidates with an understanding of the diverse need of their students and their learning environments in early childhood education (as defined by the Pennsylvania Department of Education) for grades PreK-4 and Special Education PreK-12. At the conclusion of the student teaching experience, the candidate shall have demonstrated proficiencies in instructional management; student motivation; curriculum planning; learning theory, problem solving in the educational setting; the use of technology; use of reading, language, and literacy skills in all classrooms; the identification of appropriate instructional resources; and the assessment of student achievement. Throughout student teaching and the student teaching seminar, candidates will be expected to apply the knowledge, skills, and competencies developed through the Saint Joseph's University Teacher Preparation Program as aligned with the program's mission "to cultivate knowledgeable, caring, reflective, and socially conscientious educators who can think critically, inspire a passion for learning, communicate effectively, and advocate intentionally for all PK-12 students, including those from culturally non-dominant communities who have distinct learning needs."

Attributes: Undergraduate

SPE 570 Special Ed Independent Study (3 credits)**SPE 600 Found & Current Issues: Sp Edu (3 credits)**

This course is a critical study of the contemporary and controversial issues within the field of special education. Consideration will be given to the philosophical, psychological, and sociological basis of teacher education, including an analytical review of research-based curricula, programmatic innovations, policy issues and their effects, and ethical practices. Discussions will focus on evidence-based core concepts that contribute to effective program planning; investigation of cognitive, academic, behavioral, and psycho-social solutions and implications for those working with exceptional students; and future implications for the advancement of special education diagnostic and instructional services.

Restrictions: Enrollment is limited to Doctoral or Graduate level students.

SPE 603 Thry&InstrPracticeStdntHighInc (3 credits)

This course is a comprehensive study of theoretical issues and research-based diagnosis, instructional planning and programmatic organization of instruction for children with learning problems. Content will cover curriculum design, development of programs of differential instruction involving evidence-based interventions that meet students' needs based on formative assessment, developmental and educational information; integrated learning experiences; specialized adaptations and resources; practices and procedures validated for specific characteristics of learners and settings; prevention and intervention strategies from multiple theoretical approaches for individuals at-risk for academic or behavioral failure; systematic implementation of instructional variables; and systems management necessary for effective instruction of children with disabilities. Focus will also be given to the development and implementation of differentiated curriculum and curricular enhancements, and concepts and teaching practices related to the development and implementation of effective instructional programs for students with high incidence disabilities.

Prerequisites: SPE 600

Restrictions: Enrollment is limited to Graduate level students.

SPE 604 RsrchBsedModel:Lit,WritOrlLang (3 credits)

This course will focus on the development of competency in the implementation of explicit and systematic evidence-based instructional strategies designed to teach accuracy, fluency, comprehension, and monitoring strategies in literacy and content area reading to students with disabilities, including exceptional children in regular classroom, with emphasis on applying findings from research in reading to classroom practices, including children who are linguistically and culturally diverse. Content will include diagnostic-prescriptive techniques for remediation of reading and written language and associated learning disabilities.

Restrictions: Enrollment is limited to Graduate level students.

SPE 605 RsrchBasedModel:MathSciencePro (3 credits)

This course will focus on the development of competency in the implementation of explicit and systematic evidence-based instructional strategies designed to teach mathematics and content area subjects, including science and social studies. A study of theory and practice of effective teaching methodologies, combined with principles of differentiated instruction. Attention will be on teaching models and methods supported by research and emphasis will be placed on development of effective teaching procedures.

Restrictions: Enrollment is limited to Graduate level students.

SPE 606 ThryInstrPract:Emot/Soc/Behav (3 credits)

This course covers social, emotional, and behavioral disorders in an educational setting, as well as the most common types of mental illness that PreK-12 students may experience. In addition, the course covers possible causes, identification, assessment, behavioral data collection and recording, and effective instructional planning for these populations. Teacher candidates will develop skills in classroom management and crisis intervention, trauma-informed care, and creating a safe, inclusive, culturally responsive classroom climate conducive to learning and growth.

Restrictions: Enrollment is limited to Graduate level students.

SPE 607 ThryInstrPractStdntsw/LowIncid (3 credits)

This course covers personal, social, and emotional disorders in an educational setting, including methods of identification, assessment, and instructional planning; develops skills in effective classroom management and creating classroom climate conducive to learning and growth. It also provides comprehensive coverage of a variety of models of disciplines and aids students in building systems and conceptual models of total discipline, emphasizing activities promoting pupil motivation and classroom management and organization of the environment, instruction, behavior and record keeping.

Restrictions: Enrollment is limited to Graduate level students.

SPE 608 FamiliesSchls&Cmnty:CommCollab (3 credits)

This course focuses on the home-school partnerships, issues of family and professional collaboration and diversity, and methods of promoting adult communication and management strategies. It applies the knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts as they relate to the family, culture and society. It identifies the members of teams designed to support and optimize children's educational needs and social-emotional development and the network of community services and resources available to individuals, families and groups affected by social, environmental, health and related problems.

Restrictions: Enrollment is limited to Graduate level students.

SPE 609 SPED Clinical Practicum I (3 credits)

This is a combined seminar/internship experience. This fieldwork experience will provide the candidate with an opportunity for in-depth varied and continuous instruction experiences. The practicum will include a variety of researched based instructional practices, assessment procedures, classroom management strategies and organizational strategies to provide structured opportunities for professional growth and stimulation. These experiences will enable the candidate to (a) apply the knowledge and skills acquired through his/her study and previous experience to actual classroom situations that a teacher will face in a Response to Intervention Classroom; (b) integrate the concepts and skills from different prior learning experiences as well as researched based principles in reading, comprehension and writing for educational programming and apply to individual situations; (c) become involved in the routine functions of a classroom teacher including planning, assessment, progress monitoring and collaboration with peers. Course requirements are designed to meet Departmental and Commonwealth standards.

Restrictions: Enrollment is limited to Graduate level students.

SPE 610 SPED Clinical Practicum II (3 credits)

This is a combined seminar/internship experience. This fieldwork experience will provide the candidate with an opportunity for in-depth varied and continuous instruction experiences. The practicum will include a variety of researched based instructional practices, assessment procedures, classroom management strategies and organizational strategies to provide structured opportunities for professional growth and stimulation. These experiences will enable the candidate to (a) apply the knowledge and skills acquired through his/her study and previous experience to actual classroom situations that a teacher will face in a Response to Intervention Classroom; (b) integrate the concepts and skills from different prior learning experiences as well as researched based principles in mathematics and content areas for educational programming and apply to individual situations; (c) become involved in the routine functions of a classroom teacher including planning, assessment, progress monitoring and collaboration with peers. Course requirements are designed to meet Departmental and Commonwealth standards.

Restrictions: Enrollment is limited to Graduate level students.

SPE 611 Mental Health Literacy w/Field (3 credits)

This course will introduce the concept of social, emotional, and behavioral wellness for PK-12 students. Teacher candidates will be able to define and describe social and emotional learning and identify programs that promote social and emotional competence. They will also be able to describe and define Adverse Childhood Experiences (ACEs), trauma, and mental illness, including how such experiences and conditions can impact the growth, development, and learning of children and adolescents. This course also covers the role of schools in reducing risk factors and increasing protective factors, building assets and fostering resilience in students who experienced trauma and/or mental health issues.

Prerequisites: SPE 600 or SPE 602 or SPE 603 or SPE 606 or SPE 607 or SPE 700

SPE 613 Incl. Class Practices w/Field (3 credits)

This course is a comprehensive study of theoretical issues and research-based diagnosis, instructional planning, and programmatic organization of instruction for children with disabilities in inclusive environments. Content will cover curriculum design, development of programs of differential instruction involving evidence-based interventions that meet students' needs based on formative assessment, developmental and educational information; integrated learning experiences; specialized adaptations and resources; practices and procedures validated for specific characteristics of learners and settings; prevention and intervention strategies from multiple theoretical approaches for individuals at-risk for academic or behavioral failure; systematic implementation of instructional variables; systems management necessary for effective instruction of children with disabilities; and promote an understanding of the underlying theories, issues and methods for managing classroom environments.

Restrictions: Enrollment is limited to Graduate level students.

SPE 614 Social, Emot, & Behav Wellness (3 credits)

This course covers the roles of other relevant child-serving systems within communities that can be supportive to addressing matters associated with social, emotional and behavioral wellness of PK-12 students (e.g., children's mental health, juvenile justice). Confidentiality and professional ethics will be emphasized and required. Teacher candidates will apply skills in communicating and collaborating effectively with children and youth who have experienced trauma and/or mental illness, as well as their families and school and community partners. This course also allows teacher candidates to practice advocating professionally for children and youth and their social, emotional and behavioral wellness.

Prerequisites: SPE 611

SPE 620 Fund SE Prac for School Ldrs (3 credits)

This course is a critical study of the contemporary and controversial issues within the field of special education emphases will be placed on the role of the supervisor or administrator. Consideration will be given to the philosophical, psychological, and sociological basis of teacher education, including an analytical review of research-based curricula, programmatic innovations, policy issues and their effects, and ethical practices. Discussions will focus on evidence-based core concepts that contribute to effective program planning; investigation of cognitive, academic, behavioral, and psycho-social solutions and implications for those working with exceptional students; and future implications for the advancement of special education diagnostic and instructional services.

Restrictions: Enrollment is limited to Graduate level students.

SPE 621 Law, Pol & Proced for SE Sup (3 credits)

This course is designed to provide an overview of the legal rights of students and their families in the field of special education, with particular focus on the supervisor's role in implementing and monitoring policy and procedures in districts' special education programs. Content covered includes an overview of laws and litigation and the current status of legislation dealing with special education. The American legal system, particularly in respect to special education, the constitutional and statutory provisions of federal and state law, and judicial decisions interpreting those laws are reviewed. This course will focus on the supervisor's role in addressing issues of identification, IEP development and implementation, equal protection, extended school year (and day), functional behavioral analysis, teacher assistants, least restrictive environments, transition, procedural due process, complaint resolution, and substantive due process doctrines to school practices affecting students with disabilities. Additionally, attention will be given to preparation of focus audits, data collection, basic compliance issues, communicating and collaborating with parents and maintaining active parental support groups. Also, case studies will be conducted that deal with issue, rule, analysis and conclusion (IRAC), as a tool to provide a framework for supervisors to rapidly increase their understanding of emerging, complex legal issues.

Restrictions: Enrollment is limited to Graduate level students.

SPE 622 Admin & Supv:Spec Ed Progs (3 credits)

The purpose of this course is to provide the student an opportunity for in-depth understanding of the supervisory and administrative duties for the role of Supervisor of Special Education. This course provides the Special Education Supervisor candidate with a specified professional knowledge-base included in the following aspects of leadership: decision-making, leadership theory, communication skills, human relations theory, administrative theory, policy analysis/evaluation, supervision/assessment practices.

Restrictions: Enrollment is limited to Graduate level students.

SPE 623 Advanced Fieldwork/Seminar (3 credits)

This is a combined seminar/internship experience. This fieldwork experience will provide the candidate with an opportunity for in-depth varied and continuous administrative experiences. The practicum will attempt to include a blend of all the administrative experiences possible to provide professional growth, maturity and stimulation. These experiences will enable the candidate to (a) apply the knowledge and skills acquired through his/her study and previous experience to actual problem and day-to-day administrative duties faced by a Supervisor of Special Education; (b) integrate the concepts and skills from different prior learning experiences and focus on individual situations; (c) become involved in the routine functions of schools/school districts and Intermediate Units.

SPE 624 Adv Super & Curr Fieldwk/Sem (3 credits)

This is a combined seminar/internship experience. This fieldwork experience will provide the candidate with an opportunity for in-depth varied and continuous administrative experiences. The practicum will attempt to include a blend of all the administrative experiences possible to provide professional growth, maturity and stimulation. These experiences will enable the candidate to (a) apply the knowledge and skills acquired through his/her study and previous experience to actual problem and day-to-day administrative duties faced by a Supervisor of Special Education based on the Educational Leadership course content; (b) integrate the concepts and skills from different prior learning experiences and focus on individual situations; (c) become involved in the routine functions of schools/school districts and Intermediate Units. Course requirements are designed to meet Departmental and Commonwealth standards. The requirements of this course will be a continuation of SPE 623, specifically, an additional 180 hours, for a total of 360 hours of fieldwork activities under the supervision of University faculty.

Restrictions: Enrollment is limited to Graduate level students.

SPE 626 EducAssess & ProgMonitor PK-12 (3 credits)

This course will provide an in-depth presentation of the complex issue of assessment, including an examination of evaluation procedures, from pre-referral intervention, eligibility/placement/ program decision-making to progress monitoring of scientifically-based instructional interventions based on Response to Intervention (RTI). Focus will include academic, affective, work-study skill, adaptive functioning, fine motor, and environmental measures. Content coverage will consist of an overview of assessment models including traditional, informal, dynamic, performance, curriculum-based, and alternative techniques. Additional course topics will address legislation, regulations, topical issues, emerging evaluation trends, test modifications/accommodations, parent involvement and assessment/progress reporting.

Prerequisites: SPE 600

SPE 630 Design&Tech Differentiated Ins (3 credits)

This course will provide comprehensive coverage of what is involved in the consideration, assessment and implementation of assistive technology for students with special needs including those with specific learning disabilities found most commonly in regular and special education classrooms today. Additional topics will include current and emerging technologies used to enhance instruction for both regular and special learners; school practices related to technology integration and effective uses of technology in the general and special education classroom.

Restrictions: Enrollment is limited to Graduate level students.

SPE 645 Student Teaching Certification (1 credit)

This course is the four week student teaching experience required for those who have an initial teaching certification, are adding special education PK-12 certification, and have taken the inclusive classroom practices course. The focus of this course is on developing skills for creating classroom climate conducive to student achievement and effective inclusive classroom management. Course content will include addressing the specific needs of students with disabilities. Student teachers are expected to complete 140 hours (equal to four 35-hour weeks) of direct teaching/co-teaching. Time in the classroom may be spread out over more than four weeks, but must equal 140 hours. The class may be in a public (urban or suburban), private, charter, segregated special education, or parochial school but must contain at least 10% of students who have Individual Educational Plans (IEPs). In all placements, student teaching supervisors conduct formal classroom observations and complete PDE evaluations while collaborating with the cooperating or mentor teacher(s) in supervising and evaluating the student teacher.

Restrictions: Enrollment is limited to Graduate level students.

SPE 646 Student Teaching Certification (6 credits)

This course is the full semester student teaching experience required for graduate students seeking special education PK-12 certification who do not have an initial teaching certificate. The focus of this course is on developing skills for creating classroom climate conducive to student achievement and effective inclusive classroom management skills. Course content will also include addressing the specific needs of students with disabilities in an inclusive setting. Student teachers are expected to complete a full semester (12 weeks) of direct teaching/co-teaching. The class may be in a public (urban or suburban), private, charter, segregated special education, or parochial school but must contain at least 10% of students who have Individual Educational Plans (IEPs). Student teaching supervisors conduct formal classroom observations and complete PDE 430 evaluations while collaborating with the cooperating or mentor teacher(s) in supervising and evaluating the student teacher.

Restrictions: Enrollment is limited to Graduate level students.

SPE 670 Special Topics: Special Educa (2 credits)

The theme or topic for this course will change as topical interests among graduate students and faculty change.

SPE 700 Special Education Law/Policy (3 credits)

This course is designed to provide an overview of the legal rights of students and their families in the field of special education. Students will explore the source, history, and current status of special education law. Content covered will include an overview of laws and litigation affecting special education. The American legal system, particularly in respect to special education, the constitutional and statutory provisions of federal and state law, and judicial decisions interpreting those laws are reviewed. This course relates equal protection, procedural due process, and substantive due process doctrines to school practices affecting students with disabilities.

SPE 701 Cog Proc: Resrch Brain Studies (3 credits)

This course provides an integrative survey of knowledge and research in the cognitive and neurological development of the young mind. The content is designed to connect cognition, neuroscience and educational practice with the critical periods of child development, including language development, visual systems, and psycho-social growth. Attention will be given to the basic structures of the brain and their corresponding dynamic functions, how neurons communicate with each other, and ways that networks of cells function in the vision, memory, and learning processes. The interaction and effects of learning and thinking and how the brain processes, consolidates and internalizes information will be explored.

SPE 702 Culturally Responsive Teaching (3 credits)

This course is designed to align instruction along with the assets and differential needs of diverse student populations through applying and incorporating multicultural perspectives into the teaching-learning process to maximize the academic, cognitive, personal, and social aspects of student learning. It will provide ways to design and deliver culturally responsive strategies to work with culturally and linguistically diverse students and empower their families in the teaching and learning process. The course focuses on addressing challenges to the reading achievement of culturally, linguistically, and economically diverse students with disabilities. Issues covered will include assessment and intervention, curricula development and social/affective skills related to family, community, values and culture of students from different cultural and ethnic groups

SPE 710 WRP: Intro Multisens Lang Inst (1 credit)

This online Wilson introductory course examines the definition of dyslexia and common characteristics, reading research and the five areas of reading in relation to students beyond grade two with persistent phonological coding deficits. Specifically studies the Wilson Reading System® (WRS), including student identification and placement, program implementation, progress monitoring, scheduling, and creating a successful classroom environment; principles of language structure; and how to teach language with direct, multisensory methods. Wilson Reading Certification course.

Restrictions: Enrollment is limited to Graduate level students.

SPE 711 WRP: Int Instr- NonRepsRdr 1-3 (3 credits)

This course presents in detail the multisensory structured language instruction that is required for teaching students beyond grade two with word-level deficits who are unresponsive to previous instruction. This online course provides practical application of reading research, with particular emphasis on phonological awareness, phonics and spelling at the beginning levels of decoding and encoding as well as expands upon these concepts with specific instruction in the closed syllable pattern. Provides specific procedures to teach the concepts presented in Wilson Reading System (WRS) Steps 1-3. Additional topics include accuracy and automaticity of word recognition, fluency with decodable and authentic text, vocabulary and listening/reading comprehension at beginning stages of reading. Wilson Reading Certification course.

Prerequisites: SPE 710

Restrictions: Enrollment is limited to Graduate level students.

SPE 712 WRP: Int Instr- NonRepsRdr 4-6 (3 credits)

This is a continuation of the Wilson Steps 1-3 on-line course. Presents in detail the multisensory structured language instruction that is required for teaching students beyond grade two with word-level deficits who are unresponsive to previous instruction. This online course provides practical application of reading research, with particular emphasis on phonological awareness, phonics and spelling at the beginning levels of decoding and encoding as well as expands upon these concepts with specific instruction in the vowel-consonant-e, open, and consonant-le syllable patterns. Provides specific procedures to teach the concepts presented in Wilson Reading System® (WRS) Steps 4-6. Additional topics include the ten critical points of the Wilson Reading System, dyslexia, non-controlled text, and handwriting. Wilson Reading Certification course. *Prerequisites:* SPE 710 and SPE 711

Restrictions: Enrollment is limited to Graduate level students.

SPE 713 WRP: Int Instr- NonRepsRdrPrac (3 credits)

This course, a supervised practicum, requires identifying and securing a practicum student in grades 4 - 12 with significant word level deficits, selected according to WRS practicum student selection criteria. Although not required, a second practicum student is highly recommended. The practicum entails successful delivery of a minimum of 60 Wilson Reading System (WRS) lessons and teaching mastery through WRS Step 4.2. A Wilson trainer observes the participant working with his / her student five times during the practicum via videoconferencing. Must demonstrate that the teaching plan is based on continuous assessment of the student's needs. *This course is completed over two semesters, generally spanning one academic year. Please Note: Although completion of SPE 710, SPE 711, SPE 712 and SPE 713 are required for WRS Level I Certification, certification is not guaranteed and is dependent upon successful fulfillment of all Wilson requirements.

Prerequisites: SPE 710 and SPE 711 (may be taken concurrently) and SPE 712 (may be taken concurrently)

SPE 720 Intro ASD: Caus Diag & Advoc (3 credits)

This course will provide candidates with an introduction to Autism Spectrum Disorders (ASD). With the increase in the number of individuals being diagnosed with ASD, this course will examine the challenge ASD presents to families, educators, students, related service providers, advocates, and policy makers. Course content will include an overview of ASD; family issues and challenges; ASD screening, diagnosis and assessment; an overview of intervention and treatment approaches; accessing appropriate supports and services; policy issues; advocacy and the experience of individuals living with ASD. Autism Spectrum Disorder Specialist Endorsement course.

SPE 721 Aug & Alt Com & Soc Stratg (3 credits)

This course will focus on a wide range of current research and evidence-based practices in the area of Augmentative and Alternative Communication (AAC) as it is implemented to increase, improve, and maintain functional communication skills of students with Autism Spectrum Disorder (ASD). In addition, specific strategies and techniques to address socialization skills for individuals with ASD as well as their communication partners will be addressed. Case studies, discussions, and activities will be utilized to personalize these strategies and techniques. Autism Spectrum Disorder Specialist Endorsement course.

SPE 722 Evid Based Prac: AI&I Method (3 credits)

This course will provide comprehensive coverage of the importance of using evidence-based practice in assessment, instruction, and implementation of interventions for individuals with Autism Spectrum Disorder (ASD). Course content will include identifying the legal basis and requirements for evidence-based practice; a review of how to locate and evaluate evidence in the literature base; (a review of the theoretical basis of, and evaluation of the empirical evidence for screening and assessments; a review of the theoretical basis of, and evaluation of the empirical evidence for screening and assessments; the continuum of interventions from traditional behavior to social-developmental-pragmatic; comprehensive program approaches; and instructional strategies in the classroom. Additional topics will include the use of medical, dietary, and sensory interventions in the schools; pseudoscience and fad interventions; and finding the middle ground between parents and professionals in the decision-making process. Autism Spectrum Disorder Specialist Endorsement course.

SPE 723 Autism: Behv Manag Approaches (3 credits)

This course will examine and introduce the major therapies/educational interventions that have been developed to treat autism and related pervasive developmental disorders. Applied behavior analysis (ABA), an empirically- validated treatment for individuals with autism and related disabilities will be discussed in detail. In addition, other emerging treatments including Greenspan, Relationship Development Intervention, and the principles of Positive Behavioral Supports (PBS) in Universal Design for Learning (UDL) will be examined in relation to ABA. In addition, scientific criteria will be compared to pseudoscientific criteria for various interventions. This course is relevant for both novices and experienced practitioners in the field of autism treatment. Autism Spectrum Disorder Specialist Endorsement course.

Restrictions: Enrollment is limited to Graduate level students.

SPE 730 Ed Found - Deaf & Hard of Hear (3 credits)

This course introduces basic concepts for the education of deaf and hard of hearing students. Topics covered include the social construction of deafness; the history of deaf education; families of deaf and hard of hearing children; language and literacy development; educational philosophies and approaches; cognitive and academic development; basic concepts in audiology; cochlear implants; placement options; deaf students with disabilities; and transition to life after school. The course is grounded in the perspective that varying levels of hearing ability are aspects of human diversity. Field Experience hours are required.

Restrictions: Enrollment is limited to Graduate level students.

SPE 731 Lang, Lit & Comm Dev-Deaf & HH (3 credits)

This course will introduce students to the major elements of language and literacy development and scientifically-based reading instruction pertaining to D/HH learners. Multi-modal strategies for facilitating language acquisition and integrating language and literacy instruction across academic content areas are reviewed. Students will explore literacy programs, create technology-embedded lesson plans, and perform assessments. They will also be introduced to resources and strategies for supporting families. Field experience hours are required. Students will also consider personal plans for expanding their own communication and language repertoire.

Restrictions: Enrollment is limited to Graduate level students.

SPE 732 Curr, Inst & Lrn Env-Deaf & HH (3 credits)

This course content will cover what teachers of DHH learners need to know in order to choose and effectively implement the most appropriate curriculum and instruction methods. Progress monitoring, data collection and analysis will guide students with decision-making regarding goals and objectives. Attention will also be given to how curriculum and instruction are differentiated through varied learning environments (general, special education and private education settings). Field experience hours are required. Students will have the opportunity to observe DHH students across different placements.

Restrictions: Enrollment is limited to Graduate level students.

SPE 733 List & Spk Skills - Deaf & HH (3 credits)

This course will provide information regarding the etiology and age of onset of hearing loss, anatomy and physiology of the hearing mechanism, degree and type of hearing loss, and interpretation of audiological results. The course will also offer information on auditory skill development, the utilization of various forms of amplification including hearing aids, cochlear implants, and FM systems, and the relationship of classroom acoustics to auditory access. Additionally, information in the area of spoken language development will be provided, including speech sound acquisition, development of vocabulary, syntax and pragmatics, and the relationship of listening and spoken language to literacy.

Restrictions: Enrollment is limited to Graduate level students.

SPE 734 Sign Comm in Instruct Settings (3 credits)

This course introduces and expands upon the advantages that sign language and other visual communication systems offer in the education of DHH learners. Among the topics covered are the history and structure of American Sign Language (ASL), the nature and characteristics of artificial sign systems based on English systems, as well as tactile systems for DHH learners with additional sensory differences including the DeafBlind. Interpreted education is also reviewed along with other educational tools such as fingerspelling.

Restrictions: Enrollment is limited to Graduate level students.

SPE 739 Student Teach & Prof Seminar (6 credits)

This is an individually designed field experience under approved supervision (including seminar meetings). This experience is designed as the capstone professional course for students seeking the Hearing Impaired (PK-12) certification (PA). It approximates full-time working/teaching experience for one full semester. At the conclusion of this experience, students must have demonstrated proficiencies in instructional management and specially designed instruction, student engagement and motivation, curriculum planning, learning theory, problem solving in an educational setting, using computers in the classroom, integrating reading, language, and literacy skills in all classrooms, the use of audiovisual materials in the classroom, communicating effectively with students and staff members who are deaf or hard of hearing in their preferred languages and modes of communication, the identification of instructional resources, assessment of student achievement, the development of IEP goals and objectives, management of amplification systems, assessment and development of listening and spoken language skills, consultation with regular classroom teachers, modification of the classroom acoustic environment, and development of student compensating strategies. The fieldwork course is typically the final course in a certification sequence. Includes a weekly online seminar session.

Prerequisites: SPE 600 and SPE 608 and SPE 612 and SPE 730 and SPE 731 and SPE 732 and SPE 733 and SPE 734

Restrictions: Enrollment is limited to Graduate level students.

Theology (also see REL crses) (THE)

THE 150 First Year Seminar (3 credits)

Seminar subjects vary.

Attributes: First-Year Seminar, Undergraduate

THE 153 Encountering the New Testament (3 credits)

This course examines the biblical traditions and texts of the Christian Scriptures as products of particular historical and cultural communities, and as literary and theological documents. Although it focuses on the New Testament, the course will also introduce biblical studies more generally, including the relationship between the Hebrew Bible and New Testament. Special attention will be paid to the need for historical- and literary-critical methods to interpret the Bible as mandated by the 1943 Papal encyclical, "Divino Afflante Spiritu," and later Church documents. This course will also help students acquire familiarity with the great diversity in the New Testament about regarding the person and significance of Jesus, the role and structure of the Christian community, and how discipleship is understood.

Attributes: Signature Course, Undergraduate

THE 154 Catholic Theological Tradition (3 credits)

This course critically engages the Christian, particularly Catholic, understanding of humanity in relation to God. It undertakes this study from historical/chronological, philosophical, or thematic/topical approaches. It introduces central Christian theological concepts, such as the doctrines of Christ, the human person, sin/grace/salvation, sacramentality, and moral principles such as the preferential option for the poor, solidarity, and the common good.

Attributes: Signature Course, Theology Level 1, Undergraduate

THE 155 Catholic Social Tradition (3 credits)

This course engages students in study of Christian teachings and practices related to the call to social responsibility, particularly in what is known as Catholic Social Teaching. Students examine the theological, historical, and biblical foundations of ethical commitments, explore a variety of central principles within the tradition (for instance, human dignity, social justice, rights, solidarity, and preferential option for the poor); and analyze how these ethical insights inform analysis of situations in the contemporary world (for instance, economic justice, international development, human rights, war and peace, the forced migration, and care for the global environment).

Attributes: Signature Course, Undergraduate

THE 170 Special Topics in Theology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

THE 211 Hebrew Bible (3 credits)

This course will examine the biblical traditions and texts of the Hebrew Scriptures as products of particular historical and cultural communities, and as literary and theological documents.

Attributes: Religious Difference Course, Undergraduate

THE 241 Intro to Systematic Theology (3 credits)

An investigation into the sources, norms, and key categories of Christian theology from its origins to the present. The ancient sources, contemporary issues, and related political, social and economic contexts will be studied using analytical, autobiographical, and narrative resources.

Attributes: Undergraduate

THE 261 Christian Social Ethics (3 credits)

This course provides a general overview of the forms and teachings of Christian ethics and how they impact the broader society. Specific social forms based upon human rights, theological virtues, conceptions of justice and the common good will be analyzed through teachings on war, the conquest, race, gender, class and the relationship between church and state. Particular attention will be given to the recent papal encyclicals.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Health Care Ethics Course, Justice Ethics and the Law , Undergraduate

THE 270 Special Topics in Theology (3 credits)

Concentrated focus on a selected theme in theology at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Certifications differ by section.

Attributes: Undergraduate

THE 323 The Psalms (3 credits)

The most influential of all Old Testament books for Christian spirituality, the Psalms offer a special glimpse into the religious life of ancient Israel. Placed within their larger historical background, psalms of various types (laments, hymns, royal and wisdom psalms, etc.) will be studied for their literary and religious character. The question of the Psalter's theology as a whole will be addressed as well.

Attributes: Ancient Studies Course, Undergraduate

THE 324 NT&Chr Atts to Jews/Judaism (3 credits)

The New Testament and Christian Attitudes toward Jews and Judaism: Although the New Testament conveys God's love in Christ to billions of readers, over the centuries "erroneous and unjust interpretations... relative to the Jewish people" (Pope John Paul II, 1997) promoted hostility and violence. This course explores this recurring "anti-Jewish" dynamic with a special focus on contemporary Catholic teaching on Gospel interpretation and particularly problematic scriptural passages.

Attributes: Religious Difference Course, Undergraduate

THE 325 Synoptic Gospels (3 credits)

A study of each Synoptic Gospel in its own unique historical and cultural context with special emphasis on the application of the most recent critical methodology. Students will grapple with the problems of historical distance by applying recent literary and historical methods to questions such as the identification of literary genre, narrative structure, agendas and target audience, rhetorical techniques, and tensions between author's creativity and use of older sources.

Attributes: Ancient Studies Course, Undergraduate

THE 326 Letters of Paul (3 credits)

The aim of this course is to examine the main characteristics of Paul's faith as found in his epistles. The course will establish the broad argument of each of the letters, their historical setting, and their literary and rhetorical character, and demonstrate how these elements work together to express Paul's gospel.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Ancient Studies Course, Faith-Reason Course, Undergraduate

THE 331 Early Christn Thought (3 credits)

An historical and theological investigation of the Christian community during the first four centuries. Among the topics to be considered are the relationship of the early church to classical culture, conflicts over issues of orthodoxy and heresy, and the links between historical context and early Christian doctrinal claims. The course will also investigate the development of the canon of Scripture, Christian leadership structures, the creeds, and early Christian traditions of martyrdom, monasticism, the sacraments and worship.

Attributes: Undergraduate

THE 333 Knowl & Love of God: Mid Ages (3 credits)

A study of major figures in the history of Latin Christian thought from 400 C.E. to 1500 C.E. with a concentration on theories concerning how we know God and what it means to love both God and neighbor. Emphasis is on the reading of primary sources, both scholastic and monastic, in translation. Course content will require that we consider who God is, who we are in relation to God, Jesus Christ's role in both our knowledge of God and our capacity to love, and the relationship between faith and reason.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

THE 334 Revolt, Reform, Reunion? (3 credits)

This course explores the religious, social, political, and cultural factors that precipitated the Protestant Reformation, with particular emphasis given to theological issues, such as justification, the role of scripture in the life of the church, church structure, the nature of ministry, and the sacraments. In addition, the course examines the progress that has been made in the 20th and 21st centuries to overcome the difference of the 16th century as a result of ecumenical dialogue between Roman Catholic Church, various Protestant churches, and the Anglican Communion.

Attributes: Undergraduate

THE 335 Gendr & Christian Spirituality (3 credits)

An examination of some of the spiritual classics written by both the men and women of the Christian faith. Emphasis on reading and study of primary texts, largely medieval, with an eye to any discernible differences between men as spiritual authors and women as spiritual authors. Course will also examine the given perceptions of gender, spirituality and eroticism.

Attributes: Diversity Course, Faith Justice Course, Gender Studies Course, Undergraduate

THE 339 Darwin, Dogma, and Ecology (3 credits)

In his 2015 encyclical, On Care for our Common Home (Laudato Si'), Pope Francis makes an urgent appeal to "every person living on this planet" for dialogue and action in the face of impending environmental collapse. Of course, the pope's argument is grounded in Roman Catholic teaching; however, his critique is more philosophical than theological. It concerns not just the detrimental effect modern technology has had on the environment, but, more fundamentally, how modern science understands our knowledge of the world, and how in turn this understanding has adversely affected human action. The course will investigate the development within Catholicism of an evolutionary worldview that critically embraces neo-Darwinian science, but also distinguishes between religious faith-traditions and secular faith-traditions, suggesting how the former might prove more effective than the latter in addressing the ecological crisis.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 340 Atheism and the Case for God (3 credits)

Over the past twenty years several best-selling authors have mounted a concerted attack on religion, advancing an argument that is, purportedly, so fresh and compelling as to earn them the title, "The New Atheists." The more important and enduring cultural phenomenon affecting religious practice today is the secularism that has increasingly dominated modern civilization, religious belief and practice became significant options rather than cultural givens. This course deals with the question of whether secularism arose in reaction to religion, or as one of religion's greatest success stories. Much of the analysis will be historical: When and how did the secular movement arise? What notion of "God" did it reject? But the course will also address questions that are more philosophical and theological in nature: Has natural science disproved religion? And is secularism properly understood as necessarily concurrent with scientific advance?

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 341 Jesus through the Centuries (3 credits)

An inquiry into Western Christianity's understandings of the meaning and significance of Jesus Christ, including New Testament Christologies, the controversies of the 4th and 5th century councils, medieval atonement theories, post-Enlightenment problems and reformulations, and contemporary liberation Christologies. Students will be encouraged to develop their own Christological position as an integral part of the course.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 342 Does God Exist? (3 credits)

"Is there a God?" is the first and foremost question for many. In this course, students will explore a variety of theories regarding the question of whether or not a singular (monotheistic) God exists. The arguments that address this age-old question will be evaluated epistemologically, that is, through the lens of what kind of knowledge is being considered and how this knowledge is attained. In grappling with the topic, the course will also consider such related questions as the following: What is there a great nothingness and silence from the heavens? What is the meaning of life? Can we attain true happiness and fulfillment in this life? If God exists, why is there so much evil, violence and hunger in the world? Does life end at death or is it just changed?

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 343 Theology of Word and Sacrament (3 credits)

The course explores the Christian's experience of God speaking and acting in the world and the Christian's response of listening and praising God in the Christian community. The interrelationship of the words and actions of God and His people are examined.

Attributes: Undergraduate

THE 344 Theology of the Church (3 credits)

The spirit of the Church as Christian community, the people of God who witness to the Christian mission between the resurrection of Christ and his Parousia. The foundations of the church in the Scriptures, modern interpretations of its composition, relationship to the world, and goals. Readings from Vatican II and contemporary theologians.

Attributes: Undergraduate

THE 345 Evil as a Theological Problem (3 credits)

An examination of the profound challenge both to religious understandings of a meaningful and ordered existence and to theological claims regarding an omnipotent, beneficent deity rendered by the occurrence of evil and the suffering that accompanies it. The course will contextualize particular manifestations of evil and investigate how evil is identified, explained, challenged and interpreted through texts in theology and popular culture, with particular attention to its modern and contemporary manifestations.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 211)

Attributes: Faith-Reason Course, Undergraduate

THE 346 Salvation as Story & Belief (3 credits)

In this course, redemption is presented in its two simultaneous dimensions - the unique and salvific role of Christ in the plan of Salvation, as well as the role of individual persons in response to Christ. This two-fold nature of salvation results in the paradoxical formulation of redemption as both an accomplished event as well as an unfinished, developing relationship. The mysteries of the Incarnation will be investigated as the already, complete aspect of redemption, while an inquiry into human morality and moral values will address the developing, relational dimension of redemption.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 347 Death and Rebirth (3 credits)

The course deals with the systematic theological topic of eschatology, the study of the "last thing" (eschaton), which is God or the Reign of God; and the "last things" (eschata), which are death, individual judgment, heaven, hell, purgatory, the Second Coming of Christ, the resurrection of the body, general judgment, and the consummation of all things in the perfection of the Kingdom of God. The course includes a survey of traditional, (especially biblical) approaches to eschatology, but its methodology will proceed largely "from below" as an exercise in "hope seeking understanding." Thus, the course will include an ecumenical perspective, and community service in the form of care for the dying (especially hospice). Students will be expected to make critical judgments concerning cultural practices relating to care of the dying, treatment of the dead, and the acceptance of death as an event of life.

Attributes: Health Care Ethics Course, Undergraduate

THE 348 Theology and Science (3 credits)

An exploration of the Galileo Case, evolution, contemporary Big Bang cosmology, and quantum theory show how the relationship between theology and science has developed to the present day. The scientific, methodological and theological issues will be critically evaluated for their significance today. Students will thus be provided with the basic tools for understanding and participating in the contemporary dialogue between science and theology.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Theology Level 3, Undergraduate

THE 349 Theology of Disability (3 credits)

This course will examine the relationship between the way in which human disability is approached, on the one hand, from the perspective of the theological anthropology found in the Christian faith and, on the other hand, how it is approached by other contemporary discourses. More specifically, the course will examine the adequacy of certain contemporary approaches to disability and inquire into ways in which the Christian theological tradition can contribute to the project of rethinking and re-imagining the nature of human disability as well as the nature of the human person in general.

Attributes: Diversity Course, Faith Justice Course, Health Care Ethics Course, Undergraduate

THE 350 The Beauty of God (3 credits)

This course explores how beauty serves as a way to God. In the history of all three major monotheistic faith traditions (Judaism, Christianity, and Islam), it was believed that God identified himself through various divine names. Focusing primarily, though not exclusively, on the Judeo-Christian tradition, this course examines beauty as one of these divine names. Consequently, the mode of theology that will ground this exploration is what has recently come to be called theological aesthetics. As a mode of theology, or a theo-logic, theological aesthetics draws from the principles of human reason as the art of thinking well (hence as a logic) and the event of divine revelation. Insofar as it unites theology with beauty, a theological aesthetic not only draws from the grammar, language, and thinking associated with beauty and art, but attempts to tie these more deeply to both human reason and divine revelation. Taking its cue from aesthetic experience, this course is divided into three basic parts: part 1 is the encounter with the object of interest, namely God's existence; part 2 examines the subjective aspects of the encounter, namely, the socio-cultural dimensions of how we come to understand God, "religion," faith, etc.; and part 3 examines the results inspired by the encounter, namely, the reception of divine beauty in revelation, music, responding to evil and human suffering, and mysticism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

THE 351 Ignatian Spirit in Jesuit Trad (3 credits)

An examination of and reflection on the religious vision of Ignatius of Loyola and its embodiment in the life of the Society of Jesus, including a reading of the Spiritual Exercises. An overview of the major movements and influential persons in Jesuit history, a study of Jesuit spirituality and theology, and a consideration of the role of the Jesuits in broader church life.

Attributes: European Studies Course, Undergraduate

THE 352 Recent Trends in Roman Catholic (3 credits)

Recent Trends in Roman Catholicism: This course will deal with the documents of Vatican II, current understandings of the sacraments of the Catholic Church, the movements towards unification among the Christian churches, recent suggestions for the exercise of the papacy in the future, and the modern emphasis on social justice as part of Catholic life and practice.

Attributes: Undergraduate

THE 353 American Catholicism (3 credits)

American Catholicism: This course deals with the diverse dynamics within the life of the Roman Catholic Church in the United States with a main focus on the 19th and 20th centuries. It will study the theological development of this indigenous Catholic tradition and situate it within its broader historical and cultural context.

Attributes: American Studies Course, Undergraduate

THE 354 Beauty&ConsciousnessInTheArts (3 credits)

This course is designed to enable students to examine the relationship between faith and reason in the context of beauty and consciousness. It will do this in two ways. First, with the goal to acquiring a relative mastery, it will offer students an opportunity to engage and explore certain themes pertaining to beauty and consciousness that are relevant to major figures within the Christian theological tradition. Second, it will enable students to demonstrate their relative mastery over these themes by bringing them into conversation with contemporary presentations of those themes as they appear in artistic form.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Medieval, Ren & Reform Studies, Undergraduate

THE 355 American Religious Thought (3 credits)

An historical survey of the traditions of American religious thought with special regard for the 19th and 20th centuries; a critical examination of representative religious thinkers and theologians; a study of the role of religion in American life and society.

Attributes: Undergraduate

THE 356 Liberation & Pol Theologies (3 credits)

An inquiry into the critique and vision brought to theology by the perspective of the poor and oppressed in the 20th century via the paradigm known as liberation and political theology. An extensive examination of the context and methods of Latin American liberation theology followed by an examination of European political theology and African-American liberation theology. Other topics for consideration may include the work of Hispanic, Asian, African, and North American feminist liberation theologians.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith Justice Course, Faith-Reason Course, Latin American Studies Course, Undergraduate

THE 357 Feminist Theologies (3 credits)

An inquiry into the sources, contexts, methods, and symbols of Christian theology from the perspective of women in the process of human liberation. The roles of women in church and society, the history of the women's movement in North America, and the experiences and theological perspectives offered by feminists of differing racial, ethnic and socioeconomic background will be examined. Feminist reflections within other religious traditions may also be considered.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith Justice Course, Faith-Reason Course, Gender Studies Course, Undergraduate

THE 358 Faith, Justice & Jesuit Miss (3 credits)

This course will challenge students to reflect theologically on the historic grounds of the Christian faith and how and why, for many throughout Christian history, a concern for social, economic, and political justice is rooted in the Christian Gospel. It will also familiarize students with the historical, social, religious, economic, political, educational and cultural context of contemporary Bolivia; teach students how to stand outside their own epistemological system and more fully understand the reality of the cultural "other;" and assist students to integrate this knowledge into a complex understanding of the demands of faith and the work of justice within the specific context of contemporary Bolivia. When taught as a study tour, the class will spend 10 days over Spring Break in Bolivia visiting the mission sites of the Jesuit organization Fe y Alegria.

Attributes: Ethics Intensive, Latin American Studies Course, Non-Western Studies (GEP), Undergraduate

THE 359 Religion, Violence & Terrorism (3 credits)

Religiously motivated violence constitutes one of the most important socio/economic/political factors in the twenty-first century. This course will probe both the roots and the recent manifestations of violence and terrorism in the name of religious convictions and traditions. Through rigorous investigation of both primary and secondary literature, this course will provide a thorough presentation of the theological roots of religious violence, as well as its contemporary manifestations. The course will unfold in three parts: 1) the roots of religious violence: scripture, sacrifice and ancient conquest; 2) cosmic struggle: the violence of apocalypticism then and now and 3) contemporary manifestations: sexism and racism; recent religious wars and genocides; and terrorism. When taught as a study tour, will include international travel.

Attributes: Globalization Course, Irish Studies Course, Undergraduate

THE 360 Rel Vision in Film & Fiction (3 credits)

This course introduces fiction and films that are driven by religious sensibilities and theological insights. Issues rising throughout the course include deity, sin, forgiveness, grace, redemption, virtue, and community. Student expectations entail critical analysis and theological reflection, as well as a very basic grasp of the phenomenon of human religiosity.

Attributes: American Studies Course, Undergraduate

THE 361 Catholic Social Teaching (3 credits)

The purpose of this course is to familiarize students with the tradition of Catholic social teaching with a view to developing skills for critical reading and integrated appropriation of these documents. Beginning with *Rerum Novarum* (1891), we will examine the most important papal, conciliar, and episcopal social teaching texts up to the present time, identifying foundation principles, tracing central theological, ethical, and ecclesial concerns, and locating each document in its proper historical context.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Health Care Ethics Course, Undergraduate

THE 362 Fth & Jus: Sctpt & Soc Values (3 credits)

Faith and Justice: Scripture and Social Values: How and why a concern for social, economic, and political justice is rooted in and demanded by the Christian gospel, and what this has to say about the nature and mission of the church. An overview of the social teaching of the Catholic Church in the past century with emphasis on the thought of the most recent popes. Consideration of certain social justice issues: war and peace, crime and punishment, world hunger, racism, human rights, and the international economic order.

Attributes: Faith Justice Course, Latin American Studies Course, Undergraduate

THE 363 Ignatius & Cty: Jesuit Urb Mis (3 credits)

Ignatius and the City: Jesuit Urban Missiology: This course reviews the theology and spirituality of Ignatius of Loyola and how his early followers in the Society of Jesus established a particular missiology. Study of the network of ministries created by the first generation of Jesuits in Rome will be the first part of the course with particular emphasis on the urban context. An examination of how that missiology has been used in and around the City of Philadelphia in the 18th, 19th, and 20th centuries will also be included in the course.

Attributes: Undergraduate

THE 364 Pursuit of Love: Sexual Ethics (3 credits)

This course explores some basic questions: What is love, and what does it mean for Christians to try to live as God-like lovers in all that they do, and specifically in living as sexual beings? If love is considered a necessary context for genital involvement, what specific characteristics must this love have in order to render its genital expression morally acceptable? How do we distinguish morally appropriate genital activity from that which is not? These questions are addressed within the general theological framework of Christianity that recognizes human sexuality as a multi-faceted reality involving our bodies, minds and hearts. In dealing with the moral questions and arguments surrounding premarital sexual activity, contraception, same-sex genital acts, masturbation and abortion, how can we resolve the possible tension that may arise between the promptings of our personal conscience and the official moral teachings regarding sexuality that are put forth by the Catholic Church, other Christian churches and some major religions of the world?

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

THE 365 Marriage/Same Sex Union/Divorc (3 credits)

Marriage, Same Sex Unions, and Divorce: Examining the Ethical Issues: The Judeo-Christian tradition regards marriage as a divinely instituted reality designed, not only to enhance the humanity of men and women and to establish a stable environment for the nurturing of children, but to serve also as a reminder and embodiment of God's loving relationship with His people. This course lays bare the tension between the biblical and theological texts highlighting the sacred status of marriage and the many secular aspects of contemporary society that portray marriage as "just a piece of paper" or as little more than a legal fiction. This tension shapes discussions of the psychological, social and ethical dimensions of love, marriage, and sexuality. People who marry today do so in the face of numerous questions and challenges: the "hook-up" culture, accepted, even expected, cohabitation, the extended meaning of "family," recognition of same-sex civil unions and/or marriages, undefined gender roles, and high divorce rates that are supported, perhaps even encouraged, largely by "no-fault" divorce laws. These issues are addressed, along with the ethical arguments surrounding various kinds of reproductive technology and family-planning methods. In addition, the course explains the Catholic Church's laws regarding the "impediments" or obstacles to a valid marriage, and the granting of annulments, and delves, finally, into the social, ethical and theological controversies surrounding divorce and remarriage, with particular attention given to their effects on children.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Undergraduate

THE 366 Christian Medical Ethics (3 credits)

With the technological inauguration of the age of new medicine we have at our disposal more means than norms for intervention in the life, health, and death processes of human existence. Even more crucial is the question: "Should we do everything that is within our capacity to do?" Consideration will be given to the contribution of Christian ethicists in their reflection on the issues involved in abortion, reproductive engineering (AIH, AID, IVF, cloning, etc.), care of the dying, euthanasia, medical experimentation, organ transplantation, and the rights of patients.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Health Care Ethics Course, Justice Ethics and the Law, Latin American Studies Course, Undergraduate

THE 367 Suffering and Death (3 credits)

Biblical, Systematic and Ethical Perspectives: Dramatic advances in medical information and technology increase daily and these advances are being implemented almost immediately. As a result, people who have succumbed to their illnesses only a few years ago can now have their lives extended by being treated aggressively. This treatment does prolong the lives of many people, but in the process it also causes people to endure much pain and suffering. As a result many Christians are focusing on the age old question of "why do innocent openly have to suffer?" Various answers have been given to this question by society: Dr. Kevorkian's "death machine," Oregon's "Death With Dignity Act," direct abortion of defective fetuses, and even infanticide. It has been said that "only the suffering human person knows that he/she is suffering and wonders why; and he/she suffers in a humanly speaking still deeper way if he/she does not find a satisfactory answer." This course will examine the meaning of personal suffering, as well as the Christian response to the suffering of others from biblical and systematic perspectives. Students will then apply these insights to two specific medical ethics issues-physician-assisted suicide and medical treatments for handicapped newborns.

Attributes: Undergraduate

THE 368 Just Hlth Care in Dev Nations (3 credits)

Just Health Care in Developing Nations: An investigation of adequate health care as a fundamental human right. The course will proceed from the premise that socially induced needs are a result of historical development of material and social conditions, coupled with a social consensus that some things are necessary for happiness, social life, or some other goal. It will consider the inability of many societies to supply adequate health care as an issue of basic personal dignity, a claim against society, and as a matter of justice. The course will examine the issue of just health care for all peoples from both public health and ethical perspectives. When taught as a study tour, students will travel internationally.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Globalization Course, Health Care Ethics Course, Justice Ethics and the Law , Latin American Studies Course, Theology Level 3, Undergraduate

THE 370 Special Topics in Theology (3 credits)

Concentrated focus on a selected theme in theology or religion at an advanced level. Topic and content varies from semester to semester. Course may be taken twice for credit as the topic changes. Other certifications differ by section.

Attributes: Undergraduate

THE 371 Christianity and Media (3 credits)

This course offers an opportunity to explore the relationships between Christianity and the wide variety of modes of communication that we refer to as "media." In the course, students will engage in two basic tasks. First, students will engage in the descriptive task of identifying the current state of the media with respect to religion. How are religions and religious issues portrayed in various media? How do Christians understand and use media for their various purposes? Second, the class will engage in the normative task of judging the social and moral worth of the various modes of communication using the resources of the discipline of Christian social ethics. Does the current media landscape support human flourishing and the just society? If so, what should be done to ensure that this continues? If not, how might it be shaped so that it supports such development?

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Undergraduate

THE 372 Technology Ethics (3 credits)

This course will engage in critical reflection on technology, its role in human lives, and its impact on society. The course will examine various theories of the nature technology. It will also investigate particular resources available within the discipline of Christian social ethics that are central to understanding and evaluation the moral worth of various technologies, such as common good, justice, human dignity, development, and solidarity. These conceptual tools will then be used to explore the ethical implications of technology will be the assessment of a variety of particular cases of both commonplace and emerging technologies (e.g., civil engineering, cellular telecommunications, social media, surveillance, digital divide, data security, product manufacturing and disposal, intellectual property, body modification, and the post-human movement).

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Justice Ethics and the Law , Undergraduate

THE 373 Economic Ethics (3 credits)

Economic Ethics: This course will examine the historical, social and philosophical conditions that gave rise to economics as a distinct discipline. Both the theory and practice of economics will be subjected to an ethical analysis drawing upon biblical and theological sources, particularly emphasizing Catholic teaching. Different economic systems will be compared and different forms of economic life and teaching within the Christian church will be discussed.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Globalization Course, Justice Ethics and the Law , Undergraduate

THE 374 War and Peace (3 credits)

Throughout Christian tradition, theologians have argued for and against Christian participation in war. This course will examine these arguments through reading relevant biblical, theological, historical and philosophical materials. We may explore how the various arguments have been represented (or misrepresented) in popular culture through film.

Prerequisites: PHL 154

Attributes: Ethics Intensive, Faith Justice Course, Irish Studies Course, Undergraduate

THE 380 Interreligious Dialogue (3 credits)

This course will involve both study and immersion: study of the history and theology of dialogue chiefly but not exclusively in Catholic Christian circles; immersion by writing and by regular involvement with local temples, mosques, synagogues, meditation centers, etc. Lecture with discussion and meditation. Reflection and research papers, focusing on one's own interior dialogue as well as exterior dialogue.

Attributes: Religious Difference Course, Undergraduate

THE 381 One True Religion? (3 credits)

This course examines Christian responses to two important questions: Can the world's many religions, which have different beliefs and different practices, all be true, or must only be true? If, as Christianity has claimed throughout its history, salvation is possible only through the mediation of Jesus the Christ, does this mean that anyone who is not Christian is not "saved," or is consigned to hell? Among the topics explored: classical and contemporary theories of truth; the relationship of truth and salvation; Christian theories of exclusivism, inclusivism, pluralism, and particularism.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 382 Religion, Society, and God (3 credits)

This course is an inquiry into the theological and philosophical nature of religion. What is the origin and development of religious traditions? Are there characteristics which are universal and how does theology and philosophy view them? The course will look at diverse modes of religious experience and conceptions of God, human existence and community. The philosophical and theological perspectives on the meaning of belief, symbolism and ritual in the spiritual quest for the transcendent.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

THE 384 Jews/Chr: Theologies Compared (3 credits)

The course studies fundamental religious questions as understood from various Jewish and Christian perspectives. Christian and Jewish students will gain an understanding of the other religious community while also deepening their understanding of their own. Other students will encounter the two traditions through a comparative lens. Topics to be discussed include the experience of God; the Bible; how Christians and Jews understand their relationship to God and the world; worship and prayer; and the destiny of the created universe.

Attributes: Religious Difference Course, Undergraduate

THE 385 Jesus the Jew in History (3 credits)

For centuries Jesus' Jewish identity was ignored. To understand him and the movement that emerged after him it is essential to study him as a first century Jew. In this course we will engage scholarly research into the historical Jesus and the ancient Jewish context in which he lived. We will consider how he is presented in early Christian writings and analyze how his Jewishness was perceived in later Jewish and Christian thought. Finally, we will consider the important implications of this issue for Jewish-Christian relations.

Attributes: Religious Difference Course, Undergraduate

THE 387 Jews&Chr. Entwined Histories (3 credits)

Why has the relationship between Christians and Jews been frequently hostile? How have the two communities influenced each other, for good and for ill? Is there a relationship between the Nazi genocide and historical church teaching? Has there been improvement in the two traditions' relationship in recent decades? What are today's pressing challenges? This course will examine all these questions.

Attributes: Diversity Course, Religious Difference Course, Undergraduate

THE 388 Jews&Chr. Bible Interpretation (3 credits)

Although Jews and Christians share many of the same scriptural books, their respective collections are differently organized and named. Christians refer to their collection as the "Old Testament," while Jews call their texts the "Tanakh" (an acronym for the Hebrew words for Teaching, Prophets, and Writings). Despite, or because of this commonality, Christians and Jews have often battled over these scriptures' meanings. This course explores the ways that Jews and Christians have interpreted key texts, separately and together, over two millennia of learning from and disputing with each other. It also examines why the Bible has been a source of conflict between the two groups, with a focus on certain key passages, and why that is currently changing - as evidenced in recent official Catholic instructions.

Attributes: Religious Difference Course, Undergraduate

THE 389 Abrahamic Peoples I (3 credits)

Past, Present and Future I: The three monotheistic religions all originated in the Middle East. In their origins and spread to other parts of the world, their interactions formed a complex tapestry of theologies, rituals, texts and histories. This two- semester course surveys the origins, practices, beliefs, and interactions among the Muslim, Christians, and Jewish peoples. Both semesters are taught by a Jewish, a Christian, and a Muslim professor, all three of whom will be present for each class session. Fall semester, the class will explore the early beginnings of all three traditions up to the year 1492. Spring semester brings their stories from 1492 to the present. Certain overarching themes, topics, or questions will be considered in each era to illustrate the interlacing similarities and differences among the three communities in the past, in today's world, and with a view to future possibilities. Offered over two consecutive semesters for six credits, although students may choose to take only Fall or Spring semester for 3 credits.

Attributes: Religious Difference Course, Undergraduate

THE 390 The Abrahamic Peoples II (3 credits)

Past, Present and Future II: The three monotheistic religions all originated in the Middle East. In their origins and spread to other parts of the world, their interactions formed a complex tapestry of theologies, rituals, texts, and histories. This two semester course surveys the origins, practices, beliefs, and interactions among the Muslim, Christian, and Jewish peoples. Both semesters are taught by a Jewish, a Christian, and a Muslim professor, all three of whom will be present for each class session. Fall semester, the class will explore the early beginnings of all three traditions up to the year 1492. Spring semester brings their stories from 1492 to the present. Certain overarching themes, topics, or questions will be considered in each era to illustrate the interlacing similarities and differences among the three communities in the past, in today's world, and with a view to future possibilities. Offered over two consecutive semesters for six credits, although students may choose to take only Fall or only Spring semester for 3 credits.

Attributes: Religious Difference Course, Undergraduate

THE 392 Directed Readings in Theology (3 credits)

A study of significant themes or issues in Theology or Religious Studies under the direction of faculty in the department. Frequent consultations and written reports are required. Prior written permission of the instructor and approval from the chair is required. Does not fulfill the Theology/Religious studies GEP.

Attributes: Undergraduate

THE 470 Special Topics in Theology (3 credits)

Topics will vary according to the semester in which the class is offered.

Attributes: Undergraduate

THE 491 Internship in Theology I (3 credits)

This course is an experiential learning experience in which students work 10 hours per week (total 130 hours) in an organization related to Religious Studies. The internship is a way to see how different areas of theological study are used "on the ground" in public, private, non-profit, community, and church-related organizations. In addition to their hours, students must keep a journal, meet regularly with their faculty adviser, and complete a final essay/presentation that connects their learning experience in the internship to their other coursework and the goals of the major. For more information and for the required application, please see the department chair. Does not fulfill the GEP.

Attributes: Undergraduate

THE 492 Internship in Theology II (3 credits)

This course is an experiential learning experience in which students work 10 hours per week (total 130 hours) in an organization related to Religious Studies. The internship is a way to see how different areas of theological study are used "on the ground" in public, private, non-profit, community, and church-related organizations. In addition to their hours, students must keep a journal, meet regularly with their faculty adviser, and complete a final essay/presentation that connects their learning experience in the internship to their other coursework and the goals of the major. For more information and for the required application, please see the department chair. Does not fulfill the GEP.

Attributes: Undergraduate

THE 493 Ind Research in Theology (3 credits)

Independent research and writing under the direction of faculty in the department. Prior written permission of the instructor and approval from the chair are required. Course may be taken twice for credit as the topic of research changes. Does not fulfill the Theology/Religious studies GEP.

Attributes: Undergraduate

THE 494 Ind Research in Theology (3 credits)

Independent research and writing under the direction of faculty in the department. Prior written permission of the instructor and approval from the chair are required. Course may be taken twice for credit as the topic of research changes. Does not fulfill the Theology/Religious studies GEP.

Attributes: Undergraduate

THE 495 Theor & Meth in Study of Relg (3 credits)

A survey of a wide array of theories and methods employed in the modern study of religion, such as psychological, sociological, anthropological, phenomenological, feminist, sociobiological, and other approaches. Both classic and recent theoretical models will be discussed, with special interest in current methodological developments in the academic study of religion. Emphasis will be placed on direct engagement with the writings of the major theorists themselves. Permission of the Chair required.

Prerequisites: PHL 154 and (THE 153 or THE 154 or THE 155 or THE 221)

Attributes: Faith-Reason Course, Undergraduate

DIRECTORY

Board of Trustees

Chair of the Board

James M. Norris '85, Managing Director (Retired), Vanguard International

Vice Chair

John D. Zook '71, Founder, Zook Dinon PA

Members

Michael A. Bantom '73, Head of Basketball Development, National Basketball Association

John P. Borneman, PhD, '80, '83 (MS), '87 (MBA), USP'07 (PhD), Founder & Principal, Oak View Point Partners

Eileen K. Cardile '87, '91 (M.S.), Senior Consultant, Numerof & Associates

Mark A. Casale '86, President and CEO, Essent

Doneene K. Damon, Esq. '89, Director & President, Richards, Layton & Finger

Brian Duperreault '69, Executive Chairman, American International Group

Timothy G. Fallon '76, Senior Operating Partner, Arbor Investments, LLC

Kristy W. Fercho '00 (MBA), Head of Home Lending, Wells Fargo & Company

Kelly Flanagan '06, '12 (MBA), Executive Vice President Business Planning, Jacksonville Jaguars

James J. Fleming, S.J., Executive Director, Campion Conference and Renewal Center

Daniel P. Gallagher '94, '99 (MS), Managing Director, Exude, Inc.

Eugene M. Geinzer, S.J., Superior Arrupe, Jesuit Community; Adjunct Professor, Saint Joseph's University

Michael J. Hagan '85, Managing Partner, Hawk Capital Partners

Michael C. Hemsley, Esq. '72, Senior Advisor, Juniper Advisory

Margaret K. Hondros, Co-founder Kinney Center for Autism Education and Support, Saint Joseph's University

Peter R. Kowey, M.D. '71, William Wikoff Smith Chair, Cardiovascular Research Lankenau Heart Institute

Edgardo A. Mercadante, USP'79, H'17, Founder & CEO, MediTelecare

Susan La Monica P'20, Chief Human Resources Officer, Citizens Financial Group

Christopher D. McIsaac '97, Managing Director International Operations, Vanguard Group, Inc.

Michael J. Nesspor '80, Managing Director (Retired), Pershing, LLC

Sharon R. O'Brien '76, Civic Volunteer

Maureen A. O'Connor '86, Civic Volunteer

Adele Cirone Oliva '87, Founder, 1315 Capital

Lori N. Peruto, Esq. '83, General Counsel, Philadelphia Suburban Development Corp.

Maryanne F. Post, Esq. '07, Controller and Human Resource Manager, Post Precision Castings, Inc.

Joseph D. Regan '81, Chief Executive Officer, Alphadyne Asset Management

James M. Shea, S.J., Chaplain, Georgetown University Medical Center

Michael J. Sofia, PhD, Chief Scientific Officer & Co-Founder, Arbutus Biopharma Corporation

Stephen V. Sundborg, S.J., President (Retired), Seattle University

Jeffrey P. von Arx, S.J., Superior and Director, John LaFarge House, Jesuit House of Studies; Visiting Professor of the History of Christianity, Boston College School of Theology and Ministry

Raymond G. Washington, Jr., M.D. '91, General Surgeon, Pinehurst Surgical Clinic

Joseph J. Wolk '88, Executive Vice President & Chief Financial Officer, Johnson & Johnson

Administration

President: Cheryl A. McConnell, PhD

- Associate Vice President and Chief of Staff: Sarah F. Quinn, M.B.A.
- Vice President and General Counsel: Tracey S. Pachman Esq

Academic Affairs

- Provost and Senior Vice President for Academic Affairs: Jay Carter, Ph.D.
- Director for Administrative Operations, Academic Affairs: Melissa McClory, M.Ed.
- Director, Institutional Effectiveness: Jill Dougherty Cleary, M.B.A, Ed.D
- Associate Provost, Faculty and Academic Support: Peter Norberg, Ph.D.
- Associate Provost for Research & Graduate Administration/Policy: Jean-Francois Jasmin, Ph.D.
- University Registrar: Deanna Daly, M.S.
- Director, Honors Program: Jason Powell, Ph.D
- Director, Faith Justice Institute:
- Director, Office of Teaching and Learning: Usha Rao, Ph.D.
- Director, Undergraduate Fellowships Program: Mark Reynolds, Ph.D

Vice President for Enrollment Management: Karen Pellegrino, M.S.

- Associate VP Enrollment Management: Robert McBride, M.A.
- Director, Undergrad Admissions: Maureen Mathis, M.Ed.
- Director of Enrollment Management Systems and Analytics, Michael Payne, M.A.
- Director of Financial Aid: Elizabeth Rihl Lewinsky

Dean of the College of Arts and Sciences:

- Associate Dean for Strategic Planning and Assessment:
- Associate Dean for Curriculum and Advising: James Caccamo, Ph.D.

Dean of the Haub School of Business: Joseph DiAngelo, Jr., Ed.D.

- Associate Dean of Undergraduate Studies:
- Associate Dean: Vana M. Zervanos, M.Ed., M.B.A.
- Associate Dean: Natalie Wood, Ph.D.

Dean of the School of Education and Human Development: Joshua Power, EdD '05 '16 (EdD)

- Associate Dean for School of Education and Human Development:

Dean of the School of Health Professions: Sinclair Smith, Sc.D.

- John Wyeth Dean, Philadelphia College of Pharmacy and Associate Dean School of Health Professions: Edward Foote BS '87, PharmD '91

University Librarian: Anne Krakow, M.L.S.

Scholarly Press, Director: Carmen Croce, A.B.

Mission

- Vice President for Mission and Ministry: Daniel R.J. Joyce, S.J. '88,
- Director of Campus Ministry: Thomas Sheibley, M.A.

Student Life

- Vice President for Student Life/Associate Provost:
- Associate Vice President for Student Life: Ross W. Radish, J.D.
- Director of Student Transitions: Nancy Komada, Ph. D.
- Director of Public Safety and Security:
- International Programs, Director: Thomas Kesaris, B.A.
- Director of the China Program: Juan Yu, Ph.D.
- Assistant Vice President of Student Success and Educational Support: Kim Allen-Stuck, Ph.D.
- Director of Athlete Center for Enrichment: Taylor Weidensaul
- Director of Learning Resources: Kris Goldberg, M.S.
- Director of Students with Disabilities: Christine Mecke, Ed.D.
- Director of Student Success and First Year Experience: Daniel McDevitt, M.B.A., Ed.D.
- Executive Director, Career Center: Patricia Shafer, M.A.
- Director of Counseling & Psychological Services: Gregory Nicholls, Ph.D.
- Director of Student Health Center: Eileen Bevilacqua
- Director of Student Outreach and Support: Marci Berney, M.S.
- Assistant Vice President for Student Life: Kiersten White, Ed.D.
- Assistant Vice President for Student Campus Life: John Jeffery, Ed.D.
- Director of Residence Life: Jessica Moran-Buckridge, M.A.
- Director of Student Leadership and Activities: Beth Hagovsky, Ed.D.
- Director of Inclusion and Diversity Achievement: Natalie Walker, M.S.
- Director of International Students and Scholars, Meryl Halpern, M.A.

University Operations

Vice President for Human Resources:

Vice President and Chief Information Officer: Francis J. DiSanti '79, M.S.

Vice President and Athletics Director: Jill Bodensteiner, J.D., M.B.A

- Senior Associate Athletics Director/Student Experience: Renie Shields, M.A.
- Senior Associate Athletics Director for External Affairs: Robert Sullivan
- Associate Athletics Director: Allen Pendleton, M.Ed.
- Associate Athletics Director for Business Operations and Facilities: Amanda Hall
- Assistant Athletics Director for Campus Recreation: Alexandra Kissinger
- Head Basketball Coach, Men: William Lange
- Head Basketball Coach, Women: Cindy Anderson-Griffin, M.B.A

Senior Vice President for Finance & Administration and Treasurer: David R. Beaupré, MBA

- Assistant Vice President for Budget and Financial Planning: Lauren Goldsmith, CPA, '10, '17
- Assistant Vice President and Controller: April Lee, B.S., EMBA '08
- Director of Procurement: Deborah Tavera
- Director of Financial Information Systems: Bryan Witkowski

Associate Vice President for Administrative Services: Timothy McGuirman, M.Ed.

- Executive Director of Facilities Management: Ken Ogawa
- General Manager of Print Services: Randy Kehl
- Director of Health & Safety/Environmental Compliance Officer: Mary Healy
- Director of Conferences and Aux Operations: Kathleen Sinnott
- Business Manager: Joseph Ferry

Senior Vice President for University Relations: Joseph Kender, MBA

- Associate Vice President for Advancement Principal Gifts: Martin Farrell, M.S. '88'
- Associate Vice President for Advancement Operations: Thomas Chaves
- Associate Vice President for Advancement: Katie Shields, M.S.
- Assistant Vice President for Government and Community Relations: Wadell Ridley, Jr.

Vice President of Marketing and Communications: Liz Kennedy Walsh

- Associate Vice President of Marketing and Communications: Gail Benner
- Executive Director of Communications: Kelly Welsh

Emeriti and Emeritas

Concha Alborg (1982) B.A., 1975, Georgia State University; M.A., 1977, Emory University; Ph.D., 1982, Temple University *Professor Emerita of Modern and Classical Languages*

Mary DeKonty Applegate (1983) B.S., 1964, Evangel College; M.A., 1972, Eastern Michigan University; Ed.D., 1978, Temple University *Professor Emerita of Education*

John G. Berberian (1973) B.S., 1963, University of Massachusetts; Ph.D., 1968, Brown University *Professor Emeritus of Chemistry*

Anthony J. Berret, S.J. (1982) B.A., 1964, M.A., 1967, Fordham University; M.Div., 1971, Woodstock College; Ph.D., 1981, Johns Hopkins University *Professor Emeritus of English*

Judith G. Chapman (1988) B.A., 1971, St. Bonaventure University; M.A., 1975, St. Bonaventure University; Ph.D., 1987, Syracuse University *Professor Emerita of Psychology*

Nancy M. Childs (1991) B.A., 1972, Duke University; M.S., 1977, California Institute of Technology; Ph.D., 1993, Century University, *Professor Emerita of Marketing*

Corolyn E. Clark (1977) A.B., 1965, St. Mary's College; M.B.A., Temple University; 1978, Ph.D., 1985, Temple University; CFP®, 2003. *Professor Emerita of Accounting*

Eileen Z. Cohen (1968) B.S., 1953, University of Maryland; M.A., 1958, University of Maryland; Ph.D., 1965, University of Maryland. *Professor Emerita of English*

John J. Costello (1957) B.S., 1954, Saint Joseph's University; M.A., 1956, University of Virginia. *Professor Emeritus of Mathematics and Computer Science*

Christopher Coyne (1978) B.S. 1967, Saint Joseph's University; M.B.A., 1973 Temple University; Ph.D. 1986, Temple University, *Professor Emeritus of Finance*

Thomas J. Donahue (1965) B.A., 1964, Saint Joseph's University; M.A., 1967, University of Pennsylvania; Ph.D., 1973, University of Pennsylvania *Professor Emeritus of Modern and Classical Languages*

George W. Dowdall (1982) A.B., 1965, College of the Holy Cross; A.M., 1969, Brown University; Ph.D., 1972, Brown University *Professor Emeritus of Sociology*

Joseph E. Dragonette (1967) B.S., 1958, Saint Joseph's University; M.A., 1966, George Washington University; Ph.D., 1974, University of Pennsylvania *Associate Professor Emeritus of Economics*

Joseph J. Feeney, S.J. (1971) A.B., 1958, Fordham University; M.A., 1961, Fordham University; Ph.L., 1959, Woodstock College; S.T.B., 1964, Woodstock College; S.T.L., 1966, Woodstock College; Ph.D., 1971, University of Pennsylvania *Professor Emeritus of English*

Gérard A. Férère (1964) Bachelier ès Lettres, 1948, Haiti; Ensign, 1953, Naval Academy, Venezuela; M.A., 1966, Villanova University; Ph.D., 1974, University of Pennsylvania. *Professor Emeritus of Modern and Classical Languages*

Gerald F. Finnegan, S.J. (1980) A.B., 1960, Boston College; M.A., 1961, Boston College; Lic, 1968, Sankt Georgen Hochschule; M. Div., 1975, Union Theological Seminary; Ph.D., 1978, Union Theological Seminary. *Professor Emeritus of Theology*

Paul L. Foster (1979) B.S., 1950, Northwestern University; M.B.A., 1963, George Washington University; D.B.A., 1969, University of Virginia. *Professor Emeritus of Finance*

Richard W. Fredrickson (1967) A.B., 1951, University of Kansas; M.A., University of Kansas; 1954, Ph.D., 1961, University of Kansas. *Professor Emeritus of Biology*

Vincent J. Genovesi, S.J. (1973) A.B., 1962, Fordham University; M.A., 1966, Fordham University; Ph.L., 1963, Woodstock College; M. Div., 1969,

Woodstock College; Ph.D., 1973, Emory University *Professor Emeritus of Theology and Religious Studies*

Richard J. George (1973) B.S., 1967, Saint Joseph's University; M.B.A., 1969, Harvard University; Ph.D., 1979, Temple University *Professor Emeritus of Food Marketing*

Lewis W. Gordon (1982) B.S., 1962, Temple University; M.S., 1970, Juilliard School; M.A., 1974, Rutgers University; D.M.A., 1980, Temple University. *Professor Emeritus of Performing Arts*

Spenser O. Gowdy (1965) B.S., 1963, West Chester State University; M.A., 1965, Villanova University; Ph.D., 1971, Temple University *Professor Emeritus of Mathematics*

Bart P. Hartman (1996) B.S., 1966, University of Wisconsin; M.B.A., 1967, Northern Illinois University; D.B.A., 1975, University of Kentucky. *Professor Emeritus of Accounting*

John L. Haverty (1976) B.S., 1969, Saint Joseph's University; M.B.A., 1973, University of Chicago; CPA, 1975, Pennsylvania; Ph.D., 1985, Temple University *Professor Emeritus of Accounting*

Jonathan P. E. Hodgson (1985) B.A., 1963, Trinity College, Cambridge University; M.A., 1967, Trinity College, Cambridge University; Ph.D., 1967, Trinity College, Cambridge University *Professor Emeritus of Computer Science*

Raymond A. Horn (2004) B.S., 1969, Millersville State College; M.S., 1994, West Chester University; Ph.D., 1998, Pennsylvania State University *Professor Emeritus of Education*

Anthony James Joes (1969) A.B., 1965, Saint Joseph's University; M.A., 1967, University of Pennsylvania; Ph.D., 1970, University of Pennsylvania *Professor of Political Science, Professor Emeritus of Political Science*

Thomas J. Kane, Jr. (1982) B.S., 1966, Georgetown University; M.A., 1969, Georgetown University; Ph.D., 1978, Indiana University. *Professor Emeritus of Political Science*

John K. Kearney (1970) A.B., 1962, Marquette University; M.A., 1964, Villanova University; Ph.D., 1972, Bryn Mawr College. *Professor Emeritus of Philosophy*

Richard A. Kipphorn, Jr. (1960) A.B., 1957, Franklin and Marshall College; M.A., 1962, University of Pennsylvania. *Professor Emeritus of Modern and Classical Languages*

Patrick J. Kirschling (1983) B.S., 1968, Saint Joseph's University; M.S., 1972, Rutgers University; Ph.D., 1982, Purdue University. *Professor Emeritus of Food Marketing*

William A. Kriner (1965) B.S., 1953, West Chester State University; Ph.D., 1959, University of Pennsylvania. *Professor Emeritus of Chemistry*

Francis Graham Lee (1970) A.B., 1966, Boston College; Ph.D., 1970, University of Pennsylvania *Professor Emeritus of Political Science*

William J. Leonard (1957) B.S., 1956, Saint Joseph's University; M.A., 1959, University of Notre Dame. *Professor Emeritus of Economics*

John B. Lord (1975) B.S., 1971, Saint Joseph's University; M.B.A., 1975, Drexel University; Ph.D., 1985, Temple University *Professor Emeritus of Marketing*

Deborah Lurie (1998) B.A., 1969, Temple University; M.A., 1971, Temple University; M.S., 1976, Temple University; Ph.D., 1981, Temple University
Associate Professor of Mathematics

Martin S. Meloche (1997) B.S., 1981, Walsh College; M.A., 1983, Central Michigan University; D.B.A., 1988, University of Kentucky
Professor Emeritus of Food Marketing

Thomas E. McDuffie, Jr. (1972) A.B., 1965, Merrimack College; M.S., 1969, Temple University; Ed.D., 1973, Temple University
Professor Emeritus of Teacher Education

Vincent P. McNally, Jr. (1976) B.A., 1971, Saint Joseph's University; M.A., 1972, Villanova University; Ph.D., 1979, Temple University
Professor Emeritus of Political Science

Francis J. Morris (1961) A.B., 1958, Saint Joseph's University; M.A., 1960, Columbia University; Ph.D., 1977, University of Pennsylvania. Professor Emeritus of English

John P. Mullen (1950) A.B., 1950, Saint Joseph's University; M.A., 1953, University of Pennsylvania. *Professor Emeritus of English*

Catherine S. Nash (1948) A.B., 1939, Goucher College; M.S., 1950, Ohio State University. *Professor Emerita of Biology*

John J. Newhouse (1998) B.A., 1965, Temple University; M.Ed., 1970, Temple University; Ed.D., 1976, Temple University; M.S., 1997, University of Pennsylvania
Professor Emeritus of Health Administration

Robert H. Palestini (1990) B.S., 1963, Saint Joseph's University; M.A., 1967, Saint Joseph's University; Ed.D., 1980, Temple University
Professor Emeritus of Educational Leadership

George A. Prendergast (1956) B.S., 1955, Saint Joseph's University; M.A., 1960, University of Pennsylvania; Ph.D., 1972, University of Pennsylvania
Professor of Economics, Chair, Department of Economics

Agnes M. Rash (1968) A.B., 1963, Holy Family College; M.S., 1966, University of Notre Dame; Ph.D., 1974, University of Pennsylvania
Professor Emerita of Mathematics

Douglas F. Riddle (1978) A.B., 1950, University of Illinois; M.S., 1952, University of Michigan; D.A., 1977, Carnegie-Mellon University. *Professor Emeritus of Mathematics and Computer Science*

Nicholas John Robak (1972) A.B., 1965, University of Pennsylvania; M.A., 1969, University of Pennsylvania; M.A., 1971, University of Pennsylvania; Ph.D., 1972, University of Pennsylvania
Professor Emeritus of Decision & System Sciences

Eileen F. Sabbatino (2002) B.S., 1972, State University of New York; M.Ed., 1991, University of New Mexico; Ed.D., 2001, Wilmington College
Professor Emerita of Special Education

Patrick Samway, S.J. (2001) B.A., 1963, Fordham University; M.A., 1965, Fordham University; Ph.L., 1965, Fordham University; M.Div., 1969, Woodstock College; Ph.D., 1974, University of North Carolina
Professor Emeritus of English

Claire A. Simmers (1996) B.A., 1972, University of Maryland; M.B.A., 1990, West Chester University; Ph.D., 1996, Drexel University
Professor Emeritus of Management

Phillip T. Smith (1978) B.A., 1964, University of Texas, El Paso; M.A., 1969, Indiana University; M.Phil., 1975, Columbia University; Ph.D., 1976, Columbia University
Professor Emeritus of History

Elizabeth Sherman Swing (1978) B.A., 1949, Radcliffe/Harvard University; M.A., 1952, Radcliffe/Harvard University; Ph.D., 1979, University of Pennsylvania. *Professor Emerita of Education*

W. Richard Sherman (1989) B.A., 1971, University of Pennsylvania; J.D., 1975, University of Pennsylvania; M.B.A., 1982, Temple University; CPA, 1989, Delaware; LL.M., 1991, Villanova University
Professor Emeritus of Accounting

Paul M. Tefft (1983) B.S., 1974, Illinois State University; M.S., 1978, Illinois State University; Ph.D., 1984, Southern Illinois University
Associate Professor Emeritus of Biology

Ahmet Tezel (1985) B.A., 1964, Academy of Commerce, Istanbul, Turkey; M.B.A., 1968, University of California, Berkeley; Ph.D., 1973, University of California, Berkeley
Professor Emeritus of Finance

John C. Traupman (1951) A.B., 1948, Moravian College; M.A., 1951, Princeton University; Ph.D., 1956, Princeton University. *Professor Emeritus of Classics*

Martin R. Tripole, S.J. (1972) A.B., 1957, Fordham University; M.A., 1965, Fordham University; M.A., 1968, Woodstock College; S.T.D., 1972, Institut Catholique, Paris. *Professor Emeritus of Theology*

John J. Tudor (1977) B.S., 1967, University of Kentucky; M.S., 1970, University of Kentucky; Ph.D., 1977, University of Kentucky
Professor Emeritus of Biology

Carl von Zemenszky (1966) Ph.D., 1943, Franz Joseph University; Dr. Habil, Sociology, 1944, Budapest University; J.S.D., 1946, Queen Elizabeth University. *Professor Emeritus of Sociology*

James J. Watrous (1972) B.S., 1964, University of Dayton; M.S., 1969, University of Dayton; Ph.D., 1972, Georgetown University
Professor Emeritus of Biology

George H. Webster, Jr. (1980) B.S., 1964, Seton Hall University; M.B.A., 1969, Seton Hall University; M.A., 1973, State University of New York, Binghamton; Ph.D., 1981, State University of New York, Binghamton
Professor Emeritus of Finance

Dennis W. Weeks (1977) A.B., 1971, Saint Joseph's University; M.F.A., 1975, School of the Art Institute of Chicago
Professor Emeritus of Art
